SMART EVALUATOR RESULTS

Pine Bluff Arsenal
Combined Gate
Scenario 3

An evaluation of the ACP/ECF shown above was conducted to determine the impacts of implementing technology. The option shown below was selected as the preferred scenario. See the attached pages to review the complete results and inputs provided.

Infrastructure Needs

Lanes Needed	Infrastructure Cost	Annualized Infrastructure Cost	Annualized Infrastructure Maintenance Cost
2	$10,000,000	$584,565	$29,228

Expected Congestion

Peak Hour Max Vehicle Queue	Annualized Congestion Cost	Annualized Cost of Wasted Fuel
20	$87,037	$2,658

Manpower Needs

Additional Manpower Needed	Annualized Manpower Cost
1	$184,164

Technology Costs

Technology Cost	Annualized Cost of Technology	Annualized Technology Maintenance Cost
$30,000	$5,261	$106

Emissions

Annual Carbon Monoxide Emissions (g)	Annual Nitrogen Oxide Emissions (g)	Annual Volatile Organic Compound Emissions (g)
937,992	17,009	58,156

Total Annual Costs	$893,019
Risk Score	0.000

B/C Ratios and Level of Service

Traffic Benefit to Cost Ratio	Traffic Level of Service	Safety Benefit to Cost Ratio

Introduction: SDDCTEA Services & Products

- Traffic engineering studies:
  - In-house and contracted
  - Have 30 – 40 studies ongoing at any one time for all branches of the military
- Produce and distribute multiple pamphlets
- Produce and distribute 4 - 5 bulletins per year for 2,000+ contacts
- Host 3-4 traffic engineering workshops annually, regarding traffic engineering and safety along roadways, at intersections, and at Access Control Points (ACPs)
- Develop software for "right-sizing" gates and to assist with other traffic engineering calculations
- SDDCTEA publications/bulletins can be found on their website - http://www.sddc.army.mil/sites/TEA/Functions/SpecialAssistant/TrafficEngineeringBranch/Pages/default.aspx
- Created DoD Supplement to the MUTCD - http://www.sddc.army.mil/sites/TEA/Functions/SpecialAssistant/TrafficEngineeringBranch/Documents/MUTCD_DOD_Supplement_Revision_20150601.pdf

Introduction: Gannett Fleming

- International multi-disciplinary engineering firm established in 1915
  - Headquarters in Camp Hill, PA
  - 50+ offices
  - Have provided A/E support to SDDCTEA for 15 years including over 50 comprehensive studies, over 400 ACP assessments, 30 sign management systems, and numerous traffic engineering and safety studies
- Assisted in the development of the following materials:
  - SDDCTEA 55-8, Traffic Engineering Studies Reference
  - SDDCTEA Pamphlet 55-15, Traffic and Safety Engineering for Better Entry Control Facilities
  - SDDCTEA Pamphlet 55-17, Better Military Traffic Engineering
  - Department of the Army, The Army Standard (AS) for Access Control Points (ACPs)

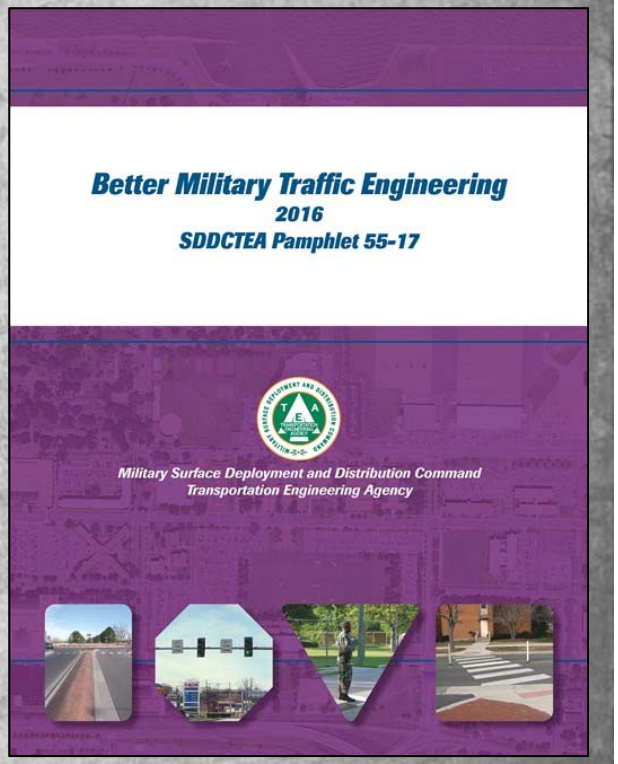
Authority of MUTCD

- Study will commonly reference the MUTCD
- The MUTCD is the national standard for traffic control devices and applies to military installations per military regulations
- It ensures uniformity among traffic control devices:
  - To reduce confusion
  - By applying proven and vetted standards for traffic safety on military installations.
- It applies to all streets, highways, pedestrian facilities, bikeways, or private roads "open to public travel"
- http://mutcd.fhwa.dot.gov/kno_2009.htm
- There is no state MUTCD or state supplement
- DoD Supplement to the MUTCD, SDDCTEA, 2015
  - The DOD Supplement is intended to be a companion document to the national MUTCD

Authority of MUTCD

- Multi-Service Regulation (AR 55-80, OPNAVINST 11210.2, AFMAN 32-1017, MCO 11210.2D and DLAR 4500.19)
  - "Installation commanders will develop and maintain their roadways to nationally accepted standards that provide a safe driving environment for all drivers and passengers."
  - "All installation traffic signals, signs, and pavement markings will be in substantial conformance to FHWA's Manual on Uniform Traffic Control Devices for Streets and Highways (MUTCD) (http://mutcd.fhwa.dot.gov)."
  - "Variances in the design and application of installation traffic control devices from the standards contained in MUTCD must be approved by (SDDCTEA) and FHWA."

Authority of MUTCD

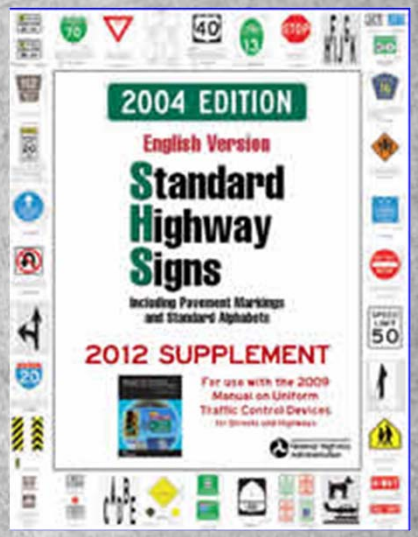


- Code of Federal Regulations: Title 32: National Defense, Subtitle A: Department of Defense, Chapter V: Department of the Army (but applicable to all branches), Part 634: Motor Vehicle Traffic Supervision

  (h) Facility engineer (public works officer at Navy installations). The facility engineer, engineer officer or civil engineer at Air Force installations, in close coordination with the law enforcement officer, will-

  (3) Ensure that traffic signs, signals, and pavement markings conform to the standards in the current Manual on Uniform Traffic Control Devices for Streets and Highways.

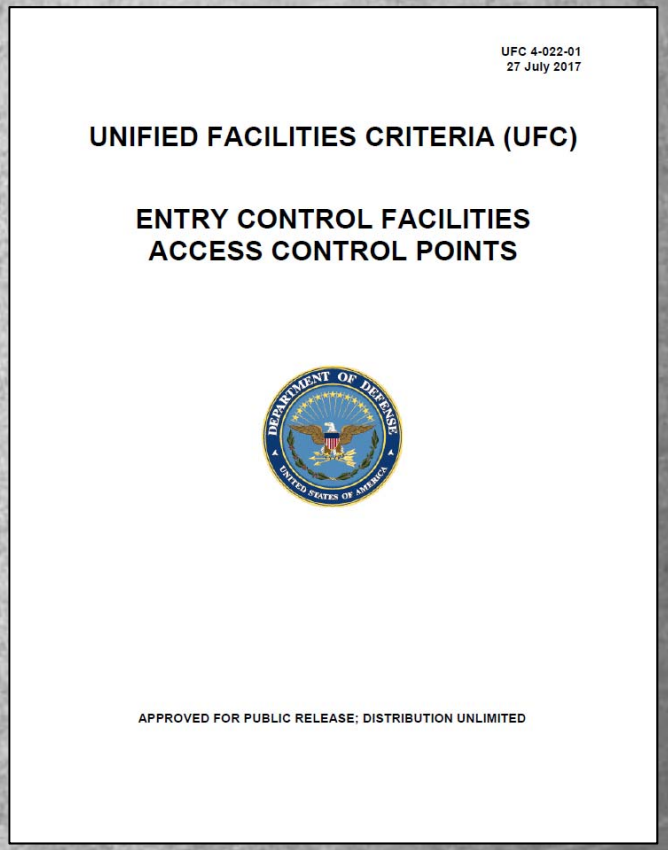
Authority of MUTCD



- SDDCTEA Pamphlet 55-17, titled "Better Military Traffic Engineering" and dated 2016.
  - Complies with the MUTCD and includes guidance for military installations
  - Includes the design for about 40 signs that are not included in the MUTCD or the Standard Highway Signs Manual (SHSM). Military installations should use these signs when applicable instead of designing their own
  - When other designs are required, installations should consult SDDCTEA for design assistance

http://www.sddc.army.mil/sites/TEA/Functions/SpecialAssistant/TrafficEngineeringBranch/Pages/default.aspx

Authority of MUTCD



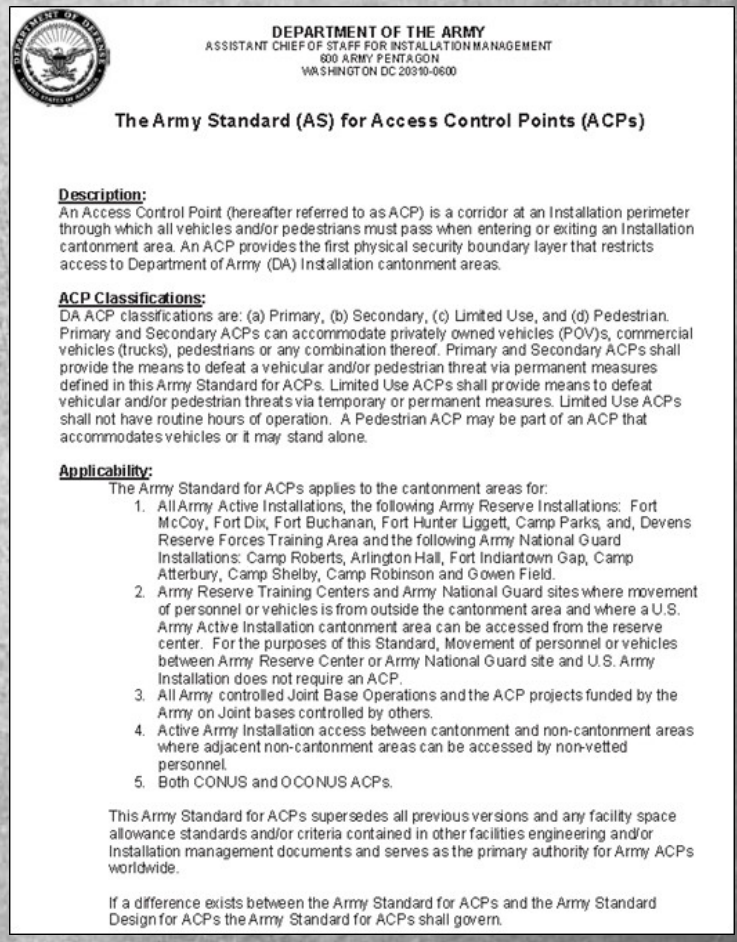
- Standard Highway Signs Manual (SHSM) 2012 supplement includes design details of new and modified signs that were added in the 2009 Edition of the MUTCD
- The contents of the 2012 supplement will be included into a new edition of the SHSM that will be concurrently released with the next edition of the MUTCD

ACP Reference Documents

- Unified Facilities Criteria (UFC) 4-022-01, Entry Control Facilities/ Access Control Points
  - This UFC presents a unified approach between military service branches regarding the design features necessary to ensure that infrastructure constructed today will have the flexibility to support future technologies, a changing threat environment, and changes in operations
  - "Should" and "must" conditions
  - **Shall conditions must be followed**

UFC 4-022-01
27 July 2017

UNIFIED FACILITIES CRITERIA (UFC)



ENTRY CONTROL FACILITIES
ACCESS CONTROL POINTS

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

Note: Updated version recently released in July 2017

ACP Evaluation

- Army Access Control Points Standard Design/Criteria
  - Includes standard drawings and supporting appendices
  - Links security needs and engineering requirements
  - Provides detailed guidance on AVB placement as well as traffic and safety requirements
  - Partially updated in 2012 and 2013

DEPARTMENT OF THE ARMY
ASSISTANT CHIEF OF STAFF FOR INSTALLATION MANAGEMENT
600 ARMY PENTAGON
WASHINGTON DC 20310-0600

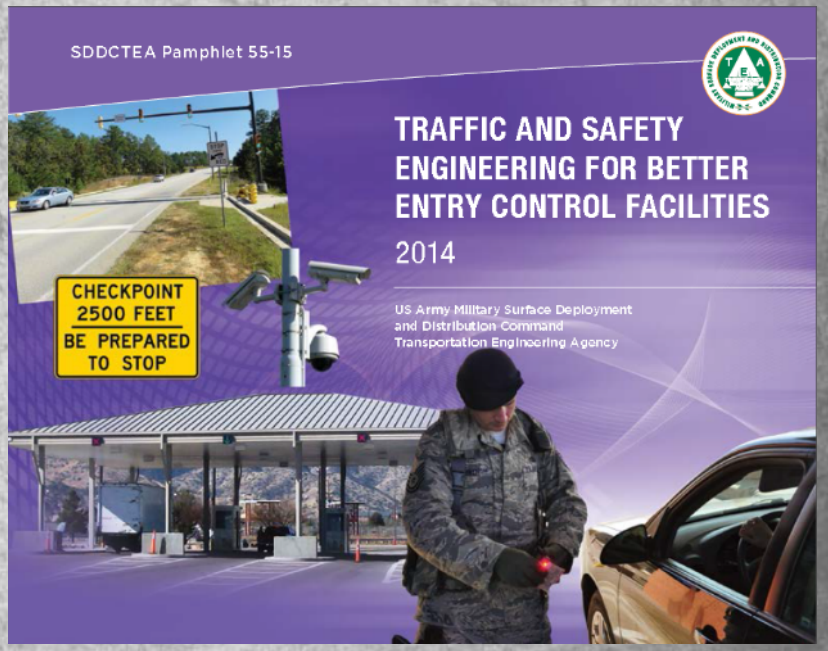
The Army Standard (AS) for Access Control Points (ACPs)

Description:
An Access Control Point (hereafter referred to as ACP) is a corridor at an Installation perimeter through which all vehicles and/or pedestrians must pass when entering or exiting an Installation cantonment area. An ACP provides the first physical security boundary layer that restricts access to Department of Army (DA) Installation cantonment areas.

ACP Classifications:
DA ACP classifications are: (a) Primary, (b) Secondary, (c) Limited Use, and (d) Pedestrian. Primary and Secondary ACPs can accommodate privately owned vehicles (POV)s, commercial vehicles (trucks), pedestrians or any combination thereof. Primary and Secondary ACPs shall provide the means to defeat a vehicular and/or pedestrian threat via permanent measures defined in this Army Standard for ACPs. Limited Use ACPs shall provide means to defeat vehicular and/or pedestrian threats via temporary or permanent measures. Limited Use ACPs shall not have routine hours of operation. A Pedestrian ACP may be part of an ACP that accommodates vehicles or it may stand alone.

Applicability:
The Army Standard for ACPs applies to the cantonment areas for:

1. All Army Active Installations, the following Army Reserve Installations: Fort McCoy, Fort Dix, Fort Buchanan, Fort Hunter Liggett, Camp Parks, and, Devens Reserve Forces Training Area and the following Army National Guard Installations: Camp Roberts, Arlington Hall, Fort Indiantown Gap, Camp Atterbury, Camp Shelby, Camp Robinson and Gowen Field.
2. Army Reserve Training Centers and Army National Guard sites where movement of personnel or vehicles is from outside the cantonment area and where a U.S. Army Active Installation cantonment area can be accessed from the reserve center. For the purposes of this Standard, Movement of personnel or vehicles between Army Reserve Center or Army National Guard site and U.S. Army Installation does not require an ACP.
3. All Army controlled Joint Base Operations and the ACP projects funded by the Army on Joint bases controlled by others.
4. Active Army Installation access between cantonment and non-cantonment areas where adjacent non-cantonment areas can be accessed by non-vetted personnel.
5. Both CONUS and OCONUS ACPs.



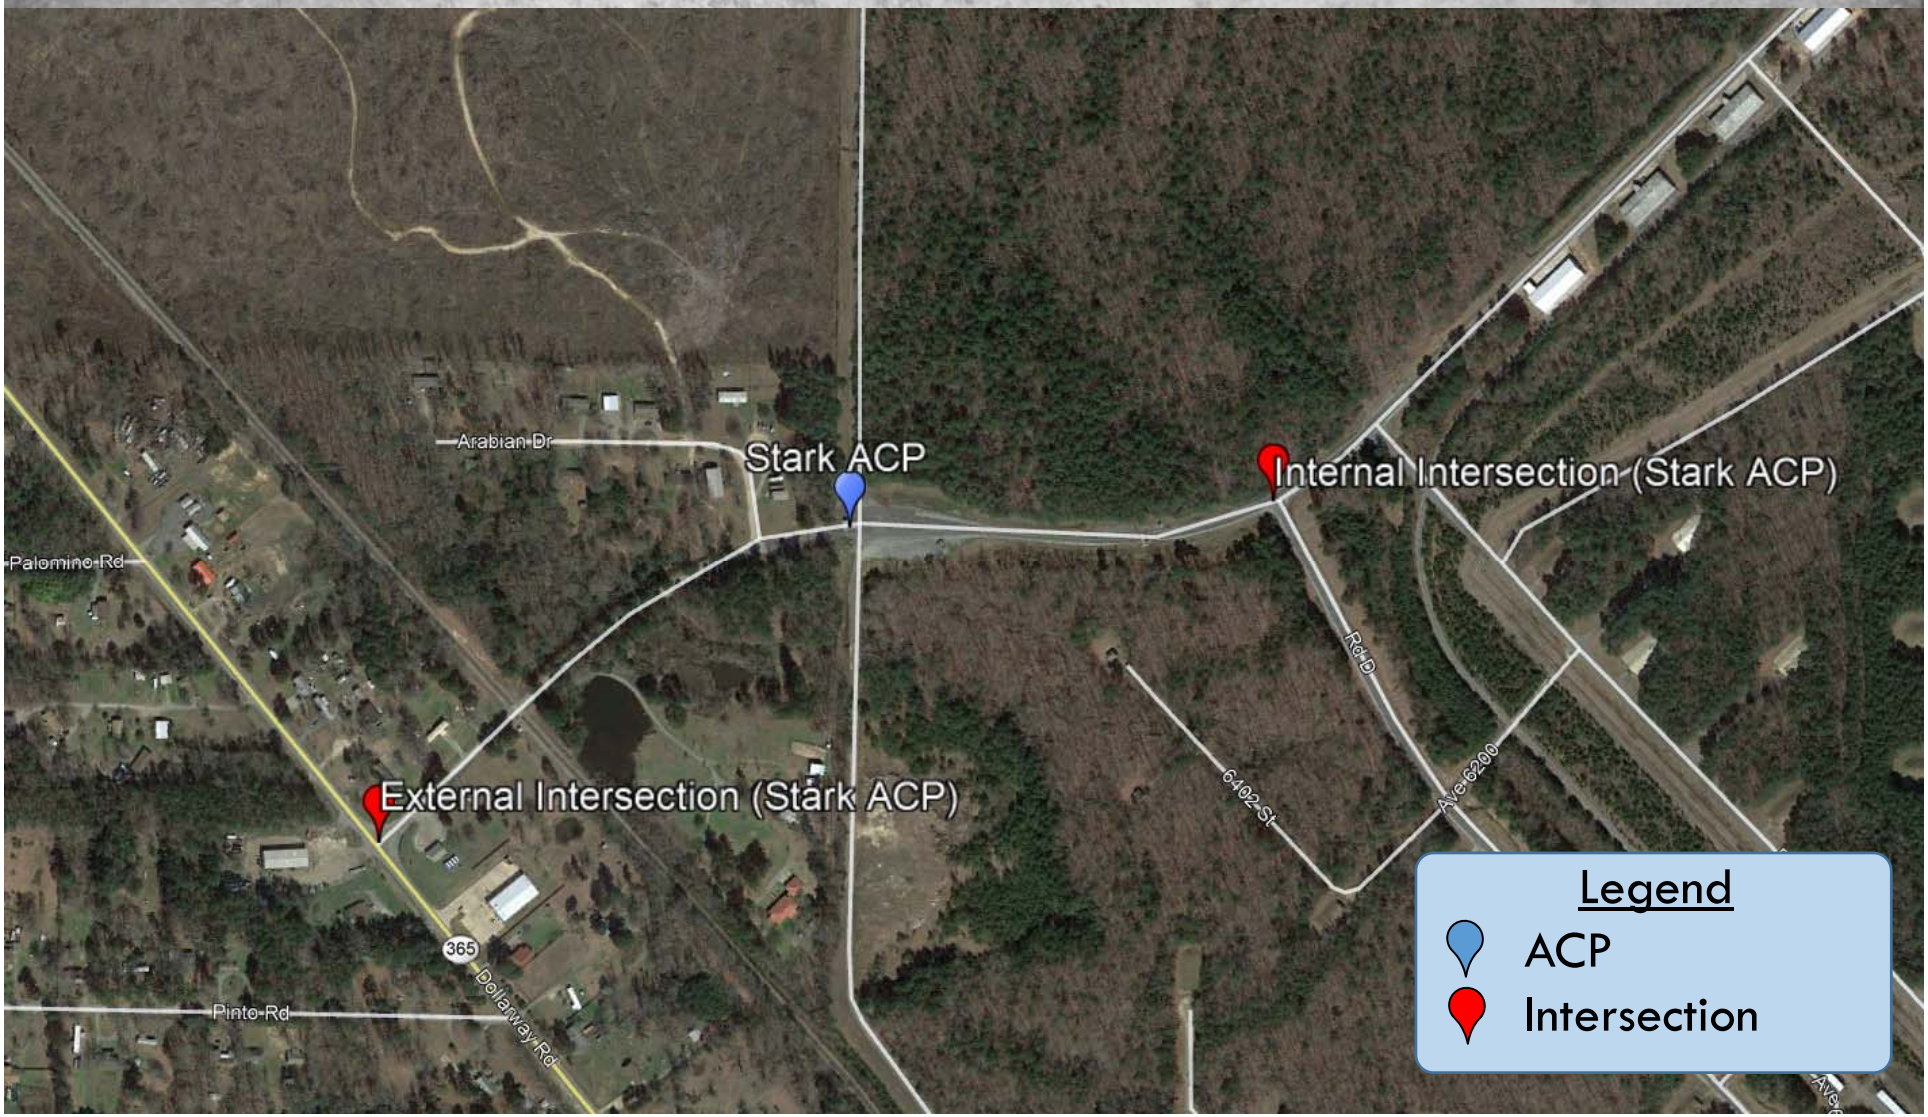
This Army Standard for ACPs supersedes all previous versions and any facility space allowance standards and/or criteria contained in other facilities engineering and/or Installation management documents and serves as the primary authority for Army ACPs worldwide.

If a difference exists between the Army Standard for ACPs and the Army Standard Design for ACPs the Army Standard for ACPs shall govern.

ACP Reference Documents

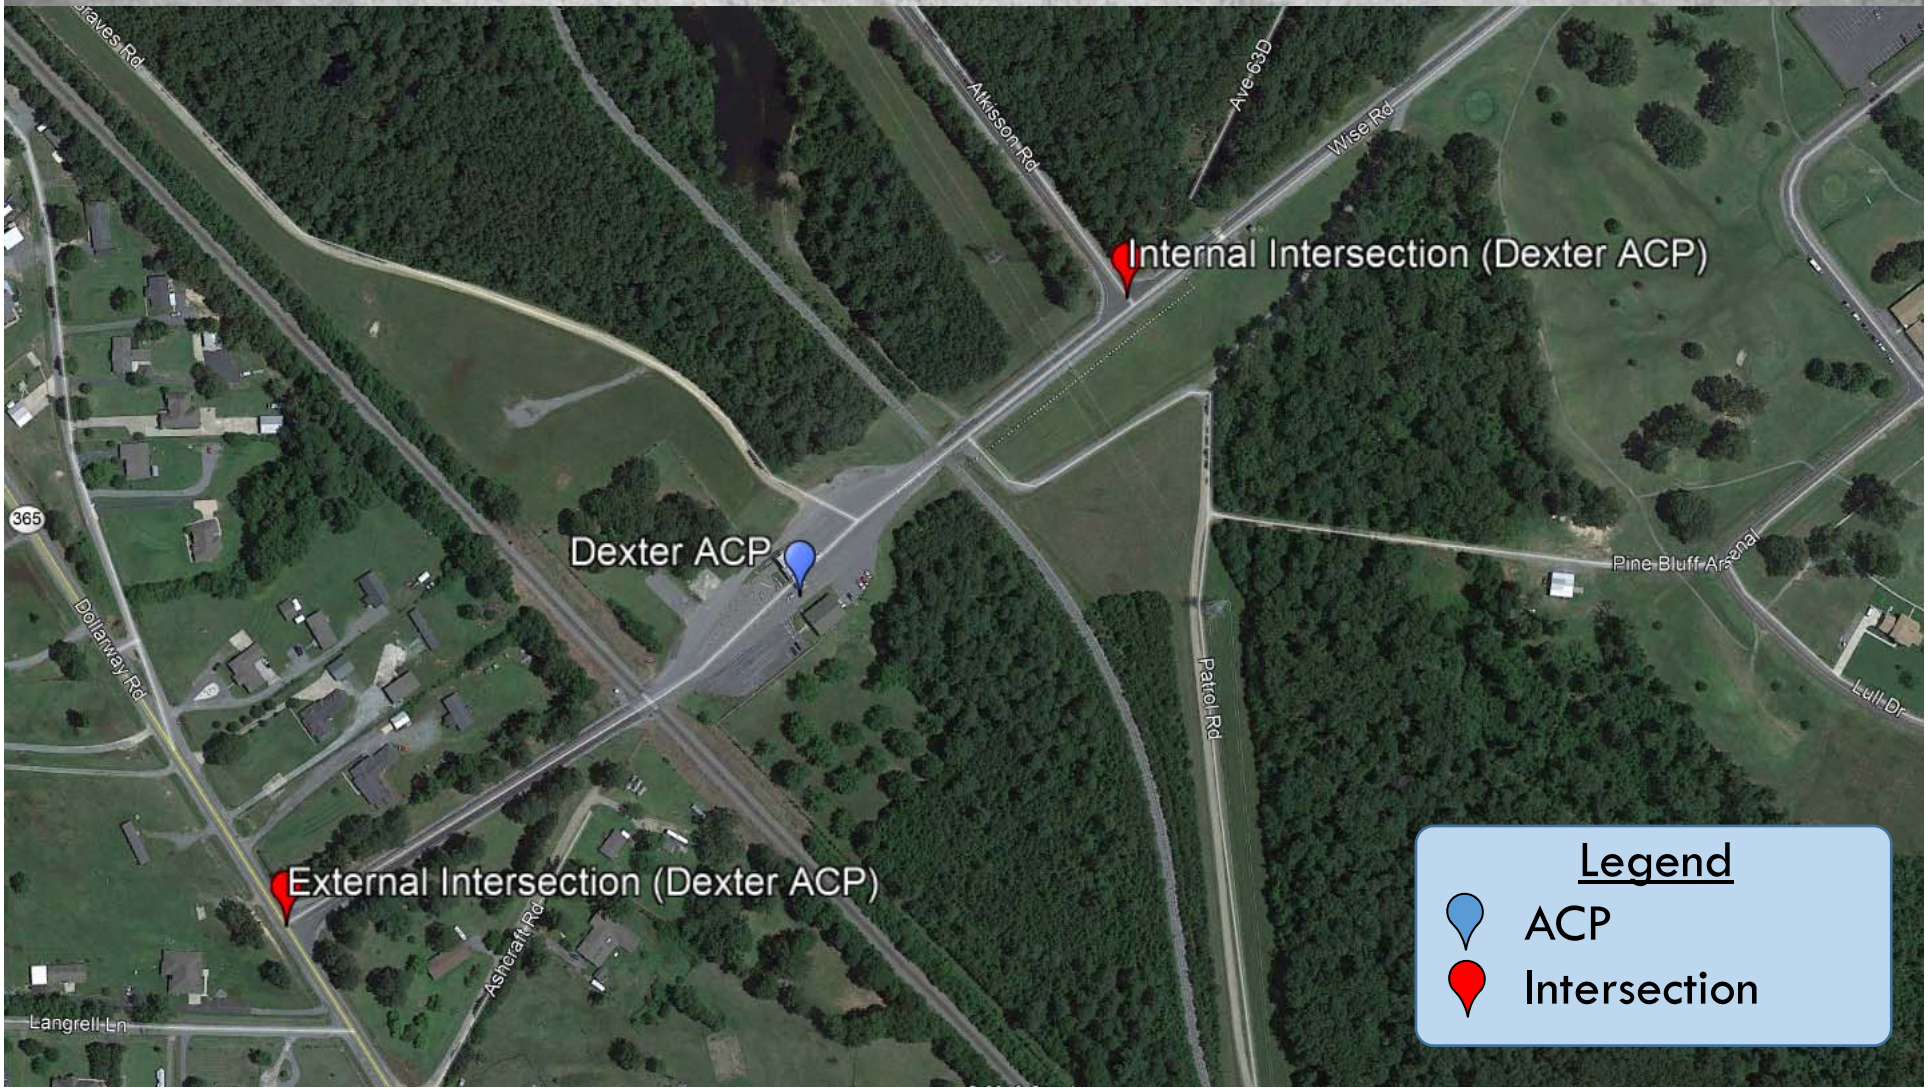
- SDDCTEA Pamphlet 55-15, Traffic and Safety Engineering for Better Entry Control Facilities (the SDDCTEA Gates Manual)
  - Supplements other existing criteria and guidance
  - Bridges the gap between ACP standards and national engineering standards
- In most cases, serves as a standard through referencing:
  - Referenced in UFC 4-022-01
  - Referenced in Army Standard Design Criteria
  - Per joint regulation OPNAVINST 11210.2
- Pamphlet 55-15 and other publications/bulletins can be found on SDDCTEA's website at:

http://www.sddc.army.mil/sites/TEA/Functions/SpecialAssistant/TrafficEngineeringBranch/Pages/default.aspx



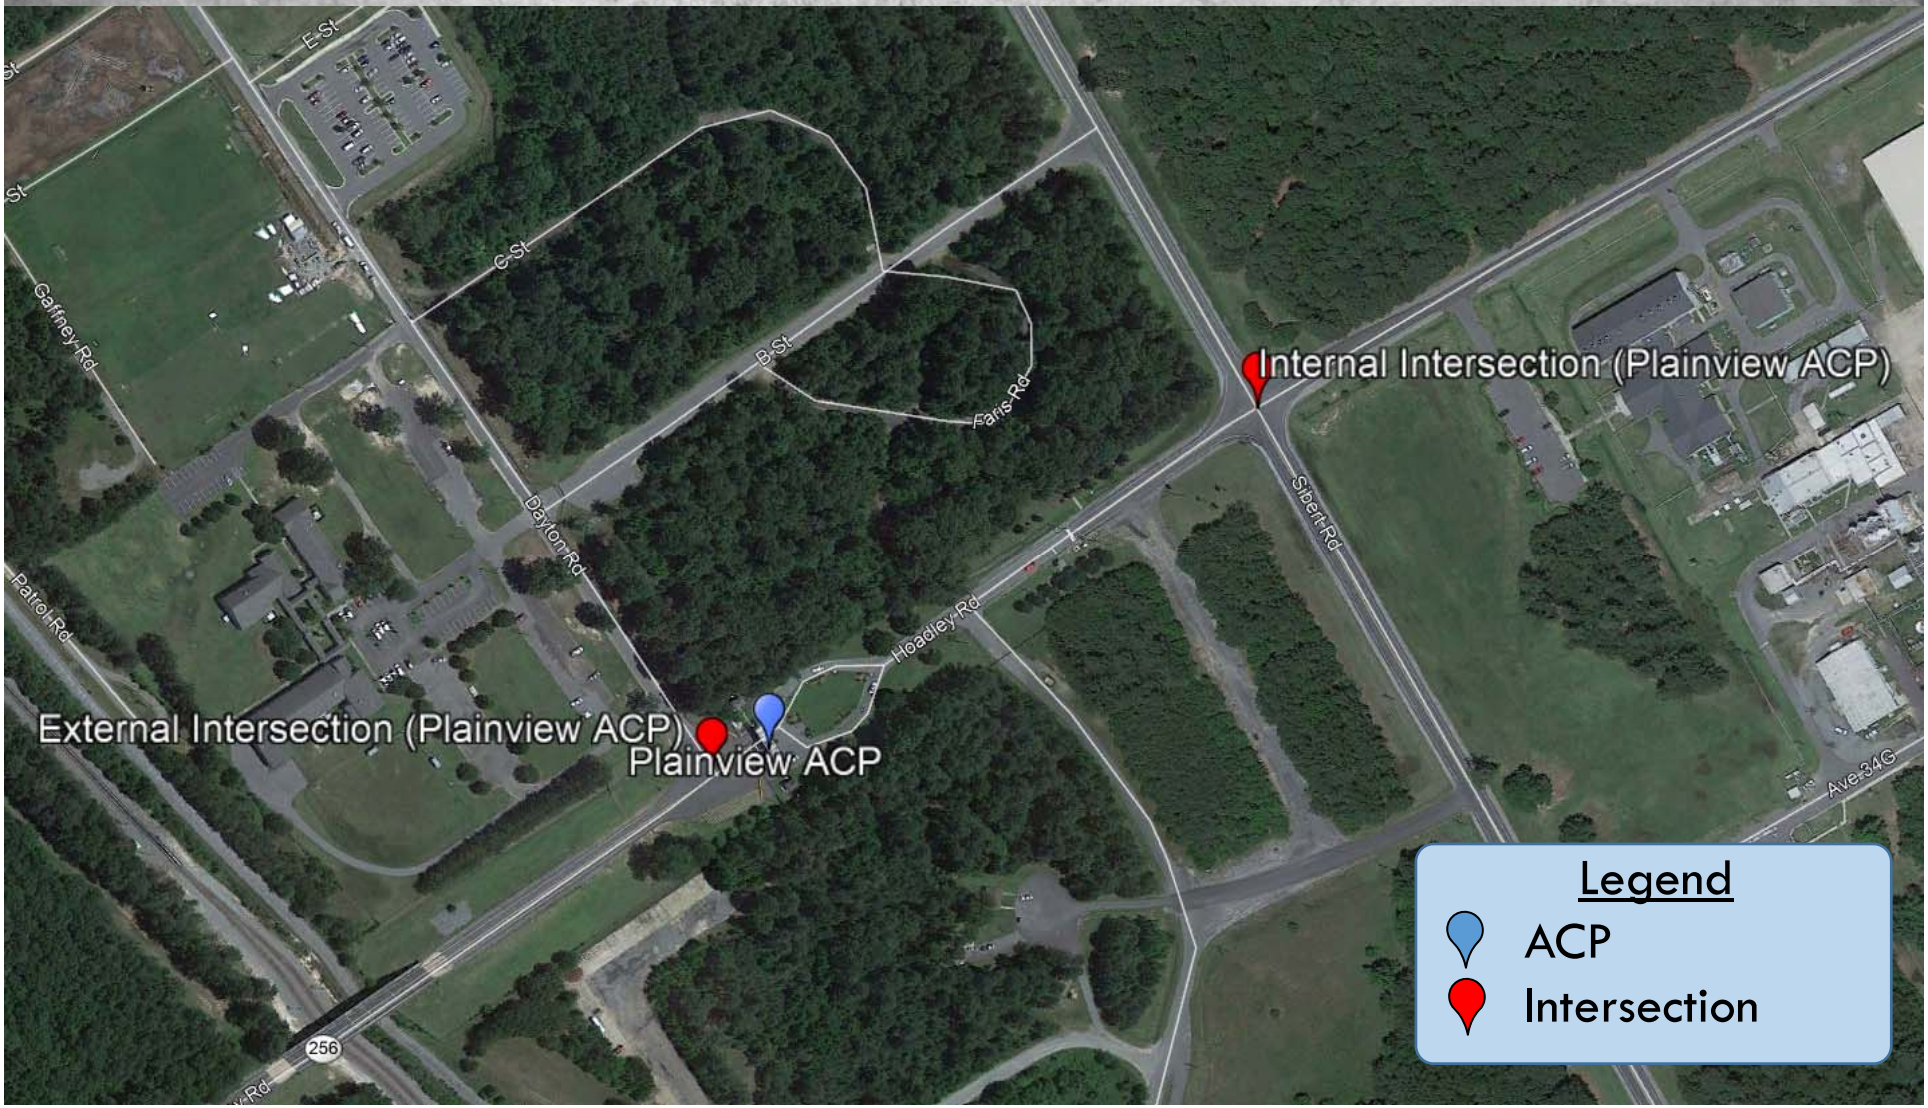
Study Goals

- Conduct a traffic engineering and safety analysis of three (3) Access Control Points (ACP) and six (6) adjacent intersections.
- Specific tasks include:
  - Traffic Data Collection (24-hour and Turning Movement Counts)
  - Road Safety Assessment at Study Intersections and ACP
  - Existing Conditions Analysis at study ACP
  - Interview ID check personnel
  - Future Traffic Volume Projections
  - Future Conditions Analysis
  - Calculate Future Processing Lane Needs
  - Improvement Options and Cost Estimates



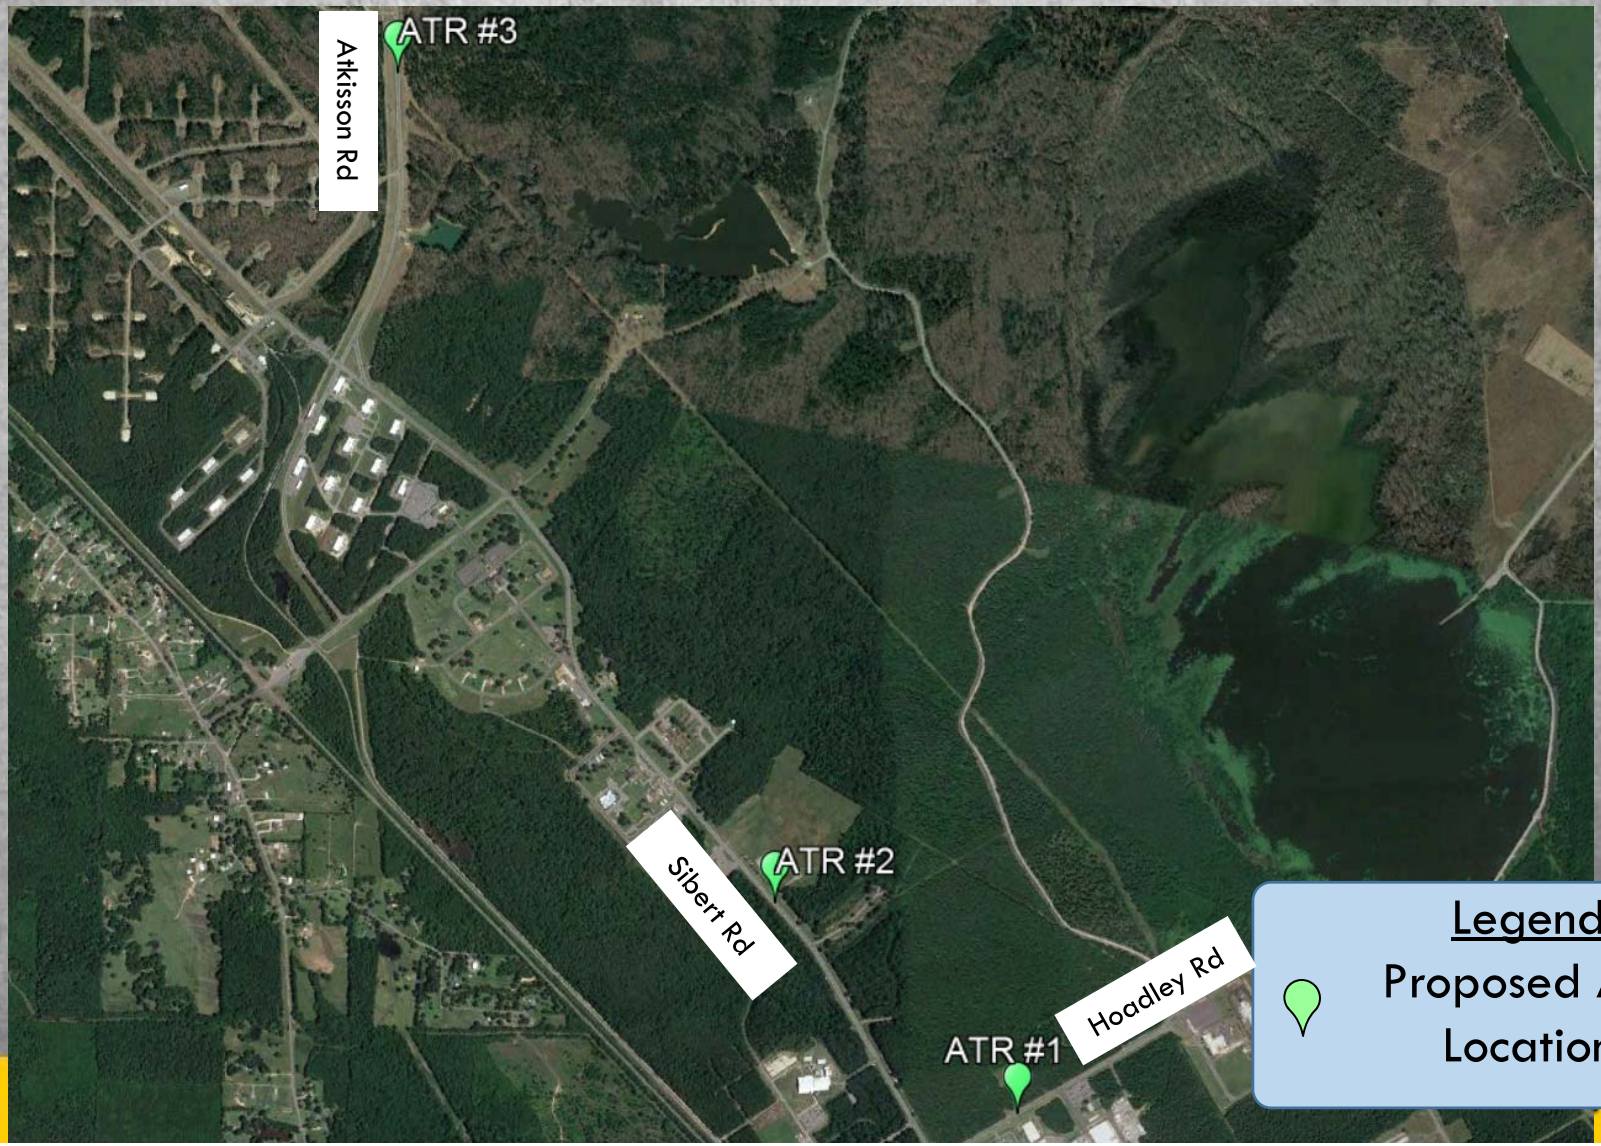
Study Activities: Traffic Data Collection

- Observe peak period gate operations and record queuing in 15-minute intervals to calculate existing demand
- Conduct AM, Midday, and PM peak intersection turning movement counts (TMCs) at six total intersections
- Data will be collected for each intersection on either Tuesday, Wednesday, or Thursday
- Refer to slides 16-18 for the TMC and ACP locations



Study Activities – Data Collection Locations

Study Activities – Data Collection Locations



Study Activities – Data Collection Locations

Study Activities: Traffic Data Collection

- 24-hour automatic traffic recorder (ATR) counts at three (3) locations
- Counters will collect 24 hours of data
  - A speed summary will be included in the report (roadway locations only)
  - Refer to slide 21 for the ATR roadway locations

Study Activities – Data Collection Locations

Study Activities: Traffic Data Collection

- Examples of count equipment to be used

In lane “card” counter

Roadside radar counter

Study Activities: Road Safety Assessment

Conduct a Roadside Safety Assessment and provide remedial recommendations for ACPs and studied intersections. The following items will be addressed:

- Traffic control
- Lane configuration
- Signing
- Striping
- Design vehicle accommodation
- Operational concerns
- Intersection Sight Distance
- Roadside hazards
- Improper traffic control devices
- Bicycle and pedestrian access
- Analysis of most recent 5 years of crash data (if available)

Study Activities

- Identify and document planned growth
- Document peak hour periods and existing demand volumes at ACP and adjacent study intersections
- Calculate future traffic demand
- Calculate the future number of ACP processing lanes
- Analyze existing and future intersection capacity and traffic flow

Study Activities

- Inspect and evaluate the study ACPs for roadway signing and striping, compliance with UFC and Army ACP Standard Design/Criteria, and roadside safety
- The assessment approach will assist with the following:
  - Verify compliance with standards and guidelines
  - Identify short-term and low-cost enhancements
  - Identify long-term enhancements to support future growth **(only the intersections as necessary)**
  - Assess lane requirements

Status of Study Data Requests

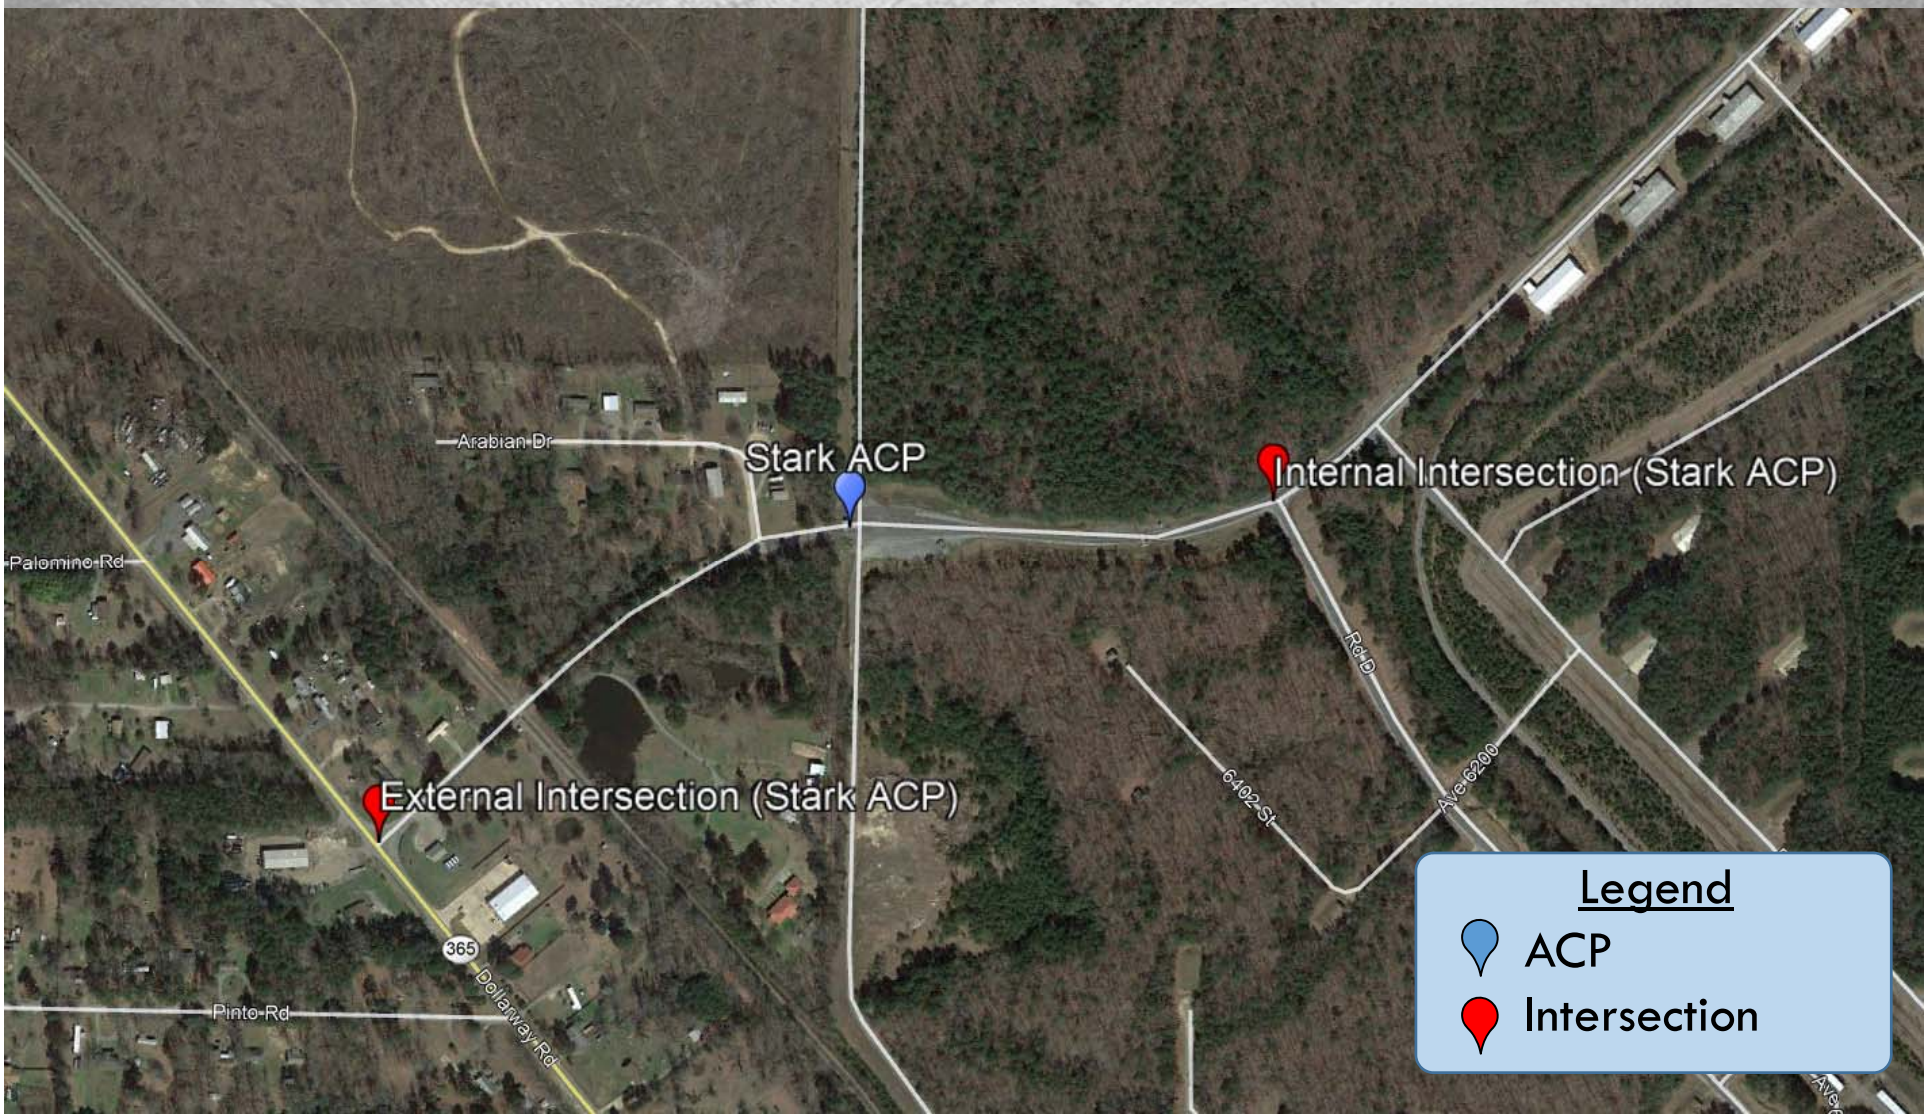
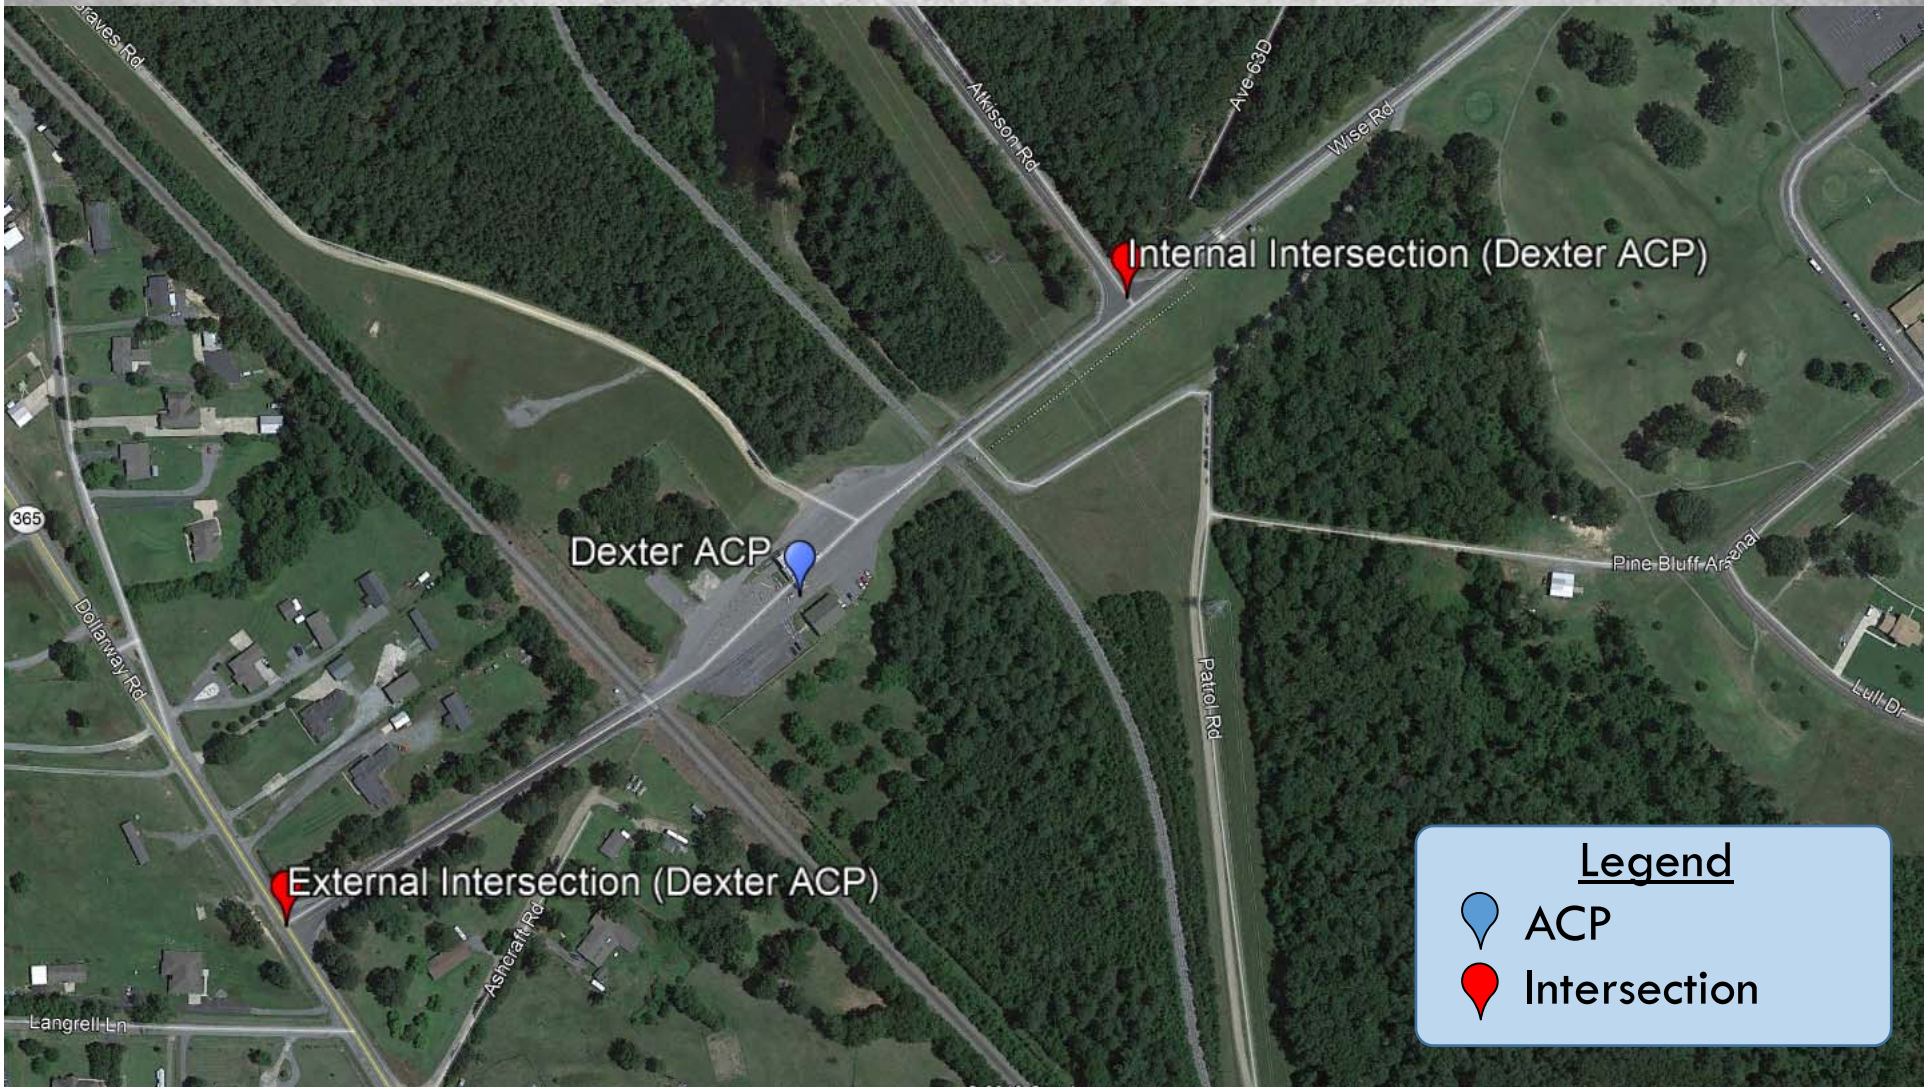
BACKGROUND



- Inbrief meeting held on 26 February 2018
- Data collection activities performed 27 February-1 March 2018
- This outbrief summarizes the procedures, analyses, and preliminary improvement options to be presented in the draft report

BACKGROUND



- Conduct a traffic engineering and safety analysis of the Entry Control Facilities (ECFs) at Pine Bluff Arsenal and its adjacent intersections:

- Specific tasks include:
  - Traffic Data Collection (24-hour and Turning Movement Counts)
  - Road Safety Assessment
  - ECF Compliance Assessment
  - Existing Conditions Analysis
  - Future Traffic Volume Projections
  - Future Conditions Analysis
  - Calculate Future Processing Lane Needs
  - Improvement Options and Cost Estimates

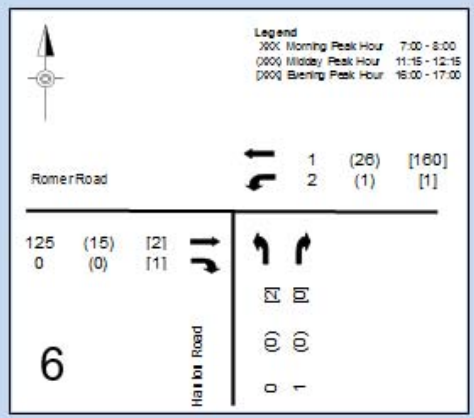
DATA COLLECTION – TMC VOLUMES



TRAFFIC ANALYSIS - GROWTH

- Jefferson County's population has been decreasing over the past five years and this trend is expected to continue
- Assuming this trend will continue, no growth factor was applied to the public traffic volumes
- The installation does not expect a growth in personnel in a ten-year period; thus, no growth factor was applied

TRAFFIC ANALYSIS - INTERSECTIONS

- Overall intersection level of service (LOS) was utilized to determine future improvement needs

Intersection	Existing LOS		
	AM	MID	PM
Hoadley Road and Dollarway Road	A	A	B
Hoadley Road and Sibert Road	A	A	A
Wise Road and Dollarway Road	A	A	A
Wise Road and Atkisson Road	A	A	A
Stark Gate Road and Dollarway Road	A	A	A
Romer Road and Hanlon Road	A	A	A

SHORT-TERM IMPROVEMENTS

Common Deficiencies

Photo	Deficiency/Corrective Action
	**Deficiencies:** All sign posts on the installation are fixed posts which are a roadside hazard. Although some of the posts are seemingly protected from errant vehicles behind a curb, curbs are generally recognized as having no significant containment or redirection capability. **Corrective Actions:** Replace all fixed posts with posts that utilize a breakaway design. Several breakaway designs are discussed in section 3.2.2.1 of this report.

Photo	Deficiency/Corrective Action
	**Deficiencies:** Type I sheeting is prevalent throughout the installation. All regulatory, warning, and guide signs with a green background should utilize Type III or higher sheeting. This sheeting provides levels of retroreflectivity to ensure the signs can be seen during nighttime or low-light conditions. Refer to Section 2A.08 of the MUTCD for standards and guidance relating to maintaining minimum retroreflectivity. The Federal Highway Administration (FHWA) also provides a retroreflective sheeting guide to help identify sheeting types: https://safety.fhwa.dot.gov/roadway_dept/night_visib/sign_visib/sheetguide/ In addition, many of the STOP signs are 24”x24” in size. The minimum size for a STOP sign is 30”x30”. The minimum size for a speed limit sign should be 24”x30”. **Corrective Actions:** Replace all signs that utilize Type I sheeting and any signs that have poor retroreflectivity. Additionally, replace all STOP signs that have dimensions less than 30”x30”. SDDCTEA can assist with sign compliance by conducting a Sign Management Study if necessary.

SHORT-TERM IMPROVEMENTS

Hoadley Road and Dollarway Road

Photo	Deficiency/Corrective Action
	**Deficiencies:** The YIELD signs and DO NOT ENTER signs are mounted back-to-back on the same post for each intersection approach. This blocks the silhouette of the YIELD sign which makes it more difficult to identify. **Corrective Actions:** Mount each sign on its own separate breakaway post.
	**Deficiencies:** Different KEEP RIGHT signs are used for the eastbound and westbound approaches. Each sign is mounted back-to-back with an additional KEEP RIGHT sign to face each directional of travel. Consistent KEEP RIGHT signs should be used for the entire intersection. **Corrective Actions:** Replace the KEEP RIGHT sign shown in the bottom photo with a R4-7 sign.  R4-7 Mount the KEEP RIGHT signs on their own separate breakaway post and install on the nose of the median in the direction which vehicles are traveling.
	

Photo	Deficiency/Corrective Action
	**Deficiencies:** No lane use control signage is used. **Corrective Actions:** Install lane use control signage on the signal mast arms and in advance of the intersection for the northbound and southbound approaches. The northbound approach signs show a left, through, and right turn movement. The southbound approach should show a left and a shared through/right turn movement.
	**Deficiencies:** Pavement markings are faded throughout the intersection. **Corrective Actions:** Restripe the faded pavement markings for proper visibility.
	**Deficiencies:** No stop lines are present for each approach lane. **Corrective Actions:** Stripe a stop bar for each approach lane to indicate the point behind which vehicles are required to stop for the traffic signal.

SHORT-TERM IMPROVEMENTS

Hoadley Road and Dollarway Road

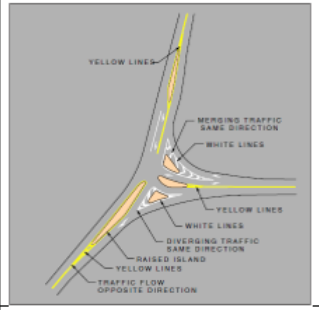


Photo	Deficiency/Corrective Action
	**Deficiencies:** Curb cuts are present on the southern leg where pedestrian crossing is not permitted. **Corrective Actions:** Remove the curb cuts. Pedestrian crossing is not permitted at these locations.
	**Deficiencies:** Medians are not flush. **Corrective Actions:** An example of a flushed median is shown below. Hatching should be oriented such that it directs a vehicle back into its desired travel lane. 
	**Deficiencies:** A YIELD sign is used for the channelized right turn on the eastbound approach. **Corrective Actions:** Remove the YIELD sign. This is a free movement since the eastbound channelized right turn lane joins an added lane.

Photo	Deficiency/Corrective Action
	Deficiencies: Multiple turn radii are too tight to accommodate commercial vehicles and trucks. **Corrective Actions:** Slightly modify the turn radii and remove the median islands at the eastbound and westbound approaches as shown in the photo.

Photo

SHORT-TERM

Hoadley Road and Sibert Road

Photo	Deficiency/Corrective Action
	**Deficiencies:** The westbound approach STOP sign has a WELCOME sign mounted below. **Corrective Actions:** Remove the WELCOME sign that supplements the eastbound approach STOP sign since it is not related to the regulatory STOP sign.
	**Deficiencies:** The TRUCK ROUTE sign is faded and is mounted too low which makes it difficult to read. **Corrective Actions:** Replace the TRUCK ROUTE sign with a new Type III sheeting TRUCK ROUTE sign that is 24"x18" and is mounted to a height of at least 5 feet.

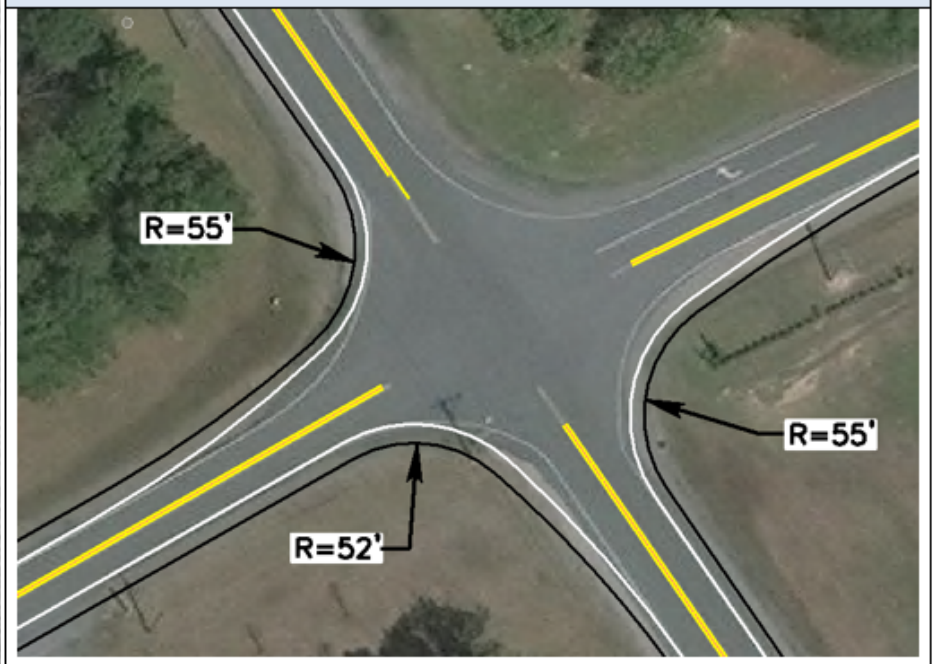

Photo	Deficiency/Corrective Action
	**Deficiencies:** The text on the wayfinding sign is difficult to read since it is faded and is less than the minimum text height. There are also too many locations. **Corrective Actions:** Replace the sign with multiple wayfinding signs that have a maximum of three destinations. Ensure the wayfinding signs are up to date. Section 2D.06 of the MUTCD states that on low-volume roads with speeds of 25 mph or less, and on urban streets with speeds of 25 mph or less, the principal legend shall be in letters at least 4 inches in height for all upper-case letters, or a combination of 4 inches in height for upper-case letters and 3 inches in height for lower-case letters.
	**Deficiencies:** The arrow marking is broken and faded. **Corrective Actions:** Restripe the arrow marking.

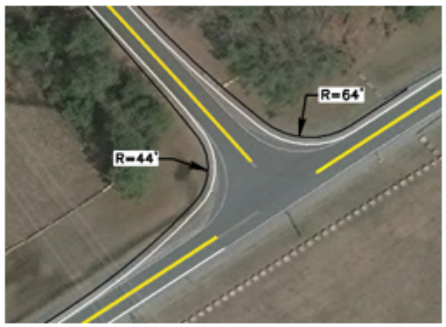
SHORT-TERM

Hoadley Road and Sibert Road

Deficiency/Corrective Action
Deficiencies: Multiple turn radii are too tight to accommodate commercial vehicles and trucks. **Corrective Actions:** Slightly modify the turn radii and remove the median islands at the eastbound and westbound approaches as shown in the photo.

Photo

SHORT-TERM IMPROVEMENTS



Wise Road and Dollarway Road

Photo	Deficiency/Corrective Action
	**Deficiencies:** There is a slight shoulder drop-off on the northbound approach. **Corrective Actions:** Backfill the shoulder area to create a smooth transition from roadway to shoulder.
	**Deficiencies:** A STOP sign is used on the left-hand side of the roadway for the westbound approach. **Corrective Actions:** Remove this STOP sign. A STOP sign is not needed on the left-hand side of the roadway in this situation. Instead, increase the right-hand side STOP sign to a size of 48"x48" and install a red, vertical retroreflective strip on the post to increase conspicuity.
	**Deficiencies:** Multiple turn radii are too tight to accommodate commercial vehicles and trucks. **Corrective Actions:** Modify the turn radii as shown in the photo. It should be noted that if the commercial vehicle inspection area is relocated to the Plainview Gate, the radii improvements will not be needed.

Photo	Deficiency/Corrective Action
	**Deficiencies:** No lane use arrow markings are used for the westbound approach. **Corrective Actions:** Install compliant lane use arrow markings for the left and right turn lanes as shown below. **B - Turn Lane-Use Arrow** 8.0 ft OR

SHORT-TERM IMPROVEMENTS

Wise Road and Atkisson Road

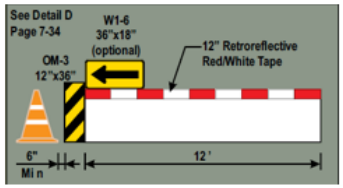
Photo	Deficiency/Corrective Action
	**Deficiencies:** The swing gate is not properly delineated. **Corrective Actions:** The swing gate should be delineated with horizontal panels with retroreflective, alternating, vertical red/white stripes. Install a ROAD CLOSED sign mounted on the gate. Delineate the post since it is located within the clear zone.
	**Deficiencies:** There is a significant shoulder drop-off for vehicles making a right turn from Atkisson Road. **Corrective Actions:** Backfill the shoulder area so vehicles can avoid this roadside hazard.
	**Deficiencies:** Multiple turn radii are too tight to accommodate commercial vehicles and trucks. **Corrective Actions:** Modify the turn radii as shown in the photo. It should be noted that if the commercial vehicle inspection area is relocated to the Plainview Gate, the radii improvements will not be needed.

SHORT-TERM IMPROVEMENTS

Stark Gate Road and Dollarway Road

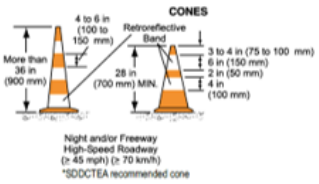
Photo	Deficiency/Corrective Action
	**Deficiencies:** An old post remains that contains no signing and is a fixed object hazard. **Corrective Actions:** Remove the post.
	**Deficiencies:** There is a slight drop-off from the new driveway to the shoulder on both ends of the driveway. **Corrective Actions:** Backfill the shoulder so that the shoulder is level with the driveway. This will create a smooth transition from shoulder to driveway.
	**Deficiencies:** The broken, yellow centerline is faded. Passing is permitted near an intersection. **Corrective Actions:** Restripe the centerline for proper visibility. The centerline should be striped as a double yellow centerline since passing should not be permitted near an intersection.

SHORT-TERM IMPROVEMENTS



Romer Road and Hanlon Road

Photo	Deficiency/Corrective Action
	**Deficiencies:** The STOP sign is mounted too low, is not retroreflective, and is mounted on a fixed post. **Corrective Actions:** Replace the STOP sign with one that uses Type III sheeting or better and mount the sign to a height of at least 5 feet on a breakaway post.
	**Deficiencies:** The light pole is located within the clear zone of the roadway. **Corrective Actions:** Ideally the light pole should be relocated out of the clear zone of the roadway. In the short-term, the light pole can be delineated with an OM3-R object marker.  OM-3R



SHORT-TERM IMPROVEMENTS

Plainview Gate

Photo	Deficiency/Corrective Action
	**Deficiencies:** The STOP AHEAD sign used in the approach zone is not compliant. The STOP AHEAD sign conveys the wrong message to drivers since they are approaching an ID checkpoint. **Corrective Actions:** Install a CHECKPOINT (W3-10A-TEA) sign supplemented by an AHEAD plaque (W16-9P). W3-10a-TEA with W16-9P 

Photo	Deficiency/Corrective Action
	**Deficiencies:** The Visitor's sign is faded and is not legible. **Corrective Actions:** Replace the sign with a new Visitor's sign that uses white lettering on a green or brown background. The text size of the lettering should be at least 6 inch in height for upper-case letters and 4.5 inches in height for lower-case letters.
	**Deficiencies:** The concrete barriers in the approach zone are not properly delineated for both the inbound and outbound lanes. **Corrective Actions:** Reevaluate the need for concrete barriers in the approach zone. If the barriers do remain, signs and delineation should be installed per SDDCTEA Pamphlet 55-15, Exhibit 7.13. 

SHORT-TERM IMPROVEMENTS

Photo	Deficiency/Corrective Action
 	**Deficiencies:** Czech hedgehogs, barriers, and planters are used in the approach zone to prevent vehicles from ramming into the gatehouse through the fencing. **Corrective Actions:** It is recommended to remove the Czech hedgehogs and planters and to ensure that the fencing and swing gates are reinforced. The barriers can remain but should create a chicane in accordance with SDDCTEA Pamphlet 55-15 Chapter 7.
	**Deficiencies:** Traffic cones used throughout the gate area not properly delineated and seem to serve no purpose. **Corrective Actions:** It is recommended to remove the traffic cones. If the cones must remain, utilize compliant traffic cones according to MUTCD standards. 

Plainview Gate

Photo	Deficiency/Corrective Action
	**Deficiencies:** No gate closure signage is used. **Corrective Actions:** Install gate closure signage and horizontal panels with retroreflective, alternating, vertical red/white stripes as shown below. 
	**Deficiencies:** A STOP sign is used at the ID check area. **Corrective Actions:** Remove the STOP sign. In the case of an ID check area, the guards function as the traffic control device.

SHORT-TERM IMPROVEMENTS

Plainview Gate

Photo	Deficiency/Corrective Action
	**Deficiencies:** Several signs throughout the gate area are mounted on fixed posts. **Corrective Actions:** Replace all fixed posts with breakaway posts since they lessen the impact to a vehicle if struck.
	**Deficiencies:** Boulders are used in the response zone to create a contiguous passive barrier. **Corrective Actions:** In accordance with the ACP Standard Design Section 1.9.2.5 boulders are not on the approved list for passive barrier use. The boulders should be replaced with an approved type of passive barrier.
	**Deficiencies:** The POST SPEED LIMIT sign is faded and has poor sheeting. **Corrective Actions:** Install a new POST SPEED LIMIT sign that uses Type III sheeting or better.

Photo	Deficiency/Corrective Action
	**Deficiencies:** The GATE EXIT SPEED sign is non-compliant. **Corrective Actions:** Install a CHECKPOINT (W3-10A-TEA) sign supplemented by an AHEAD plaque (W16-9P). W3-10a-TEA with W16-9P 
	**Deficiencies:** Two arrow signs are turned away from the road and don't seem to be needed. **Corrective Actions:** Remove the signs.

SHORT-TERM IMPROVEMENTS

Plainview Gate

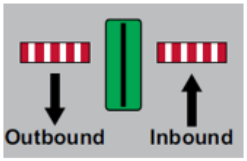


Photo	Deficiency/Corrective Action
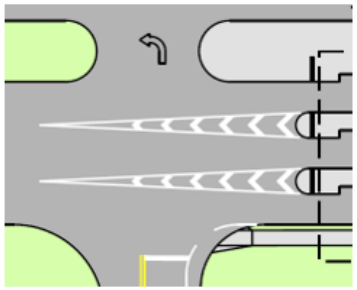
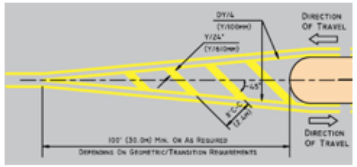
	**Deficiencies:** The AVBs are not properly striped. **Corrective Actions:** Replace the old markings with alternating red and white stripes that are aligned in the direction of travel. 
	**Deficiencies:** Parking stoppers are used in front of the BARRIER sign. **Corrective Actions:** Remove the stoppers since they do not effectively redirect a vehicle away from the fixed object. Ideally the sign should be relocated out of the clear zone on a breakaway post. At a minimum, delineate the sign with an OM3-R object marker.  OM-3R

Photo	Deficiency/Corrective Action
	**Deficiencies:** Pavement markings in the response zone are faded. **Corrective Actions:** Restripe the faded pavement markings for proper visibility.

SHORT-TERM IMPROVEMENTS

Dexter Gate





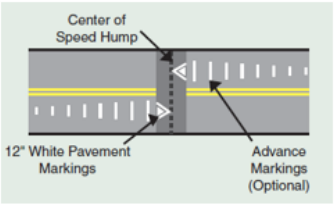


Photo	Deficiency/Corrective Action
	**Deficiencies:** The obstruction markings between the inbound and outbound lanes are not compliant and are the improper color. **Corrective Actions:** Install white obstruction markings at the nose of the median in the approach and response zones between the 2 inbound lanes and between the 2 outbound lanes in accordance to Section 6 of the SDDCTEA Pamphlet 55-15 as shown in the top photo. The obstruction markings separating the inbound lanes from the outbound lanes should be hatched as show in the bottom photo.  

Photo	Deficiency/Corrective Action
	**Deficiencies:** Several of the barrels used in the approach zone to create a chicane and the barrels are not retroreflective. **Corrective Actions:** It is recommended to remove the barrels. If the barrels are desired to remain, upgrade all barrel delineation to allow for full visibility of the barrels during nighttime hours. If the intent of the barrels is to slow non-threat vehicles down, replace the barrels with speed humps and proper signage. 
	**Deficiencies:** The YIELD sign used between the two outbound lanes is mounted on a temporary post and it is confusing to which lane has the right-of-way. **Corrective Actions:** Remove the sign and install a YIELD sign on the far right-hand side of the roadway at the merging point of the two-outbound lane. This will allow the inside outbound lane to have the right-of-way. The YIELD sign should be mounted on a permanent breakaway post.

SHORT-TERM IMPROVEMENTS

Dexter Gate

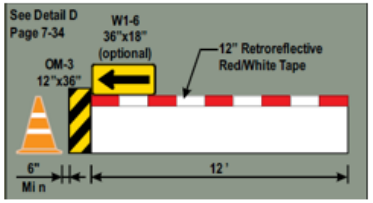

Photo	Deficiency/Corrective Action
	**Deficiencies:** The plastic barriers used in the approach zone are not properly delineated. **Corrective Actions:** Reevaluate the need for plastic barriers in the approach zone. If the barriers do remain, signs and delineation should be installed per SDDCTEA Pamphlet 55-15, Exhibit 7.13. 
	**Deficiencies:** A STOP sign is used at the ID check area. **Corrective Actions:** Remove the STOP sign. In the case of the ID check area, the guards function as the traffic control device.

Photo	Deficiency/Corrective Action
	**Deficiencies:** The POST SPEED LIMIT sign is faded and has poor sheeting. **Corrective Actions:** Install a new POST SPEED LIMIT sign that uses Type III sheeting or better.
	**Deficiencies:** Pavement markings are faded throughout the gate area. **Corrective Actions:** Restripe the faded pavement markings.
	**Deficiencies:** Signs throughout the response zone are mounted on fixed posts. **Corrective Actions:** Replace all fixed posts with breakaway posts which lessen the impact to vehicle if struck.

SHORT-TERM IMPROVEMENTS

Dexter Gate

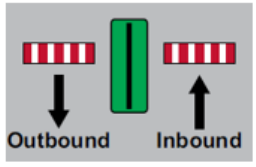

Photo	Deficiency/Corrective Action
 	**Deficiencies:** The swing gate at the first internal intersection remains open which creates a non-contiguous perimeter. Non-contiguous passive barrier is also used in the response zone. **Corrective Actions:** Close the gate and upgrade passive barrier to create a contiguous perimeter. Refer to UFC 4-022-01 for additional details relating to compliant passive barrier.
	**Deficiencies:** The AVBs are not properly delineated. **Corrective Actions:** Replace the old markings with alternating red and white stripes that are aligned vertically in the direction of travel. 

Photo	Deficiency/Corrective Action
	**Deficiencies:** The GATE EXIT SPEED sign is non-compliant. **Corrective Actions:** Install a CHECKPOINT (W3-10A-TEA) sign supplemented by an AHEAD plaque (W16-9P). **W3-10a-TEA with W16-9P** 
	**Deficiencies:** No gate closure signage is used. **Corrective Actions:** Install gate closure signage and horizontal panels with retroreflective, alternating, vertical red/white stripes as shown below. 

SHORT-TERM IMPROVEMENTS

Stark Gate

Photo	Deficiency/Corrective Action
	**Deficiencies:** Several barriers are used in the approach zone and at the ID check area. They are fixed object hazards and are not properly delineated. **Corrective Actions:** Remove the barriers. If they must remain, properly delineate the barriers in accordance with SDDCTEA Pamphlet 55-15.
	**Deficiencies:** Several of the barrels used in the approach and response zones are not retroreflective. **Corrective Actions:** Upgrade all barrel delineation to allow for full visibility of the barrels during nighttime hours.

Photo	Deficiency/Corrective Action
	**Deficiencies:** No gate closure signage is used. **Corrective Actions:** Install gate closure signage and horizontal panels with retroreflective, alternating, vertical red/white stripes as shown below. 
	**Deficiencies:** A STOP sign is used at the ID check area. **Corrective Actions:** Remove the STOP sign. Guards function as the traffic control device at the ID check area.

SHORT-TERM IMPROVEMENTS

Stark Gate

Photo	Deficiency/Corrective Action
	**Deficiencies:** The median painted island is not hatched. **Corrective Actions:** Hatch the median island such that vehicles are directed back into their desired travel lane.
 	**Deficiencies:** There are two side roads immediately following the ID check area. This creates a non-contiguous perimeter since there are no AVBs or passive barrier to stop a threat vehicle. Vehicles can proceed into the base through these two side roads. **Corrective Actions:** It is recommended to gate off these side roads or realign them so that they can be accessed after the AVBs.

Photo	Deficiency/Corrective Action
	**Deficiencies:** A bollard is in the clear zone of the outbound lane and is a roadside hazard. **Corrective Actions:** Remove the bollard.
	**Deficiencies:** The GATE EXIT SPEED sign is not compliant. **Corrective Actions:** Install a CHECKPOINT (W3-10A-TEA) sign supplemented by an AHEAD plaque (W16-9P). W3-10a-TEA with W16-9P 

SHORT-TERM IMPROVEMENTS

Stark Gate

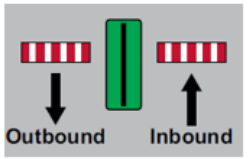

Photo	Deficiency/Corrective Action
	**Deficiencies:** The AVBs are not properly delineated. **Corrective Actions:** Replace the old markings with alternating red and white stripes that are aligned vertically in the direction of travel. 
	**Deficiencies:** There is no stop bar to supplement the STOP HERE ON RED sign. **Corrective Actions:** Install a stop bar adjacent to the STOP HERE ON RED sign for both the inbound and outbound lane.
	**Deficiencies:** The 35-mph speed limit sign is too small and is not retroreflective. **Corrective Actions:** Replace the speed limit sign with a 24”x30” sign that uses Type III sheeting or better.

Photo	Deficiency/Corrective Action
	**Deficiencies:** The STOP AHEAD sign used in the approach zone is not compliant. The STOP AHEAD sign conveys the wrong message to drivers since they are approaching an ID checkpoint. **Corrective Actions:** Install a CHECKPOINT (W3-10A-TEA) sign supplemented by an AHEAD plaque (W16-9P). W3-10a-TEA with W16-9P 

ECF RECOMMENDATIONS – LANE CALCS

Lane Calculation Summary

Currently the installation has three operational ACPs. The installation has also developed an Area Development Plan which has the commercial vehicle inspection area to be relocated to the Plainview Gate which is important due to this area being considered a site for the Joint Chemical Biological Defense Logistics Center. The installation also mentioned the possibility of consolidating gates to reduce the required manpower needed. Therefore, the study team will provide recommendations with required lane calculations and manpower for these multiple scenarios.

ECF RECOMMENDATIONS – LANE CALCS

Lane Calculation Summary-Scenario 1

The first scenario is an existing scenario where all three gates remain open but the commercial vehicle inspection area is relocated to the Plainview Gate.

ACP	Existing ID Check Lanes	Existing Demand Volume	Required ID Check Lanes					
			Single Manual Processing	Tandem Manual Processing	Single Handheld Processing	Tandem Handheld Processing	AIE Processing (No Arms)	AIE Processing (With Arms)
Plainview Gate	1	252	1	1	1	1	1	1
Dexter Gate	2	200	1	1	1	1	1	1
Stark Gate	1	184	1	1	1	1	1	1

ECF RECOMMENDATIONS – LANE CALCS

Lane Calculation Summary-Scenario 2

The second scenario includes the relocation of the commercial vehicles inspection area with the closure of the Stark Gate to help reduce the required manpower

ACP	Existing ID Check Lanes	Existing Demand Volume	Required ID Check Lanes					
			Single Manual Processing	Tandem Manual Processing	Single Handheld Processing	Tandem Handheld Processing	AIE Processing (No Arms)	AIE Processing (With Arms)
Plainview Gate	1	252	1	1	1	1	1	1
Dexter Gate	2	384	2	1	2	1	1	2

ECF RECOMMENDATIONS – LANE CALCS

Lane Calculation Summary-Scenario 3

The third scenario includes consolidating the ACPs into one location where both POVs and commercial vehicles will enter the installation from

ACP	Existing ID Check Lanes	Existing Demand Volume	Required ID Check Lanes					
			Single Manual Processing	Tandem Manual Processing	Single Handheld Processing	Tandem Handheld Processing	AIE Processing (No Arms)	AIE Processing (With Arms)
Combined Gate	NA	636	2	2	2	2	2	2

ECF RECOMMENDATIONS – MANPOWER

The following table shows manpower requirements for the required number of lanes for each scenario. Note that the personnel numbers do not consider inspection staff, pedestrian processing staff, or staff inside the gatehouse

Scenario	Required Manpower
Scenario 1	4
Scenario 2	4
Scenario 3	3

NEXT STEPS

- Outbrief/Draft report submittal
  - Installation 15-day review period following submittal
- Draft final report in Early September
  - 15-day review period following submittal of Draft Final
- Final report in mid October

- Final report will:
  - Be full color
  - Address comments
  - Include final concept drawings, cost estimates and threat calculations
  - Will include photos of deficiencies along with suggested improvements

- Questions?

(Electronic Copy Only)

APPENDIX I
FIRE HYDRANT FLOW TEST

Form 12

Private Fire Service Mains
Hydrant flow Test Report

Name of Property: Pine Bluff Arsenal

Address: Pine Bluff, Arkansas 71602

Tested by: William Burrus **Date:** 06-04/2024

Contact # William.Burrus@hdrinc.com **Time:** 2:00 PM

Weather conditions: 82 degrees, Cloudy, Wind - 5 MPH Northwest, Humidity - 60%

Location of test: Pine Bluff Arsenal, Plainview Gate

Residual hydrant location: See Map

Flow hydrant(s) location: See Map

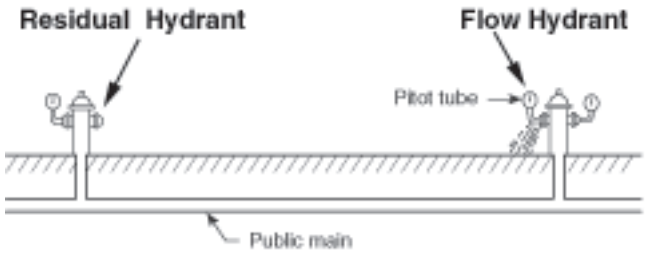
Static pressure (residual hydrant) 48 psi (bar) **Test Equipment:** Gauges - New England Manufacturing Company

Residual pressure (residual hydrant) 32 psi (bar) **Test Equipment Calibration Date:** 5/20/24 (see attached calibration records)

Nozzle size (flow hydrant) 2.50 inches in (mm)

Nozzle coefficient (flow hydrant) Rounded - 0.90 (see attached flow test chart)

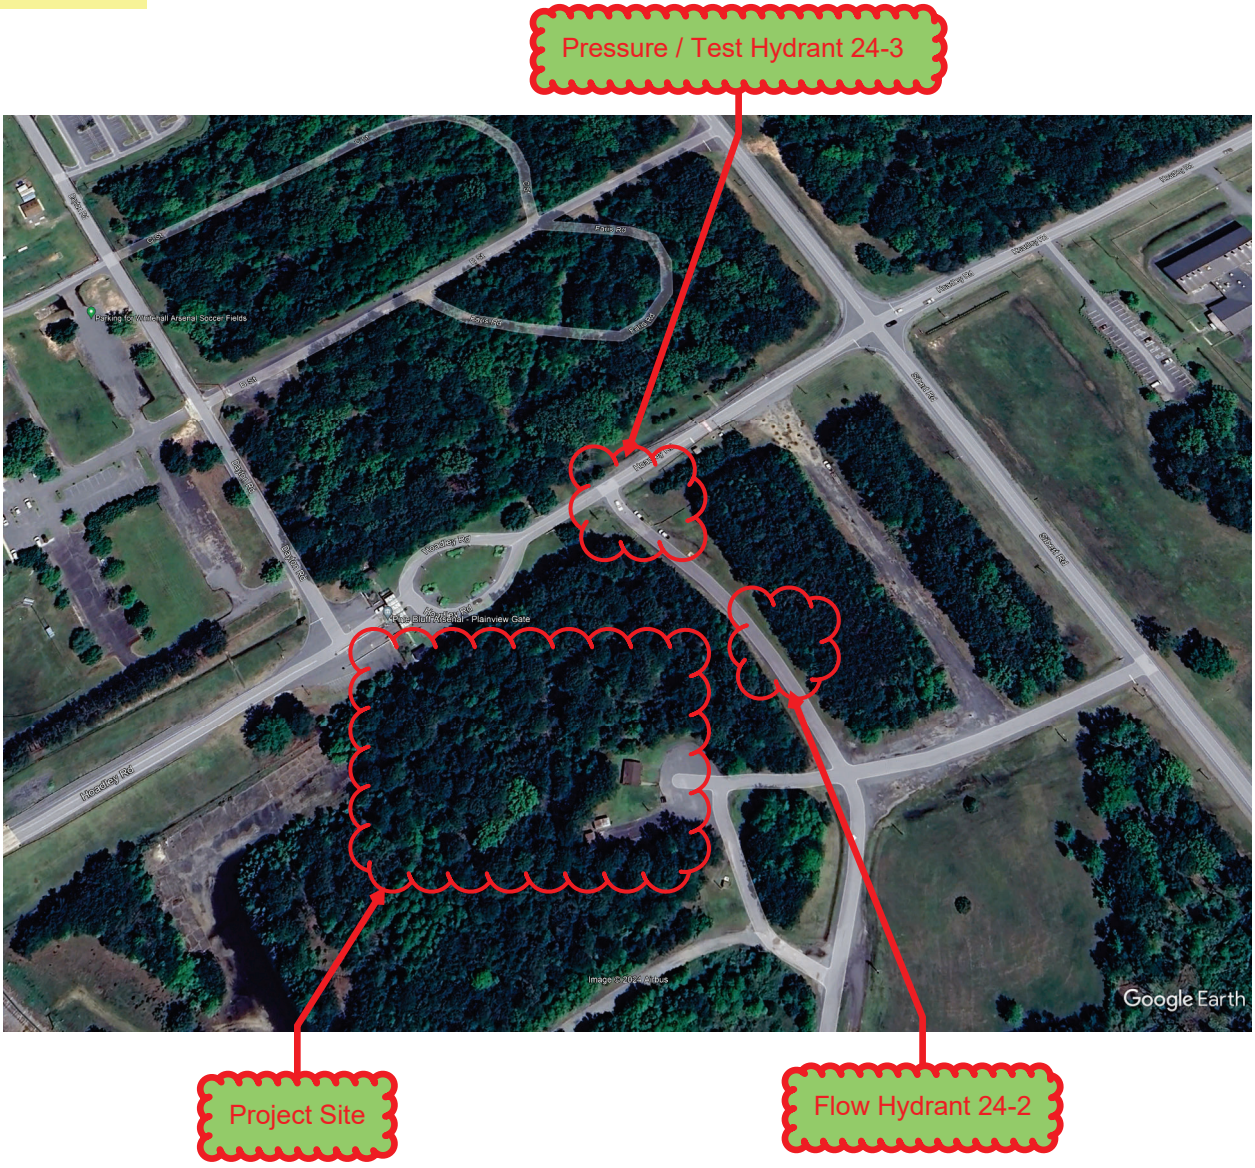
Pitot pressure(s) 26 psi (bar) (856 gpm)



Projected results: 1,157 gpm (lpm) @ 20 psi (1.4 bar)

Remarks:

One 2.50 in. Diffuser. Pitot flowed 856 gpm with Pitot Pressure of 26 psi. A Static Pressure of 48 psi was reduced to 32 psi during the flow test.



- Gauges were calibrated on May 20, 2024 (Calibration Report Numbers 29437 (flow gauge) and 29441 (pressure gauge).

STANDARDS

ARMY INSTALLATION DESIGN STANDARDS (IDS) MAY 2004 - THE PURPOSE OF THESE STANDARDS, AND THIS STANDARD DESIGN PACKAGE, IS TO PROVIDE COMMON FACILITY AND INFRASTRUCTURE STANDARDS FOR ALL ARMY INSTALLATIONS. THE ARMY IDS PROVIDE COMPREHENSIVE STANDARDS IN THE FOLLOWING AREAS THAT THIS STANDARD DESIGN, WHEN IMPLEMENTED, SHALL COMPLY WITH:

- SITE PLANNING DESIGN STANDARDS
- BUILDING DESIGN STANDARDS
- CIRCULATION DESIGN STANDARDS
- LANDSCAPE DESIGN STANDARDS
- SITE ELEMENTS DESIGN STANDARDS
- FORCE PROTECTION DESIGN STANDARDS

1. UNIFIED FACILITIES CRITERIA (UFC) 4-010-01, MINIMUM ANTITERRORISM STANDARDS FOR BUILDING LATEST EDITION
2. NFPA 70, 72, 101, AND 780, LATEST EDITIONS.
3. NATIONAL FIRE PROTECTION ASSOCIATION (NFPA), NATIONAL FIRE CODES (NFC)
4. UNIFIED FACILITIES CRITERIA (UFC)3-210-10 LOW IMPACT DEVELOPMENT
5. UNIFIED FACILITIES CRITERIA (UFC) 1-200-02, HIGH PERFORMANCE AND SUSTAINABLE BUILDING REQUIREMENTS.
6. U.S. DEPT. OF THE ARMY - ARMY STANDARDS FOR ACCESS CONTROL POINTS (ACP), MARCH 2012
7. ARMY ACCESS CONTROL POINT STANDARD DESIGN, LATEST EDITION
8. UNIFIED FACILITIES CRITERIA (UFC) 4-022-02, SELECTION AND APPLICATION OF VEHICLE BARRIERS, LATEST EDITION

ELECTRONIC SECURITY

1. UNIFIED FACILITIES CRITERIA (UFC) 4-021-02 ELECTRONIC SECURITY SYSTEMS
2. UNIFIED FACILITIES GUIDE SPECS (UFGS) 28 10 05 ELECTRONIC SECURITY SYSTEMS (ESS)

ELECTRICAL DESIGN REQUIREMENTS

1. ILLUMINATING ENGINEERING SOCIETY OF NORTH AMERICA (IESNA), GUIDELINE FOR SECURITY LIGHTING FOR PEOPLE PROPERTY AND CRITICAL INFRASTRUCTURE, 2016 G-1-16
2. TECHNICAL MANUAL (TM) 5-811-1/AIR FORCE AFJMAN32-1080, ELECTRICAL POWER SUPPLY AND DISTRIBUTION
3. TECHNICAL INSTRUCTIONS (TI) 811-16, LIGHTING DESIGN
4. NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) 70, 72, 101, AND 780, LATEST EDITIONS
5. ANSI C2 NATIONAL ELECTRIC SAFETY CODE, LATEST EDITION
6. UNIFIED FACILITIES CRITERIA (UFC) 3-501-01, ELECTRICAL ENGINEERING
7. UNIFIED FACILITIES GUIDE SPECS (UFGS) UFGS 34 75 13.13 CRASH RATED ACTIVE VEHICLE BARRIERS AND CONTROLS

MECHANICAL DESIGN REQUIREMENTS

1. TI 800-01, TECHNICAL INSTRUCTIONS, DESIGN CRITERIA, 20 JULY 1998 (CHG. 28-30 JULY 2004)
2. AMERICAN SOCIETY OF HEATING, REFRIGERATION, AND AIR CONDITIONING ENGINEERS (ASHRAE) MANUALS
3. NATIONAL FIRE PROTECTION ASSOCIATION (NFPA), NATIONAL FIRE CODES (NFC)
4. ENGINEERING TECHNICAL LETTER (ETL) 1110-3-491 - SUSTAINABLE DESIGN AND DEVELOPMENT FOR MILITARY FACILITIES, 1 MAY 2001
5. UFC 3-410-01 LATEST EDITION: HEATING, VENTILATING AND AIR CONDITIONING (WITH CHANGE 9)
6. UFC 3-410-02 LATEST EDITION DESIGN: LONWORKS(R) DIRECT DIGITAL CONTROL FOR HVAC AND OTHER BUILDING SYSTEMS

PLUMBING DESIGN REQUIREMENTS

1. NATIONAL STANDARD PLUMBING CODE (NAPHCC) AND ASHRAE TECHNICAL MANUALS

CIVIL ENGINEERING

1. UNIFIED FACILITIES CRITERIA (UFC) 3-201-01 CIVIL ENGINEERING, LATEST EDITION
2. UNIFIED FACILITIES CRITERIA (UFC) 3-250-01 PAVEMENT DESIGN FOR ROADS AND PARKING AREAS, LATEST EDITION

ARCHITECTURAL

1. ABA - ARCHITECTURAL BARRIERS ACT
2. IDG- INSTALLATION DESIGN GUIDES
3. NFPA 80, STANDARD FOR FIRE DOORS AND OTHER OPENING PROTECTIVES
4. UNIFIED FACILITIES CRITERIA (UFC) 1-200-02, HIGH PERFORMANCE AND SUSTAINABLE BUILDING REQUIREMENTS
5. UNIFIED FACILITIES CRITERIA (UFC) 3-101-01, ARCHITECTURE
6. UNIFIED FACILITIES CRITERIA (UFC) 3-110-03, ROOFING
7. UNIFIED FACILITIES CRITERIA (UFC) 3-600-01, FIRE PROTECTION ENGINEERING FOR FACILITIES
8. UNIFIED FACILITIES CRITERIA (UFC) 4-023-07, DESIGN TO RESIST DIRECT FIRE WEAPONS EFFECTS

STRUCTURAL

1. FOR A STRUCTURAL REFERENCE, AND AS A GENERAL REFERENCE USE UFC 1-200-01 "DESIGN:GENERAL BUILDING REQUIREMENTS" LATEST EDITION
2. TI 809-04, TECHNICAL INSTRUCTIONS - SEISMIC DESIGN FOR BUILDINGS, 13 DECEMBER 1998 (UFC 3-310-04)
3. TI 809-04, TECHNICAL INSTRUCTIONS - STRUCTURAL DESIGN CRITERIA FOR BUILDINGS, 01 SEPTEMBER 1999 (UFC 3-310-04)

GENERAL NOTE

1. PLEASE NOTE THAT THE PRESENTED ACP LAYOUTS ARE ILLUSTRATIVE EXAMPLES AND DO NOT REPRESENT A RIGID SET OF REQUIREMENTS. THESE LAYOUTS ARE INTENDED TO PROVIDE GUIDANCE, AND ADAPTATION MAY BE NECESSARY BASED ON SPECIFIC SITE CONDITIONS. SHOULD SPACE CONSTRAINTS ARISE, COMPONENTS MAY BE ADJUSTED AND REPOSITIONED TO OPTIMIZE FUNCTIONALITY AND CLARITY. PRIORITIZATION OF ESSENTIAL ELEMENTS IS ENCOURAGED WHEN MODIFICATIONS ARE MADE. REFER TO SDDCTEA PAMPHLET 55-15, FOR COMPREHENSIVE DETAILS AND APPROVED GUIDELINES. ITS OS HIGHLY RECOMMENDED THAT THE CENTER OF STANDARDIZATION (COS) FOR ACCESS CONTROL POINTS (ACP) BE CONTACTED AT THE BEGINNING OF THE PLANNING PROCESS FOR A PROJECT THAT WILL DESIGN A NEW OR SUBSTANTIALLY ALTERED ACP. PLEASE SEE http://mrsi.erdc.dren.mil/cos/nwo/acp/FOR CONTACT INFORMATION.

GENERAL NOTES

SHEET ID

C-001

D11 EXAMPLE: PRIMARY ACP WITH VCC AND COMMERIAL VEHICLE
SCALE: NTS

NOTES:

1. SEE 'ARMY ACCESS CONTROL POINT - STANDARD DESIGN' FOR METHOD TO DETERMINE DETECTION AND DELAY REQUIREMENTS INCLUDING THE LENGTH OF THE RESPONSE ZONE. SEE DWGS. C9.01 AND C9.02 FOR DETAILS OF THE PASSIVE AND ACTIVE VEHICLE BARRIER INTERFACES. SEE SDDCTEA PAMPHLET 55-15 FOR DETAILED LAYOUTS OF THE SIGNS, SIGNALS, AND STRIPING REQUIRED FOR EACH OF THE CURRENTLY ACCEPTED ACTIVE VEHICLE BARRIER SAFETY SCHEMES. SEE DWG.C9.04 FOR PAVEMENT MARKING DETAIL.
2. OPTIONAL: PROVIDE A 35' WIDE X 110' LONG PAVED INSPECTION AREA FOR USE BY THE CARGO AND VEHICLE INSPECTION SYSTEM. THIS PROVIDES ENOUGH WIDTH FOR THE INSPECTION SYSTEM AND THE LANE OF TRAVEL FOR THE VEHICLES TO BE INSPECTED. THE LENGTH IS SUFFICIENT TO ALLOW THE INSPECTION SYSTEM TO SCAN A LARGE STATIONARY VEHICLE AND MANEUVER.

A. TO INCREASE THROUGHPUT A LONGER INSPECTION LANE CAN BE PROVIDED FOR OPERATION OF THE CARGO AND VEHICLE INSPECTION SYSTEM THAT SCANS STATIONARY VEHICLES.THIS WILL ALLOW THE SYSTEM TO SCAN SEVERAL VEHICLES AT ONE TIME.

B. PROVIDE NO CANOPY OVER THE INSPECTION AREA PLANNED OR DEDICATED FOR USE BY THE CARGO AND VEHICLE INSPECTION SYSTEM UNLESS THE CLEAR HEIGHT IS A MINIMUM OF 22'.

C. RADIATION EXCLUSION ZONES WILL BE CONSIDERED FOR ALL SCANNING EQUIPMENT.

D. ADD CONDUIT FOR ELECTRICAL POWER AND PROVIDE SUFFICIENT ELECTRICAL POWER CAPACITY FOR POSSIBLE ADDITION OF A FIXED VEHICLE INSPECTION SYSTEM.

3. SLIDING GATES TO CLOSE SEARCH AREA DURING NON-MANNED HOURS.
4. IF BETWEEN 11 & 50 PEOPLE INHABIT THE VCC ON A ROUTINE BASIS, THEN THE VCC IS AN INHABITED BUILDING OUTSIDE A CONTROLLED PERIMETER. PER DOD MINIMUM ANTI-TERRORISM STANDARDS FOR BUILDINGS (UFC 4-010-01), REQUIRED STANDOFF DISTANCES FROM ROADS AND PARKING AREAS ARE DETERMINED BY SITE-SPECIFIC BUILDING REQUIREMENTS AND RISK ASSESSMENTS.
6. THE ACP CORRIDOR FENCE MAY BE INCORPORATED INTO CERTAIN TYPES OF PASSIVE BARRIERS. IF FENCE IS NOT INCORPORATED INTO THE PASSIVE BARRIER, LOCATE FENCE A SUFFICIENT DISTANCE FROM THE PASSIVE BARRIER SUCH THAT THE AREA BETWEEN THE PASSIVE BARRIER AND FENCE CAN BE MAINTAINED AND THE PASSIVE BARRIER CANNOT BE USED TO AIDE A FENCE CLIMBER. THE AREA BETWEEN FENCE AND PASSIVE BARRIER IS A CLEAR ZONE AND MUST BE FREE OF OBSTRUCTIONS AND PLANTINGS OVER 4 INCHES TALL. FENCE SHALL BE A MINIMUM OF 6'-0" TALL CHAIN LINK FENCE WITH SINGLE OUTRIGGER AND 3 STRAND BARBED WIRE (FE6-72).

1. SEE GENERAL NOTE ON SHEET C-001.

GENERAL NOTES:
1. THIS CONCEPTUAL FLOOR PLAN REPRESENTS A FUNCTIONAL ARRANGEMENT, BUT IS NOT A REQUIRED LAYOUT.
2. ALL WALLS CAN BE ADJUSTED TO MEET THE NEEDS OF THE SPECIFIC INSTALLATION AND TO COMPLY WITH THE INSTALLATION FACILITY STANDARDS.
3. DIFFERENT ROOF DESIGNS ARE ALLOWED, COMPLY WITH UFC 3-110-03. LOW SLOPE ROOFING IS ACCEPTABLE, IF APPROVED BY THE INSTALLATION FACILITY STANDARDS.
4. OTHER FUNCTIONS CAN BE COMBINED INTO ONE BUILDING. THIS IS ONE EXAMPLE ON HOW TO COMBINE MORE THAN ONE FUNCTION INTO ONE BUILDING.

FUNCTIONAL AREAS (WITH AREA SQUARE FOOTAGE (SF) AND NOTES):
1. VESTIBULE (NOT LESS THAN 50 SF)
2. COMMAND & CONTROL (REQUIRES BALLISTIC RATED CONSTRUCTION UL 752 LEVEL 3 AT MINIMUM. NO LESS THAN 150 SF.)
3. INSIDE/OUTSIDE STORAGE (SF IS BASED ON USER REQUIREMENTS)
4. WAITING AREA/OFFICE (NO LESS THAN 300 SF)
5. COMM ROOM (SEE UFC 3-580-01 FOR SF REQUIREMENTS. IN ADDITION, SIZE ACCORDING TO USER AND EQUIPMENT NEEDS.)
6. BREAK ROOM (NO LESS THAN 150 SF)
7. TOILET (NO LESS THAN 48 SF EACH, COMPLY WITH ARCHITECTURAL BARRIERS ACT.)
8. JANITOR'S CLOSET (SF IS BASED ON USER NEEDS)
9. MECHANICAL/ELECTRICAL ROOM (SF IS BASED ON USER/BUILDING REQUIREMENTS)
10. SEE ARMY STANDARD DESIGN FOR NURSING MOTHER'S ROOM REQUIREMENTS.

GENERAL NOTES:
1. THIS CONCEPTUAL FLOOR PLAN REPRESENTS A FUNCTIONAL ARRANGEMENT, BUT IS NOT A REQUIRED LAYOUT.
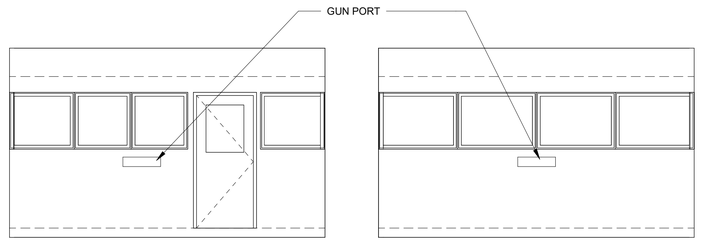
2. DIFFERENT ROOF DESIGNS ARE ALLOWED, COMPLY WITH UFC 3-110-03. FLAT OR LOW SLOPE ROOFING IS ACCEPTABLE, IF APPROVED BY THE INSTALLATION FACILITY STANDARDS.



OVERWATCH NOTES:
1. COUNTER HEIGHT SHALL BE A MINIMUM OF 34" HIGH FROM FINISH FLOOR.
2. MEET THE MINIMUM OF UL 752 LEVEL 3 FOR BALLISTIC RATING FOR ALL OF OVERWATCH PERIMETER.
3. HVAC UNITS CAN BE MOUNTED THROUGH THE WALL OR ROOF MOUNTED. UNITS NEED TO MEET THE MINIMUM BALLISTIC RESISTANCE.

BUILDING/SITE FUNCTIONS:	THIS CONCEPT PROVIDES THE FUNCTIONS:
VISITOR CONTROL CENTER (VCC)	
GUARD BOOTHS	
SEARCH BUILDING AREA	
COMMAND AND CONTROL	
ID CHECK AREA	
SEARCH AREA	
OVERWATCH	■
TOILET	
COMMUNICATIONS	
MECHANICAL/ELECTRICAL	
STORAGE	

BUILDING/SITE FUNCTION NOTES:
1. SEE ACP STANDARD DESIGN 1.4.1/1.4.2 FOR ADDITIONAL INFORMATION.

1 XXX OVERWATCH PEDESTAL RACK
NOT TO SCALE

GENERAL NOTES:
1. CONTRACTOR TO SIZE SUPPORT MEMBERS TO SUPPORT ACTUAL EQUIPMENT USED.

2. ALL ABOVE GROUND CONDUIT SHALL BE RGS AND SHALL TRANSITION TO PVC BELOW GRADE.

3. THIS IS A TYPICAL DETAIL THAT CAN BE USED WHEN THE OVERWATCH POSITION IS A PAD. THE MAIN ELEMENT IS THE OVERWATCH AVB PANEL IS TO HAVE CORD WITH A PLUG CONNECTION AND A LOCKABLE ENCLOSURE THAT ENSURE THE PANEL CAN BE STORED ON SITE.

KEYED NOTES
1. #6 AWG BARE COPPER BOLTED TO FRAME AND EXOTHERMICALLY CONNECTED TO 3/4" DIA. x 10'-0" LONG GROUND ROD.

2. SPACE FOR ACTIVE VEHICLE BARRIER OVERWATCH CONTROL PANEL. PROVIDE TAMPER SWITCHES PER SPECIFICATIONS.

3. EXOTHERMICALLY CONNECT GROUND RODS TO EACH OTHER WITH BARE COPPER. CONDUCTOR SIZE SHALL BE 1/0 AWG.

4. WEATHERPROOF GFCI CONVENIENCE RECEPTACLE.

5. WEATHERPROOF JUNCTION BOX (4"X4") FOR DURESS PUSHBUTTON.

6. DIRECT LINE TELEPHONE. INSTALL TELEPHONE JACK IN NEMA 3R OR 4 CAST ALUMIMUM HEAVY DUTY PHONE ENCLOSURE. APPROXIMATE BOX DIMENSIONS ARE 20"H x 10"W x 7"D. BOX SHALL BE YELLOW WITH THE WORDS 'TELEPHONE' ON THE OUTSIDE HINGED DOOR.

7. SIX INCH CONCRETE PAD WITH WIRE MESH.

8. ENSURE PAD WIDTH PROVIDES 3-FOOT CLEAR FROM THE EQUIPMENT AS A MINIMUM. CONTRACTOR CAN MOUNT EQUIPMENT ON BACK OF RACK TO REDUCE OVERALL LENGTH.

9. 3/4" PVC THROUGH CONCRETE SLAB. SEAL CONDUIT WITH PUTTY LIKE SEALANT.

10. EXTEND ONE 2"C TO HH-14C AND ONE 2"C TO HH-14P. CAP AND SEAL THE CONDUIT AT BOTH ENDS.

STANDARDS DEVELOPED UTILIZING COMMON ENGINEERING AND ARCHITECTURAL RESOURCES. ENGINEERING JUDGEMENT APPLIED WHERE APPROPRIATE. ALL FEATURES AND DIMENSIONS SHOULD BE VALIDATED AND ADJUSTED AS APPROPRIATE AS PART OF THE DESIGN PROCESS.

HYBRID BEACON (SIGNS AND SIGNALS) SAFETY SYSTEM
NOT TO SCALE

NOTES:

1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, A SEARCH AREA, PEDESTRIAN BOOTH, AN OVER WATCH POSITION, AND 4 ACTIVE VEHICLE BARRIERS (AVB). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. BARRIER MODE AND STATUS INDICATING LIGHTS ARE OPTIONAL. PROVIDE AT REQUEST OF THE INSTALLATION. IF THE OVERWATCH IS A PARKING POSITION, IT IS RECOMMENDED TO NOT PROVIDE.

3. PROVIDE A SEPARATE STAND ALONE EFO TOGGLE SWITCH OR RED PUSH BUTTON WITH SAFETY COVER MOUNTED ON THE INSIDE OF THE GUARD BOOTH TO THE LEFT OF THE DOOR FRAME FOR EASY ACCESS BY THE GUARD WHO MAY BE STANDING OUTSIDE GUARD BOOTH DURING ID CHECKS.

4. BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED:

   a. UNDER NORMAL OPERATIONS,THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR EFO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
   b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PLACE THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "OFF" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS.THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "EFO" POSITION, AND THEN WILL REMOVE AND LOCKUP THE KEY.
   c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PLACING THE MODE SWITCH IN THE "TEST" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE EFO POSITIONS FOR THE PROPER RESPONSE TO AN EFO COMMAND.

5. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIERS AND CONTROLS" APPENDIX A "HYBRID BEACON SAFETY SYSTEM" FOR DESCRIPTIONS OF THE REQUIRED BARRIER AND TRAFFIC CONTROL SEQUENCES. THE HYBRID BEACON SAFETY SCHEME INDICATED IS BASED ON SDDCTEA PAMPHLET 55-15, 2019.

6. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INSIDE & OUTSIDE.

7. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS.

NOTES CONTINUED:

8. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEMS OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC. THE INDICATING LIGHT LABELED 'VPD ON' SHALL COME ON WHEN ANY OF THE BARRIER'S VEHICLE PRESENCE DETECTORS (VPD'S) GETS A CALL (VEHICLE DETECTED) FOR MORE THAN 15 SECONDS. THE VPD TROUBLE SHALL COME ON WHEN THERE IS A PROBLEM DETECTED ON THE VEHICLE PRESENCE DETECTORS OR CONTROLLER.

9. OVERSPEED, WRONG-WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY ANOTHER PANEL IN THE COMMAND & CONTROL AREA.

10. AREA AROUND EFO SWITCH SHALL BE RED.

11. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

12. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

13. CONTROLS SHALL BE MADE SO THAT IF AN ACTIVE VEHICLE BARRIER (AVB) IS IN TEST OR LOCAL MODE AND AN EFO IS PUSHED THEN TURNING THE THREE POSITION SWITCH TO EFO PRIOR TO AN EFO RESET SHALL NOT CAUSE THE AVB TO DEPLOY.

14. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

   a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS-UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSHBUTTON IS REQUIRED TO DROPOUT RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED-UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIER'S LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND, IF THERE IS NOT A VEHICLE OVER IT, THE PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
   b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5 - 1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS-UP A TIMER RELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRES, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOPS 1 AND 2 BEFORE THE TIMER RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

15. PUSH BUTTONS WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

16. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

17. IF REMOTE MONINTORING OF AN EFO ACTIVATION IS REQUIRED, THEN SEE SHEET E-102.

18. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

19. THE INBOUND AND OUTBOUND LOCAL PANELS CAN BE COMBINED INTO ONE ENCLOSURE IF THE LOCATION OF THE POWER UNITS ARE ADJACENT TO EACH OTHER.

20. OUT-OF-SERVICE SWITCH IS OPTIONAL WHEN THERE IS ONL Y ONE LANE PER DIRECTION OF TRAVEL OR ONE AVB CROSSING MULTIPLE LANES; OTHEWISE, FOR MULTIPLE LANES PER DIRECTION OF TRAVEL PROVIDE.

21. OPERATING PANEL FOR THE SEARCH AREA PANEL IS TO BE MOUNTED IN A NEMA 4 LOCKABLE PANEL OR THE OPERATING PANEL MUST BE WEATHERPROOF.

22. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES

SPECIAL ALARMS:

MASTER EFO MODE LOCAL IN LOCAL MODE	MASTER EFO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
MASTER PLACED EFO MODE & AVBS INCORRECT	MASTER EFO MODE LIGHT FLASH
OUT OF SERVICE	UP & DOWN LIGHTS ALTERNATE FLASH

23. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

24. IF ALLOWED IN THE CONTRACT, PROVIDE HARD CONTROL OR TOUCHSCREEN CONTROL FOR THE OPERATING PANELS; HOWEVER, EFO IS REQUIRED TO BE A DISCRETE HARD CONTROL SWITCH WITH A COVER IN BOTH CASES.

25. THIS EFO OPERATING PANEL IS USED ONLY ON ARMY PROJECTS.

26. AIR FORCE. ON AIR FORCE PROJECTS THE VISUAL ALARM IS NOT REQUIRED AS LONG AS THE AUDIBLE ALARM IS PROVIDED.

27. OPTION. THIS IS NOT STANDARD, BUT AN ADDITIONAL KEYED SWITCH IS ALLOWED TO BYPASS THE SAFETY LOOP ON THE ACTIVE VEHICLE BARRIER SO THAT IT CAN BE LOWERED. THIS WOULD HAVE TO BE APPROVED BY THE INSTALLATION.

CONSTRUCTION NOTES:

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. BEAM TYPE DETECTORS.
11. HYBRID BEACON WITH TWO RED AND ONE YELLOW.
12. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
13. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.

GENERAL NOTES:

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.
3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.
4. DIAGRAM IS FOR FOUR AVBS. TWO GUARDBOOTHS, ONE SEARCH AREA, AND AN OVERWATCH AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNAL, REAR TAG CAMERA, AND CARD READER ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARM/SIGNAL AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR THE REAR TAG CAMERA. NOTE THAT THE PEDESTRIAN BOOTH IS NOT SHOWN EVEN THOUGH IT IS ON THE PANEL LAYOUT.

1 TY602CH NOT TO SCALE — ELEVATION TYPICAL - HYBRID BEACON

GENERAL NOTES:

1. AT THE END OF 7 SECONDS (TO INCLUDE 3 SECOND REACTION TIME) ALL BARRIERS ARE TO BE FULLY DEPLOYED.

2. DO NOT ENTER LED BLANKOUT SIGN MAY OR MAY NOT BE REQUIRED.

3. 100 dB HORN SHALL BE ADJUSTABLE. HORN IS TO SOUND FOR 10 SECONDS AFTER THE EFO IS PUSHED AND THEN TURN OFF.

4. IN-PAVEMENT LIGHTS ARE ONLY REQUIRED IF THE ACTIVE VEHICLE BARRIER DOES NOT HAVE BARRIER LIGHTS.

5. PROVIDE AT THE ID CHECK CANOPY. A MINIMUM OF ONE PER TWO LANES MOUNTED ON COLUMN NEAR ENTRANCE TO ID CHECK AREA. IT IS OPTIONAL TO HAVE ONE MOUNTED IN THE SEARCH AREA.

PROVIDE 3"-4" HIGH RED LED LETTERING IN A WEATHERPROOF ENCLOSURE. THE WORDING 'OVERSPEED' OR 'WRONG WAY' SHALL ILLUMINATE INDEPENDENTLY. PROVIDE AN AUDIBLE DEVICE WITH A MEANS TO ADJUST THE VOLUME. SEE NOTE 5.

COMMAND & CONTROL MASTER CONTROL OPERATING PANEL

HIGH EFFICIENCY PRESENCE DETECTION SAFETY SYSTEMS

NOT TO SCALE

NOTES:

1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, PEDESTRIAN BOOTH, A SEARCH AREA, AND AN OVER WATCH POSITION, AND 2 ACTIVE VEHICLE BARRIERS (AVB). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. BARRIER MODE AND STATUS INDICATING LIGHTS ARE OPTIONAL. PROVIDE AT REQUEST OF THE INSTALLATION. IF THE OVERWATCH IS A PARKING POSITION, IT IS RECOMMENDED TO NOT PROVIDE.

3. PROVIDE A SEPARATE STAND ALONE EMERGENCY FAST OPERATE (EFO) TOGGLE SWITCH OR RED PUSH BUTTON WITH SAFETY COVER MOUNTED ON THE INSIDE OF THE GUARD BOOTH TO THE LEFT OF THE DOOR FRAME FOR EASY ACCESS BY THE GUARD WHO MAY BE STANDING OUTSIDE GUARD BOOTH DURING ID CHECKS.

4. BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED:

   a. UNDER NORMAL OPERATIONS, THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR EFO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
   b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PLACE THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "OFF" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS. THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "EFO" POSITION,AND THEN WILL REMOVE AND LOCKUP THE KEY.
   c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PLACING THE MODE SWITCH IN THE "TEST" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE EFO POSITIONS FOR THE PROPER RESPONSE TO AN EFO COMMAND.

5. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS" APPENDIX A "HIGH EFFICIENCY PRESENCE DETECTION SAFETY SYSTEM" FOR DESCRIPTIONS OF THE BARRIER AND TRAFFIC CONTROL SEQUENCES. HEPD IS BASED ON SDDCTEA PAMPHLET 55-15, 2019.

6. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INSIDE & OUTSIDE.

7. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS.

NOTES CONTINUED:

8. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEMS OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC. THE INDICATING LIGHT LABELED 'SAFETY LOOPS ON' SHALL COME ON WHEN ANY OF THE BARRIER'S VEHICLE PRESENCE DETECTORS (VPD'S) GETS A CALL (VEHICLE DETECTED) FOR MORE THAN 15 SECONDS. THE VPD TROUBLE SHALL COME ON WHEN THERE IS A PROBLEM DETECTED ON THE VEHICLE PRESENCE DETECTORS OR CONTROLLER.

9. OVERSPEED, WRONG-WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY ANOTHER PANEL IN THE COMMAND & CONTROL AREA.

10. AREA AROUND EFO SWITCH SHALL BE RED.

11. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

12. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

13. CONTROLS SHALL BE MADE SO THAT IF AN AVB IS IN TEST OR LOCAL MODE AND AN EFO IS PUSHED THEN TURNING THE THREE POSITION SWITCH TO EFO PRIOR TO AN EFO RESET SHALL NOT CAUSE THE AVB TO DEPLOY.

14. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

   a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS-UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSHBUTTON IS REQUIRED TO DROPOUT RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED-UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIER'S LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND, IF THERE IS NOT A VEHICLE OVER IT, THE PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
   b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5 - 1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS-UP A TIMER RELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRES, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOPS 1 AND 2 BEFORE THE TIMER RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

15. PUSH BUTTONS WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

16. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

17. IF REMOTE MONITORING IS REQUIRED, THEN SEE SHEET E-111.

18. THE INBOUND AND OUTBOUND LOCAL PANELS CAN BE COMBINED INTO ONE PANEL IF THE LOCATION OF THE POWER UNITS ARE ADJACENT TO EACH OTHER.

19. OUT-OF-SERVICE SWITCH IS OPTIONAL.

20. OPERATING PANEL FOR THE SEARCH AREA PANEL - MOUNT IN A NEMA 4 LOCKABLE ENCLOSURE OR THE OPERATING PANEL MUST BE WEATHERPROOF.

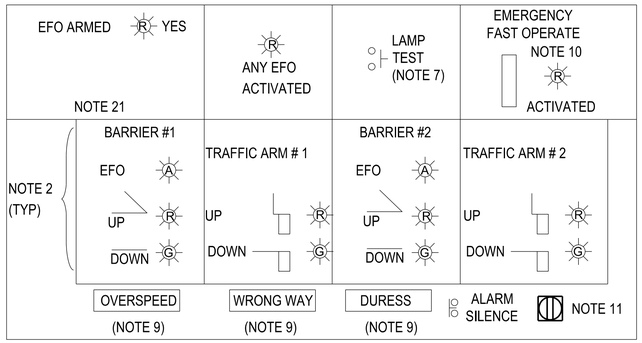
21. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

22. SPECIAL ALARM: WHEN TRAFFIC ARM IS NOT FULLY OPEN OR CLOSED FOR MORE THAN 5 SECONDS POSITION LIGHTS FLASH. WHEN GOING BACK TO AVB-UP OR AVB-DOWN & BARRIER AND TRAFFIC ARM IN INCORRECT POSITION THE MODE INDICATOR WILL FLASH.

23. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

24. IF ALLOWED IN THE CONTRACT, PROVIDE HARD CONTROL OR TOUCHSCREEN CONTROL FOR THE OPERATING PANELS; HOWEVER, EFO IS REQUIRED TO BE A DISCRETE HARD CONTROL SWITCH WITH A COVER IN BOTH CASES.

25. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES:

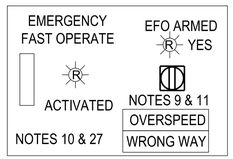


SPECIAL ALARMS:

OUT-OF-SERVICE	ALTERNATING UP/DOWN POSITION LIGHTS
MASTER EFO UP OR EFO DOWN LOCAL IN LOCAL MODE	MASTER EFO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
MASTER PLACED EFO MODE UP OR EFO DOWN & AVBS INCORRECT	MASTER EFO MODE LIGHT FLASH
TRAFFIC ARM POSITION FAILURE	ALTERNATE UP/DOWN INDICATOR

26. THIS EFO OPERATING PANEL IS ONLY USED ON ARMY PROJECTS.

27. AIR FORCE. ON AIR FORCE PROJECTS, THE VISUAL ALARM IS NOT REQUIRED IF THE AUDIBLE ALARM PROVIDED.



28. OPTION. THIS IS NOT STANDARD, BUT AN ADDITIONAL KEYED SWITCH IS ALLOWED TO BYPASS THE SAFETY LOOP ON THE ACTIVE VEHICLE BARRIER SO THAT IT CAN BE LOWERED. THIS WOULD HAVE TO BE APPROVED BY THE INSTALLATION.

CONSTRUCTION NOTES

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
11. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.

GENERAL NOTES

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.
3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.
4. DIAGRAM IS FOR TWO AVBS, TWO GUARDBOOTHS, ONE SEARCH AREA, AN OVERWATCH, AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNALS, REAR TAG CAMERA, AND CARD READER ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARMS/SIGNALS AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR A REAR TAG CAMERA. PEDESTRIAN BOOTH PANEL IS NOT SHOWN.

NOTES:

1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, PEDESTRIAN BOOTH, A SEARCH AREA, AN OVER WATCH POSITION, AND 4 ACTIVE VEHICLE BARRIERS (AVB). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. BARRIER MODE AND STATUS INDICATING LIGHTS ARE OPTIONAL. PROVIDE AT REQUEST OF THE INSTALLATION. IF THE OVERWATCH IS A PARKING POSITION, IT IS RECOMMENDED TO NOT PROVIDE.

3. PROVIDE A SEPARATE STAND ALONE EMERGENCY FAST OPERATE (EFO) TOGGLE SWITCH OR RED PUSH BUTTON WITH SAFETY COVER MOUNTED ON THE INSIDE OF THE GUARD BOOTH TO THE LEFT OF THE DOOR FRAME FOR EASY ACCESS BY THE GUARD WHO MAY BE STANDING OUTSIDE GUARD BOOTH DURING ID CHECKS.

4. BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED:

   a. UNDER NORMAL OPERATIONS,THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR EFO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
   b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PLACE THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "OFF" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS.THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "EFO" POSITION, AND THEN WILL REMOVE AND LOCKUP THE KEY.
   c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PLACING THE MODE SWITCH IN THE "TEST" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE EFO POSITIONS FOR THE PROPER RESPONSE TO AN EFO COMMAND.

5. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIERS AND CONTROLS" APPENDIX A "HIGH EFFICIENY PRESENCE DETETION (HEPD) AND STOP CONTROL SAFETY SYSTEMS" FOR DESCRIPTIONS OF THE REQUIRED BARRIER AND TRAFFIC CONTROL SEQUENCES. HEPD IS BASED ON SDDCTEA PAMPHLET 55-15, 2019. STOP CONTROL HAS NO OPERATIONAL DIFFERENCE BETWEEN SDDCTEA PAMPHLET 55-15, 2014 AND THE 2019 VERSIONS.

6. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INSIDE & OUTSIDE.

7. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS.

NOTES CONTINUED:

8. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEMS OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC. THE INDICATING LIGHT LABELED 'VPD ON' SHALL COME ON WHEN ANY OF THE BARRIER'S VEHICLE PRESENCE DETECTORS (VPD'S) GETS A CALL (VEHICLE DETECTED) FOR MORE THAN 15 SECONDS. THE VPD TROUBLE SHALL COME ON WHEN THERE IS A PROBLEM DETECTED ON THE VEHICLE PRESENCE DETECTORS OR CONTROLLER.

9. OVERSPEED, WRONG-WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY ANOTHER PANEL IN THE COMMAND & CONTROL AREA.

10. AREA AROUND EFO SWITCH SHALL BE RED.

11. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

12. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

13. CONTROLS SHALL BE MADE SO THAT IF AN ACTIVE VEHICLE BARRIER (AVB) IS IN TEST OR LOCAL MODE AND AN EFO IS PUSHED THEN TURNING THE THREE POSITION SWITCH TO EFO PRIOR TO AN EFO RESET SHALL NOT CAUSE THE AVB TO DEPLOY.

14. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

   a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS-UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSHBUTTON IS REQUIRED TO DROPOUT RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED-UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIER'S LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND, IF THERE IS NOT A VEHICLE OVER IT, THE PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
   b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5 - 1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS-UP A TIMER RELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRES, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOPS 1 AND 2 BEFORE THE TIMER RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

15. PUSH BUTTONS WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

16. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

17. IF REMOTE MONINTORING OF AN EFO ACTIVATION IS REQUIRED, THEN SEE SHEET E-102.

18. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

19. THE INBOUND AND OUTBOUND LOCAL PANELS CAN BE COMBINED INTO ONE PANEL IF THE LOCATION OF THE POWER UNITS ARE ADJACENT TO EACH OTHER.

20. OUT-OF-SERVICE SWITCH IS OPTIONAL.

21. OPERATING PANEL FOR THE SEARCH AREA PANEL IS TO BE MOUNTED IN A NEMA 4 LOCKABLE PANEL OR THE OPERATING PANEL MUST BE WEATHERPROOF.

22. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES SPECIAL ALARMS:

MASTER EFO MODE LOCAL IN LOCAL MODE	MASTER EFO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
MASTER PLACED EFO MODE & AVBS INCORRECT	MASTER EFO MODE LIGHT FLASH

23. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

24. IF ALLOWED IN THE CONTRACT, PROVIDE HARD CONTROL OR TOUCHSCREEN CONTROL FOR THE OPERATING PANELS; HOWEVER, EFO IS REQUIRED TO BE A DISCRETE HARD CONTROL SWITCH WITH A COVER IN BOTH CASES.

25. THIS EFO OPERATING PANEL IS USED ONLY ON ARMY PROJECTS.

26. AIR FORCE. ON AIR FORCE PROJECTS THE VISUAL ALARM IS NOT REQUIRED AS LONG AS THE AUDIBLE ALARM IS PROVIDED.

27. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

CONSTRUCTION NOTES

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. BEAM TYPE DETECTORS.
11. THREE HEAD GREEN/YELLOW/RED OR HYBRID BEACON WITH TWO RED AND ONE YELLOW.
12. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
13. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.

GENERAL NOTES

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.
3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.
4. DIAGRAM IS FOR FOUR AVBS. TWO GUARDBOOTHS, ONE SEARCH AREA, AND AN OVERWATCH AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNAL, REAR TAG CAMERA, AND CARD READER ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARM/SIGNAL AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR THE REAR TAG CAMERA.

NOT TO SCALE

NOTES:

1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, A PEDESTRIAN BOOTH, 1 SEARCH AREA OVER WATCH POSITION, AND 2 ACTIVE VEHICLE BARRIERS (AVB). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. BARRIER MODE AND STATUS INDICATING LIGHTS ARE OPTIONAL. PROVIDE AT REQUEST OF THE INSTALLATION. IF THE OVERWATCH IS A PARKING POSITION, IT IS RECOMMENDED TO NOT PROVIDE.

3. PROVIDE A SEPARATE STAND ALONE EMERGENCY FAST OPERATE (EFO) TOGGLE SWITCH OR RED PUSH BUTTON WITH SAFETY COVER MOUNTED ON THE INSIDE OF THE GUARD BOOTH TO THE LEFT OF THE DOOR FRAME FOR EASY ACCESS BY THE GUARD WHO MAY BE STANDING OUTSIDE GUARD BOOTH DURING ID CHECKS.

4. BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED:

   a. UNDER NORMAL OPERATIONS, THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR EFO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
   b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PLACE THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "OFF" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS. THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "EFO" POSITION, AND THEN WILL REMOVE AND LOCKUP THE KEY.
   c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PLACING THE MODE SWITCH IN THE "TEST" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE EFO POSITIONS FOR THE PROPER RESPONSE TO AN EFO COMMAND.

5. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS" APPENDIX A "STOP CONTROL SAFETY SYSTEM" FOR DESCRIPTIONS OF THE REQUIRED BARRIER AND TRAFFIC CONTROL SEQUENCES. STOP CONTROL IS BASED ON SDDCTEA PAMPHLET 55-15 DATED 2019. THERE ISN'T ANY CONTROL DIFFERNCE BETWEEN THE 2014 AND 2019 VERSIONS. THERE ARE SOME CHANGES BETWEEN THE TWO VERSION SUCH AS LOOP SIZE THAT NEED TO BE TAKEN INTO ACCOUNT.

6. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INSIDE & OUTSIDE.

7. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS.

8. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEMS OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC. THE INDICATING LIGHT LABELED 'VPD ON' SHALL COME ON WHEN ANY OF THE BARRIER'S VEHICLE PRESENCE DETECTORS (VPD'S) GETS A CALL (VEHICLE DETECTED) FOR MORE THAN 15 SECONDS. THE VPD TROUBLE SHALL COME ON WHEN THERE IS A PROBLEM DETECTED ON THE VEHICLE PRESENCE DETECTORS OR CONTROLLER.

NOTES CONTINUED:

9. OVERSPEED, WRONG-WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY SOME OTHER PANEL.

10. AREA AROUND EFO SWITCH SHALL BE RED.

11. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

12. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

13. CONTROLS SHALL BE MADE SO THAT IF AN AVB IS IN TEST OR LOCAL MODE AND AN EFO IS PUSHED THEN TURNING THE THREE POSITION SWITCH TO EFO PRIOR TO AN EFO RESET SHALL NOT CAUSE THE AVB TO DEPLOY.

14. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

   a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS-UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSHBUTTON IS REQUIRED TO DROPOUT RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED-UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIER'S LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND, IF THERE IS NOT A VEHICLE OVER IT, THE PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
   b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5 - 1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS-UP A TIMER RELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRES, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOPS 1 AND 2 BEFORE THE TIMER RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

15. PUSH BUTTONS WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

16. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

17. IF REMOTE MONITORING OF AN EFO IS REQUIRED, SEE SHEET E-131.

18. OUT-OF-SERVICE SWITCH IS OPTIONAL WHEN THERE IS A SINGLE LANE PER DIRECTION OF TRAVEL. WHEN MULTIPLE LANES PER DIRECTION OF TRAVEL AND THE LANES ARE NOT SEPARATED BY AN ISLAND, THEN PROVIDE AN OUT OF SERVICE SWITCH FOR EACH AVB.

19. OPERATING PANEL FOR THE SEARCH AREA PANEL IS TO BE MOUNTED IN A NEMA 4 LOCKABLE ENCLOSURE OR THE OPERATING PANEL MUST BE WEATHERPROOF.

20. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

21. VPD ON, LOOP ON, AND BEAM ON INDICATE ACTIVATION OF SENSOR FOR OVER 15 SECONDS.

22. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES:

SPECIAL ALARMS:

OUT-OF-SERVICE	ALTERNATING UP/DOWN POSITION LIGHTS
MASTER EFO MODE LOCAL IN LOCAL MODE	MASTER EFO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
MASTER PLACED EFO MODE & AVBS INCORRECT	MASTER EFO MODE LIGHT FLASH
OUT OF SERVICE	ALTERNATING FLASHING UP AND DOWN LIGHTS

23. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

24. IF ALLOWED BY THE CONTRACT, PROVIDE HARD CONTROL OR TOUCHSCREEN CONTROL FOR THE OPERATING PANELS; HOWEVER, EFO IS REQUIRED TO BE A DISCRETE HARD CONTROL SWITCH WITH A COVER IN BOTH CASES.

25. THIS EFO OPERATING PANEL IS USED ONLY ON ARMY PROJECTS.

26. AIR FORCE. ON AIR FORCE PROJECTS, THE VISUAL ALARM IS NOT REQUIRED AS LONG AS THE AUDIBLE ALARM IS PROVIDED.

27. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

CONSTRUCTION NOTES

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH IS PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
11. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.

GENERAL NOTES

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.
3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.
4. DIAGRAM IS FOR TWO AVBS, TWO GUARDBOOTHS, ONE SEARCH AREA, AN OVERWATCH, AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNALS, CARD READER, AND REAR TAG CAMERAS ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARMS/SIGNALS AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR THE REAR TAG CAMERA.

NOTES:

1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, AN OVER WATCH POSITION, SEARCH AREA, AND 4 ACTIVE VEHICLE BARRIERS (AVB) (2 FOR INBOUND & 2 FOR OUTBOUND ENTRAPMENT). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. IF THE INSTALLATION HAS ITS OWN IDS AT THE LOCATION, THEN THE ALARM IS NOT REQUIRED.

3. THE BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED WITH THE KEY REMOVABLE IN ALL MODES. EACH BARRIER AT AN ACP SHALL HAVE A UNIQUE KEY.

a. UNDER NORMAL OPERATIONS, THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR AUTO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PUT THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "AUTO" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS. THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "AUTO" POSITION,AND THEN WILL REMOVE AND LOCKUP THE KEY.
c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PUTTING THE MODE SWITCH IN THE "MANUAL" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE AUTO POSITIONS.

4. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS APENDIX A "FULL CONTAINMENT SAFETY SYSTEM" FOR DESCRIPTIONS OF THE REQUIRED BARRIER AND TRAFFIC CONTROL SEQUENCES. THIS IS BASED ON SDDCTEA PAMPHLET 55-15, 2019.

5. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBIAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INBOUND & OUTBOUND

6. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS.

7. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEM OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC.

8. OVERSPEED, WRONG- WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE ALARM SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY SOME OTHER PANEL.

9. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

10. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

11. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS- UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSH BUTTON IS REQUIRED RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED- UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIERS LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND IF THERE IS NOT A VEHICLE OVER IT, PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT AS DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5-1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS UP A TIMER DELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRE, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOP 1 AND 2 BEFORE THE TIME RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

12. PUSH BUTTON WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

13. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

14. SOME LOCATIONS REQUEST TRAFFIC ARMS AHEAD OF THE BARRIER. THIS IN AN ALLOWED OPTION. REVISE PANELS.

15. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

16.INDICATING LIGHTS ACTIVATED WHEN A LOOP IS ACTIVATED.

17. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION.

18. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES:
SPECIAL ALARMS:

MASTER AUTO MODE LOCAL IN LOCAL MODE	MASTER AUTO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
RETURN TO AUTO MODE INCORRECT CONFIG.	AUTO MODE & AVB INDICATOR LIGHTS FLASH

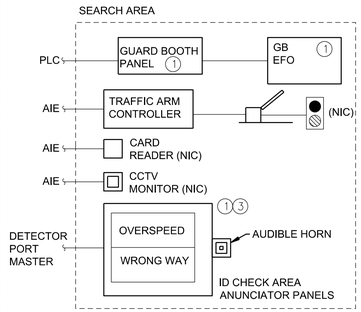
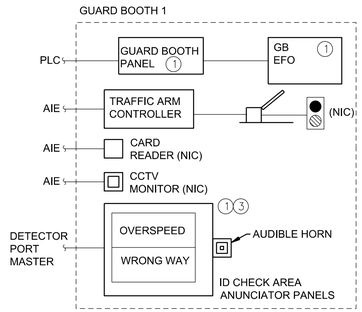
GENERAL NOTES

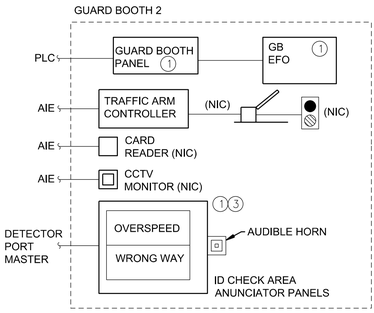
1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.



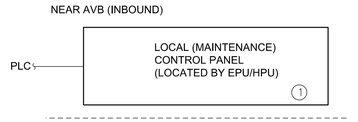
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.



3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIERS AND CONTROLS FOR SPECIFIC REQUIREMENTS.



4. DIAGRAM IS FOR FOUR AVBS, TWO GUARDBOOTHS, AND AN OVERWATCH AND FIXED AIE. NOTE THAT GUARD BOOTHS ARE NOT TYPICAL FOR THIS SAFETY SCHEME. IF HANDHELD AIE THEN TRAFFIC ARM/SIGNALS, CARD READER, AND REAR TAG CAMERA ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARM/SIGNAL AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR REAR TAG CAMERA.



CONSTRUCTION NOTES

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL CAN BE IN A BUILDING OR AT A PAVED PAD. IF AT PAVED PAD PROVIDE CABLE AND CABINET. CABINET IS TO BE LARGE ENOUGHT TO PUT CONTROL PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.

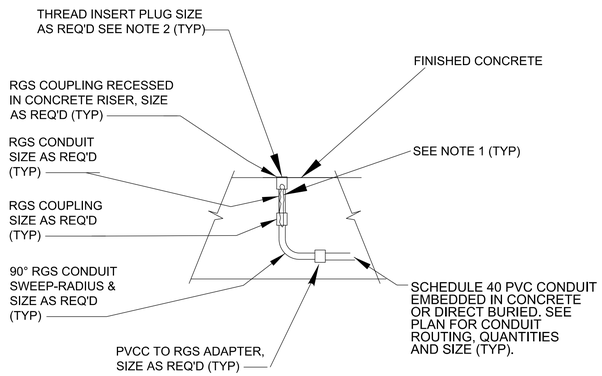
ISLAND TYPICAL PLAN

1

SCALE: 1/4" = 1'-0"



ISLAND ELEVATION

A

4' 2' 0 4'

SCALE: 1/4" = 1'-0"

NOTES:

1. PULL STRING SHALL BE PROVIDED AND INSTALLED INSIDE CONDUIT. EXCESS PULL STRING SHALL BE COILED NEAR PLUG FOR USE.

2. INSTALL CONDUIT PLUG PRIOR TO ENCASING CONDUIT IN CONCRETE.

TYPICAL EMBEDDED CONDUIT STUB UP DETAIL

2

NOT TO SCALE

KEYED NOTES:

1. P IS FOR POWER (600V OR LESS) HANDHOLE. S IS FOR SIGNAL (CONTROL CABLES) HANDHOLE. SUGGESTED SIZE FOR EACH IS 36" X 60" X 36"D. THE SIGNAL HANDHOLE MUST HAVE A SOLID BOTTOM.

2. 3/4" C FOR LOOP DETECTORS. (NIC) CONDUIT SHALL BE PLACED 1" BELOW SURFACE OF ROAD AND EXTEND OUT A DISTANCE OF 12" FROM CURB FACE..

3. 3/4" C FOR LOOP DETECTORS. (NIC) CONDUIT SHALL BE PLACED 1" BELOW SURFACE OF ROAD AND EXTEND OUT A DISTANCE OF 12" FROM CURB FACE.

4. CONDUIT REQUIREMENTS FOR AIE ONLY WHEN GOING FROM GATEHOUSE/HUT OR OTHER LOCATION TO FIRST HANDHOLE AND THEN BETWEEN ISLANDS:
POWER: TWO 2"C; SIGNAL ONE 4"C.

GENERAL NOTES

1. PLAN IS FOR NEW CONSTRUCTION. THE PLAN SHOWS PLACEMENT OF CONDUITS REQUIRED FOR AUTOMATED INSTALLATION ENTRY (AIE) EQUIPMENT. DETAIL 2 SHOWS SUGGESTED METHOD OF CONDUIT PLACEMENT IN THE CONCRETE, BUT OTHER METHODS ARE ALLOWED.

2. PROVIDE NO MORE THAN 1" SPACING BETWEEN CONDUITS.

3. CONDUIT STUB-UPS TO A DEVICE OR EQUIPMENT SHALL BE GROUPED TO HAVE A MAXIMUM OF 1" SEPARATION.

4. NIC IS NOT IN CONTRACT.

5. CONDUIT AND CAMERAS ARE TO BE INSTALLED IN CONCRETE.

6. AT LEAST 3' IS REQUIRED TO BE MAINTAINED AROUND THE GUARD BOOTH. THIS INCLUDES ENSURING THE DISTANCE IS MAINTAINED FROM THE GUARD BOOTH MECHANICAL UNIT, WHEN IT IS NOT ROOF MOUNTED.

7. TRAFFIC ARM AND TRAFFIC ARM SIGNAL ARE SHOWN COMBINED; HOWEVER THE TRAFFIC ARM AND TRAFFIC ARM SIGNAL CAN BE SEPARATED PIECES OF EQUIPMENT.

8. FOR REFERENCE, THE AIE CABINET LOCATED AT THE GATEHOUSE/HUT OR OTHER LOCATION IS TYPICALLY A 45U: 78"H X 29"W X 42"D.

STANDARDS DEVELOPED UTILIZING COMMON ENGINEERING AND ARCHITECTURAL RESOURCES. ENGINEERING JUDGEMENT APPLIED WHERE APPROPRIATE. ALL FEATURES AND DIMENSIONS SHOULD BE VALIDATED AND ADJUSTED AS APPROPRIATE AS PART OF THE DESIGN PROCESS.

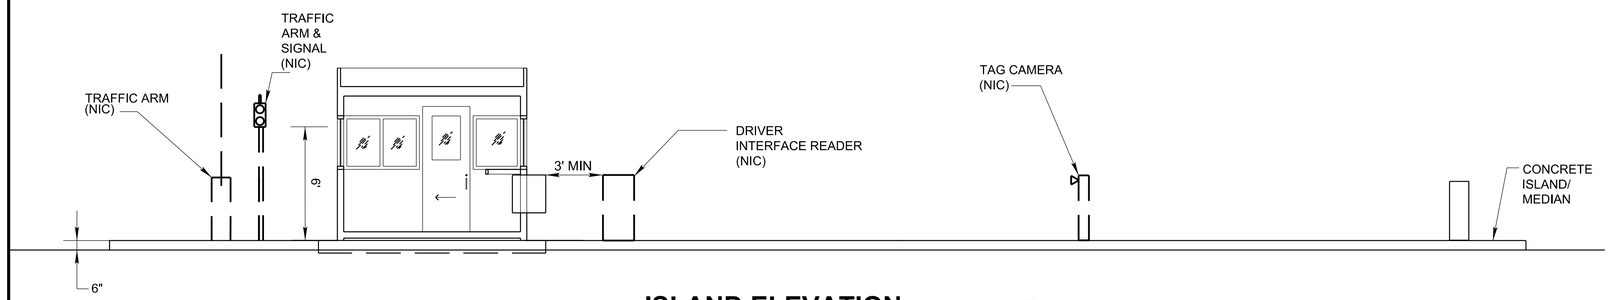
NEW ISLAND TYPICAL PLAN & ELEVATION FOR AIE



SHEET IDENTIFICATION
E-150
00

ISLAND TYPICAL PLAN

1

SCALE: 1/4" = 1'-0"

ISLAND ELEVATION

A

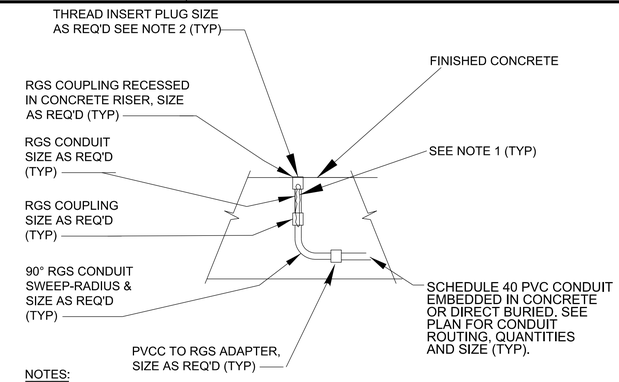
4' 2' 0 4'

SCALE: 1/4" = 1'-0"

KEYED NOTES:

1. P IS FOR POWER (600V OR LESS) HANDHOLE. S IS FOR SIGNAL (CONTROL CABLES) HANDHOLE.

2. 3/4" C FOR LOOP DETECTORS. (NIC) CONDUIT SHALL BE PLACED 1" BELOW SURFACE OF ROAD AND EXTEND OUT A DISTANCE OF 12" FROM CURB FACE..



3. 3/4" C FOR LOOP DETECTORS. (NIC) CONDUIT SHALL BE PLACED 1" BELOW SURFACE OF ROAD AND EXTEND OUT A DISTANCE OF 12" FROM CURB FACE.

4. EXISTING INFRASTRUCTURE IS ALLOWED TO HAVE 1"C FOR THE SIGNAL. NEED AT LEAST ONE CONDUIT FOR POWER AND ONE FOR SIGNAL.

5. CONDUIT REQUIREMENTS FOR AIE ONLY WHEN GOING FROM GATHOUSE/HUT OR OTHER LOCATION TO FIRST HANDHOLE AND THEN BETWEEN ISLANDS:
POWER: ONE 4"C OR TWO 2"C; SIGNAL ONE 4"C.

KEYED NOTES CONTINUED:

6. IF THE TRAFFIC ARM AND TRAFFIC ARM SIGNAL ARE ALL COLLOCATED, THEN ONLY A 2" SIGNAL AND 1" POWER IS REQUIRED.

NOTES:

1. PULL STRING SHALL BE PROVIDED AND INSTALLED INSIDE CONDUIT. EXCESS PULL STRING SHALL BE COILED NEAR PLUG FOR USE.

2. INSTALL CONDUIT PLUG PRIOR TO ENCASING CONDUIT IN CONCRETE.

TYPICAL EMBEDDED CONDUIT STUB UP DETAIL

2

NOT TO SCALE

GENERAL NOTES

1. PLAN IS FOR EXISTING INFRASTRUCTURE I.E. EXISTING CONDUIT LAYOUT OR ISLANDS. THE PLAN SHOWS PLACEMENT OF CONDUITS FOR AUTOMATED INSTALLATION ENTRY (AIE) EQUIPMENT. DETAIL 2 SHOWS SUGGESTED METHOD OF CONDUIT PLACEMENT IN THE CONCRETE, BUT OTHER METHODS ARE ALLOWED.

2. PROVIDE NO MORE THAN 1" SPACING BETWEEN CONDUITS.

3. CONDUIT STUB-UPS TO A DEVICE OR EQUIPMENT SHALL BE GROUPED TO HAVE A MAXIMUM OF 1" SEPARATION.

4. NIC IS NOT IN CONTRACT.

5. CONDUIT AND CAMERAS ARE TO BE INSTALLED IN CONCRETE.

6. AT LEAST 3' IS REQUIRED TO BE MAINTAINED AROUND THE GUARD BOOTH. THIS INCLUDES ENSURING THE DISTANCE IS MAINTAINED FROM THE GUARD BOOTH MECHANICAL UNIT.

7. TRAFFIC ARM AND TRAFFIC ARM SIGNAL ARE SHOWN SEPARATE; HOWEVER, THE TRAFFIC ARM AND TRAFFIC ARM SIGNAL COULD BE CO-LOCATED. IF CO-LOCATED AND THERE ARE EXISTING CONDUITS AS SHOWN FOR THE TRAFFIC ARM, THEN, IT IS SUGGESTED, THAT A SMALL HANDHOLE (APPROX 12" SQUARE) BE PLACED AROUND THE EXISTING CONDUITS. THEN SAW CUT IN NEW CONDUITS TO WITHIN 6 INCHES OF THE TRAFFIC ARM SIGNAL LOCATION. THIS ALLOWS THE USE OF THE EXISTING CONDUITS WITH MINIMAL IMPACT ON THE ISLAND.

8. EXISTING ISLANDS THAT ARE TOO SHORT TO FIT THE REAR TAG CAMERA ON THE ISLAND/MEDIAN AT THE MINIMUM DIMENSION WILL BE REVIEWED ON A CASE BY CASE BASIS. PROVIDE INFORMATION ON A PROPOSED LOCATION. THE CAMERA IS TO BE PROTECTED FROM ERRANT VEHICLE IMPACT ACCORDING TO AASHTO ROADSIDE DESIGN GUIDE.

9. FOR REFERENCE, THE AIE CABINET LOCATED AT THE GATEHOUSE/HUT OR OTHER LOCATION IS TYPICALLY A 45U: 78"H X 29"W X 42"D.

10. GUARD BOOTH IS SHOWN TO BE 10' L X 4' W. IF THE BOOTH IS SHORTER THAN 10' THEN WHERE POSSIBLE ENSURE THE CONDUIT PLACEMENT WILL WORK IN THE FUTURE FOR A 10 FT GUARD BOOTH. TYPICALLY ADJUST THE THE TRAFFIC ARM SIGNAL AND TRAFFIC ARM CONDUIT PLACEMENT FOR A 10 FT BOOTH BEING INSTALLED IN THE FUTURE.

STANDARDS DEVELOPED UTILIZING COMMON ENGINEERING AND ARCHITECTURAL RESOURCES. ENGINEERING JUDGEMENT APPLIED WHERE APPROPRIATE. ALL FEATURES AND DIMENSIONS SHOULD BE VALIDATED AND ADJUSTED AS APPROPRIATE AS PART OF THE DESIGN PROCESS.

HYBRID BEACON (SIGNS AND SIGNALS) SAFETY SYSTEM
NOT TO SCALE

LOCAL CONTROL PANEL AT OUTBOUND BARRIER

HYBRID BEACON (SIGNS AND SIGNALS) SAFETY SYSTEM
NOT TO SCALE

NOTES:
1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, A SEARCH AREA, PEDESTRIAN BOOTH, AN OVER WATCH POSITION, AND 4 ACTIVE VEHICLE BARRIERS (AVB). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. BARRIER MODE AND STATUS INDICATING LIGHTS ARE OPTIONAL. PROVIDE AT REQUEST OF THE INSTALLATION. IF THE OVERWATCH IS A PARKING POSITION, IT IS RECOMMENDED TO NOT PROVIDE.

3. PROVIDE A SEPARATE STAND ALONE EFO TOGGLE SWITCH OR RED PUSH BUTTON WITH SAFETY COVER MOUNTED ON THE INSIDE OF THE GUARD BOOTH TO THE LEFT OF THE DOOR FRAME FOR EASY ACCESS BY THE GUARD WHO MAY BE STANDING OUTSIDE GUARD BOOTH DURING ID CHECKS.

4. BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED:

   a. UNDER NORMAL OPERATIONS,THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR EFO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
   b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PLACE THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "OFF" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS.THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "EFO" POSITION, AND THEN WILL REMOVE AND LOCKUP THE KEY.
   c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PLACING THE MODE SWITCH IN THE "TEST" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE EFO POSITIONS FOR THE PROPER RESPONSE TO AN EFO COMMAND.

5. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIERS AND CONTROLS" APPENDIX A "CONVENTIONAL SIGNS AND SIGNALS SAFETY SYSTEM" FOR DESCRIPTIONS OF THE REQUIRED BARRIER AND TRAFFIC CONTROL SEQUENCES. THE HYBRID BEACON SAFETY SCHEME INDICATED IS BASED ON SDDCTEA PAMPHLET 55-15, 2014. SOME OF THE ITEMS SHOWN IN THE PANELS WERE NOT ORIGNAL REQUIREMENTS IN 2014 SUCH AS HAVING EFO ACTIVATION ON MASTER CONTROL PANEL FOR THE REMOTE EFOS. ALL FUNCTIONS SHOWN ARE TO INCLUDED IF PANELS ARE REPLACED.

6. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INSIDE & OUTSIDE.

7. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS.

LEGEND

- KX - KEY DESIGNATION WHERE X CORRESPONDS TO A NUMBER
- G - GREEN INDICATING LIGHT
- R - RED INDICATING LIGHT
- A - AMBER INDICATING LIGHT
- CONTROL SWITCHES
- SELECTOR SWITCH
- KEY OPERATED CONTROL SWITCH
- EFO SWITCH OR PUSH BUTTON WITH SAFETY COVER (MOMENTARY ACTION)
- BACK LIT WINDOW OR FLASHING RED INDICATOR

NOTES CONTINUED:
8. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEMS OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC. THE INDICATING LIGHT LABELED 'VPD ON' SHALL COME ON WHEN ANY OF THE BARRIER'S VEHICLE PRESENCE DETECTORS (VPD'S) GETS A CALL (VEHICLE DETECTED) FOR MORE THAN 15 SECONDS. THE VPD TROUBLE SHALL COME ON WHEN THERE IS A PROBLEM DETECTED ON THE VEHICLE PRESENCE DETECTORS OR CONTROLLER.

9. OVERSPEED, WRONG-WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY ANOTHER PANEL IN THE COMMAND & CONTROL AREA.

10. AREA AROUND EFO SWITCH SHALL BE RED.

11. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

12. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

13. CONTROLS SHALL BE MADE SO THAT IF AN ACTIVE VEHICLE BARRIER (AVB) IS IN TEST OR LOCAL MODE AND AN EFO IS PUSHED THEN TURNING THE THREE POSITION SWITCH TO EFO PRIOR TO AN EFO RESET SHALL NOT CAUSE THE AVB TO DEPLOY.

14. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

   a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS-UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSHBUTTON IS REQUIRED TO DROPOUT RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED-UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIER'S LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND, IF THERE IS NOT A VEHICLE OVER IT, THE PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
   b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5 - 1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS-UP A TIMER RELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRES, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOPS 1 AND 2 BEFORE THE TIMER RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

15. PUSH BUTTONS WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

16. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

17. IF REMOTE MONINTORING OF AN EFO ACTIVATION IS REQUIRED, THEN SEE SHEET E-102.

18. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

19. THE INBOUND AND OUTBOUND LOCAL PANELS CAN BE COMBINED INTO ONE ENCLOSURE IF THE LOCATION OF THE POWER UNITS ARE ADJACENT TO EACH OTHER.

20. OUT-OF-SERVICE SWITCH IS OPTIONAL WHEN THERE IS ONL Y ONE LANE PER DIRECTION OF TRAVEL OR ONE AVB CROSSING MULTIPLE LANES; OTHEWISE, FOR MULTIPLE LANES PER DIRECTION OF TRAVEL PROVIDE.

21. OPERATING PANEL FOR THE SEARCH AREA PANEL IS TO BE MOUNTED IN A NEMA 4 LOCKABLE PANEL OR THE OPERATING PANEL MUST BE WEATHERPROOF.

22. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES

SPECIAL ALARMS:

MASTER EFO MODE LOCAL IN LOCAL MODE	MASTER EFO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
MASTER PLACED EFO MODE & AVBS INCORRECT	MASTER EFO MODE LIGHT FLASH
OUT OF SERVICE	UP & DOWN LIGHTS ALTERNATE FLASH

23. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

24. IF ALLOWED IN THE CONTRACT, PROVIDE HARD CONTROL OR TOUCHSCREEN CONTROL FOR THE OPERATING PANELS; HOWEVER, EFO IS REQUIRED TO BE A DISCRETE HARD CONTROL SWITCH WITH A COVER IN BOTH CASES.

25. THIS EFO OPERATING PANEL IS USED ONLY ON ARMY PROJECTS.

26. AIR FORCE. ON AIR FORCE PROJECTS THE VISUAL ALARM IS NOT REQUIRED AS LONG AS THE AUDIBLE ALARM IS PROVIDED.

27. OPTION. THIS IS NOT STANDARD, BUT AN ADDITIONAL KEYED SWITCH IS ALLOWED TO BYPASS THE SAFETY LOOP ON THE ACTIVE VEHICLE BARRIER SO THAT IT CAN BE LOWERED. THIS WOULD HAVE TO BE APPROVED BY THE INSTALLATION.

STANDARDS DEVELOPED UTILIZING COMMON ENGINEERING AND ARCHITECTURAL RESOURCES. ENGINEERING JUDGEMENT APPLIED WHERE APPROPRIATE. ALL FEATURES AND DIMENSIONS SHOULD BE VALIDATED AND ADJUSTED AS APPROPRIATE AS PART OF THE DESIGN PROCESS.

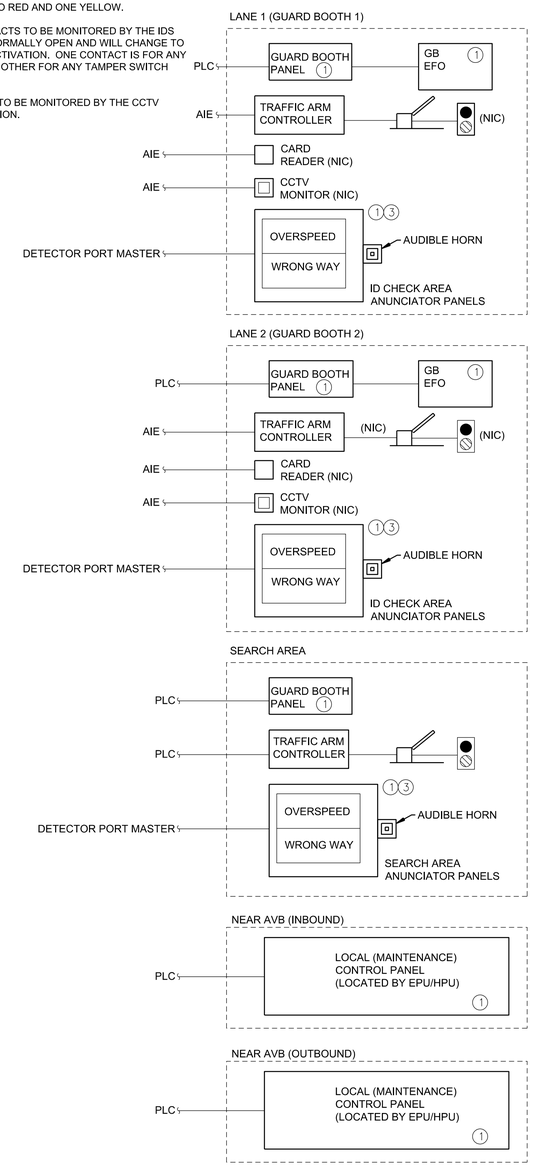
CONSTRUCTION NOTES:

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. BEAM TYPE DETECTORS.
11. HYBRID BEACON WITH TWO RED AND ONE YELLOW.
12. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
13. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.



GENERAL NOTES:

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.

2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.

3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.

4. DIAGRAM IS FOR FOUR AVBS. TWO GUARDBOOTHS, ONE SEARCH AREA, AND AN OVERWATCH AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNAL, REAR TAG CAMERA, AND CARD READER ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARM/SIGNAL AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR THE REAR TAG CAMERA. NOTE THAT THE PEDESTRIAN BOOTH IS NOT SHOWN EVEN THOUGH IT IS ON THE PANEL LAYOUT.

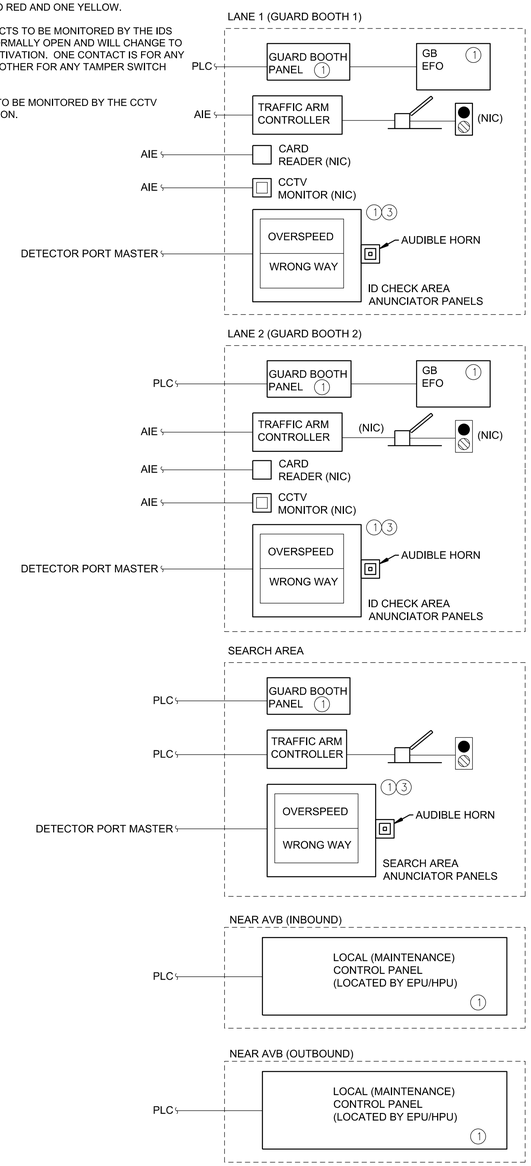
R/Y/G CONVENTIONAL SIGNS AND SIGNALS SYSTEM DIAGRAM

SHEET IDENTIFICATION
E-161



CONSTRUCTION NOTES:

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. BEAM TYPE DETECTORS.
11. HYBRID BEACON WITH TWO RED AND ONE YELLOW.
12. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
13. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.

GENERAL NOTES:

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.
3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.
4. DIAGRAM IS FOR FOUR AVBS. TWO GUARDBOOTHS, ONE SEARCH AREA, AND AN OVERWATCH AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNAL, REAR TAG CAMERA, AND CARD READER ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARM/SIGNAL AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR THE REAR TAG CAMERA. NOTE THAT THE PEDESTRIAN BOOTH IS NOT SHOWN EVEN THOUGH IT IS ON THE PANEL LAYOUT.

NOTES:

1. THE CONTROL PANEL LAYOUTS DEPICT AN ACCESS CONTROL POINT (ACP) WITH A GATEHOUSE, 2 GUARD BOOTHS, PEDESTRIAN BOOTH, A SEARCH AREA, AND AN OVER WATCH POSITION, AND 2 ACTIVE VEHICLE BARRIERS (AVB). THE BARRIER LAYOUTS ARE NOTIONAL SINCE IT WILL VARY WITH EACH ACP AND AVB SYSTEM.

2. BARRIER MODE AND STATUS INDICATING LIGHTS ARE OPTIONAL. PROVIDE AT REQUEST OF THE INSTALLATION. IF THE OVERWATCH IS A PARKING POSITION, IT IS RECOMMENDED TO NOT PROVIDE.

3. PROVIDE A SEPARATE STAND ALONE EMERGENCY FAST OPERATE (EFO) TOGGLE SWITCH OR RED PUSH BUTTON WITH SAFETY COVER MOUNTED ON THE INSIDE OF THE GUARD BOOTH TO THE LEFT OF THE DOOR FRAME FOR EASY ACCESS BY THE GUARD WHO MAY BE STANDING OUTSIDE GUARD BOOTH DURING ID CHECKS.

4. BARRIER MODE SELECTOR SWITCHES SHALL BE KEY OPERATED:

   a. UNDER NORMAL OPERATIONS, THE BARRIER MODE SELECTOR SWITCHES WILL BE IN THEIR EFO POSITIONS WITH KEYS REMOVED AND STORED IN A LOCKED CABINET IN THE GATEHOUSE ACCESSIBLE ONLY BY THE CHIEF OF THE GUARDS.
   b. WHEN PERFORMING BARRIER MAINTENANCE, MAINTENANCE PERSONNEL WILL OBTAIN THE KEY FROM THE CHIEF OF THE GUARDS, PLACE THE SWITCH IN THE "LOCAL" POSITION, AND THEN REMOVE AND RETAIN THE KEY. THE MAINTENANCE PERSON WILL THEN PUT THE KEY IN THE MODE SELECTOR SWITCH ON THE BARRIERS LOCAL CONTROL PANEL LOCATED AT THE BARRIER AND TURN THE KEY TO THE "LOCAL" POSITION TO ACTIVATE THE OPEN AND CLOSE SWITCHES ON THE LOCAL CONTROL PANEL. WHEN MAINTENANCE IS COMPLETE, THE MAINTENANCE PERSON WILL PLACE THE MODE SELECTOR SWITCH ON THE LOCAL CONTROL PANEL BACK TO "OFF" MODE, REMOVE THE KEY, AND RETURN THE KEY TO THE CHIEF OF THE GUARDS. THE CHIEF OF THE GUARDS WILL USE THE KEY TO PLACE THE BARRIER'S MODE SELECTOR SWITCH ON THE MASTER CONTROL PANEL IN THE "EFO" POSITION,AND THEN WILL REMOVE AND LOCKUP THE KEY.
   c. A GUARD MAY TEST OPERATE A BARRIER BY FIRST OBTAINING THE BARRIER'S MODE SWITCH KEY FROM THE CHIEF OF THE GUARDS, PLACING THE MODE SWITCH IN THE "TEST" POSITION, AND THEN OPENING OR CLOSING THE BARRIER WITH THE PUSHBUTTONS ON THE MASTER CONTROL PANEL. UPON COMPLETION OF THE TEST OPERATIONS, THE GUARD WILL RETURN MODE TO "EFO", REMOVE THE KEY, AND RETURN IT TO THE CHIEF OF THE GUARDS. PROCEDURES MUST BE IN PLACE TO ENSURE ALL OPERABLE BARRIERS' MODE SELECTOR SWITCHES ARE PLACED IN THE EFO POSITIONS FOR THE PROPER RESPONSE TO AN EFO COMMAND.

5. SEE UFGS 34 71 13.19 "CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS" APPENDIX A "HIGH EFFICIENCY PRESENCE DETECTION SAFETY SYSTEM 2015" FOR DESCRIPTIONS OF THE BARRIER AND TRAFFIC CONTROL SEQUENCES. THESE CONTROLS ARE BASED ON SDDCTEA PAMPHLET 55-15, 2014 WITH A 2015 UPDATE.

6. LABEL FOR BARRIER AND GUARD BOOTH DESCRIPTION SHALL USE VERBAGE TO HELP DESCRIBE THE LOCATION SUCH AS EAST AND WEST OR INSIDE & OUTSIDE.

7. LAMP TEST PUSH BUTTON SHALL TURN ON ALL INDICATING LIGHTS WHILE BUTTON IS PUSHED WITHOUT EFFECTING ANY CONTROLS

NOTES CONTINUED:

8. THE INDICATING LIGHT LABELED 'AVB TROUBLE' SHALL COME ON FOR ANY PROBLEMS OR ALARM CONDITIONS AT THE BARRIER, e.g. LOW OIL AIR PRESSURE, LOW VOLTAGE, ETC. THE INDICATING LIGHT LABELED 'SAFETY LOOP ON' OR 'BREAK BEAM ON' SHALL COME ON WHEN ANY OF THE BARRIER'S VEHICLE PRESENCE DETECTORS GETS A CALL (VEHICLE DETECTED) FOR MORE THAN 15 SECONDS. THE LOOP TROUBLE OR BEAM TROUBLE SHALL COME ON WHEN THERE IS A PROBLEM DETECTED ON THE VPDS OR CONTROLLER.

9. OVERSPEED, WRONG-WAY, AND DURESS ALARMS AND CAN EITHER BE BACK LIT WINDOWS OR RED INDICATING LIGHTS. PROVIDE AN ADJUSTABLE AUDIBLE ALARM. ALARMS. DURESS ALARMS SHALL BE ON OVERWATCH POSITION PANEL AND COMMAND & CONTROL MASTER CONTROL PANEL ONLY. SILENCE SWITCH CAN BE USED TO SILENCE AUDIBLE ALARMS. ALL OVERSPEED AND WRONG WAY ALARMS SHALL BE SELF CLEARING. DURESS ALARM DOES NOT NEED TO BE MONITORED AT THE MASTER CONTROL PANEL IF DONE BY ANOTHER PANEL IN THE COMMAND & CONTROL AREA.

10. AREA AROUND EFO SWITCH SHALL BE RED.

11. AUDIBLE ALARM, ALARM SHALL HAVE A MEANS TO ADJUST THE VOLUME.

12. PANEL ORIENTATION AND LABELING SHALL MATCH THE WAY THE GUARD VIEWS THE BARRIERS AND GUARD BOOTHS.

13. CONTROLS SHALL BE MADE SO THAT IF AN AVB IS IN TEST OR LOCAL MODE AND AN EFO IS PUSHED THEN TURNING THE THREE POSITION SWITCH TO EFO PRIOR TO AN EFO RESET SHALL NOT CAUSE THE AVB TO DEPLOY.

14. LOOP SAFETY. WHEN THE PRESENCE DETECTION LOOPS IN FRONT OF AND BEHIND THE BARRIER ARE MORE THAN 10 FEET APART, A SAFETY CIRCUIT MUST BE ADDED TO ENSURE THAT THE BARRIER WILL NOT CLOSE (DEPLOY) ON A VEHICLE THAT IS OVER THE BARRIER BUT BETWEEN THE LOOPS SO IS NOT DETECTED BY EITHER LOOP. THE FOLLOWING ARE APPROVED CIRCUITS:

   a. LATCHING CIRCUIT. WHEN A VEHICLE IS DETECTED BY LOOP 1, THE CONTROL LOGIC PICKS-UP AND SEALS ITSELF IN. AFTER THE VEHICLE PASSES OVER THE BARRIER IT SHOULD BE DETECTED BY LOOP 2 WHICH WILL DROP OUT RELAY FROM LOOP 1. LOOP RELEASE PUSHBUTTON IS REQUIRED TO DROPOUT RELAY LOOP 1 RELAY IN THE EVENT A VEHICLE IS DETECTED BY LOOP 1 BUT IS NOT DETECTED BY LOOP 2. IF THE VEHICLE PASSES OVER THE BARRIER BUT IS NOT DETECTED BY LOOP 2, THE LOOP 1 RELAY STAYS PICKED-UP EVEN THOUGH THERE IS NO VEHICLE OVER THE BARRIER. AFTER 15 SECONDS AT THIS CONDITION, AN ALARM SOUNDS TO ALERT THE GUARD THAT BARRIER'S LOOP CIRCUIT IS LATCHED. THE GUARD MUST VISUALLY CHECK THE BARRIER AND, IF THERE IS NOT A VEHICLE OVER IT, THE PUSH THE LOOP RELEASE TO DROP OUT THE RELAY AND CLEAR THE LOOP LATCH.
   b. TIME DELAY CIRCUIT. AN ALTERNATIVE TO THE LOOP LATCH CIRCUIT DESCRIBED ABOVE IS A CIRCUIT USING A SHORT (0.5 - 1 SECOND) TIME DELAY. A VEHICLE PASSING OVER LOOP 1 PICKS-UP A TIMER RELAY. AFTER THE VEHICLE CLEARS LOOP 1, THE TIMER EXTENDS THE 'ACTIVATION' OF LOOP 1 FOR THE TIME INDICATED. AFTER THE TIME EXPIRES, THEN LOOP 1 PER THE CONTROL LOGIC WILL LOOK LIKE IT IS CLEARED. THE ADDED TIME ALLOWS THE PASSING VEHICLE TO TRAVEL THE DISTANCE BETWEEN LOOPS 1 AND 2 BEFORE THE TIMER RUNS OUT. THE VEHICLE SHOULD BE DETECTED BY LOOP 2, WHICH WILL CONTINUE TO PREVENT BARRIER CLOSURE (DEPLOYMENT) UNTIL THE VEHICLE CLEARS LOOP 2.

15. PUSH BUTTONS WITH A CORRESPONDING INDICATING LIGHT ARE ALLOWED TO BE COMBINED INTO ONE DEVICE.

16. PICTOGRAPHS SHOWING UP/DOWN (CLOSED/OPEN) ARE TO BE PROVIDED BY THE PUSH BUTTONS. CONTROLS PANELS SHOW A 'WEDGE' STYLE IN THIS EXAMPLE. PICTOGRAPH SHALL MATCH THE ACTUAL TYPE OF BARRIER.

17. IF REMOTE MONITORING IS REQUIRED, THEN SEE SHEET E-111.

18. THE INBOUND AND OUTBOUND LOCAL PANELS CAN BE COMBINED INTO ONE PANEL IF THE LOCATION OF THE POWER UNITS ARE ADJACENT TO EACH OTHER.

19. OUT-OF-SERVICE SWITCH IS OPTIONAL.

20. OPERATING PANEL FOR THE SEARCH AREA PANEL - MOUNT IN A NEMA 4 LOCKABLE ENCLOSURE OR THE OPERATING PANEL MUST BE WEATHERPROOF.

21. IT IS ALLOWED TO USE OPEN/CLOSE INSTEAD OF UP/DOWN.

22. SPECIAL ALARM: WHEN TRAFFIC ARM IS NOT FULLY OPEN OR CLOSED FOR MORE THAN 5 SECONDS POSITION LIGHTS FLASH. WHEN GOING BACK TO AVB-UP OR AVB-DOWN & BARRIER AND TRAFFIC ARM IN INCORRECT POSITION THE MODE INDICATOR WILL FLASH.

23. ONE INDICATING LIGHT IS ALLOWED INSTEAD OF TWO INDICATING LIGHTS. CONFIGURATIONS WITH ONE LIGHT MUST BE RED AND ILLUMINATE WHEN SWITCH IS IN THE ARMED POSITION. IT IS ALLOWED TO HAVE THE SWITCH KEYED. IF KEYED ALL REMOTE EFOS CAN BE KEYED ALIKE OR DIFFERENTLY, BUT KEY(S) CANNOT MATCH THE OTHER KEYED SWITCHES.

24. IF ALLOWED IN THE CONTRACT, PROVIDE HARD CONTROL OR TOUCHSCREEN CONTROL FOR THE OPERATING PANELS; HOWEVER, EFO IS REQUIRED TO BE A DISCRETE HARD CONTROL SWITCH WITH A COVER IN BOTH CASES.

25. PLACE A PLACARD ON THE MASTER CONTROL PANEL WHICH STATES:

SPECIAL ALARMS:

OUT-OF-SERVICE	ALTERNATING UP/DOWN
MASTER EFO UP OR EFO DOWN LOCAL IN LOCAL MODE	MASTER EFO & LOCAL LIGHTS FLASHING
MASTER TEST MODE LOCAL IN LOCAL MODE	MASTER TEST & LOCAL LIGHTS FLASHING
MASTER PLACED EFO MODE UP OR EFO DOWN & AVBS INCORRECT	MASTER EFO MODE LIGHT FLASH
TRAFFIC ARM POSITION FAILURE	ALTERNATE UP/DOWN INDICATOR

26. THIS EFO OPERATING PANEL IS ONLY USED ON ARMY PROJECTS.

27. AIR FORCE. ON AIR FORCE PROJECTS, THE VISUAL ALARM IS NOT REQUIRED IF THE AUDIBLE ALARM PROVIDED.

28. OPTION. THIS IS NOT STANDARD, BUT AN ADDITIONAL KEYED SWITCH IS ALLOWED TO BYPASS THE SAFETY LOOP ON THE ACTIVE VEHICLE BARRIER SO THAT IT CAN BE LOWERED. THIS WOULD HAVE TO BE APPROVED BY THE INSTALLATION.

STANDARDS DEVELOPED UTILIZING COMMON ENGINEERING AND ARCHITECTURAL RESOURCES. ENGINEERING JUDGEMENT APPLIED WHERE APPROPRIATE. ALL FEATURES AND DIMENSIONS SHOULD BE VALIDATED AND ADJUSTED AS APPROPRIATE AS PART OF THE DESIGN PROCESS.

CONSTRUCTION NOTES

1. PROVIDE DEVICE AND ALL POWER AND CONTROL CONNECTIONS AS REQUIRED.
2. ANNUNCIATOR PANEL WITH AUDIBLE ALARM AND BACKLIT "WRONG WAY" & "DURESS" DISPLAY.
3. CAN BE PART OF MASTER CONTROL PANEL INSTEAD OF SEPARATE PANEL.
4. PROVIDE A DRY CONTACT FOR CCTV CAMERA CONNECTION.
5. PROVIDE A 20' CABLE FOR PANEL PORTABILITY IF AN OVERWATCH PAD INSTEAD OF A BOOTH. PROVIDE ALL CONNECTIONS AND APPURTENANCES AS REQUIRED.
6. OVERWATCH PANEL IS EITHER IN A BUILDING OR A PAVED PAD. PAVED PAD REQUIRES A LONG CORD AND PANEL LARGE ENOUGH TO LOCK THE PANEL IN IT.
7. BARRIER HEAT TAPE.
8. BARRIER EPU OR HPU. IF HPU MOTOR DOES NOT NEED UPS.
9. EPU'S SHALL BE PROVIDED WITH AN UPS THAT MATCHES THE MOTOR & MOTOR CONTROLLER CHARACTERISTICS.
10. PROVIDE TWO DRY CONTACTS TO BE MONITORED BY THE IDS PANEL. CONTACTS ARE NORMALLY OPEN AND WILL CHANGE TO NORMALLY CLOSED ON ACTIVATION. ONE CONTACT IS FOR ANY EFO ACTIVATION AND THE OTHER FOR ANY TAMPER SWITCH ACTIVATION.
11. PROVIDE DRY CONTACTS TO BE MONITORED BY THE CCTV SYSTEM. SEE SPECIFICATION.

GENERAL NOTES

1. SEE SITE PLANS FOR RELATIVE EQUIPMENT LOCATIONS. COORDINATE EXACT LOCATIONS WITH END USER PRIOR TO INSTALLATION.
2. INSTALL ALL EQUIPMENT PER MANUFACTURERS REQUIREMENTS. PROVIDE ALL CONDUIT, CONDUCTORS, CABLING, AND ALL ELECTRICAL APPURTENANCES AS REQUIRED FOR A COMPLETE AND FUNCTIONAL INSTALLATION. THIS INCLUDES ANY CHANGES TO CONDUCTORS, CONDUITS, PANELBOARDS, UPS AND GENERATOR.
3. SEE SPECIFICATIONS 34 71 13.19 CRASH RATED ACTIVE VEHICLE BARRIER AND CONTROLS FOR SPECIFIC REQUIREMENTS.
4. DIAGRAM IS FOR TWO AVBS, TWO GUARDBOOTHS, ONE SEARCH AREA, AN OVERWATCH, AND FIXED AIE. IF HANDHELD AIE THEN TRAFFIC ARMS/SIGNALS, REAR TAG CAMERA, AND CARD READER ARE NOT PROVIDED BY AIE. PROVIDE TRAFFIC ARMS/SIGNALS AS PART OF CONTRACT. DELETE DRIVER INTERFACE CARD READER. PROVIDE CONDUIT FOR A REAR TAG CAMERA. PEDESTRIAN BOOTH PANEL IS NOT SHOWN.

ARMY ACCESS CONTROL POINTS STANDARD DESIGN

1. INTRODUCTION

1.1. STANDARD DESIGN

This Standard Design supersedes all previous versions for this facility type. It shall be used for construction of all new Access Control Point (ACP) projects and renovations to existing ACP projects. It is intended for use anywhere in the continental United States (CONUS) or overseas locations (OCONUS). The design procedures and drawings included in this Standard Design provide flexibility to Army ACP designers in meeting the Army's baseline physical security requirements and the full range of Force Protection Conditions on Army Installations. This Standard Design meets the Army Standard (AS) for Access Control Points (ACPs) approved by the Army Facilities Standardization Committee dated 13 April 2012. It also meets Architectural and Engineering design criteria established by the Headquarters U.S. Army Corps of Engineers (HQUSACE). The Omaha Center of Standardization (COS) must approve all changes, deviations, or waivers to the Standard Design. In addition to these requirements, Appendix D contains design guidance and instructions that are considered information only and are meant to further provide information on issues that often arise when designing an ACP.

1.2. ACP DEFINITION

An ACP is a corridor at an Installation cantonment perimeter through which all vehicles and/or pedestrians must pass when entering or exiting the Installation cantonment area. An ACP provides the first physical security boundary layer that restricts access to Department of Army (DA) Installation cantonment areas. ACP guards control the active barriers to deny or permit entry on to the Installation.

1.3. ACP CLASSIFICATIONS

DA ACP classifications are: (a) Primary, (b) Secondary, (c) Limited Use, and (d) Pedestrian. Primary and Secondary ACPs can accommodate privately owned vehicles (POVs), commercial vehicles (trucks), pedestrians, bicycles, or any combination thereof. Primary and Secondary ACPs provide the means to defeat a vehicular and/or pedestrian threat via permanent measures defined in the Army Standard for ACPs. Limited Use ACPs provide means to defeat vehicular and/or pedestrian threats via temporary or permanent measures. Limited Use ACPs do not have routine hours of operation. A Pedestrian ACP may be part of an ACP that accommodates vehicles, or it may stand alone.

For definitions of Installation, Primary ACP, Secondary ACP, Limited Use ACP, Approach Zone, Access Control Zone, Response Zone, and other definitions, see the Army Standard for Access Control Points. Remotely manned egress only ACPs are Primary or Secondary ACPs which allow only vehicular egress. Remotely manned egress only vehicular ACPs will meet the intent of all Army Standard requirements pertaining to Primary and/or Secondary vehicular ACPs. These ACPs will be remotely manned at all times when vehicle transit is allowed. When remote manning position is not occupied the AVB(s) will be locked in the deployed position. The Remotely Manned Egress Only Vehicle ACP related information in this document relates only to ACPs where this is the only mode of operation. ACPs which include Remotely Manned Egress Only Vehicle operations and other modes of operation will meet requirements for all modes of operation.

1.4. ACP FUNCTIONS

1.4.1. Site Functions

ACP site functions include, but are not limited to, Approach Zone, Access Control Zone, Response Zone, Passive Vehicle Barriers, Active Vehicle Barriers, Command and Control, ID Check Area, Overwatch, Canopies, Turn Arounds, Search Areas, Lighting, and CCTV.

1.4.2. Building Functional Areas

Some of the building function components of an ACP are Visitor Control Center (VCC), Guard Booths (ID Check and Pedestrian ID Check), Search Area Building, Command and Control, Mechanical/Electrical, Communications, Gatehouse, Toilet, Storage, and Overwatch. This standard design includes some of the function combinations that are deemed acceptable. Combinations of functional areas not included as Standard Designs may be possible but will require COS review and approval, with Standard Design exception. The only functions that cannot be combined with other functions are the Vehicle ID Check and Vehicle ID Check Guard Booths.

1.5. MANDATORY CRITERIA

See Army Standard for Access Control Points for mandatory criteria for Primary and Secondary ACPs, Limited Use ACPs, and Pedestrian ID Check.

1.6. COORDINATING FACILITY TYPES

Access Control Points may be included as a feature on a larger project site, , but typically ACPs are stand-alone projects.

1.7. STANDARD DESIGN DRAWINGS AND INFORMATION

Copies of the drawings and text information that constitutes a Standard Design are available from the supporting Center of Standardization (Omaha) U. S. Army Corps of Engineers District, and numerous military web sites. The primary web site (the address is subject to change) to consult is:

"http://mrsi.usace.army.mil/sites/cos/SitePages/Home.aspx".

1.8. OUTSIDE CONTINENTAL UNITED STATES (OCONUS)

The requirements for this document have been written around U.S. Standards. For OCONUS applications the following requirements are applicable:

Metric units of measurement are allowed.

Local codes are permitted (except where specifically noted within this document), but) but shall not be less than U.S. requirements.

Where there are no local codes, U.S. requirements shall govern.

Requirements of the Department of Army Standard Design for Access Control Points shall be used.

All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Therefore, the acquisition team must ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

Exceptions to the above requirements include line-of-sight, ballistic ratings, threat calculations, anti-terrorism standards and standoff distances included in this document.

1.9. RFP WIZARD

The RFP Wizard is an Army Transformation Model for Design-Build Requests for Proposals (RFP). Paragraph 2 in this document includes references to the RFP Wizard, which require informed decisions to be made in order to assemble the RFP correctly. Consult the Omaha District COS for decisions on language if selected options cannot be made confidently.

2. SCOPE OF WORK

2.1. ACCESS CONTROL POINTS

Provide an installation access control point(s) which will allow safe, convenient vehicular and pedestrian access to the installation, while ensuring anti-terrorism/ force protection (AT/FP) measures are implemented.

The project is based on, and shall comply with, the Army Standard for Access Control Points (ACP-AS) and the Department of Army Access Control Points Standard Design (ACP-SD). The Access Control Point (ACP) functions are a corridor through which all vehicles and pedestrians pass when entering or exiting an installation. The ACP personnel perform identification verification procedures and control the active barriers that deny or permit entry on to the installation.

In addition, the ACP(s) shall be provided with a Closed-Circuit Television (CCTV) camera system, security lighting, duress system, Intrusion Detection System (IDS), communications system, LAN, back-up power system, traffic control system, overspeed detection system (if necessary), wrong way detection system, active vehicle barriers and control system and passive vehicle barriers. CCTV system shall include cameras, digital video recorders (DVR), monitors and controls. Cameras shall be provided at the Visitor Control Center (when required), overwatch area, ID check area, vehicle inspection areas, and active vehicle barrier (AVB) areas. Camera monitoring shall occur at the Command and Control and at a central monitoring station when present. Lighting shall be provided at the Approach zone, Access Control Zone, Response zone, vehicle search (inspection) areas, active barrier areas and parking areas. A back-up power system shall be provided with a generator and uninterruptible power supply (UPS).

The ACP(s) in this document may be a mixture of Design Build requirements with partial design drawings or Full Construction Plans and Specifications. [RFP Wizard: See Part 3 and Appendices for additional details for Design Build Request for Proposal (RFP).]

Construct the ACP(s) to include the facilities and features listed below.

2.2. TRAFFIC AND TRANSPORTATION ENGINEERING

2.2.1. Traffic Engineering Study (TES)

A. The ACP shall be planned, designed, and so located as not to create un-safe off-Installation traffic queuing or any other un-safe traffic practices as defined by Surface Deployment and Distribution Command Transportation Engineering Agency (SDDCTEA) and all other applicable roadway standards/criteria.

B. The traffic engineering study shall be either conducted or approved by the Military Surface Deployment and Distribution Command Transportation Engineering Agency (SDDCTEA).

   i. In some instances (e.g. very low volume ACPs) SDDCTEA may accept, at their discretion, abbreviated traffic engineering studies. The contents required for programming/design of key ACP design features may be determined by SDDCTEA on a case-by-case basis.

C. The traffic engineering study shall be based on the largest anticipated design demand value that occurs between the current traffic volume and the projected traffic volume five (5) years in the future.

D. The traffic engineering study shall not project future demand through use of standardized population growth rates for the Installation itself unless supported by Installation specific data.

The traffic engineering study may utilize standardized population growth rates for surrounding communities.

2.2.2. Transportation Engineering

A. The ACP shall be capable of handling the largest expected vehicle that will be processed. However, if the ACP processes trucks, it shall be capable of turning around the largest truck common to state or host nation roadways, and capable of processing the largest truck that is allowed onto the installation.

B. Analyses related to determination of the required number of ID check area lanes may include queuing but shall not include queuing that results in off-Installation traffic impacts.

C. Calculate existing and future lane requirements per Pamphlet 55-15, Traffic and Safety Engineering for Better Entry Control Facilities or similar method with consideration of growth, as well as single or tandem lane processing and Automated Installation Entry (AIE), etc.).

D. The efficient use of guard manpower will be considered when calculating the number of ID check area lanes.

E. In locations where pedestal mounted AIE is anticipated calculations related to ID check area lane, quantities shall not anticipate throughput rates in excess of 375 vehicles/hour/lane. Locations using other forms of automation shall utilize validated processing rates for that specific form of automation.

F. The calculations for the number of ID check lanes shall not be based on the use of more than 2 guards per lane.

G. Utilize the ACP/ ECF SMART Decision Evaluator© (or other methods to accomplish the same results) to evaluate the existing, short-term and long-term impact of security, manpower, automation, and roads and traffic.

H. Identify traffic control requirements per SDDCTEA Pamphlet 55-15, Traffic and Safety Engineering for Better Entry Control Facilities.

2.2.3. Turning Movements

A. Turning movement calculations/modeling shall be performed to confirm that the correct vehicle turning radius is achieved and to demonstrate there is no conflict with other vehicles in the ACP corridor. Turning movement analysis shall address all traffic types to be processed. Turning movements shall address, at a minimum, both POVs and trucks, if applicable. If trucks are prohibited at the ACP, truck modeling may terminate at the post ID Check rejection point. The turning movement calculations/models shall be provided for all turning movements.

B. The turning movement analysis shall be performed for all anticipated vehicle paths.

C. The turning movement analysis shall include, but may not be limited to, : horizontal road alignment, turn-around and rejection, entrance and egress paths for the ACP corridor, search areas and visitor control centers (when present).

2.3. DEFEAT OF VEHICLE THREAT SCENARIOS

2.3.1. Office of Provost Marshal General (OPMG) Vehicle Threat Scenarios

ACPs shall be designed to defeat the following four minimum vehicle threat scenarios. Additional vehicle threat scenarios shall be included if required by a local threat assessment. Appendix C covers the methodology associated with performing the threat path calculations by providing an example. Remotely

manned egress only vehicle ACPs shall include a vehicle resistant corridor of sufficient length to preclude wrong way circumvention of the AVB by a potential inbound threat vehicle. Corridor length shall be based on an engineering threat delay analysis which considers vehicle egress time, inbound threat time, and time required for the AVB to return to the deployed position.

A. Vehicle Threat Scenario #1. Threat vehicle enters the ACP in the inbound or outbound lane(s) at the maximum speed attainable at the ACP entrance and then immediately accelerates at its maximum acceleration rate through the ACP.

    i. Threat vehicle characteristics shall be as defined below (includes, but is not limited to,: top speed, acceleration, etc.)

B. Vehicle Threat Scenario #2. Threat vehicle enters the ACP in the inbound or outbound lane(s) at or under the posted ACP Speed Limit and then, later at some point further in the Approach Zone, accelerates at its maximum acceleration rate through the remainder of the ACP.

    i. Note that 'some point' shall be interpreted as being the worst-case threat delay time from point of detection to Active Vehicle Barrier (AVB) location(s) in the response zone. If multiple zones of overspeed detection are utilized the analysis will include the worst-case situations for each overspeed zone.

C. Vehicle Threat Scenario #3. Threat vehicle feigns compliance and stops in lane. The guard detects threat behavior or criminal status through observation or electronic means and moves to guard booth to initiate denial process. Threat vehicle occupant(s) attempt to force entry (tactics include potential use of direct fire weapons and acceleration through the ACP).

    i. Baseline protection for direct fire weapon shall be UL 752-Level 3. A higher level is required if direct fire weapons are identified in local threat assessment/policy that exceed the capabilities of UL 752-Level 3. The contents of local threat assessment/policy are not sufficient justification for the lowering of the baseline ballistic resistance (UL 752-Level 3). Use of ballistic standards other than UL 752 may be utilized anywhere where the barrier rating can be verified as clearly meeting or exceeding UL requirement designated.

D. Vehicle Threat Scenario #4. Similar to Threat Scenario 3 above, except the driver of the denied vehicle drives toward the Turn-around or Search Area at the ACP Speed Limit as if complying with guard instructions, but then fails to turn and instead accelerates at its maximum acceleration rate through the ACP while attempting to enter the Installation cantonment area.

2.3.2. Threat Vehicle Characteristics

A. Acceleration Rate. Threat calculations shall utilize the acceleration rate of 11.3 feet per second squared (feet/second/second) when determining delay.

    i. Where applicable the lower acceleration rates associated with trucks/commercial vehicles can be utilized for calculating the required stopping capability of passive and active vehicle barrier systems; however, lower acceleration rates are not relevant to delay calculations.

B. Deceleration Rate. Threat calculations shall utilize a deceleration rate of 24.1 feet per second squared (feet/second/second) when calculating delay.

C. Friction Factors. Threat calculations shall utilize a friction factor of 1.0. Calculations performed for threat purposes differ significantly from calculations typically performed for consideration of driver comfort. Lower friction factors associated with highway safety shall not be used for threat calculations.

D. Maximum Velocity. The maximum velocity of the 4,630 pounds baseline threat vehicle utilized for delay calculations shall be 130 mph. This parameter shall be utilized for calculation of delay unless a 'local' threat assessment and/or policy identifies a vehicle that is capable of a greater velocity. The addition of larger vehicles or trucks through mandatory incorporation of threats identified in 'local' threat assessments and/or policies shall not be considered justification for use of a reduced velocity in delay calculations.

   i. The maximum velocity of specific threat vehicles (where local threat analysis and/or policy identifies a specific vehicle) shall be obtained from manufacturer specifications.

   ii. The maximum velocity of other vehicle classes (where a type of vehicle e.g. 'pickup truck' is identified in local threat analysis and/or policy) shall be calculated through acquisition of information on at least 5 vehicles within the type and averaging the top speed of the lot. If significant outliers (atypical vehicles with unusual characteristics) exist, they may be removed from the sample set.

E. Vehicle Mass. The baseline threat vehicle shall be a large passenger car as defined in ASTM F2656. The weight of the baseline threat vehicle is 4,630 pounds and the mass is 143.8 slugs. This mass shall be utilized for kinetic energy calculations unless a vehicle of larger mass is included due to the aforementioned incorporation of local threat analysis and/or policy.

F. Modification of baseline vehicle threat. The baseline threat vehicle must be adjusted in accordance with all applicable 'local' threat analysis and policy. All relevant 'local' threat analyses and policy shall be reviewed and incorporated. Classification of such documentation is not justification for exclusion of baseline threat vehicle for barrier impact energy and/or delay calculations. Both the baseline vehicle and the additional vehicle(s) (identified by 'local' threat assessment and/or policy) shall be analyzed and the more stringent of results shall be applied.

2.4. GENERAL REQUIREMENTS

2.4.1. ID Check Area

A. Design Demand of Vehicle per Hour (vph)
[Less than 290 vph] [Greater than 290 vph]

B. Number of ID Check Lanes
[2] [3] [4] [5] [6] [7] [8] [9] [10] lanes under the ID Check Area Canopy

C. Vehicle ID Check Area Guard Booths: One for each Vehicle ID Check Lane.

2.4.2. Ballistic Resistance

UL 752-Level [3] [4] [5], where required.

2.4.3. Canopies

Canopies are required for the ID Check Area, (Truck) Search Area, Passenger Vehicle Search Area and Combination Truck and Passenger Vehicle Search Areas, where required.

2.4.4. ACP Functional Area Facilities

[See Center of Standardization (COS) drawings required for the ACP project] [RFP Wizard: included in Appendix B – Drawings].

2.4.5. Stand-Off Distance

As identified on site drawings furnished for the ACP Project.

2.4.6. Equipment

A. Truck Inspection Equipment to be Used: [Vehicle Inspection System] - [Mobile] [Permanent] [None]

B. Functional Area Facility/Facilities Equipment: [None] [Package Scanner] [_____]

2.4.7. Visitor Control Center (VCC)

A. VCC must be located such that visitor processing occurs prior to entry into the Installation (prior to ID Check location).

B. Paved road surface used to support movement to/from the VCC location must not provide opportunity for undetected bypass of the ID check area. Configuration shall not anticipate detection of bypass by personnel working at the visitor control center, ID check area, or search areas. These personnel are not capable of monitoring paved bypass paths for the VCC.

C. If the Installation accepts visitors and does not currently possess a VCC one should be included in the first available ACP project.

D. The VCC shall include the following:

   i. Parking.

   ii. Service Counter.

   iii. Waiting Area.

E. The VCC may include the following:

   i. Self-registering kiosks.

   ii. Administration Office.

   iii. Break Room.

   iv. Electric Water cooler.

   v. Toilet.

F. Ballistic protection of guard positions

   i. When guard functions requiring ballistic protection (e.g. command & control, pedestrian ID check, etc.) are combined in a facility with the VCC function the guards must be separated from VCC personnel (both workers and visitors waiting to be processed) by ballistic rated building components (walls, glazing, doors, etc.).

   ii. Where guards are utilized solely to perform VCC function(s) it is not necessary to provide a ballistic rated separation between the guard and the visitor. Non-ballistic rated guard positions cannot be designed to require shared VCC responsibility with guards responsible for command & control, ID check area, overwatch building, active vehicle barrier deployment or similar functions.

   iii. Visitor control center worker positions (non-guard) are not required to include ballistic protection.

G. Occupancy Level. The occupancy level of the VCC shall be the sum of the number of visitors waiting to be processed, the number of visitors being processed, the number of processors, and the number of supervisors and security personnel in the VCC anytime during the peak hour.

Equation: Occupancy = VW+VP+c+S

Where:

VW = Visitors waiting to be processed

VP = Visitors currently being processed

c = number of processors

S = Supervisors/Security personnel in VCC

i. The number of Visitors waiting to be processed can found by taking the 1-hour processing rate time (60 minutes) and dividing it by the processing rate and subtracting one (for the Visitor currently being processed) and then multiplying the resulting number by the total number of processors. If the Visitors waiting to be processed is determined to be a negative number than the VCC is processing all Visitors as they come into the VCC and the number of Visitors waiting is zero.

Equation: VW = V - [(60 min / p)-1] x c

Where:

V = Peak Hourly Visitor Rate

p = Processing rate (minutes/visitor)

ii. The number of Visitors currently being processed will be the lower of either the number of Processors in the VCC or the number of Visitors that come into the VCC for each processing rate cycle. The number of Visitors per processing rate cycle can be determined by dividing the Peak Hourly Visitor Rate by 60 minutes in an hour and multiplying it by the Processing Equation:

Equation: $VP_{RC} = (V/60) \times p$

Where:

VP_{RC} = Visitors being process per processing rate cycle

2.4.8. Guard Facilities

A. Vehicle ID Check Area Guard Booths (Used by guards responsible for validating credentials of vehicle occupants)

i. Provide a minimum of one guard booth for each vehicle ID check area entry lane.

ii. Raised traffic island - The guard booth will be protected by a raised traffic island in one of the following ways:

a. Locate the guard booth on a raised traffic island. Provide a minimum of 3’ setback between doorways of guard booth and face of raised traffic island curb. Must also include, as a minimum, a 1’ horizontal clearance between face of traffic island curb and guard booth roof, gutters or any other objects protruding from the guard booth

b. Recess the guard booth within a raised traffic island. Curb may be interrupted to allow movement of guard between booth and ID check position (adjacent to vehicles) to occur without stepping onto, off or over raised island or curb sections.

iii. Passive Barrier Protection

a. Provide protection against errant impact.

b. The protection provided for the guard booth structure is not required to be an ASTM, Department of State (DOS) or DOD anti-ram capable product.

c. Protection (passive barrier) may be located on the leading edge of the island on which the guard booth is located and shall be prior to the leading canopy column (if present).

d. If breaks in the ID check traffic island curb-line exist, additional protection should be included to mitigate errant impact.

iv. Dimensions

a. Minimum nominal ID check area guard booth width shall be 4 feet.

b. Minimum nominal ID check area guard booth length shall be 10 feet.

v. Prohibition of Combining with Other Functions - The function performed by the ID Check Area Guard Booths used for validating credentials of vehicle occupants shall not be combined with any other function.

vi. Field of View - Shall provide a 360-degree field of view for occupant. Door frame interruptions in lines of sight shall not exceed 11 degrees for a guard sitting or standing at the counter. Door frame interruption of guard line of sight shall be minimized.

vii. Ballistic Rating - Shall, as a minimum, be ballistic rating of UL 752 – Level 3 with a higher level being required if prescribed in 'local' threat analyses or policy.

viii. Blast Resistance - Given the proximity of the guard booth to vehicular traffic it is normally not considered feasible to provide blast protection for ID check guard booth occupants.

ix. HVAC

a. General Requirements – General requirements pertaining to HVAC can be found in paragraph 3.11 Heating, Ventilating, and Air-Conditioning (HVAC) Requirements of this document.

b. Ballistic Rating - All penetrations of guard booth resulting from incorporation of HVAC shall provide the same level of ballistic resistance as the rest of the guard booth. The roof and floor of the guard booth (to include HVAC penetrations) shall not require ballistic protection unless direct fire trajectory is possible through roof/floor and into the occupied portion of the guard booth.

c. Exterior HVAC units should be placed so that they do not provide a convenient sitting or resting position for guard staff. Where this is not possible, provide seating surface above HVAC unit to prevent personnel from sitting directly on the HVAC unit.

x. Energy Policy - Shall adhere to the latest national energy policy unless applicable exemption exists within said policy and can be found in paragraph 2.18. Sustainable Design.

xi. Counter - Must include a counter oriented such that a guard is facing inbound (ingress) traffic while seated or standing at the counter.

xii. Door(s) - Must include door(s) oriented in the direction of each lane for which a guard occupying the booth has vetting responsibility (includes situations where vehicle occupants' identification is validated remotely through use of automated equipment).

xiii. Provide exterior power outlet sufficient to power hand-held searchlights, and bug zappers etc.

xiv. Provide interior power outlet sufficient for radio chargers, and computers, etc.

xv. Provide active vehicle barrier control console with annunciator, computer workstation, and communications equipment including Local Area Network (LAN), telephone, and Internet connections.

xvi. Communications. Provide a minimum of two (2) means of communications from the facility and with the Central Security Monitoring Station.

xvii. Electronic Security.

a. Duress Alarms. Provide duress alarm capability that annunciates at both the Command and Control and the Central Security Monitoring Station.

b. Intrusion Detection. The entry doors to the ID Check Area Guard Booths are to be equipped with Balanced Magnetic Switches (BMS) for intrusion detection.

c. CCTV. Provide the means to control the cameras from Command and Control. It is recommended that CCTV monitors be placed above the counter, if there is wall space.

xviii. Active Vehicle Barrier Controls.

a. Provide emergency-fast-operate (EFO) controls for all active vehicle barriers related to the ACP. One EFO will be located on the counter, and another will be located in close proximity to the guard position while performing vehicle ID Check validation.

b. Panel is to have LED indicator lights showing whether or not the panel is functional and capable of barrier deployment.

xix. Remotely Manned Egress Only Vehicle Access Control Points.

a. Do not require guard facilities at the ACP location.

b. Require a remote guard position which is manned at all times vehicles are allowed to utilize the ACP. Barrier will be locked in the deployed position during times that the ACP is not being actively monitored.

B. Pedestrian ID Check Guard Booth functional area (Used by guards responsible for validating credentials of pedestrians)

i. Raised traffic island - The Pedestrian ID Check will be protected by a raised traffic island in one of the following ways:

a. If located within the roadway clear zone, locate the guard booth on a raised traffic island. Provide a minimum of 3 feet setback between doorways of guard booth and face of raised traffic island curb.

b. If located within the roadway clear zone, the functional area must include, as a minimum, a 1 feet horizontal clearance between the face of traffic island curb and guard booth roof, gutters or any other objects protruding from the guard booth.

ii. Passive Barrier Protection

a. Must be provided with protection against errant impact if located on a traffic island or within the roadway clear zone.

b. Protection (passive barrier) may be located on the leading edge of the island on which the guard booth is located.

iii. Dimensions: Minimum width of 4 feet and minimum length of 10 feet, but in no case shall the building exceed the maximum square footage specified in the Army Standard (AS).

iv. Prohibition of Combining with Other Functions - This function differs from the vehicle ID check guard booth. The pedestrian ID check guard booth function may be combined with other functions.

v. Field of View - Shall provide a 180-degree field of view for guard. Interruptions in lines of sight shall not exceed 11 degrees for a guard sitting or standing at the counter.

vi. Ballistic Rating - As a minimum, shall have a ballistic rating of UL 752 – Level 3 with a higher level being required if prescribed in 'local' threat analyses or policy.

vii. HVAC

a. Required - General Requirements – General requirements pertaining to HVAC can be found in paragraph 3.11 Heating, Ventilating, and Air-Conditioning (HVAC) Requirements of this document.

b. Ballistic Rating

All penetrations of guard booth resulting from incorporation of HVAC shall provide the same level of ballistic resistance as the rest of the guard booth. The roof and floor of the guard booth (to include HVAC penetrations) shall not require ballistic protection unless direct fire trajectory is possible through roof/floor and into the occupied portion of the guard booth.

The guard position shall be separated from pedestrian traffic by ballistic rated materials whether the ballistic rated material is exterior to a facility or interior to a facility.

viii. Material transfer - A 'deal tray' or other device offering a similar level of protection shall be included for transfer of materials (e.g. identification, and/or passes, etc.) between pedestrians and guard personnel. Where pedestrians are outside and materials are transitioning between indoor and outdoor, the deal tray shall be intended for use in the local climate and rated for exterior use.

ix. Energy Policy - Shall adhere to the latest national energy policy unless applicable exemption exists within said policy and can be found in paragraph 2.18. Sustainable Design.

x. Counter - Must include a counter oriented such that a guard is facing pedestrian traffic while seated or standing at the counter.

xi. Provide exterior power outlet sufficient to power hand-held searchlights.

xii. Provide interior power outlet sufficient for radio chargers, and computers, etc.

xiii. Provide active vehicle barrier control console with annunciator, computer workstation, and communications equipment including Local Area Network (LAN), telephone, and Internet connections.

xiv. Communications. Provide a minimum of two (2) means of communications from the facility and with the Central Security Monitoring Station.

xv. Electronic Security.

a. Duress Alarms. Provide duress alarm capability that will annunciate at both the Command and Control and the Central Security Monitoring Station.

b. Intrusion Detection. The entry door(s) is to be equipped with Balanced Magnetic Switches (BMS) for intrusion detection.

xvi. Communication and Security Systems – General Requirements. See paragraph 3.9 Communications and Security Systems.

xvii. Active Vehicle Barrier Controls.

a. Provide emergency-fast-operate (EFO) controls for all active vehicle barriers related to the ACP.

b. Panel is to have LED indicator lights showing whether or not the panel is functional and capable of barrier deployment.

2.4.9. Facility Description

A. The Access Control Point (ACP) must comply with the Department of Army (DA) standards for this facility type. The ACP(s) are required by the DA to provide safe entry to the installation by authorized procedures for vehicles, and/or pedestrian traffic. Both safety and security requirements are primary of the ACP criteria.

B. Facility types may be adapt build (based on approximately 80% level of design), design build (based on specific floor plan) or design/build (based on functional requirements only).

2.4.10. Accommodations

A. Accessibility Requirements

The Visitor Control Center(s), Search Area Building(s) and Pedestrian ID Check (Where those being vetted are inside the facility) are the only ACP facilities that require access by individuals with disabilities. Provide access for individuals with disabilities in accordance with Architectural Barriers Act (ABA) and Americans with Disabilities Act (ADA) Accessibility Guidelines or Host Nation equivalent.

B. Nursing Mother’s Room

Provide Nursing Mothers accommodations in accordance with UFC 1-200-01 DOD Building Code.

Complete ACP renovations or new ACP campus projects shall include nursing accommodations in one of the larger buildings on the ACP campus. A large building will be defined as having equal to or greater than 400 square feet of occupiable space. Renovation projects of existing large buildings shall include nursing accommodations.

New or existing ACP campuses, which include only small buildings, shall provide accommodations for nursing mothers through operational procedures identified and coordinated with the security forces, either on-site, at an adjoining facility, or at a security forces facility. A small building will be defined as having less than 400 square feet of occupiable space, so a Gatehouse, Guard Booth, and Overwatch are all examples of small buildings. When programming renovations or new facilities it will be necessary to account for additional square footage and cost into the programming documents.

2.4.11. Building Areas

GROSS AREA: For each ACP building or structure, provide gross building area as calculated by UFC 3-101-01, "01, "Architecture", Chapter 2 which is the area included within the surrounding exterior walls measured from outside face of wall to inside face of wall.

2.4.12. Hours of Operation

The hours of operation for access control points will depend upon ACP classification. For primary ACPs the hours of operation are typically 24 hours a day, 7 days a week. For secondary ACPs the hours of operation will vary with installation requirements and are generally less than 24 hours a day, 7 days a week. Limited use ACPs are open only for special events, and do not have a fixed schedule.

2.4.13. Ballistic Requirements

Various buildings defined (guard booths, command and control function, and overwatch position, etc.) require design/ construction for ballistic resistance to UL 752-Level 3 or higher. See paragraph 2 SCOPE OF WORK for required ballistic level.

2.4.14. Mandatory Requirements

Floor plans included are considered conceptual, but strongly encouraged to fit mandatory functions into each building. For OCONUS locations dimensions shown shall be considered nominal. Changes are allowed where required for use of metric construction materials.

2.4.15. Facility Goals

A. The objective of the access control facilities is to prevent unauthorized vehicles and where required pedestrians from entering an installation. The access control point needs to be constructed with features that support the effective use of equipment, procedures, and manpower.

B. The technical and functional requirements defined herein are the standard requirements that apply to all (DA) ACP projects and are current with Headquarters U.S. Army Corps of Engineers (HQUSACE) criteria.

C. The ACP is intended to provide a high level of safety while meeting the ACP Standard requirements.

2.4.16. Adapt Build Model

When an Adapt-Build Model is available to use as a basis for design and/or construction, it will be posted on the Center of Standardization (CoS) web site, noted in solicitation documentation, or made available upon request as follows:

CoS Web Site address:

https://mrsi.erdc.dren.mil/cos/nwo/acp/

CoS address:

U. S. Army Corps of Engineers, Omaha District
CENWO-ED-D
1616 Capitol Avenue
Omaha, NE 68102-4901

Attn: CoS Program Manager (Matthew Hebert)

2.4.17. Outside Continental United States (OCONUS)

The requirements for this document have been written primarily around U.S. Standards. For OCONUS applications the following requirements are applicable:

A. Metric units are allowed.

B. Local codes are permitted (except where specifically noted within this document), but) but shall not be less than U.S. requirements.

C. Where there are no local codes, U.S. requirements shall govern.

D. Requirements of the Department of Army Access Control Points Standard Design (ACP-SD).

E. All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

F. Exceptions to the above requirements include line of sight, ballistic ratings, threat path calculations, anti-terrorism standards and standoff distances included in this document.

2.5. FUNCTIONAL AND OPERATIONAL REQUIREMENTS:

2.5.1. General

A. Functional areas and facilities included in the design of ACP(s) are as listed below.

B. Coordinate the visual appearance and exterior material selections as well with the standards set by the Installation in their respective Installation Design Guide. Address the impact of climate, security and geography appropriately. There may be reasons to control exterior traffic noise from entering the facilities and may require special treatment or Standard Transmission Class (STC) rating on major building components. Provide appropriate and adequate protection from the wind, and wind driven precipitation for doors and entries.

2.5.2. Entry Gate

Entry gate will have the same level of protection as the adjacent perimeter.

A. Signage

i. Type: Entry gate signage shall be as indicated in Section 7.5 of SDDCTEA Pamphlet 55-15 for CONUS locations (to include both Hawaii and Alaska). OCONUS entry gate signage shall conform to host nation criteria for closure/barricading of a normally open roadway lane. In the absence of applicable host nation criteria, the entry gate shall be signed in accordance with the aforementioned criteria.

ii. Retro reflectivity: Entry gate signage shall be red/white retroreflective or illuminated to show the same shape and similar color by both day and night. Retro reflectivity and/or illumination shall be in accordance with the Manual on Uniform Traffic Control Devices

(MUTCD) for CONUS locations (to include both Hawaii and Alaska). OCONUS entry gate signage shall include retro reflectivity and/or illumination in accordance with host nation criteria where such exists. If no host nation criteria exist for retro reflectivity/illumination of barricade signage, then the MUTCD criteria shall be utilized.

B. Impact Resistance

i. Where adjacent perimeter is not vehicle resistant, the fence gate is not required to exceed the kinetic energy mitigation/defeat capabilities of the adjacent perimeter fence.

ii. Where adjacent perimeter is vehicle resistant and vehicle resistant capability of adjacent perimeter is manmade, the fence gate shall match or exceed the kinetic energy rating of the adjacent perimeter fence/wall/barrier. Where the adjacent perimeter anti-ram capabilities are provided by topographic feature, the fence gate shall match or exceed the kinetic energy mitigation/defeat capabilities of the adjacent perimeter. In this case, however, the fence gate is not required to exceed 1,250,000 ft-lbs. of kinetic energy resistance (limit of requirement is K12 equivalent).

C. Remotely Manned Egress Only Vehicle ACPs

i. Shall include an automatic fence gate which is programmed to open when AVB sensors detect egress traffic and will be programmed to close automatically when no vehicles have been detected by the AVB system for a period of 30 seconds. Fencing will connect the fence gate to other fencing or features to preclude circumvention by pedestrians.

2.5.3. Passive Vehicle Barriers

A. Approach Zone

Passive vehicle barriers in the approach zone will begin at the entry gate/perimeter and extend to the access control zone passive vehicle barriers. Transitions between passive vehicle barrier systems shall not represent weak points in the barrier system.

i. Passive Vehicle Barriers will be designed to defeat the kinetic energy associated with the baseline threat and any additional threat identified in ‘local’ threat analyses or policy.

a. Achievable angle and velocity shall be included in such calculations.

b. Kinetic energy calculations must be performed for the baseline threat vehicle as well as any additional vehicles included through mandatory incorporation of ‘local’ threat analyses.

ii. Passive vehicle barriers must be certified or approved in accordance with one of the following:

a. Included on the list of DOD Anti-Ram Vehicle Barriers maintained by the U.S. Army Corps of Engineers (USACE)-Protective Design Mandatory Center of Expertise (PD-MCX),

b. Analysis is not currently an acceptable method of validation.

iii. Capacity (kinetic energy defeat/mitigation capability)

The kinetic energy mitigation capacity of the system shall be capable of defeating the baseline threat vehicle and any additional threat vehicles identified in ‘local’ threat assessment and/or policy.

However, the capacity of the passive vehicle barrier system is not required to exceed 1.25 million ft-lbs of kinetic energy defeat capability unless 'local' threat assessment and/or criteria identifies a threat vehicle in excess of 15,000 pounds and that threat vehicle is capable of approaching the passive vehicle barrier system at a speed and angle resulting in impact energy in excess of the previously mentioned 1.25 million ft-lbs.

The ACP passive vehicle barrier corridor shall be analyzed in segments.

a. Segments will be restricted in length to those locations where the potential impact energy of a threat vehicle on the vehicle barrier system is equal.

b. Segments will break where a change in passive barrier alignment in relation to the ACP roadway differs or the layout of the barriers and roadway differs.

c. Segments will also be broken where any other existing or proposed topography or ACP features in any other way increases or decreases the potential impact energy of a threat vehicles speed or angle of approach prior to impact with the passive vehicle barrier system.

iv. Gaps

The gaps between elements of a passive vehicle barrier system (or between systems) shall not exceed 4 feet where potential angle of impact exceeds 60 degrees and achievable speed (for impact at the 60 degrees or more angles) exceeds 40 miles per hour. The gaps between elements of a passive barrier system (or between systems) where potential velocity and angle of impact do not meet or exceed the threshold identified above shall not exceed 5 feet.

v. Transition

The transition between passive vehicle barrier systems shall not result in weak points. Transitions between barrier systems or types will include measures to ensure that the transition meets or exceeds the kinetic energy mitigation/defeat level of the adjacent barrier systems.

B. Control Zone

Passive vehicle barriers in the access control zone will begin at the termination of the approach zone passive vehicle barriers and extend to the response zone passive vehicle barriers. Transitions between passive vehicle barrier systems shall not represent weak points in the barrier system.

i. Passive Vehicle Barriers will be designed to defeat the kinetic energy associated with the baseline threat and any additional threat identified in 'local' threat analyses or policy.

a. Achievable angle and velocity shall be included in such calculations.

b. Kinetic energy calculations must be performed for the baseline threat vehicle as well as any additional vehicles included through mandatory incorporation of 'local' threat analyses.

ii. Passive vehicle barriers must be certified or approved in accordance with one of the following:

a. Included on the list of DOD Anti-Ram Vehicle Barriers maintained by the U.S. Army Corps of Engineers (USACE)-Protective Design Mandatory Center of Expertise (PD-MCX),

b. Analysis is not currently an acceptable method of validation.

iii. Capacity (kinetic energy defeat/mitigation capability)

The kinetic energy mitigation capacity of the system shall be capable of defeating the baseline threat vehicle and any additional threat vehicles identified in 'local' threat assessment and/or policy.

However, the capacity of the passive vehicle barrier system is not required to exceed 1.25 million ft-lbs of kinetic energy defeat capability unless 'local' threat assessment and/or criteria identifies a threat vehicle in excess of 15,000 pounds and that threat vehicle is capable of approaching the passive vehicle barrier system at a speed and angle resulting in impact energy in excess of the previously mentioned 1.25 million ft-lbs.

The ACP passive vehicle barrier corridor shall be analyzed in segments.

a. Segments will be restricted in length to those locations where the potential impact energy of a threat vehicle on the vehicle barrier system is less than or equal.

b. Segments will break where a change in passive barrier alignment in relation to the ACP roadway differs or the layout of the barriers and roadway differs.

c. Segments will also be broken where any other existing or proposed topography or ACP features in any other way increases or decreases the potential impact energy of a threat vehicles speed or angle of approach prior to impact with the passive vehicle barrier system.

iv. Gaps

The gaps between elements of a passive vehicle barrier system (or between systems) shall not exceed 4 feet where potential angle of impact exceeds 60 degrees and achievable speed (for impact at the 60 degrees or more angles) exceeds 40 miles per hour. The gaps between elements of a passive barrier system (or between systems) where potential velocity and angle of impact do not meet or exceed the threshold identified above shall not exceed 5 feet.

v. Transition

The transition between passive vehicle barrier systems shall not result in weak points. Transitions between barrier systems or types will include measures to ensure that the transition meets or exceeds the kinetic energy mitigation/defeat level of the adjacent barrier systems.

C. Response Zone

Passive vehicle barriers in the Response Zone will begin at the termination of the control zone passive vehicle barriers and extend to the active vehicle barriers. Transitions between passive vehicle barrier systems and active vehicle barriers shall not represent weak points in the barrier system.

i. Passive Vehicle Barriers will be designed to defeat the kinetic energy associated with the baseline threat and any additional threat identified in 'local' threat analyses or policy.

a. Achievable angle and velocity shall be included in such calculations.

b. Kinetic energy calculations must be performed for the baseline threat vehicle as well as any additional vehicles included through mandatory incorporation of 'local' threat analyses.

ii. Passive vehicle barriers must be certified or approved in accordance with one of the following:

a. Included on the list of DOD Anti-Ram Vehicle Barriers maintained by the U.S. Army Corps of Engineers (USACE)-Protective Design Mandatory Center of Expertise (PD-MCX),

b. Analysis is not an accepted method for validation.

iii. Capacity (kinetic energy defeat/mitigation capability)

The kinetic energy mitigation capacity of the system shall be capable of defeating the baseline threat vehicle and any additional threat vehicles identified in 'local' threat assessment and/or policy.

However, the capacity of the passive vehicle barrier system is not required to exceed 1.25 million ft-lbs of kinetic energy defeat capability unless 'local' threat assessment and/or criteria identifies a threat vehicle in excess of 15,000 pounds and that threat vehicle is capable of approaching the passive vehicle barrier system at a speed and angle resulting in impact energy in excess of the previously mentioned 1.25 million ft-lbs.

The ACP passive vehicle barrier corridor shall be analyzed in segments.

a. Segments will be restricted in length to those locations where the potential impact energy of a threat vehicle on the vehicle barrier system is equal.

b. Segments will break where a change in passive barrier alignment in relation to the ACP roadway differs or the layout of the barriers and roadway differs.

c. Segments will also be broken where any other existing or proposed topography or ACP features in any other way increases or decreases the potential impact energy of a threat vehicles speed or angle of approach prior to impact with the passive vehicle barrier system.

iv. Gaps

The gaps between elements of a passive vehicle barrier system (or between systems) shall not exceed 4 feet where potential angle of impact exceeds 60 degrees and achievable speed (for impact at the 60 degrees or more angles) exceeds 40 miles per hour. The gaps between elements of a passive barrier system (or between systems) where potential velocity and angle of impact do not meet or exceed the threshold identified above shall not exceed 5 feet.

v. Transition

The transition between passive vehicle barrier systems shall not result in weak points. Transitions between barrier systems or types will include measures to ensure that the transition meets or exceeds the kinetic energy mitigation/defeat level of the adjacent barrier systems.

2.5.4. Active Vehicle Barriers (AVB)

A. Safety Scheme

The Active Vehicle Barriers and Access Control Point Control System types shall conform to a safety scheme, as identified by Surface Deployment Distribution Command Transportation and Engineering Agency (SDDCTEA). All identified components of the identified SDDCTEA safety scheme will be included.

Major AVB renovation projects will include upgrades to the AVB safety regime which bring the AVB system into conformance with a current SDDCTEA safety scheme.

Remotely Manned Egress Only Vehicle ACPs shall utilize the High Efficiency Presence Detection SDDCTEA safety scheme with the Active Vehicle Barriers being operated in the 'normally deployed' mode. When no egress vehicles are detected by the AVB system the AVB will remain in the deployed position.

B. Security

The active vehicle barrier system selected must be a DOD active vehicle barrier system that has been tested in accordance with State Department STD-02.01 or ASTM F-2656 by an accredited laboratory/test facility and included on the DOD anti-ram vehicle barrier list.

The DOD anti-ram vehicle barrier list can be found on the U.S. Army Corps of Engineers, Protective Design Center website. The list is updated quarterly.

https://www.nwo.usace.army.mil/About/Centers-of-Expertise/Protective-Design-Center/PDC-Library/

Vehicle barrier systems that have demonstrated a vulnerability to a vehicle that falls within the parameter of the baseline threat and/or 'local' identified threat shall not be utilized. The baseline threat includes multiple attempts by the same vehicle (if not captured or rendered inoperable) but does not include a multiple vehicle threat.

C. Active Vehicle Barrier Markings and Delineation

i. The active vehicle barrier type selected will meet the following requirements:

The non-deployed active vehicle barrier shall not result in unsafe roadway or roadside obstructions. Active vehicle barrier shall include retro-reflective material that is visible on both sides of the barrier when the barrier is deployed.

ii. Active vehicle barrier red delineation lighting.

The following does not apply to vehicle barriers behind closed gates (gate marked with retroreflective road closure signage in accordance with MUTCD) and those utilized to close service drives (average traffic of 1 vehicle per day or less). These systems are not required to comply with the 'barrier red delineation lighting' criteria.

Red delineation lighting shall be provided to ensure the active vehicle barrier is clearly visible when the barrier is deployed. All delineation lighting shall be LED and each luminaire shall provide a sustained illumination level of 50 lumina. Active vehicle barrier system shall include the following alternatives:

The active vehicle barrier system shall include red flashing lights facing the direction of the threat vehicle and facing in the direction of vehicles traveling on the roadway. The lighting shall meet the following alternatives.

a. Alternative 1 - Bollard systems must include, as a minimum, one red led light per bollard.

b. Alternative 2a – Plate/wedge barrier systems equal to or greater than 3 feet in width will include, as a minimum, 3 red lights. One will be mounted within 1 foot of each barrier edge, and one will be mounted within 1 foot of barrier centerline.

c. Alternative 2b – Plate/wedge barrier systems less than 3 feet in width will include, as a minimum, 1 red light. One light will be mounted within 1 foot of the barrier centerline.

d. Alternative 3 - Crash beam barrier systems will include, as a minimum, 3 red lights. One will be mounted within 2 feet of the each edge of the driving surface. One light will be mounted within 1 foot of the center of each lane spanned by the barrier.

e. Alternative 4 – Net type barriers are not required to have lighting mounted on the barrier, but mitigation must be provided through use of in-roadway lighting.

f. Alternative 5 - Roadway Lighting (Alternative to barrier mounted red delineation lighting)

Red non-flashing roadway lighting shall be provided in the pavement on both sides of the barrier. A minimum of three shall be provided per lane per side.

D. Site Selection

i. Utility conflicts

Utility conflicts are not justification for modification of DOD active vehicle barrier system.

ii. Drainage

Drainage conflicts are not justification for modification of 'as tested' active vehicle barrier system(s).

iii. Sight distance

Sight distance will conform to the AASHTO Roadside Design Guide. Sight distance is for crest/sag curves and view when lane obstructions are present. OCONUS locations will conform to host nation criteria. If no equivalent host nation criterion exists, the AASHTO Roadside Design Guide shall be utilized.

iv. Roadside Safety/Clear Zones

Many active vehicle barrier systems include components that lie adjacent to the roadway. These components will be evaluated for their impact on driver sight distance.

E. Active Vehicle Barrier and Passive Vehicle Barrier Transitions

i. Foundation Conflicts

The 'as tested' foundation of the active vehicle barrier will not be modified.

ii. Acceptable Gaps

For locations where high-speed impact at significant angle (less than 40 mph and 60 degrees or kinetic energy equivalent) is not achievable, the clear distance between active vehicle barriers and adjacent passive vehicle barriers shall not exceed 5 feet.

For locations where high-speed impact at significant angle (greater than 40 mph and 60 degrees or kinetic energy equivalent) is achievable, the clear distance between active vehicle barriers and adjacent passive vehicle barriers shall not exceed 4 feet.

F. Maintenance:

Maintenance of the AVB system will be considered during the design, construction and selection of AVB systems.

i. During the time that an active vehicle barrier is undergoing maintenance the lane, the barrier signals may stay dark, green or go to red depending upon the safety scheme being

used. The measures taken during the maintenance of an active vehicle barrier shall be similar to that used for temporary lane closure during construction. Signage, marking and other measures will be in accordance with national roadway standards applicable for temporary lane closure. For OCONUS locations relevant host nation criteria related to temporary lane closure shall be utilized. If no applicable host nation criterion exists, the U.S. national standards shall be utilized.

ii. Active vehicle barrier systems should be maintained in accordance with manufacturer's recommendations.

iii. AVB O&M manuals developed by manufacturers often include requirements that are not feasible for the configuration of the access control point. In such cases the requirement will either be mitigated or an alternate product selected.

G. Active Vehicle Barrier Commissioning

i. Commissioning of active vehicle barriers will be in accordance with UFGS 34 75 13.13 "Crash Rated Active Vehicle Barriers and Controls".

ii. The active vehicle barrier system will be commissioned by the U.S. Army Corps of Engineers, Protective Design Mandatory Center of Expertise (PD-MCX) or a representative designated by the PD-MCX.

a. On-site commissioning effort will not take place until after the review of required commissioning related materials (as defined in the aforementioned UFGS) by the PD-MCX.

b. The endurance testing period identified in UFGS 34 75 13.13 may occur during normal ACP operations. However, it will include periodic (at least once daily) operation of the AVB system regardless of whether or not such operation is part of normal ACP operations.

H. Primary and Secondary ACPs

The AVBs will be permanent systems (not portable or transportable).

2.5.5. ID Check Area

A. ID Check Area Islands

i. Design shall provide opportunity for a guard to step out of guard booth onto a flat, relatively level surface or step.

ii. Locations where ID checks occur shall include all likely positions for such operations along and within the ID check island (for lighting and island surface).

B. ID Check Area Canopy

i. Individual canopy columns shall limit field of view from ID check guard booth by no more than 11 degrees. Where automated means include driver use of pedestal mounted credential validation, no canopy feature shall interfere with the view of this pedestal from the related ID check guard booth.

ii. Canopy shall provide 15 feet clear height where ACP use is limited to POVs.

iii. Canopy shall provide 17.5 feet clear height where commercial traffic is allowed.

iv. Canopy shall cover, as a minimum, routinely occupied guard positions and locations where drivers or pedestrians are required to interact with guards or equipment.

v. Foundations for canopy columns shall be raised at least 6" above adjacent surface to prevent corrosion of the steel columns, unless otherwise justified.

vi. Ceiling/underside of canopy roof should include reflective coating to aid light distribution.

vii. Canopy clear height shall include lighting, signage and all other objects or equipment hung from, or projecting from, the canopy.

viii. Provide an open/close visual indicator on the canopy over each lane that is controlled from the ID Check area or Command and Control.

ix. Communication and Security Systems – General Requirements. See paragraph 3.9 Communication and Security Systems.

x. Electrical – General Requirements. See paragraph 3.10 Electrical Requirements for electrical and lighting requirements.

C. Turn-Arounds

i. Definition - Turn-around 'lane' shall be defined as a median opening, widened area or other feature(s) devised to permit an inbound vehicle to move from the ingress to the egress lanes.

ii. Turnaround – For the turn around prior to the ID check the turning movement analysis shall, as a minimum, allow rejection of the largest common commercial vehicle allowed (without special permit) on the public roads near the Access Control Point.

iii. Rejection - For ACPs restricted to POV use; turning movement analysis for the rejection after the ID check shall, at a minimum, allow rejection of the largest POV common to public roadways leading to the Installation. Where commercial vehicles are allowed, turning movement analysis for the rejection after the ID check shall, at a minimum, allow rejection of the largest common commercial vehicle allowed on the public road leading to the Installation.

D. Remotely Manned Egress Only Vehicle ACPs

Do not require ID Check Area features due the absence of inbound traffic. No ID Check Islands or Canopies are required.

2.5.6. Search Area

Assumption must be that the search area will not be open 24/7. Search area lanes must be capable of closure during periods when search area is vacant.

A. Closure of search area lanes shall consist of one of the following:

i. Vehicle blockage - Utilize vehicle blockage to prevent or mitigate the inconspicuous movement of vehicles through the search area when the search area is unmanned. Blockage shall be sufficient to ensure that in the event of attempted circumvention, guards notice/are made aware of an attempted bypass.

ii. Delineation of closure with alarm for ID check location - Alarm annunciation will be audible (above traffic and other background noise) for guards in each ID check guard booth(s), at the command and command-and-control functional area and all areas under

the ID check area canopy where guards may be standing adjacent to inbound lanes conducting validation of credentials. Alarm levels will be 85 – 90 dB interior and 105 – 115 dB exterior to guard booth(s).

iii. Search Area Canopy

a. Canopy shall provide 15 feet clear height where ACP use is limited to POVs.

b. Canopy shall provide 17.5 feet clear height where commercial traffic is allowed.

c. Canopy clear height shall include lighting, signage and all other objects or equipment hung from, or projecting from, the canopy.

d. Canopy shall cover, as a minimum, the search lane(s) routinely occupied guard positions and locations where drivers or pedestrians are required to interact with guards or equipment.

e. Canopy or enclosed facility shall extend a minimum of 4 feet beyond these locations.

f. Ceiling/underside of structure should include reflective coating to aid light distribution.

g. Communication and Security Systems – General Requirements. See paragraph 3.9.

iv. Search Area Enclosed Facility

Where necessary for protection in extreme climatological areas/zones an enclosed facility may be utilized in lieu of a canopy. In locations with both a Search Area Enclosed Facility functional area and Search Area Office functional area, the two functional areas may be combined into one facility.

a. Enclosed Facility shall provide 15 feet clear height where ACP use is limited to POVs.

b. Enclosed Facility shall provide 17.5 feet of clear height where ACP allows commercial traffic.

c. Enclosed Facility clear height shall include the structure itself as well as lighting, signage and all other objects hung from, or projecting from, the underside of the roof structure, doorways, or other facets of the facility.

d. Enclosed Facility shall cover, as a minimum, the search lane(s) and the locations routinely occupied by guards as well as locations where drivers or pedestrians are required to interact with guards or equipment.

e. The inside of the Search Area Enclosed Facility should include a light reflective coating to aid in light distribution.

f. Ventilation of the Enclosed Facility shall be designed in accordance with all relevant standards related to ventilation of enclosed spaces which accommodate motor vehicles.

g. HVAC is required for enclosed occupied spaces (e.g. offices, waiting areas, etc.) within the Search Area Enclosed Facility.

h. HVAC is not normally feasible for the vehicle search bay(s). However, consider the use of radiant heating for northern climates.

i. Provide interior power outlets for offices or other spaces if they are included within the Search Area Enclosed Facility.

j. Provide interior power outlets for the Search Area Enclosed Facility. Outlets must be provided along the periphery of the Facility as well as near each search lane.

k. Provide exterior power outlets near the entry and egress points (both vehicular and pedestrian doors).

l. Provide Electronic Security, Duress Alarms and IDS

v. Search Area Shelter - A search area shelter is required in order to shelter occupants removed from vehicles being searched. This may be accomplished in the search area office (if provided), or in a standalone search area shelter. Consider obscuration in this location such that the search of the vehicle cannot be observed by its occupants.

vi. Inclusion of a Search Area Office – If the ACP will have a significant search area function that will be frequently manned by one or more personnel, a search area office must be considered. Proximity of other facilities must be considered. If no other facility is nearby and/or cannot be used by search area personnel, a search area office is recommended.

vii. Remotely Manned Egress Only Vehicle ACPs – No inbound traffic is allowed and, as a result, no search facilities are required.

2.5.7. Command and Control

A. Functional Location – The command-and-control function will be located in either the Access Control Zone or the Response zone. The location will be conducive to the monitoring of activities at and near the ID check area canopy as well as the rejection path for vehicles being turned away from the ID check area. The location will also allow monitoring of vehicles exiting the search area to ensure that proper actions are taken by those vehicles. For Remotely Manned Egress Only Vehicle ACPs the remote manning location will be considered an extension of the Access Control Zone.

B. Field of View - Shall include a view of the ID check area. View shall be direct if the command-and-control function is located within the control zone. If the command-and-control function is located within the response zone the view of ID check area will be augmented with CCTV where direct view is distant or limited. Remotely manned egress only vehicle ACPs will utilize CCTV to provide the required views. Monitor(s) presenting all required views will be provided for guards in the remote manning location.

C. Ballistic Rating

i. Ballistic rating shall protect against all feasible firing angles achievable from a ground-based attack from a direct fire weapon.

ii. Ballistic rating shall include ceiling/roof protection where the topography or the structures' location provides opportunity for direct fire from an elevated position (when angle is sufficient to impact guard standing and/or sitting at the counter).

iii. When combined with other facilities only the portion of the facility defined as Command and Control and all other areas specifically designated as requiring a ballistic rating shall require a ballistic rating. Under these circumstances, the requirement for a ballistic rating shall include both the exterior walls and the interior walls which separate the command-and-control function from other functional areas.

iv. Shall include, as a minimum, a UL 752 - Level 3 ballistic rating with a higher level being required if prescribed in a local threat analysis or policy.

D. HVAC

i. Requirement - The Command & Control function includes a requirement for ballistic protection. Ballistic rating precludes the feasibility of mechanical ventilation as an alternative to heating or air conditioning.

ii. Both heating and air conditioning shall be provided.

iii. Ballistic Rating - Building envelope penetrations created by HVAC components shall be mitigated to provide the same level of ballistic protection as the structure itself.

E. Provide exterior power outlet sufficient to power hand-held searchlights, and bug zappers etc.

F. Provide interior power outlet sufficient for radio chargers, and computers, etc.

G. Provide active vehicle barrier control console with enunciator, computer workstation, and communications equipment including Local Area Network (LAN), telephone, and Internet connections.

H. Communications. Provide a minimum of two (2) means of communications from the facility and with the Central Security Monitoring Station.

I. Electronic Security. Intrusion Detection. The entry doors to the Command and Control are to be equipped with Balanced Magnetic Switches (BMS) for intrusion detection.

J. Active Vehicle Barrier Controls

i. Provide emergency-fast-operate (EFO) controls for all active vehicle barriers related to the ACP.

ii. Panel is to have LED indicator lights showing whether or not the panel is functional and capable of barrier deployment.

2.5.8. Overwatch

A. The ACP will include an overwatch position in accordance with one of the following alternatives:

i. Overwatch Pad: The Overwatch pad alternative shall include size and pavement section capable of supporting the identified Overwatch vehicle. The minimum vehicle shall be that associated with a High-Mobility Multipurpose Wheeled Vehicle (HMMWV). The Overwatch pad includes Items 4) Location and 6) Communications and Security System below.

ii. Overwatch Facility: The Overwatch Facility alternative includes all the items listed below.

iii. Remotely Manned Egress Only Vehicle ACPs shall include AVB controls, alarm annunciation and other features associated with overwatch at the remote manning location.

B. Dimensions

Dimensions shall be sufficient for movement of guard personnel within the structure.

C. Fighting Position

Design must provide adequate space for movement of a guard and use of both handgun and shoulder fired weapon with gunports.

Gunports shall be provided on each face of the overwatch.

All gunports shall be usable for both handgun and shoulder fired weapons. Gunport design shall not require weapons to be oriented in an unusual way (e.g. gunport being placed immediately above counter and counter interfering with vertical orientation of pistol magazine).

D. Ballistic Rating

Overwatch facility shall include, as a minimum, UL 752- Level 3 ballistic rating.

A higher ballistic rating is required when such is identified during mandatory review of 'local' threat analysis and policy.

Ballistic ratings shall be provided for all walls, glazing, doors and frames.

A ballistic rating is required for the roof and/or floor only if direct fire striking of that surface is possible and the trajectory could result in guard impact.

E. Location

The overwatch position must be located such that it is near the AVBs but within site of the ID Check Area. The overwatch position will be utilized as a fighting position. If the AVBs and/or the ID Check Area are not directly observable, then observation will be supplemented by CCTV.

Remotely manned egress only vehicle ACPs shall utilize wrong way sensors and CCTV and other features to provide remote capabilities similar to an on-site Overwatch position.

F. Protection Against Errant Impact

Provide passive barrier protection for facility if located less than 3 feet behind the face of curb when adjacent to a curbed roadway section.

Provide passive barrier protection for facility if located less than 7 feet from the traveled lane when adjacent to a shouldered roadway section.

G. Communications and Security Systems

i. Active Vehicle Barrier Controls.

a. Provide emergency-fast-operate (EFO) controls for all active vehicle barriers related to the ACP.

b. Panel is to have LED indicator lights showing whether or not the panel is functional and capable of barrier deployment.

c. A full discussion on the requirements on Active Vehicle Barrier Controls can be found in paragraph 3.9 Communications and Security Systems of this document.

ii. Communications. Provide a minimum of two (2) means of communications from the facility and with the Central Security Monitoring Station, when present.

iii. Information Connectivity. Facility shall have LAN connectivity.

iv. Electronic Security. Intrusion Detection. The entry doors to the Overwatch Facility are to be equipped with Balanced Magnetic Switches (BMS) for intrusion detection.

v. CCTV. If the facility does not have a direct visual view of the ID Check Area, then provide necessary connectivity to the CCTV to allow CCTV monitors to be installed.

vi. Electrical Requirements

a. Provide interior power outlets sufficient for radio chargers, and computers, etc.

b. Electrical – General Requirements. See paragraph 3.10 Electrical Requirements.

2.5.9. Primary Spaces (Functional Areas)

A. Visitor Processing: Provide the capability to process visitors. The following elements may be included.

i. Vestibule

The vestibule is a small antechamber between the outer door of a building and an interior door. The vestibule saves energy by not allowing exterior conditions to enter the building. The space is not required to be ballistic rated but may be located in a blast resistant (hardened) building. If blast resistance is required, the wall of the vestibule opposite the door will need to be constructed of reinforced concrete or masonry to stop the door from traveling through the building in the event of a bomb blast.

ii. Waiting Room

The waiting area contains seating for people waiting processing on to the Installation. The space is not required to be ballistic rated.

iii. Processing Room

The processing area is normally an area with casework and cabinets that houses personnel who will verify credentials for temporary access onto the Installation. A counter is normally the only separation between the working personnel and those requiring a vehicle and individual passes. The space is not required to be ballistic rated.

iv. Break Room

The break room is space for eating or recreation of the personnel staffing the access control point. The space may also be used for interrogation of persons of interest. The space is not required to be ballistic rated.

v. Office

The office is a space where the supervisor may be located. The space may be used to perform interviews and appraisals and requires sound deadening materials within the walls to reduce the amount of sound transfer. The space is not required to be ballistic rated.

vi. Provost Marshal/ Military Police

The Marshal/ Military Police occupies office space within the facility. The space may be used to perform interviews of persons of interest and requires sound deadening materials within the walls to reduce the amount of sound transfer. The space may also be used to detain such persons and is required to have a separate exterior entrance to allow detainees to be removed from the building without encountering anyone within the waiting area. The space is not required to be ballistic rated but may be located in a ballistic rated or blast resistant (hardened) building.

vii. ID Check Area Canopy

The ID Check Area Canopy will be a structure that covers the islands of the ID Check Area. The canopy height will be a minimum 15’-0” clear height above the road surface if only automobiles will be using the ACP but will be increased 17’-6” clear height above the road surface if oversize vehicles such as firefighting equipment would need to pass under the canopy. The roof of the canopy can be in any configuration but should be in conformance with the Installation Design Guidance. The canopy structure shall be designed by a registered professional engineer. Less than 11 degrees of obscuration of vision from the Guard Booth shall be maintained.

viii. ID Check Guard Booth

Ballistic resistant guard booths will be installed on islands adjacent to each incoming lane of traffic under the ID Check Canopy for protection of guards performing vehicle/passenger ID checks. Locate Guard Booths on a raised island in the ID Check Area under the ID Check Canopy. Guard booths can be pre-manufactured units. Guard booths are not required to be ABA/ADA compliant. Guard booths shall have sliding doors and a counter.

ix. Search Area Shelter

The search area shelter is a space to house individuals whose vehicles are being searched. The space should hold persons for the short time their vehicle is being inspected. The space should have large windows on the exterior to observe the people within the space and allow the inspectors to observe occupants. The space is not required to be ballistic rated. The function is not normally located in a blast protected building. Depending on installation requirements, this may either be a bus stop type shelter or building.

x. Truck Search Area Canopy

Canopy: The Truck Search Canopy will be a structure that covers the Truck Search Area. The canopy shall be sized for one or more of the largest vehicles expect to enter the Installation. The canopy height will be a minimum 17’-6” clear height above the road surface. The roof of the canopy can be in any configuration but should be in conformance with the Installation Design Guidance. The canopy structure shall be designed by a registered Professional Engineer.

Enclosed Facility: The Truck Search Enclosed Facility will be a structure that encloses the Truck Search Area. The facility shall be sized for one or more of the largest vehicles expected to enter the Installation. The clear height of the facility will be a minimum of 17’-6” above the surface of the roadway. The roof of the facility can be in any configuration but should be in conformance with the Installation Design Guidance.

xi. Passenger Vehicle Search Area Canopy

Canopy: The Passenger Vehicle Search Canopy will be a structure that covers the Passenger Vehicle Search Area. The building shall be large enough to allow the searching of a minimum of two vehicles at a time. The canopy clear height will be a minimum 15’-0” clear above the road surface. The roof of the canopy can be in any configuration but should be in conformance with the Installation Design Guidance. The canopy structure shall be designed by a registered Professional Engineer.

Enclosed Facility: The Passenger Vehicle Search Enclosed Facility will be a structure that covers the Passenger Vehicle Search Area. The facility shall be large enough to allow the search of, as a minimum, two vehicles at a time. The clear height above the road surface will be a minimum or 15’-0”. The roof of the facility can be in any configuration but should be in conformance with the Installation Design Guidance.

xii. Command- and- Control

The Command-and-Control area will contain the controls to activate the AVB in the event of an unauthorized vehicle tries to penetrate the installation's perimeter. The Command-and-Control area shall have a clear view of all ID Check area, and if possible, the Search Area Canopies. Due to the function of this area the public will not be allowed to enter the area. Therefore, this function/room is not required to be ABA/ ADA compliant. The function will be protected with ballistic resistant construction.

Remotely Manned Egress Only Vehicle ACPs will meet the requirements of the Command-and-Control Functional Area at a remote location.

xiii. Toilet

Toilets can be unisex units or single sex units, sized in accordance with ABA/ ADA criteria. The toilets shall be handicapped accessible with grab bars, tilted handicapped mirrors, etc. All toilet accessories are to be mounted in accordance with ABA/ ADA criteria unless the toilet is to be operated by only able-bodied personnel. Toilets operated by able bodied personnel shall not be required to meet ABA/ ADA requirements but must follow ABA/ADA to the greatest extent feasible.

xiv. Janitor's Closet/Inside Storage

The room may contain cleaning supplies, mops, a mop rack, mop bucket and a mop sink. Space is not normally ballistic resistant construction.

xv. Outside Storage

The Outside Storage function will house equipment used within the ID Check and Search Area. Equipment may include traffic cones, and mirrors used for vehicle inspection. The building can be a prefabricated storage unit or stick built construction. The building may be located on a raised curb under the ID Check Canopy. The function does not require ballistic protection.

xvi. Electrical/Communications Room

Electrical/ Communications room shall be sized to accommodate all required equipment. This functional space houses communications equipment, telephone equipment, along with space for CCTV equipment racks, and back-up generator equipment, used in the operation of the access control point. Equipment shall be arranged in the facility to maintain individual security and access. Equipment shall be located in secure areas within the facility. Some space may require separate entrances. This functional space also includes mechanical equipment necessary to heat and/or cool the equipment.

xvii. Pedestrian ID Check

The Pedestrian ID Check area occupied by guard personnel shall be ballistic rated. Pedestrian ID Check can be pre-manufactured or stick built construction. The Pedestrian ID Check area occupied exclusively by guard personnel is not required to be ABA/ADA compliant, however any area utilized by pedestrians during the vetting process shall be ABA/ADA compliant. A Pedestrian ID Check functional area with no pedestrian pass-through shall have a single door with a counter. The counter will include a deal tray for the passage of identification, and a speaking port to allow communication between the guard and persons wishing to enter the installation.

xviii. Miscellaneous Functional Elements

The following items may be included:

a. Janitor's Closet/Inside Storage

The space contains cleaning supplies, mops, a mop rack, mop bucket and a mop sink. The space does not require a ballistic rating may be located in a blast resistant building.

b. Recycle Room

The space contains bins for recycled materials. The space does not require a ballistic rating may be located in a blast resistant building.

c. Standalone Storage Building

The facility will house equipment used at the I.D. Check Canopy such as cones, and vehicle inspection mirrors. k The facility does not require ballistic or blast protection.

B. Overwatch Position

i. Overwatch Building

Ballistic resistant Overwatch building installed near the active barrier and providing occupant(s) the ability to oversee response zone traffic and operations at the ID Check Area. The Overwatch building may be a pre-manufactured unit or stick built. The Overwatch building is not ABA/ADA compliant. The Overwatch building is a fighting position and shall be equipped with gunports to allow for the occupant to respond to inbound threats. Overwatch building shall have a 360 degree360-degree field of view.

ii. Overwatch Pad

A paved pad designed to accommodate at a minimum one High-Mobility Multipurpose Wheeled Vehicle (HMMWV). This pad includes a pedestal for AVB controls.

2.5.10. Combinations/Square Foot Limitations for Various Functional Areas

The following represent standard designs for both functional areas and combinations of functional areas. Square footage limitations for these designs are listed in the Army Standard. Other functions may be combined even though it might not be addressed in the Army Standard or this document.

A. Gatehouse - Includes command and control, toilet, janitor's closet/inside storage, outside storage, mechanical/ electrical room and communications room. Ooutside storage is optional.

B. Command and Control - Includes command and control, toilet, janitor's closet/inside storage, and a mechanical/electrical room.

C. Toilet Small Search Building –Includes office, break room, toilet, janitor's closet/inside storage, mechanical/electrical room, communications room, and outside storage.

D. Large Search Building –Includes processing room, waiting room, provost marshal room, break room, toilet, janitor's closet/inside storage, mechanical/electrical room, communications room, and outside storage.

E. ID Check Canopy – Varies with the number of lanes.

F. Passenger Vehicle Search Area Canopy or Enclosed Facility – Varies with the number of lanes and configuration.

G. Truck Search Area Canopy or Enclosed Facility – Varies with the number of lanes and configuration.

H. Two (2) Processor Visitor Control Center – Includes waiting and processing room, vestibule, toilet, janitor's closet, break room, mechanical/electrical room, and communications room.

I. Three (3) and Six (6) Processor Visitor Control Center – Includes waiting room, processing room, vestibules, janitor's closet, toilets, break room, office, dedicated provost marshal room, mechanical/electrical room, and communications room.

J. Nine (9) Processor Visitor Control Center – Includes waiting room, processing room, vestibules, toilets, break room, office, dedicated provost marshal room, janitor's closet, storage room, mechanical/electrical room, and communications room.

2.6. SITE FUNCTIONAL REQUIREMENTS

2.6.1. General

A. Location and construction of the new facilities including associated structures, roads, parking, and utilities and landscaping shall be as indicated and as specified herein. All site layout changes are subject to review and approval by the Government. Government supplied site plans are provided to assist the Contractor in the preparation of their proposal and design. Any errors identified shall be brought to the attention of the Contracting Officer immediately for resolution and direction. Take all professionally prudent and reasonable actions to verify the accuracy of the data provided. The Contractor is responsible for final site plans.

B. Installation Physical Security and Antiterrorism requirements that are in addition to the requirements of this section will be included in a separate document. [RFP Wizard: See Part 3 for any additional security requirements required by the installation Physical Security and Antiterrorism including the requirements in this section.]

C. Visitor Control Center

i. The Visitor Control Center (VCC), if present, shall be placed such that the processing of visitors is done prior to entry into the Installation. This shall mean that the visitor vetting is conducted prior to inbound traffic (vehicular and pedestrian) reaching the ID check and search area.

ii. The VCC parking and driveway shall not provide undetected bypass of the ID check area.

D. ID Check Area

i. The ID check area shall be configured in a manner that allows ID check guards to be aware of all inbound vehicle and pedestrian traffic.

E. Overwatch Position

i. The overwatch position is both a location for overwatch and a potential fighting position. As such it shall be located in a position where a guard within the structure has some ability to defend the Installation from a potential threat in the ACP response zone.

ii. Overwatch firing ports will be oriented to allow guards to fire from all sides of the position. Specific consideration will be given to the most likely threat locations. This shall include the response zone near the final denial active vehicle barriers.

F. Search Area

i. Search area(s) shall present the opportunity for vehicles to be designated for search prior to the ID check and must also support search for those vehicles selected for search at the ID check location.

ii. The search area must not provide opportunity for undetected bypass of the ID check area. The design will not be based on the search area being in operation during the entire time that the ACP is open. During closure the design must anticipate search area being unmanned at times and vehicle resistant measures and/or alarm and annunciation provided for ID check guards if a vehicle travels through toward the search area when it is closed.

2.6.2. Parking

A. Vehicle Parking

i. Provide clear and convenient traffic flow through and around the ACP parking areas and access drives that maximizes functional capabilities but minimizes traffic conflicts. If required coordinate inter-modal traffic within the ACP site.

ii. Provide sufficient parking spaces for the anticipated number of visitors and personnel at the ACP. See Military Surface Deployment and Distribution Command, Transportation Engineering Agency (SDDCTEA) Pamphlet 55-15 for the methodology to be used in determining the number of visitor parking spaces required. Provide ramps serving the handicapped spaces for access.

iii. Privately Owned Vehicle (POV) parking is to be off-street parking. Area lighting and landscaping is to reinforce the parking area while meeting functional and safety requirements. Pavement markings shall comply with MUTCD. [RFP Wizard: Minimum flexible and concrete pavement thickness and pavement calculations shall comply with the installation design guide and any additional requirements identified in Part 3.]

2.6.3. Access Roadways, Drives and Islands

A. Roadways and Access Drives: Design roadways to accommodate expected vehicles in the design, including, but are not limited to, passenger cars, emergency vehicles, garbage trucks, fire trucks, military vehicles, delivery service, utility vehicles, commercial vehicles and bicycles if present. The minimum roadway width in the approach and response zones is 11 feet. The minimum roadway width at the ID Check Area is 10 feet, but 11-12 feet is preferred. All roadway horizontal and vertical alignments must properly address the turning radius of the design vehicle(s). Pavement design shall follow the UFC or other approved methods. Host nation methods for determining concrete pavement section may be utilized where present. If no such documentation exists, the aforementioned minimum applies. [RFP Wizard: Minimum flexible and concrete pavement thickness and pavement calculations shall comply with the installation design guide and any additional requirements identified in Part 3.]

B. Devices in Pavements: Devices installed in the roadway surface will be rated for exterior use and will be installed in a manner which resists or avoids impact by snowplows. Housings for such devices will be metal capable of resisting corrosion. Recess devices where necessary to avoid snowplow impact.

C. ID Check Area Islands: Traffic islands in the ID Check Area are to be, at a minimum, 10 feet in width. Medians at the ID Check Area shall be a minimum of 10 feet in width.

D. ID Check Area Hardstand: ID Check Area will consist of a concrete hardstand extending a minimum of 3 feet before and after the ID Check Islands and canopy.

2.7. SITE AND LANDSCAPE REQUIREMENTS

2.7.1. Site Structures

A. Dumpsters: Dumpsters are not a requirement of the Army Standard Design, but maybe incorporated at the request of the installation.

i. Provide concrete pads and dumpster screen wall enclosure. Ensure minimum UFC 4-010-02 “DoD Minimum Antiterrorism Standoff Distances for Buildings” between the building and dumpster location is complied with. Construct the screen wall enclosures of materials to match the new facility exterior walls. Coordinate color with the installation. Integrate a gate keeper capable of holding the entry gate(s) in an open position and a locking mechanism into the entry gate design consistent with DA fence requirements.

ii. Coordinate with the Installation on the required recycling dumpsters (or storage containers). Collocate, but separate recycling dumpsters (or containers) with the dumpsters and screened as per dumpsters.

2.7.2. Landscaping/Hardscaping

A. Landscaping:

i. Lines-of-Sight

a. Landscaping shall not obscure lines of sight. Lines-of-sight shall be determined by the mature growth of trees and other plantings. Provide clear lines of sight between guards and the following functions:

b. Vehicle ID Check Guard Booth guards view of vehicle and driver during the vetting process will not be obstructed.

c. Pedestrian ID Check guards view of pedestrian being processed will not be obstructed.

d. Overwatch position view of ID Check Area.

e. Command and Control view of ID Check and Search Area exits.

f. Landscaping shall not infringe on sight distance for drivers. Sight distance shall bas defined in the AASTHTO Green Book (or applicable host nation criteria). If the specific issue of sight distance is not addressed by host nation criteria the AASHTO documentation shall be utilized.

ii. Make selection of landscape materials from among species well adapted to the region and consider maintenance requirements. Focus landscaping concepts on desirable environmental effects such as windbreaks, shade, and screening of undesirable views and definition of desirable enclosed areas.

iii. The landscaping plan is also to consider the irrigation requirements. Ideally, the selected species are to be native and drought resistant such that a permanent irrigation system is not required. In the event that a permanent irrigation system is required, include as a minimum, a backflow prevention and pop-up or drip type sprinkler heads.

B. Sidewalks: Provide an ample functional system of walks connecting structures, parking area(s), street(s), and other sidewalk(s) as pedestrian traffic demands. In addition, review paths of travel to determine a layout of sidewalks that is sufficient to meet the likely paths of travel. Slopes of all sidewalks are required to meet all requirements for ADA Accessibility Guidelines (ADAAG). Pedestrian sidewalks are to be a minimum of 6 feet wide and 10 feet wide for those anticipated to have bidirectional bicycle traffic. Construct pedestrian sidewalks of Portland Cement Concrete having a minimum 3,000 psi compressive strength. Conformance with Architectural Barriers Act

(ABA) is also required. Host Nation methods for determination of concrete section and strength may be utilized.

2.7.3. Site Design Requirements

For all site design requirements, excluding line-of-sight requirements, Host nation criteria may be used in lieu of the contents of this section. Use the requirements described in this section, if host nation criteria does not specifically address any of the features described herein.

A. Grading:

   i. Provide positive drainage for all areas and use existing drainage ways to the extent possible. It is desirable to direct drainage away from buildings to curb and gutter or road ditches. Avoid swales between buildings and parking areas, if possible. Grade parking areas such that storm water is directed off to the sides, with curbs and gutters to control drainage, and not down the center of the parking area, where possible. Balance earthwork to the extent possible without compromising the design. Keep the number of existing trees to be removed to a minimum. No grading is to be done within drip lines of existing trees to be preserved.

   ii. Design grading such that visual lines of sight are maintained throughout the ACP corridor between the major functional areas (Gatehouse, active vehicle barriers, Guard Booths, Search Area Building, Visitor Control Center, Vehicle Search Area, ID Check Area, etc.).

   iii. Comply with AASHTO Green book for vertical roadway profiles.

B. Line of Sight: Individual obstructions, to include canopy columns, shall not cause more than 11-degree interruption of line of sight of the inbound lanes (in both directions – both upstream and downstream) from vehicle ID Check guard booths and other routinely occupied vehicle ID Check guard locations.

C. Adjustment of Existing Structures: Adjust all manholes, valve boxes, or inlets of any nature within the project that do not conform to the finished grade in either surfaced or unsurfaced areas to the finished grade. Where inlets, manholes, or valve boxes fall within a surfaced or unpaved roadway or parking, remove the existing frames and cover and replace with a heavy-duty frame and cover. Adjust the structure as needed to fit the new conditions. Provide structures of a type suitable for the intended use and conforming to the requirements of the applicable sections herein.

D. Sidewalks: Provide concrete sidewalks with a transverse grade of 2 percent. The maximum longitudinal sidewalk grade adjacent to the roadway shall be less than or equal to the adjacent roadway grade. Sidewalks without railings shall have a maximum grade not to exceed 5 percent. Sidewalks with handrails and landing shall have a maximum slope of 8.333 percent (1V:12H) slope with 5 feet level landings at 30 feet maximum spacing and at the top and bottom of the slope. See Uniform Federal Accessibility Standards for additional requirements.

E. Stairs: Avoid the use of stairs in sidewalks whenever possible, this is especially important throughout the ACP. When stairs are unavoidable, they should have at least three risers and shall be provided with handrails. Provide all steps within a stair to have a uniform tread width and riser height. Provide risers with a height of 4.5 to 6 inches and treads with a width of 12 to 17 inches. Treads should slope 2 percent for positive drainage. Keep the height between landings to a maximum of 5 feet to allow a view of the next higher landing whenever possible. The height between landings is not to exceed 12 feet. Provide landings that are at least 4 feet long.

F. Transverse Parking Area Grades:

i. Desirable minimum of 2 percent.

ii. Absolute minimum of 1.5 percent for flexible pavement and 1 percent for rigid pavement.

G. Longitudinal Parking Area Grades: Maximum of 5 percent.

H. Road and Street Longitudinal Grades: Preferred maximum longitudinal road and street grades of 5 percent. Use of longitudinal road and street grades greater than 7 percent shall not be used.

I. Ramp Grades:

i. Desirable maximum of 7 percent.

ii. Absolute maximum of 10 percent for short distances only.

J. Gutter Grades:

i. Desirable minimum of 0.8 percent.

ii. Absolute minimum of 0.5 percent.

K. Building Floor Elevation: Set building finished floor elevation to ensure that the required minimum and maximum grades are met. Construct first floor of new buildings a minimum of 1 foot above the 100-year flood plain elevation, if applicable.

L. Grades Away from Building:

i. Minimum Soil Grade: 5 percent for 10 feet.

ii. Maximum Soil Grade: 10 percent for 10 feet.

iii. Sidewalk or Paved Grade: Preferred is 2 percent, maximum is 4 percent, and this shall be subject to approval by the Contracting Officer. This is especially important where sidewalks transition between the buildings and adjacent roadways or drives that have vehicle traffic.

M. Overlot Grades:

i. Minimum 1 percent for cohesionless sandy soils.

ii. Minimum 2 percent for cohesive soils or turfed areas.

iii. Side slopes for ditches, roads, and other turfed areas shall be no steeper than 3 Horizontal to 1 Vertical (3H:1V), preferred is 4 Horizontal to 1 Vertical (4H:1V). A 10-foot-wide shelf shall be constructed every 15 feet in elevation change on all cut and fill slopes. Retaining walls are an option to limit the amount of cut and fill.

N. Ditches: Grade ditches at non-erodible slopes or line the ditch with an appropriate material to prevent erosion. Use a design storm with a return period of at least 10 years to determine erodibility of ditches and swales. Provide the depth of ditches along pavement shoulders such that the water surface from the 10-year design storm is below pavement subbase and base courses which daylight through the adjacent shoulder.

O. Storm Drainage System: Comply with host nation requirements for storm drainage requirements. If no applicable host nation requirement exists, comply with UFCs requirements. Comply with the appropriate UFCs requirements for design, construction and material specified for storm drainage installation. State’s DOT requirements maybe used with Government approval. Use reinforced concrete pipe (RCP) with watertight joints for all storm drainage lines constructed under road, parking area and or surfaces subject to vehicular traffic.

P. Canopy Stormwater Drainage System: All drainage from canopy roofs shall be collected and either discharged into a storm drain system or onto non-paved areas with positive drainage. Roof drainage shall not be discharged onto islands, pavements, sidewalks, or any other areas that people or vehicles regularly access.

Q. Building Stormwater Drainage System: Stormwater from building roofs shall be collected and will be either discharged into a subsurface stormwater drainage system or onto non-paved areas in areas unlikely to be accessed by guard personnel or pedestrians. Provide positive slope away from facilities, roadways, sidewalks and other areas that may be accessed by pedestrians or vehicles.

R. Asphalt Pavement: Provide asphalt aprons, roads and parking areas per project requirements. Construct the asphalt areas with concrete curb and gutter at the project specific locations.

S. Concrete Pavement: Provide concrete pavement per project specific. Construct the concrete pavement with the curb type at project specific locations, minimum 6 inches high.

T. Traffic Signage, Pavement Markings and Striping: Provide traffic signage, pavement marking and striping for all roads and parking areas. Design signage, pavement markings and striping in accordance with MUTCD for Streets and Highways. Provide retro-reflectorized signs according to the minimum requirements of ASTM D 4956-07e1, Type III sheeting. Provide non-reflectorized paint for parking areas. Stripe roads and streets with reflectorized paint.

U. Exterior Signage: To be in accordance with installation requirements.

2.7.4. Minimum Anti-terrorism Standards for ACP Buildings

A. General

ACP structures shall be sited, designed and constructed in accordance with the minimum requirements of UFC 4-010-01, “DoD Minimum Antiterrorism Standards for Buildings”. Facilities which are, by occupancy, considered “inhabited structures”, per the criteria, which cannot be sited to meet conventional construction standoff distance requirements from threats, shall be designed as hardened facilities.

B. Standoff

Shall be in accordance with UFC 4-010-01” Minimum Antiterrorism Standards for Buildings.”

Standoff shall consider a moving vehicle threat scenario within the ACP corridor.

The element of UFC 4-010-01 that has the most significant impact on project planning is providing protection against explosives effects. That protection can either be achieved using conventional construction (including specific window requirements) in conjunction with establishing relatively large standoff distances to parking, roadways, and installation perimeters or through building hardening, which will allow lesser standoff distances. Even with the latter, the minimum standoff distances cannot be encroached upon. These setbacks will establish the maximum buildable area. All standards in Appendix B of UFC 4-010-01 must be followed. In addition to the UFC cited in this paragraph UFC 4-020-02FA, (2005) “Security Engineering: Concept Design”; UFC 4-020-03FA, (2005) “Security Engineering: Final Design”; UFC 4-020-04FA, (2005) “Electronic Security Systems: Security Engineering”; and UFC 4-021-01 “Design and O&M Mass Notification Systems” apply to the facility.

C. Visitor Control Center (VCC) and Multi-Function Building Combination

VCC Standard design facilities and multi-function building combinations where occupancy level is greater than 11 persons may necessitate standoff in compliance with UFC 4-010-01 depending on site placement of these facilities.

2.8. ARCHITECTURAL REQUIREMENTS:

2.8.1. General Requirements

The requirements below include both separate functional requirements and example combination of functional requirements, where identified.

A. Two (2) Processor Visitor Control Center (See drawings)

Visitor Control Center shall have occupancy under 11 persons and shall be considered an unoccupied facility and is not required to have blast resistant construction. The facility is non-ballistic rated construction. This Visitor Control Center contains, but not limited to, the following:

i. Waiting and Processing: Provide seating for visitors. The processing area will contain casework for processing operations.

ii. Vestibule: Provide exterior and interior vestibule doors with panic hardware.

iii. Toilet: Provide privacy lockset.

iv. Break Room/Provost Marshal Room: Provide passage latch set. Provide at least STC 45 sound rated walls. Provide a microwave and refrigerator. Verify if arms storage or personal lockers are required. Separate exterior door will be provided to allow the removal of arrested individuals, exterior door to have no exterior trim.

v. Mechanical/ Electrical room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

vi. Communications room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

vii. Janitor's Closet: Provide mop sink and mop holder with shelf.

B. Three (3) Processor Visitor Control Center (See drawings)

The Visitor Control Center is non-ballistic rated construction but may require blast rated construction based on stand-off distance (for hardened structures). This Visitor Control Center contains, but not limited to, the following:

i. Waiting Room: Provide seating for visitors.

ii. Processing Area: Provide raised flooring with ramp access and, if feasible, stair access. The processing area will contain casework for processing operations.

iii. Vestibules: Provide exterior and interior vestibule doors with panic hardware.

iv. Toilets: Provide privacy lockset.

v. Break Room: Provide latch set. Provide a microwave and refrigerator. Provide space for recycling receptacle. Verify if arms storage or personal lockers are required.

vi. Office: Provide office lockset. Provost Marshal Room: Provide office lockset on interior door. Provide at least STC 45 sound rated walls. Separate exterior door will be provided to allow the removal of arrested individuals, exterior door to have no exterior trim.

vii. Mechanical/ Electrical room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

viii. Communications room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

ix. Janitor's Closet: Provide mop sink and mop holder with shelf.

C. Six (6) Processor Visitor Control Center (See drawings))

The Visitor Control Center is non-ballistic rated construction but may require blast rated construction based on stand-off distance (for hardened structures). This Visitor Control Center contains, but not limited to, the following:

i. Waiting Room: Provide seating for visitors.

ii. Processing Area: Provide raised flooring with ramp access and, if feasible, stair access. The processing area will contain casework for processing operations. Vestibules: Provide exterior and interior vestibule doors with panic hardware.

iii. Vestibules: Provide exterior and interior vestibule doors with panic hardware.

iv. Toilets: Provide privacy lockset.

v. Break Room: Provide latch set. Provide a microwave and refrigerator. Provide space for recycling receptacle. Verify if arms storage or personal lockers are required.

vi. Office: Provide office lockset.

vii. Provost Marshal Room: Provide office lockset on interior door. Provide at least STC 45 sound rated walls. Separate exterior door to allow the removal of arrested individuals, exterior door to have no exterior trim.

viii. Mechanical/Electrical room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

ix. Communications room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

x. Janitor's Closet: Provide mop sink and mop holder with shelf.

D. Nine (9) Processor Visitor Control Center (Drawing Not Included)

The facility is non-ballistic rated construction but may require blast rated construction based on stand-off distance (for hardened structures). This Visitor Control Center contains, but not limited to, the following:

i. Waiting Area: Provide seating for visitors.

ii. Processing Area: Provide raised flooring with ramp access and, if feasible, stair access. The processing area will contain casework for processing operations.

iii. Vestibules: Provide exterior and interior vestibule doors with panic hardware.

iv. Toilets: Provide privacy lockset.

v. Break Room: Provide latch set. Provide a microwave and refrigerator. Provide space for recycling receptacle. Verify if arms storage or personal lockers are required.

vi. Office: Provide office lockset.

vii. Provost Marshal Room: Provide office lockset on interior door. Provide at least STC 45 sound rated walls. No ballistic protection required. Separate exterior door to allow the removal of arrested individuals, exterior door with no exterior trim.

viii. Mechanical/Electrical room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

ix. Communications room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

x. Janitor's Closet: Provide mop sink and mop holder with shelf.

xi. Storage Room: The space will be for dedicated storage. Provide standard utility space lockset.

E. ID Check Canopy (See drawings)

The ID Check Canopy will be a roof structure supported by columns that covers the islands and entry lanes of the ID Check Area. It is desirable to clad the structural members and provide soffits to the underside of the structure to prevent birds from nesting on the exposed legs of the steel beam flanges.

F. Vehicle ID Check Guard Booth (See drawings)

Ballistic rated construction. Provide 360-degree field of view. Provide two sliding ballistic rated doors with hardware. Provide at least 32-inch-deep stainless-steel countertop. Roof requires ballistic rating only where direct fire threat is possible from an elevated position.

G. Search Function Bus Shelter

The three-sided or four-sided glass and aluminum pre-manufactured bus shelter will have a wood or metal bench and doors, where needed. Bus shelter size may vary with search area traffic volume and manufacturer provided. Glazing shall be clear to allow guards to maintain visual contact with persons whose vehicle is being inspected. Ballistic rated construction is not required.

H. Small Search Area Building(s) (See drawings)

The Small Search Area Building(s) will be located adjacent to the Vehicle Search Area(s) to support the Search Area guards in performing their activities by providing a space for vehicle occupants to go during the vehicle inspection process. The Enclosed Search Area Facility will include additional CCTV to mitigate the loss of direct line of sight from other areas within the ACP Control Zone. The building will be designed and constructed to be Architectural Barriers Act (ABA) and Americans with Disabilities Act (ADA) Accessibility Guidelines compliance. Ballistic rated construction is not required. The Small Search Area Building contains, but not limited to, the following:

i. Waiting room/Office: Provide door with entry door hardware. Provide seating for visitors.

ii. Break room: Provide latch set and a microwave and refrigerator.

iii. Toilet: Provide privacy lockset.

iv. Janitor's Closet/Inside Storage: Provide standard utility space lockset. Provide mop sink and mop holder with shelf.

v. Communications Room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

vi. Mechanical/ Electrical room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

vii. Outside Storage: Provide entry door with locksets.

I. Large Search Area Building (See drawings)

The Large Search Area Building is located adjacent to the Vehicle Search Area to support the Search Area guards in performing their activities by providing a space for vehicle occupants to go during the vehicle inspection process. The Enclosed Search Area Facility will include additional CCTV to mitigate the loss of direct line of sight from other areas within the ACP Control Zone. The building will be designed and constructed to be Architectural Barriers Act ABA and Americans with Disabilities Act (ADA) Accessibility Guidelines compliant. At OCONUS locations host nation accessibility criteria may be utilized in lieu of ABA/ADA requirements. If no host nation criteria exists, the project will comply with ABA/ADA. Ballistic rated construction is not required for this facility. The Large Search Area Building contains, but not limited to, the following:

i. Optional X- Ray/Metal Detector: Provide a pair of doors with panic hardware on active leaf and lever action flush bolts on inactive leaf.

ii. Office/Provost Marshall Room: Provide interior door with office lockset. Provide separate exterior door to allow the removal of arrested individuals and make it have an entry door lockset.

iii. Toilet: Provide privacy lockset.

iv. Visitor Processing:Two (2) processors with office door with office lockset.

v. Break Room: Provide latch set and a microwave and refrigerator.

vi. Outside Storage: Provide entry door with utility room lockset.

vii. Mechanical/ Electrical room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

viii. Communications room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

ix. Janitor’s Closet/Inside Storage: Provide standard utility space lockset. Provide mop sink and mop holder with shelf.

x. Waiting room: Provide seating for visitors.

J. Truck Search Area Canopy (See drawings)

Canopy: The Truck Search Canopy will be a structure that covers the Truck Search Area. The roof of the canopy can be in any configuration, must conform with the Installation Design Guide. The canopy structure shall be designed by a registered Professional Engineer. Screening of search operations from casual observation should be considered. The structure may include screen walls as part of the canopy design.

Enclosed Facility: The Truck Search Enclosed Facility will be a structure that encloses the Truck Search Area. The roof of the facility can be any configuration that conforms to the Installation Design Guide. This facility shall be designed by a registered Professional Engineer. The Enclosed Facility may not require additional measure to screen from casual observation; however, it should still be considered during planning and design.

K. Passenger Vehicle Search Area Canopy (See drawings)

Canopy: The Passenger Vehicle Search Canopy will be a structure that covers the Passenger Vehicle Search Area. The roof of the canopy can be in any configuration, must conform with the Installation Design Guide. The canopy structure must be designed by a registered professional engineer. Screening of search operations from casual observation should be considered. The building may include screen wall(s) as part of the canopy design.

Enclosed Facility: The Passenger Vehicle Search Enclosed Facility will be structure that encloses the Passenger Vehicle Search Area. The roof of this facility can be of any configuration that conforms to the Installation Design Guide. This facility shall be designed by a registered Professional Engineer. The Enclosed Facility may not require additional measure to screen from casual observation; however, it should still be considered during planning and design.

L. Command-and-Control Function/Room

The Command-and-Control functional area will enable guards' oversight of the ID Check and Search Areas and will contain the master controls to activate the AVB in the event of an unauthorized vehicle tries to penetrate the ACP. The facility must have a 180-degree un-obstructed view. Areas not directly observable from the Command and Control can be monitored by closed circuit television (CCTV). Due to the function of the building, the public will not be allowed to enter therefore the facility is not required to be ABA/ADA compliant. All areas shall be ballistic rated. Roof requires ballistic rating only where direct fire threat is possible from an elevated position. The room is not required to be blast resistant. Casework provided in this function must be at least 2’ 6” in depth.

M. Gatehouse (See drawings)

Gatehouse shall be located to allow guards to observe and oversee the Identification (ID) Check Area, the exits from search areas, and must have a 180-degree un-obstructed view. Areas not directly observable from the Command-and-Control room can be monitored by closed circuit television (CCTV). A control panel for the Active Vehicle Barrier (AVB) will be located in the Command-and-Control room of the building and will activate the AVB in the event of an unauthorized vehicle tries to penetrate the ACP. The Gatehouse will be located on a raised island immediately after the last turn-around past the ID Check Canopy. Due to the function of the building the public will not be allowed to enter the building so therefore the facility will not be required to be ABA/ADA compliant. Spaces occupied by guard personnel shall be ballistic rated. Roof requires ballistic rating only where direct fire threat is possible from an elevated position. The facility is not designed to be blast resistant. A break room that provides personal storage may replace, or be combined with, inside storage or replace outside storage depending on user requirements. Also consider the addition of a small break room, especially when the gatehouse is located in a remote area.

i. Command and Control function: Provide ballistic resistant walls, windows and exterior doors with front door locksets. Roof requires ballistic rating only where direct fire threat is possible from an elevated position.

ii. Toilet: Provide privacy lockset. Provide a base cabinet with the sink to house equipment such as a water heater and miscellaneous supplies, if desired by users. This is recommended to be accessible directly from the Command-and-Control Room only.

iii. Janitor’s Closet/Inside Storage: Provide standard utility space lockset. Provide a mop sink and mop holder with shelf.

iv. Mechanical/Electrical room: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation).

v. Outside Storage (Optional): Provide entry door with locksets.

vi. Communications room: Provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation).

N. Standalone Toilets

Toilets can be single units or twin single units combined in a single building. The toilets when required to be ABA/ADA accessible shall be handicapped accessible with grab bars, tilted handicapped mirrors, etc. All toilet accessories are to be mounted in accordance with ABA/ADA criteria. At OCONUS locations host nation accessibility criteria may be utilized in lieu of ABA/ADA requirements. If no host nation criteria exists, the project will comply with ABA/ADA. Provide privacy lockset. No ballistic or blast protection is required.

O. Standalone Storage

The Standalone Storage will house equipment used within the ID Check and Search Areas. Equipment may include traffic cones, and mirrors used in vehicle inspection. The building can be a prefabricated storage unit or stick built construction. The building can be located on an island under the ID Check Canopy if the required field of view is maintained. Provide utility lockset. No ballistic or blast protection is required.

P. Communications with Mechanical/ Electrical Equipment Building (Standalone Building)

The facility will house electrical and Communications equipment. The mechanical and electrical equipment area will house heating and cooling equipment for the building. The building will contain CCTV equipment racks, Duress, AVB, AIE, IDS and other electrical equipment necessary for the operation of the ACP.

i. Communications: Provide entry doors with locksets (coordinated keying with installation groups responsible for maintenance and operation). No ballistic or blast protection is required.

ii. Mechanical room: If required, provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation). No ballistic or blast protection is required.

iii. Electrical room: If required, provide entry doors with locksets (coordinate keying with installation groups responsible for maintenance and operation). No ballistic or blast protection is required.

Q. Pedestrian ID Check

Ballistic rated construction. Provide 360-degree field of view. Provide sliding ballistic rated doors and hardware. Provide a countertop. Countertop to have deal tray for passing identification cards. Provide a ballistic rated speaking portal. Roof requires ballistic rating only where direct fire threat is possible from an elevated position. If acting as a Pedestrian ID Check Entrapment area for a combined facility, see the desired facility combination example for additional information.

R. Overwatch Building

The Overwatch Building will be a pre-manufactured or stick built unit. Overwatch shall have a single door and a minimum of 24-inch-deep stainless-steel counter. Ballistic rated construction for walls and windows is required. Provide 360-degree field of view for the overwatch. Provide single ballistic rated door with

hardware. Gun ports to be provided on all sides of the building. If there is substantial thickness to walls, such as a CMU wainscot veneer, the gunports need to be increased in size to accommodate the maneuverability of the gun and the personnel for aiming. Roof requires ballistic rating only where direct fire threat is possible from an elevated position.

2.8.2. Examples of Combinations of Facilities

See Army Standard for guidance on square footage limits and additions regarding combining multiple functions/facilities into one facility. The following combinations are examples of functions that can be combined into one facility. Combinations that are not addressed may still be combined but are not typical.

A. Gatehouse with Small or Large Search Area Function

All interaction between Command and Control and non-ACP personnel shall include ballistic rated protection (e.g. Intercom, Pass Through Drawers, etc.). See the Architectural General Requirements for these two facilities/functions to combine into one facility. An example drawing is provided on the MSRI website for this combination.

B. Gatehouse with Visitor Control Center Function

All interaction between Command and Control and non-ACP personnel shall include ballistic rated protection (e.g. Intercom, Pass Through Drawers, etc.). See the Architectural General Requirements for these two facilities/functions to combine into one facility.

C. Visitor Control with Small or Large Search Area Function

See the Architectural General Requirements for these two facilities/functions to combine into one facility.

D. Gatehouse with Small or Large Search Area Function and Pedestrian ID Check

All interaction between Command and Control and non-ACP personnel shall include ballistic rated protection (e.g. Intercom, Pass Through Drawers, etc.). The Pedestrian ID Check will act as an entrapment area that will be controlled by the command-and-control personnel. Wall between the Pedestrian Entrapment Area and Command and Control function will be ballistic rated. Doors will have locksets and electric strikes. See the Architectural General Requirements for these three facilities/functions to combine into one facility.

E. Gatehouse with Pedestrian ID Check and Visitor Control Center

All interaction between Command and Control and non-ACP personnel shall include ballistic rated protection (e.g. Intercom, Pass Through Drawers, etc.). The Pedestrian ID Check will act as an entrapment area that will be controlled by the command-and-control personnel. Wall between the Pedestrian Entrapment Area and Command and Control function will be ballistic rated. Doors will have locksets and electric strikes. See the Architectural General Requirements for these three facilities/functions to combine into one facility.

F. Pedestrian Entrapment Area ID Check and Visitor Control Center

Ballistic resistant Pedestrian ID Check Entrapment Area can be pre-manufactured or stick built construction and will be installed on the end of the Visitor Control Center portion. See the Architectural General Requirements for these two facilities/functions to combine into one facility.

G. Overwatch Building with Command-and-Control Function

See the Architectural General Requirements for these two facilities/functions to combine into one facility. This building will be just one room for the Command-and-Control portion of the Gatehouse (excludes storage, toilet room, etc.) and overwatch room. This combined facility will require other facilities on the ACP area for access to toilets, communication, electrical, storage, and mechanical requirements. An example drawing is provided on the MSRI website for this combination.

2.8.3. Architectural Specialties

A. GENERAL

i. Where gypsum wallboard and acoustical tile ceilings are provided, provide recessed light fixtures.

ii. Kick plate: Provide a minimum height of 18” on all interior doors.

iii. Exterior Doors: Provide door hardware to limit weather, bugs, etc. from entering into the door when closed.

2.9. INTERIOR DESIGN REQUIREMENTS:

2.9.1. General Requirements

A. Interior Building Appearance: Provide the facility interior with a warm, comfortable, and professional environment through the appropriate use of building materials, finishes, fabrics, color and texture. Provide materials of high quality, functional, easily maintained, and furnished as described herein. Provide complementary building finishes and details. Finish and fabrics shall provide a completely integrated interior design. Coordinate the interior building appearance with the exterior building appearance.

B. Interior Design Categories: Interior Design is divided into two categories (1) Structural Interior Design (SID) and (2) Furniture, Fixtures and Equipment (FF&E). SID is the design of building related interior finishes and includes the selection and specification of interior materials and finishes for the building environment. Items typically considered a part of the building design include, but are not limited to interior building materials, floor, wall and ceiling finishes, built-in casework, millwork, fixed equipment, trim items, signage, window treatment, etc. Building related items are generally applied or fastened to the building. Furniture related interior design (FF&E) is the design of the interior furniture and includes the selection and specification of these items. Items typically considered part of the furniture package but are not limited to workstations, desks, seating, tables, storage units, trash receptacles, etc. Provide appropriate furniture finishes and fabrics for the intended use. Provide upholstery fabric (color, pattern, and fiber content) that is easily cleaned and helps hide soiling.

C. Two (2) Processor Visitor Control Center

i. Waiting and Processing:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide protective wallcovering minimum 36" h and maximum 4” h chair rail with painted gypsum wallboard above the protective wallcovering.

c. Provide chair rails along wall at location of seating at a minimum.

d. Provide painted gypsum wallboards for all other wall finish.

e. Include resilient corner guards on all exposed corners a minimum 48” h.

f. Provide solid surface material for window sills.

ii. Vestibule:

a. Provide walk-off mat in entire area.

iii. Toilet:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide full height porcelain tile on all walls.

iv. Break Room/Provost Marshal Room:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

.

b. Provided painted gypsum wallboard for the wall finish with protective wallcovering wainscot.

c. Provide plastic laminate or solid wood cabinetry.

d. Provide countertops and windowsills constructed of solid surface material.

e. Provide backsplash of solid surface or porcelain tile.

v. Mechanical/ Electrical room:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

vi. Communications room:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/ floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

vii. Janitor's Closet:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide painted gypsum wallboard for the wall finish with FRP panels or porcelain tile on wet walls.

D. Three (3), (6), (9) Processor Visitor Control Center

i. Waiting Room:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide protective wallcovering minimum 36” h and maximum 4” h chair rail with painted gypsum wallboard above the protective wallcovering.

c. Provide chair rails along wall at location of seating at a minimum.

d. Provide painted gypsum wallboards for all other wall finish. Include resilient corner guards on all exposed corners a minimum 48” h.

e. Provide solid surface material for window sills.

ii. Processing Area:

a. Provide raised flooring with ramp access and, if feasible, stair access.

b. Provide carpet tile and resilient base finish.

c. Provide plastic laminate or solid wood casework with solid surface material countertops and backsplash.

iii. Vestibules:

a. Provide walk-off mat in entire area.

iv. Toilets:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide full height porcelain tile on all walls.

v. Break Room:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. .

c. Provided painted gypsum wallboard for the wall finish with protective wallcovering wainscot.

d. Provide plastic laminate or solid wood cabinetry.

e. Provide countertops, and windowsills constructed of solid surface material.

f. Provide back splash of solid surface or porcelain tile.

vi. Office:

a. Provide carpet tile and resilient base finish.

b. Provided painted gypsum wallboard for the wall finish.

c. Provide solid surface material for windowsills.

vii. Provost Marshal Room:

a. Provide carpet tile and resilient base finish.

b. Provided painted gypsum wallboard for the wall finish.

c. Provide solid surface material for windowsills.

viii. Mechanical/ Electrical room:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

ix. Communications room:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

E. ID Check Canopy

i. N/A

F. Vehicle ID Check Guard Booth

i. Sealed concrete floor slab.

G. Search Function Bus Shelter

i. Sealed concrete floor slab.

ii. Benches can be metal or wood. Wood benches shall have manufacturer's approved sealant/preservative.

H. Small and Large Search Area Building(s)

i. Visitor Processor Area (Large Search Building Only):

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide protective wallcovering minimum 36" h and maximum 4" h chair rail with painted gypsum wallboard above the protective wallcovering.

c. Provide chair rails along wall at location of seating.

d. Provide painted gypsum wallboards for all other wall finish.

e. Include resilient corner guards on all exposed corners a minimum 48" h.

f. Provide solid surface material on window sills.

ii. Corridor (Large Search Building Only):

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b.

c. Provide protective wallcovering minimum 36" h and maximum 4" h chair rail with painted gypsum wallboard above the protective wallcovering.

d. Provide painted gypsum wallboards for all other wall finish. Include resilient corner guards on all exposed corners a minimum 48" h.

iii. Waiting Room/Office (Small Search Building) or Waiting Room (Large Search Building):

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide protective wallcovering minimum 36" h and maximum 4" h chair rail with painted gypsum wallboard above the protective wallcovering.

c. Provide chair rails along wall at location of seating at a minimum.

d. Provide painted gypsum wallboards for all other wall finish. Include resilient corner guards on all exposed corners a minimum 48" h.

e. Provide solid surface material for windowsills.

iv. Office/Provost Marshal Room (Large Search Building Only):

a. Provide carpet tile and resilient base finish.

b. Provided painted gypsum wallboard for the wall finish.

c. Provide solid surface material for windowsills.

v. Break Room:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provided painted gypsum wallboard for the wall finish with protective wallcovering wainscot.

c. Provide plastic laminate or solid wood cabinetry.

d. Provide countertops and windowsills constructed of solid surface material.

e. Provide back splash of solid surface or porcelain tile.

vi. Toilet:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

vii. Janitor's Closet/Inside Storage:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide painted gypsum wallboard for the wall finish with FRP panels or porcelain tile on wet walls.

viii. Outside Storage:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Walls shall be painted concrete masonry or gypsum wallboard.

ix. Mechanical/ Electrical room:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

x. Communications room:

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

I. Truck Search Area Canopy

i. N/A

J. Passenger Vehicle Search Area Canopy

i. Vehicle Search Area

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

K. Gatehouse

i. Command and Control:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide protective wallcovering minimum 36" h and maximum 4” h chair rail with painted gypsum wallboard above the protective wallcovering.

c. Provide chair rails along wall at location of seating at a minimum.

d. Provide painted gypsum wallboards for all other wall finish. Include resilient corner guards on all exposed corners a minimum 48” h.

e. Provide solid surface material for countertops, back splash and windowsills.

f. Provide a raised section of the ceiling in front of the front wall for the installation of CCTV monitors that place the monitor out of the line of sight of a person looking out the windows.

ii. Toilet:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide full height porcelain tile on all walls.

iii. Janitor’s Closet/Inside Storage:

a. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

b. Provide painted gypsum wallboard for the wall finish with FRP panels or porcelain tile on wet walls.

iv. Mechanical/ Electrical room:

a. Provide exposed sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

v. Communications:

a. Provide exposed sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

vi. Outside Storage (Optional):

a. Provide sealed concrete for floor finish.

b. Provide resilient base for wall/floor trim.

c. Provide painted concrete masonry or gypsum wallboard.

L. Standalone Toilets:

i. Provide porcelain tile, rubber or epoxy floor finish and coordinate base material to match the floor finish.

ii. Provide full height porcelain tile on all walls.

M. Standalone Storage

i. Provide sealed concrete for floor finish.

ii. Provide resilient base for wall/floor trim.

N. Communications with Mechanical/ Electrical Equipment Building (Standalone Building)

i. Provide sealed concrete for floor finish.

ii. Provide resilient base for wall/floor trim.

O. Pedestrian ID Check

i. Provide rubber flooring.

ii. Provide resilient base for wall/floor trim.

iii. Provide solid surface material for countertop and back splash.

P. Overwatch Building

i. Provide sealed concrete for floor finish.

ii. Provide resilient base for walfloor trim.

Q. (Example Combination Facilities, See drawings)

i. See information above

2.9.2. Interior Finishes

The following requirements include both functional and (example combinations of functional requirements), where identified. Any reference to installation criteria is to establish materials and finishes consistent with the installation's architectural theme.

A. MINIMUM FINISH REQUIREMENTS

i. Carpet Tile

a. Provide antistatic carpet with a pattern containing a minimum of 3 distinctly different colors or a bold multi-colored tweed for maximum soil-hiding properties. Carpet must be tile with 100% continuous filament, solution dyed and/or yarn dyed, branded nylon with loop construction. Provide synthetic primary and secondary backing materials that are customarily used and accepted by the trade for each type of carpet. Preference should be given to products containing recovered material when possible. Carpet must meet the following minimum requirement:

b. Minimum Pile Characteristics
Provide carpet with tufted construction, loop pile, minimum 1/8" gauge and minimum pile density of 4725. Provide carpet with a greater than or equal to 3.0 (Heavy) TARR traffic level classification in accordance with ASTM D7330 or CRI Test Method 103.

c. Static Control
Provide static control that is appropriate for the function of the room. Flammability and Critical Radiant Flux Requirements Carpet must comply with 16 CFR 1630 or ASTM D2859.

d. Tuft Bind
Comply with ASTM D1335 for tuft bind force required to pull a tuft or loop free from carpet backing with a minimum 8-pound average force for modular carpet tile.

ii. Porcelain Tile

a. Provide large format porcelain tile that conforms to ANSI A137.1, less than 0.5 percent water absorption and is a minimum commercial heavy traffic grade. Porcelain tile and trim shall be unglazed with the color extending uniformly through the body of the tile or glazed with body color consistent with glaze color. Color of porcelain tile and porcelain tile grout shall be a medium range color to help hide soiling.

iii. Rubber Flooring

a. Provide flooring that conforms to ASTM F1344 for tile, Class 1 homogeneous, Type B (through mottled). Conform to ASTM F1859 (flooring without backing). Provide textured surface.

iv. Epoxy Flooring:

a. Provide a clear two-component compatible system epoxy resin binder consisting of: (1) a liquid blend of a biphenyl-based epoxy resin and an aliphatic polyglyceride ether, and (2) a liquid blend of two modified amine curing agents, which individually cures the epoxy resin at room temperature to a glossy smooth film.

b. Provide aggregate recommended by the resinous flooring manufacturer and approved by the Contracting Officer. Deliver aggregate to the site in three separate package gradations for blending.

c. Provide nonambering aliphatic or aromatic moisture-curing polyurethane surface sealer into which has been incorporated a flatting agent. Add flatting agent not more than 24 hours prior to actual application of the coating. Ensure cured coating with flatting agent yields 60-degree specular gloss of 10 to 20 when tested in accordance with ASTM D523.

v. Walk Off Mat

a. Provide surface-mounted extruded aluminum frames that have a tapered flexible aluminum or vinyl edge at least 1 ½" wide and a frame depth that accommodates a mat. Provide roll up mat in frame with tread inserts consisting of carpet composed of solution-dyed nylon or polypropylene carpet fibers fusion-bonded to a rigid two-ply backing to prevent fraying and supplied in continuous splice-free lengths. Carpet to have antistatic and anti-stain treatments. Ensure that pile weight is a minimum 30 ounces per square yard.

vi. Resilient Base:

a. Provide rubber or vinyl base 4 inches high and minimum of 1/8 inch thick.

vii. Solid Surfacing Material

a. Solid surface material to be homogeneous filled solid polymer, not coated, laminated or of a composite construction, meet CSA B45.5-11/IAPMO Z124 requirements, and be composed of cast 100 percent acrylic or a formulation composed of acrylic and polyester polymers, mineral fillers, and pigments. Acrylic polymer content must not be less than 5 percent and not more than 10 percent. Color and pattern must go through the thickness of the material. Provide minimum of ½ inch-thick material for countertops and windowsills. Solid surfacing material shall have patterns that are mottled, flecked or speckled, except for sinks. Countertops at sinks shall be light to medium range in color to help hide water spotting and to reduce appearance of scratches.

viii. Plastic Laminate

a. Provide High Density Pressure Laminate (HDPL) that are patterned are mottled, flecked, speckled or wood grain; solid colors are not acceptable.

ix. Protective Wall Covering

a. Provide wall covering/panels consisting of high impact rigid acrylic vinyl or polyvinyl chloride resilient material. Provide panel sizes of 3 x 8 or 4 x 8 feet and a minimum .060" thick. Minimum impact resistance must be 18 ft-lbs./sq. inch when tested in accordance with ASTM D256 (Izod impact, ft-lbs. per sq inch notched). Fire rating must be Class 1 when tested in accordance with ASTM E84 having a maximum flame spread of 25 and a smoke developed rating of 450 or

less. Material must be rated self-extinguishing when tested in accordance with ASTM D635. Finish top edge and seams of wallcovering/panels.

x. Corner Guards

a. Provide resilient corner guards a minimum 48 " h. Product must be fabricated of 16-gauge thick material and wings shall be minimum 1 ½" wide.

xi. Miscellaneous Items

a. Provide finish colors of fire extinguisher cabinets, receptacle bodies and plates, fire alarms/warning lights, emergency lighting, and other miscellaneous items must be coordinated with the building interior design. Match color of equipment items on ceilings (speakers, smoke detectors, grills, etc.) with the ceiling color.

2.9.3. Interior Specialties

A. Signage: Provide a complete interior signage system that coordinates with the interior design. The facility interior signage system shall be standardized throughout the building and shall be flexible to allow for the addition and deletion of signs and information.

B. Room signs for spaces in which the room name, function of the room, or personnel within a room may change shall have a changeable paper insert that can be changed by the User in the future. Provide rooms signs where appropriate.

C. Window Treatment: Provide commercial grade horizontal blinds for exterior windows with the exception of functions that required visibility (i.e. guard booth). Slats must be aluminum not less than .0070 thick.

2.9.4. FF&E (Furniture Fixtures & Equipment)

A. Furnishings

GENERAL:

Conceal clips, screws and other furniture construction elements where possible. Seating upholstery is required to meet Wyzenbeek Abrasion Test; 50,000 minimum double rubs. Furniture can be wood (where appropriate), plastic laminate or metal finish. Tops for case goods with plastic laminate or metal construction are to be plastic laminate. Location, use and frequency of moving furniture are to be considered when determining appropriate finish material and construction. Furniture constructed of particleboard with plastic laminate finish is not acceptable. Provide box and file drawers with a heavy-duty suspension system. Construct furniture with concealed fasteners. Furniture storage is to be lockable with keys provided to the user. Locks shall be keyed per user requirements. Coordinate style details and finishes within a room. Refer to the drawings for furniture layout. Trash receptacles shall be provided in all employee workspaces, waiting rooms and by copier and printers.

i. Task Chair: Provide ergonomic task chair that is rated for 24/7 use, minimum weight capacity 300 lbs., without arms, upholstered or mesh seat and back, back tilt and locking capability, pneumatic seat height adjustment, adjustable lumbar support, seat depth adjustment, five-star base and casters. Provide desk chairs with adjustable seat height range of 4 ½", range to include 16 1/2 – 20". (Exception private offices to have a task chair with arms).

ii. High Stool: Provide ergonomic swivel stool that is rated for 24/7 use, minimum weight capacity 300lbs, without arms, upholstered or mesh seat and back, variable back lock, pneumatic seat height adjustment, adjustable lumbar support, seat depth adjustment, five-

star base, foot ring and casters. Provide high stools with adjustable seat height range of 5 ½" to include 20-25 ½".

iii. Guest/Waiting Chair: Provide guest chairs without arms, upholstered cushioned seat and back that are compatible in style, finish and color with the desk chairs (approximately 1'-9 w x 1'-11" d x 2'-6"h in size).

iv. Nursing Mother's Room Chair & Table: See guidance in para 2.4.10.B

v. Break Room Chairs: Provide break room chairs without arms, that are easily cleaned. Verify style and finishes with user.

vi. Break Room Table: Provide table with high pressure laminate top with PVC, vinyl, or post formed high pressure plastic laminate edge. A high-pressure laminate plastic laminate self-edge is not acceptable.

vii. Waiting Room Table: Provide end table with high pressure plastic laminate top, metal or wood frames that are compatible in style, finish and color to waiting chairs.

viii. U-Shape Workstations: Provide U-shaped workstation with keyboard tray, overhead storage, tackboard and task light, under all overhead storage. The unit is to have modesty panels that allow access to the wall for power and communications including two pedestals and a pencil drawer. Provide a personal tower with coat storage, shelves, and file storage where possible. Provide desk of steel construction with high pressure plastic laminate work surface. Tops are to have a formed edge such as PVC, vinyl molding or post formed high pressured plastic laminate. A high-pressure plastic laminate self-edge is not acceptable. Provide knee space that is not obstructed by legs/storage units that interfere with knee space of seated person. Provide adjustable height worksurface with wire management.

ix. L-shaped Workstations: Provide electric height adjustable desk with wire management, return, pedestal storage, wardrobe, tackboard, task light, steel construction with high pressure laminate worksurfaces and PVC edge banding to match the worksurface

x. Lateral File Cabinet: Provide four drawer lateral file, unless limited by window design or other architectural features. File drawers are to be full extension, accommodate letter files and have rails for hanging folders. The drawers are to be capable of hanging files side-to-side and front-to-back. Drawer pulls are to be an integral pull, not an attached pull. Counterweights are to be provided when required by the manufacturer for stability.

xi. Bookcase: Provide four shelf metal bookcase(s) with adjustable shelves. Shelves are to be of sufficient height and depth to accommodate standard three ring binders. Bookcases can be inter-changed with lateral file cabinets, depending on user requirements or preferences.

xii. Supply Cabinet: Provide metal double door lockable supply cabinet with adjustable shelves.

xiii. Anti-Fatigue Mat: Provide an appropriate sized anti-fatigue mat.

xiv. Trash Receptacles: Provide rubber trash receptacles approximately 14" w x 11" d x 15" h.

xv. Recycling Center: Provide recycle center with four separate containers fastened together, decals and corresponding top opening for trash, paper recycling, plastic recycling and aluminum recycling. Provide 23-gallon capacity for each container, polyethylene liner included with hinged door for easy access to empty liners steel construction with powder

coated finish and adjustable foot glides. (Provide larger bins for larger buildings and smaller bins for smaller buildings).

2.10. STRUCTURAL REQUIREMENTS:

2.10.1. General

Structural design of all Access Control buildings shall be governed by the International Code Council publication, International Building Code (IBC), as modified by DoD Unified Facilities Criteria document, UFC 3-301-01, "Structural Engineering". The most current edition of UFC 3-301-01 shall apply, and the applicable edition of IBC shall be as identified in the UFC.

2.10.2. Loadings

Structural loadings for building designs shall be determined in accordance with the IBC, and, by reference, American Society of Civil Engineers publication, ASCE 7, using applicable occupancy data and climatic/seismic data tabulated in UFC 3-301-01 "Structural Engineering" for the location of the facility on which the Access Control structures are being constructed, unless specific design parameters are provided by the facility.

2.10.3. Seismic Design

Seismic design of buildings shall be in accordance with the IBC, except as modified by UFC 3-301-01, "Structural Engineering".

2.10.4. Ballistic Resistant Design

Facility buildings identified in the Architectural criteria as "ballistic resistant" shall be designed in accordance with the provisions of UFC 4-023-07, "Design to Resist Direct Fire Weapons Effects", in addition to the criteria identified in the Architectural design narrative.

2.10.5. Antiterrorism Design

ACP structures shall be sited, designed and constructed in accordance with the minimum requirements of UFC 4-010-01, "DoD Minimum Antiterrorism Standards for Buildings", unless a higher level of protection is mandated by local threat assessment and/or policy. Facilities which are, by occupancy, considered "inhabited structures", per the criteria, which cannot be sited to meet conventional construction standoff distance requirements from threats, shall be designed as hardened facilities. Hardened structures shall have walls, roof slabs, doors and windows designed and/or specified to resist blast pressures associated with the actual threat standoff distance per UFC 4-010-01.

Where prestressed concrete roof systems are used to support gravity loads for ACP structures that are required by the UFC to be designed to be hardened against blast threats, conventional reinforcement shall be provided in roof toppings and/or on the exterior side of prestressed members, designed to provide adequate reinforced resistance to the combined reverse flexural effects of the blast pressure dynamic elastic rebound member moments and the existing upward prestress member moments, where they exceed the resisting minimum dead load.

2.10.6. Canopies

A. Wind Loading

Vehicle canopies shall be considered as "open structures" with "clear wind flow" for calculation of wind pressures on roofs for main wind force resisting systems and component and cladding wind pressures in accordance with the UFC referenced edition of ASCE 7. Canopies shall be considered flexible structures,

having a Gust Effect Factor, “G”, of not less than 0.90, in accordance with ASCE 7, to account for flexibility of the building system. Canopy wind for the design of frames or columns shall include the summation of pressures on the various canopy elements having a projected area perpendicular to the wind direction under consideration. Projected areas include front and rear surfaces of both windward and leeward canopy fascias or other vertical roof structure surfaces, windward surfaces of all columns, and lateral components of wind on sloped roofs, in accordance with ASCE 7. Canopy fascias shall be considered as either inverted “parapets” or “solid freestanding signs”, in accordance with ASCE 7, depending upon their configuration. Wind pressure on columns shall be computed as for “open signs and/or lattice frameworks”, and shall be applied to all free-standing columns simultaneously, rather than just to the windward facing perimeter columns. Main wind force resisting system overall lateral wind forces from the roof, fascias and columns shall be applied in each (+/-) direction along the principal building axes as separate loading conditions, and as another set of load conditions, shall be applied coincident with a torsional moment equal to the sum of wind forces multiplied by a +/- eccentricity of 15% of the windward roof plan width dimension. Wind shall also be considered at 75% of the full pressure from additive orthogonal axis directions applied simultaneously (representing oblique wind directions).

B. Lateral Force Resisting System

Canopies shall have a rigid frame and/or cantilever column lateral force resisting structural system. Lateral forces shall be transferred to columns and frames by horizontally spanning spandrel members, structural diaphragms or horizontal bracing systems in the plane of the roof. The metal roof panels and liners shall not be used as a structural diaphragm unless analysis calculations in accordance with the provisions of the Steel Deck Institute (SDI), demonstrating the adequacy of the strength and stiffness of the panels and anchorage system, are performed. Roof and fascia panels shall similarly not be considered to provide lateral bracing for roof beams and purlins. Roof and liner panels shall be anchored to purlins or other framing members with screws or bolts. Clamp systems shall not be used to attach panels to the structure.

C. Column Anchorage and Foundations

Canopy column base anchorages shall be designed for combined shear, moment and uplift, as applicable, in accordance with the UFC referenced edition of American Concrete Institute code ACI 318, Chapter 17. Canopy foundations shall be designed to resist factored wind uplift and overturning. Soil bearing pressures shall be investigated for all loading conditions, including overturning.

2.11. THERMAL PERFORMANCE

[For RFP Wizard revise paragraph title to read: “SEE PART 3.7 THERMAL PERFORMANCE – NOT USED”]

[ACP Standard:

Thermal insulation must comply with the minimum requirements of ASHRAE Standard 189.1-2009.]

2.12. PLUMBING REQUIREMENTS:

OCONUS: All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Therefore, the acquisition team must ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

2.12.1. Sanitary Sewer (where connection is possible)

A. Search Area Building and Search function

For Large and Small Army Standard Design or Custom Types Search Area Buildings, and search functions or rooms of combined facilities as shown on [Center of Standardization (COS) drawings] [RFP Wizard Appendix B – Drawings]; domestic cold and hot water are to be provided to all plumbing fixtures as required by code. A sink and garbage disposal is to be provided for the break room. Condensate drains from mechanical equipment are to be routed to a floor drain. Provide a sanitary drainage system as required by code.

B. Visitor Control Center & (Facilities including Visitor's Processing)

Domestic cold and hot water are to be provided to all plumbing fixtures as required by code. A sink and garbage disposal are to be provided for the break room. Condensate drains from mechanical equipment are to be routed to a floor drain. Provide a sanitary drainage and vent system as required by code.

C. Facilities including Command and Control function

Domestic cold and hot water are to be provided to all plumbing fixtures as required by code. A sink and garbage disposal are to be provided for the break room. Condensate drains from mechanical equipment are to be routed to a floor drain. Provide a sanitary drainage and vent system as required by code.

D. ID Check Guard Booth and Pedestrian ID Check or (Pedestrian ID Check "room" function)

No domestic cold and hot water are to be provided and no drainage and vent system.

E. Overwatch Building

No domestic cold and hot water are to be provided and no drainage and vent system.

2.12.2. Sanitary Sewer (where connections are not possible)

Design criteria for septic tanks, waterless toilets (composting toilet, incineration toilet, chemical toilet) and mounding systems shall be in accordance with UFC 3-240-02, "Domestic Wastewater Treatment".

2.12.3. Drinking Water

Drinking fountains are not required for an occupant load of 15 or fewer. See Center of Standardization (COS) furniture layout drawings for occupant count.

2.12.4. Sizing

OCONUS: All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

A. STANDARDS AND CODES: The plumbing system and water consuming equipment shall conform to APPLICABLE CRITERIA and ASHRAE Standard 189.1, Section 6.3, Mandatory Provisions, and either Section 6.4, Prescriptive Option, or Section 6.5, Performance Option. In addition, meet the requirements of ASHRAE Standard 189.1, Section 10.3.2. Exception: Paragraph 6.3.2.3. (c) Shall not be required to be provided.

B. HOT WATER SYSTEMS: For hot water heating and supply systems, meet the requirements in UFC 3-420-01 "Plumbing Systems" and amendments, and the service water heating requirements of ASHRAE 189.1.

C. SIZING HOT WATER SYSTEMS: Design in accordance with ASHRAE Handbook HVAC Applications, Chapter 49, “Service Water Heating,” UFC 3-420-01 and amendments, and ASHRAE 189.1, Section 7.4.4. Size and place equipment so that it is easily accessible and removable for repair or replacement.

D. WATER EFFICIENT PLUMBING FIXTURES: Indoor plumbing fixture equipment shall comply with the following criteria: ASHRAE 189.1, Section 6.3, Mandatory Provisions, and either Section 6.4, Prescriptive Option, or Section 6.5, Performance Option.

E. DRAINAGE SYSTEMS: Do not use engineered vent or Sovent® type drainage systems.

2.13. COMMUNICATIONS AND SECURITY SYSTEMS:

2.13.1. Communication

A. Communication system shall be installed in accordance with the Technical Guide for Installation Information Infrastructure Architecture (I3A) for exterior telecommunications work and use UFC 3-580-01 for interior telecommunications.

B. Command and Control, ID Check Guard Booth, Pedestrian ID Check, Search Area(s), Search Facilities, except Search Shelter, Overwatch Position, Overwatch Facility, and Visitor Control Center shall have a minimum of two (2) means of communication from the facility and, when present, the Central Security Monitoring Station.

C. Communication Handhole. Provide a communication handhole in each island/median in the ID Check Area. Conduit shall be run from the handhole to the island/median guard booth and to the next island/median handhole. This handhole/conduit system shall be used for all communication (copper and fiber) to the ID Check guard booths and to the area. The handhole cover is to be flush with the island/median.

2.13.2. Information Connectivity

A. Information Connectivity and LAN systems shall be installed in accordance with the Technical Guide for Installation Information Infrastructure Architecture (I3A) for exterior telecommunications and UFC 3-580-01 for interior telecommunications.

B. Command and Control, ID Check Guard Booth, Pedestrian ID Check, Search Facilities, Overwatch Facility, and Visitor Control Center shall have information connectivity to the LAN system and internet.

2.13.3. Closed Circuit Television (CCTV)

A. The ACP shall have a CCTV system installed.

B. CCTV cameras shall have sufficient resolution and wide dynamic range for real time assessment of activity detail.

C. Overwatch Cameras. CCTV cameras shall over watch the Approach Zone, ID Check Area, Search Area(s), and Active Vehicle Barrier area(s). Camera view at the active vehicle barriers shall include the nonsecure side of all active vehicle barriers as well as any traffic signals facing toward the nonsecure side. Camera view at the active vehicle barriers shall include a view of the secure side of outbound lane active vehicle barrier(s) and traffic signal.

D. ID Check Area. CCTV cameras shall be positioned to view drivers, ID Check guards, rear license plate, and the vehicle in the ID check lane.

E. Search Area(s) including Enclosed Search Facility. CCTV cameras shall be positioned to view drivers, Search guards, rear license plate, and the vehicle being searched.

F. Rear License Plates. Conduit shall be installed in the islands at the Search Areas and ID Check Area to accommodate future cameras to view rear license plates. Coordinate with the requirements given in the paragraph on Automated Installation Entry (AIE). Installations that will receive fixed AIE do not need an additional rear license plate camera for the ID Check Area, since there will be one that is part of the fixed AIE install package.

G. ID Verification. CCTV cameras are to be positioned to view visitors at pass and identification stations. These stations area located in the Visitor Control Centers. Command & Control does not have to be able to view the Visitor Control Center interior view. Search Offices may have an interior identification station, which would need a CCTV camera to view the visitor.

H. All cameras are intended to be fixed view except for the ID Check Area and Search Area overwatch cameras are allowed to be pan/tilt/zoom. The active vehicle barrier area cameras are to be fixed in order to ensure the proper view are always maintained.

I. Monitors. Monitors for CCTV shall be at the Command-and-Control location and the Central Security Monitoring Station as a minimum.

J. Digital Video Recording. The CCTV system shall include digital video recording for all ACP video cameras. The video recording shall operate 24 hours per day and seven (7) days a week and shall retain all imagery for a minimum of seven (7) days.

K. Pedestrian ACPs:

i. Overwatch Cameras. CCTV cameras shall over watch the approach to the booth from the entry gate to the area around the active pedestrian barrier including the booth.

ii. Monitors. Monitors for CCTV shall be at the Pedestrian ID Check. Monitors shall also be located at Command and Control and Central Security Monitoring, if part of a vehicle ACP. If not part of a vehicle ACP, then provide monitoring at the Central Security Monitoring Station.

iii. Digital Video Recording. The CCTV system shall include digital video recording for all ACP video cameras. The video recording shall operate 24 hours per day and seven (7) days a week and shall retain all imagery for a minimum of seven (7) days. Video recordings shall have the ability to be saved to external media for retention greater than seven (7) days.

2.13.4. Electronic Security

A. Duress Alarms. Guards at the ID Check Area Guard booth, Pedestrian Booth, Search Area(s) including Enclosed Search Facilities, Overwatch Facility, Overwatch Position, and Visitor Control Center shall have duress alarm capability that shall annunciate at both the Command-and-Control location and the Central Security Monitoring Station, when available. The Visitor Control Center shall ensure each Pass & ID station, as a minimum, have a means of duress.

i. Duress buttons shall be protected and not prone to accidental activation.

ii. Duress buttons shall be located within close proximity to all routinely manned positions.

iii. Duress button shall not be visible to the general public.

iv. Telephone shall not be considered a duress device in their normal configuration.

v. If there isn't a Central Monitoring Station, then annunciate at an alternate security force station or monitoring location.

vi. Wireless Duress Buttons. If wireless duress buttons are utilized in conjunction with mandatory hardwire buttons, then the wireless device shall have battery level monitoring, low battery level visible and audible warning, demonstrated transmission capacity of 150 feet greater than all usage locations, transmit of radio frequencies that do not interfere with or are impeded by any local wireless apparatus, and transmit in a spread spectrum mode.

B. Intrusion Detection. Exterior doors to the Command and Control, Gatehouse, Guard Booths, Overwatch, Search Office, Enclosed Search Facility, and Visitors Control Center shall be equipped with Balanced Magnetic Switches (BMS) for intrusion detection. Storage rooms that do not contain any security, CCTV or Communication equipment are not required to have BMS. Interior doors that go to rooms that contain Communication or security equipment shall be equipped with BMS.

C. Tamper Switches.

i. Electronic control cabinets for Communications, AIE, CCTV, and security controls shall be equipped with tamper switches. CCTV and security controllers shall be in cabinets or panels.

ii. Active vehicle barrier cabinets shall be equipped with tamper switches. Active vehicle barrier controllers shall be in cabinets or panels. Control panels associated with the AVB controls (master, guard booth, local, etc.) are required to be equipped with tamper switches.

iii. The cabinet at the Overwatch Position pad (if provided) shall be equipped with a tamper switch(es).

iv. Manholes and handholes that will contain duress alarm, AIE, CCTV, intrusion detection or AVB control wiring and there are splices present are to have tamper switches provided on the covers.

v. Uninterruptable power supply (UPS) cabinets shall be equipped with tamper switches.

2.13.5. Automation

A. Infrastructure to include the conduit pathways and space in facilities for Automated Installation Entry (AIE) per the latest requirements by PM-PFS and the requirements in this document shall be provided. AIE is not currently required in foreign countries. AIE includes a fixed pedestal card reader or a handheld card reader. Each system has different requirements.

i. Fixed AIE includes a rear license plate camera, a driver face camera, traffic arm with signal, and a card reader that is located on each ID Check Area Island.

ii. Fixed AIE includes equipment that is provided in each ID Check Area guard booth that monitors the camera views and the card reader.

iii. Fixed and Hand-Held AIE head end equipment is located in the communications room and is to be in a cabinet.

iv. Fixed and Hand-Held AIE require an antenna that is normally located at the ID Check Island.

B. Automation equipment other than AIE may be required. Provide infrastructure to include the conduit pathways, power, and space for this equipment.

2.13.6. Active Vehicle Barrier Control System

Each ACP shall be furnished with an Active Vehicle Barrier Control System (AVBCS). The AVBCS shall be an integrated control system and be include part or all of the following subsystems: active vehicle barriers, active vehicle barrier controls, traffic signals, traffic signal controls, traffic signs, pavement markings, traffic warning signs, traffic arms, vehicle overspeed detection & alarm, vehicle wrong-way detection & alarm., intrusion detection/duress alarm, CCTV, sequence event recorder (data logger), data transmission, other audible and visual alarms and all interconnecting wiring. The active vehicle barrier control system (AVBCS) shall collect alarm, status, and control sensor inputs at the ACP and provide control signals to the active vehicle barriers (AVB), traffic signals, traffic arms (when present), barrier lights, in roadway lights, and warning beacons. The AVBCS shall provide alarm, status, and control information to the Command and Control 'control console', each Guard Booth Control Panel, the Overwatch Position or Booth Control Panel, the Local Control Panel(s) at each AVB, Search Area Control Panel, Pedestrian Booth control panel, the CCTV subsystem for controlling camera presets, the duress alarm subsystem for controlling camera presets, and to the Installation's Central Security Monitoring System (CSMS)for annunciating alarms at both the CSMS alarm monitoring point and a CSMS provided annunciation panel at the Gatehouse.

A. Locations that do not have a CSMS shall have the alarms annunciate at the equivalent location.

B. CCTV and duress alarm subsystems may not be present when the AVBCS is installed. If that is the case, the AVBCS shall be provided with the necessary spare capacity for later installation.

C. The ACPCS system must utilize components and software that are intended for use in industrial or commercial control systems. The ACP control system shall not be a general-purpose computer or personal computer and shall not be consumer grade software.

D. Emergency-Fast-Operate (EFO), when required by the safety scheme, shall ensure the AVB closes in two (2) seconds or less.

E. Only guards in the Command and Control, ID Check Guard Booths, Search Areas, Pedestrian Booth, and Overwatch Position are required to have emergency fast operate close control of the active barriers. A master “Emergency-Fast- Operate” (EFO) button/switch shall be provided on a Barrier Master Control Panel located in Command and Control. Remote EFO buttons shall be located in each ID Check Guard Booth, Search Area, Pedestrian Booth, and the Overwatch Position. The “Emergency-Fast-Operate” buttons will close all active barriers in all inbound and outbound lanes, that are in EFO mode, simultaneously. Only those safety schemes that require an EFO have to comply with this requirement.

F. Command and Control, Guard Booths, Search Areas and Overwatch position shall have an enunciator providing audible and visual indication of alarms including over speed and wrong way.

G. Command and Control and the Overwatch position shall have an enunciator providing audible and visual indication of duress alarm.

H. Switches and indicating lights shall be provided on the AVB Master Control Panel to allow the Command-and-Control guard to individually enable or disable the remote EFO buttons.

I. Switches and indicating lights shall be provided on the AVB Master Control Panel to allow the Command-and-Control guard to individually open and close the active vehicle barriers.

J. Switches and indicating lights shall be provided on the AVB Local Control Panel to allow maintenance personnel to individually open and close the active vehicle barriers.

K. Installation shall maintain strict key control to ensure the EFO Reset, and the Test and Local modes are only operated when allowed by the head of the guards at that ACP.

L. See Access Control Point Standard drawing set for information on panel layouts and operation.

M. See UFGS 34 71 13.19, Appendix A for the appropriate SDDCTEA safety scheme and description on controls. Safety schemes that are not in Appendix A but have been approved by SDDCTEA are allowed. Description on the sequence of operation and operating panel layouts will be provided upon request.

N. Active Vehicle Barrier and In Roadway Lighting:

i. Active vehicle red delineation lighting is required to make barriers clearly visible when deployed, unless vehicle barriers are behind closed gates or the specific vehicle barriers are used to close service drives. Active vehicle barriers shall include red flashing lights facing the direction of the threat vehicle as a minimum. Required red lighting is dependent on the type of system required as listed below:

a. Bollard Systems – Include, as a minimum, one red light per bollard.

b. Plate Barriers Systems, 3 feet or greater in width – Include, as a minimum, 3 red lights with one mounted within 1 foot of each barrier edge and one mounted within 1 foot of the barrier centerline.

c. Plate Barrier Systems less than 3 feet in width – Include, as a minimum, one red light mounted within 1 foot of the barrier centerline.

d. Crash Barrier Systems – Include as a minimum, 3 red lights with one light mounted within 2 feet of each edge of the driving surface and one light mounted within 1 foot of the center of each lane spanned by the barrier.

e. Net Type Barrier Systems – No light is required to be mounted on this barrier type system, but mitigation (e.g. in-roadway lighting) must be provided.

ii. In-Roadway lighting is required where the AVB does not have all the required lighting on the AVB itself. Then hard-wired in-pavement lights are to be provided.

a. Provide red non-flashing roadway lighting in the pavement, with a minimum of 3 lights per lane per side. Luminaires shall have a sustained illumination level of 500,000 candela per square meter using the 10-degree refractor option at a distance of 30 feet.

b. Luminaire shall be rated for vehicular traffic and shall be manufactured for use in roadways.

c. Luminaire shall be unidirectional with a wide distribution pattern.

d. The luminaire shall not extend more than 0.5 inches above the road surface and shall have a smooth transition from the road surface.

e. In areas with snow, the luminaire shall be rated to handle snowplows. Select a product that has proven performance and will not be forced above the pavement surface by freeze/thaw cycles.

iii. Active Vehicle Barrier Markings/Finishes

Active vehicle barriers include retro-reflective material that is visible on both sides of the barrier when deployed. The markings/finishes are to comply with SDDTTEA Pamphlet 55-15 and MUTCD.

O. Guard booths. Provide a number on the exterior of each guard booth that is visible from Command and Control. The number will correspond with the Guard booth number used on the Master Control Panel for the barrier controls. Numbering shall be approved by the installation. Numbering shall be at least 6 inches high.

P. Overspeed detection, when required, shall be located to ensure the overspeed zone or zones are covered to ensure threat vehicle detection. Overspeed detectors are allowed to be several different types per UFGS 34 71 13.19 ACPCS; however, local weather conditions and topology requirements shall be taken into account. When overspeed detection is required, judicious use is required to prevent nuisance alarms associated with having set-points too low for the traffic flow. Set-points need to be sufficiently high over the posted speed to prevent nuisance alarms. Note that some installation will have posted speeds below 25 mph; however, set-points should still be set based on an assumed posted speed of at least 25 mph in order to limit nuisance alarms. Where overspeed detection settings of less than 30mph are utilized, the zone shall not extend more than 75 feet forward (toward the approach zone) when measured from the centerline of the ID Check guard booth. Such zones must utilize equipment that allows absolute cutoff at the 75 feet (or shorter) distance and will not utilize alarm settings lower than 25mph. Where possible, use 35mph as a minimum alarm setpoint for overspeed detection systems.

Q. Wrong-way detection shall be located to ensure that a vehicle that has not been cleared to proceed and try to use the outbound lane(s) to gain entry is detected. Wrong-way detectors are allowed to be several different types per UFGS 34 71 13.19 ACPCS; however, local weather conditions and topology requirements shall be taken into account. Wrong-way detection shall be located to ensure that rejected vehicles and other vehicles do not cause a nuisance alarm by traversing the in-bound and out-bound lanes.

R. Remotely Manned Egress Only Vehicle ACPs shall utilize the High Efficiency Presence Detection SDDCTEA safety scheme with the AVB being operated in the normally deployed position. The master control panel will be located at the remote manning location and will also provide the remote guard an option to lock the AVB in the deployed position. The remotely manned ACP is not intended to operate at FPCON levels in excess of Bravo+. If ACP operations are anticipated at higher FPCON levels on-site master control panel may also be necessary.

2.13.7. Cable Television (CATV)

Provide CATV in those facilities requested by the installation.

2.13.8. General Requirements

A. Exterior Wiring. Direct buried wiring is not allowed. All wiring shall be in conduit and shall be concrete encased. Exterior communication shall meet the requirements of I3A Technical Criteria for the Installation Information Infrastructure Architecture.

B. Signal System Handhole. Provide a signal system handhole in each island/median in the ID Check Area. Conduit shall be run from the handhole to the island/median guard booth and to the next island/median handhole. This handhole/conduit system shall be used for all signal systems (CCTV, IDS, Duress, AIE, AVB controls) to the ID Check guard booths and to the area. The handhole cover is to be flush with the island/median. A single handhole that handles both the signal and communication cables is allowed.

2.14. ELECTRICAL REQUIREMENTS:

2.14.1. Exterior Lighting

A. Visitor Control Center parking lot, sidewalks and other parking are to comply with the lighting requirements in UFC 3-530-01 “Design: Interior and Exterior Lighting and Controls”.

B. Lighting for the Pedestrian ACP shall maintain a minimum of two (2) Foot-Candles maintained illumination with an average to minimum ratio of 3:1 as measured at an elevation of 6 inches above the roadway surface. This includes areas of a vehicle ACP used for pedestrian access.

C. Access Control Point Corridor Lighting:

i. Approach Zone Roadway(s) are to have three (3) Foot-candles (FC) average maintained with an average to minimum ratio not to exceed 4:1 as measured at an elevation of 6 inches above the roadway surface. Lighting color rendering index (CRI) are to be not less than 50.

ii. Access Control Zone, ID Check Area and Search Area(s) are to have five (5) foot-candles (FC) average maintained with an average to minimum ratio not to exceed 3:1 as measured at an elevation of 6 inches above the roadway surface. In addition, where ID checks or searches are made, the illumination shall be 10 FC or twice the illumination in the immediate or surrounding area, whichever is greater. The vertical illumination shall be at least 25% of the horizontal illumination. ID Check Area and Search Areas shall have a color rendering index (CRI) of not less than 65. All other areas shall have a CRI of not less than 50.

iii. Response Zone Roadway(s) are to have three (3) Foot-candles (FC) average maintained with an average to minimum ratio not to exceed 4:1 as measured at an elevation of 6 inches above the roadway surface. Lighting shall have a CRI of not less than 50.

iv. The ACP corridor (Approach, Access Control and Response Zones) cannot have poles shorter than 15 feet. In situations where poles would need to be shorter to provide the lighting, then the COS is to be contacted. A proposed solution is required to be approved by the Surface Deployment and Distribution Command Transportation Agency (SDDCTEA) in order to ensure all aspects of motorist safety is maintained. The option to not provide lighting throughout the entire ACP Corridor will have to be justified in writing as to why there isn’t a workable solution.

v. ACP layouts will vary greatly, which will have an impact on the length of the Approach, Access Control and Response Zones. Situations where the zone length is too short to have sufficient transitional lighting will be taken on a case-by-case basis. Approval will be by the COS with consultation with SDDCTEA to ensure traffic safety is maintained. This may mean on a short Approach zone that it may be deemed better to have the appropriate transition lighting over having the full foot-candle level average immediately at the start of the ACP.

D. Color Rendering Index (CRI). Lighting at the ID Check Area, Access Control Zone, and Search Areas shall have a color rendition index (CRI) of not less than 65. All other light sources shall have a CRI of not less than 50.

E. Light Loss Factor (LLF).The design is to take into account a light loss factor for the life of the luminaires. The LLF is to be calculated in accordance with Illuminating Engineering Society of North American handbook. This includes using lamp depreciation factor (for LEDs this would include the driver and the luminaire) and the dirt depreciation factor. Instead of providing the

LLF calculation, a LLF of 0.75 can be used. The LLF can be adjusted, if the installation indicates that there is a relamping plan in place to replace all the luminaires after a specified time. In no case is a LLF used to be higher than 0.85.

F. Transition Lighting. Transition lighting shall be provided in accordance with UFC-3-530-01 “Design: Interior and Exterior Lighting and Controls”, SDDCTEA Pamphlet 55-15 “Traffic and Safety Engineering for Better Entry Control for Facilities”, and IES Handbook of North America. Transition lighting goes from the lower light levels prior to the Approach Zone up to the required light level for the Approach Zone and then again up to the required level for the Access Control Zone. Then the lighting will transition from the Access Control Zone to the lower level for the Response Zone. Then after the active vehicle barriers the light level needs to transition down to the lower light level for the street. Roadway geometry may impact the ability to do the transition lighting per the criteria; however, the best engineering attempt shall be accomplished.

G. Power Requirements. High intensity discharge luminaires indicated to be on generator back-up power shall have quartz-restrike provided when the luminaire is a type that either requires cool-down to restrike or takes considerable time to achieve full brightness. An exception to the quartz-restrike would be to provide a means to ensure the luminaire does not lose its arc during transition from normal or generator and back again.

H. Existing ACPs where roadways within the ACP are revised in width or geometry are required to bring that specific entire ACP Zone (approach zone, control zone or response zone) into compliance with the lighting levels. If adjoining ACP Zone(s) are not in compliance, then transitioning lighting is required from the upgraded zone to the existing zones.

I. Exterior lighting poles and the electrical connections shall be frangible when required by MUTCD.

J. Poles are to be located at least 2 ft. from any road edge or curb face. Comply with AASHTO Roadway Design Guide break-away requirements.

K. Exterior canopy lighting control requirements are to be coordinated with the local installation as to location and method. Command and Control shall be provided with a Hand/Off/Automatic controller(s) with the automatic means, as a minimum, being a photocell for controlling the Approach Zone, Access Control Zone and Response Zone, unless the Customer approves in writing an alternate location or different requirements.

L. Exterior doors are to have a luminaire above or adjacent to the door that can be controlled via an automatic means such as a photocell or a manual means. These luminaires shall be LED unless local conditions dictate a more appropriate light source. The following facilities are exempt from this requirement: ID Check Guard Booths, Pedestrian ID Check and Overwatch building.

M. Provide an open/close visual indicator on the ID Check canopy over each lane that is controlled from the ID Check area or Command and Control. The preferred style of indicator is the red “X” and green “Arrow”, but other types are allowed if approved in writing by the local installation and the COS-ACP.

N. Provide an open/close visual indicator on the Search canopy(s) or Enclosed Facility over each lane that is controlled from the Canopy area or Command and Control. The preferred style of indicator is the red “X” and green “Arrow”, but the two head traffic signal (red/green) is allowed, but other types are allowed, such as red/green signal, if approved in writing by the local installation and the COS-ACP. Luminaires shall be Light Emitting Diode (LED). If there is only one search lane, then it is up to the Installation to determine if a visual indicator is desired. If the approach lanes have curves such that the line of site for drivers would make it difficult to see the

canopy mounted indicators, additional indicators should be added in the approach zone to make drivers aware of lanes that are open/closed.

O. Provide under-vehicle lighting, when required by the User, for one lane in each Search Area. The lane must be under the canopy. Those areas that may have snowplows go through the lane are to ensure the lights are flush with or below the finished surface. Provide a manual switch in the area to turn the lights on/off. The local installation can state in writing that they do not want this under-vehicle lighting. Only those lanes under a canopy can have under-vehicle lighting.

2.14.2. Interior Lighting

A. Interior lighting shall comply with UFC 3-530-01 "Design: Interior and Exterior Lighting and Controls "and with the sustainability requirements.

B. Lighting for most spaces with suspended acoustic ceilings shall be of the recessed type.

C. Lighting in Command and Control, ID Check Guard Booth, Pedestrian ID Check, and Overwatch facility shall be dimmable.

D. Emergency and Exit Lighting. Provide emergency lighting and exit lighting per NFPA 101, UFC 3-600-01 "Fire Protection Engineering Facilities" and UFC 4-010-01 "DoD Minimum Antiterrorism Standards for Buildings". Emergency and exit access lighting are to be on battery backup. Facilities that have stand-by generator power are required to have the power to the emergency and exit lights on a generator circuit and also have battery back-up. The battery back-up is considered the primary source. All signage as required by life safety codes are to be included in designs.

2.14.3. General Power Requirements

A. Requirements for heating, ventilation, and air conditioning system shall be determined by the project criteria package. Access around equipment shall be provided for service and air flow. In cold climates, provide features that will protect plumbing, water lines, and other lines from freezing.

B. The power panelboard shall not be installed below a counter. This includes prefabricated structures such as the Vehicle ID Check Area Guard Booths, Pedestrian Check Area both and Overwatch Booth.

C. Exterior Wiring. Direct buried wiring is not allowed. All 600V or less wiring shall be in conduit. If the conduit is within six (6) ft. of a roadway, then the conduit shall be concrete encased or in rigid steel conduit. All wiring over 600V shall be concrete encased.

D. Provide power receptacles per NFPA 70 and in conjunction with the proposed equipment and furniture layouts. Provide duplex receptacles adjacent (at least 6 inches away) to each telecommunication outlet. Special receptacles may be required for equipment to be installed by others to include package scanners. The following are in addition to the general requirements.

   i. Search Function/Bus Shelter is to have at least one duplex receptacle.

   ii. ID Check Guard Booth, Pedestrian ID Check, Overwatch Building. Provide one duplex receptacle at the counter that is either on a UPS circuit or provide a standalone UPS.

   iii. ID Check Guard Booth. Provide an exterior receptacle on each of the narrow ends. Provide at least one receptacle below the eave along each of the long sides.

   iv. Overwatch Pad. Provide a duplex receptacle at the pad.

v. ID Check Canopy. Provide at least one duplex receptacle per island.

vi. Truck Search Area Canopy or Enclosed Facility, Passenger Vehicle Search Area Canopy or Enclosed Facility. Provide at least one duplex receptacle on a column on each side of the inspection space. Provide a dedicated circuit for each side of the inspection space receptacles.

vii. ID Check Canopy, Truck Search Area Canopy, Passenger Vehicle Search Area Canopy. Coordinate with the User on any special power requirements for portable heaters or misters. This typically will require a 20-amp circuit at either 208VAC, 240VAC, 277VAC or similar voltage depending on the country. Provide an appropriate receptacle for the amperage and voltage configuration and have an adjacent disconnecting means.

viii. Truck Search Enclosed Facility, Passenger Vehicle Search Enclosed Facility. Provide duplex receptacles spaced around the perimeter of the inspection space. Provide a dedicated circuit for each side of the inspection space.

E. Other Equipment and Systems. See discussion on COMMUNICATIONS AND SECURITY SYSTEMS for other equipment and systems that will need power. Provide power for communications equipment per UFC 3-580-01 Telecommunications.

F. Power Handhole. Provide a power handhole in each island/median in the ID Check Area. Conduit shall be run from the handhole to the island/median guard booth and to the next island/median handhole. This handhole/conduit system shall be used for all 600V or less power to the ID Check guard booths and to the area. The handhole cover is to be flush with the island/median.

G. Design and locate the service transformer(s) to be either located within the ACP corridor (inside the passive barrier) or on the outside. Location needs to ensure access is maintained to the transformer. If on the outside, this may include a manual gate with the appropriate crash rating in the passive barrier.

H. Panelboards and other cabinets that are located in the ID Check Area or in Search Areas cannot be located closer than 18 inches to the curb face. Locations where the equipment may be struck by an errant vehicle are to provide bollards for protection.

I. Search Canopies. Provide traffic arms with a signal light for each search lane.

J. ID Check area. Provide a traffic arm with or without a signal light for each ID Check Lane, if the installation is not on the list to have fixed Automated Installation Entry installed at this ACP.

2.14.4. Back-up Power

A. Generator

i. Automatic start-up within 10 seconds after the normal source of electrical power fails.

ii. Generator shall have an alternate fuel source and/or sufficient on-site fuel to maintain full-load operation for a minimum of 12 hours. Natural gas line to the generator will be accepted as meeting the 12 hr. on-site fuel source.

iii. Status monitored at Command and Control to include alarms for loss of normal power, generator malfunction, and low fuel.

iv. The generator is to be installed so that it is at least 30 feet from the service entrance transformer and 30 ft. from any ACP building.

v. Design and locate the generator to be either located within the ACP corridor (inside the passive barrier) or on the outside. Location needs to ensure access to the generator is maintained for adding fuel and performing maintenance. If on the outside, this may include a manual gate with the appropriate crash rating in the passive barrier.

vi. The following loads shall be on generator power:

a. Interior lighting for Command and Control, the Gatehouse, Guard Booths, Pedestrian ID Check, Overwatch position, and Search Offices.

b. Canopy lighting in the ID Check Area and the Search Areas.

c. Where canopies are utilized for Search Areas: Canopy lighting for the Search Areas.

d. Where enclosed facilities are utilized for search areas: Interior lighting for the Search Area Enclosed Facility.

e. External lighting in the Access Control Area.

f. External lighting in the Search Areas this shall include 100 ft. on both sides of the Search canopy.

g. Approach Zone and Response Zone lighting within 100 feet of the Access Control Zone.

h. External lighting 150 feet on both sides of the final vehicle barriers.

i. ID Check Area traffic arms.

j. Uninterruptible Power Supplies (UPS).

k. Search Area traffic arms.

vii. Under Vehicle Inspection System (UVIS). An ACP is not required to have a UVIS, but if provided then all equipment associated with the UVIS system needs to be on generator power.

B. Uninterruptible Power Supply (UPS). The ACP shall have one or more hard-wired Uninterruptible Power Supplies to power critical security, Communications, and safety loads when the normal source of electrical power fails. Plug in electrical connection is not acceptable. The UPS shall provide a minimum of 10 minutes back-up power. A centralized UPS is to have a remote monitoring panel located at the Command and Control to report alarms associated with the UPS. The following loads shall be on UPS:

i. Primary communications system

ii. Duress alarm system.

iii. Computers.

iv. CCTV system.

v. Intrusion Detection Systems (IDS).

vi. Automation (Automated Installation Entry) excludes the island traffic arms.

vii. Lighting:

a. One luminaire for each ID Check Lane. This luminaire shall be located near the location where ID checks are performed.

b. One luminaire at each Active Vehicle Barrier to include requirement of CCTV cameras for real time assessment of activity detail.

viii. Access Control Equipment including:

a. Active vehicle barrier controls.

b. Active barrier activation system for one complete operation cycle (opens to close and close to open). Hydraulic systems do not need to have the pump motor on UPS, if the system can maintain enough pressure for 1.5 cycles. The hydraulic pump motor then only needs to be on generator back-up power for a hydraulic system having sufficient capacity.

c. Traffic arms located at the active vehicle barriers.

d. Traffic sensors (wrong way, over speed, and presence detectors). Traffic signals and warning lights.

ix. Under Vehicle Inspection System (UVIS). The computer that operates the UVIS needs to be on UPS.

2.14.5. Lightning Protection System

A. A risk analysis per NFPA 780 is to be performed to determine if a lightning protection system is required. If required, but the installation does not desire a lightning protection system, then the installation shall provide direction in writing.

B. The lightning protection systems are to comply with the requirements found in UFC 3-575-01 “Lightning and Static Electricity Protection Systems”.

C. Provide surge protection per requirements found in UFC 3-575-01 “Lightning and Static Electricity Protection Systems” and UFC 3-520-01 “Interior Electrical Systems”. In addition, all exterior power panelboards and those panelboards that primarily power communications, LAN, exterior site lighting, security equipment and active vehicle barrier controls are to have surge protection.

2.15. HEATING VENTILATING AND AIR CONDITIONING (HVAC) REQUIREMENTS:

OCONUS: All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

2.15.1. Sizing

A. The capacity of HVAC systems and equipment shall be calculated in accordance with ASHRAE Handbooks, ASHRAE 62.1, ASHRAE 55, and ASHRAE 189.1. Outdoor and Indoor Calculations and Requirements: Indoor design conditions and load calculations shall be in accordance with UFC 3-410-01FA “Heating, Ventilating, and Air Conditioning”. Outdoor air and exhaust ventilation requirements for indoor air quality shall be in accordance with ASHRAE 62.1-2007. All Buildings with minimum LEED Silver requirement (or better) will earn LEED Credit EQ 7.1, Thermal Comfort-Design, except were precluded by other project requirements.

B. Indoor Air Quality: Buildings indoor air quality systems, thermal comfort, acoustical control, equipment, calculation procedures, construction and start-up shall comply with ASHRAE Standard 189.1, Section 8.3, Mandatory Provisions, and Section 8.4, Prescriptive Option, or Section 8.5, Performance Option.

C. Outdoor Air Delivery Monitoring: Spaces Ventilated by Mechanical Systems. Reference Sections 7.4.3.2, 8.3.1.2.1, and 10.3.2, of ASHRAE Standard 189.1. A densely occupied space is defined as those spaces with a design occupant density greater than or equal to 25 people per 1000 ft2.

D. Environmental Tobacco Smoke:

i. Smoking shall not be allowed inside the building. Signage stating such shall be posted within 10 ft. of each building entrance.

ii. Any exterior designated smoking areas shall be located a minimum of 50 ft. away from building entrances, outdoor air intakes, and operable windows.

iii. Section 6.2.9 of ANSI/ASHRAE Standard 62.1 shall not apply.

2.15.2. Ballistic Resistant Rated Structures

A. Command and Control function

The occupied portions of the command-and-control functional areas of combined facilities, which are a ballistically protected area, are to be heated and air conditioned, and controlled for temperature (settings) are to be easily accessed by staff. Locate mechanical equipment when provided for heating and cooling in the Mechanical equipment room or in other areas where space is provided for clearance and accessibility for maintenance. Provide insulation on all ductwork, equipment, and other items as required by code. Provide toilets when required and janitor closets or areas with a mop sink with an exhaust system. The system is to maintain exhaust rates as required by the applicable code. Exhaust fans are to be accessible for repair or maintenance. Communications room when provided are to be air conditioned to maintain a space temperature of 75 degrees F at the design load. The mechanical/electrical room and inside storage is to be heated and ventilated as required by code and to prevent damage from excessive space temperatures.

B. ID Check Guard Booth

This is a ballistic rated structure, heating and air conditioning of the structure is mandatory.

C. Overwatch Building.

This is a ballistic rated structure, heating and air conditioning of the structure is mandatory.

D. Pedestrian ID Check & (Pedestrian ID Check functional areas “room”)

This is a ballistic rated structure, heating and air conditioning of the structure is mandatory.

2.15.3. Non-Ballistic Resistant Rated Structures

A. Search Area Building and Search Function

For large and small standard army design or custom type Search Area Buildings, and search functions or rooms of combined facilities: Occupied portions of the facility are to be heated and air conditioned for occupant comfort, unless otherwise not required by the Installation Design Guidance (IDG). Search area may not be air conditioned. Controls for temperature settings are to be easily accessed by staff. Locate mechanical equipment for heating and cooling in the Mechanical equipment room when required or in other areas where space is provided for clearance and accessibility for maintenance. Provide insulation on all ductwork, equipment, and other items as required by code. Provide Toilet when required and janitor

closets or areas with a mop sink with an exhaust system. The system is to maintain exhaust rates as required by the applicable code. Exhaust fans are to be accessible for repair or maintenance. The mechanical and electrical rooms and inside storage are to be heated and ventilated as required by code and to prevent damage from excessive space temperatures.

B. Two (2)- Three (3)- Six (6)- Nine (9) Processor Visitor Control Center & (Combined facilities including Visitor Processing)

Occupied portions of the facility (Office, Provost Marshal, Vestibule, Hall, and Breakroom, Etc.) and the visitor processing area of combined facility are required to be heated and air conditioned for occupant comfort. Controls for temperature settings are to be easily accessed by staff. Locate mechanical equipment for heating and cooling in the Mechanical room when required or in other areas where space is provided for clearance and accessibility for maintenance. Provide insulation on all ductwork, equipment, and other items as required by code. Provide Toilet when required and janitor closets or areas with a mop sink with an exhaust system. The system is to maintain exhaust rates as required by the applicable code. Exhaust fans are to be accessible for repair or maintenance. Communications room when required are to be air conditioned to maintain a space temperature of 75 degrees F at the design load. The mechanical/electrical room and inside storage is to be heated and ventilated as required by code and to prevent damage from excessive space temperatures.

C. Environmental Requirements for Communications Rooms:

Comply with ANSI/EIA/TIA 569 (including applicable Addenda). Maintain environmental conditions at the Class 1 and 2 Recommended Operating Environment. Before being introduced into the room, filter and pre-condition outside air to remove particles with the minimum MERV filtration quality shown in the ASHRAE HVAC Applications, Chapter 19. Maintain rooms under positive pressure relative to surrounding spaces. Design computer room air conditioning units specifically for Communications room applications. Build and test units in accordance with the requirements of ANSI/ASHRAE Standard 127. A complete air handling system shall provide ventilation, air filtration, cooling and dehumidification, humidification (as determined during the design phase), and heating. The system shall be independent of other facility HVAC systems and operation shall be required year-round.

2.16. ENERGY CONSERVATION REQUIREMENTS

OCONUS: All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

2.16.1. Whole Building Approach

A whole building approach should be used in achieving the target energy reduction. Energy consumption levels for both the baseline and proposed building shall be determined by using the Performance Rating Method found in ASHRAE Standard 90.1-2007 Appendix G, with process and plug loads; see paragraph Energy Policy. All calculations shall be performed using a professionally recognized and proven computer program or programs that integrate architectural features with air-conditioning, heating, lighting, and other energy producing and consuming systems. These programs will be capable of simulating the features, systems, and thermal loads used in the design. The energy savings and any parasitic energy loads associated with the utilization of recovered energy and other renewable or waste heat applications shall be included. All calculations shall be included as part of the design analysis. A summary of the energy reduction features should also be included as part of the design analysis. This summary should include for

both the baseline and proposed building such items as building insulation values, glass SHGC and U-factor, roof construction, equipment efficiencies and lighting levels.

2.16.2. Energy Calculation Methodologies and Substantiation Requirements:

The calculation methodology used for the documentation and analysis shall follow the guidelines set forth in Appendix G of ASHRAE 90.1, with the exception that receptacle and process loads may not be omitted from the calculation and; this calculation shall address all energy consuming systems in a single integrated methodology. Individual calculations for heating, cooling, power, and lighting systems etc. will not be acceptable. The following building simulation software is acceptable for use in calculating building energy consumption: Hourly Analysis Program (HAP) by Carrier Corp., TRACE 700 by Trane Corp., DOE-2 by US Department of Energy, and EnergyPlus by DOD/DOE.

2.16.3. Design After Award

Interim and final design submittals shall demonstrate that each building including the building envelope, HVAC systems, service water heating, power, and lighting systems meet the Mandatory Provisions and the Prescriptive Path requirements of ASHRAE 90.1. Interim and final design submittals which address energy consuming systems, (heating, cooling, service hot water, lighting, power, etc.) must also include calculations in a separate Energy Conservation Section of the Design Analysis which demonstrate and document:

A. The baseline energy consumption for the facility or facilities under contract, that would meet the requirements of ANSI/ASHRAE/IESNA Standard 90.1-2007,

B. The energy consumption of the facility or facilities under contract utilizing the materials and methods required by this construction contract.

2.17. FIRE PROTECTION REQUIREMENTS:

OCONUS: All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

2.17.1. Building Function Requirements

The facilities shall be designed in compliance with UFC 3-600-01 “Fire Protection Engineering for Facilities”. The typical construction is Type IIB. The facilities are a combination of Business and Assembly occupancies. Due to the nature of the facility (size, and mission criteria), the facilities are generally not provided with a fire sprinkler system unless officially requested by a specific command. For Life Safety and Egress, the latest version of NFPA 101 shall be used in the development of the buildings. For general square footage, building areas, and heights, the latest version of IBC shall be complied with in the development of the buildings.

2.17.2. Fire Alarm System

The fire alarm system, when required, is to comply with UFC 3-600-01 “Fire Protection Engineering for Facilities". Buildings with a fire alarm system shall have an addressable fire alarm evacuation system with manual pull stations (break glass not allowed), audible and visual alarms. The facilities shall be designed in compliance with UFC 3-600-01, and NFPA 101

2.17.3. Mass Notification

Mass notification system is to be integrated into the fire detection system when both are required. The building mass notification system is to meet the requirements of UFC 4-021-01 “Design and Operation & Maintenance (O&M): Mass Notification System. The system is to be fully compatible with local mass notification system.

2.18. SUSTAINABLE DESIGN

OCONUS: All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Ensure compliance with the most stringent of any UFC applicable, the SOFA, the HNFA, and the BIA, as applicable.

2.18.1. General

Many features that make a facility sustainable can be integrated into a typical building and site. Reduction in the use of water is a key element that generally applies to every building and site. However, other very beneficial features/techniques (such as shading devices for buildings or building orientation for sites) or materials might also have application but need to have a more tailored building and site to be effective.

The offeror (for design-build contracts) or designer (for design-bid-build contracts) is encouraged to suggest sustainable material substitutions or building feature modifications for consideration where they appear to provide benefit without appearing to interfere with functionality. One aspect of sustainability is the over-all energy consumption of a building and mandated federal criteria are regularly being revised to decrease such energy consumption by increasing energy efficiency.

Documents, such as ASHRAE 189.1-2009, have been developed to focus building design on steadily improving their levels of energy efficiency.

It is expected that meeting certain levels of energy efficiency will require the use of such features as horizontal shades or overhangs above windows in hotter climates and these techniques are acceptable even though not required for every climate application. The target for this facility type at the time this Army Standard Design was approved for application to specific projects was 30% energy savings from the base-line energy use defined in the criteria of ASHRAE 90.1-2007. The U. S. Army has decided to include/use site energy for the HVAC, lighting, and hot water loads to determine the energy savings.

It is recommended that facilities provided for climate zones 1a & b, 2a & b and 3a, b & c have horizontal shades above the windows, shading grills, or other devices or building geometry (like being deeply recessed) techniques (clerestories close to the roof line may accomplish the same benefit with overhangs) to allow for meeting the required energy savings.

It is assumed that both the governing criteria and the energy target (as defined by the U. S. Governments and organizations such as the United States Green Building Council (USGBC)) will change regularly. Provide every facility (these will generally be projects appropriated at specific times over several years) so that it meets the requirements of governing criteria and the energy target that are applicable at the time of project development.

Many federally mandated definitions/requirements or measures of energy consumption criteria (energy cost savings) are not identical with other measures of energy efficiency or sustainability. Examples of different measures are those described in the USGBC “LEED” point criteria.

Provide a comprehensive analysis of energy consumption during specific project design processes and incorporate what appears to be the best/most-appropriate blend of features/characteristics that will reduce

energy consumption of the facility to the minimum practicable levels. Also meet whatever the current mandates or criteria that apply at the time of the specific project under design:

A. FY08-FY12, and FY13 and beyond: New facilities or minor renovations that don't meet LEED minimum program requirements (occupied building, climate control (heating and/or cooling) for human comfort and 1000 S.F. or greater):

   i. Scored using LEED-NC and incorporate sustainable design features to the maximum extent life cycle cost effective and technically possible.

   ii. Supporting documentation will be developed (including LEED checklist).

2.18.2. LEED and Third-Party Validation

Reference: UFC 1-200-02 High Performance and Sustainable Building Requirements, latest

A. GENERAL. Except where indicated otherwise, these requirements apply worldwide to all facility construction activities on permanent Active Army installations, Army Reserve, Army Readiness Centers, Army National Guard Facilities and Armed Forces Reserve Centers, regardless of funding source and including Base Realignment and Closure (BRAC) and non-Army tenant facilities on Army property. For tenant projects on Army property, USACE project Master Planner and Project Manager (PM) will make the tenant organization aware of Army Sustainability requirements and the tenant responsibility to coordinate directly with the installation Department of Public Works (DPW) if the requirements cannot be met. These requirements apply to permanent facility construction only. Excluded are overseas contingency construction and continental United States (CONUS) interim facilities. However, overseas contingency construction and CONUS interim facilities should incorporate as many sustainability features as life cycle cost effective especially passive sustainability measures. The UFC 1-200-02 "High Performance and Sustainable Building Requirements" will be used for all DOD projects, except ASHRAE 90.1-2007 shall be used and work for other customers where appropriate. All construction outside of the United States is also governed by Status of Forces Agreements (SOFA), Host Nation Funded Construction Agreements (NNFA), and in some instances, bilateral Infrastructure Agreements (BIA). Therefore, the acquisition team must ensure compliance with the most stringent of the UFC, the SOFA, the HNFA, and the BIA, as applicable.

B. MINIMUM REQUIREMENT - NEW FACILITIES IN THE UNITED STATES AND ITS TERRITORIES. Facilities which meet the requirements for Sustainability HPSB validation shall be registered with one of the organizations which provide sustainability validation indicated in the UFC. The project shall incorporate all applicable requirements of the DoD or Army Sustainability/HPSB Score Sheet. Sustainability validation shall be completed by one of the validation methods through one of the organizations indicated in the UFC. DoD or Army Sustainability/HPSB Score Sheet shall be completed and updated throughout the project life and copies shall be forwarded to the Army PM at each design phase and upon request during construction. Final validation and certification documents shall be forwarded to the PM for record and data calls. Projects which do not meet minimum requirements for sustainability validation or certification shall document sustainability features which are applicable to the scope involved. Documentation of this type of projects shall use the DoD or Army Sustainability/HPSB Score Sheet and additional data collected, such as construction waste recycling shall be provided to the DPW and the Army PM.

C. ENERGY POLICY

Directive and Guidance for FY13 and beyond MCA Projects - See Reference ECB 2012-13.

c. Memorandum of Understanding (MOU), 06 Mar 2006, “Guiding Principles for Federal Leadership in High Performance and Sustainable Buildings”

d. Engineering and Construction Bulletin (ECB) 2011-1, 19 Jan 2011, Subject: “High Performance Energy and Sustainability Policy”

e. Engineering and Construction Bulletin (ECB) 2012-13, 23 Apr 2013, Subject: “Energy Implementation Guidance Update, ASHRAE 189.1, Life-Cycle Cost Analysis Requirements”

f. Energy Independence and Security Act (EISA) of 2007, Section 433” Federal Building Energy Efficiency Performance Standards”

g. Methodology and Procedures for Life-Cycle Cost Analysis, Subpart A, Code of Federal Regulations, Part 436

h. ANSI/ASHRAE/IES Standard 90.1-2010 “Final Qualitative Determination, Pacific Northwest National Laboratory”, October 2011

ii. General

a. The purpose is to update and clarify the Energy and Sustainability guidance previously issued by ECB 2011-1 (Reference d). Specifically, this establishes a minimum energy requirement for compliance with ASHRAE Standard 189.1-2009 (Reference b) for prescriptive and performance paths and establishes ASHRAE Standard 189.1 as our baseline facility criteria for the purpose of life-cycle cost analysis (LCCA). Previous guidance issued in ECB 2011-1 related to LCCA for features that exceed 1% of the Programmed Amount will no longer apply starting with FY13 projects and beyond. Instead, projects should follow guidance stated herein.

b. We are in the process of reviewing the most current versions of ASHRAE Standards 189.1-2011 and 90.1-2010 to determine what the impacts are, if any, of adopting the latest versions of the Standards. ASHRAE Standard 189.1-2011 references the 2010 version of ASHRAE Standard 90.1 and according to an analysis conducted by the Pacific Northwest National Laboratory (Reference g) there are 109 changes to the 90.1-2010 version compared to the 90.1-2007 version of which 62 changes have an impact on energy. Expect additional guidance regarding adoption of these new standards.

c. As stated in ECB 2011-1 (Reference d), all FY13 and beyond projects are required to meet the Energy and Sustainability requirements of ASHRAE Standard 189.1 according to Department of the Army Sustainable Design and Development Policy Update (Reference a) with the noted exemptions. The Army established ASHRAE Standard 189.1 as a minimum standard and recognizes that Congressional Law and Executive Orders drive project solutions beyond the requirements of ASHRAE Standard 189.1; an example being EISA 2007 fossil fuel reduction targets (Reference e).

d. The Energy Independence & Security Act of 2007 (EISA 2007) requires the progressive reduction in site fossil fuel use, compared to a 2003 Commercial building Energy Consumption survey (CBECS) average per building type as published by the Energy Information Administration (EIA), with the goal of eliminating consumption of fossil fuels by 2030.

e. In terms of the fossil fuel reduction statute, there is currently no formal guidance issued by an expert agency detailing how the calculations for fossil fuel reduction should be performed. In general, DOD implementation guidance would follow expert agency guidance. In absence of formal implementation guidance, USACE cannot require the fossil fuel avoidance as pertains to EISA 2007, which requires a reduction of 65% for the average building type in CBECS with respect to ASHRAE 90.1-2007 for buildings FY15-FY19 and 55% reduction respectfully for FY10-FY14.

f. Per Army Policy, ASHRAE 189.1 is a minimum requirement and shall be used as the project baseline for life-cycle cost comparisons. A LCCA is not required on the baseline project. An incremental LCCA shall be completed for all energy efficiency or conservation features provided in excess of the baseline to ensure the payback period is no greater than the lesser of 40 years or the projected life of the facility. Equipment procurement, fuel, maintenance, repair, replacement, and any other quantifiable benefits and costs are to be included in the LCCA. The LCCA will be documented and made part of the design analysis.

g. When applying ASHRAE Standard 189.1 energy performance standards, ensure that the minimum energy savings to be achieved, through performance or prescriptive paths, is at least 30 percent better than ASHRAE Standard 90.1-2007 (including process and plug loads) by the use of Energy use analysis: see paragraph Energy Conservation. This 30 percent savings threshold may in some cases be a slight improvement upon the standard for certain facility types in some climatic zones.

h. The Energy Policy Act of 2005 (EPact 2005) amended and extended by Executive Orders, subsequent legislation, and the “Federal Leadership in High Performance and Sustainable Buildings Memorandum of Understanding” (FLHPSB MOU) establishes a betterment goal for the proposed project compared to an ASHRAE 90.1-2004 standard baseline model. Epact is applicable to all buildings and is an Energy Use based analysis, which excludes plug and process loads but the requirements of the paragraph above including process and plug loads is a much more extensive, conservative and stricter requirement for energy use savings.

i. 10 CFR Part 436 (Reference f) establishes a methodology to conduct a LCCA for determining energy and water conservation improvements for Federal Buildings. The Building Life-Cycle Cost (BLCC) program developed by the National Institute of Standards and Technology (NIST) was designed to comply with 10 CFR Part 436 and includes a MILCON Analysis module. All project delivery teams shall use the BLCC program and follow the methodology in 10 CFR Part 436 to determine the LCCA for each project when requesting additional funds for features in excess of the baseline described in paragraph (c). A link is provided below with instructions on how to download the BLCC program for free:

http://www1.eere.energy.gov/femp/information/download_blcc.html

j. A request for an exemption to HQUSACE may be made for any specific requirement included herein or by reference that the PDT determines would adversely affect mission performance, security requirements, health, safety, or welfare. The request for exemption shall only apply to the specific requirements in conflict. Any approved exemptions to the guidance shall be documented with reference to the specific requirement in conflict and included in the project documentation.

2.19. CYBERSECURITY FOR FACILITY RELATED CONTROL SYSTEMS (FRCS):

All planning, design, and construction of FRCS for existing and new facilities including integration into existing control systems shall be done in accordance with the requirements set forth. The following is a non-comprehensive list of potential FRCS:

A. Electronic Security Systems (ESS) which include Intrusion Detection Systems (IDS), Access Control Systems (ACS), and Video Monitoring Systems/Closed Circuit TV (CCTV)

B. Fire Protection Life-Safety Systems which include Fire Alarm Reporting System (FA), Fire Suppression System, Mass Notification System (MN) and Sound Masking Systems

C. Building (Level) Automation Control System (BCS) which includes Heating, Ventilation and Air Conditioning Systems (HVAC) and Direct Digital Control (DDC)

D. Energy Monitoring and Control System (EMCS) and Utility Monitoring and Control System (UMCS)

E. Building Lighting System (UFC 3-530-01) and Receptacle Control System

F. Physical Access Control Systems (PACS)

G. Variable Frequency Drives

H. Automated Rollup Doors

I. Automated Window Shades

J. Electrical Distribution System (Exterior and Interior) with micrologic processors

K. Generator, Controller, Automatic Transfer Switch and Uninterruptible Power Supply

L. Utility Metering System (Advanced Meters, AMI, etc.)

M. Public Address System (PA)

N. Audio/Visual Systems (A/V)

O. Supervisory Control and Data Acquisition (SCADA) Systems

P. Gate Controllers

Q. Other FRCS as defined by Project Requirements, and not specifically identified. Any system, or component of a system, which has wireless, radio frequency (rf), Bluetooth, network communication capabilities, or a port for connecting a laptop/computer.

As the project design progresses the inventory list of FRCS will be narrowed and fully defined and edited. 25 05 11 Cybersecurity for Facility-Related Control Systems specification sections will be included. An ECIFP (Engineering Considerations and Instructions for Field Personnel) will be provided to Construction to facilitate the implementation of cybersecurity controls and inventorying process.

Preliminary categorization for this facility is presumed to be mission essential, depending upon the existence of an alternate ACP. Refer to "Distribution of the FRCS Master List Memo - signed 7_16_21" and "Addendum - FRCS Master List Update 7_16_21". The Confidentiality-Integrity-Availability (C-I-A) Impact Level Ratings may be taken from the FRCS Master List as preliminary until all of the FRCS has been inventoried, and the respective System Owner (SO), Information System Security Manager/Officer (ISSM/ISSO) is able to provide the respective C-I-A impact level ratings in accordance with UFC 04 010 06.

Identification of the SO, ISSM/ISSO is the first and foremost task of the Cybersecurity Subject Matter Expert (SME) or Cybersecurity Designer, whose credentials should be a minimum Information Assurance Manager (IAM) Level II Certification per DoD 8570.01-M.

Provide a Cybersecurity Design Analysis write up which documents the cybersecurity design process for the project.

APPENDIX L
ARMY STANDARD FOR ACCESS CONTROL POINTS

DEPARTMENT OF THE ARMY
ASSISTANT CHIEF OF STAFF FOR INSTALLATION MANAGEMENT
600 ARMY PENTAGON
WASHINGTON, DC 20310-0600

DAIM-ZA

APR 13 2012

MEMORANDUM FOR

Commander, United States Army Corps of Engineers (CEMP), 441 G St NW, Washington, DC 20314
Director, Installation Management Command, 2405 Gun Shed Road, Fort Sam Houston, TX 78234

SUBJECT: Army Standard for Access Control Points

1. The enclosed, Army Standard for Access Control Points (ACP) is approved for implementation. Only the Assistant Chief of Staff for Installation Management has authority to approve exceptions to this standard. Waivers from the Army Standard must be approved in accordance with AR 420-1.

2. The Army Standard is effective for Military Construction design and mandatory, where possible within statutory limitations, for major renovation projects in FY2013 and beyond. Designs based on the Army Standard and the Army Standard Design will be developed consistent with the MILCON Business Process.

3. The points of contact (POC) for the Facilities Design Team are Ms. Elizabeth Troeder, DAIM-ODO, elizabeth.g.troeder.civ@mail.mil, 571-256-8148; Mr. Eugene Smith, DAPM-MPO, eugenea.smith@us.army.mil, 703-695-4210; and Mr. William Miller, USACE NWO, william.d.miller@usace.army.mil, 402-995-2118.

The Army Standard (AS) for Access Control Points (ACPs)

13 April 2012

Description:
An Access Control Point (hereafter referred to as ACP) is a corridor at an Installation perimeter through which all vehicles and/or pedestrians must pass when entering or exiting an Installation cantonment area. An ACP provides the first physical security boundary layer that restricts access to Department of Army (DA) Installation cantonment areas.

ACP Classifications:
DA ACP classifications are: (a) Primary, (b) Secondary, (c) Limited Use, and (d) Pedestrian. Primary and Secondary ACPs can accommodate privately owned vehicles (POV)s, commercial vehicles (trucks), pedestrians or any combination thereof. Primary and Secondary ACPs shall provide the means to defeat a vehicular and/or pedestrian threat via permanent measures defined in this Army Standard for ACPs. Limited Use ACPs shall provide means to defeat vehicular and/or pedestrian threats via temporary or permanent measures. Limited Use ACPs shall not have routine hours of operation. A Pedestrian ACP may be part of an ACP that accommodates vehicles or it may stand alone.

Applicability:
The Army Standard for ACPs applies to the cantonment areas for:

1. All Army Active Installations, the following Army Reserve Installations: Fort McCoy, Fort Dix, Fort Buchanan, Fort Hunter Liggett, Camp Parks, and, Devens Reserve Forces Training Area and the following Army National Guard Installations: Camp Roberts, Arlington Hall, Fort Indiantown Gap, Camp Atterbury, Camp Shelby, Camp Robinson and Gowen Field.
2. Army Reserve Training Centers and Army National Guard sites where movement of personnel or vehicles is from outside the cantonment area and where a U.S. Army Active Installation cantonment area can be accessed from the reserve center. For the purposes of this Standard, Movement of personnel or vehicles between Army Reserve Center or Army National Guard site and U.S. Army Installation does not require an ACP.
3. All Army controlled Joint Base Operations and the ACP projects funded by the Army on Joint bases controlled by others.
4. Active Army Installation access between cantonment and non-cantonment areas where adjacent non-cantonment areas can be accessed by non-vetted personnel.
5. Both CONUS and OCONUS ACPs.

This Army Standard for ACPs supersedes all previous versions and any facility space allowance standards and/or criteria contained in other facilities engineering and/or Installation management documents and serves as the primary authority for Army ACPs worldwide.

If a difference exists between the Army Standard for ACPs and the Army Standard Design for ACPs the Army Standard for ACPs shall govern.

Waivers:

- Only the Assistant Chief of Staff for Installation Management (ACSIM) has authority to approve waivers and exceptions to the Army Standard for ACPs.
- Waivers from the Army Standard for ACPs must be requested in accordance with Army Regulation (AR) 420-1 *Army Facilities Management* (see Appendix G).
- All waiver requests to the Army Standard for ACPs require Center of Standardization (COS) for ACPs conflict resolution prior to submission by the Garrison Commander to the respective IMCOM Region, HQ IMCOM and the ACSIM. Non-IMCOM Installations or activity requests are sent, upon endorsement by their Senior Commander, to their owning Army Command (ACOM), Army Service Component Command (ASCC), or Direct Reporting Unit (DRU) instead of the IMCOM Region and HQ IMCOM, and then sent to the ACSIM.
- Waiver requests must be received in sufficient time to allow the Facility Design Team (FDT) to complete review and development of recommendation(s) or course(s) of action for the Army Facilities Standardization Committee (AFSC) to consider prior to its deliberation for approval or rejection and the possible implementation into project design by the appropriate parties.
- All waiver requests shall include compelling rationale of functional and operational deviations to include substantiating documentation in sufficient detail for DA to assess implications of approving the waiver.
- All Headquarters, Department of the Army (HQDA) approved exceptions shall be documented in Installation master plans thereby serving as the Installation's modified standards for the ACP affected. Late submissions or project delays are not sufficient stand alone justification for accelerated review or other dispensation to meeting the Army Standard for ACPs contained herein.

Design Guidance:

The Design Guidance section of this Army Standard for ACPs provides instructions and definitions necessary for the application of the mandatory requirements contained in the Army Standard for ACPs. As such, they shall be used in conjunction with the Army Standard for ACPs in order to ensure the intent and embedded functionality will meet the DA's mandatory requirements set forth by this standard. If a difference exists between the tabular section of the Army Standard for ACPs and the design guidance section, the tabular section of the Army Standard for ACPs shall govern.

Standard Design:

The Army Standard Design is published under separate cover providing prescriptive details for design and programming of ACP projects, regardless of funding source. Neither of the documents is intended for standalone use but must instead be used together for the programming and design of Army ACPs. If differences exist between the ACP Standard Design and the ACP Standard, the Army Standard shall govern.

ARMY STANDARD for ACPs
Primary and Secondary ACPs

Item	Primary and Secondary ACP Mandatory Criteria
Gross Area of Facilities	ACP gross area of facilities not to exceed: Shown in Square Feet (SF) VISITOR CONTROL CENTER (VCC): 1. Two processor VCC 900 SF (3) 2. Three processor VCC 2,480 SF 3. Six processor VCC 2,960 SF 4. Nine processor VCC 3,440 SF 5. VCC function of a combined VCC and Search Building 900 SF (3) 6. VCC function of a combined VCC and Command and Control function 900 SF (3) 7. VCC function of a combined VCC, Search Bldg, and Command & Control function 900 SF (3) Note: VCCs larger than two processors may trigger requirement for conformance with UFC 04-010-01 'Minimum AT Standards for Buildings'. GUARD BOOTHS: 1. ID Check Guard Booth 40 SF Note: ID Check Guard Booths used for guards responsible for validation of vehicle driver's credentials shall not be combined with other facilities. 2. Pedestrian Guard Booth 140 SF SEARCH BUILDINGS: 1. Bus Shelter 75 SF 2. Small Search Building 660 SF 3. Large Search Building 1,200 SF 4. Search Building function of a combined VCC and Search Building 75 SF 5. Search Building function of a combined Command & Control function and Search Bldg 75 SF 6. Search Building function of a combined VCC, Search Bldg, and Command. & Control function 75 SF COMMAND & CONTROL / ELECTRICAL and COMMUNICATIONS ROOM: 1. Gatehouse as a standalone building 940 SF (3) 2. Command and Control as a standalone building 530 SF (3) 3. Storage as a standalone building 50 SF

Item	Primary and Secondary ACP Mandatory Criteria
	4. Electrical & Communications Room as a standalone building 530 SF 5. Latrine Facility as a standalone building 110 SF 6. Gatehouse without storage as a standalone building 910 SF (3) 7. Command & Control function of a combined Command & Control Function and Search Bldg 264 SF 8. Command & Control function of a combined Command & Control Function and VCC 264 SF 9. Command & Control function of a combined Command & Control Function, VCC, & Search Bldg 264 SF OVERWATCH BUILDING: 1. Standard Overwatch Building 36 SF 2. Overwatch Building combined with Command & Control Function (No Latrine or Storage) 230 SF NOTES: 1. Gross Area of Facilities GSF (Gross Square Feet) Deviation: Facility constructed gross area shall not exceed 105% of space allocation set forth in this document to accommodate site, construction, or environmental factors. 2. Design projects will fully comply with the Sustainable Design & Development (SDD) policy as stated in Memorandum, ASA (IE&E), Latest edition, Subject: Sustainable Design and Development Update (Environmental and Energy Performance). The programmed amount and square footage will be adjusted by Department of Army after the 3086 review to incorporate energy enhancements to fully comply with the SDD policy. 3. Where unisex facilities are not permitted an additional 110 SF of latrine facility is authorized.
Planning	1. All Installation ACP improvements shall be based either on a Surface Deployment Distribution Command Transportation and Engineering Agency (SDDCTEA) traffic engineering study or a traffic engineering study generated by others that SDDCTEA has validated. 2. All ACP planning shall include coordination with the COS for ACPs. 3. Concepts developed for planning purposes shall include analysis of vehicle turning movements, show primary geometric dimensions and be to scale. 4. Planning shall be conducted to validate ACP requirements and to preclude unsafe off-post queuing of vehicles 5. ACP shall be designed to include queuing to minimize lanes and the number of ID check lanes shall be the minimum required to prevent unsafe off-Installation queuing of vehicles.
Site Selection	1. The appropriate AT/FP stand-off distances shall be in accordance with 'UFC 4-010-01 'Minimum Antiterrorism Standards For Buildings' and shall be incorporated into the design of an ACP. The entire area within the ACP corridor shall be considered to be outside a controlled perimeter. 2. The site selected shall minimize off-Installation impacts.

Item	Primary and Secondary ACP Mandatory Criteria
	3. Capacity and safety limitations of both internal and external road networks shall be considered during site selection.
Traffic Engineering Study	A traffic engineering study shall be performed and completed prior to planning, design or construction of a new ACP or prior to modification of an existing ACP. For the purposes of the traffic engineering study, the term 'modification' shall include, but not be limited to, any of the following: 1. Modifications which include changes to ACP road alignment. 2. Relocation of Identification (ID) Check Area. 3. Projects which include modifications intended to alter ACP traffic volume capacity. The traffic engineering study shall, at a minimum, include the following: 1. Current and proposed peak hour volume for both POVs and commercial vehicles. 2. Current peak hour vehicle search volume for both POVs and commercial vehicles. 3. Current peak hour pedestrian and bicycle volume. 4. Reasonable development of proposed Design Hourly Volume (DHV). 5. ACP capacity impacts caused by intersections or other roadway features prior to the approach zone and immediately after the response zone. Intersections and other roadway features that are located within the approach and response zones shall also be analyzed for traffic volume impacts. 6. Identify the number of ID check lanes associated with Level of Service (LOS) D.
Signage and Marking	All signs and pavement markings will: 1. Be in conformance with state, local and/or host nation criteria. 2. Signs and markings shall comply with all applicable retroreflectivity requirements.
Geometrics	Design roadway in accordance with applicable AASHTO, and/or host nation criteria.
Threat Vehicle	The 4630-pound baseline vehicle threat, as determined by Office of the Provost Marshal General (OPMG) and described in the guidance portion of this Standard and in the Army ACP Standard Design, shall be utilized for all ACP efforts. In addition, the local threat assessment(s) and/or policy shall be reviewed and, if applicable, used to modify the baseline vehicle threat. 1. The threat vehicle utilized shall not be less substantial than the baseline threat vehicle mass established by OPMG unless a waiver, in accordance with AR 420-1, has been requested and approved. 2. The threat vehicle (after incorporation of 'local' threat assessment(s) and policy) shall not be less substantial than the

Item	Primary and Secondary ACP Mandatory Criteria
	baseline threat vehicle mass unless a waiver is acquired 3. Where 'local' threat assessment and/or policy identifies a vehicle with a mass in excess of the OPMG baseline threat vehicle the vehicle with the greater mass will be utilized as the threat vehicle.
Approach Zone	The Approach Zone begins at the ACP entrance and extends to the beginning of the Access Control Zone. It provides an area for incoming vehicles to be sorted and queued.
Entry Gate	Provide an Entry Gate that: 1. Joins with the Installation cantonment perimeter to close off the ACP. 2. Provides equivalent security as the adjoining perimeter barrier/fence/topographic feature; however, is limited in kinetic energy mitigation capacity to a level of 1,200,000 ft-lbs unless a higher level is required by 'local' threat analysis and/or policy.
Passive Vehicle Barriers	Provide Passive Vehicle Barriers that: 1. Tie into the Entry Gate and the Control Zone passive vehicle barriers to form a continuous anti-vehicular corridor. 2. Are capable of defeating the OPMG identified baseline threat vehicle and any vehicle of greater mass identified through mandatory incorporation of all applicable 'local' threat assessments and policy. 3. Are not required to exceed 1,200,000 ft-lbs of kinetic energy in vehicle stopping/mitigation capacity unless a threat vehicle in excess of 15,000 lbs is identified in 'local' threat assessment and/or policy. 4. Are on the DOD anti-ram vehicle barrier list. 5. Comply with all applicable roadside safety criteria.
Visitor Control	Provide the capability to process visitors at each Installation. 1. Installation must be capable of processing the current and projected visitor volume. 2. Visitor processing will be conducted prior to entry into the Installation. 3. If function is combined with the command and control function a physical separation of the two functions is required. 4. Where visitor processing is conducted, non-vetted personnel shall be separated from guard personnel with partition(s), glazing and lockable doors having a ballistic rating equivalent to the requirement for the guard facility exterior. 5. Space utilized for visitor processing must include HVAC in accordance with local climate. 6. The visitor processing area must comply with the required stand-off distance for a building not within a controlled perimeter as per UFC 4-010-01.
Lighting	Provide lighting: 1. In appropriate levels and with appropriate color rendition for

Item	Primary and Secondary ACP Mandatory Criteria
	roadway, parking areas and pedestrian crossings. 2. In appropriate levels and with appropriate color rendition for security areas. 3. That meets the Minimum Maintained Illumination level design objective. 4. With appropriate uniformity. 5. Illumination and color rendition levels will be as prescribed in the Army Access Control Points Standard Design.
Access Control Zone	Provide an Access Control Zone that: 1. Begins at the turn around prior to the ID check and extends to the end of the turn-around immediately after the ID Check Area. 2. Enables guard defeat of all prescribed OPMG threat scenarios which are described in the design guidance section of this Standard.
Passive Vehicle Barriers	Provide Passive Vehicle Barriers that: 1. Tie into the approach zone passive barriers and response zone passive barriers to provide a continuous anti-vehicular corridor. 2. Are capable of defeating the OPMG identified baseline threat vehicle and any vehicle of greater mass identified through mandatory incorporation of all applicable 'local' threat assessments and policy. 3. Are not required to exceed 1,200,000 ft-lbs of kinetic energy in vehicle stopping/mitigation capacity unless a threat vehicle in excess of 15,000 lbs is identified in 'local' threat assessment and/or policy. 4. Are on the DOD anti-ram vehicle barrier list. 5. Comply with all applicable roadside safety criteria.
ID Check Area	Provide an Identification Check Area that: 1. Is established within the Access Control Zone where guards and/or automated equipment validate drivers and vehicle occupant's identifications. 2. Includes a canopy. 3. Includes the number of entry lanes sufficient to process the traffic volume identified in the traffic engineering study. 4. Shall have adequate lighting to support ACP operations. 5. Shall have raised curbed traffic islands to separate all inbound lanes. 6. Shall have one Guard Booth building for each inbound lane, located on the raised curbed traffic island.
ID Check Area Canopy	ID Check Area Canopy Shall: 1. Cover all inbound lanes 2. Be a roof structure supported by columns 3. Not include columns or other features which obstruct more than 11 degrees line of sight for all routinely occupied guard positions. 4. Not impair guards line of sight for critical functions identified in the Army ACP Standard Design.

Item	Primary and Secondary ACP Mandatory Criteria
Turn Arounds	As a minimum, two Turn Around lanes shall be provided with: 1. One located before the ID Check Area 2. One located immediately after the ID Check Area.
Search Area(s)	Provide Vehicle Search Area(s) that: 1. Is located within the Access Control Zone. 2. Has a covered area(s) easily accessible from the ID Check Area. 3. Is sized in accordance with the search volumes identified in an SDDCTEA conducted and/or validated traffic engineering study. 4. Truck and POV search operations may be co-located. 5. If designed for POVs, is accessible for vehicles from the inbound lanes both prior to and after the ID Check Area. 6. Provides shelter for vehicle occupants removed from vehicles during search operations. 7. Includes adequate lighting to support vehicle search operations. 8. May be incorporated into the ID check area as a second lane under the ID check area canopy when projected peak hour traffic volumes are at or below 290 vehicles per hour.
Search Area Canopy	The Search Area Canopy shall: 1. Where commercial vehicles are accommodated, include a Truck Search Area canopy sized to accommodate, at a minimum, one tractor trailer of the largest size allowed on roadways approaching the Installation. 2. Where POVs are allowed, include a POV search area sized to accommodate, at a minimum, one POV.
Guard Facilities	1. ID Check Area shall include a guard booth for each entry lane at the ID check area (unless the ACP includes an OPMG approved automated means that allows a single guard to monitor multiple lanes in which case the number and locations of guard booths shall be in accordance with OPMG identified automation requirements). 2. ID Check guard booths used by guards responsible for validation of vehicle drivers credentials shall provide a 360 degree field of view for occupants. 3. ID Check guard booths used by guards responsible for validation of vehicle drivers credentials cannot be combined with other facilities. 4. ACP shall include a Command and Control functional location which provides guard(s) a clear view (line of sight with augmentation by CCTV where no line of sight exists) of operations in the ID Check Area and of vehicles directed to reject (both from ID Check and Search area). This location shall include an Active Vehicle Barrier (AVB) master control panel. This location will be located in either the Control Zone or the Response Zone. 5. Guard facilities shall include passive barrier protection unless located more than 3' behind the face of a curb or, in the

Item	Primary and Secondary ACP Mandatory Criteria
	absence of a curb, at least 7' from the edge of all traveled vehicle paths. 6. All routinely occupied ACP guard positions and overwatch facility shall be provided ballistic rating of UL 752 level III as a minimum. Ballistic rating shall be increased when warranted by local threat assessment and/or policy. 7. Ballistic rated structures shall be provided with both air conditioning and heating. Capacity of heating and cooling system(s) shall be in accordance with the geographic location.
Control Zone Facilities	Control Zone shall include: 1. Latrine facilities. Latrine facilities shall comply with all applicable building codes and shall be easily accessible from the ID check area. 2. Storage for items routinely utilized at ACP ID Check Areas and Search Areas (e.g. under vehicle mirrors, traffic cones, signs, etc.). 3. Commercial exterior power outlets in close proximity to all locations where routine guard presence is anticipated. 4. An electrical/communications room sized to accommodate all required equipment.
Closed Circuit Television (CCTV) and Electronic Security Systems	1. ACPs shall include infrastructure to support CCTV camera system(s) identified in the Army ACP Standard Design. 2. ACP facilities shall include infrastructure for Electronic Security systems identified in the Army ACP Standard Design.
Automation	Provide infrastructure for automation as prescribed in the Army ACP Standard Design.
Back-Up Power	1. The ACP shall have one or more Uninterruptible Power Supply(s) (UPS) to power critical security and safety loads. 2. UPS shall accommodate lighting for, as a minimum, one fixture for each ID Check Lane located near the guard position and at the AVB(s). 3. The ACP shall have a dedicated back-up generator with automatic start-up and automatic transfer after the normal source of electrical power fails with alternate fuel source and/or sufficient on-site fuel to maintain full-load operation for a minimum of 12 hours.
Lighting	Provide lighting: 1. In appropriate levels, and with appropriate color rendition for roadway, parking areas and pedestrian crossings. 2. In appropriate levels and with appropriate color rendition for security areas. 3. Where identification validation is conducted and locations where searches are conducted shall be provided with lighting appropriate for such procedures. 4. That meets the Minimum Maintained Illumination level design objective. 5. With appropriate uniformity. 6. Illumination and color rendition levels will be as prescribed in the

Item	Primary and Secondary ACP Mandatory Criteria
	Army Access Control Points Standards Design.
Response Zone	Provide a Response Zone that: 1. Begins at the end of the Turn-around immediately after the ID Check Area and extends to the AVBs. 2. Enables guard defeat of all prescribed OPMG threat scenarios which are described in the design guidance section of this Standard.
Passive Vehicle Barriers	Provide Passive Vehicle Barriers that: 1. Tie into the Control Zone passive barriers as well as the AVBs to form a continuous anti-vehicular corridor capable of preventing circumvention or penetration by a vehicle. 2. Are capable of defeating the OPMG identified baseline threat vehicle and any vehicle of greater mass identified through mandatory incorporation of all applicable 'local' threat assessments and policy. 3. Are not required to exceed 1,200,000 ft-lbs of kinetic energy in vehicle stopping/mitigation capacity unless a threat vehicle in excess of 15,000 lbs is identified in 'local' threat assessment and/or policy. 4. Are on the DOD anti-ram vehicle barrier list. 5. Comply with all applicable roadside safety criteria.
AVB Barriers/ AVB Safety System/ AVB Controls System	1. Active Vehicle barriers (AVBs), controlled by ACP guards, shall be installed in all inbound and outbound lanes at the end of the Response Zone to permit or deny vehicle access. 2. AVBs shall be capable of mitigating/defeating the kinetic energy associated with the baseline threat vehicle (or modified threat vehicle if applicable) at the speed and angle achievable prior to impact. 3. The kinetic energy mitigation/defeat capacity of active vehicle barriers is not required to exceed 1,200,000 ft-lbs except where threat vehicles in excess of 15,000 lbs are identified in 'local' threat assessment and/or policy. 4. Active vehicle barrier(s) shall be selected from the DOD anti-ram vehicle barrier list. 5. AVBs deployed in the normally-open operating mode shall have an Emergency-Fast-Operate (EFO) control capability. The EFO shall deploy all AVBs related to the ACP to form a continuous vehicle barrier (with the exception of the entry gate). 6. EFO control of the AVBs shall be provided in the Command and Control Guard functional location, ID Check Guard Booths, Overwatch Position, and the Search Area(s). Actuation of any EFO button shall close all AVBs in all inbound and outbound lanes. 7. Shall include an AVB Safety scheme developed and/or approved by the SDDCTEA. 8. All AVBs that must be deployed in reaction to a perceived threat (normally open) must have a barrier travel time of 2 seconds or less under EFO conditions. 9. AVBs shall include barrier controls in accordance with Unified

Item	Primary and Secondary ACP Mandatory Criteria
	Facility Guide Specification (UFGS) 34 41 26.00 10 "Access Control Points Control System".
AVB Commissioning	AVBs shall be commissioned in accordance with UFGS 34 41 26.00 10 "Access Control Points Control System" by the U.S. Army Corps of Engineers (USACE), Protective Design Mandatory Center of Expertise (PD-MCX) or their designated representative.
Overwatch Position	1. ACP shall have a strategically placed Overwatch Position, which serves as a fighting position, located near (as defined in the Army ACP Standard Design) the AVBs and from which guards are able to assess conditions at the ID Check Area (direct line of sight or augmented by CCTV). 2. The Overwatch shall be either a building with communications, power, and AVB controls, or a paved pad designed to support, at a minimum, one HMMWV. 3. Paved pad overwatch shall also include a pedestal containing a lockable junction box with quick connections to telecommunications, power, and AVB controls. 4. Overwatch building shall be provided ballistic rating of UL 752 level III as a minimum. Ballistic rating shall be increased where warranted by local threat assessment and/or policy. 5. Overwatch building must include a 360 degree field of view for occupants.
Back-Up Power	1. The ACP shall have one or more Uninterruptible Power Supply(s) (UPS) to power critical security and safety loads. 2. UPS shall accommodate lighting for, as a minimum, one fixture at the AVB(s).
Lighting	Provide lighting: 1. In appropriate levels and with appropriate color rendition for roadway, parking areas and pedestrian crossings. 2. In appropriate levels and with appropriate color rendition for security areas. 3. In appropriate levels and with appropriate color rendition for Active Vehicle Barrier location(s). 4. That meets the Minimum Maintained Illumination level design objective. 5. With appropriate uniformity. 6. Illumination and color rendition levels will be as prescribed in the Army Access Control Points Standards Design.
Telecommunications	1. Guards at the Command and Control Guard functional location, Guard Booths, Search Area(s), Overwatch Position, and VCC shall have a minimum of two (2) means of communication with each other and with the Central Security Monitoring Station (if applicable). 2. Telecommunications infrastructure shall meet the (USAISEC) Technical Guide for Installation Information Infrastructure Architecture (I3A) and ANSI/TIA/EIA 568 and 569 requirements. 3. Telecommunications Room(s) (TR) shall be provided for the voice and data network associated with the ACP.

Item	Primary and Secondary ACP Mandatory Criteria
Information Connectivity & Distribution	1. The Command and Control Guard functional location, ID Check Guard Booths, VCC, Overwatch Position permanent building and Search Area Building (when included and utilized to process drivers) shall include counters, LAN connections, and all other infrastructure necessary for computer and communications equipment identified in the Army ACP Standard Design. 2. Outside plant connectivity shall be In accordance with DA I3A guidance.
Energy Policy	ACP shall comply with all energy policy requirements.
Sustainable Design Development	All ACP components shall be designed to meet current sustainable development and design policy requirements as established by the DA.
Accessibility	1. The VCC and Search Area Building (where utilized) shall comply with all requirements contained in applicable accessibility documents. 2. The public portion of combined facilities and other ACP buildings intended for public use shall also comply with applicable accessibility documents.

ARMY STANDARD for ACPs
Limited Use ACPs

Item	Limited Use ACP Mandatory Criteria
Planning	Planning: 1. An analysis of traffic needs shall be conducted to validate requirements and to preclude unsafe off-post queuing of vehicles. 2. No formal Traffic Engineering Study required.
Site Selection	The appropriate Anti-Terrorism/Force Protection (AT/FP) stand-off distances shall be in accordance with 'UFC 4-010-01 'Minimum Antiterrorism Standards For Buildings' and shall be incorporated into the design of an ACP. The entire area within the ACP corridor shall be considered to be outside a controlled perimeter.
Approach Zone	The Approach Zone begins at the ACP entrance and extends to the beginning of the Access Control Zone. It provides an area for incoming vehicles to be sorted and queued.
Entry Gate	1. Has an Entry Gate to close off the ACP at the Installation perimeter. 2. Entry Gate shall adjoin to and provide equivalent security as the

Item	Limited Use ACP Mandatory Criteria
	adjoining perimeter barrier/fence; however, it is not required to exceed a kinetic energy mitigation capacity of 1,200,000 ft-lbs unless required by 'local' threat analysis and/or policy.
Passive Vehicle Barriers	Provide Passive Vehicle Barriers and/or operational procedures that are capable of defeating or enabling defeat of the OPMG identified baseline threat vehicle and any vehicle of greater mass identified through incorporation of all applicable 'local' threat assessments and policy.
Lighting	Provide lighting in appropriate levels: 1. For the safety of drivers, pedestrians and guards via permanent or temporary measures when ACP is operational. 2. And with appropriate color rendition for security areas via permanent or temporary measures when ACP is operational.
Access Control Zone	Provide an Access Control Zone that begins at the turn around prior to the ID check and extends to the end of the turn-around immediately after the ID Check Area.
Passive Vehicle Barriers	Provide Passive Vehicle Barriers and/or operational procedure that are capable of defeating or enabling defeat of the OPMG identified baseline threat vehicle and any vehicle of greater mass identified through mandatory incorporation of all applicable 'local' threat assessments and policy.
Identification Check Area	Provide an Identification Check Area that: 1. Is established within the Access Control Zone where guards or automated equipment verify pedestrians, vehicles, and vehicular occupant's identifications; direct vehicles to other areas of the ACP; and validate authorizations to enter the installation. 2. Has adequate lighting to support validation of credentials and other ACP operations.
Search Area(s)	Provide a Search Area that: 1. Is of sufficient size to process designated vehicles 2. Is located in the Access Control Zone
Guard Facilities	ACP guards conducting validation of credentials shall be protected from errant vehicle impact.
Lighting	Provide lighting: 1. In appropriate levels for the safety of drivers, pedestrians and guards 2. In appropriate levels and with appropriate color rendition for security areas.
Response Zone	Provide a Response Zone that enables guard defeat of all prescribed OPMG threat scenarios.
Passive Vehicle Barriers	Provide Passive Vehicle Barrier System and/or Operational Procedure that: 1. Is capable of defeating or enabling defeat of the OPMG identified baseline threat vehicle and any vehicle of greater mass identified

Item	Limited Use ACP Mandatory Criteria
	through mandatory incorporation of all applicable 'local' threat assessments and policy. 2. Where utilized, passive vehicle barriers are not required to exceed 1,200,000 ft-lbs of kinetic energy in vehicle stopping/mitigation capacity unless a threat vehicle in excess of 15,000 lbs is identified in 'local' threat assessment and/or policy.
AVB Barriers/ AVB Safety System/ AVB Controls System	Provide Active Vehicle Barrier System and/or Operational Procedure that is capable of defeating or enabling defeat of the OPMG identified baseline threat vehicle and any additional threat vehicles identified through incorporation of all applicable 'local' threat assessments and policy.
AVB Commissioning	When AVBs are utilized they shall be commissioned in accordance with UFGS 34 41 26.00 10 "Access Control Points Control System" with oversight by the U.S. Army Corps of Engineers (USACE), Protective Design Mandatory Center of Expertise (PD-MCX).
Overwatch Position	ACP shall have a strategically placed Overwatch Position, located near the AVBs but within sight of the ID Check Area.
Telecommunications	Guards shall have a minimum of two (2) means of communication.
Energy Policy	ACP shall comply with all energy policy requirements.

ARMY STANDARD for ACPs
Pedestrian ACPs

Item	Pedestrian ACP Mandatory Criteria
Pedestrian Access	Pedestrian ACPs shall utilize guard personnel and/or automated access equipment (where applicable) to safely permit or deny entry while maximizing pedestrian throughput. Pedestrian ACPs shall provide: 1. Passive Pedestrian Barriers and Active Pedestrian Barriers arranged to form a contiguous perimeter. 2. An ID Check Area where the guards or automated equipment validate credentials. 3. A ballistic rated guard location with, as a minimum, a 180 degree field of view If guards are utilized at the ACP for validation of credentials. Where automated means are utilized and guard participation is remote no guard booth is required. 4. Security and safety lighting in conformance with local, state, federal and/or applicable host nation criteria. 5. Pedestrian safety features in accordance with all applicable standards. 6. Accessibility in conformance with all applicable criteria.

DESIGN GUIDANCE SECTION

Facility Category Code: No unique Category Code exists for Access Control Points. A complete and usable ACP includes the following:

CATEGORY CODE	DESCRIPTION
14113	Access Control Building (entrance control posts, guard and watchtowers, sentry stations, area to conduct personnel identification and visitor control. This CATCD is for buildings (enclosed); for open-sided structures use 14179, Overhead Protection.
14179	Overhead Protection
87210	Fencing & Walls
87250	Entrance Gates

General:

The following guidance for application of the Army Standard for ACPs is provided for design agent use in coordination with the Garrison and associated Directorates. All design agents shall incorporate the mandatory design features described herein in close coordination with the USACE designated Center of Standardization (COS) for ACPs. All ACP projects must be reviewed by the COS.

Compliance Threshold:

The Army Standards (AS) may identify an Army regulation, technical guide or other written guidance as mandatory criteria. The COS provides the first line technical compliance review. The FDT, in conjunction with the COS, will resolve any issues where there may be conflicting, unclear, or no compliance measurement threshold. Resolution may require senior leadership guidance or amendment of the AS. Only the ACSIM may approve adjustments or changes to the requirements in an AS. The AS is not intended to provide compliance criteria detailed in references, regulations, industry standards, or standard design.

Citing project execution delays is insufficient justification for expedited review or other accelerated dispensation for deviating from meeting the Army Standard for ACPs contained herein. Late submissions must be substantiated by unforeseen and documented life safety, health and welfare, or compelling mission imperatives that cannot be met without an approved waiver.

Definitions:

Installation: The definition of Installation is as found in AR 420-1

Primary ACP: Operates 24 hours per day during weekdays. These are often open 24 hours per day during weekends as well; however, weekend operation is not required for an ACP to be construed as 'Primary'.

Secondary ACP: Operates during regular hours but less than 24 hours per day.

Limited Use ACP: Operates only for special purposes or special events. ACPs open for scheduled hours (even if not daily) are not to be considered Limited Use.

Approach Zone: The Approach Zone provides an area for incoming vehicles to be sorted and queued. This zone may include visitor control and traffic calming measures.

Access Control Zone: Vehicle occupants and pedestrian ID validation are validated within this zone. Vehicle and/or pedestrian searches are also done within this zone. This zone includes the turn-arounds before and after the ID check area.

Response Zone: This zone extends from the final turn-around to the active vehicle barriers. Overwatch capability is included in this zone.

CONUS: Continental United States. Used to describe the 48 contiguous U.S. States.

OCONUS: Outside Continental United States. Any location other than the 48 continental U.S. States.

FDT: Facility Design Team. The AFSC establishes an FDT for each facility type, or group of facility types, to be standardized. Specific working teams may be established as necessary within each team to address specific elements, or geographical and regional variations of the facility type.

AFSC: Army Facilities Standardization Committee. The AFSC is responsible for the overall Army Facilities Standardization program. It directs the activities of the Facility Design Group (FDG), the Technology Standards Group, and the various Design Teams that develop and recommend the Army Standards and Standard Design/Criteria.

Design Hourly Volume: A design hourly volume (DHV) is the calculated volume or number of vehicles passing over a point in an hour. The DHV would be used for design purposes to accommodate variations in traffic volume and expected growth or decline in traffic volumes. Although a design hourly volume (DHV) of traffic is commonly related to the thirtieth highest hourly traffic volume for the design year, if less data is available it is prudent to derive a DHV based on a measured peak hourly volume, taking into account periods within an hour of higher rates of traffic flow, and possible growth for the design life of a project.

Peak Hour Volume: A peak hourly volume is the volume or number of vehicles passing over a point in the busiest hour within a peak period. A day may have several peak periods, such as a morning, noon, and afternoon peak.

Contact Information:

SDDCTEA website: http://www.tea.army.mil/DODProg/TE/default.htm

COS for ACPs website: http://mrsi.usace.army.mil/cos/SitePages/Home.aspx

Description:

An ACP provides the first physical security boundary layer that restricts access to Department of Army (DA) Installations and real property through centralized perimeter and access controls. The ACP also provides the appropriate vehicular and pedestrian throughput, to prevent vehicles from queuing in an unsafe manner. All functions of the ACP must meet applicable safety standards. The AVB system must perform in accordance with the applicable safety schemes. Also, the perimeter of the ACP will consist of both passive and active barriers arranged to form a continuous barrier to pedestrians and/or vehicles. ACP guards control the active pedestrian and vehicle barriers to deny or permit entry into the Installation.

ACP Classifications:

Department of the Army ACP classifications are: (a) Primary, (b) Secondary, (c) Limited Use, and (d) Pedestrian. Primary and Secondary ACPs can accommodate POVs, trucks, pedestrians or any combination thereof. There are only operational differences between a Primary and a Secondary ACP. Limited Use ACPs are only open for non-routine and non-predicable special purposes and special events. Primary and Secondary ACPs shall provide the means to defeat the vehicle and/or pedestrian threat via permanent measure defined in this Army Standard for ACPs. Limited Use ACPs shall provide a means to defeat the vehicle and/or pedestrian threats via temporary and/or permanent physical measures and/or operational procedure. A Pedestrian ACP can be part of an ACP that accommodates other vehicles or it can be standalone.

Design Philosophy:

The ACP is a complex combination of force protection and traffic control elements. It must enable defeat of identified OPMG threat scenarios while allowing throughput in accordance with the demand identified in the Traffic Engineering Study, and it must do so while providing safe conditions for vehicle occupants, guards and pedestrians. The Traffic Engineering Study is critical to the design of an ACP. The TES provides the data the designer uses to size many of the components of an ACP.

The adaptation of these Standards to a specific site is a complicated process. Requirements related to the defeat of threats may seem to contradict requirements for throughput and/or safety; they do not. Each category of requirement (security, safety, and throughput) must not be looked at individually but must rather be considered part of a system.

The amount of land necessary for an ACP can be considerable. The land must be sufficient to meet the requirements contained in this Standard as well as requirements contained in UFC 4-010-01 'Minimum AT Standards For Buildings'. It is important to note that the basis for standoff for 'occupied' buildings within the ACP and for those buildings adjacent to the ACP must be 'parking and roadways without a controlled perimeter'. The boundaries of the ACP corridor are considered to be the controlled perimeter for these purposes.

Key Points about Army Standard ACPs:

1. The ACP is designed and constructed to comply with the Army Standard and Standard Design for ACPs.
2. Manpower efficiency has been considered during the development of these Standards. Site adaptation of the ACP should always include an evaluation of manpower constraints and requirements.
3. The Standards are not dependent upon the existence of Installation perimeter vehicle barriers, fencing or other security measures.

Planning:

1. Involvement of the U.S. Army Corps of Engineers Center of Standardization (COS) for ACPs in the planning process is essential. The incorrect programming of ACP projects has been prevalent in those situations where the COS has not been involved prior to submittal of programming documents.
2. A review of 'local' threat assessment and policy will be conducted prior to the programming and/or design of an ACP.
3. A Traffic Engineering Study that specifically addresses ACP requirements is necessary prior to the development of programming documents. The TES must be conducted or validated by the SDDCTEA before it can be utilized for the planning, design or construction of an ACP. The size of many ACP features must be based on the traffic volumes identified in the TES. The TES process can take a year to conduct so plan accordingly.
4. Vehicle Threat Scenarios. ACPs shall be designed to defeat all identified OPMG vehicle threat scenarios. Additional vehicle threat scenarios shall be defeated when required by a 'local' threat assessment or policy.
5. A baseline threat vehicle and a set of baseline threat scenarios is provided by OPMG. All applicable 'local' threat assessment and/or policies must be reviewed and utilized to modify the prescribed baseline threat. No waiver is required for the addition of threat scenarios or adding to the mass of the threat vehicle. Waivers will be required for any reduction of the baseline threat or any of the threat scenarios.
6. ACP shall be capable of processing the expected traffic types, which may include: tractor-trailer trucks, POVs, official DOD Vehicles, tactical vehicles, pedestrians and bicycles.
7. Guard reaction time shall be three (3) seconds for threat scenarios where there has been no notice to guard personnel that a specific vehicle has been identified for a specific action. Guard reaction time shall be one (1) second for situations where guard personnel have been notified of a specific action to be taken by an identified vehicle and guard personnel have had time to prepare for activation of the AVBs.
8. Vehicle Threat Scenario calculations, and corresponding vehicle threat paths, shall be conducted to verify that the AVBs are located where defeat is possible for the shortest timed path of travel through the ACP for each Threat Scenarios.

Threat Scenarios:

OPMG Vehicle Threat Scenarios. ACPs shall be designed to defeat the following four minimum vehicle threat scenarios. Additional vehicle threat scenarios shall be included if required by a local threat assessment.

1. Vehicle Threat Scenario #1. Threat vehicle enters the ACP in the inbound or outbound lane(s) at the maximum speed attainable at the ACP entrance and then immediately accelerates at its maximum acceleration rate through the ACP.
2. Vehicle Threat Scenario #2. Threat vehicle enters the ACP in the inbound or outbound lane(s) at or under the posted ACP Speed Limit and then, later at some point further in the Approach Zone, accelerates at its maximum acceleration rate through the rest of the ACP.
3. Vehicle Threat Scenario #3. Threat vehicle feigns compliance and stops in lane. The guard detects threat behavior or criminal status through observation or electronic means and moves to guard booth to initiate denial process. Threat vehicle occupants attempt to force entry (tactics include potential use of direct fire weapons and acceleration through the ACP).
4. Vehicle Threat Scenario #4. Similar to Threat Scenario 3 above, except the driver of the denied vehicle drives toward the Turn-around or Search Area at the ACP Speed Limit as if complying with guard instructions, but then fails to turn and instead accelerates at its maximum acceleration rate

Threat Vehicle:

1. The baseline threat vehicle shall be a large passenger car as defined in ASTM F2656. The mass of the baseline threat vehicle is 4630 pounds.
2. Other threat vehicle characteristics and capabilities are located in the Army ACP Standard Design.

Site Selection:

1. The site selected must be suitable for conformance with these Standards. Modifications to adjacent facilities, relocation of intersecting roadways and other features may be necessary. Future facility locations identified in Master Planning documents must be considered and adjusted where conflicts are identified.

AVB Barriers/ AVB Safety Systems/ AVB Controls Systems:

1. AVBs, controlled by ACP guards shall be installed in all inbound and outbound lanes at the end of the Response Zone to permit or deny vehicle access.
2. Only SDDCTEA established AVB safety schemes shall be used.
3. Normally open AVB systems will include EFO controls. When pushed, an EFO will result in the deployment of all open AVBs and will result in the locking in place of all AVBs already deployed at the time of EFO activation. Barrier deployment shall not take place until the time identified for the SDDCTEA safety scheme used.
4. The SDDCTEA AVB safety scheme utilized must be based on throughput as well as Installation needs and preferences. Some safety regimes place additional restrictions on throughput and could be perceived as being unduly inconvenient by drivers or other Installation personnel. Where adequate space exists, the default safety scheme should be 'Signs and Signals'.

AVB Commissioning:

AVBs shall be commissioned in accordance with Unified Facility Guide Specification (UFGS) 34 41 26.00 10 "Access Control Points Control System" by the U.S. Army Corps

of Engineers Protective Design Center (USACE, PD-MCX) or their designated representative.

Approach Zone:

1. The Approach Zone begins at the ACP entrance and proceeds to the beginning of the vehicle Turn-around immediately prior to the ID Check Area.
2. Provide an area for incoming vehicles to be sorted and queued.
3. The VCC can be in either the Approach or Access Control Zones. However, the processing of visitors must be accomplished prior to the ID check area.
4. The aesthetic treatment of the entry gate should be consistent with the adjoining perimeter barrier fencing.

Access Control Zone:

1. The Access Control Zone is located between the Approach Zone and the Response Zone.
2. The access control zone includes both the ID Check Area and all the Search Areas. It is within this Zone that credentials of vehicle drivers and pedestrians are validated and vehicles are searched.

Response Zone:

1. The Response Zone starts from the end of the Turn-around immediately after the ID Check Area and continues to the AVBs.
2. It is completely contained by AVBs and Passive Barriers.
3. The Response zone includes AVBs, controlled by ACP guards, which shall be installed in all inbound lanes at the end of the Response Zone and all outbound lanes at the end of the Response Zone to permit or deny vehicle access.
4. It has an Overwatch that shall be located near the AVBs but within sight of the ID Check Area. If conditions are such that the overwatch guard is not able to view operations in the Access Control Zone, augmentation of view through use of CCTV can be used to mitigate deficiencies.

Command and Control Guard functional location:

1. A Command and Control Guard functional location will be provided at each ACP. This location will be located in either the Access Control Zone or the Response Zone. A guard in this location will be able to assess conditions in the Control Zone (to include ID Check Area, Search Area, turn-arounds and rejections). Locaion will be provided with controls for the Active Vehicle Barriers as well as augmentation, where necessary, to ensure guards ability to assess aforementioned areas.
2. The ballistic rating of this location, as with all other ACP guard facilities, must be modified when a rating above UL 752 level III is identified in 'local' threat analysis and/or policy. Applicable analysis/policy shall be sufficient justification for a higher ballistic rating. A lower ballistic rating, even where identified by such analysis/policy shall require a waiver.

Overwatch Position:

1. Each Installation ACP shall have a strategically placed Overwatch Position, which serves as a fighting position. It will be located near the AVBs but within sight (either direct view or with augmentation by CCTV) of the ID Check Area. The Overwatch shall be either a building with communications, power, and AVB controls, or a paved pad with a pedestal containing a lockable junction box containing quick connections for communications, power and AVB controls. The paved pad will be designed to support, as a minimum, one HMMWV.
2. The ballistic rating of this structure, as with all other ACP guard facilities, must be modified in accordance with all 'local' threat analysis and/or policy. Directly applicable analysis/policy shall be sufficient justification for a higher ballistic rating. A lower ballistic rating, even where identified by such analysis/policy shall require a waiver.

HVAC for Ballistic Rated Structures:

1. The requirement for both Air Conditioning and Heating is essential for a ballistic rated structure to function as intended. Ballistic rated structures do not provide significant opportunity to cool through use of open windows or other methods of fresh air ventilation.

Visitor Control Center (VCC):

1. Each Installation must have at least one VCC.
2. The VCC must be located outside the point at which vetting of personnel occurs.
3. Access to and egress from the VCC must not be such that it provides bypass of the ID check area.

Pedestrian Access:

1. Pedestrian ACPs shall safely convey/pass personnel, prevent unauthorized entry and process the pedestrian volume identified in the Traffic Engineering Study.

Back-Up Power:

1. The ACP shall have one or UPS to power critical security and safety loads during an interruption in electrical service.
2. The following loads shall be on UPS:
    - Primary communications system
    - Duress alarm system
    - Computers
    - CCTV systems
    - Intrusion Detection Systems (IDS)
    - Prescribed Lighting, Traffic signals and warning devices
    - AVB controls
    - AVB activation system for one complete cycle (open to close and close to open), and all equipment associated with the AVB safety scheme

    Lighting levels and other details can be found in the Army ACP Standards Design.
3. The ACP shall have a dedicated back-up generator with automatic start-up and automatic transfer after the normal source of electrical power fails and shall have an

alternate fuel source (e.g. natural gas) or sufficient on-site fuel to maintain full-load operation for a minimum of 12 hours.

4. The following loads shall be on Back-up Power:
    - Interior lighting for the Command and Control functional location, Guard Booths, Overwatch position, and Search Area Building
    - Canopy lighting in prescribed levels at the ID Check and Search Area(s)
    - External lighting in prescribed levels for the Access Control Area from and including the turn-arounds before and immediately after the ID check area.
    - External lighting in prescribed levels for 50' of Approach Zone and Response Zone lighting prior to the turn-around before and immediately after the ID Check Area
    - External lighting, in prescribed levels within 50 feet on both sides of the AVBs; and all items on Uninterruptible Power Supply(s) (UPS).

Lighting levels and other details can be found in the Army ACP Standards Design.

Remainder of Army ACP Standards:

No further discussion is offered for the remainder of the Standards.

Reference Criteria: Use the latest editions of the following criteria for design of the Access Control Point:

- American with Disabilities Act and Architectural Barriers Act Accessibility Guidelines
- ANSI/TIA/EIA-568-B Commercial Building Telecommunications Cabling Standard
- ANSI/TIA/EIA-568-B Commercial Building Standard for Telecommunications Pathways and Spaces

Construct a standard design Access Control Point (ACP) and Commercial Vehicle Inspection Point. Project includes a Visitor Control Center, Gatehouse, vehicle inspection canopy, guard booths, ID check canopy, search area pedestrian shelter, roadways, parking, lighting, traffic control signals, passive and active vehicle barriers with comprehensive control systems, information systems, fire protection and alarm systems, Intrusion Detection System (IDS) installation, Cybersecurity Measures, and Energy Monitoring Control Systems (EMCS) connection. Visitor Control Center includes additional costs for antiterrorism and tornado shelter hardening requirements to protect staff and visitors. Sustainability and energy enhancement measures are included. Supporting facilities include site development, utilities and connections, site lighting, paving, parking, walks, curbs and gutters, storm drainage, information systems, landscaping and signage. Heating and air conditioning will be provided by self-contained system. Measures in accordance with the Department of Defense (DoD) Minimum Antiterrorism for Buildings standards will be provided. Comprehensive building and furnishings related interior design services are required. Access for individuals with disabilities will be provided. Since this facility type has not been constructed in several years, the OSD Unit Cost does not include Building Information Systems cost. Facilities will be designed to a minimum life of 40 years in accordance with DoD's Unified Facilities Criteria (UFC 1-200-02) including energy efficiencies, building envelope and integrated building systems performance. Demolish 5 buildings at Pine Bluff Arsenal, AR (1,367 Total SF). Air Conditioning (Estimated 15 Tons).

PROJECT:
Construct a Primary Access Control Point at Plainview Gate, Pine Bluff Army Arsenal. (Current Mission)

REQUIREMENT:
This project is required to provide safe and secure access at the Plain View Gate entrance into Pine Bluff Arsenal (PBA). Plainview Gate is the primary entrance into Pine Bluff Arsenal. The Gate's one inbound and outbound lanes require modification to expedite vehicle security measures. An Access Control Point Study conducted in 2018 by the Military Surface Deployment and Distribution Command, Transportation Engineering Agency, determined that the Plainview Access Control Point requires two new entrance access lanes and one exit access lane with a commercial inspection point to provide secure and efficient traffic flow. The facility will become the primary gate to Pine Bluff Army Arsenal that must be able to handle 636 privately owned vehicles per day and provide 50 commercial truck inspections per day to support the Army Joint Munitions Command and have the ability to closely monitor and inspect all traffic that enters the installation through this gate. Visitor control Center will require connection to stand-by back-up power to allow commercial vehicle processing during a power outage to prevent delays in shipping and receiving of materials. Visitor Control Center (VCC) is larger than Standard VCC drawings to provide for additional staff supporting commercial truck processing and Quality Assurance Specialist Ammunition Surveillance (QASAS) inspections required at PBA.

CURRENT SITUATION:
Plainview Gate Entrance serves as the primary entrance into Pine Bluff Arsenal. It

Pine Bluff Arsenal
Arkansas

Access Control Point - Plainview 62817

CURRENT SITUATION: (CONTINUED)
is the only entrance that has an overpass over the adjacent railroad tracks. The other two entries have at grade railroad crossings that present safety issues when vehicular traffic is heavy. This is especially true with commercial truck traffic at Dexter Gate. This safety issue will be alleviated by moving all commercial traffic to Plainview. Currently, the ACP has only one entrance and one-exit lane. There is no location to perform thorough searches of vehicles prior to their entrance onto the installation. Vehicles are allowed to pass through the gate and directed to a side road for any inspections. Portable generator light sets are used for the inspections. During periods in which the installation operates at Force Protection Level Delta, and when commercial trunk traffic is heavy, the current configuration of the entrance gates allows traffic at Dexter Gate (current commercial gate) to back up beyond the reservation boundary across the at-grade railroad crossing and to the intersection with Arkansas State Highway 65. Because the railroad tracks parallel the base boundary there is limited real estate between the tracks and the ACP severely restricting a feasible solution compliant with UFC 4-011-02 at Dexter Gate. Also, the 1940's construction of the Plainview ACP buildings provides little protection for PBA Security personnel.

IMPACT IF NOT PROVIDED:
If this project is not provided, one of the major entrances to Pine Bluff Arsenal will not comply with Unified Facilities Criteria (UFC 4-011-02) Security Engineering: Entry control Facilities/Access Control Points. During periods when the installation is operating under Force Protection Level Delta conditions, and when commercial truck traffic is heavy, there will continue to be long lines of traffic that will extend from the gate to the intersection with Arkansas State Highway 65 impacting the local community traffic patterns and risking accidents at the railroad crossing. PBA Security personnel will continue to be at increased risk.

ADDITIONAL:
All required physical security and antiterrorism/force protection measures will be incorporated. Sustainable principles will be integrated into the development, design, and construction of the project. Joint use potential will be incorporated where feasible. Provisions will be made for persons with disabilities if applicable. An Economic Analysis is not necessary for this project. All potential alternatives were examined in the development of the project and none were found to be feasible. RPLANS sets the Allowance='0' for this Category Code, 14113. Required assessments have been made for supporting facilities and the project is not in a 100-year floodplain in-accordance-with Executive Order 11988. This project has been coordinated with the installation physical security plan, and all physical security measures are included. All required antiterrorism protection measures are included. Alternative methods of meeting this requirement have been explored during project development. This project is the only feasible option to meet the requirement. The Deputy Assistant Secretary of the Army (Installations, Housing and Partnerships) certifies that this project has been considered for joint use potential. The facility will be available for use by other components. Sustainable principles, to include life cycle cost effective practices, will be

Pine Bluff Arsenal
Arkansas

Access Control Point - Plainview 62817

ADDITIONAL: (CONTINUED)
integrated into the design, development and construction of the project and will follow the guidance detailed in the Army Sustainable Design and Development Policy - complying with applicable laws and executive orders.

PROJECT TITLE: Access Control Point - Plainview
INSTALLATION: Pine Bluff Arsenal
LOCATION: Arkansas

TAB C - GENERAL JUSTIFICATION DATA

General

The Pine Bluff Arsenal (PBA) is located 12 to 15 miles from the city of Pine Bluff, Arkansas. PBA is a "restricted access" installatioin responsible for many diverse missions, one of which is to store 12 percent of the nation's chemical stockpile. Plainview Gate Entrance serves as a major entrance for non-commercial vehicles entering Pine Bluff Arsenal with hours of opperation 24 hours per day 7 days a week. All visitors to the installation register at the security building located north of the gate. It has one inbound and outbound lane.

Traffic Analysis (Standard Text)

An Access Control Point and Traffic Study was completed by the Military Surface Deployment and Distribution Command, Transportation Engineering Agency, in August 2018. This project incorporates the findings of that study.

Analysis of Deficiencies

The current access control point is sustandard and does not comply with the requirements of Unified Facilities Criteria (UFC 4-011-02) Security Engineering: Entry Control Facilities/Access Control Points. Since there is only one inbound and one outbound lane there is a long wait for vehicles passing through the gate. Security inspections are performed on a side road on the installation side of the gate entrance. In the morning the inbound lane has double ID checkers. The wait to get onto the installation can last 15 minutes and the traffic is backed up over the bridge frequently. The vehicle search area is located on the arsenal on a side road. The gatehouse windows have no ballistic rating, but the house itself has metal plating in the walls. Lighting around the access control point consists of one wall-packs HPS light fixture mounted on the gatehouse on the inbound lane, six light fixtures mounted on the canopy (three on the inbound lane and three on the outbound lane, five-pole-mounted area light fixtures at less than 15 feet height located just inside the boundary fence at the entrance, eight pole-mounted area light fixtures at less than 15 feet height located around the perimeter of the island, and four pole mounted area lights at greater than 30 feet height located at the incoming traffic lanes.

Criteria for Proposed Construction

The proposed facility will comply with the requirements of Unified Facilities Criteria (UFC 4-011-02) Security Engineering: Entry Control Facilities/Access Control Points. An Access Control Point Study completed in Aug 2018 by the Military Surface Deployment and Distribution Command, Transportation Engineering Agency, and a follow-up ACP Conceptual Plan completed in Nov 2018 by the Omaha Center of Standardization for ACPs were used in the development of this project. The 2018 plan was updated to include current SDDC-TEA guidance and security schemes.
The Visitor Control Center (VCC) started with a Standard 3-Processor VCC to accommodate the Pass & Badge personnel, then was enlarged to accommodate an additional personnel with Traffic Management that process commercial truck traffic and perform Quality Assurance Specialist Ammunition Surveillance (QASAS) inspections of incoming and outgoing trucks carrying explosive materials. Traffic Management will be moving from Dexter Gate to Plainview when the project is complete. Dexter Gate (current commercial traffic gate) will close when the new Plainview Gate is opened.

Determination and Certification of Actual Need

An Access Control Point Site Survey, performed by the Little Rock Corps of Engineer

Planning Charrette Discussion:

Charrette Notes for DD1391 Planning Charrette, 10-12 March 2020

Charrette was conducted at Pine Bluff Arsenal by a USACE team from Little Rock and Fort Worth Districts. The attendee sign-in sheet is included in the Attachments Tab. Charrette was started with a welcome by COL Luis Ortiz, PBA Commander, and a presentation by Deputy Commander Roch Byrne on PBA’s history and current mission. PBA employs 657 persons and produces products that are task critical in 48 OPLANS. Stephen Redman, DPW, and Tim Fox, Master Planner, then provided an overview of the ACP project.

A site visit was conducted on the afternoon of 9 March. The current gate consists of guardhouse (B24-020), one small structure (B24-011) on the outside of the incoming lane that has a small latrine, a similar structure (B24-030) on the outside of the outgoing lane (no latrine), and a concrete, semi-buried tornado shelter located next to B24-011. There is an automatic vehicle barrier(AVB) (wedge type) on each of the two traffic lanes approximately 560ft from the entry gate and approximately 336 ft from the intersection with Sibert Road.

An ACP Study was conducted by SDDC-TEA for ACPs at Pine Bluff Arsenal (PBA) and completed in Aug 2018. A follow-up conceptual plan for the Plainview Gate on Hoadley Road was completed in Nov 2018 by the ACP Center of Standardization/Protective Design Center (Omaha District). The charrette team’s goal was to start with the conceptual plan and validate PBA’s requirements. The new ACP will need to accommodate the commercial gate functions that will be moved from the Dexter Gate. The team toured the Pass & Badge office to learn their operations, and they toured the Traffic Management office at Dexter Gate (current commercial gate) to learn about their operations. New ACP will require a tornado shelter sized for staff and visitors. The Cos Conceptual Plan gets very close to a MWR Game Check Facility. Avoid or program a replacement in this project.

Current POV Process at Plainview Gate:
POVs with a valid badge approach and stop at the ID Check, then proceed on to their

PREP DATE: 07 SEP 2004 ACF=0.76 UM=E
FORM/PROJECT NUMBER: 62817
PROJECT TITLE: Access Control Point - Plainview
INSTALLATION: Pine Bluff Arsenal
LOCATION: Arkansas

TAB C - PLANNING CHARRETTE VALIDATION

Planning Charrette Discussion (CONTINUED)

destination. Vehicles selected for search, proceed through ID Check and pull over onto a paved area along the road for search. Rejected vehicles must U-turn at the gate and leave through the exit. POVs needing a pass or badge will turn left on to Dayton Rd. prior to the ID Check and go to the Pass & Badge Office in Bldg 17130 (Located north and west of the Plainview Gate). After receiving their pass/badge, POVs will proceed to the ID Check.

Pass & Badge office:
A staff of 2 processors operate the Pass & Badge office. Each has two CPUs with monitors at their workstation. A separate CPU-based badging system is located separately and shared. New employees are required to watch a safety briefing video in a separate room (10 PN) prior to receiving their badge. Space for a standard GSA security safe and personnel lockers (2 ea) are required. A duress alarm is required (Requires IDS). A visitor waiting area for 10 PN with male and female latrines is needed.

Current Commercial Vehicle Process at Dexter Gate:
Commercial trucks are required to make an appointment to schedule their arrival, or they will be turned away [exceptions are package delivery (FedEx, UPS, etc), garbage trucks, contractor dump trucks]. Commercial trucks pull into a parking area prior to the ID Check and enter the Traffic Management office to have the driver’s credentials checked/validated, receive a temporary pass/badge, and receive direction on where to drop-off or pick-up their cargo. Drivers failing the credential validation will be rejected. If the driver is carrying a firearm, those will be put into a gun safe. A Quality Assurance Specialist Ammunition Surveillance (QASAS) inspector will be called to conduct an inspection of trucks carrying ammunition in or out. Trucks failing the inspection will be rejected. An escort will be called if needed. Commercial trucks typically have two persons per vehicle, especially those carrying munitions.
Exiting trucks are required to park at a pull over area and the driver return to the Traffic Management office to turn-in their temporary pass/badge, receive their signed paperwork, and pick-up their firearm or other personal property left at entry processing. The vehicle also requires inspection and weight calculation to ensure the truck is not overweight. Traffic Management does not have a truck scale at the Dexter Gate or anywhere else on the installation that can be used. A truck scale for incoming and outgoing traffic at the new ACP is desired. Currently, staff is weighing pallets and calculating allowable load weight.
A staff of 6 occupy the office. Two require offices, and 4 require workstations. The QASAS inspector is currently not located in the Traffic Mgmt office, but would need to be co-located at the new ACP. Two small work areas are also required for the UPS and FedEx label machines. The label machines will also require connection to a commercial network. Space for a printer, file cabinets (5 ea), a visitor waiting area for 10 PN with male and female latrines, break room and a 14 PN conference room are needed. The Traffic Management office processes on average 80 less than truckloads (LTL) and 40 truckloads (TL) per week. LTLs are trucks that will be delivering only part of their cargo to PBA. TLs are trucks that will be delivering the complete load of cargo to PBA. LTLs do not require an appointment. Processing time averages 15 min/truck. Drivers that have delivered to PBA in the past, can be processed faster. Space for escort vehicles is needed at the new ACP. Staff parking will be required.

The CoS concept plan allows the existing gate to remain open during construction, however that is not a requirement per PBA leadership.

The Out-brief was held on 12 Mar. No issues with the plan presented were voiced.

Prior to the charrette, the USACE team was informed by the Center of Standardization that the safety scheme for the AVB had been changed by SDDC and may impact the concept design

PREP DATE: 07 SEP 2004 ACF=0.76 UM=E
FORM/PROJECT NUMBER: 62817
PROJECT TITLE: Access Control Point - Plainview
INSTALLATION: Pine Bluff Arsenal
LOCATION: Arkansas

TAB C - PLANNING CHARRETTE VALIDATION

Planning Charrette Discussion (CONTINUED)

from 2018. The team was unable to connect with the CoS during the charrette, but was able to conduct a teleconference with the CoS after the charrette. Brian Erickson, Omaha CoS, informed the team that new AVB safety scheme now requires a 4-5 ft wide median between the entry and exit lanes that extends 80 ft towards the entry gate. The median must include a metal beam guard fence barrier. The team also asked if modifications were allowed to the Visitor Control Center (VCC). We explained that the floor plans in the standard drawings did not accommodate PBA's requirement to combine Pass & Badge function with the commercial Traffic Management function. Mr. Erickson stated that modifications to the VCC floor plan would only require CoS approval and not a waiver to the Army Standard.

ELECTRICAL NOTES
1. Most of the projects electrical requirements are already pre-programmed into the 1391 with the exception of some site work as well as parking and roadway lighting requirements. These requirements were captured in a site plan and electrical quantities also provided.
2. There is an Installation Design Guide for Pine Bluff Arsenal which should be requested during the design charrette and utilized during the design phase.

SITE ELECTRICAL AND COMMUNICATIONS:
1. PBA manages its own utilities, however they hire contractors for installation. Not enough manning for installation during construction.
2. Demolition will be required for a single power pole in the path of the proposed roadway near the Active Vehicle Barrier (AVB).
3. Telecom are maintained by the installation. PBA is not managed by a NEC but instead is managed by a Directorate of Information Management (DOIM). DOIM has installation guidelines to be obtained during design charrette and utilized during design.
4. The new facilities shall be provided 24 strand SM fiber and 25 pair copper that shall come from building 17-120 (credit union outside gate).
5. Commercial internet is provided by AT&T.
6. There is a requirement for backup natural gas generator, ATS, and UPS systems for the ACP and its surrounding facilities. Follow COP and UFC guidelines on backup requirements.

INTERIOR ELECTRICAL, COMMUNICATIONS AND FIRE ALARM SYSTEMS:
VISITOR CONTROL CENTER:
1. Customer requested 120/208, 3 phase power to facilities.
2. Project is currently programmed for utility monitoring (EMCS) although PBA is not currently monitored utilizing a front end system.
3. Monaco D21 is the preferred fire panel transmitter. Monitored at fire station; transmitted via radio Line of Site (LOS); no obvious LOS issues
4. The current IDS requirement for the admin facility is for a duress switch only. Depending on the workstations to be put in the facility, there is a possibility for "classified" spaces and therefore a more robust IDS system as per UFC. The IDS shall be monitored by local guard shack (gatehouse); transmitted via Fiber.
ACP AND GATEHOUSE:
1. Requirement for RFID reader and 2 weight stations along roadway to the Truck ACP entrance.
2. Security cameras shall be utilized for ACP; monitored locally by Gatehouse only. CCTV racks to be located in a separate room from telecom space. DOIM shall have control over the locked telecom room, but the CCTV will be locally operated. Access to CCTV systems should not have to be coordinated with DOIM.

CIVIL NOTES:
The proposed site of the new ACP is located just south of the existing Plainview Gate and is heavily wooded. The area on the west end of the project site is paved with old

PREP DATE: 07 SEP 2004 ACF=0.76 UM=E
FORM/PROJECT NUMBER: 62817
PROJECT TITLE: Access Control Point - Plainview
INSTALLATION: Pine Bluff Arsenal
LOCATION: Arkansas

TAB C - PLANNING CHARRETTE VALIDATION

Planning Charrette Discussion (CONTINUED)

asphalt pavement. According to PBA personnel, the area was formerly used for family housing. There are no structures remaining. The southern boundary of the project site is the MWR Game Check Station (Building 24560), located approximately 400 feet south of the existing gate. If disturbed by this project, this facility will have to be replaced by this project. The project area slopes gradually to the SSW.
The approach into the existing gate, as well as the new gate, is a two-lane asphalt road with an overpass over two commercial tracks and one government owned track. Government ownership of the road starts approximately 580 feet from the west end of the overpass where E. Baldwin Road intersects E. Hoadley Road/State Highway 256. E. Hoadley Road/State Highway 256 continues west, crossing State Highway 365, and then terminating at Interstate 530 (US Highway 65).

Existing Utilities:
1) Natural Gas: Existing high pressure 8" gas is available on, and runs running parallel to, the south side of Sibert Road, and is approximately 850 feet from the existing ACP.
2) Sanitary Sewer line: There is an existing lift station (24550) just south of Building 24560 (MWR Game Check Station) that collects flow from Buildings 24560, 24770, 24761, and 24610. The lift station pumps ~175 feet to Manhole 26180, located east of B24560, and then gravity flows approximately 400 feet north in an 8” line to MH 26192 on an existing 10" Sanitary Sewer that flows east on the south side of Hoadley Road. The 10” VC line flows east from MH 26181 at the Plainview Gate, through MH 26192, approximately 637 feet to MH 26183 where it changes to an 8” VC and continues northeast crossing Hoadley and Sibert Roads. Because these pipes are well past their design life and may be deteriorating, PBA utility personnel recommend replacing the existing 10” vitrified clay pipe from MH 26181 to MH 26183, and the existing 8” line from MH 26180 to MH 26192, as part of this project. There is enough capacity to support the increased flow of 35-40 people that would account for the new VCC staff and visitors.
3) Existing Water: There is an existing 6" water line that will have to be re-routed around the new ACP to connect to the buildings to the south and the southwest. There is adequate pressure for domestic and fire protection and we can request a fire flow test to confirm.
4) Storm Drain: All current runoff is conveyed via existing ditches or overland. Based on the site visit it appears the site will have to be raised 1 to 2 feet and direct the storm drain outfall to the southwest.

Project Description:

Construct a standard design Access Control Point (ACP) and Commercial Vehicle Inspection Point. Project includes a Visitor Control Center, Gatehouse, vehicle inspection canopy, guard booths, ID check canopy, search area pedestrian shelter, roadways, parking, lighting, traffic control signals, passive and active vehicle barriers with comprehensive control systems, information systems, fire protection and alarm systems, Intrusion Detection System (IDS) installation, Cybersecurity Measures, and Energy Monitoring Control Systems (EMCS) connection. Visitor Control Center includes additional costs for antiterrorism and tornado shelter hardening requirements to protect staff and visitors. Sustainability and energy enhancement measures are included. Supporting facilities include site development, utilities and connections, site lighting, paving, parking, walks, curbs and gutters, storm drainage, information systems, landscaping and signage. Heating and air conditioning will be provided by self-contained system. Measures in accordance with the Department of Defense (DoD) Minimum Antiterrorism for Buildings standards will be provided. Comprehensive building and furnishings related interior design services are required. Access for individuals with disabilities will be provided. Since this facility type has not been constructed in several years, the OSD Unit Cost

TAB D - ECONOMIC ANALYSIS

Executive Summary Report

Project Title : PN 62817 ACP (Plainview Gate) Pine Bluff Arsenal
Type of Analysis : Mission Requirement - Partial
Project Objective : To provide an Access Control Point (ACP) that will support both commercial and privately owned vehicles. Project includes a Visitor Control Center (3500 sf), Gatehouse (933 sf), inspection canopies, guard booths, ID check canopy, search area pedestrian shelter (50 sf), roadways, vehicle parking, lighting, traffic control signals, passive and active vehicle barriers.
Certification Name :
Certification Date :

Background:

The current ACP at Plainview Gate has only one entry and exit lane which results in traffic backups during peak entry times. The gate also can only accommodate cars. All trucks must enter at the Dexter gate. An ACP Study was conducted by SDDC-TEA for ACPs at Pine Bluff Arsenal (PBA) and completed in Aug 2018. A follow-up conceptual plan for the Plainview Gate on Hoadley Road was completed in Nov 2018 by the ACP Center of Standardization/Protective Design Center (Omaha District). The ACP study concluded that PBA required a single ACP with two entry lanes and facilities to accommodate both cars and trucks. This would combine both the Pass & Badge staff and the Traffic Management staff in one location for more efficient operation.

Alternatives Considered for this Analysis:

Status Quo (Current Operations) - The current facilities at the Plainview Gate do not meet current Army standards for an Access Control Point, and the guard house does not have ballistic protection. This alternative is nonviable.

Renovation - Renovating the existing Plainview Gate facilities will not increase the traffic capacity, nor accommodate commercial trucks. This alternative is nonviable.

Renovation/New Construction Mix - Renovation/New Construction Mix will not be able to bring the Plainview Gate faciliites up to Army ACP Standards. This alternative is nonviable.

New Construction - New Construction will provide a Access Control Point that meets all Army criteria, will accommodate POV and commercial truck traffic, and will provide adequate space for staff and security personnel. This is a viable alternative.

Basic Allowance for Housing (BAH) - This alternative does not apply to this project. This alternative is nonviable.

Leasing - Leasing is not an option for Access Control Points. This alternative is nonviable.

Other Facilities on Base; As Is, Renovation, or Renovation/New Construction Mix - There are no other facilities on the installation that can meet the requirements as

PREP DATE: 07 SEP 2004 ACF=0.76 UM=E
FORM/PROJECT NUMBER: 62817
PROJECT TITLE: Access Control Point - Plainview
INSTALLATION: Pine Bluff Arsenal
LOCATION: Arkansas

TAB D - ECONOMIC ANALYSIS

is or through renovation, or renovation/new construction mix. The other existing gates have at grade railroad crossings near the entry point which presents a safety issue. Plainview gate is the only gate with an overpass over the railroad. This alternative is nonviable.

Other DOD or Federal Agency Facilities - There are no other DoD or Federal Agency facilities available to meet the project requirements. This alternative is nonviable.

Contracting Services Out - The Access Control Point is not a facility that can be contracted. This alternative is nonviable.

Innovative Alternatives or Combinations of the Above Alternatives - There are not other innovative alternatives or combinations of the above alternatives that will meet the project requirements. This alternative is nonviable.

Government Owned Contractor Operated Facility (GOCO) - The Access Control Point is not a facility that can be contracted. This alternative is nonviable.

Contractor Owned Contractor Operated Facility (COCO) - The Access Control Point is not a facility that can be contracted. This alternative is nonviable.

Results and Recommendations:

New Construction is the only alternative that will meet the project requirements of an Army standard Access Control Point that will accommodate both cars and commercial trucks.

TAB G - ANTITERRORISM PROTECTION

Parameters for Minimum AT Standards for Buildings

Building Type	Building Category	Controlled Perimeter	Building Three Stories or More
Visitor Control Center	Inhabited	No	No
Gatehouse, Guard Booths and Overwatch	Uninhabited	No	No

Antiterrorism Protection Measures

This project has been coordinated with the installation's antiterrorism plans. Risk and threat analyses have been performed in accordance with DA PAM 190-51 and Unified Facilities Criteria (UFC) 4-020-01, respectively. Protective measures required by regulation and additional protective measures, above the minimum required by UFC 4-010-01 "Department of Defense Minimum Antiterrorism Standards for Buildings," are needed to mitigate the threat. These requirements are included in the description of construction and cost estimate.

Risk Analysis = YES Dated 29 APR 2020
Threat Analysis = YES Dated 29 APR 2020

Summary of Risk and Threat Analyses and Description of any Protective Measures that are Required

Visitor Control Center (VCC):
- No additional antiterrorism requirements. Minimum standards addressed in UFC are adequate for the VCC.

Gatehouse, Guard Booths and Overwatch:
- Windows: Ballistic resistant protection Underwriters Laboratories (UL) 752 Level 8 for all glass. Provide translucent or figured glazing to limit viewing into the facility to the extent possible without restricting views out of the facility during day and night operations.
-Doors: Stock hollow steel doors, or steel clad with steel frames.
-Walls: Ballistic resistant protection UL 752 Level 5 Concrete Masonry (Fully Grouted)
- Other Equipment: Install the heating, ventilating, and air conditioning (HVAC) equipment out of the line of sight behind the ACP or provide ballistic protection.
- Provide passive vehicle barriers (Concrete Bull nose wall with impact attenuator) at each traffic island to protect personnel from potential injury caused by a vehicle leaving the roadway or lane and to provide personnel with cover in the event of an attack.
- Gate enabling the ACP to be closed at the installation perimeter when not in use. The gate must maintain an equivalent level of security as the adjacent fence/barriers. Must have signage and retroreflectivity.
- Each inbound lane of traffic must be equipped with cameras capable of reading license plates and viewing drivers in the identification check areas and inspection areas.
- Must be equipped with DVR capability for 24 hour/7 days a week operation.
- Line-of-sight of security personnel through the ACP must not be impeded, therefore, line-of-sight considerations must be included in the landscape design. This includes consideration of overwatch positions, which require an adequate and acceptable line-of-sight.

TAB J - ENVIRONMENTAL ANALYSIS

Environmental Documentation

Based on information provided in the Planning Charrette Validation (Tab C), the environmental concerns cross several media including air and water. With demolition of the existing access control facility, all asbestos related materials will need to be addressed in accordance with the Arkansas Energy & Environment, Division of Environmental Quality Regulation No. 21. The project proposes to add a new emergency generator, which requires PBA's Title V Air Permit to be modified. Any demolition and construction activities associate with the project will need to adhere to state-issued NPDES construction permits and associated Stormwater Pollution Prevention Plans (SWPPPs). Erosion controls should be implemented in accordance with the SWPPP and best management practices (BMPs). If any Water of the State is crossed or disturbed a Short Term Activity Authorization will be needed from the Department of the Environment. Additionally, if any wetlands are identified in the footprint of the project the USCOE 404 Permit will be needed. There are no Threatened and Endangered species present on the Pine Bluff Arsenal property. No known land use restrictions affect the area of the proposed project. No known soil or groundwater contamination exists in the area of the proposed project.

PBA's Risk Management and Regulatory Affairs (RMRA) Environmental Compliance Division is available to assist the Corps of Engineers with navigating the environmental regulations surrounding this project.

Summary of Environmental Consequences

This project will not affect the environment significantly. A Draft Environmental Assessment (EA) for Implementation of Master Planning Action at the Mission District is currently being prepared for PBA. The draft EA finds that issuance of a Finding of No Significant Impact (FONSI) is appropriate. PBA's Environmental Compliance Division agrees with the EA, and considers the proposed EA as sufficient supporting documentation that this project will not affect the environment significantly.

Environmental Standard Text

The Record of Environmental Consideration (REC) is included. It has been determined that the action qualifies for categorical exclusion, No Extraod Circumsta 32 CFR part 651.

TAB J - PROTECTION OF HISTORIC PROPERTIES

Historic and Archeological Sites (Standard Text)

Review procedures have been implemented for this project in accordance with 36 CFR 800. The review has established that there will be no effect.

Detailed Statement of Review Findings

These are past review findings: a. There are no Category I, II, or III historic properties on the Arsenal. (1) One old cemetary is known to exist on the Arsenal. It contains five to six graves. The gravestones indicate that this cemetry dates from around 1900. It is cared for according to Army regulations. (2) There are six early home sites found on the Arsenal; however, on five of these sites only foundations remain. Dr. Scale's farmhouse is still in existence. The exact age of the structure is not known. (3) Approximately 22 farm/homestead sites are located at various undisturbed parts of the Arsenal. (4) In some areas, the mounds are clumped together as a town site. Stone artifacts denote possible occupancy as early as 3000 B.C. to as late as 500 to 1000 A.D. All are of the preceramic era. b. The proposed work will be accomplished in an area which will have no ill effect on historical or archeological sites on the Arsenal. (1) No damage to historical or archeological artifacts is expected to result from this project. (2) There have been four studies which included portions of the Arsenal acreage, including the area now within the National Center for Toxicological Research (NCTR). (a) Burney McClurken (1967) reported no sites, but indicated the land surfaces at the west of the bluff overlooking the Arsenal (east boundary) has portential for archaeological sites. (b) Hearfield, Price and Green (1990/81) reported no sites within two Arsenal sites covering about 225 acres; sites of opertional Hazardous Landfill (FY83 MCA PN 66) and completed mounds were identified as geological. No archaeological sites were noted. (c) Corps of Engineers, Tulsa District (1983)report no sites within one Arsenal site covering about 27 acres; site of former BZ Agent/Munititions Disposal Facility (FY84 MCA PN 70) (d) Corps of Engineers, Little Rock District (Dunn 1988) archaeological reconnaisance reported no sites within a ten acre outgrant (for a transmitting tower) to the Arkansas State Police. (3) Should any cultural materials appear during construction, further impact will be avoided pending consultation with the Arkansas state Historic Preservation Officer. The proposed action will take place entirely within the bound of the installation and will not affect any offpost historic/archaeological site.

SHPO Statement of Concurrence

A programmatic agreement was signed between the Department of Defense and the National Council of SHPO's in 1986 concerning World War II temporary structures. This project is in full compliance with the National Historic Preservation Act. ///signed/// Libby Madar, Real Property Officer, Pine Bluff Arsenal Directorate of Public Works, Engineering Plans and Service Div.

Disclaimer

The information presented in this report and any attached appendices and documents is for the purpose of guidance and assistance in design only and does not represent the actual energy use of the building or its individual systems. There are a number of factors that may cause the actual energy use of the building to diverge from the projected energy use of the model, including without limitation differences in building construction relative to the building modeled; differences in actual weather conditions relative to the weather modeled; variations in schedules for equipment, systems, and occupancy; inconsistencies in the application of controls and operations strategies compared to those used in the model; the level of direct loads; and changes in connected loads and electricity and gas rates. HDR has exercised all reasonable efforts, consistent with the degree of skill and care normally exercised by similarly situated members of the profession performing similar services at the same time and in the same locale as the Project, to confirm the accuracy of the energy model inputs, including verifying that actual details correspond to the building as it is currently designed. This document may contain information regarding third-party products and equipment, the inclusion of such information is not an endorsement by HDR.

This page is intentionally left blank.

1 Executive Summary

This report presents the results of energy and life-cycle cost analysis of a new Visitor Control Center for the Pine Bluff Arsenal in White Hall, AR. The proposed building has a total conditioned area of approximately 5,000 sq. ft. and consists of a lobby, offices, breakroom, conference room, storage/file rooms, mechanical room, and comm room.

In accordance with federal sustainability requirements, analyses were performed to evaluate and determine the appropriate design strategy with respect to building HVAC system.

1.1 HVAC System Comparison and Analysis

Three HVAC system alternatives were compared:

- HVAC Alternative #1 – Heat Pumps with DOAS
- HVAC Alternative #2 – VRF System with DOAS
- HVAC Alternative #3 – DX VAV AHU with Electric Reheat Terminal Units
- HVAC Alternative #4 – ASHRAE Baseline System 4: Packaged Heat Pump RTU

A building-level life-cycle cost analysis (LCCA) was performed to evaluate the proposed system alternatives. The analysis was calculated using a 40-year building life and equipment lives. Individual component life expectancies are reflected by the inclusion of appropriate replacement and salvage values.

Results of the HVAC system comparison LCCA indicate that the DX VAV AHU system option is the most overall life-cycle cost effective and life-cycle energy cost effective out of all alternatives analyzed. Further details and results of the analysis can be found in subsequent sections of this report, and its appendices.

3 Analysis Methodology

3.1 Energy Modeling

The energy analysis of this project to compare HVAC systems was performed using accepted, standard engineering calculation procedures and the computer program Trane Trace 700. Trace is a program designed to determine the energy consumption behavior of proposed and existing buildings utilizing an hour-by-hour (8,760) simulation procedure for an entire year.

Although every attempt has been made to model the actual building conditions that will exist when construction is complete and while Trace is generally accepted as an industry standard in energy simulation, the predicted energy consumption should not be interpreted as an absolute prediction of the actual usage. Actual conditions may differ from the original assumptions due to unpredictable variables such as changes in occupancy schedules, equipment selection and installation, building construction and operation, and weather variations from a typical year.

A computer model was developed from new design documents and future concept plans to define the energy performance. This model is referred to as the "proposed case” or “as designed” model. This proposed case (Alternative 4) model was modified to become the baseline case according to ASHRAE Standard 90.1-2019, Appendix G “Performance Rating Method”. Alternatives 1, 2, and 3 were modeled based on the proposed case, with identical construction, lighting, and room assignments, but with different HVAC systems as described in this document. These four models were then compared against each other to obtain the energy and energy cost savings of each.

3.2 Life-Cycle Cost Analysis

Life-cycle cost analysis were performed per the requirements of UFC 1-200-02 using Building Life Cycle Cost (BLCC) software version 5.3. BLCC was developed by NIST to provide computational support for the analysis of capital investments in buildings.

Whole building and individual component LCCAs were performed using a 40-year study period and include the costs associated with salvage and replacement of equipment and related components.

Energy price escalation rates and discount rates are established by the DOE. Following FEMP conventions for calculation life-cycle costs in constant-dollar terms, real energy price escalation rates must be considered when computing future energy costs. These escalation rates are built into BLCC and are utilized for this analysis. A real discount rate of 3.0% was utilized.

Initial costs were developed primarily using component pricing from the 2024 Release of RS Means. Some costs were developed with input from supplier representatives and/or were determined by past project experience. Service life expectancy is per ASHRAE equipment life expectancy. Maintenance costs and residual/salvage values were estimated based on engineering judgement, past project experience, and equipment initial costs.

Utility rates for White Hall, AR were based on the energy companies and are stated further down in this report.

Refer to the Appendix to this report for all analysis inputs and outputs.

4 HVAC System Comparison and Analysis

4.1 Selected Alternatives

HVAC System alternatives picked for consideration for this project were determined based on HDR's opinion of feasible systems.

The alternatives consist of:

- HVAC Alternative #1 (Heat Pumps) – Individual DX heat pumps provide cooling and heating for individual fan coil units and ceiling cassettes. Ventilation provided by dedicated outside air handling unit with DX coil and fix plate sensible and latent energy recovery.
- HVAC Alternative #2 (VRF) – Variable refrigerant flow system provides cooling and heating for individual fan coil units and ceiling cassettes. Ventilation provided by dedicated outside air handling unit with DX coil and fix plate sensible and latent energy recovery.
- HVAC Alternative #3 (DX VAV/AHU) – Variable air volume air handling unit with single duct terminal units. Cooling provided by DX coils and heating provided by electric resistance reheat coils. Ventilation air induced by air handling unit.
- HVAC Alternative #4 (ASHRAE Baseline System 4) – Packaged Heat Pump Rooftop Units. Cooling provided by DX constant volume RTUs. Heating provided by natural gas heaters. Ventilation air induced by rooftop unit.

The energy model utilized the following interior space temperatures and corresponding relative humidity:

- Lobby, Office, Restrooms, Conference, Breakroom: 68 to 74°F and maximum of 50% RH
- Comm Room: 65 to 78°F and maximum of 50% RH
- Electrical, Mechanical Rooms: 40 to 80°F

Energy model utilized 94.9°F dry bulb (DB)/77.3°F wet bulb (WB) for worse case summer ambient conditions and 25.2°F DB for worse case winter ambient conditions.

The energy model assumed the building is occupied from 0700 to 1800 Monday through Friday.

Based on data provided by the government an electrical rate of $0.09/kWh was used in the LCCA. Water and Gas rates are not included since none of the alternative systems utilize these utilities.

4.2 Energy Modeling Results

The VAV AHU option (Alternative 3) shows the lowest energy usage but is marginally lower than the VRF option (Alternative 2). All three options (Alternatives 1, 2, & 3) have a lower annual energy usage and cost than the Baseline (Alternative 4). Though the improvement of the heat pump (Alternative 1) is slightly better than the baseline system.

Figure 1. Annual Energy Cost Summary

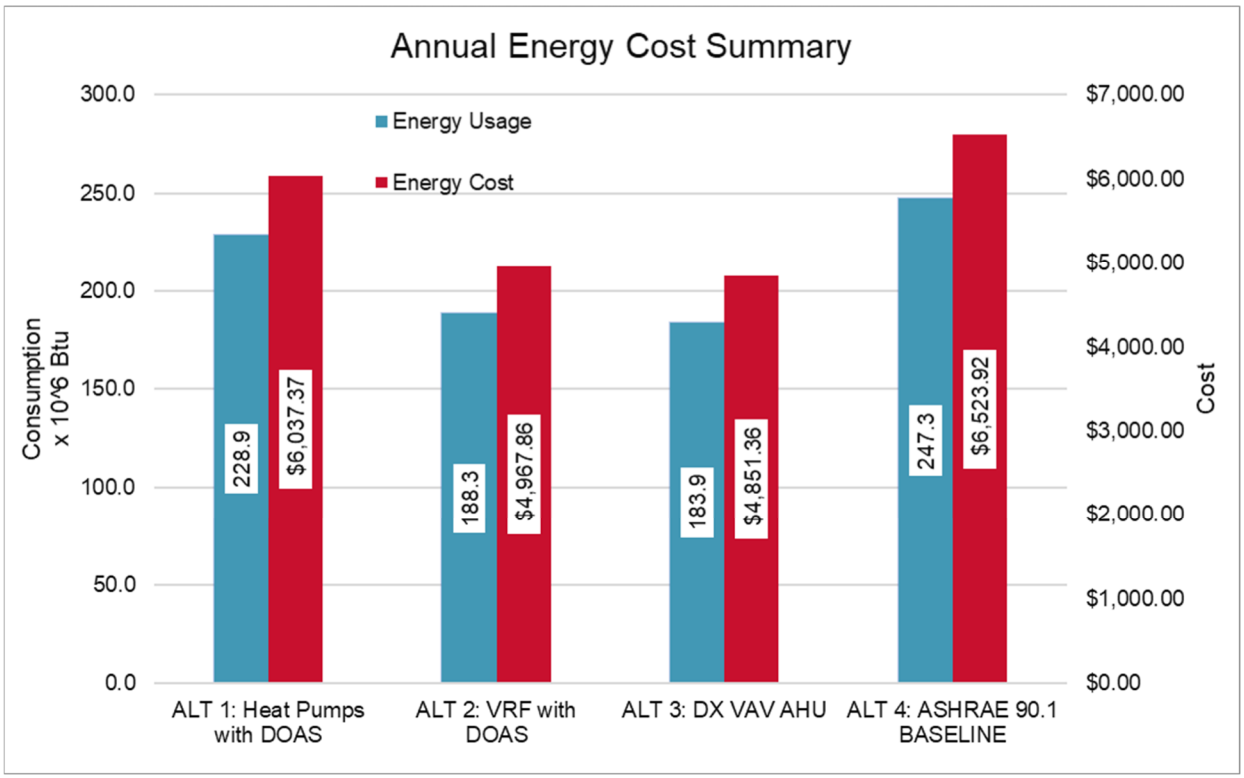

Table 1. Annual Site Energy Consumption Breakdown

Energy Use	Annual System Energy Consumption			
	ALT 1: Heat Pumps with DOAS	ALT 2: VRF with DOAS	ALT 3: DX VAV AHU	ALT 4: ASHRAE 90.1 BASELINE
Electricity, kWh	67,082	55,199	53,904	72,488

Total Energy Cost, $	$6,037	$4,968	$4,851	$6,524
Total Energy Cost Savings, $	**$487**	**$1,556**	**$1,673**	**$0**
Lowest Energy Lifecycle Cost			**X**	

Table 2 - Annual site energy costs breakdown

*Total savings compared to Baseline

All three alternatives show savings over the baseline primarily due to the increased fan energy demand, at 26%, required by the larger constant volume fans of the roof top units. The VRF option (Alternative 2) and VAV option (Alternative 3) had near identical fan energy at 11-10%, cooling energy at 24-22%, and heating energy at 7%. The differential between these two systems came from a very small reduction in fan and cooling energy, allowing the VAV system to take a slight edge over the VRF. The heat pump option (Alternative 1) has the highest cooling energy at 41% due to the lower energy efficiency of these smaller units compared to the larger and more efficient options.

Lowest Overall Lifecycle Cost	-		X	

Table 3 - Comparative Present-Value Costs of Alternatives

While the heat pump option (Alternative 1) has the lowest life-cycle cost, it also has the lowest performance rating improvements and energy consumption against the baseline system (Table 4). As a result the heat pump option LCCA results were removed from consideration. Of the remaining two viable options the DX VAV AHU (Alternative 3) is the most life-cycle effective, approximately 10% less than the least effective VRF option (Alternative 2). It is important to note that the project is still under development and mechanical details used in this report will change during the design phase. The savings come from the higher maintenance costs of the VRF system.

Table 4. Performance Rating

Variable	Description	Energy Consumption Performance Rating			
		ALT 1: Heat Pumps with DOAS	ALT 2: VRF with DOAS	ALT 3: DX VAV AHU	ALT 4: ASHRAE 90.1 BASELINE
BBUEC ($)	Baseline Building Unregulated Energy Cost	1,836	1,836	1,836	1,836
	Baseline Building Regulated Energy Cost	4,688	4,688	4,688	4,688

Percent %	**Percentage Improvement**	**11.3%**	**36.0%**	**38.7%**	**0.0%**

Table 4 - Performance Rating

4.4 Results Discussion

The VAV option consumes the lowest overall energy, has the lowest life cycle cost (of the viable systems based on energy consumption), and has the highest performance rating improvement over the baseline system. It should be noted that these improvements are marginally better than the VRF option and either system would be suitable for serving the building.

However it is also worth considering local service support, and it is anticipated that local service contractors would be able to more effectively support a VAV system opposed to a Variable Refrigerant Flow system.

As a result of the energy analysis and life-cycle analysis, in addition to the anticipated service support of local contractors, it is recommended that the building mechanical design utilize the DX VAV AHU option (Alternative 3).

Heat Rejection

Condenser fan for MZ rooftop

Comments	Multizone packaged rooftop cond fan	
Capacity	100.00	Percent
Energy consumption	0.08	kW/ton
Low speed consumpt	0.00	Percent full load
Fluid type	Water	
Condenser type	Air-cooled condenser	
Number of cells	1	
% Air at low Speed	0.00	
Approach Temp	5.56	°C
Temp Range	5.56	°C
Wet bulb Temp	25.56	°C
Design water flow rate	3.00	gpm/ton
Makeup water flow rate	0.00	gal/ton-hr
Hourly Amb WB Offset		°C
Unloading curve	C-Tower on/off	

Coil load assignmen

+ Main
  Direct evaporator
+ Indirect evaporator

Life Cycle Cost Analyses

September 6, 2024

NIST BLCC 5.3-22: Lowest LCC

Consistent with Federal Life Cycle Cost Methodology and Procedures, 10 CFR, Part 436, Subpart A

General Information

File Name:	C:\Users\chaby\Desktop\LCCA\Pine Bluff\Pine Bluff Arsenal ACP.XML
Date of Study:	Wed Sep 25 16:00:50 CDT 2024
Analysis Type:	FEMP Analysis, Energy Project
Project Name:	PBA ACP
Project Location:	Arkansas
Analyst:	CH
Comment:	ALT 1: Heat Pumps with DOAS ALT 2: VRF with DOAS ALT 3: DX VAV AHU ALT 4: ASHRAE 90.1 BASELINE
Base Date:	January 1, 2025
Service Date:	January 1, 2027
Study Period:	42 years 0 months (January 1, 2025 through December 31, 2066)
Discount Rate:	3%
Discounting Convention:	Mid-Year

Lowest LCC

Comparative Present-Value Costs of Alternatives
(Shown in Ascending Order of Initial Cost, * = Lowest LCC)

Alternative	Initial Cost (PV)	Life Cycle Cost (PV)	
ALT 4: ASHRAE 90.1 BASELINE	$0	$137,226	*
ALT 1: Heat Pumps with DOAS	$104,860	$682,698	
ALT 2: VRF with DOAS	$129,030	$822,242	
ALT 3: DX VAV AHU	$143,966	$747,129	

NIST BLCC 5.3-22: Summary LCC

Consistent with Federal Life Cycle Cost Methodology and Procedures, 10 CFR, Part 436, Subpart A

Alternative: ALT 1: Heat Pumps with DOAS

LCC Summary

	Present Value	Annual Value
Initial Cost	$104,860	$4,424
Energy Consumption Costs	$126,992	$5,358
Energy Demand Costs	$0	$0
Energy Utility Rebates	$0	$0
Water Usage Costs	$0	$0
Water Disposal Costs	$0	$0
Annually Recurring OM&R Costs	$193,524	$8,165
Non-Annually Recurring OM&R Costs	$0	$0
Replacement Costs	$389,654	$16,441
Less Remaining Value	-$132,333	-$5,584
Total Life-Cycle Cost	$682,698	$28,806

Alternative: ALT 2: VRF with DOAS

LCC Summary

	Present Value	Annual Value
Initial Cost	$129,030	$5,444

Energy Consumption Costs	$104,496	$4,409
Energy Demand Costs	$0	$0
Energy Utility Rebates	$0	$0
Water Usage Costs	$0	$0
Water Disposal Costs	$0	$0
Annually Recurring OM&R Costs	$285,632	$12,052
Non-Annually Recurring OM&R Costs	$0	$0
Replacement Costs	$435,393	$18,371
Less Remaining Value	-$132,308	-$5,583
Total Life-Cycle Cost	$822,242	$34,693

Alternative: ALT 3: DX VAV AHU

LCC Summary

	Present Value	Annual Value
Initial Cost	$143,966	$6,074
Energy Consumption Costs	$102,045	$4,306
Energy Demand Costs	$0	$0
Energy Utility Rebates	$0	$0
Water Usage Costs	$0	$0
Water Disposal Costs	$0	$0
Annually Recurring OM&R Costs	$178,649	$7,538
Non-Annually Recurring OM&R Costs	$0	$0
Replacement Costs	$452,773	$19,104
Less Remaining Value	-$130,304	-$5,498
Total Life-Cycle Cost	$747,129	$31,524

Alternative: ALT 4: ASHRAE 90.1 BASELINE

LCC Summary

	Present Value	Annual Value
Initial Cost	$0	$0
Energy Consumption Costs	$137,226	$5,790
Energy Demand Costs	$0	$0
Energy Utility Rebates	$0	$0
Water Usage Costs	$0	$0
Water Disposal Costs	$0	$0

Annually Recurring OM&R Costs	$0	$0

Initial Cost Data (not Discounted)

Initial Capital Costs

(adjusted for price escalation)

Initial Capital Costs for All Components: $104,860

Component: Heat Pump 0.5-ton - Ducted
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$12,000
Total (for Component)		$12,000

Component: Heat Pump 1-ton - Ducted
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$13,400
Total (for Component)		$13,400

Component: Heat Pump 1.5-ton - Ducted
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$7,500
Total (for Component)		$7,500

Component: Heat Pump 0.5-ton - Ceiling
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$15,000
Total (for Component)		$15,000

Component: DX DOAS - 1100 CFM
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$24,000
Total (for Component)		$24,000

Component: Split System 0.5-ton - Wall
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$5,000
Total (for Component)		$5,000

Component: Ductwork (Supply/Return) - 10.00 per LB
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$10,020
Total (for Component)		$10,020

Component: Refrigerant Piping - Line Sets 50'
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$6,240
Total (for Component)		$6,240

Component: Refrigerant Piping - Line Sets 100'

Component: Refrigerant Piping - Line Sets 100
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$2,700
Total (for Component)		$2,700

Component: Ductwork Insulation - 2
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$4,000
Total (for Component)		$4,000

Component: Controls
Cost-Phasing

Date	Portion	Yearly Cost
January 1, 2025	100%	$5,000
Total (for Component)		$5,000

Energy Costs: Electricity
(base-year dollars)

Average Annual Usage	Average Price/Unit	Average Annual Cost	Average Annual Demand	Average Annual Rebate
228.9 MBtu	$26.37630	$6,037	$0	$0

Life-Cycle Cost Analysis

	Present Value	Annual Value
Initial Capital Costs	$104,860	$4,424
Energy Costs		
Energy Consumption Costs	$126,992	$5,358
Energy Demand Charges	$0	$0
Energy Utility Rebates	$0	$0
Subtotal (for Energy):	$126,992	$5,358
Water Usage Costs	$0	$0
Water Disposal Costs	$0	$0

Operating, Maintenance & Repair Costs

Component: Heat Pump 0.5-ton - Ducted		
Annually Recurring Costs	$28,593	$1,206
Non-Annually Recurring Costs	$0	$0
Component: Heat Pump 1-ton - Ducted		
Annually Recurring Costs	$31,928	$1,347
Non-Annually Recurring Costs	$0	$0
Component: Heat Pump 1.5-ton - Ducted		
Annually Recurring Costs	$17,870	$754
Non-Annually Recurring Costs	$0	$0
Component: Heat Pump 0.5-ton - Ceiling		
Annually Recurring Costs	$23,827	$1,005
Non-Annually Recurring Costs	$0	$0
Component: DX DOAS - 1100 CFM		
Annually Recurring Costs	$57,185	$2,413
Non-Annually Recurring Costs	$0	$0
Component: Split System 0.5-ton - Wall		
Annually Recurring Costs	$7,942	$335
Non-Annually Recurring Costs	$0	$0
Component: Ductwork (Supply/Return) - 10.00 per LB		
Annually Recurring Costs	$7,958	$336
Non-Annually Recurring Costs	$0	$0
Component: Refrigerant Piping - Line Sets 50'		
Annually Recurring Costs	$4,956	$209
Non-Annually Recurring Costs	$0	$0
Component: Refrigerant Piping - Line Sets 100'		
Annually Recurring Costs	$2,144	$90
Non-Annually Recurring Costs	$0	$0
Component: Ductwork Insulation - 2		
Annually Recurring Costs	$3,177	$134
Non-Annually Recurring Costs	$0	$0
Component: Controls		
Annually Recurring Costs	$7,942	$335
Non-Annually Recurring Costs	$0	$0
Subtotal (for OM&R):	$193,524	$8,165

Replacements to Capital Components

Component: Heat Pump 0.5-ton - Ducted	$49,623	$2,094
Component: Heat Pump 1-ton - Ducted	$55,412	$2,338
Component: Heat Pump 1.5-ton - Ducted	$31,014	$1,309
Component: Heat Pump 0.5-ton - Ceiling	$62,028	$2,617
Component: DX DOAS - 1100 CFM	$99,245	$4,188
Component: Split System 0.5-ton - Wall	$20,676	$872

1.0 PROJECT OVERVIEW

1.1 INTRODUCTION

Hana-Kenall JV is currently under contract with US Army Corps of Engineers Little Rock District under Task Order W9127S24F6002 of Contract No. W9127S23D6035, to produce a design package for the construction of a new Access Control Point (ACP) at Pine Bluff Arsenal (PBA). Within the scope, implementation of new drainage system is required to mitigate overtopping and flooding issues during the design storm events along with controlled release of stormwater flow to the existing outfalls using a detention pond. To that end, the primary purpose of this drainage study is to provide an overview of the analysis that was used to evaluate the existing hydrologic conditions and provide design for proposed drainage system to reduce overtopping and inundation issues from design storm events (e.g. 25-year, and 100-year). The hydrologic and hydraulic design, modeling, methodologies, and assumptions used in this analysis will be outlined below.

1.2 PROJECT LOCATION

The Pine Bluff Arsenal ACP Project is located within Jefferson County, Arkansas, positioned near the internal intersection of Hoadley Road, Sibert Road, and Clark Road inside the secured installation boundary (**EXHIBIT A**). The project site lies approximately 3.5 miles east of U.S. Highway 65, the primary north–south corridor serving the City of Pine Bluff, and roughly 2.8 miles north of U.S. Highway 79, which provides regional connectivity toward Little Rock and Stuttgart. As shown on the location map, the project area sits just northeast of the Mopac Railroad alignment and south of Faris Road, surrounded by dense woodland within the central portion of the Arsenal. This strategic siting supports controlled access operations while maintaining proximity to critical regional transportation routes.

1.3 FLOODPLAIN INFORMATION

According to FEMA Flood Insurance Rate Map (FIRM) Panel 05069C0165D (effective date March 16, 2009), The project site lies entirely within FEMA Zone X, designated as an Area of Minimal Flood Hazard, with no mapped 1% annual-chance (Zone AE) floodplain affecting the ACP footprint (**EXHIBIT B**). As shown on the FEMA FIRMette, the nearest Zone AE floodway and 23-ft BFE corridor is located south of the site, beyond the Mopac Railroad embankment. No regulatory floodway crosses or influences the project area, and no Base Flood EL (BFE) is assigned within the project limits.

1.4 ENERGY INDEPENDENCE AND SECURITY ACT (EISA) 438

This project is mandated to meet the EISA Section 438 retention volume requirements to mitigate the impact of the proposed development on stormwater runoff by employing Low Impact Development (LID) practices. Due to the limited soil infiltration capacity and space constraints, LID practices are not feasible to control the stormwater runoff. However, controlled release of stormwater to the existing outfall can offer an effective stormwater management for this site. The net impervious increase from the proposed development is 3.647 acre. The increased runoff for this proposed development will be managed via detention pond strategy. The net runoff volume increase for 95th percentile rainfall (2.1 inch) is 20,322.70 cubic feet (**EXHIBIT J**).

2.0 EXISTING CONDITION

The project area is bounded by Hoadley Road to the north and Clark Road along the south and east, with a total drainage area of approximately 9.49 acres. Existing area is delineated into subcatchments based on their land use type using surveyed topography and observed flow paths, as shown in **EXHIBIT C**. The primary wooded area designated for development covers 6.50 acres (subcatchment A-1), while 1.9 acres consist of roadway segments associated with Dayton Road and Hoadley Road (subcatchments A-4, A-5, &A-6) in **EXHIBIT K**. Existing drainage infrastructure surrounding the site includes roadside ditches, swales, several curb, and grate inlets, and approximately six culverts ranging from 15-inch to 24-inch diameter beneath nearby roadways, as documented in **EXHIBIT D** and Table 1. A set of privately owned railroad tracks along the western boundary also influences the local drainage pattern. Stormwater from the undeveloped portion of the site flows as sheet flow transitioning to shallow concentrated flow, generally draining toward the lowest elevation near EL 242 as per **EXHIBIT C**. The dominant soil type within the project area is Amy Silt Loam (0–1% slope), NRCS map unit AR660, classified as Hydrologic Soil Group C/D, indicating relatively poor drainage and higher runoff potential (**EXHIBIT F**). The northwestern portion of the site is paved with aged asphalt and previously served as a contractor staging area, while approximately 86% of the remaining site area consists of light underbrush, woodland, and short grass with moderately dense vegetative cover. Based on existing conditions, the site has an overall weighted Curve Number (CN) of 81.7 (**EXHIBIT K**) and an imperviousness of approximately 14% (**EXHIBIT K**). Detailed hydrologic parameters for each delineated subcatchment are provided in **EXHIBIT K**.

Table 1 : Existing outfalls

*** = NA = Not Applicable*			

3.0 PROPOSED IMPROVEMENTS

3.1 PROPOSED DRAINAGE FEATURES

The proposed drainage system is designed to manage runoff generated from parking areas, building roofs (VCC, Gate House, ID Check Canopy), inbound and outbound lanes, and other impervious surfaces (pads, sidewalks etc.). The proposed drainage is delineated into multiple subcatchments based on the land use type and flow paths (**EXHIBIT E**). Stormwater is collected through a network of curb cuts, curb inlets, grate inlets, combination inlets, roof drains, and vegetated swales, and is conveyed via pipes/culverts to the detention pond prior to controlled release to the existing downstream outfalls. System performance is evaluated for the 25-year, 24-hour storm event to ensure the drainage layout operates reliably with no local flooding or adverse ponding. The overall Curve Number and percent imperviousness for the proposed condition are 91.1 (**EXHIBIT K**) and 50.5% (**EXHIBIT K**), respectively.12-inch PVC pipes, along with multiple curb inlets on both the western and eastern sides of the building, convey runoff to either the detention pond or open discharge areas via a 24-inch Reinforced Concrete culvert. Grass lined trapezoidal swales with 4H:1V side slopes are provided along both sides of the outbound road. Several storm drain outfall pipes terminate into these stabilized swales to reduce flow velocity, enhance retention, and manage energy dissipation before water enters the detention pond. The VCC area includes 3×3 ft and 1×1 ft grate inlets to prevent ponding during storm events equal to or exceeding the 25-year, 24-hour rainfall.

Runoff from the gatehouse and search-area canopy is directed as sheet flow toward the gutter system, where combination inlets capture the flow. The detention pond, located on the southern portion of the site, provides staged outflow control to maintain the predevelopment flow condition without flooding the downstream channel. Outlet and inlet protection for pipes and culverts are provided by the headwalls and endwalls. The curb cut ends and outlet protection is reinforced with Flexamat™ Plus to prevent erosion, maintain channel stability, and support peak-flow attenuation during larger storm events.

3.2 DETENTION POND

Despite the presence of HSG-D soils with minimal infiltration capacity, the stormwater design satisfies EISA 438 requirements by implementing DoD-approved runoff reduction measures consistent with UFC 3-210-01. Compliance is achieved through Flexamat™ Plus lined swales, which provide non-erosive, stable conveyance per UFC 3-240-01 and distributed storage, in combination with a detention pond sized to the required initial 20,322.70 cubic feet retention volume at 95th percentile rainfall (**EXHIBIT J**). The pond, configured as shown in Table 2, includes an invert at EL 241, a 1' × 1' bottom orifice limiting maximum outflow to 8.62 cfs at 3.5 feet head, an 18-inch CMP outlet, and a grated weir at EL 243.3 providing overflow control up to EL 244.5. The orifice and grated weir rating curve is determined at 0.1 feet interval shown in **EXHIBIT M.** The system provides 75,395.34 cubic feet of storage at 3.5 ft depth. Together, the lined swales and detention pond replicate predevelopment hydrology through detention, attenuation, and controlled release, fully in accordance with UFC 3-210-01 Section 4-3 allowances for low-permeability soils. Table 2 and 3 shows the overall detention pond configuration and capacity.

Table 2 : Detention Pond System Data

Side Slope	Total Depth (ft)	Riser Dia, D (ft)	Riser Height (ft)	Orifice (inch x inch) at EL 241.80	Open Top Weir Length = **Πd** (ft) at EL 244.3	Outflow Pipe dia (inch)
4H:1V	3.5	4	3.5	12 x 12	12.6	18

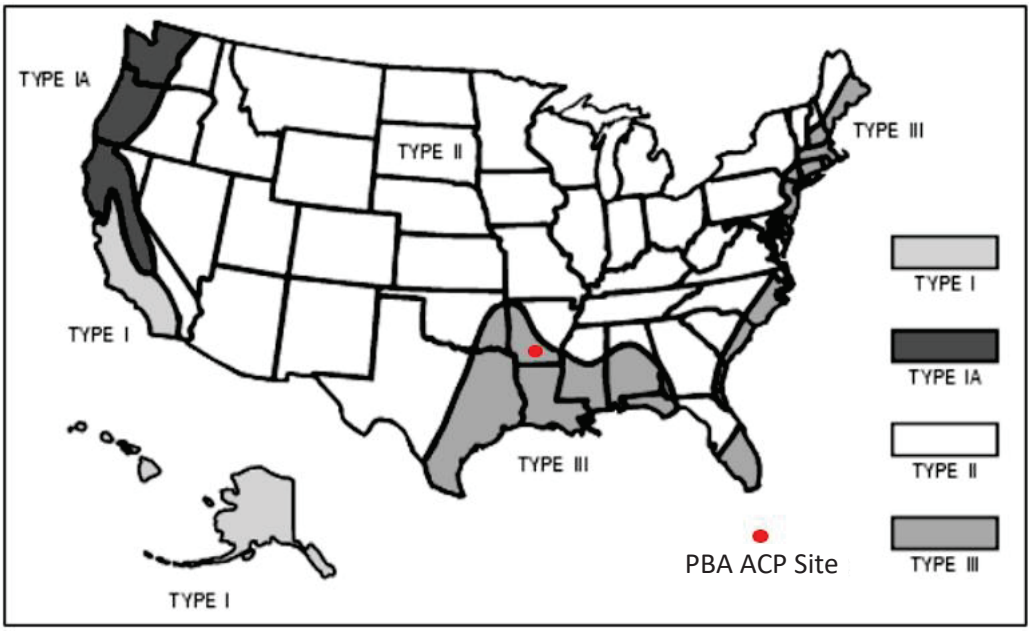

Table 3 : Detention Pond Stage-Area-Storage (Freeboard = 0.5')

3.0	244.00	24,090.65	63,225.09
3.5	244.50	25,121.32	75,395.34

4.0 DATA COLLECTION

4.1 RAINFALL DATA

Rainfall depth for different recurrence intervals is retrieved from the NOAA ATLAS VOLUME 14 which are furnished in **EXHIBIT H**. The rainfall distribution type for this site is SCS Type III under state of Arkansas. The rainfall time series for different recurrence interval is derived for from HEC-HMS model (**EXHIBIT I**). This project area falls under the SCS Type III 24-hr rainfall distribution (see the map below).

4.2 SOIL DATA

Soil data is retrieved from the USDA NRCS Soil Survey data which is furnished in **EXHIBIT F**. According to the NRCS soil survey, the project site is composed predominantly of dual hydrologic soil group C/D soils, representing approximately 96.8% of the area, with the remaining 3.2% classified as Group D. In the absence of documented drainage improvements, the C/D soils should be evaluated as Hydrologic Soil Group D for rainfall-runoff analyses.

4.3 TOPOGRAPHIC SURVEY DATA

Topographic Survey is conducted by Halff (**EXHIBIT D**). The hydrologic analysis for existing condition is conducted based on this topographic survey data.

4.4 LAND COVER DATA

The land cover data for existing site is extracted based on the satellite imagery and topographic survey data to separate the impervious areas from pervious areas. The cover classification is performed accordingly to assign the curve number and overland flow Manning's N. However, the land cover classification

for proposed condition is derived from the proposed site layout based on the revised corridor and alignment for this site. Land use types in the existing and proposed condition for each delineated subcatchments are defined in the **EXHIBIT C AND EXHIBIT E,** respectively.

5.0 METHODS OF ANALYSIS

In accordance with the guidelines specified in UFC 3-210-10: Low Impact Development (LID), we utilized the approved methodologies outlined in Section 3-1.1. The hydrologic and hydraulic analyses were performed using the United States Environmental Protection Agency's (USEPA) Storm Water Management Model (SWMM) and the United States Army Corps of Engineers' (USACE) Hydrologic Engineering Center Hydrologic Modeling System (HEC-HMS) as per UFC 3-210-01(Hydrology and Hydraulics). The modeling procedures employed to simulate the rainfall-runoff processes are discussed in detail below:

5.1 HYDROLOGIC & HYDRAULIC ANALYSIS (DRAINAGE SYSTEM)

5.1.1 USACE - HEC-HMS MODELING:

HEC-HMS is used to simulate watershed hydrology and generate precipitation–runoff responses for flood and drainage analysis. For this project, HEC-HMS was applied to develop 15-minute rainfall time series using the SCS Type III distribution. Design rainfall depths for the 24-hour duration and corresponding recurrence intervals were obtained from NOAA Atlas 14, Volume 14, and were transformed into temporal hyetographs for use as rainfall inputs in the SWMM model. (**EXHIBIT I)**

5.1.2 USEPA-SWMM (STORMWATER MANAGEMENT MODEL)

SWMM is a rainfall-runoff simulation modeling tool primarily sensitive to the rainfall input used to generate runoff and convey that runoff through a drainage system. Building upon the rainfall data developed in the HEC-HMS model, SWMM was employed to perform detailed hydraulic flow routing through the proposed storm drain network. Subcatchments were delineated in Civil 3D based on surface flow paths and proposed grading, assigning each inlet as a pour point (**EXHIBIT E**). These subcatchments, along with the rainfall time series, were replicated within the SWMM model, where hydrologic characteristics such as imperviousness, surface roughness, depression storage, and curve number were defined for each drainage area (**EXHIBIT K**). We used dynamic wave routing to accurately capture backwater effects, pressurized flow, and hydraulic interactions within the stormwater system. We applied the NRCS Curve Number method to represent infiltration using land cover and soil conditions consistent with accepted hydrologic practice. Together, these approaches provide a reliable and physically realistic simulation of runoff generation and flow routing. The hydraulic elements-including curb inlets, grate inlets, swales, pipes, and the detention pond

outlet structure were modeled in accordance with the DBRF submittal. The model hydrologic and hydraulic parameters for each subcatchment in pre-and-post-development conditions are derived from the recognized source which are tabulated in **EXHIBIT O**. Those parameter values are used for each subcatchment to accurately represent the hydrological condition for each delineated subcatchments. The model parameter values are listed in **EXHIBIT K.** The curb cut dimension and splash pad design to accommodate the peak runoff are shown in the **EXHIBIT M.** We applied dampened inertial terms to enhance numerical stability while preserving realistic momentum effects during rapidly varying flow conditions. We use the Slope & Froude normal flow criterion, Hazen-Williams force main equation, and the EXTRAN surcharge method to accurately represent gravity flow, pressurized conveyance, and surcharged system behavior under peak storm events. Multiple simulation runs were performed for the 95th-percentile rainfall event and the 10-, 25-, 50-, and 100-year 24-hour design storms at 15-min time interval. Model performance was evaluated using SWMM's continuity error metrics for both surface runoff and hydraulic routing, ensuring stability across all events. The 25-year 24-hour and 100-year-24 hour continuous event for predevelopment and postdevelopment condition are used to assess system-wide flow routing and confirm that conduits and swales velocities remain below the 5-fps maximum velocity requirement outlined in UFC 3-240-01 and UFC 3-210-01 (**EXHIBIT L & EXHIBIT N**). The 100-year 24-hour storm was used to evaluate the upper limit of system capacity, hydraulic grade lines, and water surface elevations across the network. The roof drainage connection to the header pipes through the downspout from VCC, Gatehouse, Truck Search Canopy, and ID Check canopy are incorporated based on the contributing roof area derived from architectural drawings. The roof area for each downspout and corresponding roof width are used in the SWMM model to capture the impact of roof runoff (**EXHIBIT P**). The adverse impact due to postdevelopment flow is mitigated by limiting the flow up to 10.24 cfs which is well below the predevelopment flow during 100-year storm event. The maximum water depth due to 10.24 cfs flow is 1 foot in the 2 feet deep channel. The SWMM model generated water surface profile is shown to demonstrate the no adverse impact in the **EXHIBIT Q**.

Overall, the SWMM model demonstrates that the proposed stormwater management system-including the detention pond, inlets, swales, and underground conduits provides effective peak-flow attenuation and UFC-compliant hydraulic performance across all design storms. For the 10-, 25-, 50-, and 100-year events, maximum pond outflow is limited to approximately 10.24 cfs, consistent with peak-flow control guidance in UFC 3-210-01, while detention depths remain below 4 ft, maintaining roughly 0.5 ft of freeboard. The 95th-percentile storm remains fully orifice-controlled with no weir activation, aligning with small-storm retention and water-quality objectives under UFC 3-210-01. These results confirm that the system maintains acceptable velocities, safe

hydraulic grade lines, and adequate storage capacity while meeting all applicable UFC stormwater drainage and performance criteria.

6.0 EROSION AND SEDIMENT CONTROL

The area of disturbance due to construction activities will be enclosed with silt fencing to prevent the sediment discharge out of the disturbed area. Inlet protection will be provided around the existing inlets from sediment intrusion. The detention pond should be installed prior to demolition/ clearing/grubbing to utilize the pond as the sediment control measure. Reserve at least 75 % of the permanent detention volume for runoff attenuation, and dedicate the remaining 25 % (or more, if high sediment loads are expected) as a sediment storage zone (i.e., forebay) below the permanent outlet elevation. A forebay should be installed at the pond inlet (minimum 10 % of the total basin volume) to intercept coarse sediments. Grade the forebay bottom to a gentle slope toward the dewatering structure to facilitate clean-out. Replace or retrofit the permanent riser with a dewatering device (e.g., a riser with slide gate and calibrated orifice) set at the pre-development EL to draw down the basin within 48 hours after a storm, per UFC 3-210-10 §2-4. Line the sides and bottom of the sediment storage zone with Flexamat™ Plus to prevent rill erosion as sediment accumulates. Inspect weekly and within 24 hours of any rainfall > 0.5 in; remove accumulated sediment when it reaches 50 % of the storage depth. After final site grading and permanent seeding (> 70 % cover), remove temporary forebay structures and reset the pond to its permanent detention configuration. By temporarily reallocating a portion of the permanent pond's volume and outfitting it with the proper forebay, outlet control, and access for clean-out, both USACE EM 1110-2-1901 sediment-trap requirements and UFC 3-210-10 temporary sediment basin criteria will be satisfied without constructing a separate facility.

7.0 RESULTS AND DISCUSSION

As shown in Table 4, untreated post-development peak flows would substantially exceed predevelopment conditions for all storm events, with increases ranging from approximately 37.9 – 75.4% for the major design storms. The proposed detention pond successfully offsets these increases by reducing outflow to 6 to 10 cfs for the 10-, 25-, 50-, and 100-year storms, consistent with the peak-flow attenuation requirements outlined in UFC 3-210-01. These controlled discharge rates are lower than predevelopment peak flows in every case, demonstrating that the detention system restores post-development hydrologic performance to below existing conditions in compliance with UFC 3-210-01 stormwater management criteria. The total peak inflow in the Outfall 1, Outfall 2, and Outfall 4 are summed up to find the peak flow in pre-development period from SWMM model in **EXHIBIT L.** The total peak inflow in the detention pond from the whole drainage area is taken as the post-development peak flow from the SWMM model in **EXHIBIT N.** Those peak flows for multiple storm events are tabulated in Table 4.

Table 4 : Peak Flow Summary (Predevelopment vs Post development and Control)

Event	Predevelopment Peak Flow (cfs)	Postdevelopment Peak Flow (cfs)	Detention Pond Outflow to Outfall (cfs)
2-year-24 Hr	7.2	20.14	6.14
5-year-24 Hr	10.64	25.92	8.34
10-year-24 Hr	13.68	30.62	9.26
25-year-24 Hr	18.27	32.25	9.76
50-year-24 Hr	21.98	35.86	10.20
100-year-24 Hr	26.25	38.89	10.24

The detention pond demonstrates consistent and effective flow attenuation across all modeled storm events, as summarized in Table 5. No weir activation occurs, indicating that the low-flow outlet functions as intended for water quality and frequent storm management in accordance with UFC 3-210-01 guidance for small event control. For the 10-, 25-, 50-, and 100-year, 24-hour storms, the pond reaches depths between 2.99 ft and 3.50 ft, corresponding to 85 - 100% storage utilization. Although peak inflows increase from 20 cfs to 39 cfs for the storm return period 2-year to 100 year, the pond effectively limits outflow to 6.14 to 10.24 cfs, demonstrating proper staged outlet control consistent with UFC 3-210-01 stormwater detention performance criteria. During larger events, the grated weir on top of the riser conveys 0.58 cfs-27.24 cfs, while orifice flow remains stable at approximately 0.10 cfs to 8.62 cfs for the depth of water 0.1 to 3.5 feet. The downstream 18-inch CMP, which meets the minimum storm drain pipe size requirements in UFC 3-240-01, further regulates discharge to maintain the controlled 10.24 cfs peak release.

Overall, the detention pond performs as intended by capping post-development peak flows, preserving required freeboard, and maintaining safe hydraulic behavior under all design storms. The results confirm that the proposed stormwater system meets UFC 3-210-01 objectives for peak-flow reduction, UFC 3-240-01 criteria for conveyance capacity, and overall storm event resilience.

Table 5 : Detention Pond Summary

Event	Max Depth (ft)	Max Inflow (cfs)	Max Outflow (cfs)	Peak Attenuation Ratio (Qout/Qin)	Storage Utilization (%) (Depth/3.5)	Max Volume (cf)
2-Year, 24 Hr	2.02	20.14	6.14	0.30	57	40,603.44
5-Year, 24 Hr	2.55	25.92	8.34	0.32	72	52,584.55
10-Year, 24-Hr	2.99	30.62	9.26	0.30	85	63,091.67

25-Year, 24-Hr	3.42	32.25	9.76	0.30	97.8	73,555.61
50-Year, 24-Hr	3.44	35.86	10.20	0.28	98.2	74,028.35
100-Year, 24-Hr	3.50	38.89	10.24	0.26	100	75,338.94

8.0 CONCLUSION

The SWMM simulations for existing and proposed conditions demonstrate that the designed stormwater system and detention facility provide strong hydraulic performance across all events. Continuity errors for surface runoff (0.18%) and flow routing (2.17%) (100-year-24-hour) simulation is well within acceptable limits, confirming mass balance is adequately conserved and results are hydraulically reliable. Although post-development peak flows increase to 20.14 – 38.89 cfs, the detention pond effectively attenuates runoff, regulating outflow to 6.14 cfs -10.24 cfs through combined weir and orifice control. Storage depths remain within 2.02 - 3.50 ft, with volumes up to 75,338.94 cubic feet, confirming adequate capacity under 2-year to 100-year storms. Overall, the system reduces downstream peaks below pre-development levels and meets all stormwater management criteria with robust reliability.

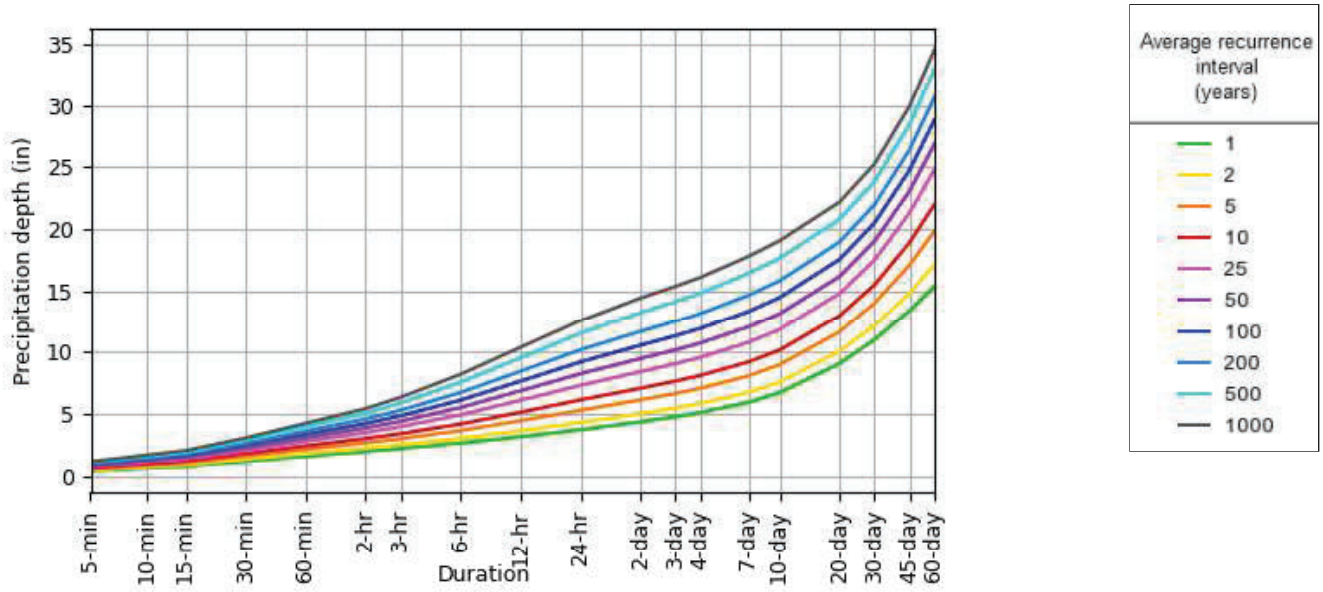
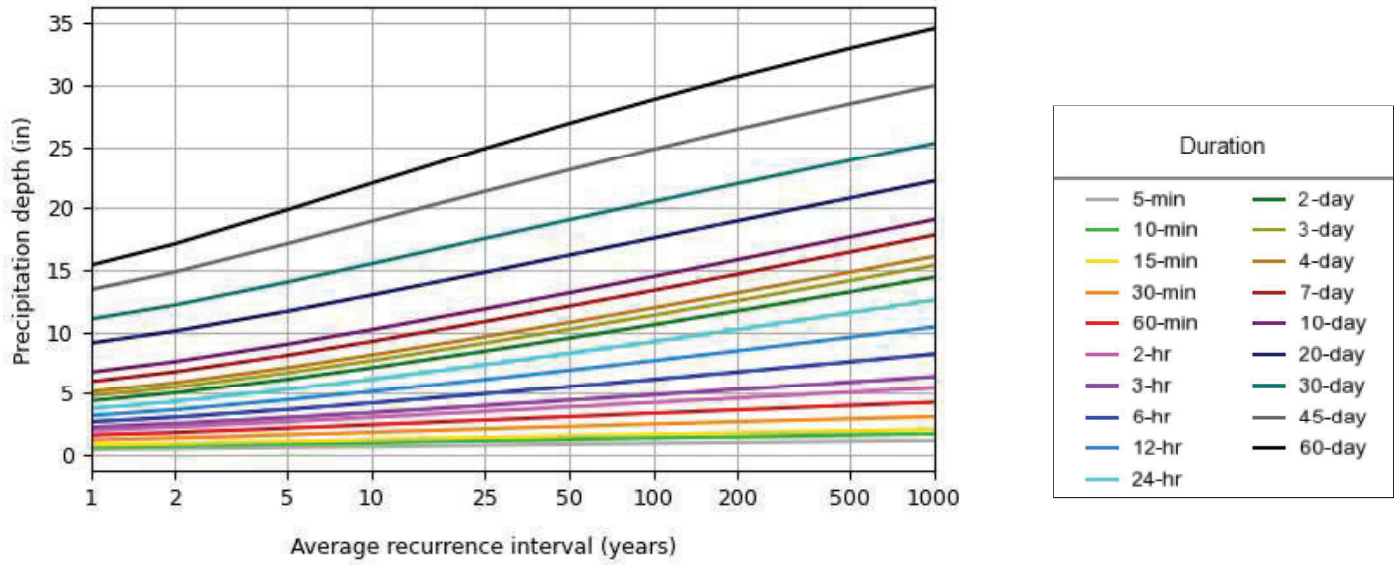
[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).



Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.



Please refer to NOAA Atlas 14 document for more information.

EXHIBIT I: RAINFALL TIME SERIES FROM HEC-HMS MODEL

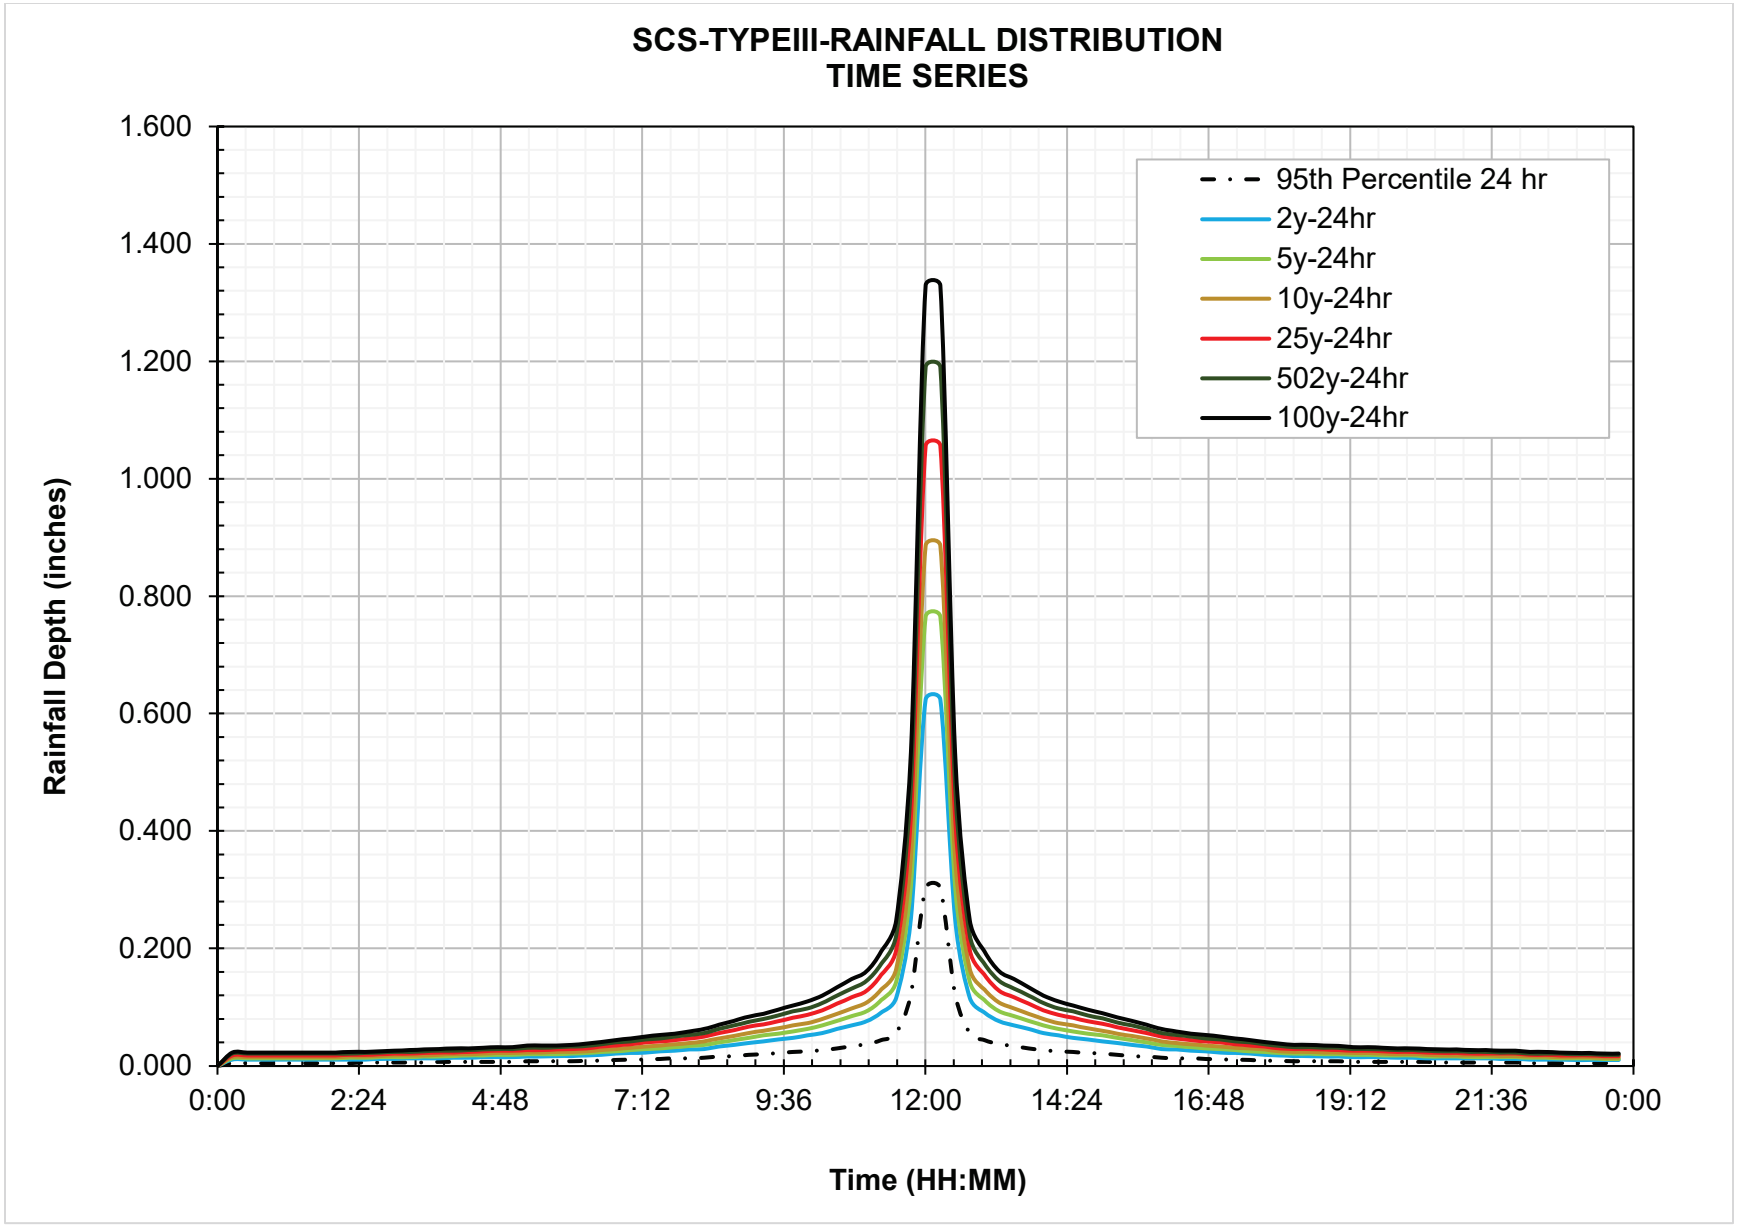

EXHIBIT J- ESIA 438 AND DETENTION POND REQUIREMENT CALCULATION

EISA 438 ANALYSIS AND PRELIMINARY DETENTION POND REQUIREMENT			
Project Name	Pine Bluff Arsenal ACP	**Prepared By**	MC
Project Number	8114	**Date**	4.05.2026
.2026	USACE	**Checked by**	RT
Client Project Location	Pine Bluff Arsenal - Plainview Gate,Hoadley Rd, White Hall,	**Date**	4.11.2026
File Location	J:\0-A&E\Projects\2024\8114-Pine Bluff Arsenal ACP\H&H\Calculation		
Sources/References	*1. UFC-3-210-10 (2015), 2. Soil data (https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx) 3. Urban Hydrology for Small Watersheds, TR-55 4. Curve Number: Federal Highway Administration. National Highway Institute. Highway Hydrology: Hydraulic Design Series Number 2. 2nd ed. 5.FHWA-HIF-02-001. Washington, DC: U.S. Department of Transportation, October 2002, Table 5-4, pp. 5-22 through 5-24.https://www.fhwa.dot.gov/engineering/hydraulics/library_arc.cfm?pub_number=2&id=7 , 6. Rainfall Data: https://www.ncdc.noaa.gov/cdo-web/datasets/GHCND/stations/GHCND:USC00035754/detail*		
Equations used	1. NRCS TR55 Formula, Runoff Depth, inches= Q= (P-0.2S)^2/(P+0.8*S); where S= ((1000/CN)-10), 2.Pond Volume = (Depth/3) * (Top Surface Area+Bottom Surface Area +SQRT(Top Surface Area * Bottom Surface Area))		
NOTES	This is preliminary sizing of detention based on the pervious and impervious area variation between pre-and Post-development scenario during the project initiation. Actual design will be dictated by the proposed site hydraulics and site alignment and correspodning changes in the subcatchements in SWMM Model.		

SITE HYDROLOGY

Top Width ,T,ft	78.00		
Depth , H, ft	3.50	Without freeboard	
Depth , H', (+1 ft freeboard)	4.00	With freeboard=0.5'	
Base Length, L, ft	150.00	The Flexamat Plus will be used for outfall armoring and also for pond slope stablization.	
Top Length, ft	178.00		
Top Surface Area,A, sf	13,884.00		
Base Surface Area,sf	7,500.00		
Design Volume for Detention Pond, V, CF @ 3.5 ft depth	**36,853**	**OK**	
Design Volume for Detention Pond, V, CF @4 ft depth	**75,000**	**OK**	

1. Net impervious area increase = 3.647 acre which is above 5,000 SF as per EISA 438 requirement,
2. The detention pond storage volume is modified in the final design which is well above the design storage volume of 62,740.64 cubic feet at 100-year level to offset the EISA requirement.

https://grogreen.us/PDS/Erosion-Blankets/GS_TRM_FlexamatPlus.pdf

Design Remarks
1. USE CURB CUT WITH DIMENSION (Minimum) : L = 6', H= 0.5' at 114' spacing
2. Place first curb cut at 114' from the far nrothern end of ID Check area.
3. Make sure at the end of each curb cut Flexamat Plus is installed up to the ditch bottom (Slope 4H:1V).
4. The curb cut invert can be flushed with the Bottom of Curb. Gutter should be terminated before the edge of the curb cut.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

	4. Rainfall Data: NOAA Atlas 14 Rainfall data for Pine Bluff, Arkansas.			
	5. Runoff coefficient data: USACE EM 1110-2-1417 – Flood-Runoff Analysis (1994), Table 11-1 (Page-11-2)			
Equations	1. **Peak Roof Runoff, Qroof (cfs)** = C_{roof} * I * A_{roof}; C_{roof} = Roof Runoff coefficient, I = Rainfall Intensity (in/hr) (100-year,1-hr), A_{roof} = Condtributing Roof Area (ac)			
	2. **Flow through conduits, Qpipe (cfs)**= (1.486/n) x A * $R^{2/3}$ x $S^{0.5}$; n= Manning's roughness coefficient (s/ft^1/3) , A = Flow area (ft^2), R = Hydraulic Radius (ft), S = Slope (ft/ft)			
Design Criteria	a) Storm drainage (roof drains/leaders/conductors) to 5 ft outside the building.			
	b) Minimum underground roof drain pipe ID = 6 in (or size per UFC 3-420-01 / IPC, whichever larger)			
	c) Air break (4"-6") between downspouts and underground piping must be provided.			
	d) Maximum 3 downspouts per underground roof drainage header are permitted.			
	e) Each header must connect to a storm drainage structure (catch basin / manhole).			
	f) Maximum distance of 150 ft from most distant downspout to that structure must be maintained.			
	g) Cleanouts are required at each downspout connection, at direction changes with≤ 100 ft apart.			
	h) Design Rainfall for roof drainage as per IPC =100-yr, 1-hr			
	i) Open discharge to grade must be done with splash blocks/paved channels to move flow away from structure and avoid safety hazards.			
NOTES	Not all downspouts locations need to be provided with splash pads. Rather some locations will be provided with underground roof drain connections.

RIPRAP EXTENSION (4"-6" gravels)	
Length, ft	1
Width, ft	2
Thickness, ft	0.5

DESIGN REMARKS:
1. Type: Flared Recinforced Concrete Splash Pad or Apron
2. Total Length : 3 feet
3. Width near downspout (upstream): 0.5 feet
4. End width(downstream) : 2 feet
5. Concrete slab thickness: 6 inch
6. Edge curb height: 4 inch flushed with the grade at the end of apron.
7. Slope: Must be 2%
8. Provide riprap at the end of the splash pad to withstand that lower erosive velocity for extra protection if discharged to turf or road or parking lot with heavy traffic or padestrain movements.
9. The flow from splash pad must go to the nearest catch basin or inlets before transferring to header pipe.

Sheet flow

Sheet flow is flow over plane surfaces. It usually occurs in the headwater of streams. With sheet flow, the friction value (Manning's n) is an effective roughness coefficient that includes the effect of raindrop impact; drag over the plane surface; obstacles such as litter, crop ridges, and rocks; and erosion and transportation of sediment. These n values are for very shallow flow depths of about 0.1 foot or so. Table 3-1 gives Manning's n values for sheet flow for various surface conditions.

Table 3-1 Roughness coefficients (Manning's n) for sheet flow

Surface description	n [1/]
Smooth surfaces (concrete, asphalt, gravel, or bare soil)	0.011
Fallow (no residue)	0.05
Cultivated soils:	
Residue cover ≤20%	0.06
Residue cover >20%	0.17
Grass:	
Short grass prairie	0.15
Dense grasses [2/]	0.24
Bermudagrass	0.41
Range (natural)	0.13
Woods: [3/]	
Light underbrush	0.40
Dense underbrush	0.80

1 The n values are a composite of information compiled by Engman (1986).

2 Includes species such as weeping lovegrass, bluegrass, buffalo grass, blue grama grass, and native grass mixtures.

3 When selecting n , consider cover to a height of about 0.1 ft. This is the only part of the plant cover that will obstruct sheet flow.

For sheet flow of less than 300 feet, use Manning's kinematic solution (Overtop and Meadows 1976) to compute T_t:

$$T_t = \frac{0.007(nL)^{0.8}}{(P_2)^{0.5} s^{0.4}} \qquad \text{[eq. 3-3]}$$

where:

T_t = travel time (hr),
n = Manning's roughness coefficient (table 3-1)
L = flow length (ft)
P_2 = 2-year, 24-hour rainfall (in)
s = slope of hydraulic grade line (land slope, ft/ft)

This simplified form of the Manning's kinematic solution is based on the following: (1) shallow steady uniform flow, (2) constant intensity of rainfall excess (that part of a rain available for runoff), (3) rainfall duration of 24 hours, and (4) minor effect of infiltration on travel time. Rainfall depth can be obtained from appendix B.

Shallow concentrated flow

After a maximum of 300 feet, sheet flow usually becomes shallow concentrated flow. The average velocity for this flow can be determined from figure 3-1, in which average velocity is a function of watercourse slope and type of channel. For slopes less than 0.005 ft/ft, use equations given in appendix F for figure 3-1. Tillage can affect the direction of shallow concentrated flow. Flow may not always be directly down the watershed slope if tillage runs across the slope.

After determining average velocity in figure 3-1, use equation 3-1 to estimate travel time for the shallow concentrated flow segment.

Open channels

Open channels are assumed to begin where surveyed cross section information has been obtained, where channels are visible on aerial photographs, or where blue lines (indicating streams) appear on United States Geological Survey (USGS) quadrangle sheets. Manning's equation or water surface profile information can be used to estimate average flow velocity. Average flow velocity is usually determined for bankfull elevation.

Table 2-2a Runoff curve numbers for urban areas [1]

Cover description: Cover type and hydrologic condition	Average percent impervious area [2]	Curve numbers for hydrologic soil group: A	B	C	D
Fully developed urban areas (vegetation established)					
Open space (lawns, parks, golf courses, cemeteries, etc.) [3]:					
Poor condition (grass cover < 50%)		68	79	86	89
Fair condition (grass cover 50% to 75%)		49	69	79	84
Good condition (grass cover > 75%)		39	61	74	80
Impervious areas:					
Paved parking lots, roofs, driveways, etc. (excluding right-of-way)		98	98	98	98
Streets and roads:					
Paved; curbs and storm sewers (excluding right-of-way)		98	98	98	98
Paved; open ditches (including right-of-way)		83	89	92	93
Gravel (including right-of-way)		76	85	89	91
Dirt (including right-of-way)		72	82	87	89
Western desert urban areas:					
Natural desert landscaping (pervious areas only) [4]		63	77	85	88
Artificial desert landscaping (impervious weed barrier, desert shrub with 1- to 2-inch sand or gravel mulch and basin borders)		96	96	96	96
Urban districts:					
Commercial and business	85	89	92	94	95
Industrial	72	81	88	91	93
Residential districts by average lot size:					
1/8 acre or less (town houses)	65	77	85	90	92
1/4 acre	38	61	75	83	87
1/3 acre	30	57	72	81	86
1/2 acre	25	54	70	80	85
1 acre	20	51	68	79	84
2 acres	12	46	65	77	82
Developing urban areas					
Newly graded areas (pervious areas only, no vegetation) [5]		77	86	91	94
Idle lands (CN's are determined using cover types similar to those in table 2-2c).					

[1] Average runoff condition, and $I_a = 0.2S$.

[2] The average percent impervious area shown was used to develop the composite CN's. Other assumptions are as follows: impervious areas are directly connected to the drainage system, impervious areas have a CN of 98, and pervious areas are considered equivalent to open space in good hydrologic condition. CN's for other combinations of conditions may be computed using figure 2-3 or 2-4.

[3] CN's shown are equivalent to those of pasture. Composite CN's may be computed for other combinations of open space cover type.

[4] Composite CN's for natural desert landscaping should be computed using figures 2-3 or 2-4 based on the impervious area percentage (CN = 98) and the pervious area CN. The pervious area CN's are assumed equivalent to desert shrub in poor hydrologic condition.

[5] Composite CN's to use for the design of temporary measures during grading and construction should be computed using figure 2-3 or 2-4 based on the degree of development (impervious area percentage) and the CN's for the newly graded pervious areas.

Table 2-2c Runoff curve numbers for other agricultural lands [1/]

Cover description		Curve numbers for hydrologic soil group			
Cover type	Hydrologic condition	A	B	C	D
Pasture, grassland, or range—continuous forage for grazing. [2/]	Poor	68	79	86	89
	Fair	49	69	79	84
	Good	39	61	74	80
Meadow—continuous grass, protected from grazing and generally mowed for hay.	—	30	58	71	78
Brush—brush-weed-grass mixture with brush the major element. [3/]	Poor	48	67	77	83
	Fair	35	56	70	77
	Good	30 [4/]	48	65	73
Woods—grass combination (orchard or tree farm). [5/]	Poor	57	73	82	86
	Fair	43	65	76	82
	Good	32	58	72	79
Woods. [6/]	Poor	45	66	77	83
	Fair	36	60	73	79
	Good	30 [4/]	55	70	77
Farmsteads—buildings, lanes, driveways, and surrounding lots.	—	59	74	82	86

1 Average runoff condition, and $I_a = 0.2S$.

2 *Poor:* <50%) ground cover or heavily grazed with no mulch.
Fair: 50 to 75% ground cover and not heavily grazed.
Good: > 75% ground cover and lightly or only occasionally grazed.

3 *Poor*: <50% ground cover.
Fair: 50 to 75% ground cover.
Good: >75% ground cover.

4 Actual curve number is less than 30; use CN = 30 for runoff computations.

5 CN's shown were computed for areas with 50% woods and 50% grass (pasture) cover. Other combinations of conditions may be computed from the CN's for woods and pasture.

6 *Poor:* Forest litter, small trees, and brush are destroyed by heavy grazing or regular burning.
Fair: Woods are grazed but not burned, and some forest litter covers the soil.
Good: Woods are protected from grazing, and litter and brush adequately cover the soil.

Rational Formula
Runoff Coefficients

GRASS

Type of Drainage Area	Runoff Coefficient
Lawns:	
Sandy soil, flat, less than 2%	0.05-0.10

Manning's Roughness Coefficient Values

Manning's roughness coefficients are used to calculate flows using Manning's equation. Values from American Society of Civil Engineers(ASCE) 1992, FHWA 2001, and Chow 1959 are reproduced in Table 4-7, Table 4-8, and Table 4-9.

Type of channel	Manning's n
A. Natural streams	
1. Minor streams (top width at flood stage < 100 ft)	
a. Clean, straight, full, no rifts or deep pools	0.025-0.033
b. Same as a, but more stones and weeds	0.030-0.040
c. Clean, winding, some pools and shoals	0.033-0.045
d. Same as c, but some weeds and stones	0.035-0.050
e. Same as d, lower stages, more ineffective	0.040-0.055
f. Same as d, more stones	0.045-0.060
g. Sluggish reaches, weedy, deep pools	0.050-0.080
h. Very weedy, heavy stand of timber and underbrush	0.075-0.150
i. Mountain streams with gravel and cobbles, few boulders on bottom	0.030-0.050
j. Mountain streams with cobbles and large boulders on bottom	0.040-0.070
2. Floodplains	
a. Pasture, no brush, short grass	0.025-0.035
b. Pasture, no brush, high grass	0.030-0.050
c. Cultivated areas, no crop	0.020-0.040
d. Cultivated areas, mature row crops	0.025-0.045
e. Cultivated areas, mature field crops	0.030-0.050
f. Scattered brush, heavy weeds	0.035-0.070
g. Light brush and trees in winter	0.035-0.060
h. Light brush and trees in summer	0.040-0.080
i. Medium to dense brush in winter	0.045-0.110
j. Medium to dense brush in summer	0.070-0.160
k. Trees, dense willows summer, straight	0.110-0.200
l. Trees, cleared land with tree stumps, no sprouts	0.030-0.050
m. Trees, cleared land with tree stumps, with sprouts	0.050-0.080
n. Trees, heavy stand of timber, few down trees, flood stage below branches	0.080-0.120

Type of channel	Manning's n
o. Trees, heavy stand of timber, few down trees, flood stage reaching branches	0.100-0.160
3. Major streams (top width at flood stage > 100 ft)	
a. Regular section with no boulders or brush	0.025-0.060
b. Irregular rough section	0.035-0.100
B. Excavated or dredged channels	
1. Earth, straight and uniform	
a. Clean, recently completed	0.016-0.020
b. Clean, after weathering	0.018-0.025
c. Gravel, uniform section, clean	0.022-0.030
d. With short grass, few weeds	0.022-0.033
2. Earth, winding and sluggish	
a. No vegetation	0.023-0.030
b. Grass, some weeds	0.025-0.033
c. Deep weeds or aquatic plants in deep channels	0.030-0.040
d. Earth bottom and rubble sides	0.028-0.035
e. Stony bottom and weedy banks	0.025-0.040
f. Cobble bottom and clean sides	0.030-0.050
g. Winding, sluggish, stony bottom, weedy banks	0.025-0.040
h. Dense weeds as high as flow depth	0.050-0.120
3. Dragline-excavated or dredged	
a. No vegetation	0.025-0.033
b. Light brush on banks	0.035-0.060
4. Rock cuts	
a. Smooth and uniform	0.025-0.040
b. Jagged and irregular	0.035-0.050
5. Unmaintained channels	
a. Dense weeds, high as flow depth	0.050-0.120
b. Clean bottom, brush on sides	0.040-0.080
c. Clean bottom, brush on sides, highest stage	0.045-0.110
d. Dense brush, high stage	0.080-0.140
C. Lined channels	

Type of channel	Manning's n
1. Asphalt	0.013-0.016
2. Brick (in cement mortar)	0.012-0.018
3. Concrete	
a. Trowel finish	0.011-0.015
b. Float finish	0.013-0.016
c. Unfinished	0.014-0.020
d. Gunite, regular	0.016-0.023
e. Gunite, wavy	0.018-0.025
4. Riprap (n-value depends on rock size)	0.020-0.035
5. Vegetal lining	0.030-0.500

Table 4-8: Manning's Roughness Coefficients for Streets and Gutters

Type of gutter or pavement	Manning's n
Concrete gutter, troweled finish	0.012
Asphalt pavement: smooth texture	0.013
Asphalt pavement: rough texture	0.016
Concrete gutter with asphalt pavement: smooth texture	0.013
Concrete gutter with asphalt pavement: rough texture	0.015
Concrete pavement: float finish	0.014
Concrete pavement: broom finish	0.016

Table 4-8 note: For gutters with small slope or where sediment may accumulate, increase n values by 0.02 (USDOT, FHWA 2001).

Table 4-9: Manning's Coefficients for Closed Conduits (ASCE 1982, FHWA2001)

Material		Manning's n
Asbestos-cement pipe		0.011-0.015
Brick		0.013-0.017
Cast iron pipe		
	Cement-lined & seal coated	0.011-0.015
Concrete (monolithic)		
	Smooth forms	0.012-0.014
	Rough forms	0.015-0.017
	Concrete pipe	0.011-0.015
	Box (smooth)	0.012-0.015

Corrugated-metal pipe -- (2-1/2 in. x 1/2 in. corrugations)		
	Plain	0.022-0.026
	Paved invert	0.018-0.022
	Spun asphalt lined	0.011-0.015
	Plastic pipe (smooth)	0.011-0.015
Corrugated-metal pipe -- (2-2/3 in. by 1/2 in. annular)		0.022-0.027
Corrugated-metal pipe -- (2-2/3 in. by 1/2 in. helical)		0.011-0.023
Corrugated-metal pipe -- (6 in. by 1 in. helical)		0.022-0.025
Corrugated-metal pipe -- (5 in. by 1 in. helical)		0.025–0.026
Corrugated-metal pipe -- (3 in. by 1 in. helical)		0.027–0.028
Corrugated-metal pipe -- (6 in. by 2 in. structural plate)		0.033–0.035
Corrugated-metal pipe -- (9 in. by 2-1/2 in. structural plate)		0.033–0.037
Corrugated polyethylene		0.010–0.013
	Smooth	0.009-0.015
	Corrugated	0.018–0.025
Spiral rib metal pipe (smooth)		0.012-0.013
Vitrified clay		
	Pipes	0.011-0.015
	Liner plates	0.013-0.017
Polyvinyl chloride (PVC) (smooth)		0.009-0.011
Table 4-9 note: Manning's n for corrugated pipes is a function of the corrugation size, pipe size, and whether the corrugations are annular or helical (see USGS 1993).		

EXHIBIT P: EXHIBIT P - ROOF DRAINAGE AREA AND WIDTH FROM ARCHITECTURAL DRAWING (SWMM INPUT).

ROOF SUBCATCHMENT AREA AND WIDTH - Source : Architechtural drawing

EXHIBIT Q: 100-YEAR WATER SURFACE PROFILE IN THE EXISTING OUTFALL IMMIEDIATE DOWNSTREAM OF THE POND OUTLET PIPE

PINE BLUFF ARSENAL -ACP PROJECT -POSTDEVELOPMENT WATER SURFACE PROFILE IN THE IMMIDIATE DOWNSTREAM OF THE POND OUTLET PIPE (100YEAR-24 HOUR STORM EVENT)

APPENDIX P
CYBERSECURITY CONTROLS

Starting Control Set and Tailoring Recommendations

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-1	ACCESS CONTROL POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An access control policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the access control policy and associated access controls; and b. Reviews and updates the current: 1. Access control policy [Assignment: organization-defined frequency]; and 2. Access control procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-2	ACCOUNT MANAGEMENT	The organization: a. Identifies and selects the following types of information system accounts to support organizational missions/business functions: [Assignment: organization-defined information system account types]; b. Assigns account managers for information system accounts; c. Establishes conditions for group and role membership; d. Specifies authorized users of the information system, group and role membership, and access authorizations (i.e., privileges) and other attributes (as required) for each account; e. Requires approvals by [Assignment: organization-defined personnel or roles] for requests to create information system accounts; f. Creates, enables, modifies, disables, and removes information system accounts in accordance with [Assignment: organization-defined procedures or conditions]; g. Monitors the use of information system accounts; h. Notifies account managers: 1. When accounts are no longer required; 2. When users are terminated or transferred; and 3. When individual information system usage or need-to-know changes; i. Authorizes access to the information system based on: 1. A valid access authorization; 2. Intended system usage; and 3. Other attributes as required by the organization or associated missions/business functions; j. Reviews accounts for compliance with account management requirements [Assignment: organization-defined frequency]; and k. Establishes a process for reissuing shared/group account credentials (if deployed) when individuals are removed from the group.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-3	ACCESS ENFORCEMENT	The information system enforces approved authorizations for logical access to information and system resources in accordance with applicable access control policies.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-7	UNSUCCESSFUL LOGIN ATTEMPTS	The information system: a. Enforces a limit of [Assignment: organization-defined number] consecutive invalid logon attempts by a user during a [Assignment: organization-defined time period]; and b. Automatically [Selection: locks the account/node for an [Assignment: organization-defined time period]; locks the account/node until released by an administrator; delays next logon prompt according to [Assignment: organization-defined delay algorithm]] when the maximum number of unsuccessful attempts is exceeded.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-8	SYSTEM USE NOTIFICATION	The information system: a. Displays to users [Assignment: organization-defined system use notification message or banner] before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance and states that: 1. Users are accessing a U.S. Government information system; 2. Information system usage may be monitored, recorded, and subject to audit; 3. Unauthorized use of the information system is prohibited and subject to criminal and civil penalties; and 4. Use of the information system indicates consent to monitoring and recording; b. Retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access the information system; and c. For publicly accessible systems: 1. Displays system use information [Assignment: organization-defined conditions], before granting further access; 2. Displays references, if any, to monitoring, recording, or auditing that are consistent with privacy accommodations for such systems that generally prohibit those activities; and 3. Includes a description of the authorized uses of the system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-14	PERMITTED ACTIONS WITHOUT IDENTIFICATION OR AUTHENTICATION	The organization: a. Identifies [Assignment: organization-defined user actions] that can be performed on the information system without identification or authentication consistent with organizational missions/business functions; and b. Documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification or authentication.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-17	REMOTE ACCESS	The organization: a. Establishes and documents usage restrictions, configuration/connection requirements, and implementation guidance for each type of remote access allowed; and b. Authorizes remote access to the information system prior to allowing such connections.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-18	WIRELESS ACCESS	The organization: a. Establishes usage restrictions, configuration/connection requirements, and implementation guidance for wireless access; and b. Authorizes wireless access to the information system prior to allowing such connections.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-19	ACCESS CONTROL FOR MOBILE DEVICES	The organization: a. Establishes usage restrictions, configuration requirements, connection requirements, and implementation guidance for organization-controlled mobile devices; and b. Authorizes the connection of mobile devices to organizational information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-20	USE OF EXTERNAL INFORMATION SYSTEMS	The organization establishes terms and conditions, consistent with any trust relationships established with other organizations owning, operating, and/or maintaining external information systems, allowing authorized individuals to: a. Access the information system from external information systems; and b. Process, store, or transmit organization-controlled information using external information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-21	INFORMATION SHARING	The organization: a. Facilitates information sharing by enabling authorized users to determine whether access authorizations assigned to the sharing partner match the access restrictions on the information for [Assignment: organization-defined information sharing circumstances where user discretion is required]; and b. Employs [Assignment: organization-defined automated mechanisms or manual processes] to assist users in making information sharing/collaboration decisions.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-22	PUBLICLY ACCESSIBLE CONTENT	The organization: a. Designates individuals authorized to post information onto a publicly accessible information system; b. Trains authorized individuals to ensure that publicly accessible information does not contain nonpublic information; c. Reviews the proposed content of information prior to posting onto the publicly accessible information system to ensure that nonpublic information is not included; and d. Reviews the content on the publicly accessible information system for nonpublic information [Assignment: organization-defined frequency] and removes such information, if discovered.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-1	SECURITY AWARENESS AND TRAINING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security awareness and training policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security awareness and training policy and associated security awareness and training controls; and b. Reviews and updates the current: 1. Security awareness and training policy [Assignment: organization-defined frequency]; and 2. Security awareness and training procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-2	SECURITY AWARENESS TRAINING	The organization provides basic security awareness training to information system users (including managers, senior executives, and contractors): a. As part of initial training for new users; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-3	ROLE-BASED SECURITY TRAINING	The organization provides role-based security training to personnel with assigned security roles and responsibilities: a. Before authorizing access to the information system or performing assigned duties; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-4	SECURITY TRAINING RECORDS	The organization: a. Documents and monitors individual information system security training activities including basic security awareness training and specific information system security training; and b. Retains individual training records for [Assignment: organization-defined time period].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-1	AUDIT AND ACCOUNTABILITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An audit and accountability policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the audit and accountability policy and associated audit and accountability controls; and b. Reviews and updates the current: 1. Audit and accountability policy [Assignment: organization-defined frequency]; and 2. Audit and accountability procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-2	AUDIT EVENTS	The organization: a. Determines that the information system is capable of auditing the following events: [Assignment: organization-defined auditable events]; b. Coordinates the security audit function with other organizational entities requiring audit-related information to enhance mutual support and to help guide the selection of auditable events; c. Provides a rationale for why the auditable events are deemed to be adequate to support after-the-fact investigations of security incidents; and d. Determines that the following events are to be audited within the information system: [Assignment: organization-defined audited events (the subset of the auditable events defined in AU-2 a.) along with the frequency of (or situation requiring) auditing for each identified event].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-3	CONTENT OF AUDIT RECORDS	The information system generates audit records containing information that establishes what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, and the identity of any individuals or subjects associated with the event.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-4	AUDIT STORAGE CAPACITY	The organization allocates audit record storage capacity in accordance with [Assignment: organization-defined audit record storage requirements].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-4(1)	AUDIT STORAGE CAPACITY | TRANSFER TO ALTERNATE STORAGE	The information system off-loads audit records [Assignment: organization-defined frequency] onto a different system or media than the system being audited.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-5	RESPONSE TO AUDIT PROCESSING FAILURES	The information system: a. Alerts [Assignment: organization-defined personnel or roles] in the event of an audit processing failure; and b. Takes the following additional actions: [Assignment: organization-defined actions to be taken (e.g., shut down information system, overwrite oldest audit records, stop generating audit records)].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-6	AUDIT REVIEW, ANALYSIS, AND REPORTING	The organization: a. Reviews and analyzes information system audit records [Assignment: organization-defined frequency] for indications of [Assignment: organization-defined inappropriate or unusual activity]; and b. Reports findings to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AU-8	TIME STAMPS	The information system: a. Uses internal system clocks to generate time stamps for audit records; and b. Records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT) and meets [Assignment: organization-defined granularity of time measurement].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-9	PROTECTION OF AUDIT INFORMATION	The information system protects audit information and audit tools from unauthorized access, modification, and deletion.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-11	AUDIT RECORD RETENTION	The organization retains audit records for [Assignment: organization-defined time period consistent with records retention policy] to provide support for after-the-fact investigations of security incidents and to meet regulatory and organizational information retention requirements.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-12	AUDIT GENERATION	The information system: a. Provides audit record generation capability for the auditable events defined in AU-2 at [Assignment: organization-defined information system components]; b. Allows [Assignment: organization-defined personnel or roles] to select which auditable events are to be audited by specific components of the information system; and c. Generates audit records for the audited events defined in AU-2 with the content defined in AU-3.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-1	SECURITY ASSESSMENT AND AUTHORIZATION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security assessment and authorization policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security assessment and authorization policy and associated security assessment and authorization controls; and b. Reviews and updates the current: 1. Security assessment and authorization policy [Assignment: organization-defined frequency]; and 2. Security assessment and authorization procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-2	SECURITY ASSESSMENTS	The organization: a. Develops a security assessment plan that describes the scope of the assessment including: 1. Security controls and control enhancements under assessment; 2. Assessment procedures to be used to determine security control effectiveness; and 3. Assessment environment, assessment team, and assessment roles and responsibilities; b. Assesses the security controls in the information system and its environment of operation [Assignment: organization-defined frequency] to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting established security requirements; c. Produces a security assessment report that documents the results of the assessment; and d. Provides the results of the security control assessment to [Assignment: organization-defined individuals or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-3	SYSTEM INTERCONNECTIONS	The organization: a. Authorizes connections from the information system to other information systems through the use of Interconnection Security Agreements; b. Documents, for each interconnection, the interface characteristics, security requirements, and the nature of the information communicated; and c. Reviews and updates Interconnection Security Agreements [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-5	PLAN OF ACTION AND MILESTONES	The organization: a. Develops a plan of action and milestones for the information system to document the organization's planned remedial actions to correct weaknesses or deficiencies noted during the assessment of the security controls and to reduce or eliminate known vulnerabilities in the system; and b. Updates existing plan of action and milestones [Assignment: organization-defined frequency] based on the findings from security controls assessments, security impact analyses, and continuous monitoring activities.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-6	SECURITY AUTHORIZATION	The organization: a. Assigns a senior-level executive or manager as the authorizing official for the information system; b. Ensures that the authorizing official authorizes the information system for processing before commencing operations; and c. Updates the security authorization [Assignment: organization - defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-7	CONTINUOUS MONITORING	The organization develops a continuous monitoring strategy and implements a continuous monitoring program that includes: a. Establishment of [Assignment: organization-defined metrics] to be monitored; b. Establishment of [Assignment: organization-defined frequencies] for monitoring and [Assignment: organization-defined frequencies] for assessments supporting such monitoring; c. Ongoing security control assessments in accordance with the organizational continuous monitoring strategy; d. Ongoing security status monitoring of organization-defined metrics in accordance with the organizational continuous monitoring strategy; e. Correlation and analysis of security-related information generated by assessments and monitoring; f. Response actions to address results of the analysis of security-related information; and g. Reporting the security status of organization and the information system to [Assignment: organization-defined personnel or roles] [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-9	INTERNAL SYSTEM CONNECTIONS	The organization: a. Authorizes internal connections of [Assignment: organization-defined information system components or classes of components] to the information system; and b. Documents, for each internal connection, the interface characteristics, security requirements, and the nature of the information communicated.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CM-1	CONFIGURATION MANAGEMENT POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A configuration management policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the configuration management policy and associated configuration management controls; and b. Reviews and updates the current: 1. Configuration management policy [Assignment: organization-defined frequency]; and 2. Configuration management procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-2	BASELINE CONFIGURATION	The organization develops, documents, and maintains under configuration control, a current baseline configuration of the information system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-4	SECURITY IMPACT ANALYSIS	The organization analyzes changes to the information system to determine potential security impacts prior to change implementation.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-6	CONFIGURATION SETTINGS	The organization: a. Establishes and documents configuration settings for information technology products employed within the information system using [Assignment: organization-defined security configuration checklists] that reflect the most restrictive mode consistent with operational requirements; b. Implements the configuration settings; c. Identifies, documents, and approves any deviations from established configuration settings for [Assignment: organization - defined information system components] based on [Assignment: organization-defined operational requirements]; and d. Monitors and controls changes to the configuration settings in accordance with organizational policies and procedures.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-7	LEAST FUNCTIONALITY	The organization: a. Configures the information system to provide only essential capabilities; and b. Prohibits or restricts the use of the following functions, ports, protocols, and/or services: [Assignment: organization-defined prohibited or restricted functions, ports, protocols, and/or services].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-7(1)	LEAST FUNCTIONALITY | PERIODIC REVIEW	The organization: (a) Reviews the information system [Assignment: organization-defined frequency] to identify unnecessary and/or nonsecure functions, ports, protocols, and services; and (b) Disables [Assignment: organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-8	INFORMATION SYSTEM COMPONENT INVENTORY	The organization: a. Develops and documents an inventory of information system components that: 1. Accurately reflects the current information system; 2. Includes all components within the authorization boundary of the information system; 3. Is at the level of granularity deemed necessary for tracking and reporting; and 4. Includes [Assignment: organization-defined information deemed necessary to achieve effective information system component accountability]; and b. Reviews and updates the information system component inventory [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-10	SOFTWARE USAGE RESTRICTIONS	The organization: a. Uses software and associated documentation in accordance with contract agreements and copyright laws; b. Tracks the use of software and associated documentation protected by quantity licenses to control copying and distribution; and c. Controls and documents the use of peer-to-peer file sharing technology to ensure that this capability is not used for the unauthorized distribution, display, performance, or reproduction of copyrighted work.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-11	USER-INSTALLED SOFTWARE	The organization: a. Establishes [Assignment: organization-defined policies] governing the installation of software by users; b. Enforces software installation policies through [Assignment: organization-defined methods]; and c. Monitors policy compliance at [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-1	CONTINGENCY PLANNING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A contingency planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the contingency planning policy and associated contingency planning controls; and b. Reviews and updates the current: 1. Contingency planning policy [Assignment: organization-defined frequency]; and 2. Contingency planning procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CP-2	CONTINGENCY PLAN	The organization: a. Develops a contingency plan for the information system that: 1. Identifies essential missions and business functions and associated contingency requirements; 2. Provides recovery objectives, restoration priorities, and metrics; 3. Addresses contingency roles, responsibilities, assigned individuals with contact information; 4. Addresses maintaining essential missions and business functions despite an information system disruption, compromise, or failure; 5. Addresses eventual, full information system restoration without deterioration of the security safeguards originally planned and implemented; and 6. Is reviewed and approved by [Assignment: organization-defined personnel or roles]; b. Distributes copies of the contingency plan to [Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements]; c. Coordinates contingency planning activities with incident handling activities; d. Reviews the contingency plan for the information system [Assignment: organization-defined frequency]; e. Updates the contingency plan to address changes to the organization, information system, or environment of operation and problems encountered during contingency plan implementation, execution, or testing; f. Communicates contingency plan changes to [Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements]; and g. Protects the contingency plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-3	CONTINGENCY TRAINING	The organization provides contingency training to information system users consistent with assigned roles and responsibilities: a. Within [Assignment: organization-defined time period] of assuming a contingency role or responsibility; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-4	CONTINGENCY PLAN TESTING	The organization: a. Tests the contingency plan for the information system [Assignment: organization-defined frequency] using [Assignment: organization-defined tests] to determine the effectiveness of the plan and the organizational readiness to execute the plan; b. Reviews the contingency plan test results; and c. Initiates corrective actions, if needed.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-9	INFORMATION SYSTEM BACKUP	The organization: a. Conducts backups of user-level information contained in the information system [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; b. Conducts backups of system-level information contained in the information system [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; c. Conducts backups of information system documentation including security-related documentation [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; and d. Protects the confidentiality, integrity, and availability of backup information at storage locations.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-10	INFORMATION SYSTEM RECOVERY AND RECONSTITUTION	The organization provides for the recovery and reconstitution of the information system to a known state after a disruption, compromise, or failure.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-12	SAFE MODE	The information system, when [Assignment:organization-defined conditions] are detected, enters a safe mode of operation with [Assignment: organization-defined restrictions of safe mode of operation].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-1	IDENTIFICATION AND AUTHENTICATION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An identification and authentication policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the identification and authentication policy and associated identification and authentication controls; and b. Reviews and updates the current: 1. Identification and authentication policy [Assignment: organization-defined frequency]; and 2. Identification and authentication procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-2	IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS)	The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-2(1)	IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS	The information system implements multifactor authentication for network access to privileged accounts.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-2(12)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS	The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-3	DEVICE IDENTIFICATION AND AUTHENTICATION	The information system uniquely identifies and authenticates [Assignment: organization defined specific and/or types of devices] before establishing a [Selection (one or more): local; remote; network] connection.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-4	IDENTIFIER MANAGEMENT	The organization manages information system identifiers by: a. Receiving authorization from [Assignment: organization-defined personnel] to assign an individual, group, role, or device identifier; b. Selecting an identifier that identifies an individual, group, role, or device; c. Assigning the identifier to the intended individual, group, role, or device; d. Preventing reuse of identifiers for [Assignment: organization-defined time period]; and e. Disabling the identifier after [Assignment: organization-defined time period of inactivity].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IA-5	AUTHENTICATOR MANAGEMENT	The organization manages information system authenticators by: a. Verifying, as part of the initial authenticator distribution, the identity of the individual, group, role, or device receiving the authenticator; b. Establishing initial authenticator content for authenticators defined by the organization; c. Ensuring that authenticators have sufficient strength of mechanism for their intended use; d. Establishing and implementing administrative procedures for initial authenticator distribution, for lost/compromised or damaged authenticators, and for revoking authenticators; e. Changing default content of authenticators prior to information system installation; f. Establishing minimum and maximum lifetime restrictions and reuse conditions for authenticators; g. Changing/refreshing authenticators [Assignment: organization-defined time period by authenticator type]; h. Protecting authenticator content from unauthorized disclosure and modification; i. Requiring individuals to take, and having devices implement, specific security safeguards to protect authenticators; and j. Changing authenticators for group/role accounts when membership to those accounts changes.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-5(1)	AUTHENTICATOR MANAGEMENT | PASSWORD-BASED AUTHENTICATION	The information system, for password-based authentication: (a) Enforces minimum password complexity of [Assignment: organization-defined requirements for case sensitivity, number of characters, mix of upper-case letters, lower-case letters, numbers, and special characters, including minimum requirements for each type]; (b) Enforces at least the following number of changed characters when new passwords are created: [Assignment: organization-defined number]; (c) Stores and transmits only cryptographically-protected passwords; (d) Enforces password minimum and maximum lifetime restrictions of [Assignment: organization-defined numbers for lifetime minimum, lifetime maximum]; (e) Prohibits password reuse for [Assignment: organization-defined number] generations; and (f) Allows the use of a temporary password for system logons with an immediate change to a permanent password.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-5(11)	AUTHENTICATOR MANAGEMENT | HARDWARE TOKEN-BASED AUTHENTICATION	The information system, for hardware token-based authentication, employs mechanisms that satisfy [Assignment: organization-defined token quality requirements].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-6	AUTHENTICATOR FEEDBACK	The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-7	CRYPTOGRAPHIC MODULE AUTHENTICATION	The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8	IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS)	The information system uniquely identifies and authenticates non-organizational users (or processes acting on behalf of non-organizational users).	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(1)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS FROM OTHER AGENCIES	The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials from other federal agencies.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(2)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF THIRD-PARTY CREDENTIALS	The information system accepts only FICAM-approved third-party credentials.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(3)	IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-APPROVED PRODUCTS	The organization employs only FICAM-approved information system components in [Assignment: organization-defined information systems] to accept third-party credentials.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(4)	IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-ISSUED PROFILES	The information system conforms to FICAM-issued profiles.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-1	INCIDENT RESPONSE POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An incident response policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the incident response policy and associated incident response controls; and b. Reviews and updates the current: 1. Incident response policy [Assignment: organization-defined frequency]; and 2. Incident response procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-2	INCIDENT RESPONSE TRAINING	The organization provides incident response training to information system users consistent with assigned roles and responsibilities: a. Within [Assignment: organization-defined time period] of assuming an incident response role or responsibility; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-4	INCIDENT HANDLING	The organization: a. Implements an incident handling capability for security incidents that includes preparation, detection and analysis, containment, eradication, and recovery; b. Coordinates incident handling activities with contingency planning activities; and c. Incorporates lessons learned from ongoing incident handling activities into incident response procedures, training, and testing/exercises, and implements the resulting changes accordingly.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-5	INCIDENTMONITORING	The organization tracks and documents information system security incidents.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IR-6	INCIDENT REPORTING	The organization: a. Requires personnel to report suspected security incidents to the organizational incident response capability within [Assignment: organization-defined time-period]; and b. Reports security incident information to [Assignment: organization-defined authorities].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-7	INCIDENT RESPONSE ASSISTANCE	The organization provides an incident response support resource, integral to the organizational incident response capability, that offers advice and assistance to users of the information system for the handling and reporting of security incidents.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-8	INCIDENT RESPONSE PLAN	The organization: a. Develops an incident response plan that: 1. Provides the organization with a roadmap for implementing its incident response capability; 2. Describes the structure and organization of the incident response capability; 3. Provides a high-level approach for how the incident response capability fits into the overall organization; 4. Meets the unique requirements of the organization, which relate to mission, size, structure, and functions; 5. Defines reportable incidents; 6. Provides metrics for measuring the incident response capability within the organization; 7. Defines the resources and management support needed to effectively maintain and mature an incident response capability; and 8. Is reviewed and approved by [Assignment: organization-defined personnel or roles]; b. Distributes copies of the incident response plan to [Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements]; c. Reviews the incident response plan [Assignment: organization-defined frequency]; d. Updates the incident response plan to address system/organizational changes or problems encountered during plan implementation, execution, or testing; e. Communicates incident response plan changes to [Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements]; and f. Protects the incident response plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-1	SYSTEM MAINTENANCE POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system maintenance policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system maintenance policy and associated system maintenance controls; and b. Reviews and updates the current: 1. System maintenance policy [Assignment: organization-defined frequency]; and 2. System maintenance procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-2	CONTROLLED MAINTENANCE	The organization: a. Schedules, performs, documents, and reviews records of, maintenance and repairs on information system components in accordance with manufacturer or vendor specifications and /or organizational requirements; b. Approves and monitors all maintenance activities, whether performed on site or remotely and whether the equipment is serviced on site or removed to another location; c. Requires that [Assignment: organization-defined personnel] explicitly approve the removal of the information system or system components from organizational facilities for off-site maintenance or repairs; d. Sanitizes equipment to remove all information from associated media prior to removal from organizational facilities for off-site maintenance or repairs; e. Checks all potentially impacted security controls to verify that the controls are still functioning properly following maintenance or repair actions; and f. Includes [Assignment: organization-defined maintenance-related information] in organizational maintenance records.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-4	NONLOCAL MAINTENANCE	The organization: a. Approves and monitors nonlocal maintenance and diagnostic activities; b. Allows the use of nonlocal maintenance and diagnostic tools only as consistent with organizational policy and documented in the security plan for the information system; c. Employs strong authenticators in the establishment of nonlocal maintenance and diagnostic sessions; d. Maintains records for nonlocal maintenance and diagnostic activities; and e. Terminates session and network connections when nonlocal maintenance is completed.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-5	MAINTENANCE PERSONNEL	The organization: a. Establishes a process for maintenance personnel authorization and maintains a list of authorized maintenance organizations or personnel; b. Ensures that non-escorted personnel performing maintenance on the information system have required access authorizations; and c. Designates organizational personnel with required access authorizations and technical competence to supervise the maintenance activities of personnel who do not possess the required access authorizations.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MP-1	MEDIA PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A media protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the media protection policy and associated media protection controls; and b. Reviews and updates the current: 1. Media protection policy [Assignment: organization-defined frequency]; and 2. Media protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MP-2	MEDIA ACCESS	The organization restricts access to [Assignment: organization-defined types of digital and/or non-digital media] to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
MP-6	MEDIA SANITIZATION	The organization: a. Sanitizes [Assignment: organization-defined information system media] prior to disposal, release out of organizational control, or release for reuse using [Assignment: organization-defined sanitization techniques and procedures] in accordance with applicable federal and organizational standards and policies; and b. Employs sanitization mechanisms with the strength and integrity commensurate with the security category or classification of the information.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MP-7	MEDIA USE	The organization [Selection: restricts; prohibits] the use of [Assignment: organization-defined types of information system media] on [Assignment: organization-defined information systems or system components] using [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-1	PHYSICAL AND ENVIRONMENTAL PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A physical and environmental protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the physical and environmental protection policy and associated physical and environmental protection controls; and b. Reviews and updates the current: 1. Physical and environmental protection policy [Assignment: organization-defined frequency]; and 2. Physical and environmental protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-2	PHYSICAL ACCESS AUTHORIZATIONS	The organization: a. Develops, approves, and maintains a list of individuals with authorized access to the facility where the information system resides; b. Issues authorization credentials for facility access; c. Reviews the access list detailing authorized facility access by individuals [Assignment: organization-defined frequency]; and d. Removes individuals from the facility access list when access is no longer required.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-3	PHYSICAL ACCESS CONTROL	The organization: a. Enforces physical access authorizations at [Assignment: organization-defined entry/exit points to the facility where the information system resides] by; 1. Verifying individual access authorizations before granting access to the facility; and 2. Controlling ingress/egress to the facility using [Selection (one or more): [Assignment: organization-defined physical access control systems/devices]; guards]; b. Maintains physical access audit logs for [Assignment: organization-defined entry/exit points]; c. Provides [Assignment: organization-defined security safeguards] to control access to areas within the facility officially designated as publicly accessible; d. Escorts visitors and monitors visitor activity [Assignment: organization-defined circumstances requiring visitor escorts and monitoring]; e. Secures keys, combinations, and other physical access devices; f. Inventories [Assignment: organization-defined physical access devices] every [Assignment: organization-defined frequency]; and g. Changes combinations and keys [Assignment: organization-defined frequency] and/or when keys are lost, combinations are compromised, or individuals are transferred or terminated.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-6	MONITORING PHYSICAL ACCESS	The organization: a. Monitors physical access to the facility where the information system resides to detect and respond to physical security incidents; b. Reviews physical access logs [Assignment: organization-defined frequency] and upon occurrence of [Assignment: organization-defined events or potential indications of events]; and c. Coordinates results of reviews and investigations with the organizational incident response capability.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-8	VISITOR ACCESS RECORDS	The organization: a. Maintains visitor access records to the facility where the information system resides for [Assignment: organization-defined time period]; and b. Reviews visitor access records [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-11	EMERGENCY POWER	The organization provides a short-term uninterruptible power supply to facilitate [Selection (one or more): an orderly shutdown of the information system; transition of the information system to long-term alternate power] in the event of a primary power source loss.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-11(1)	EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - MINIMAL OPERATIONAL CAPABILITY	The organization provides a long-term alternate power supply for the information system that is capable of maintaining minimally required operational capability in the event of an extended loss of the primary power source.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-12	EMERGENCY LIGHTING	The organization employs and maintains automatic emergency lighting for the information system that activates in the event of a power outage or disruption and that covers emergency exits and evacuation routes within the facility.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-13	FIRE PROTECTION	The organization employs and maintains fire suppression and detection devices/systems for the information system that are supported by an independent energy source.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-14	TEMPERATURE AND HUMIDITY CONTROLS	The organization: a. Maintains temperature and humidity levels within the facility where the information system resides at [Assignment: organization - defined acceptable levels]; and b. Monitors temperature and humidity levels [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-15	WATER DAMAGE PROTECTION	The organization protects the information system from damage resulting from water leakage by providing master shutoff or isolation valves that are accessible, working properly, and known to key personnel.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-16	DELIVERY AND REMOVAL	The organization authorizes, monitors, and controls [Assignment: organization-defined types of information system components] entering and exiting the facility and maintains records of those items.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PL-1	SECURITY PLANNING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security planning policy and associated security planning controls; and b. Reviews and updates the current: 1. Security planning policy [Assignment: organization-defined frequency]; and 2. Security planning procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PL-2	SYSTEM SECURITY PLAN	The organization: a. Develops a security plan for the information system that: 1. Is consistent with the organization's enterprise architecture; 2. Explicitly defines the authorization boundary for the system; 3. Describes the operational context of the information system in terms of missions and business processes; 4. Provides the security categorization of the information system including supporting rationale; 5. Describes the operational environment for the information system and relationships with or connections to other information systems; 6. Provides an overview of the security requirements for the system; 7. Identifies any relevant overlays, if applicable 8. Describes the security controls in place or planned for meeting those requirements including a rationale for the tailoring decisions; and 9. Is reviewed and approved by the authorizing official or designated representative prior to plan implementation; b. Distributes copies of the security plan and communicates subsequent changes to the plan to [Assignment: organization-defined personnel or roles]; c. Reviews the security plan for the information system [Assignment: organization-defined frequency]; d. Updates the plan to address changes to the information system/environment of operation or problems identified during plan implementation or security control assessments; and e. Protects the security plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PL-2(3)	SYSTEM SECURITY PLAN | PLAN / COORDINATE WITH OTHER ORGANIZATIONAL ENTITIES	The organization plans and coordinates security-related activities affecting the information system with [Assignment: organization-defined individuals or groups] before conducting such activities in order to reduce the impact on other organizational entities.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PL-4	RULES OF BEHAVIOR	The organization: a. Establishes and makes readily available to individuals requiring access to the information system, the rules that describe their responsibilities and expected behavior with regard to information and information system usage; b. Receives a signed acknowledgment from such individuals, indicating that they have read, understand, and agree to abide by the rules of behavior, before authorizing access to information and the information system; c. Reviews and updates the rules of behavior [Assignment: organization-defined frequency]; and d. Requires individuals who have signed a previous version of the rules of behavior to read and resign when the rules of behavior are revised/updated.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-1	PERSONNEL SECURITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A personnel security policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the personnel security policy and associated personnel security controls; and b. Reviews and updates the current: 1. Personnel security policy [Assignment: organization-defined frequency]; and 2. Personnel security procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-2	POSITION RISK DESIGNATION	The organization: a. Assigns a risk designation to all organizational positions; b. Establishes screening criteria for individuals filling those positions; and c. Reviews and updates position risk designations [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-3	PERSONNEL SCREENING	The organization: a. Screens individuals prior to authorizing access to the information system; and b. Rescreens individuals according to [Assignment: organization -defined conditions requiring rescreening and, where re-screening is so indicated, the frequency of such rescreening].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-4	PERSONNEL TERMINATION	The organization, upon termination of individual employment: a. Disables information system access within [Assignment: organization-defined time period]; b. Terminates/revokes any authenticators/credentials associated with the individual; c. Conducts exit interviews that include a discussion of [Assignment: organization-defined information security topics]; d. Retrieves all security-related organizational information system-related property; e. Retains access to organizational information and information systems formerly controlled by terminated individual; and f. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-5	PERSONNEL TRANSFER	The organization: a. Reviews and confirms ongoing operational need for current logical and physical access authorizations to information systems/facilities when individuals are reassigned or transferred to other positions within the organization; b. Initiates [Assignment: organization-defined transfer or reassignment actions] within [Assignment: organization-defined time period following the formal transfer action]; c. Modifies access authorization as needed to correspond with any changes in operational need due to reassignment or transfer; and d. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PS-6	ACCESS AGREEMENTS	The organization: a. Develops and documents access agreements for organizational information systems; b. Reviews and updates the access agreements [Assignment: organization-defined frequency]; and c. Ensures that individuals requiring access to organizational information and information systems: 1. Sign appropriate access agreements prior to being granted access; and 2. Re-sign access agreements to maintain access to organizational information systems when access agreements have been updated or [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-7	THIRD-PARTY PERSONNEL SECURITY	The organization: a. Establishes personnel security requirements including security roles and responsibilities for third-party providers; b. Requires third-party providers to comply with personnel security policies and procedures established by the organization; c. Documents personnel security requirements; d. Requires third-party providers to notify [Assignment: organization-defined personnel or roles] of any personnel transfers or terminations of third-party personnel who possess organizational credentials and/or badges, or who have information system privileges within [Assignment: organization-defined time period]; and e. Monitors provider compliance.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-8	PERSONNEL SANCTIONS	The organization: a. Employs a formal sanctions process for individuals failing to comply with established information security policies and procedures; and b. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period] when a formal employee sanctions process is initiated, identifying the individual sanctioned and the reason for the sanction.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-1	RISK ASSESSMENT POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A risk assessment policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the risk assessment policy and associated risk assessment controls; and b. Reviews and updates the current: 1. Risk assessment policy [Assignment: organization-defined frequency]; and 2. Risk assessment procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-2	SECURITY CATEGORIZATION	The organization: a. Categorizes information and the information system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance; b. Documents the security categorization results (including supporting rationale) in the security plan for the information system; and c. Ensures that the security categorization decision is reviewed and approved by the authorizing official or authorizing official designated representative.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-3	RISK ASSESSMENT	The organization: a. Conducts an assessment of risk, including the likelihood and magnitude of harm, from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information system and the information it processes, stores, or transmits; b. Documents risk assessment results in [Selection: security plan; risk assessment report; [Assignment: organization-defined document]]; c. Reviews risk assessment results [Assignment: organization-defined frequency]; d. Disseminates risk assessment results to [Assignment: organization-defined personnel or roles]; and e. Updates the risk assessment [Assignment: organization-defined frequency] or whenever there are significant changes to the information system or environment of operation (including the identification of new threats and vulnerabilities), or other conditions that may impact the security state of the system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-5	VULNERABILITY SCANNING	The organization: a. Scans for vulnerabilities in the information system and hosted applications [Assignment: organization-defined frequency and/or randomly in accordance with organization-defined process] and when new vulnerabilities potentially affecting the system/applications are identified and reported; b. Employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by using standards for: 1. Enumerating platforms, software flaws, and improper configurations; 2. Formatting checklists and test procedures; and 3. Measuring vulnerability impact; c. Analyzes vulnerability scan reports and results from security control assessments; d. Remediates legitimate vulnerabilities [Assignment: organization-defined response times] in accordance with an organizational assessment of risk; and e. Shares information obtained from the vulnerability scanning process and security control assessments with [Assignment: organization-defined personnel or roles] to help eliminate similar vulnerabilities in other information systems (i.e., systemic weaknesses or deficiencies).	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-1	SYSTEM AND SERVICES ACQUISITION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and services acquisition policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and services acquisition policy and associated system and services acquisition controls; and b. Reviews and updates the current: 1. System and services acquisition policy [Assignment: organization-defined frequency]; and 2. System and services acquisition procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SA-2	ALLOCATION OF RESOURCES	The organization: a. Determines information security requirements for the information system or information system service in mission/business process planning; b. Determines, documents, and allocates the resources required to protect the information system or information system service as part of its capital planning and investment control process; and c. Establishes a discrete line item for information security in organizational programming and budgeting documentation	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-3	SYSTEM DEVELOPMENT LIFE CYCLE	The organization: a. Manages the information system using [Assignment: organization-defined system development life cycle] that incorporates information security considerations; b. Defines and documents information security roles and responsibilities throughout the system development life cycle; c. Identifies individuals having information security roles and responsibilities; and d. Integrates the organizational information security risk management process into system development life cycle activities.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-4	ACQUISITION PROCESS	The organization includes the following requirements, descriptions, and criteria, explicitly or by reference, in the acquisition contract for the information system, system component, or information system service in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, guidelines, and organizational mission/business needs: a. Security functional requirements; b. Security strength requirements; c. Security assurance requirements; d. Security-related documentation requirements; e. Requirements for protecting security-related documentation; f. Description of the information system development environment and environment in which the system is intended to operate; and g. Acceptance criteria.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-4(10)	ACQUISITION PROCESS | USE OF APPROVED PIV PRODUCTS	The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-5	INFORMATION SYSTEM DOCUMENTATION	The organization: a. Obtains administrator documentation for the information system, system component, or information system service that describes: 1. Secure configuration, installation, and operation of the system, component, or service; 2. Effective use and maintenance of security functions/mechanisms; and 3. Known vulnerabilities regarding configuration and use of administrative (i.e., privileged) functions; b. Obtains user documentation for the information system, system component, or information system service that describes: 1. User-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms; 2. Methods for user interaction, which enables individuals to use the system, component, or service in a more secure manner; and 3. User responsibilities in maintaining the security of the system, component, or service; c. Documents attempts to obtain information system, system component, or information system service documentation when such documentation is either unavailable or nonexistent and [Assignment: organization-defined actions] in response; d. Protects documentation as required, in accordance with the risk management strategy; and e. Distributes documentation to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-9	EXTERNAL INFORMATION SYSTEM SERVICES	The organization: a. Requires that providers of external information system services comply with organizational information security requirements and employ [Assignment: organization-defined security controls] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance; b. Defines and documents government oversight and user roles and responsibilities with regard to external information system services; and c. Employs [Assignment: organization-defined processes, methods, and techniques] to monitor security control compliance by external service providers on an ongoing basis.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-1	SYSTEM AND COMMUNICATIONS PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and communications protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and communications protection policy and associated system and communications protection controls; and b. Reviews and updates the current: 1. System and communications protection policy [Assignment: organization-defined frequency]; and 2. System and communications protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-5	DENIAL OF SERVICE PROTECTION	The information system protects against or limits the effects of the following types of denial of service attacks: [Assignment: organization-defined types of denial of service attacks or reference to source for such information] by employing [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-7	BOUNDARY PROTECTION	The information system: a. Monitors and controls communications at the external boundary of the system and at key internal boundaries within the system; b. Implements subnetworks for publicly accessible system components that are [Selection: physically; logically] separated from internal organizational networks; and c. Connects to external networks or information systems only through managed interfaces consisting of boundary protection devices arranged in accordance with an organizational security architecture.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-12	CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT	The organization establishes and manages cryptographic keys for required cryptography employed within the information system in accordance with [Assignment: organization-defined requirements for key generation, distribution, storage, access, and destruction].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SC-13	CRYPTOGRAPHIC PROTECTION	The information system implements [Assignment: organization-defined cryptographic uses and type of cryptography required for each use] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-15	COLLABORATIVE COMPUTING DEVICES	The information system: a. Prohibits remote activation of collaborative computing devices with the following exceptions: [Assignment: organization-defined exceptions where remote activation is to be allowed]; and b. Provides an explicit indication of use to users physically present at the devices.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-20	SECURE NAME / ADDRESS RESOLUTION SERVICE (AUTHORITATIVE SOURCE)	The information system: a. Provides additional data origin authentication and integrity verification artifacts along with the authoritative name resolution data the system returns in response to external name/address resolution queries; and b. Provides the means to indicate the security status of child zones and (if the child supports secure resolution services) to enable verification of a chain of trust among parent and child domains, when operating as part of a distributed, hierarchical namespace.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-21	SECURE NAME / ADDRESS RESOLUTION SERVICE (RECURSIVE OR CACHING RESOLVER)	The information system requests and performs data origin authentication and data integrity verification on the name/address resolution responses the system receives from authoritative sources.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-22	ARCHITECTURE AND PROVISIONING FOR NAME / ADDRESS RESOLUTION SERVICE	The information systems that collectively provide name/address resolution service for an organization are fault-tolerant and implement internal/external role separation.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-39	PROCESS ISOLATION	The information system maintains a separate execution domain for each executing process.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-41	PORT AND I/O DEVICE ACCESS	The organization physically disables or removes [Assignment: organization-defined connection ports or input/output devices] on [Assignment: organization-defined information systems or information system components].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-1	SYSTEM AND INFORMATION INTEGRITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and information integrity policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and information integrity policy and associated system and information integrity controls; and b. Reviews and updates the current: 1. System and information integrity policy [Assignment: organization-defined frequency]; and 2. System and information integrity procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-2	FLAW REMEDIATION	The organization: a. Identifies, reports, and corrects information system flaws; b. Tests software and firmware updates related to flaw remediation for effectiveness and potential side effects before installation; c. Installs security-relevant software and firmware updates within [Assignment: organization-defined time period] of the release of the updates; and d. Incorporates flaw remediation into the organizational configuration management process.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-3	MALICIOUS CODE PROTECTION	The organization: a. Employs malicious code protection mechanisms at information system entry and exit points to detect and eradicate malicious code; b. Updates malicious code protection mechanisms whenever new releases are available in accordance with organizational configuration management policy and procedures; c. Configures malicious code protection mechanisms to: 1. Perform periodic scans of the information system [Assignment: organization-defined frequency] and real-time scans of files from external sources at [Selection (one or more); endpoint; network entry/exit points] as the files are downloaded, opened, or executed in accordance with organizational security policy; and 2. [Selection (one or more): block malicious code; quarantine malicious code; send alert to administrator; [Assignment: organization-defined action]] in response to malicious code detection; and d. Addresses the receipt of false positives during malicious code detection and eradication and the resulting potential impact on the availability of the information system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-4	INFORMATION SYSTEM MONITORING	The organization: a. Monitors the information system to detect: 1. Attacks and indicators of potential attacks in accordance with [Assignment: organization-defined monitoring objectives]; and 2. Unauthorized local, network, and remote connections; b. Identifies unauthorized use of the information system through [Assignment: organization-defined techniques and methods]; c. Deploys monitoring devices: (i) strategically within the information system to collect organization-determined essential information; and (ii) at ad hoc locations within the system to track specific types of transactions of interest to the organization; d. Protects information obtained from intrusion-monitoring tools from unauthorized access, modification, and deletion; e. Heightens the level of information system monitoring activity whenever there is an indication of increased risk to organizational operations and assets, individuals, other organizations, or the Nation based on law enforcement information, intelligence information, or other credible sources of information; f. Obtains legal opinion with regard to information system monitoring activities in accordance with applicable federal laws, Executive Orders, directives, policies, or regulations; and g. Provides [Assignment: organization-defined information system monitoring information] to [Assignment: organization-defined personnel or roles] [Selection (one or more): as needed; [Assignment: organization-defined frequency]].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SI-5	SECURITY ALERTS, ADVISORIES, AND DIRECTIVES	The organization: a. Receives information system security alerts, advisories, and directives from [Assignment: organization-defined external organizations] on an ongoing basis; b. Generates internal security alerts, advisories, and directives as deemed necessary; c. Disseminates security alerts, advisories, and directives to: [Selection (one or more): [Assignment: organization-defined personnel (identified by name and/or by role)]; [Assignment: organization-defined elements within the organization]; [Assignment: organization-defined external organizations]]; and d. Implements security directives in accordance with established time frames, or notifies the issuing organization of the degree of noncompliance.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-12	INFORMATION HANDLING AND RETENTION	The organization handles and retains information within the information system and information output from the system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and operational requirements.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-17	FAIL-SAFE PROCEDURES	The information system implements [Assignment: organization-defined fail-safe procedures] when [Assignment: organization-defined failure conditions occur].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-1	INFORMATION SECURITY PROGRAM PLAN	The organization: a. Develops and disseminates an organization-wide information security program plan that: 1. Provides an overview of the requirements for the security program and a description of the security program management controls and common controls in place or planned for meeting those requirements; 2. Includes the identification and assignment of roles, responsibilities, management commitment, coordination among organizational entities, and compliance; 3. Reflects coordination among organizational entities responsible for the different aspects of information security (i.e., technical, physical, personnel, cyber-physical); and 4. Is approved by a senior official with responsibility and accountability for the risk being incurred to organizational operations (including mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation; b. Reviews the organization-wide information security program plan [Assignment: organization-defined frequency]; c. Updates the plan to address organizational changes and problems identified during plan implementation or security control assessments; and d. Protects the information security program plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-2	SENIOR INFORMATION SECURITY OFFICER	The organization appoints a senior information security officer with the mission and resources to coordinate, develop, implement, and maintain an organization-wide information security program.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-3	INFORMATION SECURITY RESOURCES	The organization: a. Ensures that all capital planning and investment requests include the resources needed to implement the information security program and documents all exceptions to this requirement; b. Employs a business case/Exhibit 300/Exhibit 53 to record the resources required; and c. Ensures that information security resources are available for expenditure as planned.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-4	PLAN OF ACTION AND MILESTONES PROCESS	The organization: a. Implements a process for ensuring that plans of action and milestones for the security program and associated organizational information systems: 1. Are developed and maintained; 2. Document the remedial information security actions to adequately respond to risk to organizational operations and assets, individuals, other organizations, and the Nation; and 3. Are reported in accordance with OMB FISMA reporting requirements. b. Reviews plans of action and milestones for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-5	INFORMATION SYSTEM INVENTORY	The organization develops and maintains an inventory of its information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-6	INFORMATION SECURITY MEASURES OF PERFORMANCE	The organization develops, monitors, and reports on the results of information security measures of performance.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-7	ENTERPRISE ARCHITECTURE	The organization develops an enterprise architecture with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-8	CRITICAL INFRASTRUCTURE PLAN	The organization addresses information security issues in the development, documentation, and updating of a critical infrastructure and key resources protection plan.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-9	RISK MANAGEMENT STRATEGY	The organization: a. Develops a comprehensive strategy to manage risk to organizational operations and assets, individuals, other organizations, and the Nation associated with the operation and use of information systems; b. Implements the risk management strategy consistently across the organization; and c. Reviews and updates the risk management strategy [Assignment: organization-defined frequency] or as required, to address organizational changes.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-10	SECURITY AUTHORIZATION PROCESS	The organization: a. Manages (i.e., documents, tracks, and reports) the security state of organizational information systems and the environments in which those systems operate through security authorization processes; b. Designates individuals to fulfill specific roles and responsibilities within the organizational risk management process; and c. Fully integrates the security authorization processes into an organization-wide risk management program.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-11	MISSION/BUSINESS PROCESS DEFINITION	The organization: a. Defines mission/business processes with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation; and b. Determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until achievable protection needs are obtained.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PM-12	INSIDER THREAT PROGRAM	The organization implements an insider threat program that includes a cross-discipline insider threat incident handling team.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-13	INFORMATION SECURITY WORKFORCE	The organization establishes an information security workforce development and improvement program.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-14	TESTING, TRAINING, AND MONITORING	The organization: a. Implements a process for ensuring that organizational plans for conducting security testing, training, and monitoring activities associated with organizational information systems: 1. Are developed and maintained; and 2. Continue to be executed in a timely manner; b. Reviews testing, training, and monitoring plans for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-15	CONTACTS WITH SECURITY GROUPS AND ASSOCIATIONS	The organization establishes and institutionalizes contact with selected groups and associations within the security community: a. To facilitate ongoing security education and training for organizational personnel; b. To maintain currency with recommended security practices, techniques, and technologies; and c. To share current security-related information including threats, vulnerabilities, and incidents.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-16	THREAT AWARENESS PROGRAM	The organization implements a threat awareness program that includes a cross-organization information-sharing capability.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Correlation Identifiers (CCI) List

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000043	AC-7(a)	The organization defines the maximum number of consecutive invalid logon attempts to the information system by a user during an organization-defined time period.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	Except for high availability user interfaces indicated as exempt, devices must meet the indicated requirements (3) for handling unsuccessful logon attempts. If a device cannot meet these requirements, document device capabilities to protect from subsequent logon attempts and propose alternate protections in a Device Account Lock Exception Request submittal. Do not implement alternate protection measures in lieu of the indicated requirements without explicit permission from the Government.
CCI-000044	AC-7(a)	The information system enforces the organization-defined limit of consecutive invalid logon attempts by a user during the organization-defined time period.	Designer	Unsuccessful Logon Attempts	Except for high availability user interfaces indicated as exempt, devices must meet the indicated requirements (3) for handling unsuccessful logon attempts. If a device cannot meet these requirements, document device capabilities to protect from subsequent logon attempts and propose alternate protections in a Device Account Lock Exception Request submittal. Do not implement alternate protection measures in lieu of the indicated requirements without explicit permission from the Government.
CCI-000048	AC-8(a)	The information system displays an organization-defined system use notification message or banner before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance.	Enclave Designer Impractical	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors.
CCI-000050	AC-8(b)	The information system retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access.	Enclave Designer	System Use Notification	See CCI-000048
CCI-000061	AC-14(a)	The organization identifies and defines organization-defined user actions that can be performed on the information system without identification or authentication consistent with organizational missions/business functions.	Designer	Permitted Actions Without Identification and Authentication	---
CCI-000123	AU-2(a)	The organization determines the information system must be capable of auditing an organization-defined list of auditable events.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	This is met by requiring the contractor to configure all BAS Controllers which FULLY Support Accounts to audit: a. Successful and unsuccessful logon attempts to the controller; b. Successful logouts; c. All account creations, modifications, disabling, and terminations; d. All controller shutdown and startup. For all other controllers, there are no requirements to perform auditing at these field controllers that do not FULLY support accounts and are not capable of meeting these requirements.
CCI-000125	AU-2(c)	The organization provides a rationale for why the list of auditable events is deemed to be adequate to support after-the-fact investigations of security incidents.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	This is met by requiring the contractor to configure all BAS Controllers which FULLY Support Accounts to audit what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, the identity of any individuals or subjects associated with the event, as applicable and as the controller is capable.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000130	AU-3	The information system generates audit records containing information that establishes what type of event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes what type of event occurred. Contractor to determine and apply all STIGs/SRGs.
CCI-000131	AU-3	The information system generates audit records containing information that establishes when an event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to g audit records containing information that establishes when an event occurred. Contractor to determine and apply all STIGs/SRGs.
CCI-000132	AU-3	The information system generates audit records containing information that establishes where the event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes where the event occurred. Contractor to determine and apply all STIGs/SRGs.
CCI-000133	AU-3	The information system generates audit records containing information that establishes the source of the event.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes the source of the event. Contractor to determine and apply all STIGs/SRGs.
CCI-000134	AU-3	The information system generates audit records containing information that establishes the outcome of the event.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes the outcome of the event. Contractor to determine and apply all STIGs/SRGs.
CCI-000159	AU-8(a)	The information system uses internal system clocks to generate time stamps for audit records.	Designer	Audit Time Stamps	This is partially met by requiring the contractor to ensure that any device, (controller) generating audit records must have an internal clock capable of providing time with a resolution of one second. Contractor to ensure clocks must not drift more than 10 seconds per day. Contractor must configure the system so that each device (computer or controller) generating audit records maintains accurate time to within one second. Contractor is to ensure that if the control system specifications include requirement for clocks, the most stringent requirement applies. Contractor is responsible to determine and apply all applicable STIGs and SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000169	AU-12(a)	The information system provides audit record generation capability for the auditable events defined in AU-2 a at organization defined information system components.	Designer	Audit Events, Content of Audit Records, and Audit Generation	The contractor is responsible for configuring the control system device(s) to provide audit record generation capability for the auditable events defined in AU-2(a) at organization defined control system components.
CCI-000171	AU-12(b)	The information system allows organization-defined personnel or roles to select which auditable events are to be audited by specific components of the information system.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	This is partially met by requiring the contractor to ensure that controllers will be configured to record, Successful and unsuccessful logon attempts to the controller; Successful logouts; All account creations, modifications, disabling, and terminations; All controller shutdown and startup. Contractor is required to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal. If the controller does not support this capability, the Contractor is to provide a statement documenting this deficiency as a part of the final Control System Cybersecurity Documentation. Contractor is required to determine and apply all applicable STIGs/SRGs.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000172	AU-12(c)	The information system generates audit records for the events defined in AU-2 d with the content defined in AU-3.	Designer	Audit Events, Content of Audit Records, and Audit Generation	This is partially met by requiring the contractor to configure ontrollers to generate audit records for the defined subset of the auditable events defined in AU-2, CCI-000126, which are listed the events listed in AU-2 (a), CCI-000123 per occurrence as required by DoD, which will contain information that establishes the outcome of the event as defined by AU-3, CCI-000134. Contractor is required to determine and apply all applicable STIGs/SRGs applicable STIGs or SRGs that pertains to CCI-000172. For controllers with the capability to store audit records, contractor to configure the generating and storing audit records locally in its internal memory for these records to be retrieved and reviewed during routine maintenance or inspection by the ISSM or individual appointed by the ISSM upon final acceptance of the control system. Contractor to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal.
CCI-000176	IA-5(b)	The organization manages information system authenticators by establishing initial authenticator content for authenticators defined by the organization.	Designer Non-Designer	---	The organization is responsible for managing control system authenticators by establishing initial authenticator content for authenticators defined by the organization.
CCI-000182	IA-5(g)	The organization manages information system authenticators by changing/refreshing authenticators in accordance with the organization defined time period by authenticator type.	DoD-Defined Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	All other devices and software must not use cached authenticators. For all non-computing components, (e.g., PLC's, RTU's, and Human Machine Interface (HMI)'s) that cannot meet the password requirements, contractor is required to use the strongest password that is technically feasible as long as this does not interfere with the full functionality of the control system component and the control system it supports, as designed.
CCI-000192	IA-5(1)(a)	The information system enforces password complexity by the minimum number of upper case characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one uppercase character. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000193	IA-5(1)(a)	The information system enforces password complexity by the minimum number of lower case characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one lowercase character. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000194	IA-5(1)(a)	The information system enforces password complexity by the minimum number of numeric characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one numeric character. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000195	IA-5(1)(b)	The information system, for password-based authentication, when new passwords are created, enforces that at least an organization-defined number of characters are changed.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure all password must differ from previous five passwords, where differ is defined as changing at least 50 percent of the characters. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000196	IA-5(1)(c)	The information system, for password-based authentication, stores only cryptographically-protected passwords.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (computer or controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure must be cryptographically protected during storage and transmission. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000197	IA-5(1)(c)	The information system, for password-based authentication, transmits only cryptographically-protected passwords.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (computer or controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure must be cryptographically protected during storage and transmission. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000198	IA-5(1)(d)	The information system enforces minimum password lifetime restrictions.	Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not applicable at the controller; This is managed at PIT L2 computer or above which allows for minimum lifetime of 24 hours which allows the use of a temporary password for system logons with an immediate change to a permanent password.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000199	IA-5(1)(d)	The information system enforces maximum password lifetime restrictions.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure all controllers FULLY supporting user accounts, to ensure that passwords must have a maximum lifetime of 60 days. Contractor to configure the computer or controller to prompt users to change passwords. Contractor to ensure accounts do not lock due to expired passwords.Contractor is required to determine and apply all applicable STIGs/SRGs. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000200	IA-5(1)(e)	The information system prohibits password reuse for the organization defined number of generations.	Enclave Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure all controllers FULLY supporting user accounts, to ensure that passwords must differ from previous five passwords, where differ is defined as changing 50 percent of the characters. Contractor to configure the computer or controller to prompt users to change passwords. Contractor to ensure accounts do not lock due to expired passwords.Contractor is required to determine and apply all applicable STIGs/SRGs. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000205	IA-5(1)(a)	The information system enforces minimum password length.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	Unless otherwise indicated, all user interfaces supporting accounts (either FULLY or MINIMALLY) must implement Identification and Authorization via passwords. For all non-computing components, (e.g., PLC's, RTU's, and Human Machine Interface (HMI)'s) that cannot meet the password requirements, use the strongest password that is technically feasible as long as this does not interfere with the full functionality of the control system component and the control system it supports, as designed. All devices and software must not use cached authenticators.The organization is responsible to ensure all policies and user training including advising users not to use the same password for domains of differing classification levels.
CCI-000206	IA-6	The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.	Enclave Designer Impractical	Authenticator Feedback	This is addressed by requiring the contractor to employ devices that do not show authentication information on a display. Devices that momentarily display a character as it is entered are acceptable. For devices that have STIGs or SRGs related to CCI-000206 will comply with those requirements.
CCI-000207	PM-5	The organization develops and maintains an inventory of its information systems.	Designer Non-Designer Impractical	---	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators) that includes all components withing the authorization boundary of the system. Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000232	AC-14(b)	The organization documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification and authentication.	Designer	Permitted Actions Without Identification and Authentication	See CCI-000061
CCI-000236	PM-11(b)	The organization determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until an achievable set of protection needs are obtained.	Enclave Designer Non-Designer	---	This is partially met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06. The organization is responsible to determine any information protection needs arising from the defined mission/business processes and partner with the Cybersecurity Designer to revise the processes as necessary, until an achievable set of protection needs are obtained Designer during the Five Steps for Cybersecurity Design as per Section 3-1.1, and then revised during this processes as necessary for the identified Control System(s). The contractor will then will be required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000258	CA-3(b)	The organization documents, for each interconnection, the interface characteristics.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule CYBERSECURITY DURING CONSTRUCTION	This is met by requiring the contractor to meet CYBERSECURITY DURING CONSTRUCTION requirements as listed in this section of the UFGS 25 05 11.XX. The Contractor is also required to provide a completed Cybersecurity Interconnection Schedule documenting network connections between the installed system and other systems including information for each device directly communicating between systems: Device Identifier, Device Description, Transport layer Protocol, Network Address, Port (if applicable), MAC (Layer 2) address (if applicable), Media, Application Protocol, Service (if applicable), Descriptive Purpose of communication. The organization is responsible to document any Interconnection security agreements which are required for systems connecting between enclaves which can include both DoD enclaves or non DoD enclaves.The contractor is responsible for ensuring that all Ethernet switches are provided and configured as listed in the UFGS Section ETHERNET SWITCH. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000293	CM-2	The organization develops and documents a current baseline configuration of the information system.	Designer	---	This is met by requiring the Contractor to provide all baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices. The Government organization is responsble to continue to develop and document current baseline configuration of the control system, subsystem and devices throughout the lifecycle of the control system.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000363	CM-6(a)	The organization defines security configuration checklists to be used to establish and document configuration settings for the information system technology products employed.	Designer	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000364	CM-6(a)	The organization establishes configuration settings for information technology products employed within the information system using organization-defined security configuration checklists.	Designer	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000365	CM-6(a)	The organization documents configuration settings for information technology products employed within the information system using organization-defined security configuration checklists that reflect the most restrictive mode consistent with operational requirements.	DoD-Defined Designer Non-Designer Impractical	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000380	CM-7(b)	The organization defines for the information system prohibited or restricted functions, ports, protocols, and/or services.	Designer	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	The organization is responsible for defining the prohibited or restricted functions, ports, protocols, and/or services for the control system. DoD has defined the control system prohibited or restricted functions, ports, protocols, and/or services as IAW DoDI 8551.01.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000381	CM-7(a)	The organization configures the information system to provide only essential capabilities.	Designer	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000382	CM-7(b)	The organization configures the information system to prohibit or restrict the use of organization-defined functions, ports, protocols, and/or services.	Designer	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000389	CM-8(a)(1)	The organization develops and documents an inventory of information system components that accurately reflects the current information system.	Designer	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000392	CM-8(a)(2)	The organization develops and documents an inventory of information system components that includes all components within the authorization boundary of the information system.	Designer	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators) that includes all components withing the authorization boundary of the system. Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000398	CM-8(a)(4)	The organization defines information deemed necessary to achieve effective information system component accountability.	DoD-Defined Designer Non-Designer Impractical	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000764	IA-2	The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).	Enclave Designer Impractical	User Accounts USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controllers do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-000765	IA-2(1)	The information system implements multifactor authentication for network access to privileged accounts.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controllers do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-000777	IA-3	The organization defines a list of specific and/or types of devices for which identification and authentication is required before establishing a connection to the information system.	DoD-Defined Enclave Designer Impractical	Control System Inventory Report Device Identification and Authentication	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device contractor to provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000778	IA-3	The information system uniquely identifies an organization defined list of specific and/or types of devices before establishing a local, remote, or network connection.	Enclave Designer Impractical	Control System Inventory Report Device Identification and Authentication	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device contractor to provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000803	IA-7	The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.	Enclave Designer Impractical	Cryptographic Module Authentication	Impractical; Controllers and related equipment do not support authentication to a crypotgraphic module.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001048	RA-3(a)	The organization conducts an assessment of risk of the information system and the information it processes, stores, or transmits that includes the likelihood and magnitude of harm from the unauthorized access, use, disclosure, disruption, modification, or destruction.	Designer Non-Designer	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06. The organization is responsible to conduct a risk of the system and the information it processes, stores, or transmits that includes the likelihood and magnitude of harm from the unauthorized access, use, disclosure, disruption, modification, or destruction which is then documented by the Designer as per Section 3-1.1 Five Steps for Cybersecurity Design. This risk is revised during this processes as necessary. The Design process concludes with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s) iwhich the Contractor will be required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices.
CCI-001054	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications on an organization-defined frequency.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.
CCI-001055	RA-5(a)	The organization defines a frequency for scanning for vulnerabilities in the information system and hosted applications.	DoD-Defined Enclave Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. CCI-001058	RA-5(c)	The organization analyzes vulnerability scan reports and results from security control assessments.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to analyze vulnerability scan reports and security control assessment results with the intent of identifying legitimate vulnerabilities and the relationship between vulnerabilities and security controls in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final
CCI-001059	RA-5(d)	The organization remediates legitimate vulnerabilities in organization-defined response times in accordance with an organizational assessment risk.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to take corrective actions as appropriate on legitimate vulnerabilities identified in RA-5, CCI 001058 IAW an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) when scanning for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final
CCI-001097	SC-7(a)	The information system monitors and controls communications at the external boundary of the system and at key internal boundaries within the system.	DoD-Defined Enclave Designer Impractical	Physical Security Denial of Service Protection Process Isolation and Boundary Protection	Enclave; The network is monitored by the enclave. There is no local monitoring provided by the local system.
CCI-001241	SI-3(c)(1)	The organization configures malicious code protection mechanisms to perform periodic scans of the information system on an organization-defined frequency.	Enclave Designer Non-Designer	Malicious Code Protection	Impractical; only applicable at the computer level.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001253	SI-4(a)(1)	The organization defines the objectives of monitoring for attacks and indicators of potential attacks on the information system.	DoD-Defined Enclave Designer Impractical	Information System Monitoring	This is partially met through the implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). OT systems in DoD buildings (e.g., HVAC, access control, energy management) are designed with cybersecurity measures integrated from the start, not as an afterthought through this process. The Contractor is required to to execute the government approved, Issued For Construction specification of the appropriate 25 05 11 which ensures that the developer of the system, system component, or service ensures sensor placement and monitoring requirements as per the DoD defined monitoring objectives requirements within CJCSI 6510.01F. The government organization is responsible for oversight to ensure the contractor executes the appropriate 25 05 11.XX contracts/agreements related to the control system. For all else, the Government manages and maintains the existing network and will configure network monitoring software for all new work provided under this contract. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the
CCI-001423	AC-7(a)	The organization defines the time period in which the organization-defined maximum number of consecutive invalid logon attempts occur.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to unlock the user account after the DoD Defined time period of 15 Minutes.
CCI-001438	AC-18(a)	The organization establishes usage restrictions for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-001439	AC-18(a)	The organization establishes implementation guidance for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-001441	AC-18(b)	The organization authorizes wireless access to the information system prior to allowing such connections.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-001459	AU-12(a)	The organization defines information system components that provide audit record generation capability.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	The organization is responsible for defining the control system components that provide audit record generation capability.
CCI-001485	AU-2(d)	The organization defines the events which are to be audited on the information system on an organization-defined frequency of (or situation requiring) auditing for each identified event.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	For controllers capable of performing auditing, this is met by requiring the contractor to configure the devices as defined in AU-2 (a), CCI-000123. Upon final acceptance of the control system, the organization is responsible perform ongoing risk assessments of current threat information and environment or the control system, and select events accordingly as DoD has determined that the events are not appropriate to define at the Enterprise level.
CCI-001487	AU-3	The information system generates audit records containing information that establishes the identity of any individuals or subjects associated with the event.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	For controllers capable of performing auditing, this is met by requiring the contractor to ensure all devices be configured to generate audit records containing the information established in AU-2(a), CCI-000123, which contain information according to CCI-000130, CCI-000131, CCI-000132, CCI-000133, CCI-000134, AND CCI-001462 that establishes the identity of any individuals or subjects associated with the event. Contractor is required to determine and apply all applicable STIGs/SRGs that pertain to CCI-001487.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001544	IA-5(c)	The organization manages information system authenticators by ensuring that authenticators have sufficient strength of mechanism for their intended use.	Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001571	AU-2(a)	The organization defines the information system auditable events.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	For controllers capable of performing auditing, this is met by requiring the contractor to ensure all devices be configured to generate audit records containing the information established in AU-2(a), CCI-000123, which contain information according to CCI-000130, CCI-000131, CCI-000132, CCI-000133, CCI-000134, CCI-001462, CCI-001571 that establishes the identity of any individuals or subjects associated with the event. Contractor is required to determine and apply all applicable STIGs/SRGs that pertain to CCI-001487.
CCI-001588	CM-6(a)	The organization-defined security configuration checklists reflect the most restrictive mode consistent with operational requirements.	DoD-Defined Designer Non-Designer Impractical	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	The organization is responsible for ensuring that the organization-defined security configuration checklists reflect the most restrictive mode consistent with operational requirements.
CCI-001610	IA-5(g)	The organization defines the time period (by authenticator type) for changing/refreshing authenticators.	DoD-Defined Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001611	IA-5(1)(a)	The organization defines the minimum number of special characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001612	IA-5(1)(a)	The organization defines the minimum number of upper case characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001613	IA-5(1)(a)	The organization defines the minimum number of lower case characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001614	IA-5(1)(a)	The organization defines the minimum number of numeric characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001615	IA-5(1)(b)	The organization defines the minimum number of characters that are changed when new passwords are created.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001616	IA-5(1)(d)	The organization defines minimum password lifetime restrictions.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001617	IA-5(1)(d)	The organization defines maximum password lifetime restrictions.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615, CCI-001616. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001618	IA-5(1)(e)	The organization defines the number of generations for which password reuse is prohibited.	DoD-Defined Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615, CCI-001616, CCI-001617. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-001619	IA-5(1)(a)	The information system enforces password complexity by the minimum number of special characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615, CCI-001616, CCI-001617, CCI-001618. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001641	RA-5(a)	The organization defines the process for conducting random vulnerability scans on the information system and hosted applications.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.
CCI-001643	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications in accordance with the organization-defined process for random scans.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs), and to document the vulnerability scans as an audit trail for future reference. The audit trail must be maintained IAW DoD, CYBERCOM, or component policies upon final acceptance of
CCI-001755	CM-6(c)	The organization defines the information system components for which any deviation from the established configuration settings are to be identified, documented and approved.	DoD-Defined Designer Non-Designer Impractical	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001761	CM-7(1)(b)	The organization defines the functions, ports, protocols and services within the information system that are to be disabled when deemed unnecessary and/or nonsecure.	Designer	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	The organization is responsible for defining the functions, ports, protocols and services within the control system that are to be disabled when deemed unnecessary and/or nonsecure.
CCI-001762	CM-7(1)(b)	The organization disables organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure.	Designer Impractical	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-001889	AU-8(b)	The information system records time stamps for audit records that meets organization-defined granularity of time measurement.	Designer	Audit Time Stamps	The contractor is responsible for configuring the control system device(s) to record time stamps for audit records that meets organization-defined granularity of time measurement. For control system components that have applicable STIGs or SRGs, the contractor must comply with the STIG/SRG guidance that pertains to CCI-001889. DoD has defined the granularity of time measurement as one second.
CCI-001890	AU-8(b)	The information system records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT).	Designer	Audit Time Stamps	The contractor is responsible for configuring the control system device(s) to record time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT). For control system components that have applicable STIGs or SRGs, the contractor must comply with the STIG/SRG guidance that pertains to CCI-001890.
CCI-001910	AU-12(b)	The organization defines the personnel or roles allowed select which auditable events are to be audited by specific components of the information system.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	This is met by requiring the contractor to configure the controller to generate audit records for the defined subset of the auditable events defined in AU-2, CCI-000126, which are listed the events listed in AU-2 (a), CCI-000123 per occurrence as required by DoD, which will contain information that establishes the outcome of the event as defined by AU-3, CCI-000134. Contractor is required to determine and apply all applicable STIGs/SRGs applicable STIGs or SRGs that pertains to CCI-000172. For controllers with the capability to store audit records, contractor to configure the generating and storing audit records locally in its internal memory for these records to be retrieved and reviewed during routine maintenance or inspection by the ISSM or individual appointed by the ISSM upon final acceptance of the control system. Contractor to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal.
CCI-001953	IA-2(12)	The information system accepts Personal Identity Verification (PIV) credentials.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controllers do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-001954	IA-2(12)	The information system electronically verifies Personal Identity Verification (PIV) credentials.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controllers do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001958	IA-3	The information system authenticates an organization defined list of specific and/or types of devices before establishing a local, remote, or network connection.	Enclave Designer Impractical	Control System Inventory Report Device Identification and Authentication	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-001989	IA-5(e)	The organization manages information system authenticators by changing default content of authenticators prior to information system installation.	Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to provide a Confidential Password Report for all devices with a password which documents a change of all passwords from the default password as part of the final CYBERSECURITY DOCUMENTATION submittal package. The Contractor is required to coordinate selection of passwords with the site designated Password Point of Contact. Contractor may not use the same password for more than one device unless specifically instructed to do so. Contractor is required to provide the Confidential Password Report which shall include documenting the password for each device and describing the procedure to change the password for each device.
CCI-002002	IA-5(11)	The organization defines the token quality requirements to be employed by the information system mechanisms for token-based authentication.	DoD-Defined Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the BAS controllers do not support token-based authentication.
CCI-002003	IA-5(11)	The information system, for token-based authentication, employs mechanisms that satisfy organization-defined token quality requirements.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the BAS controllers do not support token-based authentication.
CCI-002041	IA-5(1)(f)	The information system allows the use of a temporary password for system logons with an immediate change to a permanent password.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not applicable at the controller; This is managed at PIT L2 computer or above which allows for minimum lifetime of 24 hours which allows the use of a temporary password for system logons with an immediate change to a permanent password.
CCI-002102	CA-9(a)	The organization defines the information system components or classes of components that that are authorized internal connections to the information system.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used. The organization is responsible to define and document any other system components or classes of components that that are authorized internal connections to the system upon final acceptance of the system as DoD has determined the information system components are not appropriate to define at the Enterprise level.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002103	CA-9(b)	The organization documents, for each internal connection, the interface characteristics.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used.
CCI-002104	CA-9(b)	The organization documents, for each internal connection, the security requirements.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used. Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION.
CCI-002105	CA-9(b)	The organization documents, for each internal connection, the nature of the information communicated.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used. Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION. The contractor is required to provide any documentation or submittals related to network communication, such as Points Schedules (CCI-002105). If the control system's specifications require a riser diagram submittal that meets this requirement, the contractor can provide a copy of that submittal instead as the cybersecurity riser diagram as part of the final CYBERSECURITY DOCUMENTATION.
CCI-002110	AC-2(a)	The organization defines the information system account types that support the organizational missions/business functions.	Designer	User Accounts	This is met by requiring the contractor to ensure that any user interface supporting user accounts (either FULLY or MINIMALLY) must limit access according to specified limitations for each account, as that system is designed and as provided by the organization as DoD has DoD has determined the information system account types are not appropriate to define at the Enterprise level which determine system account types that support the organizational missions/business functions.
CCI-002236	AC-7(b)	The organization defines the time period the information system will automatically lock the account or node when the maximum number of unsuccessful attempts is exceeded.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to ensure that once an account is locked, the account must stay locked until unlocked by an administrator. If the account being locked is the sole administrator account on the device, the account must stay locked for one hour and then automatically unlock.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002237	AC-7(b)	The organization defines the delay algorithm to be employed by the information system to delay the next login prompt when the maximum number of unsuccessful attempts is exceeded.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to delay the next login prompt according to the DoD Defined Algorith of five Seconds.
CCI-002238	AC-7(b)	The information system automatically locks the account or node for either an organization-defined time period, until the locked account or node is released by an administrator, or delays the next login prompt according to the organization-defined delay algorithm when the maximum number of unsuccessful attempts is exceeded.	Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to ensure the locked account is released by an administrator and delays the next login prompt for a minimum of five seconds when the maximum number of unsuccessful attempts is exceeded. Contractor is required to determine and apply applicable STIGs or SRGs that pertains to CCI-002238.
CCI-002243	AC-8(a)(1)	The organization-defined information system use notification message or banner is to state that users are accessing a U.S. Government information system.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002244	AC-8(a)(2)	The organization-defined information system use notification message or banner is to state that information system usage may be monitored, recorded, and subject to audit.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002245	AC-8(a)(3)	The organization-defined information system use notification message or banner is to state that unauthorized use of the information system is prohibited and subject to criminal and civil penalties.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002246	AC-8(a)(4)	The organization-defined information system use notification message or banner is to state that use of the information system indicates consent to monitoring and recording.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002247	AC-8(a)	The organization defines the use notification message or banner the information system displays to users before granting access to the system.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002248	AC-8(c)(1)	The organization defines the conditions of use which are to be displayed to users of the information system before granting further access.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002323	AC-18(a)	The organization establishes configuration/connection requirements for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-002449	SC-13	The organization defines the cryptographic uses, and type of cryptography required for each use, to be implemented by the information system.	DoD-Defined Enclave Designer Impractical	Cryptographic Protection	The organization is responsible for defining the cryptographic uses, and type of cryptography required for each use, to be implemented by the control system.
CCI-002450	SC-13	The information system implements organization-defined cryptographic uses and type of cryptography required for each use in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.	Enclave Designer Impractical	Cryptographic Protection	This is addressed by requiring and employing encrypted sessions for communications.
CCI-002530	SC-39	The information system maintains a separate execution domain for each executing process.	Designer	---	Impractical; the BAS controllers do not support this functionality.
CCI-002544	SC-41	The organization defines the information systems or information system components on which organization-defined connection ports or input/output devices are to be physically disabled or removed.	Enclave Designer Non-Designer	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	The organization is responsible for defining the control systems or control system components on which organization-defined connection ports or input/output devices are to be physically disabled or removed.
CCI-002545	SC-41	The organization defines the connection ports or input/output devices that are to be physically disabled or removed from organization-defined information systems or information system components.	Enclave Designer Non-Designer	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	The organization is responsible for defining the connection ports or input/output devices that are to be physically disabled or removed from organization-defined control systems or control system components.
CCI-002546	SC-41	The organization physically disables or removes organization-defined connection ports or input/output devices on organization-defined information systems or information system components.	Designer Impractical	IP Control Networks REQUIREMENTS FOR LEAST FUNCTIONALITY	The contractor is responsible for physically disabling or removing organization-defined connection ports or input/output devices on organization-defined information systems or control system components.
CCI-002623	SI-3(c)(1)	The organization defines the frequency for performing periodic scans of the information system for malicious code.	DoD-Defined Designer Impractical	Malicious Code Protection	Impractical; only applicable at the computer level.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002645	SI-4(b)	The organization defines the techniques and methods to be used to identify unauthorized use of the information system.	Enclave Designer Non-Designer	Information System Monitoring	This is partially met by requiring the contractor to provide all control system Cybersecurity Documentation in accordance with all required Control System Cybersecurity Documentation submittals as applicable which documents techniques and methods to be used to identify unauthorized use of the control system. For all other requirements, the organization is responsible to determine any additional techniques and methods (such as use of/connection to and enclave) as DoD has determined these are not appropriate to define at the Enterprise level. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-002773	SI-17	The organization defines the fail-safe procedures to be implemented by the information system when organization-defined failure conditions occur.	Designer	Control System Inventory Report SAFE MODE AND FAIL SAFE OPERATION	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. Fail-safe procedures to be implemented by the control system are defined in that system's specification's section of its sequence of operations as designed by the Lead Engineer of the control system. For all control system components with an applicable STIG or SRG, contractor to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002774	SI-17	The organization defines the failure conditions which, when they occur, will result in the information system implementing organization-defined fail-safe procedures.	Designer	Control System Inventory Report SAFE MODE AND FAIL SAFE OPERATION	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. Fail-safe procedures to be implemented by the control system are defined in that system's specification's section of its sequence of operations as designed by the Lead Engineer of the control system. For all control system components with an applicable STIG or SRG, contractor to configure the component in accordance with all applicable STIGs and SRGs.

CCI-002775	SI-17	The information system implements organization-defined fail-safe procedures when organization-defined failure conditions occur.	Designer	Control System Inventory Report SAFE MODE AND FAIL SAFE OPERATION	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. Fail-safe procedures to be implemented by the control system are defined in that system's specification's section of its sequence of operations as designed by the Lead Engineer of the control system. For all control system components with an applicable STIG or SRG, contractor to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002855	CP-12	The information system, when organization-defined conditions are detected, enters a safe mode of operation with organization-defined restrictions of safe mode of operation.	Designer	SAFE MODE AND FAIL SAFE OPERATION	This is met through the Engineering Design Process as defineed by UFC 1-200-01 DoD Building Code that is the foundational document of the UFC program in providing general building requirements and overarching criteria and documents. Throughout the Design process, the Lead Engineer coordinates with the organization to any requirements for the control system needed to meet CP-12, Safe Mode or SI-17, Fail-Safe Procedures to determine/define when organization-defined conditions are detected, the control system will enter a safe mode of operation with organization-defined restrictions of safe mode of operation. The contractor is then required to determine all applicable STIGs or SRGs, and then to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002856	CP-12	The organization defines the conditions, that when detected, the information system enters a safe mode of operation with organization-defined restrictions of safe mode of operation.	Designer	SAFE MODE AND FAIL SAFE OPERATION	This is met through the Engineering Design Process as defineed by UFC 1-200-01 DoD Building Code that is the foundational document of the UFC program in providing general building requirements and overarching criteria and documents. Throughout the Design process, the Lead Engineer coordinates with the organization to define any requirements for the control system needed to meet CP-12, Safe Mode or SI-17, Fail-Safe Procedures to be implemented by the control system when the control system enters a safe mode of operation with organization-defined restrictions of safe mode of operation as DoD has determined the fail-safe procedures are not appropriate to define at the Enterprise level. The contractor is then required to determine all applicable STIGs or SRGs, and then to configure the component in accordance with all applicable STIGs and SRGs.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002857	CP-12	The organization defines the restrictions of safe mode of operation that the information system will enter when organization-defined conditions are detected.	Designer	SAFE MODE AND FAIL SAFE OPERATION	This is met through the Engineering Design Process as defineed by UFC 1-200-01 DoD Building Code that is the foundational document of the UFC program in providing general building requirements and overarching criteria and documents. Throughout the Design process, the Lead Engineer coordinates with the organization to define any requirements for the control system needed to meet CP-12, Safe Mode or SI-17, Fail-Safe Procedures to be implemented by the control system when organization-defined conditions are detected as DoD has determined the restrictions on safe mode of operation are not appropriate to define at the Enterprise level. The contractor is then required to determine all applicable STIGs or SRGs, and then to configure the component in accordance with all applicable STIGs and SRGs.
CCI-003051	PL-2(a)(2)	The organizations security plan for the information system explicitly defines the authorization boundary for the system.	Enclave Designer Non-Designer	Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which defines the authorization boundary for the system. The organization is responsible to use this diagram to explicitly define within the security plan the authorization boundary for the system upon final acceptance of the system. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-003053	PL-2(a)(4)	The organizations security plan for the information system provides the security categorization of the information system including supporting rationale.	Designer Non-Designer	Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which defines the authorization boundary for the system. The organization is responsible to use this diagram as the supporting rationale to define within the security plan the security categorization of the system including upon final acceptance.
CCI-003116	SA-4(10)	The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.	Enclave Designer Impractical	FIPS 201-2 REQUIREMENT	Impractical; the controllers do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-003124	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure configuration of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes secure configuration of the controller/device.
CCI-003125	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure installation of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes secure configuration of the controller/device, or or a specific indication that there are no secure configuration steps that apply as necessary.
CCI-003126	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure operation of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes secure operation of the controller/device, or or a specific indication that there are no secure configuration steps that apply as necessary.
CCI-003127	SA-5(a)(2)	The organization obtains administrator documentation for the information system, system component, or information system services that describes effective use and maintenance of security functions/mechanisms.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes effective use and maintenance of security functions or mechanisms for the controller/device, or a specific indication that there are no security functions or mechanisms in the device as necessary.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003128	SA-5(a)(3)	The organization obtains administrator documentation for the information system, system component, or information system services that describes known vulnerabilities regarding configuration and use of administrative (i.e. privileged) functions.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes known vulnerabilities regarding configuration and use of administrative (i.e. privileged) functions for the device.
CCI-003129	SA-5(b)(1)	The organization obtains user documentation for the information system, system component, or information system service that describes user-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide documentation that describes user-accessible security functions or mechanisms in the device and how to effectively use those security functions or mechanisms; or a specific indication that there are no user-accessible security functions or mechanisms in the device.
CCI-003130	SA-5(b)(2)	The organization obtains user documentation for the information system, system component or information system service that describes methods for user interaction which enables individuals to use the system, component, or service in a more secure manner.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor must provide documentation that describes methods for user interaction which enables individuals to use the device in a more secure manner.
CCI-003131	SA-5(b)(3)	The organization obtains user documentation for the information system, system component or information system service that describes user responsibilities in maintaining the security of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation Software Applications	This is met by requiring the contractor must provide documentation that describes methods for user interaction which enables individuals to use the device in a more secure manner.

Starting Control Set and Tailoring Recommendations

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-1	ACCESS CONTROL POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An access control policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the access control policy and associated access controls; and b. Reviews and updates the current: 1. Access control policy [Assignment: organization-defined frequency]; and 2. Access control procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-2	ACCOUNT MANAGEMENT	The organization: a. Identifies and selects the following types of information system accounts to support organizational missions/business functions: [Assignment: organization-defined information system account types]; b. Assigns account managers for information system accounts; c. Establishes conditions for group and role membership; d. Specifies authorized users of the information system, group and role membership, and access authorizations (i.e., privileges) and other attributes (as required) for each account; e. Requires approvals by [Assignment: organization-defined personnel or roles] for requests to create information system accounts; f. Creates, enables, modifies, disables, and removes information system accounts in accordance with [Assignment: organization-defined procedures or conditions]; g. Monitors the use of information system accounts; h. Notifies account managers: 1. When accounts are no longer required; 2. When users are terminated or transferred; and 3. When individual information system usage or need-to-know changes; i. Authorizes access to the information system based on: 1. A valid access authorization; 2. Intended system usage; and 3. Other attributes as required by the organization or associated missions/business functions; j. Reviews accounts for compliance with account management requirements [Assignment: organization-defined frequency]; and k. Establishes a process for reissuing shared/group account credentials (if deployed) when individuals are removed from the group.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-3	ACCESS ENFORCEMENT	The information system enforces approved authorizations for logical access to information and system resources in accordance with applicable access control policies.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-7	UNSUCCESSFUL LOGIN ATTEMPTS	The information system: a. Enforces a limit of [Assignment: organization-defined number] consecutive invalid logon attempts by a user during a [Assignment: organization-defined time period]; and b. Automatically [Selection: locks the account/node for an [Assignment: organization-defined time period]; locks the account/node until released by an administrator; delays next logon prompt according to [Assignment: organization-defined delay algorithm]] when the maximum number of unsuccessful attempts is exceeded.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-8	SYSTEM USE NOTIFICATION	The information system: a. Displays to users [Assignment: organization-defined system use notification message or banner] before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance and states that: 1. Users are accessing a U.S. Government information system; 2. Information system usage may be monitored, recorded, and subject to audit; 3. Unauthorized use of the information system is prohibited and subject to criminal and civil penalties; and 4. Use of the information system indicates consent to monitoring and recording; b. Retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access the information system; and c. For publicly accessible systems: 1. Displays system use information [Assignment: organization-defined conditions], before granting further access; 2. Displays references, if any, to monitoring, recording, or auditing that are consistent with privacy accommodations for such systems that generally prohibit those activities; and 3. Includes a description of the authorized uses of the system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-14	PERMITTED ACTIONS WITHOUT IDENTIFICATION OR AUTHENTICATION	The organization: a. Identifies [Assignment: organization-defined user actions] that can be performed on the information system without identification or authentication consistent with organizational missions/business functions; and b. Documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification or authentication.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-17	REMOTE ACCESS	The organization: a. Establishes and documents usage restrictions, configuration/connection requirements, and implementation guidance for each type of remote access allowed; and b. Authorizes remote access to the information system prior to allowing such connections.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-18	WIRELESS ACCESS	The organization: a. Establishes usage restrictions, configuration/connection requirements, and implementation guidance for wireless access; and b. Authorizes wireless access to the information system prior to allowing such connections.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-19	ACCESS CONTROL FOR MOBILE DEVICES	The organization: a. Establishes usage restrictions, configuration requirements, connection requirements, and implementation guidance for organization-controlled mobile devices; and b. Authorizes the connection of mobile devices to organizational information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-20	USE OF EXTERNAL INFORMATION SYSTEMS	The organization establishes terms and conditions, consistent with any trust relationships established with other organizations owning, operating, and/or maintaining external information systems, allowing authorized individuals to: a. Access the information system from external information systems; and b. Process, store, or transmit organization-controlled information using external information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-21	INFORMATION SHARING	The organization: a. Facilitates information sharing by enabling authorized users to determine whether access authorizations assigned to the sharing partner match the access restrictions on the information for [Assignment: organization-defined information sharing circumstances where user discretion is required]; and b. Employs [Assignment: organization-defined automated mechanisms or manual processes] to assist users in making information sharing/collaboration decisions.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AC-22	PUBLICLY ACCESSIBLE CONTENT	The organization: a. Designates individuals authorized to post information onto a publicly accessible information system; b. Trains authorized individuals to ensure that publicly accessible information does not contain nonpublic information; c. Reviews the proposed content of information prior to posting onto the publicly accessible information system to ensure that nonpublic information is not included; and d. Reviews the content on the publicly accessible information system for nonpublic information [Assignment: organization-defined frequency] and removes such information, if discovered.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-1	SECURITY AWARENESS AND TRAINING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security awareness and training policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security awareness and training policy and associated security awareness and training controls; and b. Reviews and updates the current: 1. Security awareness and training policy [Assignment: organization-defined frequency]; and 2. Security awareness and training procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-2	SECURITY AWARENESS TRAINING	The organization provides basic security awareness training to information system users (including managers, senior executives, and contractors): a. As part of initial training for new users; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-3	ROLE-BASED SECURITY TRAINING	The organization provides role-based security training to personnel with assigned security roles and responsibilities: a. Before authorizing access to the information system or performing assigned duties; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AT-4	SECURITY TRAINING RECORDS	The organization: a. Documents and monitors individual information system security training activities including basic security awareness training and specific information system security training; and b. Retains individual training records for [Assignment: organization-defined time period].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-1	AUDIT AND ACCOUNTABILITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An audit and accountability policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the audit and accountability policy and associated audit and accountability controls; and b. Reviews and updates the current: 1. Audit and accountability policy [Assignment: organization-defined frequency]; and 2. Audit and accountability procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-2	AUDIT EVENTS	The organization: a. Determines that the information system is capable of auditing the following events: [Assignment: organization-defined auditable events]; b. Coordinates the security audit function with other organizational entities requiring audit-related information to enhance mutual support and to help guide the selection of auditable events; c. Provides a rationale for why the auditable events are deemed to be adequate to support after-the-fact investigations of security incidents; and d. Determines that the following events are to be audited within the information system: [Assignment: organization-defined audited events (the subset of the auditable events defined in AU-2 a.) along with the frequency of (or situation requiring) auditing for each identified event].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-3	CONTENT OF AUDIT RECORDS	The information system generates audit records containing information that establishes what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, and the identity of any individuals or subjects associated with the event.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-4	AUDIT STORAGE CAPACITY	The organization allocates audit record storage capacity in accordance with [Assignment: organization-defined audit record storage requirements].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-4(1)	AUDIT STORAGE CAPACITY | TRANSFER TO ALTERNATE STORAGE	The information system off-loads audit records [Assignment: organization-defined frequency] onto a different system or media than the system being audited.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-5	RESPONSE TO AUDIT PROCESSING FAILURES	The information system: a. Alerts [Assignment: organization-defined personnel or roles] in the event of an audit processing failure; and b. Takes the following additional actions: [Assignment: organization-defined actions to be taken (e.g., shut down information system, overwrite oldest audit records, stop generating audit records)].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-6	AUDIT REVIEW, ANALYSIS, AND REPORTING	The organization: a. Reviews and analyzes information system audit records [Assignment: organization-defined frequency] for indications of [Assignment: organization-defined inappropriate or unusual activity]; and b. Reports findings to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AU-8	TIME STAMPS	The information system: a. Uses internal system clocks to generate time stamps for audit records; and b. Records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT) and meets [Assignment: organization-defined granularity of time measurement].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-9	PROTECTION OF AUDIT INFORMATION	The information system protects audit information and audit tools from unauthorized access, modification, and deletion.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-11	AUDIT RECORD RETENTION	The organization retains audit records for [Assignment: organization-defined time period consistent with records retention policy] to provide support for after-the-fact investigations of security incidents and to meet regulatory and organizational information retention requirements.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
AU-12	AUDIT GENERATION	The information system: a. Provides audit record generation capability for the auditable events defined in AU-2 at [Assignment: organization-defined information system components]; b. Allows [Assignment: organization-defined personnel or roles] to select which auditable events are to be audited by specific components of the information system; and c. Generates audit records for the audited events defined in AU-2 with the content defined in AU-3.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-1	SECURITY ASSESSMENT AND AUTHORIZATION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security assessment and authorization policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security assessment and authorization policy and associated security assessment and authorization controls; and b. Reviews and updates the current: 1. Security assessment and authorization policy [Assignment: organization-defined frequency]; and 2. Security assessment and authorization procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-2	SECURITY ASSESSMENTS	The organization: a. Develops a security assessment plan that describes the scope of the assessment including: 1. Security controls and control enhancements under assessment; 2. Assessment procedures to be used to determine security control effectiveness; and 3. Assessment environment, assessment team, and assessment roles and responsibilities; b. Assesses the security controls in the information system and its environment of operation [Assignment: organization-defined frequency] to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting established security requirements; c. Produces a security assessment report that documents the results of the assessment; and d. Provides the results of the security control assessment to [Assignment: organization-defined individuals or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-3	SYSTEM INTERCONNECTIONS	The organization: a. Authorizes connections from the information system to other information systems through the use of Interconnection Security Agreements; b. Documents, for each interconnection, the interface characteristics, security requirements, and the nature of the information communicated; and c. Reviews and updates Interconnection Security Agreements [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-5	PLAN OF ACTION AND MILESTONES	The organization: a. Develops a plan of action and milestones for the information system to document the organization's planned remedial actions to correct weaknesses or deficiencies noted during the assessment of the security controls and to reduce or eliminate known vulnerabilities in the system; and b. Updates existing plan of action and milestones [Assignment: organization-defined frequency] based on the findings from security controls assessments, security impact analyses, and continuous monitoring activities.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-6	SECURITY AUTHORIZATION	The organization: a. Assigns a senior-level executive or manager as the authorizing official for the information system; b. Ensures that the authorizing official authorizes the information system for processing before commencing operations; and c. Updates the security authorization [Assignment: organization - defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-7	CONTINUOUS MONITORING	The organization develops a continuous monitoring strategy and implements a continuous monitoring program that includes: a. Establishment of [Assignment: organization-defined metrics] to be monitored; b. Establishment of [Assignment: organization-defined frequencies] for monitoring and [Assignment: organization-defined frequencies] for assessments supporting such monitoring; c. Ongoing security control assessments in accordance with the organizational continuous monitoring strategy; d. Ongoing security status monitoring of organization-defined metrics in accordance with the organizational continuous monitoring strategy; e. Correlation and analysis of security-related information generated by assessments and monitoring; f. Response actions to address results of the analysis of security-related information; and g. Reporting the security status of organization and the information system to [Assignment: organization-defined personnel or roles] [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CA-9	INTERNAL SYSTEM CONNECTIONS	The organization: a. Authorizes internal connections of [Assignment: organization-defined information system components or classes of components] to the information system; and b. Documents, for each internal connection, the interface characteristics, security requirements, and the nature of the information communicated.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CM-1	CONFIGURATION MANAGEMENT POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A configuration management policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the configuration management policy and associated configuration management controls; and b. Reviews and updates the current: 1. Configuration management policy [Assignment: organization-defined frequency]; and 2. Configuration management procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-2	BASELINE CONFIGURATION	The organization develops, documents, and maintains under configuration control, a current baseline configuration of the information system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-4	SECURITY IMPACT ANALYSIS	The organization analyzes changes to the information system to determine potential security impacts prior to change implementation.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-6	CONFIGURATION SETTINGS	The organization: a. Establishes and documents configuration settings for information technology products employed within the information system using [Assignment: organization-defined security configuration checklists] that reflect the most restrictive mode consistent with operational requirements; b. Implements the configuration settings; c. Identifies, documents, and approves any deviations from established configuration settings for [Assignment: organization - defined information system components] based on [Assignment: organization-defined operational requirements]; and d. Monitors and controls changes to the configuration settings in accordance with organizational policies and procedures.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-7	LEAST FUNCTIONALITY	The organization: a. Configures the information system to provide only essential capabilities; and b. Prohibits or restricts the use of the following functions, ports, protocols, and/or services: [Assignment: organization-defined prohibited or restricted functions, ports, protocols, and/or services].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-7(1)	LEAST FUNCTIONALITY | PERIODIC REVIEW	The organization: (a) Reviews the information system [Assignment: organization-defined frequency] to identify unnecessary and/or nonsecure functions, ports, protocols, and services; and (b) Disables [Assignment: organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-8	INFORMATION SYSTEM COMPONENT INVENTORY	The organization: a. Develops and documents an inventory of information system components that: 1. Accurately reflects the current information system; 2. Includes all components within the authorization boundary of the information system; 3. Is at the level of granularity deemed necessary for tracking and reporting; and 4. Includes [Assignment: organization-defined information deemed necessary to achieve effective information system component accountability]; and b. Reviews and updates the information system component inventory [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-10	SOFTWARE USAGE RESTRICTIONS	The organization: a. Uses software and associated documentation in accordance with contract agreements and copyright laws; b. Tracks the use of software and associated documentation protected by quantity licenses to control copying and distribution; and c. Controls and documents the use of peer-to-peer file sharing technology to ensure that this capability is not used for the unauthorized distribution, display, performance, or reproduction of copyrighted work.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CM-11	USER-INSTALLED SOFTWARE	The organization: a. Establishes [Assignment: organization-defined policies] governing the installation of software by users; b. Enforces software installation policies through [Assignment: organization-defined methods]; and c. Monitors policy compliance at [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-1	CONTINGENCY PLANNING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A contingency planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the contingency planning policy and associated contingency planning controls; and b. Reviews and updates the current: 1. Contingency planning policy [Assignment: organization-defined frequency]; and 2. Contingency planning procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CP-2	CONTINGENCY PLAN	The organization: a. Develops a contingency plan for the information system that: 1. Identifies essential missions and business functions and associated contingency requirements; 2. Provides recovery objectives, restoration priorities, and metrics; 3. Addresses contingency roles, responsibilities, assigned individuals with contact information; 4. Addresses maintaining essential missions and business functions despite an information system disruption, compromise, or failure; 5. Addresses eventual, full information system restoration without deterioration of the security safeguards originally planned and implemented; and 6. Is reviewed and approved by [Assignment: organization-defined personnel or roles]; b. Distributes copies of the contingency plan to [Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements]; c. Coordinates contingency planning activities with incident handling activities; d. Reviews the contingency plan for the information system [Assignment: organization-defined frequency]; e. Updates the contingency plan to address changes to the organization, information system, or environment of operation and problems encountered during contingency plan implementation, execution, or testing; f. Communicates contingency plan changes to [Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements]; and g. Protects the contingency plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-3	CONTINGENCY TRAINING	The organization provides contingency training to information system users consistent with assigned roles and responsibilities: a. Within [Assignment: organization-defined time period] of assuming a contingency role or responsibility; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-4	CONTINGENCY PLAN TESTING	The organization: a. Tests the contingency plan for the information system [Assignment: organization-defined frequency] using [Assignment: organization-defined tests] to determine the effectiveness of the plan and the organizational readiness to execute the plan; b. Reviews the contingency plan test results; and c. Initiates corrective actions, if needed.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-9	INFORMATION SYSTEM BACKUP	The organization: a. Conducts backups of user-level information contained in the information system [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; b. Conducts backups of system-level information contained in the information system [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; c. Conducts backups of information system documentation including security-related documentation [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; and d. Protects the confidentiality, integrity, and availability of backup information at storage locations.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-10	INFORMATION SYSTEM RECOVERY AND RECONSTITUTION	The organization provides for the recovery and reconstitution of the information system to a known state after a disruption, compromise, or failure.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
CP-12	SAFE MODE	The information system, when [Assignment:organization-defined conditions] are detected, enters a safe mode of operation with [Assignment: organization-defined restrictions of safe mode of operation].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-1	IDENTIFICATION AND AUTHENTICATION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An identification and authentication policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the identification and authentication policy and associated identification and authentication controls; and b. Reviews and updates the current: 1. Identification and authentication policy [Assignment: organization-defined frequency]; and 2. Identification and authentication procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-2	IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS)	The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-2(1)	IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS	The information system implements multifactor authentication for network access to privileged accounts.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-2(12)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS	The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-3	DEVICE IDENTIFICATION AND AUTHENTICATION	The information system uniquely identifies and authenticates [Assignment: organization defined specific and/or types of devices] before establishing a [Selection (one or more): local; remote; network] connection.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-4	IDENTIFIER MANAGEMENT	The organization manages information system identifiers by: a. Receiving authorization from [Assignment: organization-defined personnel] to assign an individual, group, role, or device identifier; b. Selecting an identifier that identifies an individual, group, role, or device; c. Assigning the identifier to the intended individual, group, role, or device; d. Preventing reuse of identifiers for [Assignment: organization-defined time period]; and e. Disabling the identifier after [Assignment: organization-defined time period of inactivity].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IA-5	AUTHENTICATOR MANAGEMENT	The organization manages information system authenticators by: a. Verifying, as part of the initial authenticator distribution, the identity of the individual, group, role, or device receiving the authenticator; b. Establishing initial authenticator content for authenticators defined by the organization; c. Ensuring that authenticators have sufficient strength of mechanism for their intended use; d. Establishing and implementing administrative procedures for initial authenticator distribution, for lost/compromised or damaged authenticators, and for revoking authenticators; e. Changing default content of authenticators prior to information system installation; f. Establishing minimum and maximum lifetime restrictions and reuse conditions for authenticators; g. Changing/refreshing authenticators [Assignment: organization-defined time period by authenticator type]; h. Protecting authenticator content from unauthorized disclosure and modification; i. Requiring individuals to take, and having devices implement, specific security safeguards to protect authenticators; and j. Changing authenticators for group/role accounts when membership to those accounts changes.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-5(1)	AUTHENTICATOR MANAGEMENT | PASSWORD-BASED AUTHENTICATION	The information system, for password-based authentication: (a) Enforces minimum password complexity of [Assignment: organization-defined requirements for case sensitivity, number of characters, mix of upper-case letters, lower-case letters, numbers, and special characters, including minimum requirements for each type]; (b) Enforces at least the following number of changed characters when new passwords are created: [Assignment: organization-defined number]; (c) Stores and transmits only cryptographically-protected passwords; (d) Enforces password minimum and maximum lifetime restrictions of [Assignment: organization-defined numbers for lifetime minimum, lifetime maximum]; (e) Prohibits password reuse for [Assignment: organization-defined number] generations; and (f) Allows the use of a temporary password for system logons with an immediate change to a permanent password.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-5(11)	AUTHENTICATOR MANAGEMENT | HARDWARE TOKEN-BASED AUTHENTICATION	The information system, for hardware token-based authentication, employs mechanisms that satisfy [Assignment: organization-defined token quality requirements].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-6	AUTHENTICATOR FEEDBACK	The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-7	CRYPTOGRAPHIC MODULE AUTHENTICATION	The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8	IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS)	The information system uniquely identifies and authenticates non-organizational users (or processes acting on behalf of non-organizational users).	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(1)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS FROM OTHER AGENCIES	The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials from other federal agencies.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(2)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF THIRD-PARTY CREDENTIALS	The information system accepts only FICAM-approved third-party credentials.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(3)	IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-APPROVED PRODUCTS	The organization employs only FICAM-approved information system components in [Assignment: organization-defined information systems] to accept third-party credentials.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IA-8(4)	IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-ISSUED PROFILES	The information system conforms to FICAM-issued profiles.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-1	INCIDENT RESPONSE POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An incident response policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the incident response policy and associated incident response controls; and b. Reviews and updates the current: 1. Incident response policy [Assignment: organization-defined frequency]; and 2. Incident response procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-2	INCIDENT RESPONSE TRAINING	The organization provides incident response training to information system users consistent with assigned roles and responsibilities: a. Within [Assignment: organization-defined time period] of assuming an incident response role or responsibility; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-4	INCIDENT HANDLING	The organization: a. Implements an incident handling capability for security incidents that includes preparation, detection and analysis, containment, eradication, and recovery; b. Coordinates incident handling activities with contingency planning activities; and c. Incorporates lessons learned from ongoing incident handling activities into incident response procedures, training, and testing/exercises, and implements the resulting changes accordingly.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-5	INCIDENTMONITORING	The organization tracks and documents information system security incidents.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IR-6	INCIDENT REPORTING	The organization: a. Requires personnel to report suspected security incidents to the organizational incident response capability within [Assignment: organization-defined time-period]; and b. Reports security incident information to [Assignment: organization-defined authorities].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-7	INCIDENT RESPONSE ASSISTANCE	The organization provides an incident response support resource, integral to the organizational incident response capability, that offers advice and assistance to users of the information system for the handling and reporting of security incidents.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
IR-8	INCIDENT RESPONSE PLAN	The organization: a. Develops an incident response plan that: 1. Provides the organization with a roadmap for implementing its incident response capability; 2. Describes the structure and organization of the incident response capability; 3. Provides a high-level approach for how the incident response capability fits into the overall organization; 4. Meets the unique requirements of the organization, which relate to mission, size, structure, and functions; 5. Defines reportable incidents; 6. Provides metrics for measuring the incident response capability within the organization; 7. Defines the resources and management support needed to effectively maintain and mature an incident response capability; and 8. Is reviewed and approved by [Assignment: organization-defined personnel or roles]; b. Distributes copies of the incident response plan to [Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements]; c. Reviews the incident response plan [Assignment: organization-defined frequency]; d. Updates the incident response plan to address system/organizational changes or problems encountered during plan implementation, execution, or testing; e. Communicates incident response plan changes to [Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements]; and f. Protects the incident response plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-1	SYSTEM MAINTENANCE POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system maintenance policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system maintenance policy and associated system maintenance controls; and b. Reviews and updates the current: 1. System maintenance policy [Assignment: organization-defined frequency]; and 2. System maintenance procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-2	CONTROLLED MAINTENANCE	The organization: a. Schedules, performs, documents, and reviews records of, maintenance and repairs on information system components in accordance with manufacturer or vendor specifications and /or organizational requirements; b. Approves and monitors all maintenance activities, whether performed on site or remotely and whether the equipment is serviced on site or removed to another location; c. Requires that [Assignment: organization-defined personnel] explicitly approve the removal of the information system or system components from organizational facilities for off-site maintenance or repairs; d. Sanitizes equipment to remove all information from associated media prior to removal from organizational facilities for off-site maintenance or repairs; e. Checks all potentially impacted security controls to verify that the controls are still functioning properly following maintenance or repair actions; and f. Includes [Assignment: organization-defined maintenance-related information] in organizational maintenance records.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-4	NONLOCAL MAINTENANCE	The organization: a. Approves and monitors nonlocal maintenance and diagnostic activities; b. Allows the use of nonlocal maintenance and diagnostic tools only as consistent with organizational policy and documented in the security plan for the information system; c. Employs strong authenticators in the establishment of nonlocal maintenance and diagnostic sessions; d. Maintains records for nonlocal maintenance and diagnostic activities; and e. Terminates session and network connections when nonlocal maintenance is completed.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MA-5	MAINTENANCE PERSONNEL	The organization: a. Establishes a process for maintenance personnel authorization and maintains a list of authorized maintenance organizations or personnel; b. Ensures that non-escorted personnel performing maintenance on the information system have required access authorizations; and c. Designates organizational personnel with required access authorizations and technical competence to supervise the maintenance activities of personnel who do not possess the required access authorizations.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MP-1	MEDIA PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A media protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the media protection policy and associated media protection controls; and b. Reviews and updates the current: 1. Media protection policy [Assignment: organization-defined frequency]; and 2. Media protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MP-2	MEDIA ACCESS	The organization restricts access to [Assignment: organization-defined types of digital and/or non-digital media] to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
MP-6	MEDIA SANITIZATION	The organization: a. Sanitizes [Assignment: organization-defined information system media] prior to disposal, release out of organizational control, or release for reuse using [Assignment: organization-defined sanitization techniques and procedures] in accordance with applicable federal and organizational standards and policies; and b. Employs sanitization mechanisms with the strength and integrity commensurate with the security category or classification of the information.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
MP-7	MEDIA USE	The organization [Selection: restricts; prohibits] the use of [Assignment: organization-defined types of information system media] on [Assignment: organization-defined information systems or system components] using [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-1	PHYSICAL AND ENVIRONMENTAL PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A physical and environmental protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the physical and environmental protection policy and associated physical and environmental protection controls; and b. Reviews and updates the current: 1. Physical and environmental protection policy [Assignment: organization-defined frequency]; and 2. Physical and environmental protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-2	PHYSICAL ACCESS AUTHORIZATIONS	The organization: a. Develops, approves, and maintains a list of individuals with authorized access to the facility where the information system resides; b. Issues authorization credentials for facility access; c. Reviews the access list detailing authorized facility access by individuals [Assignment: organization-defined frequency]; and d. Removes individuals from the facility access list when access is no longer required.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-3	PHYSICAL ACCESS CONTROL	The organization: a. Enforces physical access authorizations at [Assignment: organization-defined entry/exit points to the facility where the information system resides] by; 1. Verifying individual access authorizations before granting access to the facility; and 2. Controlling ingress/egress to the facility using [Selection (one or more): [Assignment: organization-defined physical access control systems/devices]; guards]; b. Maintains physical access audit logs for [Assignment: organization-defined entry/exit points]; c. Provides [Assignment: organization-defined security safeguards] to control access to areas within the facility officially designated as publicly accessible; d. Escorts visitors and monitors visitor activity [Assignment: organization-defined circumstances requiring visitor escorts and monitoring]; e. Secures keys, combinations, and other physical access devices; f. Inventories [Assignment: organization-defined physical access devices] every [Assignment: organization-defined frequency]; and g. Changes combinations and keys [Assignment: organization-defined frequency] and/or when keys are lost, combinations are compromised, or individuals are transferred or terminated.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-6	MONITORING PHYSICAL ACCESS	The organization: a. Monitors physical access to the facility where the information system resides to detect and respond to physical security incidents; b. Reviews physical access logs [Assignment: organization-defined frequency] and upon occurrence of [Assignment: organization-defined events or potential indications of events]; and c. Coordinates results of reviews and investigations with the organizational incident response capability.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-8	VISITOR ACCESS RECORDS	The organization: a. Maintains visitor access records to the facility where the information system resides for [Assignment: organization-defined time period]; and b. Reviews visitor access records [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-11	EMERGENCY POWER	The organization provides a short-term uninterruptible power supply to facilitate [Selection (one or more): an orderly shutdown of the information system; transition of the information system to long-term alternate power] in the event of a primary power source loss.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-11(1)	EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - MINIMAL OPERATIONAL CAPABILITY	The organization provides a long-term alternate power supply for the information system that is capable of maintaining minimally required operational capability in the event of an extended loss of the primary power source.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-12	EMERGENCY LIGHTING	The organization employs and maintains automatic emergency lighting for the information system that activates in the event of a power outage or disruption and that covers emergency exits and evacuation routes within the facility.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-13	FIRE PROTECTION	The organization employs and maintains fire suppression and detection devices/systems for the information system that are supported by an independent energy source.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-14	TEMPERATURE AND HUMIDITY CONTROLS	The organization: a. Maintains temperature and humidity levels within the facility where the information system resides at [Assignment: organization - defined acceptable levels]; and b. Monitors temperature and humidity levels [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-15	WATER DAMAGE PROTECTION	The organization protects the information system from damage resulting from water leakage by providing master shutoff or isolation valves that are accessible, working properly, and known to key personnel.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PE-16	DELIVERY AND REMOVAL	The organization authorizes, monitors, and controls [Assignment: organization-defined types of information system components] entering and exiting the facility and maintains records of those items.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PL-1	SECURITY PLANNING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security planning policy and associated security planning controls; and b. Reviews and updates the current: 1. Security planning policy [Assignment: organization-defined frequency]; and 2. Security planning procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PL-2	SYSTEM SECURITY PLAN	The organization: a. Develops a security plan for the information system that: 1. Is consistent with the organization's enterprise architecture; 2. Explicitly defines the authorization boundary for the system; 3. Describes the operational context of the information system in terms of missions and business processes; 4. Provides the security categorization of the information system including supporting rationale; 5. Describes the operational environment for the information system and relationships with or connections to other information systems; 6. Provides an overview of the security requirements for the system; 7. Identifies any relevant overlays, if applicable 8. Describes the security controls in place or planned for meeting those requirements including a rationale for the tailoring decisions; and 9. Is reviewed and approved by the authorizing official or designated representative prior to plan implementation; b. Distributes copies of the security plan and communicates subsequent changes to the plan to [Assignment: organization-defined personnel or roles]; c. Reviews the security plan for the information system [Assignment: organization-defined frequency]; d. Updates the plan to address changes to the information system/environment of operation or problems identified during plan implementation or security control assessments; and e. Protects the security plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PL-2(3)	SYSTEM SECURITY PLAN | PLAN / COORDINATE WITH OTHER ORGANIZATIONAL ENTITIES	The organization plans and coordinates security-related activities affecting the information system with [Assignment: organization-defined individuals or groups] before conducting such activities in order to reduce the impact on other organizational entities.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PL-4	RULES OF BEHAVIOR	The organization: a. Establishes and makes readily available to individuals requiring access to the information system, the rules that describe their responsibilities and expected behavior with regard to information and information system usage; b. Receives a signed acknowledgment from such individuals, indicating that they have read, understand, and agree to abide by the rules of behavior, before authorizing access to information and the information system; c. Reviews and updates the rules of behavior [Assignment: organization-defined frequency]; and d. Requires individuals who have signed a previous version of the rules of behavior to read and resign when the rules of behavior are revised/updated.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-1	PERSONNEL SECURITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A personnel security policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the personnel security policy and associated personnel security controls; and b. Reviews and updates the current: 1. Personnel security policy [Assignment: organization-defined frequency]; and 2. Personnel security procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-2	POSITION RISK DESIGNATION	The organization: a. Assigns a risk designation to all organizational positions; b. Establishes screening criteria for individuals filling those positions; and c. Reviews and updates position risk designations [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-3	PERSONNEL SCREENING	The organization: a. Screens individuals prior to authorizing access to the information system; and b. Rescreens individuals according to [Assignment: organization -defined conditions requiring rescreening and, where re-screening is so indicated, the frequency of such rescreening].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-4	PERSONNEL TERMINATION	The organization, upon termination of individual employment: a. Disables information system access within [Assignment: organization-defined time period]; b. Terminates/revokes any authenticators/credentials associated with the individual; c. Conducts exit interviews that include a discussion of [Assignment: organization-defined information security topics]; d. Retrieves all security-related organizational information system-related property; e. Retains access to organizational information and information systems formerly controlled by terminated individual; and f. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-5	PERSONNEL TRANSFER	The organization: a. Reviews and confirms ongoing operational need for current logical and physical access authorizations to information systems/facilities when individuals are reassigned or transferred to other positions within the organization; b. Initiates [Assignment: organization-defined transfer or reassignment actions] within [Assignment: organization-defined time period following the formal transfer action]; c. Modifies access authorization as needed to correspond with any changes in operational need due to reassignment or transfer; and d. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PS-6	ACCESS AGREEMENTS	The organization: a. Develops and documents access agreements for organizational information systems; b. Reviews and updates the access agreements [Assignment: organization-defined frequency]; and c. Ensures that individuals requiring access to organizational information and information systems: 1. Sign appropriate access agreements prior to being granted access; and 2. Re-sign access agreements to maintain access to organizational information systems when access agreements have been updated or [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-7	THIRD-PARTY PERSONNEL SECURITY	The organization: a. Establishes personnel security requirements including security roles and responsibilities for third-party providers; b. Requires third-party providers to comply with personnel security policies and procedures established by the organization; c. Documents personnel security requirements; d. Requires third-party providers to notify [Assignment: organization-defined personnel or roles] of any personnel transfers or terminations of third-party personnel who possess organizational credentials and/or badges, or who have information system privileges within [Assignment: organization-defined time period]; and e. Monitors provider compliance.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PS-8	PERSONNEL SANCTIONS	The organization: a. Employs a formal sanctions process for individuals failing to comply with established information security policies and procedures; and b. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period] when a formal employee sanctions process is initiated, identifying the individual sanctioned and the reason for the sanction.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-1	RISK ASSESSMENT POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A risk assessment policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the risk assessment policy and associated risk assessment controls; and b. Reviews and updates the current: 1. Risk assessment policy [Assignment: organization-defined frequency]; and 2. Risk assessment procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-2	SECURITY CATEGORIZATION	The organization: a. Categorizes information and the information system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance; b. Documents the security categorization results (including supporting rationale) in the security plan for the information system; and c. Ensures that the security categorization decision is reviewed and approved by the authorizing official or authorizing official designated representative.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-3	RISK ASSESSMENT	The organization: a. Conducts an assessment of risk, including the likelihood and magnitude of harm, from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information system and the information it processes, stores, or transmits; b. Documents risk assessment results in [Selection: security plan; risk assessment report; [Assignment: organization-defined document]]; c. Reviews risk assessment results [Assignment: organization-defined frequency]; d. Disseminates risk assessment results to [Assignment: organization-defined personnel or roles]; and e. Updates the risk assessment [Assignment: organization-defined frequency] or whenever there are significant changes to the information system or environment of operation (including the identification of new threats and vulnerabilities), or other conditions that may impact the security state of the system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
RA-5	VULNERABILITY SCANNING	The organization: a. Scans for vulnerabilities in the information system and hosted applications [Assignment: organization-defined frequency and/or randomly in accordance with organization-defined process] and when new vulnerabilities potentially affecting the system/applications are identified and reported; b. Employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by using standards for: 1. Enumerating platforms, software flaws, and improper configurations; 2. Formatting checklists and test procedures; and 3. Measuring vulnerability impact; c. Analyzes vulnerability scan reports and results from security control assessments; d. Remediates legitimate vulnerabilities [Assignment: organization-defined response times] in accordance with an organizational assessment of risk; and e. Shares information obtained from the vulnerability scanning process and security control assessments with [Assignment: organization-defined personnel or roles] to help eliminate similar vulnerabilities in other information systems (i.e., systemic weaknesses or deficiencies).	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-1	SYSTEM AND SERVICES ACQUISITION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and services acquisition policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and services acquisition policy and associated system and services acquisition controls; and b. Reviews and updates the current: 1. System and services acquisition policy [Assignment: organization-defined frequency]; and 2. System and services acquisition procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SA-2	ALLOCATION OF RESOURCES	The organization: a. Determines information security requirements for the information system or information system service in mission/business process planning; b. Determines, documents, and allocates the resources required to protect the information system or information system service as part of its capital planning and investment control process; and c. Establishes a discrete line item for information security in organizational programming and budgeting documentation	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-3	SYSTEM DEVELOPMENT LIFE CYCLE	The organization: a. Manages the information system using [Assignment: organization-defined system development life cycle] that incorporates information security considerations; b. Defines and documents information security roles and responsibilities throughout the system development life cycle; c. Identifies individuals having information security roles and responsibilities; and d. Integrates the organizational information security risk management process into system development life cycle activities.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-4	ACQUISITION PROCESS	The organization includes the following requirements, descriptions, and criteria, explicitly or by reference, in the acquisition contract for the information system, system component, or information system service in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, guidelines, and organizational mission/business needs: a. Security functional requirements; b. Security strength requirements; c. Security assurance requirements; d. Security-related documentation requirements; e. Requirements for protecting security-related documentation; f. Description of the information system development environment and environment in which the system is intended to operate; and g. Acceptance criteria.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-4(10)	ACQUISITION PROCESS | USE OF APPROVED PIV PRODUCTS	The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-5	INFORMATION SYSTEM DOCUMENTATION	The organization: a. Obtains administrator documentation for the information system, system component, or information system service that describes: 1. Secure configuration, installation, and operation of the system, component, or service; 2. Effective use and maintenance of security functions/mechanisms; and 3. Known vulnerabilities regarding configuration and use of administrative (i.e., privileged) functions; b. Obtains user documentation for the information system, system component, or information system service that describes: 1. User-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms; 2. Methods for user interaction, which enables individuals to use the system, component, or service in a more secure manner; and 3. User responsibilities in maintaining the security of the system, component, or service; c. Documents attempts to obtain information system, system component, or information system service documentation when such documentation is either unavailable or nonexistent and [Assignment: organization-defined actions] in response; d. Protects documentation as required, in accordance with the risk management strategy; and e. Distributes documentation to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SA-9	EXTERNAL INFORMATION SYSTEM SERVICES	The organization: a. Requires that providers of external information system services comply with organizational information security requirements and employ [Assignment: organization-defined security controls] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance; b. Defines and documents government oversight and user roles and responsibilities with regard to external information system services; and c. Employs [Assignment: organization-defined processes, methods, and techniques] to monitor security control compliance by external service providers on an ongoing basis.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-1	SYSTEM AND COMMUNICATIONS PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and communications protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and communications protection policy and associated system and communications protection controls; and b. Reviews and updates the current: 1. System and communications protection policy [Assignment: organization-defined frequency]; and 2. System and communications protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-5	DENIAL OF SERVICE PROTECTION	The information system protects against or limits the effects of the following types of denial of service attacks: [Assignment: organization-defined types of denial of service attacks or reference to source for such information] by employing [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-7	BOUNDARY PROTECTION	The information system: a. Monitors and controls communications at the external boundary of the system and at key internal boundaries within the system; b. Implements subnetworks for publicly accessible system components that are [Selection: physically; logically] separated from internal organizational networks; and c. Connects to external networks or information systems only through managed interfaces consisting of boundary protection devices arranged in accordance with an organizational security architecture.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-12	CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT	The organization establishes and manages cryptographic keys for required cryptography employed within the information system in accordance with [Assignment: organization-defined requirements for key generation, distribution, storage, access, and destruction].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SC-13	CRYPTOGRAPHIC PROTECTION	The information system implements [Assignment: organization-defined cryptographic uses and type of cryptography required for each use] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-15	COLLABORATIVE COMPUTING DEVICES	The information system: a. Prohibits remote activation of collaborative computing devices with the following exceptions: [Assignment: organization-defined exceptions where remote activation is to be allowed]; and b. Provides an explicit indication of use to users physically present at the devices.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-20	SECURE NAME / ADDRESS RESOLUTION SERVICE (AUTHORITATIVE SOURCE)	The information system: a. Provides additional data origin authentication and integrity verification artifacts along with the authoritative name resolution data the system returns in response to external name/address resolution queries; and b. Provides the means to indicate the security status of child zones and (if the child supports secure resolution services) to enable verification of a chain of trust among parent and child domains, when operating as part of a distributed, hierarchical namespace.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-21	SECURE NAME / ADDRESS RESOLUTION SERVICE (RECURSIVE OR CACHING RESOLVER)	The information system requests and performs data origin authentication and data integrity verification on the name/address resolution responses the system receives from authoritative sources.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-22	ARCHITECTURE AND PROVISIONING FOR NAME / ADDRESS RESOLUTION SERVICE	The information systems that collectively provide name/address resolution service for an organization are fault-tolerant and implement internal/external role separation.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-39	PROCESS ISOLATION	The information system maintains a separate execution domain for each executing process.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SC-41	PORT AND I/O DEVICE ACCESS	The organization physically disables or removes [Assignment: organization-defined connection ports or input/output devices] on [Assignment: organization-defined information systems or information system components].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-1	SYSTEM AND INFORMATION INTEGRITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and information integrity policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and information integrity policy and associated system and information integrity controls; and b. Reviews and updates the current: 1. System and information integrity policy [Assignment: organization-defined frequency]; and 2. System and information integrity procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-2	FLAW REMEDIATION	The organization: a. Identifies, reports, and corrects information system flaws; b. Tests software and firmware updates related to flaw remediation for effectiveness and potential side effects before installation; c. Installs security-relevant software and firmware updates within [Assignment: organization-defined time period] of the release of the updates; and d. Incorporates flaw remediation into the organizational configuration management process.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-3	MALICIOUS CODE PROTECTION	The organization: a. Employs malicious code protection mechanisms at information system entry and exit points to detect and eradicate malicious code; b. Updates malicious code protection mechanisms whenever new releases are available in accordance with organizational configuration management policy and procedures; c. Configures malicious code protection mechanisms to: 1. Perform periodic scans of the information system [Assignment: organization-defined frequency] and real-time scans of files from external sources at [Selection (one or more); endpoint; network entry/exit points] as the files are downloaded, opened, or executed in accordance with organizational security policy; and 2. [Selection (one or more): block malicious code; quarantine malicious code; send alert to administrator; [Assignment: organization-defined action]] in response to malicious code detection; and d. Addresses the receipt of false positives during malicious code detection and eradication and the resulting potential impact on the availability of the information system.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-4	INFORMATION SYSTEM MONITORING	The organization: a. Monitors the information system to detect: 1. Attacks and indicators of potential attacks in accordance with [Assignment: organization-defined monitoring objectives]; and 2. Unauthorized local, network, and remote connections; b. Identifies unauthorized use of the information system through [Assignment: organization-defined techniques and methods]; c. Deploys monitoring devices: (i) strategically within the information system to collect organization-determined essential information; and (ii) at ad hoc locations within the system to track specific types of transactions of interest to the organization; d. Protects information obtained from intrusion-monitoring tools from unauthorized access, modification, and deletion; e. Heightens the level of information system monitoring activity whenever there is an indication of increased risk to organizational operations and assets, individuals, other organizations, or the Nation based on law enforcement information, intelligence information, or other credible sources of information; f. Obtains legal opinion with regard to information system monitoring activities in accordance with applicable federal laws, Executive Orders, directives, policies, or regulations; and g. Provides [Assignment: organization-defined information system monitoring information] to [Assignment: organization-defined personnel or roles] [Selection (one or more): as needed; [Assignment: organization-defined frequency]].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SI-5	SECURITY ALERTS, ADVISORIES, AND DIRECTIVES	The organization: a. Receives information system security alerts, advisories, and directives from [Assignment: organization-defined external organizations] on an ongoing basis; b. Generates internal security alerts, advisories, and directives as deemed necessary; c. Disseminates security alerts, advisories, and directives to: [Selection (one or more): [Assignment: organization-defined personnel (identified by name and/or by role)]; [Assignment: organization-defined elements within the organization]; [Assignment: organization-defined external organizations]]; and d. Implements security directives in accordance with established time frames, or notifies the issuing organization of the degree of noncompliance.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-12	INFORMATION HANDLING AND RETENTION	The organization handles and retains information within the information system and information output from the system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and operational requirements.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
SI-17	FAIL-SAFE PROCEDURES	The information system implements [Assignment: organization-defined fail-safe procedures] when [Assignment: organization-defined failure conditions occur].	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-1	INFORMATION SECURITY PROGRAM PLAN	The organization: a. Develops and disseminates an organization-wide information security program plan that: 1. Provides an overview of the requirements for the security program and a description of the security program management controls and common controls in place or planned for meeting those requirements; 2. Includes the identification and assignment of roles, responsibilities, management commitment, coordination among organizational entities, and compliance; 3. Reflects coordination among organizational entities responsible for the different aspects of information security (i.e., technical, physical, personnel, cyber-physical); and 4. Is approved by a senior official with responsibility and accountability for the risk being incurred to organizational operations (including mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation; b. Reviews the organization-wide information security program plan [Assignment: organization-defined frequency]; c. Updates the plan to address organizational changes and problems identified during plan implementation or security control assessments; and d. Protects the information security program plan from unauthorized disclosure and modification.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-2	SENIOR INFORMATION SECURITY OFFICER	The organization appoints a senior information security officer with the mission and resources to coordinate, develop, implement, and maintain an organization-wide information security program.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-3	INFORMATION SECURITY RESOURCES	The organization: a. Ensures that all capital planning and investment requests include the resources needed to implement the information security program and documents all exceptions to this requirement; b. Employs a business case/Exhibit 300/Exhibit 53 to record the resources required; and c. Ensures that information security resources are available for expenditure as planned.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-4	PLAN OF ACTION AND MILESTONES PROCESS	The organization: a. Implements a process for ensuring that plans of action and milestones for the security program and associated organizational information systems: 1. Are developed and maintained; 2. Document the remedial information security actions to adequately respond to risk to organizational operations and assets, individuals, other organizations, and the Nation; and 3. Are reported in accordance with OMB FISMA reporting requirements. b. Reviews plans of action and milestones for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-5	INFORMATION SYSTEM INVENTORY	The organization develops and maintains an inventory of its information systems.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-6	INFORMATION SECURITY MEASURES OF PERFORMANCE	The organization develops, monitors, and reports on the results of information security measures of performance.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-7	ENTERPRISE ARCHITECTURE	The organization develops an enterprise architecture with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-8	CRITICAL INFRASTRUCTURE PLAN	The organization addresses information security issues in the development, documentation, and updating of a critical infrastructure and key resources protection plan.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-9	RISK MANAGEMENT STRATEGY	The organization: a. Develops a comprehensive strategy to manage risk to organizational operations and assets, individuals, other organizations, and the Nation associated with the operation and use of information systems; b. Implements the risk management strategy consistently across the organization; and c. Reviews and updates the risk management strategy [Assignment: organization-defined frequency] or as required, to address organizational changes.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-10	SECURITY AUTHORIZATION PROCESS	The organization: a. Manages (i.e., documents, tracks, and reports) the security state of organizational information systems and the environments in which those systems operate through security authorization processes; b. Designates individuals to fulfill specific roles and responsibilities within the organizational risk management process; and c. Fully integrates the security authorization processes into an organization-wide risk management program.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-11	MISSION/BUSINESS PROCESS DEFINITION	The organization: a. Defines mission/business processes with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation; and b. Determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until achievable protection needs are obtained.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PM-12	INSIDER THREAT PROGRAM	The organization implements an insider threat program that includes a cross-discipline insider threat incident handling team.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-13	INFORMATION SECURITY WORKFORCE	The organization establishes an information security workforce development and improvement program.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-14	TESTING, TRAINING, AND MONITORING	The organization: a. Implements a process for ensuring that organizational plans for conducting security testing, training, and monitoring activities associated with organizational information systems: 1. Are developed and maintained; and 2. Continue to be executed in a timely manner; b. Reviews testing, training, and monitoring plans for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-15	CONTACTS WITH SECURITY GROUPS AND ASSOCIATIONS	The organization establishes and institutionalizes contact with selected groups and associations within the security community: a. To facilitate ongoing security education and training for organizational personnel; b. To maintain currency with recommended security practices, techniques, and technologies; and c. To share current security-related information including threats, vulnerabilities, and incidents.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.
PM-16	THREAT AWARENESS PROGRAM	The organization implements a threat awareness program that includes a cross-organization information-sharing capability.	Generated	Generated for LOW-LOW-LOW impact levels using DoD CCI generator.

Control Correlation Identifiers (CCI) List

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000043	AC-7(a)	The organization defines the maximum number of consecutive invalid logon attempts to the information system by a user during an organization-defined time period.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	Except for high availability user interfaces indicated as exempt, devices must meet the indicated requirements (3) for handling unsuccessful logon attempts. If a device cannot meet these requirements, document device capabilities to protect from subsequent logon attempts and propose alternate protections in a Device Account Lock Exception Request submittal. Do not implement alternate protection measures in lieu of the indicated requirements without explicit permission from the Government.
CCI-000044	AC-7(a)	The information system enforces the organization-defined limit of consecutive invalid logon attempts by a user during the organization-defined time period.	Designer	Unsuccessful Logon Attempts	Except for high availability user interfaces indicated as exempt, devices must meet the indicated requirements (3) for handling unsuccessful logon attempts. If a device cannot meet these requirements, document device capabilities to protect from subsequent logon attempts and propose alternate protections in a Device Account Lock Exception Request submittal. Do not implement alternate protection measures in lieu of the indicated requirements without explicit permission from the Government.
CCI-000048	AC-8(a)	The information system displays an organization-defined system use notification message or banner before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance.	Enclave Designer Impractical	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000050	AC-8(b)	The information system retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access.	Enclave Designer	System Use Notification	See CCI-000048
CCI-000061	AC-14(a)	The organization identifies and defines organization-defined user actions that can be performed on the information system without identification or authentication consistent with organizational missions/business functions.	Designer	Permitted Actions Without Identification or Authentication	This is met by requiring the contractor to ensure that control system must require identification and authentication before allowing any actions except read-only actions by a user acting from a user interface which MINIMALLY or FULLY supports accounts.
CCI-000123	AU-2(a)	The organization determines the information system must be capable of auditing an organization-defined list of auditable events.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation;	For each controller which does not FULLY support accounts configure the controller to audit all controller shutdown and startup events and to record for each event the type of event and when the event occurred where the device is capable to do so. For all other controllers, there are no requirements to perform auditing at these field controllers that do not FULLY support accounts and are not capable of meeting these requirements.
CCI-000125	AU-2(c)	The organization provides a rationale for why the list of auditable events is deemed to be adequate to support after-the-fact investigations of security incidents.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation;	This is met by requiring the contractor to configure all ES Controllers which FULLY Support Accounts to audit what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, the identity of any individuals or subjects associated with the event, as applicable and as the controller is capable.
CCI-000130	AU-3	The information system generates audit records containing information that establishes what type of event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation;	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes what type of event occurred. Contractor to determine and apply all STIGs/SRGs.
CCI-000131	AU-3	The information system generates audit records containing information that establishes when an event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to g audit records containing information that establishes when an event occurred. Contractor to determine and apply all STIGs/SRGs.
CCI-000132	AU-3	The information system generates audit records containing information that establishes where the event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes where the event occurred. Contractor to determine and apply all STIGs/SRGs.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000133	AU-3	The information system generates audit records containing information that establishes the source of the event.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the controller to generate audit records containing information that establishes the source of the event. Contractor to determine and apply all STIGs/SRGs.
CCI-000134	AU-3	The information system generates audit records containing information that establishes the outcome of the event.	Designer	Audit Events, Content of Audit Records, and Audit Generation	For those controllers capable of performing auditing, this is met by requiring the contractor to configure the conroller to generate audit records containing information that establishes the outcome of the event. Contractor to determine and apply all STIGs/SRGs.
CCI-000159	AU-8(a)	The information system uses internal system clocks to generate time stamps for audit records.	Designer	Audit Time Stamps	This is partially met by requiring the contractor to ensure that any device, (controller) generating audit records must have an internal clock capable of providing time with a resolution of one second. Contractor to ensure clocks must not drift more than 10 seconds per day. Contractor must configure the system so that each device (controller) generating audit records maintains accurate time to within 1 second. Contractor is to ensure that if the control system specifications include requirement for clocks, the most stringent requirement applies. Contractor is responsible to determine and apply all applicable STIGs and SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000169	AU-12(a)	The information system provides audit record generation capability for the auditable events defined in AU-2 a at organization defined information system components.	Designer	Audit Events, Content of Audit Records, and Audit Generation	This is partially met by requiring the contractor to ensure that controllers will be configured to record, Successful and unsuccessful logon attempts to the controller; Successful logouts; All account creations, modifications, disabling, and terminations; All controller shutdown and startup. Contractor is required to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal. If the controller does not support this capability, the Contractor is to provide a statement documenting this deficiency as a part of the final Control System Cybersecurity Documentation. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000171	AU-12(b)	The information system allows organization-defined personnel or roles to select which auditable events are to be audited by specific components of the information system.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	This is partially met by requiring the contractor to ensure that controllers will be configured to record, Successful and unsuccessful logon attempts to the controller; Successful logouts; All account creations, modifications, disabling, and terminations; All controller shutdown and startup. Contractor is required to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal. If the controller does not support this capability, the Contractor is to provide a statement documenting this deficiency as a part of the final Control System Cybersecurity Documentation. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000172	AU-12(c)	The information system generates audit records for the events defined in AU-2 d with the content defined in AU-3.	Designer	Audit Events, Content of Audit Records, and Audit Generation	This is partially met by requiring the contractor to configure ontrollers to generate audit records for the defined subset of the auditable events defined in AU-2, CCI-000126, which are listed the events listed in AU-2 (a), CCI-000123 per occurrence as required by DoD, which will contain information that establishes the outcome of the event as defined by AU-3, CCI-000134. Contractor is required to determine and apply all applicable STIGs/SRGs applicable STIGs or SRGs that pertains to CCI-000172. For controllers with the capability to store audit records, contractor to configure the generating and storing audit records locally in its internal memory for these records to be retrieved and reviewed during routine maintenance or inspection by the ISSM or individual appointed by the ISSM upon final acceptance of the control system. Contractor to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal.
CCI-000176	IA-5(b)	The organization manages information system authenticators by establishing initial authenticator content for authenticators defined by the organization.	Designer Non-Designer	---	The organization is responsible for managing control system authenticators by establishing initial authenticator content for authenticators defined by the organization.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000182	IA-5(g)	The organization manages information system authenticators by changing/refreshing authenticators in accordance with the organization defined time period by authenticator type.	DoD-Defined Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This CCI requires infrastructure support and is therefore impractical. Implementation of this CCI is modified to require the contractor to ensure all devices and software must not use cached authenticators. For all non-computing components, (e.g., PLC's, RTU's, and Human Machine Interface (HMI)'s) that cannot meet the password requirements, contractor is required to use the strongest password that is technically feasible as long as this does not interfere with the full functionality of the control system component and the control system it supports, as designed. Upon final acceptance of the control system, the organization is responsible for changing Passwords for any User Interfaces provided by, or connected to, an existing computer operating systems according to the DOD specified time of every 60 days.
CCI-000192	IA-5(1)(a)	The information system enforces password complexity by the minimum number of upper case characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one uppercase character. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000193	IA-5(1)(a)	The information system enforces password complexity by the minimum number of lower case characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one lowercase character. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000194	IA-5(1)(a)	The information system enforces password complexity by the minimum number of numeric characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one numeric character. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000195	IA-5(1)(b)	The information system, for password-based authentication, when new passwords are created, enforces that at least an organization-defined number of characters are changed.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure all password must differ from previous five (5) passwords, where differ is defined as changing at least fifty percent of the characters. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000196	IA-5(1)(c)	The information system, for password-based authentication, stores only cryptographically-protected passwords.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure must be cryptographically protected during storage and transmission. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000197	IA-5(1)(c)	The information system, for password-based authentication, transmits only cryptographically-protected passwords.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure any any devices (controllers) FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure must be cryptographically protected during storage and transmission. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000198	IA-5(1)(d)	The information system enforces minimum password lifetime restrictions.	Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not applicable at the controller; This is managed at PIT L2 computer or above which allows for minimum lifetime of 24 hours which allows the use of a temporary password for system logons with an immediate change to a permanent password.)
CCI-000199	IA-5(1)(d)	The information system enforces maximum password lifetime restrictions.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure all controllers FULLY supporting user accounts, to ensure that passwords must have a maximum lifetime of 60 days. Contractor to configure the computer or controller to prompt users to change passwords. Contractor to ensure accounts do not lock due to expired passwords. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000200	IA-5(1)(e)	The information system prohibits password reuse for the organization defined number of generations.	Enclave Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is partially met by requiring the contractor to configure all controllers FULLY supporting user accounts, to ensure that passwords must have a maximum lifetime of 60 days. Contractor to configure the computer or controller to prompt users to change passwords. Contractor to ensure accounts do not lock due to expired passwords. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-000205	IA-5(1)(a)	The information system enforces minimum password length.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	Unless otherwise indicated, all user interfaces supporting accounts (either FULLY or MINIMALLY) must implement Identification and Authorization via passwords. For all non-computing components, (e.g., PLC's, RTU's, and Human Machine Interface (HMI)'s) that cannot meet the password requirements, use the strongest password that is technically feasible as long as this does not interfere with the full functionality of the control system component and the control system it supports, as designed. All devices and software must not use cached authenticators. The organization is responsible to ensure all policies and user training including advising users not to use the same password for domains of differing classification levels.
CCI-000206	IA-6	The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.	Enclave Designer Impractical	Authenticator Feedback	This is addressed by requiring the contractor to employ devices that do not show authentication information on a display. Devices that momentarily display a character as it is entered are acceptable. For devices that have STIGs or SRGs related to CCI-000206 will comply with those requirements.
CCI-000207	PM-5	The organization develops and maintains an inventory of its information systems.	Designer Non-Designer Impractical	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators) that includes all components withing the authorization boundary of the system. Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000232	AC-14(b)	The organization documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification and authentication.	Designer	Permitted Actions Without Identification or Authentication	See CCI-000061
CCI-000236	PM-11(b)	The organization determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until an achievable set of protection needs are obtained.	Enclave Designer Non-Designer	Control System Cybersecurity Documentation	This is partially met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06. The organization is responsible to determine any information protection needs arising from the defined mission/business processes and partner with the Cybersecurity Designer to revise the processes as necessary, until an achievable set of protection needs are obtained Designer during the Five Steps for Cybersecurity Design as per Section 3-1.1, and then revised during this processes as necessary, until the completion of the Design Review by the Government at the 35% Design Deliverable for the identified Control System(s). The contractor will then will be required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000258	CA-3(b)	The organization documents, for each interconnection, the interface characteristics.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule; CYBERSECURITY DURING CONSTRUCTION	Requiring the contractor to meet CYBERSECURITY DURING CONSTRUCTION requirements as listed in this section of the UFGS 25 05 11.XX. The Contractor is also required to provide a completed Cybersecurity Interconnection Schedule documenting network connections between the installed system and other systems including information for each device directly communicating between systems: Device Identifier, Device Description, Transport layer Protocol, Network Address, Port (if applicable), MAC (Layer 2) address (if applicable), Media, Application Protocol, Service (if applicable), Descriptive Purpose of communication. The organization is responsible to document any Interconnection security agreements which are required for systems connecting between enclaves which can include both DoD enclaves or non DoD enclaves. The Contractor is also required to ensure all Ethernet switches are provided and configured as listed in the UFGS Section ETHERNET SWITCH. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000293	CM-2	The organization develops and documents a current baseline configuration of the information system.	Designer	---	This is met by requiring the Contractor to provide all baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices. The Government organization is responsble to continue to develop and document current baseline configuration of the control system, subsystem and devices throughout the lifecycle of the control system.
CCI-000363	CM-6(a)	The organization defines security configuration checklists to be used to establish and document configuration settings for the information system technology products employed.	Designer	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000364	CM-6(a)	The organization establishes configuration settings for information technology products employed within the information system using organization-defined security configuration checklists.	Designer	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000365	CM-6(a)	The organization documents configuration settings for information technology products employed within the information system using organization-defined security configuration checklists that reflect the most restrictive mode consistent with operational requirements.	DoD-Defined Designer Non-Designer Impractical	REQUIREMENTS FOR LEAST FUNCTIONALITY	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-000380	CM-7(b)	The organization defines for the information system prohibited or restricted functions, ports, protocols, and/or services.	Designer	IP Control Networks;	The organization is responsible for defining the prohibited or restricted functions, ports, protocols, and/or services for the control system.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000381	CM-7(a)	The organization configures the information system to provide only essential capabilities.	Designer	IP Control Networks;	The contractor is responsible for configuring the control system device(s) to provide only essential capabilities.
CCI-000382	CM-7(b)	The organization configures the information system to prohibit or restrict the use of organization-defined functions, ports, protocols, and/or services.	Designer	IP Control Networks;	The contactor is responsible for configuring the control system device(s) to prohibit or restrict the use of organization-defined functions, ports, protocols, and/or services.
CCI-000389	CM-8(a)(1)	The organization develops and documents an inventory of information system components that accurately reflects the current information system.	Designer	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000392	CM-8(a)(2)	The organization develops and documents an inventory of information system components that includes all components within the authorization boundary of the information system.	Designer	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators) that includes all components withing the authorization boundary of the system. Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000398	CM-8(a)(4)	The organization defines information deemed necessary to achieve effective information system component accountability.	DoD-Defined Designer Non-Designer Impractical	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000764	IA-2	The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).	Enclave Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controller systems do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-000765	IA-2(1)	The information system implements multifactor authentication for network access to privileged accounts.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controller systems do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-000777	IA-3	The organization defines a list of specific and/or types of devices for which identification and authentication is required before establishing a connection to the information system.	DoD-Defined Enclave Designer Impractical	Control System Inventory Report; Device Identification and Authentication	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device contractor to provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000778	IA-3	The information system uniquely identifies an organization defined list of specific and/or types of devices before establishing a local, remote, or network connection.	Enclave Designer Impractical	Control System Inventory Report; Device Identification and Authentication	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device contractor to provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000803	IA-7	The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.	Enclave Designer Impractical	Cryptographic Module Authentication	Impractical; Controllers and related equipment do not support authentication to a cryptographic module.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001048	RA-3(a)	The organization conducts an assessment of risk of the information system and the information it processes, stores, or transmits that includes the likelihood and magnitude of harm from the unauthorized access, use, disclosure, disruption, modification, or destruction.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06. The organization is responsible to conduct a risk of the system and the information it processes, stores, or transmits that includes the likelihood and magnitude of harm from the unauthorized access, use, disclosure, disruption, modification, or destruction which is then documented by the Designer as per Section 3-1.1 Five Steps for Cybersecurity Design. This risk is revised during this processes as necessary, until the completion of the Design Review by the Government at the 35% Design Deliverable. The Design process concludes with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s) which the Contractor will be required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices.
CCI-001054	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications on an organization-defined frequency.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This ispartially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.
CCI-001055	RA-5(a)	The organization defines a frequency for scanning for vulnerabilities in the information system and hosted applications.	DoD-Defined Enclave Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001056	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications when new vulnerabilities potentially affecting the system/applications are identified and reported.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to conduct vulnerability scans of the system and hosted applications when new vulnerabilities potentially affecting the system/applications are identified and reported via authoritative sources (e.g., IAVM, CTO, DTM, STIG, product vendor), upon final acceptance of the system.
CCI-001057	RA-5(b)	The organization employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by using standards for: enumerating platforms, software flaws, and improper configurations; formatting checklists and test procedures; and measuring vulnerability impact.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to employ the DoD Enterprise scanning tool to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.
CCI-001058	RA-5(c)	The organization analyzes vulnerability scan reports and results from security control assessments.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to analyze vulnerability scan reports and security control assessment results with the intent of identifying legitimate vulnerabilities and the relationship between vulnerabilities and security controls in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001059	RA-5(d)	The organization remediates legitimate vulnerabilities in organization-defined response times in accordance with an organizational assessment risk.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to take corrective actions as appropriate on legitimate vulnerabilities identified in RA-5, CCI 001058 IAW an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) when scanning for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.
CCI-001097	SC-7(a)	The information system monitors and controls communications at the external boundary of the system and at key internal boundaries within the system.	DoD-Defined Enclave Designer Impractical	Physical Security Denial of Service Protection	Enclave; The network is monitored by the enclave. There is no local monitoring provided by the local system.
CCI-001241	SI-3(c)(1)	The organization configures malicious code protection mechanisms to perform periodic scans of the information system on an organization-defined frequency.	Enclave Designer Non-Designer	Malicious Code Protection	Impractical; not applicable at the computer level.
CCI-001253	SI-4(a)(1)	The organization defines the objectives of monitoring for attacks and indicators of potential attacks on the information system.	DoD-Defined Enclave Designer Impractical	Malicious Code Protection	Impractical; not applicable at the computer level.
CCI-001423	AC-7(a)	The organization defines the time period in which the organization-defined maximum number of consecutive invalid logon attempts occur.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to unlock the user account after the DoD Defined time period of 15 Minutes.
CCI-001438	AC-18(a)	The organization establishes usage restrictions for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-001439	AC-18(a)	The organization establishes implementation guidance for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-001441	AC-18(b)	The organization authorizes wireless access to the information system prior to allowing such connections.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-001459	AU-12(a)	The organization defines information system components that provide audit record generation capability.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	The organization is responsible for defining the control system components that provide audit record generation capability.
CCI-001485	AU-2(d)	The organization defines the events which are to be audited on the information system on an organization-defined frequency of (or situation requiring) auditing for each identified event.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	For controllers capable of performing auditing, this is met by requiring the contractor to configure the devices as defined in AU-2 (a), CCI-000123. Upon final acceptance of the control system, the organization is responsible perform ongoing risk assessments of current threat information and environment or the control system, and select events accordingly as DoD has determined that the events are not appropriate to define at the Enterprise level.
CCI-001487	AU-3	The information system generates audit records containing information that establishes the identity of any individuals or subjects associated with the event.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	For controllers capable of performing auditing, this is met by requiring the contractor to ensure all devices be configured to generate audit records containing the information established in AU-2(a), CCI-000123, which contain information according to CCI-000130, CCI-000131, CCI-000132, CCI-000133, CCI-000134, AND CCI-001462 that establishes the identity of any individuals or subjects associated with the event. Contractor is required to determine and apply all applicable STIGs/SRGs that pertain to CCI-001487.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001544	IA-5(c)	The organization manages information system authenticators by ensuring that authenticators have sufficient strength of mechanism for their intended use.	Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001571	AU-2(a)	The organization defines the information system auditable events.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	For controllers capable of performing auditing, this is met by requiring the contractor to ensure all devices be configured to generate audit records containing the information established in AU-2(a), CCI-000123, which contain information according to CCI-000130, CCI-000131, CCI-000132, CCI-000133, CCI-000134, CCI-001462, CCI-001571 that establishes the identity of any individuals or subjects associated with the event. Contractor is required to determine and apply all applicable STIGs/SRGs that pertain to CCI-001487.
CCI-001588	CM-6(a)	The organization-defined security configuration checklists reflect the most restrictive mode consistent with operational requirements.	DoD-Defined Designer Non-Designer Impractical	IP Control Networks;	The organization is responsible for ensuring that the organization-defined security configuration checklists reflect the most restrictive mode consistent with operational requirements.
CCI-001610	IA-5(g)	The organization defines the time period (by authenticator type) for changing/refreshing authenticators.	DoD-Defined Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001611	IA-5(1)(a)	The organization defines the minimum number of special characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001612	IA-5(1)(a)	The organization defines the minimum number of upper case characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001613	IA-5(1)(a)	The organization defines the minimum number of lower case characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001614	IA-5(1)(a)	The organization defines the minimum number of numeric characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001615	IA-5(1)(b)	The organization defines the minimum number of characters that are changed when new passwords are created.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001616	IA-5(1)(d)	The organization defines minimum password lifetime restrictions.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001617	IA-5(1)(d)	The organization defines maximum password lifetime restrictions.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615, CCI-001616. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001618	IA-5(1)(e)	The organization defines the number of generations for which password reuse is prohibited.	DoD-Defined Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615, CCI-001616, CCI-001617. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)
CCI-001619	IA-5(1)(a)	The information system enforces password complexity by the minimum number of special characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205, CCI-001544, CCI-001610, CCI-001611, CCI-001612, CCI-001613, CCI-001614, CCI-001615, CCI-001616, CCI-001617, CCI-001618. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06)

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001641	RA-5(a)	The organization defines the process for conducting random vulnerability scans on the information system and hosted applications.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs) upon final acceptance of the system.
CCI-001643	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications in accordance with the organization-defined process for random scans.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	This is partially met by requiring the contractor to ensure that all IP devices must be scannable, such that the device can be scanned by industry standard IP network scanning utilities without harm to the device, application, or functionality. For computers and applications running on computers contractor must meet relevant vulnerability scanning STIGs/SRGs and respond to approved DoD vulnerability scanning tools. For controllers, contractor must provide controllers that are scannable by standard control system discovery tools or control system browsers and return meaningful status information including the network inputs and outputs for the controller.This information must contain sufficient detail to detect vulnerabilities or exploits of the controller. Contractor must provide all software needed to scan the control system as the Control System Scanning Tools submittal. If the software required to scan the system is already installed at the project site or is provided under a separate section instead contractor must provide a statement indicating this. The organization is responsible to scan for vulnerabilities in the system and hosted applications according to the DoD defined frequency of every 30 days or as directed by an authoritative source (e.g. IAVM, CTOs, DTMs, STIGs), and to document the vulnerability scans as an audit trail for future reference. The audit trail must be maintained IAW DoD, CYBERCOM, or component policies upon final acceptance of the system.
CCI-001755	CM-6(c)	The organization defines the information system components for which any deviation from the established configuration settings are to be identified, documented and approved.	DoD-Defined Designer Non-Designer Impractical	IP Control Networks;	This is met by requiring the Contractor to ensure that IP Networks must be Ethernet networks and must use switches which are Ethernet Switches as defined in this Section. Contractor must not use nonsecure functions, ports, protocols and services as defined in DODI 8551.01 unless those ports, protocols and services are specifically required by the control system specifications or otherwise specifically authorized by the Government. Contractor must not use, and/or must physically disable or remove ports, protocols and services that are not specified in the control system specifications or required for operation of the control system. For devices that have a STIG or SRG related to Requirements for Least Functionality (such as configuration settings and port and device I/O access for least functionality), Contractor is required to install and configure the device in accordance with that STIG or SRGs.
CCI-001761	CM-7(1)(b)	The organization defines the functions, ports, protocols and services within the information system that are to be disabled when deemed unnecessary and/or nonsecure.	Designer	Information Flow Enforcement; IP Control Networks;	The organization is responsible for defining the functions, ports, protocols and services within the control system that are to be disabled when deemed unnecessary and/or nonsecure.
CCI-001762	CM-7(1)(b)	The organization disables organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure.	Designer Impractical	Information Flow Enforcement; IP Control Networks;	The contractor is responsible for disabling organization-defined functions, ports, protocols, and services within the control system deemed to be unnecessary and/or nonsecure.
CCI-001889	AU-8(b)	The information system records time stamps for audit records that meets organization-defined granularity of time measurement.	Designer	Audit Time Stamps	The contractor is responsible for ocnfiguring the control system device(s) to record time stamps for audit records that meets organization-defined granularity of time measurement.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001890	AU-8(b)	The information system records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT).	Designer	Audit Time Stamps	The contractor is responsible for ocnfiguring the control system device(s) to record time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT).
CCI-001910	AU-12(b)	The organization defines the personnel or roles allowed select which auditable events are to be audited by specific components of the information system.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	This is met by requiring the contractor to configure the controller to generate audit records for the defined subset of the auditable events defined in AU-2, CCI-000126, which are listed the events listed in AU-2 (a), CCI-000123 per occurrence as required by DoD, which will contain information that establishes the outcome of the event as defined by AU-3, CCI-000134. Contractor is required to determine and apply all applicable STIGs/SRGs applicable STIGs or SRGs that pertains to CCI-000172. For controllers with the capability to store audit records, contractor to configure the generating and storing audit records locally in its internal memory for these records to be retrieved and reviewed during routine maintenance or inspection by the ISSM or individual appointed by the ISSM upon final acceptance of the control system. Contractor to provide step-by-step documentation for this process as a part of the control systems final CYBERSECURITY DOCUMENTATION submittal.
CCI-001953	IA-2(12)	The information system accepts Personal Identity Verification (PIV) credentials.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controller systems do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-001954	IA-2(12)	The information system electronically verifies Personal Identity Verification (PIV) credentials.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the controller systems do not support connectivity to a central validation system. The controllers do not support the use of PIV authentication.
CCI-001958	IA-3	The information system authenticates an organization defined list of specific and/or types of devices before establishing a local, remote, or network connection.	Enclave Designer Impractical	Control System Inventory Report; Device Identification and Authentication	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-001989	IA-5(e)	The organization manages information system authenticators by changing default content of authenticators prior to information system installation.	Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to provide a Confidential Password Report for all devices with a password which documents a change of all passwords from the default password as part of the final CYBERSECURITY DOCUMENTATION submittal package. The Contractor is required to coordinate selection of passwords with the site designated Password Point of Contact. Contractor may not use the same password for more than one device unless specifically instructed to do so. Contractor is required to provide the Confidential Password Report which shall include documenting the password for each device and describing the procedure to change the password for each device.
CCI-002002	IA-5(11)	The organization defines the token quality requirements to be employed by the information system mechanisms for token-based authentication.	DoD-Defined Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not implemented. DoDI 8520.03 defines types of authentication credentials that are acceptable for authentication to different systems based on the systems' information sensitivity levels and the users' access environments. Most OT systems do not have the ability to accept token-based authentication credentials unless connected to an ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-002003	IA-5(11)	The information system, for token-based authentication, employs mechanisms that satisfy organization-defined token quality requirements.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not implemented. DoDI 8520.03 defines types of authentication credentials that are acceptable for authentication to different systems based on the systems' information sensitivity levels and the users' access environments. Most OT systems do not have the ability to accept token-based authentication credentials unless connected to an ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-002041	IA-5(1)(f)	The information system allows the use of a temporary password for system logons with an immediate change to a permanent password.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not applicable at the controller; This is managed at PIT L2 computer or above which allows for minimum lifetime of 24 hours which allows the use of a temporary password for system logons with an immediate change to a permanent password.)

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002102	CA-9(a)	The organization defines the information system components or classes of components that that are authorized internal connections to the information system.	Designer	Network Communication Report	This is met by requiring the contractor to provide a Network Communication Report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used. The organization is responsible to define and document any other system components or classes of components that that are authorized internal connections to the system upon final acceptance of the system as DoD has determined the information system components are not appropriate to define at the Enterprise level.
CCI-002103	CA-9(b)	The organization documents, for each internal connection, the interface characteristics.	Designer	Network Communication Report	This is met by requiring the contractor to provide a Network Communication Report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used.
CCI-002104	CA-9(b)	The organization documents, for each internal connection, the security requirements.	Designer	Network Communication Report	This is met by requiring the contractor to provide a Network Communication Report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used. Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION.
CCI-002105	CA-9(b)	The organization documents, for each internal connection, the nature of the information communicated.	Designer	Network Communication Report	This is met by requiring the contractor to provide a Network Communication Report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For each device using IP, contractor is required to document all TCP and UDP ports used. For non-IP communications, contractor is required to document communication protocol and media used. Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION. The contractor is required to provide any documentation or submittals related to network communication, such as Points Schedules (CCI-002105). If the control system's specifications require a riser diagram submittal that meets this requirement, the contractor can provide a copy of that submittal instead as the cybersecurity riser diagram as part of the final CYBERSECURITY DOCUMENTATION.
CCI-002110	AC-2(a)	The organization defines the information system account types that support the organizational missions/business functions.	Designer	User Accounts	This is met by requiring the contractor to ensure that any user interface supporting user accounts (either FULLY or MINIMALLY) must limit access according to specified limitations for each account, as that system is designed and as provided by the organization as DoD has DoD has determined the information system account types are not appropriate to define at the Enterprise level which determine system account types that support the organizational missions/business functions.
CCI-002236	AC-7(b)	The organization defines the time period the information system will automatically lock the account or node when the maximum number of unsuccessful attempts is exceeded.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to ensure that once an account is locked, the account must stay locked until unlocked by an administrator. If the account being locked is the sole administrator account on the device, the account must stay locked for 1 hour and then automatically unlock.
CCI-002237	AC-7(b)	The organization defines the delay algorithm to be employed by the information system to delay the next login prompt when the maximum number of unsuccessful attempts is exceeded.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to delay the next login prompt according to the DoD Defined Algorith of 5 Seconds.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002238	AC-7(b)	The information system automatically locks the account or node for either an organization-defined time period, until the locked account or node is released by an administrator, or delays the next login prompt according to the organization-defined delay algorithm when the maximum number of unsuccessful attempts is exceeded.	Designer Impractical	Unsuccessful Logon Attempts	For Devices MINIMALLY Supporting Accounts and Devices FULLY Supporting Accounts, this is met by requiring the contractor to configure the device to ensure the locked account is released by an administrator and delays the next login prompt for a minimum of 5 seconds when the maximum number of unsuccessful attempts is exceeded. Contractor is required to determine and apply applicable STIGs or SRGs that pertains to CCI-002238.
CCI-002243	AC-8(a)(1)	The organization-defined information system use notification message or banner is to state that users are accessing a U.S. Government information system.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002244	AC-8(a)(2)	The organization-defined information system use notification message or banner is to state that information system usage may be monitored, recorded, and subject to audit.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002245	AC-8(a)(3)	The organization-defined information system use notification message or banner is to state that unauthorized use of the information system is prohibited and subject to criminal and civil penalties.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002246	AC-8(a)(4)	The organization-defined information system use notification message or banner is to state that use of the information system indicates consent to monitoring and recording.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002247	AC-8(a)	The organization defines the use notification message or banner the information system displays to users before granting access to the system.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002248	AC-8(c)(1)	The organization defines the conditions of use which are to be displayed to users of the information system before granting further access.	DoD-Defined Enclave Designer Impractical	System Use Notification	See CCI-000048
CCI-002323	AC-18(a)	The organization establishes configuration/connection requirements for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	Wireless communication is not authorized for this project.
CCI-002449	SC-13	The organization defines the cryptographic uses, and type of cryptography required for each use, to be implemented by the information system.	DoD-Defined Enclave Designer Impractical	Cryptographic Protection	The organization is responsible for defining the cryptographic uses, and type of cryptography required for each use, to be implemented by the control system.
CCI-002450	SC-13	The information system implements organization-defined cryptographic uses and type of cryptography required for each use in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.	Enclave Designer Impractical	Cryptographic Protection	This is addressed by requiring and employing encrypted sessions for communications.
CCI-002530	SC-39	The information system maintains a separate execution domain for each executing process.	Designer	---	The control system device maintains a separate execution domain for each executing process within the limitations of the device.
CCI-002544	SC-41	The organization defines the information systems or information system components on which organization-defined connection ports or input/output devices are to be physically disabled or removed.	Enclave Designer Non-Designer	IP Control Networks	The organization is responsible for defining the control systems or control system components on which organization-defined connection ports or input/output devices are to be physically disabled or removed.
CCI-002545	SC-41	The organization defines the connection ports or input/output devices that are to be physically disabled or removed from organization-defined information systems or information system components.	Enclave Designer Non-Designer	IP Control Networks	The organization is responsible for defining the connection ports or input/output devices that are to be physically disabled or removed from organization-defined control systems or control system components.
CCI-002546	SC-41	The organization physically disables or removes organization-defined connection ports or input/output devices on organization-defined information systems or information system components.	Designer Impractical	IP Control Networks	The contractor is responsible for physically disabling or removing organization-defined connection ports or input/output devices on organization-defined control systems or control system components.
CCI-002623	SI-3(c)(1)	The organization defines the frequency for performing periodic scans of the information system for malicious code.	DoD-Defined Designer Impractical	Malicious Code Protection	Impractical; not applicable at the computer level.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002645	SI-4(b)	The organization defines the techniques and methods to be used to identify unauthorized use of the information system.	Enclave Designer Non-Designer	Information System Monitoring	This is partially met by requiring the contractor to provide all control system Cybersecurity Documentation in accordance with all required Control System Cybersecurity Documentation submittals as applicable which documents techniques and methods to be used to identify unauthorized use of the control system. For all other requirements, the organization is responsible to determine any additional techniques and methods (such as use of/connection to and enclave) as DoD has determined these are not appropriate to define at the Enterprise level. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-002773	SI-17	The organization defines the fail-safe procedures to be implemented by the information system when organization-defined failure conditions occur.	Designer	Control System Inventory Report; SAFE MODE AND FAIL SAFE OPERATION	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. Fail-safe procedures to be implemented by the control system are defined in that system's specification's section of its sequence of operations as designed by the Lead Engineer of the control system. For all control system components with an applicable STIG or SRG, contractor to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002774	SI-17	The organization defines the failure conditions which, when they occur, will result in the information system implementing organization-defined fail-safe procedures.	Designer	Control System Inventory Report; SAFE MODE AND FAIL SAFE OPERATION	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. Fail-safe procedures to be implemented by the control system are defined in that system's specification's section of its sequence of operations as designed by the Lead Engineer of the control system. For all control system components with an applicable STIG or SRG, contractor to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002775	SI-17	The information system implements organization-defined fail-safe procedures when organization-defined failure conditions occur.	Designer	Control System Inventory Report; SAFE MODE AND FAIL SAFE OPERATION	This is partially met by requiring the contractor to provide a Control System Inventory Report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. Contractor is required to determine and apply all applicable STIGs/SRGs. Fail-safe procedures to be implemented by the control system are defined in that system's specification's section of its sequence of operations as designed by the Lead Engineer of the control system. For all control system components with an applicable STIG or SRG, contractor to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002855	CP-12	The information system, when organization-defined conditions are detected, enters a safe mode of operation with organization-defined restrictions of safe mode of operation.	Designer	SAFE MODE AND FAIL SAFE OPERATION	This is met through the Engineering Design Process as defineed by UFC 1-200-01 DoD Building Code that is the foundational document of the UFC program in providing general building requirements and overarching criteria and documents. Throughout the Design process, the Lead Engineer coordinates with the organization to any requirements for the control system needed to meet CP-12, Safe Mode or SI-17, Fail-Safe Procedures to determine/define when organization-defined conditions are detected, the control system will enter a safe mode of operation with organization-defined restrictions of safe mode of operation. The contractor is then required to determine all applicable STIGs or SRGs, and then to configure the component in accordance with all applicable STIGs and SRGs.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002856	CP-12	The organization defines the conditions, that when detected, the information system enters a safe mode of operation with organization-defined restrictions of safe mode of operation.	Designer	SAFE MODE AND FAIL SAFE OPERATION	This is met through the Engineering Design Process as defineed by UFC 1-200-01 DoD Building Code that is the foundational document of the UFC program in providing general building requirements and overarching criteria and documents. Throughout the Design process, the Lead Engineer coordinates with the organization to define any requirements for the control system needed to meet CP-12, Safe Mode or SI-17, Fail-Safe Procedures to be implemented by the control system when the control system enters a safe mode of operation with organization-defined restrictions of safe mode of operation as DoD has determined the fail-safe procedures are not appropriate to define at the Enterprise level. The contractor is then required to determine all applicable STIGs or SRGs, and then to configure the component in accordance with all applicable STIGs and SRGs.
CCI-002857	CP-12	The organization defines the restrictions of safe mode of operation that the information system will enter when organization-defined conditions are detected.	Designer	SAFE MODE AND FAIL SAFE OPERATION	This is met through the Engineering Design Process as defineed by UFC 1-200-01 DoD Building Code that is the foundational document of the UFC program in providing general building requirements and overarching criteria and documents. Throughout the Design process, the Lead Engineer coordinates with the organization to define any requirements for the control system needed to meet CP-12, Safe Mode or SI-17, Fail-Safe Procedures to be implemented by the control system when organization-defined conditions are detected as DoD has determined the restrictions on safe mode of operation are not appropriate to define at the Enterprise level. The contractor is then required to determine all applicable STIGs or SRGs, and then to configure the component in accordance with all applicable STIGs and SRGs.
CCI-003051	PL-2(a)(2)	The organization's security plan for the information system explicitly defines the authorization boundary for the system.	Enclave Designer Non-Designer	Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which defines the authorization boundary for the system. The organization is responsible to use this diagram to explicitly define within the security plan the authorization boundary for the system upon final acceptance of the system. All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-003053	PL-2(a)(4)	The organization's security plan for the information system provides the security categorization of the information system including supporting rationale.	Designer Non-Designer	Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which defines the authorization boundary for the system. The organization is responsible to use this diagram as the supporting rationale to define within the security plan the security categorization of the system including upon final acceptance.
CCI-003116	SA-4(10)	The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.	Enclave Designer Impractical	FIPS 201-2 REQUIREMENT	Not Implemented and impractical. OT systems do not have the ability to accept PIV credentials and will require compensating controls. This CCI requires infrastructure support within the control system.
CCI-003124	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure configuration of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes secure configuration of the controller/device.
CCI-003125	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure installation of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes secure configuration of the controller/device, or or a specific indication that there are no secure configuration steps that apply as necessary.
CCI-003126	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure operation of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes secure operation of the controller/device, or or a specific indication that there are no secure configuration steps that apply as necessary.
CCI-003127	SA-5(a)(2)	The organization obtains administrator documentation for the information system, system component, or information system services that describes effective use and maintenance of security functions/mechanisms.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes effective use and maintenance of security functions or mechanisms for the controller/device, or a specific indication that there are no security functions or mechanisms in the device as necessary.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003128	SA-5(a)(3)	The organization obtains administrator documentation for the information system, system component, or information system services that describes known vulnerabilities regarding configuration and use of administrative (i.e. privileged) functions.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide all administrator documentation that describes known vulnerabilities regarding configuration and use of administrative (i.e. privileged) functions for the device.
CCI-003129	SA-5(b)(1)	The organization obtains user documentation for the information system, system component, or information system service that describes user-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide documentation that describes user-accessible security functions or mechanisms in the device and how to effectively use those security functions or mechanisms; or a specific indication that there are no user-accessible security functions or mechanisms in the device.
CCI-003130	SA-5(b)(2)	The organization obtains user documentation for the information system, system component or information system service that describes methods for user interaction which enables individuals to use the system, component, or service in a more secure manner.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor must provide documentation that describes methods for user interaction which enables individuals to use the device in a more secure manner.
CCI-003131	SA-5(b)(3)	The organization obtains user documentation for the information system, system component or information system service that describes user responsibilities in maintaining the security of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor must provide documentation that describes methods for user interaction which enables individuals to use the device in a more secure manner.

Starting Control Set and Tailoring Recommendations

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-1	ACCESS CONTROL POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An access control policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the access control policy and associated access controls; and b. Reviews and updates the current: 1. Access control policy [Assignment: organization-defined frequency]; and 2. Access control procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2	ACCOUNT MANAGEMENT	The organization: a. Identifies and selects the following types of information system accounts to support organizational missions/business functions: [Assignment: organization-defined information system account types]; b. Assigns account managers for information system accounts; c. Establishes conditions for group and role membership; d. Specifies authorized users of the information system, group and role membership, and access authorizations (i.e., privileges) and other attributes (as required) for each account; e. Requires approvals by [Assignment: organization-defined personnel or roles] for requests to create information system accounts; f. Creates, enables, modifies, disables, and removes information system accounts in accordance with [Assignment: organization-defined procedures or conditions]; g. Monitors the use of information system accounts; h. Notifies account managers: 1. When accounts are no longer required; 2. When users are terminated or transferred; and 3. When individual information system usage or need-to-know changes; i. Authorizes access to the information system based on: 1. A valid access authorization; 2. Intended system usage; and 3. Other attributes as required by the organization or associated missions/business functions; j. Reviews accounts for compliance with account management requirements [Assignment: organization-defined frequency]; and k. Establishes a process for reissuing shared/group account credentials (if deployed) when individuals are removed from the group.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(1)	ACCOUNT MANAGEMENT | AUTOMATED SYSTEM ACCOUNT MANAGEMENT	The organization employs automated mechanisms to support the management of information system accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(2)	ACCOUNT MANAGEMENT | REMOVAL OF TEMPORARY / EMERGENCY ACCOUNTS	The information system automatically [Selection: removes; disables] temporary and emergency accounts after [Assignment: organization-defined time period for each type of account].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(3)	ACCOUNT MANAGEMENT | DISABLE INACTIVE ACCOUNTS	The information system automatically disables inactive accounts after [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(4)	ACCOUNT MANAGEMENT | AUTOMATED AUDIT ACTIONS	The information system automatically audits account creation, modification, enabling, disabling, and removal actions, and notifies [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(5)	ACCOUNT MANAGEMENT | INACTIVITY LOGOUT	The organization requires that users log out when [Assignment: organization-defined time-period of expected inactivity or description of when to log out].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(7)	ACCOUNT MANAGEMENT | ROLE-BASED SCHEMES	The organization: (a) Establishes and administers privileged user accounts in accordance with a role-based access scheme that organizes allowed information system access and privileges into roles; (b) Monitors privileged role assignments; and (c) Takes [Assignment: organization-defined actions] when privileged role assignments are no longer appropriate.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(9)	ACCOUNT MANAGEMENT | RESTRICTIONS ON USE OF SHARED GROUPS / ACCOUNTS	The organization only permits the use of shared/group accounts that meet [Assignment: organization-defined conditions for establishing shared/group accounts].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(10)	ACCOUNT MANAGEMENT | SHARED / GROUP ACCOUNT CREDENTIAL TERMINATION	The information system terminates shared/group account credentials when members leave the group.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(12)	ACCOUNT MANAGEMENT | ACCOUNT MONITORING / ATYPICAL USAGE	The organization: (a) Monitors information system accounts for [Assignment: organization-defined atypical use]; and (b) Reports atypical usage of information system accounts to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-2(13)	ACCOUNT MANAGEMENT | DISABLE ACCOUNTS FOR HIGH-RISK INDIVIDUALS	The organization disables accounts of users posing a significant risk within [Assignment: organization-defined time period] of discovery of the risk.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-3	ACCESS ENFORCEMENT	The information system enforces approved authorizations for logical access to information and system resources in accordance with applicable access control policies.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-3(4)	ACCESS ENFORCEMENT | DISCRETIONARY ACCESS CONTROL	The information system enforces [Assignment: organization-defined discretionary access control policies] over defined subjects and objects where the policy specifies that a subject that has been granted access to information can do one or more of the following: (a) Pass the information to any other subjects or objects; (b) Grant its privileges to other subjects; (c) Change security attributes on subjects, objects, the information system, or the information system's components; (d) Choose the security attributes to be associated with newly created or revised objects; or (e) Change the rules governing access control.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-4	INFORMATION FLOW ENFORCEMENT	The information system enforces approved authorizations for controlling the flow of information within the system and between interconnected systems based on [Assignment: organization-defined information flow control policies].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-5	SEPARATION OF DUTIES	The organization: a. Separates [Assignment: organization-defined duties of individuals]; b. Documents separation of duties of individuals; and c. Defines information system access authorizations to support separation of duties.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6	LEAST PRIVILEGE	The organization employs the concept of least privilege, allowing only authorized accesses for users (and processes acting on behalf of users) which are necessary to accomplish assigned tasks in accordance with organizational missions and business functions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(1)	LEAST PRIVILEGE | AUTHORIZE ACCESS TO SECURITY FUNCTIONS	The organization explicitly authorizes access to [Assignment: organization-defined security functions (deployed in hardware, software, and firmware) and security-relevant information].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(2)	LEAST PRIVILEGE | NON-PRIVILEGED ACCESS FOR NONSECURITY FUNCTIONS	The organization requires that users of information system accounts, or roles, with access to [Assignment: organization-defined security functions or security-relevant information], use non-privileged accounts or roles, when accessing nonsecurity functions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(5)	LEAST PRIVILEGE | PRIVILEGED ACCOUNTS	The organization restricts privileged accounts on the information system to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(7)	LEAST PRIVILEGE | REVIEW OF USER PRIVILEGES	The organization: (a) Reviews [Assignment: organization-defined frequency] the privileges assigned to [Assignment: organization-defined roles or classes of users] to validate the need for such privileges; and (b) Reassigns or removes privileges, if necessary, to correctly reflect organizational mission/business needs.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(8)	LEAST PRIVILEGE | PRIVILEGE LEVELS FOR CODE EXECUTION	The information system prevents [Assignment: organization-defined software] from executing at higher privilege levels than users executing the software.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(9)	LEAST PRIVILEGE | AUDITING USE OF PRIVILEGED FUNCTIONS	The information system audits the execution of privileged functions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-6(10)	LEAST PRIVILEGE | PROHIBIT NON-PRIVILEGED USERS FROM EXECUTING PRIVILEGED FUNCTIONS	The information system prevents non-privileged users from executing privileged functions to include disabling, circumventing, or altering implemented security safeguards/countermeasures.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-7	UNSUCCESSFUL LOGIN ATTEMPTS	The information system: a. Enforces a limit of [Assignment: organization-defined number] consecutive invalid logon attempts by a user during a [Assignment: organization-defined time period]; and b. Automatically [Selection: locks the account/node for an [Assignment: organization-defined time period]; locks the account/node until released by an administrator; delays next logon prompt according to [Assignment: organization-defined delay algorithm]] when the maximum number of unsuccessful attempts is exceeded.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-8	SYSTEM USE NOTIFICATION	The information system: a. Displays to users [Assignment: organization-defined system use notification message or banner] before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance and states that: 1. Users are accessing a U.S. Government information system; 2. Information system usage may be monitored, recorded, and subject to audit; 3. Unauthorized use of the information system is prohibited and subject to criminal and civil penalties; and 4. Use of the information system indicates consent to monitoring and recording; b. Retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access the information system; and c. For publicly accessible systems: 1. Displays system use information [Assignment: organization-defined conditions], before granting further access; 2. Displays references, if any, to monitoring, recording, or auditing that are consistent with privacy accommodations for such systems that generally prohibit those activities; and 3. Includes a description of the authorized uses of the system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-10	CONCURRENT SESSION CONTROL	The information system limits the number of concurrent sessions for each [Assignment: organization-defined account and/or account type] to [Assignment: organization-defined number].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-11	SESSION LOCK	The information system: a. Prevents further access to the system by initiating a session lock after [Assignment: organization-defined time period] of inactivity or upon receiving a request from a user; and b. Retains the session lock until the user reestablishes access using established identification and authentication procedures.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-12	SESSION TERMINATION	The information system automatically terminates a user session after [Assignment: organization-defined conditions or trigger events requiring session disconnect].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-14	PERMITTED ACTIONS WITHOUT IDENTIFICATION OR AUTHENTICATION	The organization: a. Identifies [Assignment: organization-defined user actions] that can be performed on the information system without identification or authentication consistent with organizational missions/business functions; and b. Documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification or authentication.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-16	SECURITY ATTRIBUTES	The organization: a. Provides the means to associate [Assignment: organization-defined types of security attributes] having [Assignment: organization-defined security attribute values] with information in storage, in process, and/or in transmission; b. Ensures that the security attribute associations are made and retained with the information; c. Establishes the permitted [Assignment: organization-defined security attributes] for [Assignment: organization-defined information systems]; and d. Determines the permitted [Assignment: organization-defined values or ranges] for each of the established security attributes.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-16(6)	SECURITY ATTRIBUTES | MAINTENANCE OF ATTRIBUTE ASSOCIATION BY ORGANIZATION	The organization allows personnel to associate, and maintain the association of [Assignment: organization-defined security attributes] with [Assignment: organization-defined subjects and objects] in accordance with [Assignment: organization-defined security policies].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-17	REMOTE ACCESS	The organization: a. Establishes and documents usage restrictions, configuration/connection requirements, and implementation guidance for each type of remote access allowed; and b. Authorizes remote access to the information system prior to allowing such connections.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-17(1)	REMOTE ACCESS | AUTOMATED MONITORING / CONTROL	The information system monitors and controls remote access methods.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-17(2)	REMOTE ACCESS | PROTECTION OF CONFIDENTIALITY / INTEGRITY USING ENCRYPTION	The information system implements cryptographic mechanisms to protect the confidentiality and integrity of remote access sessions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-17(3)	REMOTE ACCESS | MANAGED ACCESS CONTROL POINTS	The information system routes all remote accesses through [Assignment: organization-defined number] managed network access control points.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-17(4)	REMOTE ACCESS | PRIVILEGED COMMANDS/ ACCESS	The organization: (a) Authorizes the execution of privileged commands and access to security-relevant information via remote access only for [Assignment: organization-defined needs]; and (b) Documents the rationale for such access in the security plan for the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-17(9)	REMOTE ACCESS | DISCONNECT/ DISABLE ACCESS	The organization provides the capability to expeditiously disconnect or disable remote access to the information system within [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-18	WIRELESS ACCESS	The organization: a. Establishes usage restrictions, configuration/connection requirements, and implementation guidance for wireless access; and b. Authorizes wireless access to the information system prior to allowing such connections.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-18(1)	WIRELESS ACCESS | AUTHENTICATION AND ENCRYPTION	The information system protects wireless access to the system using authentication of [Selection (one or more): users; devices] and encryption.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-18(3)	WIRELESS ACCESS | DISABLE WIRELESS NETWORKING	The organization disables, when not intended for use, wireless networking capabilities internally embedded within information system components prior to issuance and deployment.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-18(4)	WIRELESS ACCESS | RESTRICT CONFIGURATIONS BY USERS	The organization identifies and explicitly authorizes users allowed to independently configure wireless networking capabilities.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-19	ACCESS CONTROL FOR MOBILE DEVICES	The organization: a. Establishes usage restrictions, configuration requirements, connection requirements, and implementation guidance for organization-controlled mobile devices; and b. Authorizes the connection of mobile devices to organizational information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-19(5)	ACCESS CONTROL FOR MOBILE DEVICES | FULL DEVICE/ CONTAINER-BASED ENCRYPTION	The organization employs [Selection: full-device encryption; container encryption] to protect the confidentiality and integrity of information on [Assignment: organization-defined mobile devices].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-20	USE OF EXTERNAL INFORMATION SYSTEMS	The organization establishes terms and conditions, consistent with any trust relationships established with other organizations owning, operating, and/or maintaining external information systems, allowing authorized individuals to: a. Access the information system from external information systems; and b. Process, store, or transmit organization-controlled information using external information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-20(1)	USE OF EXTERNAL INFORMATION SYSTEMS | LIMITS ON AUTHORIZED USE	The organization permits authorized individuals to use an external information system to access the information system or to process, store, or transmit organization-controlled information only when the organization: (a) Verifies the implementation of required security controls on the external system as specified in the organization's information security policy and security plan; or (b) Retains approved information system connection or processing agreements with the organizational entity hosting the external information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-20(3)	USE OF EXTERNAL INFORMATION SYSTEMS | NON-ORGANIZATIONALLY OWNED SYSTEMS / COMPONENTS / DEVICES	The organization [Selection: restricts; prohibits] the use of non-organizationally owned information systems, system components, or devices to process, store, or transmit organizational information.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AC-21	INFORMATION SHARING	The organization: a. Facilitates information sharing by enabling authorized users to determine whether access authorizations assigned to the sharing partner match the access restrictions on the information for [Assignment: organization-defined information sharing circumstances where user discretion is required]; and b. Employs [Assignment: organization-defined automated mechanisms or manual processes] to assist users in making information sharing/collaboration decisions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AC-22	PUBLICLY ACCESSIBLE CONTENT	The organization: a. Designates individuals authorized to post information onto a publicly accessible information system; b. Trains authorized individuals to ensure that publicly accessible information does not contain nonpublic information; c. Reviews the proposed content of information prior to posting onto the publicly accessible information system to ensure that nonpublic information is not included; and d. Reviews the content on the publicly accessible information system for nonpublic information [Assignment: organization-defined frequency] and removes such information, if discovered.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-1	SECURITY AWARENESS AND TRAINING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security awareness and training policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security awareness and training policy and associated security awareness and training controls; and b. Reviews and updates the current: 1. Security awareness and training policy [Assignment: organization-defined frequency]; and 2. Security awareness and training procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-2	SECURITY AWARENESS TRAINING	The organization provides basic security awareness training to information system users (including managers, senior executives, and contractors): a. As part of initial training for new users; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-2(2)	SECURITY AWARENESS | INSIDER THREAT	The organization includes security awareness training on recognizing and reporting potential indicators of insider threat.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-3	ROLE-BASED SECURITY TRAINING	The organization provides role-based security training to personnel with assigned security roles and responsibilities: a. Before authorizing access to the information system or performing assigned duties; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-3(2)	SECURITY TRAINING | PHYSICAL SECURITY CONTROLS	The organization provides [Assignment: organization-defined personnel or roles] with initial and [Assignment: organization-defined frequency] training in the employment and operation of physical security controls.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-3(4)	SECURITY TRAINING | SUSPICIOUS COMMUNICATIONS AND ANOMALOUS SYSTEM BEHAVIOR	The organization provides training to its personnel on [Assignment: organization-defined indicators of malicious code] to recognize suspicious communications and anomalous behavior in organizational information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AT-4	SECURITY TRAINING RECORDS	The organization: a. Documents and monitors individual information system security training activities including basic security awareness training and specific information system security training; and b. Retains individual training records for [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-1	AUDIT AND ACCOUNTABILITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An audit and accountability policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the audit and accountability policy and associated audit and accountability controls; and b. Reviews and updates the current: 1. Audit and accountability policy [Assignment: organization-defined frequency]; and 2. Audit and accountability procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-2	AUDIT EVENTS	The organization: a. Determines that the information system is capable of auditing the following events: [Assignment: organization-defined auditable events]; b. Coordinates the security audit function with other organizational entities requiring audit-related information to enhance mutual support and to help guide the selection of auditable events; c. Provides a rationale for why the auditable events are deemed to be adequate to support after-the-fact investigations of security incidents; and d. Determines that the following events are to be audited within the information system: [Assignment: organization-defined audited events (the subset of the auditable events defined in AU-2 a.) along with the frequency of (or situation requiring) auditing for each identified event].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-2(3)	AUDIT EVENTS | REVIEWS AND UPDATES	The organization reviews and updates the audited events [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-3	CONTENT OF AUDIT RECORDS	The information system generates audit records containing information that establishes what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, and the identity of any individuals or subjects associated with the event.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-3(1)	CONTENT OF AUDIT RECORDS | ADDITIONAL AUDIT INFORMATION	The information system generates audit records containing the following additional information: [Assignment: organization-defined additional, more detailed information].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-4	AUDIT STORAGE CAPACITY	The organization allocates audit record storage capacity in accordance with [Assignment: organization-defined audit record storage requirements].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-4(1)	AUDIT STORAGE CAPACITY | TRANSFER TO ALTERNATE STORAGE	The information system off-loads audit records [Assignment: organization-defined frequency] onto a different system or media than the system being audited.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AU-5	RESPONSE TO AUDIT PROCESSING FAILURES	The information system: a. Alerts [Assignment: organization-defined personnel or roles] in the event of an audit processing failure; and b. Takes the following additional actions: [Assignment: organization-defined actions to be taken (e.g., shut down information system, overwrite oldest audit records, stop generating audit records)].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-5(1)	RESPONSE TO AUDIT PROCESSING FAILURES | AUDIT STORAGE CAPACITY	The information system provides a warning to [Assignment: organization-defined personnel, roles, and/or locations] within [Assignment: organization-defined time period] when allocated audit record storage volume reaches [Assignment: organi zation-defined percentage] of repository maximum audit record storage capacity.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-6	AUDIT REVIEW, ANALYSIS, AND REPORTING	The organization: a. Reviews and analyzes information system audit records [Assignment: organization-defined frequency] for indications of [Assignment: organization-defined inappropriate or unusual activity]; and b. Reports findings to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-6(1)	AUDIT REVIEW, ANALYSIS, AND REPORTING | PROCESS INTEGRATION	The organization employs automated mechanisms to integrate audit review, analysis, and reporting processes to support organizational processes for investigation and response to suspicious activities.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-6(3)	AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATE AUDIT REPOSITORIES	The organization analyzes and correlates audit records across different repositories to gain organization-wide situational awareness.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-6(4)	AUDIT REVIEW, ANALYSIS, AND REPORTING | CENTRAL REVIEW AND ANALYSIS	The information system provides the capability to centrally review and analyze audit records from multiple components within the system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-6(10)	AUDIT REVIEW, ANALYSIS, AND REPORTING | AUDIT LEVEL ADJUSTMENT	The organization adjusts the level of audit review, analysis, and reporting within the information system when there is a change in risk based on law enforcement information, intelligence information, or other credible sources of information.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-7	AUDIT REDUCTION AND REPORT GENERATION	The information system provides an audit reduction and report generation capability that: a. Supports on-demand audit review, analysis, and reporting requirements and after-the-fact investigations of security incidents; and b. Does not alter the original content or time ordering of audit records.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-7(1)	AUDIT REDUCTION AND REPORT GENERATION | AUTOMATIC PROCESSING	The information system provides the capability to process audit records for events of interest based on [Assignment: organization-defined audit fields within audit records].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-8	TIME STAMPS	The information system: a. Uses internal system clocks to generate time stamps for audit records; and b. Records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT) and meets [Assignment: organization-defined granularity of time measurement].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-8(1)	TIME STAMPS | SYNCHRONIZATION WITH AUTHORITATIVE TIME SOURCE	The information system: (a) Compares the internal information system clocks [Assignment: organization-defined frequency] with [Assignment: organization-defined authoritative time source]; and (b) Synchronizes the internal system clocks to the authoritative time source when the time difference is greater than [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-9	PROTECTION OF AUDIT INFORMATION	The information system protects audit information and audit tools from unauthorized access, modification, and deletion.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-9(4)	PROTECTION OF AUDIT INFORMATION | ACCESS BY SUBSET OF PRIVILEGED USERS	The organization authorizes access to management of audit functionality to only [Assignment: organization-defined subset of privileged users].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-10	NON-REPUDIATION	The information system protects against an individual (or process acting on behalf of an individual) falsely denying having performed [Assignment: organization-defined actions to be covered by non-repudiation].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-11	AUDIT RECORD RETENTION	The organization retains audit records for [Assignment: organization-defined time period consistent with records retention policy] to provide support for after-the-fact investigations of security incidents and to meet regulatory and organizational information retention requirements.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-11(1)	AUDIT RECORD RETENTION | LONG-TERM RETRIEVAL CAPABILITY	The organization employs [Assignment: organization-defined measures] to ensure that long-term audit records generated by the information system can be retrieved.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-12	AUDIT GENERATION	The information system: a. Provides audit record generation capability for the auditable events defined in AU-2 at [Assignment: organization-defined information system components]; b. Allows [Assignment: organization-defined personnel or roles] to select which auditable events are to be audited by specific components of the information system; and c. Generates audit records for the audited events defined in AU-2 with the content defined in AU-3.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-12(1)	AUDIT GENERATION | SYSTEM-WIDE / TIME-CORRELATED AUDIT TRAIL	The information system compiles audit records from [Assignment: organization-defined information system components] into a system-wide (logical or physical) audit trail that is time-correlated to within [Assignment: organization-defined level of tolerance for relationship between time stamps of individual records in the audit trail].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-12(3)	AUDIT GENERATION | CHANGES BY AUTHORIZED INDIVIDUALS	The information system provides the capability for [Assignment: organization-defined individuals or roles] to change the auditing to be performed on [Assignment: organization-defined information system components] based on [Assignment: organization-defined selectable event criteria] within [Assignment: organization-defined time thresholds].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-14	SESSION AUDIT	The information system provides the capability for authorized users to select a user session to capture/record or view/hear.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
AU-14(1)	SESSION AUDIT | SYSTEM START-UP	The information system initiates session audits at system start-up.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
AU-14(2)	SESSION AUDIT | CAPTURE/RECORD AND LOG CONTENT	The information system provides the capability for authorized users to capture/record and log content related to a user session.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-1	SECURITY ASSESSMENT AND AUTHORIZATION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security assessment and authorization policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security assessment and authorization policy and associated security assessment and authorization controls; and b. Reviews and updates the current: 1. Security assessment and authorization policy [Assignment: organization-defined frequency]; and 2. Security assessment and authorization procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-2	SECURITY ASSESSMENTS	The organization: a. Develops a security assessment plan that describes the scope of the assessment including: 1. Security controls and control enhancements under assessment; 2. Assessment procedures to be used to determine security control effectiveness; and 3. Assessment environment, assessment team, and assessment roles and responsibilities; b. Assesses the security controls in the information system and its environment of operation [Assignment: organization-defined frequency] to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting established security requirements; c. Produces a security assessment report that documents the results of the assessment; and d. Provides the results of the security control assessment to [Assignment: organization-defined individuals or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-2(1)	SECURITY ASSESSMENTS | INDEPENDENT ASSESSORS	The organization employs assessors or assessment teams with [Assignment: organization-defined level of independence] to conduct security control assessments.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-3	SYSTEM INTERCONNECTIONS	The organization: a. Authorizes connections from the information system to other information systems through the use of Interconnection Security Agreements; b. Documents, for each interconnection, the interface characteristics, security requirements, and the nature of the information communicated; and c. Reviews and updates Interconnection Security Agreements [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-3(5)	SYSTEM INTERCONNECTIONS | RESTRICTIONS ON EXTERNAL SYSTEM CONNECTIONS	The organization employs [Selection: allow-all, deny-by-exception; deny-all, permit-by-exception] policy for allowing [Assignment: organization-defined information systems] to connect to external information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-5	PLAN OF ACTION AND MILESTONES	The organization: a. Develops a plan of action and milestones for the information system to document the organization's planned remedial actions to correct weaknesses or deficiencies noted during the assessment of the security controls and to reduce or eliminate known vulnerabilities in the system; and b. Updates existing plan of action and milestones [Assignment: organization-defined frequency] based on the findings from security controls assessments, security impact analyses, and continuous monitoring activities.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-6	SECURITY AUTHORIZATION	The organization: a. Assigns a senior-level executive or manager as the authorizing official for the information system; b. Ensures that the authorizing official authorizes the information system for processing before commencing operations; and c. Updates the security authorization [Assignment: organization - defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-7	CONTINUOUS MONITORING	The organization develops a continuous monitoring strategy and implements a continuous monitoring program that includes: a. Establishment of [Assignment: organization-defined metrics] to be monitored; b. Establishment of [Assignment: organization-defined frequencies] for monitoring and [Assignment: organization-defined frequencies] for assessments supporting such monitoring; c. Ongoing security control assessments in accordance with the organizational continuous monitoring strategy; d. Ongoing security status monitoring of organization-defined metrics in accordance with the organizational continuous monitoring strategy; e. Correlation and analysis of security-related information generated by assessments and monitoring; f. Response actions to address results of the analysis of security-related information; and g. Reporting the security status of organization and the information system to [Assignment: organization-defined personnel or roles] [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-7(1)	CONTINUOUS MONITORING | INDEPENDENT ASSESSMENT	The organization employs assessors or assessment teams with [Assignment: organization-defined level of independence] to monitor the security controls in the information system on an ongoing basis.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CA-9	INTERNAL SYSTEM CONNECTIONS	The organization: a. Authorizes internal connections of [Assignment: organization-defined information system components or classes of components] to the information system; and b. Documents, for each internal connection, the interface characteristics, security requirements, and the nature of the information communicated.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CM-1	CONFIGURATION MANAGEMENT POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A configuration management policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the configuration management policy and associated configuration management controls; and b. Reviews and updates the current: 1. Configuration management policy [Assignment: organization-defined frequency]; and 2. Configuration management procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-2	BASELINE CONFIGURATION	The organization develops, documents, and maintains under configuration control, a current baseline configuration of the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-2(1)	BASELINE CONFIGURATION | REVIEWS AND UPDATES	The organization reviews and updates the baseline configuration of the information system: (a) [Assignment: organization-defined frequency]; (b) When required due to [Assignment organization-defined circumstances]; and (c) As an integral part of information system component installations and upgrades.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-2(3)	BASELINE CONFIGURATION | RETENTION OF PREVIOUS CONFIGURATIONS	The organization retains [Assignment: organization-defined previous versions of baseline configurations of the information system] to support rollback.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-2(7)	BASELINE CONFIGURATION | CONFIGURE SYSTEMS, COMPONENTS, OR DEVICES FOR HIGH-RISK AREAS	The organization: (a) Issues [Assignment: organization-defined information systems, system components, or devices] with [Assignment: organization-defined configurations] to individuals traveling to locations that the organization deems to be of significant risk; and (b) Applies [Assignment: organization-defined security safeguards] to the devices when the individuals return.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-3	CONFIGURATION CHANGE CONTROL	The organization: a. Determines the types of changes to the information system that are configuration-controlled; b. Reviews proposed configuration-controlled changes to the information system and approves or disapproves such changes with explicit consideration for security impact analyses; c. Documents configuration change decisions associated with the information system; d. Implements approved configuration-controlled changes to the information system; e. Retains records of configuration-controlled changes to the information system for [Assignment: organization-defined time period]; f. Audits and reviews activities associated with configuration-controlled changes to the information system; and g. Coordinates and provides oversight for configuration change control activities through [Assignment: organization-defined configuration change control element (e.g., committee, board)] that convenes [Selection (one or more): [Assignment: organization-defined frequency]; [Assignment: organization-defined configuration change conditions]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-3(2)	CONFIGURATION CHANGE CONTROL | TEST / VALIDATE / DOCUMENT CHANGES	The organization tests, validates, and documents changes to the information system before implementing the changes on the operational system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-3(4)	CONFIGURATION CHANGE CONTROL | SECURITY REPRESENTATIVE	The organization requires an information security representative to be a member of the [Assignment: organization-defined configuration change control element].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-3(6)	CONFIGURATION CHANGE CONTROL | CRYPTOGRAPHY MANAGEMENT	The organization ensures that cryptographic mechanisms used to provide [Assignment: organization-defined security safeguards] are under configuration management.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-4	SECURITY IMPACT ANALYSIS	The organization analyzes changes to the information system to determine potential security impacts prior to change implementation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-4(1)	SECURITY IMPACT ANALYSIS | SEPARATE TEST ENVIRONMENTS	The organization analyzes changes to the information system in a separate test environment before implementation in an operational environment, looking for security impacts due to flaws, weaknesses, incompatibility, or intentional malice.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-5	ACCESS RESTRICTIONS FOR CHANGE	The organization defines, documents, approves, and enforces physical and logical access restrictions associated with changes to the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-5(1)	ACCESS RESTRICTIONS FOR CHANGE | AUTOMATED ACCESS ENFORCEMENT / AUDITING	The information system enforces access restrictions and supports auditing of the enforcement actions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-5(2)	ACCESS RESTRICTIONS FOR CHANGE | REVIEW SYSTEM CHANGES	The organization reviews information system changes [Assignment: organization-defined frequency] and [Assignment: organization-defined circumstances] to determine whether unauthorized changes have occurred.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-5(5)	ACCESS RESTRICTIONS FOR CHANGE | LIMIT PRODUCTION / OPERATIONAL PRIVILEGES	The organization: (a) Limits privileges to change information system components and system-related information within a production or operational environment; and (b) Reviews and reevaluates privileges [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-5(6)	ACCESS RESTRICTIONS FOR CHANGE | LIMIT LIBRARY PRIVILEGES	The organization limits privileges to change software resident within software libraries.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CM-6	CONFIGURATION SETTINGS	The organization: a. Establishes and documents configuration settings for information technology products employed within the information system using [Assignment: organization-defined security configuration checklists] that reflect the most restrictive mode consistent with operational requirements; b. Implements the configuration settings; c. Identifies, documents, and approves any deviations from established configuration settings for [Assignment: organization - defined information system components] based on [Assignment: organization-defined operational requirements]; and d. Monitors and controls changes to the configuration settings in accordance with organizational policies and procedures.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-6(1)	CONFIGURATION SETTINGS | AUTOMATED CENTRAL MANAGEMENT / APPLICATION / VERIFICATION	The organization employs automated mechanisms to centrally manage, apply, and verify configuration settings for [Assignment: organization-defined information system components].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-7	LEAST FUNCTIONALITY	The organization: a. Configures the information system to provide only essential capabilities; and b. Prohibits or restricts the use of the following functions, ports, protocols, and/or services: [Assignment: organization-defined prohibited or restricted functions, ports, protocols, and/or services].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-7(1)	LEAST FUNCTIONALITY | PERIODIC REVIEW	The organization: (a) Reviews the information system [Assignment: organization-defined frequency] to identify unnecessary and/or nonsecure functions, ports, protocols, and services; and (b) Disables [Assignment: organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-7(2)	LEAST FUNCTIONALITY | PREVENT PROGRAM EXECUTION	The information system prevents program execution in accordance with [Selection (one or more): [Assignment: organization-defined policies regarding software program usage and restrictions]; rules authorizing the terms and conditions of software program usage].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-7(3)	LEAST FUNCTIONALITY | REGISTRATION COMPLIANCE	The organization ensures compliance with [Assignment: organization-defined registration requirements for functions, ports, protocols, and services].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-7(5)	LEAST FUNCTIONALITY | AUTHORIZED SOFTWARE / WHITELISTING	The organization: (a) Identifies [Assignment: organization-defined software programs authorized to execute on the information system]; (b) Employs a deny-all, permit-by-exception policy to allow the execution of authorized software programs on the information system; and (c) Reviews and updates the list of authorized software programs [Assignment: organization- defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-8	INFORMATION SYSTEM COMPONENT INVENTORY	The organization: a. Develops and documents an inventory of information system components that: 1. Accurately reflects the current information system; 2. Includes all components within the authorization boundary of the information system; 3. Is at the level of granularity deemed necessary for tracking and reporting; and 4. Includes [Assignment: organization-defined information deemed necessary to achieve effective information system component accountability]; and b. Reviews and updates the information system component inventory [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-8(1)	INFORMATION SYSTEM COMPONENT INVENTORY | UPDATES DURING INSTALLATIONS / REMOVALS	The organization updates the inventory of information system components as an integral part of component installations, removals, and information system updates.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-8(2)	INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED MAINTENANCE	The organization employs automated mechanisms to help maintain an up-to-date, complete, accurate, and readily available inventory of information system components.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-8(3)	INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED UNAUTHORIZED COMPONENT DETECTION	The organization: (a) Employs automated mechanisms [Assignment: organization-defined frequency] to detect the presence of unauthorized hardware, software, and firmware components within the information system; and (b) Takes the following actions when unauthorized components are detected: [Selection (one or more): disables network access by such components; isolates the components; notifies [Assignment: organization-defined personnel or roles]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-8(5)	INFORMATION SYSTEM COMPONENT INVENTORY | NO DUPLICATE ACCOUNTING OF COMPONENTS	The organization verifies that all components within the authorization boundary of the information system are not duplicated in other information system component inventories.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-9	CONFIGURATION MANAGEMENT PLAN	The organization develops, documents, and implements a configuration management plan for the information system that: a. Addresses roles, responsibilities, and configuration management processes and procedures; b. Establishes a process for identifying configuration items throughout the system development life cycle and for managing the configuration of the configuration items; c. Defines the configuration items for the information system and places the configuration items under configuration management; and d. Protects the configuration management plan from unauthorized disclosure and modification.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-10	SOFTWARE USAGE RESTRICTIONS	The organization: a. Uses software and associated documentation in accordance with contract agreements and copyright laws; b. Tracks the use of software and associated documentation protected by quantity licenses to control copying and distribution; and c. Controls and documents the use of peer-to-peer file sharing technology to ensure that this capability is not used for the unauthorized distribution, display, performance, or reproduction of copyrighted work.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-10(1)	SOFTWARE USAGE RESTRICTIONS | OPEN SOURCE SOFTWARE	The organization establishes the following restrictions on the use of open source software: [Assignment: organization-defined restrictions].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CM-11	USER-INSTALLED SOFTWARE	The organization: a. Establishes [Assignment: organization-defined policies] governing the installation of software by users; b. Enforces software installation policies through [Assignment: organization-defined methods]; and c. Monitors policy compliance at [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CM-11(2)	USER-INSTALLED SOFTWARE | PROHIBIT INSTALLATION WITHOUT PRIVILEGED STATUS	The information system prohibits user installation of software without explicit privileged status.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-1	CONTINGENCY PLANNING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A contingency planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the contingency planning policy and associated contingency planning controls; and b. Reviews and updates the current: 1. Contingency planning policy [Assignment: organization-defined frequency]; and 2. Contingency planning procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-2	CONTINGENCY PLAN	The organization: a. Develops a contingency plan for the information system that: 1. Identifies essential missions and business functions and associated contingency requirements; 2. Provides recovery objectives, restoration priorities, and metrics; 3. Addresses contingency roles, responsibilities, assigned individuals with contact information; 4. Addresses maintaining essential missions and business functions despite an information system disruption, compromise, or failure; 5. Addresses eventual, full information system restoration without deterioration of the security safeguards originally planned and implemented; and 6. Is reviewed and approved by [Assignment: organization-defined personnel or roles]; b. Distributes copies of the contingency plan to [Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements]; c. Coordinates contingency planning activities with incident handling activities; d. Reviews the contingency plan for the information system [Assignment: organization-defined frequency]; e. Updates the contingency plan to address changes to the organization, information system, or environment of operation and problems encountered during contingency plan implementation, execution, or testing; f. Communicates contingency plan changes to [Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements]; and g. Protects the contingency plan from unauthorized disclosure and modification.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-2(1)	CONTINGENCY PLAN | COORDINATE WITH RELATED PLANS	The organization coordinates contingency plan development with organizational elements responsible for related plans.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-2(3)	CONTINGENCY PLAN | RESUME ESSENTIAL MISSIONS / BUSINESS FUNCTIONS	The organization plans for the resumption of essential missions and business functions within [Assignment: organization-defined time period] of contingency plan activation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-2(8)	CONTINGENCY PLAN | IDENTIFY CRITICAL ASSETS	The organization identifies critical information system assets supporting essential missions and business functions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-3	CONTINGENCY TRAINING	The organization provides contingency training to information system users consistent with assigned roles and responsibilities: a. Within [Assignment: organization-defined time period] of assuming a contingency role or responsibility; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-4	CONTINGENCY PLAN TESTING	The organization: a. Tests the contingency plan for the information system [Assignment: organization-defined frequency] using [Assignment: organization-defined tests] to determine the effectiveness of the plan and the organizational readiness to execute the plan; b. Reviews the contingency plan test results; and c. Initiates corrective actions, if needed.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-4(1)	CONTINGENCY PLAN TESTING | COORDINATE WITH RELATED PLANS	The organization coordinates contingency plan testing with organizational elements responsible for related plans.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-6	ALTERNATE STORAGE SITE	The organization: a. Establishes an alternate storage site including necessary agreements to permit the storage and retrieval of information system backup information; and b. Ensures that the alternate storage site provides information security safeguards equivalent to that of the primary site.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-6(1)	ALTERNATE STORAGE SITE | SEPARATION FROM PRIMARY SITE	The organization identifies an alternate storage site that is separated from the primary storage site to reduce susceptibility to the same threats.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-6(3)	ALTERNATE STORAGE SITE | ACCESSIBILITY	The organization identifies potential accessibility problems to the alternate storage site in the event of an area-wide disruption or disaster and outlines explicit mitigation actions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
CP-7	ALTERNATE PROCESSING SITE	The organization: a. Establishes an alternate processing site including necessary agreements to permit the transfer and resumption of [Assignment: organization-defined information system operations] for essential missions/business functions within [Assignment: organization-defined time period consistent with recovery time and recovery point objectives] when the primary processing capabilities are unavailable; b. Ensures that equipment and supplies required to transfer and resume operations are available at the alternate processing site or contracts are in place to support delivery to the site within the organization-defined time period for transfer/resumption; and c. Ensures that the alternate processing site provides information security safeguards equivalent to that of the primary site.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-7(1)	ALTERNATE PROCESSING SITE | SEPARATION FROM PRIMARY SITE	The organization identifies an alternate processing site that is separated from the primary processing site to reduce susceptibility to the same threats.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-7(2)	ALTERNATE PROCESSING SITE | ACCESSIBILITY	The organization identifies potential accessibility problems to the alternate processing site in the event of an area-wide disruption or disaster and outlines explicit mitigation actions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-7(3)	ALTERNATE PROCESSING SITE | PRIORITY OF SERVICE	The organization develops alternate processing site agreements that contain priority-of-service provisions in accordance with the organization's availability requirements (including recovery time objectives).	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-8	TELECOMMUNICATIONS SERVICES	The organization establishes alternate telecommunications services including necessary agreements to permit the resumption of [Assignment: organization-defined information system operations] for essential missions and business functions within [Assignment: organization- defined time period] when the primary telecommunications capabilities are unavailable at either the primary or alternate processing or storage sites.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-8(1)	TELECOMMUNICATIONS SERVICES | PRIORITY OF SERVICE PROVISIONS	The organization: (a) Develops primary and alternate telecommunications service agreements that contain priority-of-service provisions in accordance with organizational availability requirements (including recovery time objectives); and (b) Requests Telecommunications Service Priority for all telecommunications services used for national security emergency preparedness in the event that the primary and/or alternate telecommunications services are provided by a common carrier.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-8(2)	TELECOMMUNICATIONS SERVICES | SINGLE POINTS OF FAILURE	The organization obtains alternate telecommunications services to reduce the likelihood of sharing a single point of failure with primary telecommunications services.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-9	INFORMATION SYSTEM BACKUP	The organization: a. Conducts backups of user-level information contained in the information system [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; b. Conducts backups of system-level information contained in the information system [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; c. Conducts backups of information system documentation including security-related documentation [Assignment: organization-defined frequency consistent with recovery time and recovery point objectives]; and d. Protects the confidentiality, integrity, and availability of backup information at storage locations.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-9(1)	INFORMATION SYSTEM BACKUP | TESTING FOR RELIABILITY / INTEGRITY	The organization tests backup information [Assignment: organization-defined frequency] to verify media reliability and information integrity.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-9(5)	INFORMATION SYSTEM BACKUP | TRANSFER TO ALTERNATE STORAGE SITE	The organization transfers information system backup information to the alternate storage site [Assignment: organization-defined time period and transfer rate consistent with the recovery time and recovery point objectives].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-10	INFORMATION SYSTEM RECOVERY AND RECONSTITUTION	The organization provides for the recovery and reconstitution of the information system to a known state after a disruption, compromise, or failure.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-10(2)	INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | TRANSACTION RECOVERY	The information system implements transaction recovery for systems that are transaction-based.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
CP-12	SAFE MODE	The information system, when [Assignment:organization-defined conditions] are detected, enters a safe mode of operation with [Assignment: organization-defined restrictions of safe mode of operation].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-1	IDENTIFICATION AND AUTHENTICATION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An identification and authentication policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the identification and authentication policy and associated identification and authentication controls; and b. Reviews and updates the current: 1. Identification and authentication policy [Assignment: organization-defined frequency]; and 2. Identification and authentication procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2	IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS)	The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(1)	IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS	The information system implements multifactor authentication for network access to privileged accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(2)	IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS	The information system implements multifactor authentication for network access to non-privileged accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IA-2(3)	IDENTIFICATION AND AUTHENTICATION | LOCAL ACCESS TO PRIVILEGED ACCOUNTS	The information system implements multifactor authentication for local access to privileged accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(4)	IDENTIFICATION AND AUTHENTICATION | LOCAL ACCESS TO NON-PRIVILEGED ACCOUNTS	The information system implements multifactor authentication for local access to non-privileged accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(5)	IDENTIFICATION AND AUTHENTICATION | GROUP AUTHENTICATION	The organization requires individuals to be authenticated with an individual authenticator when a group authenticator is employed.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(8)	IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS - REPLAY RESISTANT	The information system implements replay-resistant authentication mechanisms for network access to privileged accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(9)	IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS - REPLAY RESISTANT	The information system implements replay-resistant authentication mechanisms for network access to non-privileged accounts.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(11)	IDENTIFICATION AND AUTHENTICATION | REMOTE ACCESS - SEPARATE DEVICE	The information system implements multifactor authentication for remote access to privileged and non-privileged accounts such that one of the factors is provided by a device separate from the system gaining access and the device meets [Assignment: organization-defined strength of mechanism requirements].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-2(12)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS	The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-3	DEVICE IDENTIFICATION AND AUTHENTICATION	The information system uniquely identifies and authenticates [Assignment: organization defined specific and/or types of devices] before establishing a [Selection (one or more): local; remote; network] connection.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-3(1)	DEVICE IDENTIFICATION AND AUTHENTICATION | CRYPTOGRAPHIC BIDIRECTIONAL AUTHENTICATION	The information system authenticates [Assignment: organization-defined specific devices and/or types of devices] before establishing [Selection (one or more): local; remote; network] connection using bidirectional authentication that is cryptographically based.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-3(4)	DEVICE IDENTIFICATION AND AUTHENTICATION | DEVICE ATTESTATION	The organization ensures that device identification and authentication based on attestation is handled by [Assignment: organization-defined configuration management process].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-4	IDENTIFIER MANAGEMENT	The organization manages information system identifiers by: a. Receiving authorization from [Assignment: organization-defined personnel] to assign an individual, group, role, or device identifier; b. Selecting an identifier that identifies an individual, group, role, or device; c. Assigning the identifier to the intended individual, group, role, or device; d. Preventing reuse of identifiers for [Assignment: organization-defined time period]; and e. Disabling the identifier after [Assignment: organization-defined time period of inactivity].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-4(4)	IDENTIFIER MANAGEMENT | IDENTIFY USER STATUS	The organization manages individual identifiers by uniquely identifying each individual as [Assignment: organization-defined characteristic identifying individual status].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5	AUTHENTICATOR MANAGEMENT	The organization manages information system authenticators by: a. Verifying, as part of the initial authenticator distribution, the identity of the individual, group, role, or device receiving the authenticator; b. Establishing initial authenticator content for authenticators defined by the organization; c. Ensuring that authenticators have sufficient strength of mechanism for their intended use; d. Establishing and implementing administrative procedures for initial authenticator distribution, for lost/compromised or damaged authenticators, and for revoking authenticators; e. Changing default content of authenticators prior to information system installation; f. Establishing minimum and maximum lifetime restrictions and reuse conditions for authenticators; g. Changing/refreshing authenticators [Assignment: organization-defined time period by authenticator type]; h. Protecting authenticator content from unauthorized disclosure and modification; i. Requiring individuals to take, and having devices implement, specific security safeguards to protect authenticators; and j. Changing authenticators for group/role accounts when membership to those accounts changes.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(1)	AUTHENTICATOR MANAGEMENT | PASSWORD-BASED AUTHENTICATION	The information system, for password-based authentication: (a) Enforces minimum password complexity of [Assignment: organization-defined requirements for case sensitivity, number of characters, mix of upper-case letters, lower-case letters, numbers, and special characters, including minimum requirements for each type]; (b) Enforces at least the following number of changed characters when new passwords are created: [Assignment: organization-defined number]; (c) Stores and transmits only cryptographically-protected passwords; (d) Enforces password minimum and maximum lifetime restrictions of [Assignment: organization-defined numbers for lifetime minimum, lifetime maximum]; (e) Prohibits password reuse for [Assignment: organization-defined number] generations; and (f) Allows the use of a temporary password for system logons with an immediate change to a permanent password.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(2)	AUTHENTICATOR MANAGEMENT | PKI-BASED AUTHENTICATION	The information system, for PKI-based authentication: (a) Validates certifications by constructing and verifying a certification path to an accepted trust anchor including checking certificate status information; (b) Enforces authorized access to the corresponding private key; (c) Maps the authenticated identity to the account of the individual or group; and (d) Implements a local cache of revocation data to support path discovery and validation in case of inability to access revocation information via the network.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IA-5(3)	AUTHENTICATOR MANAGEMENT | IN-PERSON OR TRUSTED THIRD-PARTY REGISTRATION	The organization requires that the registration process to receive [Assignment: organization-defined types of and/or specific authenticators] be conducted [Selection: in person; by a trusted third party] before [Assignment: organization-defined registration authority] with authorization by [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(4)	AUTHENTICATOR MANAGEMENT | AUTOMATED SUPPORT FOR PASSWORD STRENGTH DETERMINATION	The organization employs automated tools to determine if password authenticators are sufficiently strong to satisfy [Assignment: organization-defined requirements].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(8)	AUTHENTICATOR MANAGEMENT | MULTIPLE INFORMATION SYSTEM ACCOUNTS	The organization implements [Assignment: organization-defined security safeguards] to manage the risk of compromise due to individuals having accounts on multiple information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(11)	AUTHENTICATOR MANAGEMENT | HARDWARE TOKEN-BASED AUTHENTICATION	The information system, for hardware token-based authentication, employs mechanisms that satisfy [Assignment: organization-defined token quality requirements].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(13)	AUTHENTICATOR MANAGEMENT | EXPIRATION OF CACHED AUTHENTICATORS	The information system prohibits the use of cached authenticators after [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-5(14)	AUTHENTICATOR MANAGEMENT | MANAGING CONTENT OF PKI TRUST STORES	The organization, for PKI-based authentication, employs a deliberate organization-wide methodology for managing the content of PKI trust stores installed across all platforms including networks, operating systems, browsers, and applications.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-6	AUTHENTICATOR FEEDBACK	The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-7	CRYPTOGRAPHIC MODULE AUTHENTICATION	The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-8	IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS)	The information system uniquely identifies and authenticates non-organizational users (or processes acting on behalf of non-organizational users).	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-8(1)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS FROM OTHER AGENCIES	The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials from other federal agencies.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-8(2)	IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF THIRD-PARTY CREDENTIALS	The information system accepts only FICAM-approved third-party credentials.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-8(3)	IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-APPROVED PRODUCTS	The organization employs only FICAM-approved information system components in [Assignment: organization-defined information systems] to accept third-party credentials.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IA-8(4)	IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-ISSUED PROFILES	The information system conforms to FICAM-issued profiles.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-1	INCIDENT RESPONSE POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. An incident response policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the incident response policy and associated incident response controls; and b. Reviews and updates the current: 1. Incident response policy [Assignment: organization-defined frequency]; and 2. Incident response procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-2	INCIDENT RESPONSE TRAINING	The organization provides incident response training to information system users consistent with assigned roles and responsibilities: a. Within [Assignment: organization-defined time period] of assuming an incident response role or responsibility; b. When required by information system changes; and c. [Assignment: organization-defined frequency] thereafter.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-3	INCIDENT RESPONSE TESTING	The organization tests the incident response capability for the information system [Assignment: organization-defined frequency] using [Assignment: organization-defined tests] to determine the incident response effectiveness and documents the results.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-3(2)	INCIDENT RESPONSE TESTING | COORDINATION WITH RELATED PLANS	The organization coordinates incident response testing with organizational elements responsible for related plans.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-4	INCIDENT HANDLING	The organization: a. Implements an incident handling capability for security incidents that includes preparation, detection and analysis, containment, eradication, and recovery; b. Coordinates incident handling activities with contingency planning activities; and c. Incorporates lessons learned from ongoing incident handling activities into incident response procedures, training, and testing/exercises, and implements the resulting changes accordingly.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-4(1)	INCIDENT HANDLING | AUTOMATED INCIDENT HANDLING PROCESSES	The organization employs automated mechanisms to support the incident handling process.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-4(3)	INCIDENT HANDLING | CONTINUITY OF OPERATIONS	The organization identifies [Assignment: organization-defined classes of incidents] and [Assignment: organization-defined actions to take in response to classes of incidents] to ensure continuation of organizational missions and business functions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-4(4)	INCIDENT HANDLING | INFORMATION CORRELATION	The organization correlates incident information and individual incident responses to achieve an organization-wide perspective on incident awareness and response.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
IR-4(6)	INCIDENT HANDLING | INSIDER THREATS - SPECIFIC CAPABILITIES	The organization implements incident handling capability for insider threats.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-4(7)	INCIDENT HANDLING | INSIDER THREATS - INTRA-ORGANIZATION COORDINATION	The organization coordinates incident handling capability for insider threats across [Assignment: organization-defined components or elements of the organization].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-4(8)	INCIDENT HANDLING | CORRELATION WITH EXTERNAL ORGANIZATIONS	The organization coordinates with [Assignment: organization-defined external organizations] to correlate and share [Assignment: organization-defined incident information] to achieve a crossorganization perspective on incident awareness and more effective incident responses.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-5	INCIDENTMONITORING	The organization tracks and documents information system security incidents.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-6	INCIDENT REPORTING	The organization: a. Requires personnel to report suspected security incidents to the organizational incident response capability within [Assignment: organization-defined time-period]; and b. Reports security incident information to [Assignment: organization-defined authorities].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-6(1)	INCIDENT REPORTING | AUTOMATED REPORTING	The organization employs automated mechanisms to assist in the reporting of security incidents.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-6(2)	INCIDENT REPORTING | VULNERABILITIES RELATED TO INCIDENTS	The organization reports information system vulnerabilities associated with reported security incidents to [Assignment: organization-defined personnel].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-7	INCIDENT RESPONSE ASSISTANCE	The organization provides an incident response support resource, integral to the organizational incident response capability, that offers advice and assistance to users of the information system for the handling and reporting of security incidents.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-7(1)	INCIDENT RESPONSE ASSISTANCE | AUTOMATION SUPPORT FOR AVAILABILITY OF INFORMATION / SUPPORT	The organization employs automated mechanisms to increase the availability of incident response related information and support.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-7(2)	INCIDENT RESPONSE ASSISTANCE | COORDINATION WITH EXTERNAL PROVIDERS	The organization: (a) Establishes a direct, cooperative relationship between its incident response capability and external providers of information system protection capability; and (b) Identifies organizational incident response team members to the external providers.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-8	INCIDENT RESPONSE PLAN	The organization: a. Develops an incident response plan that: 1. Provides the organization with a roadmap for implementing its incident response capability; 2. Describes the structure and organization of the incident response capability; 3. Provides a high-level approach for how the incident response capability fits into the overall organization; 4. Meets the unique requirements of the organization, which relate to mission, size, structure, and functions; 5. Defines reportable incidents; 6. Provides metrics for measuring the incident response capability within the organization; 7. Defines the resources and management support needed to effectively maintain and mature an incident response capability; and 8. Is reviewed and approved by [Assignment: organization-defined personnel or roles]; b. Distributes copies of the incident response plan to [Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements]; c. Reviews the incident response plan [Assignment: organization-defined frequency]; d. Updates the incident response plan to address system/organizational changes or problems encountered during plan implementation, execution, or testing; e. Communicates incident response plan changes to [Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements]; and f. Protects the incident response plan from unauthorized disclosure and modification.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-9(3)	INFORMATION SPILLAGE RESPONSE | POST-SPILL OPERATIONS	The organization implements [Assignment: organization-defined procedures] to ensure that organizational personnel impacted by information spills can continue to carry out assigned tasks while contaminated systems are undergoing corrective actions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
IR-10	INTEGRATED INFORMATION SECURITY ANALYSIS TEAM	The organization establishes an integrated team of forensic/malicious code analysts, tool developers, and real-time operations personnel.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-1	SYSTEM MAINTENANCE POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system maintenance policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system maintenance policy and associated system maintenance controls; and b. Reviews and updates the current: 1. System maintenance policy [Assignment: organization-defined frequency]; and 2. System maintenance procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
MA-2	CONTROLLED MAINTENANCE	The organization: a. Schedules, performs, documents, and reviews records of, maintenance and repairs on information system components in accordance with manufacturer or vendor specifications and /or organizational requirements; b. Approves and monitors all maintenance activities, whether performed on site or remotely and whether the equipment is serviced on site or removed to another location; c. Requires that [Assignment: organization-defined personnel] explicitly approve the removal of the information system or system components from organizational facilities for off-site maintenance or repairs; d. Sanitizes equipment to remove all information from associated media prior to removal from organizational facilities for off-site maintenance or repairs; e. Checks all potentially impacted security controls to verify that the controls are still functioning properly following maintenance or repair actions; and f. Includes [Assignment: organization-defined maintenance-related information] in organizational maintenance records.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-3	MAINTENANCE TOOLS	The organization approves, controls, and monitors information system maintenance tools.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-3(1)	MAINTENANCE TOOLS | INSPECT TOOLS	The organization inspects the maintenance tools carried into a facility by maintenance personnel for improper or unauthorized modifications.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-3(2)	MAINTENANCE TOOLS | INSPECT MEDIA	The organization checks all media containing diagnostic and test programs for malicious code before the media are used in the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-4	NONLOCAL MAINTENANCE	The organization: a. Approves and monitors nonlocal maintenance and diagnostic activities; b. Allows the use of nonlocal maintenance and diagnostic tools only as consistent with organizational policy and documented in the security plan for the information system; c. Employs strong authenticators in the establishment of nonlocal maintenance and diagnostic sessions; d. Maintains records for nonlocal maintenance and diagnostic activities; and e. Terminates session and network connections when nonlocal maintenance is completed.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-4(1)	NONLOCAL MAINTENANCE | AUDITING AND REVIEW	The organization: (a) Audits nonlocal maintenance and diagnostic sessions [Assignment: organization-defined audit events]; and (b) Reviews the records of the maintenance and diagnostic sessions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-4(2)	NONLOCAL MAINTENANCE | DOCUMENT NONLOCAL MAINTENANCE	The organization documents in the security plan for the information system, the policies and procedures for the establishment and use of nonlocal maintenance and diagnostic connections.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-4(3)	NONLOCAL MAINTENANCE | COMPARABLE SECURITY / SANITIZATION	The organization: (a) Requires that non-local maintenance and diagnostic services be performed from an information system that implements a security capability comparable to the capability implemented on the system being serviced; or (b) Removes the component to be serviced from the information system and prior to non-local maintenance or diagnostic services, sanitizes the component (with regard to organizational information) before removal from organizational facilities, and after the service is performed, inspects and sanitizes the component (with regard to potentially malicious software) before reconnecting the component to the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-4(6)	NONLOCAL MAINTENANCE | CRYPTOGRAPHIC PROTECTION	The information system implements cryptographic mechanisms to protect the integrity and confidentiality of nonlocal maintenance and diagnostic communications.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-4(7)	NONLOCAL MAINTENANCE | REMOTE DISCONNECT VERIFICATION	The information system implements remote disconnect verification at the termination of nonlocal maintenance and diagnostic sessions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-5	MAINTENANCE PERSONNEL	The organization: a. Establishes a process for maintenance personnel authorization and maintains a list of authorized maintenance organizations or personnel; b. Ensures that non-escorted personnel performing maintenance on the information system have required access authorizations; and c. Designates organizational personnel with required access authorizations and technical competence to supervise the maintenance activities of personnel who do not possess the required access authorizations.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MA-6	TIMELY MAINTENANCE	The organization obtains maintenance support and/or spare parts for [Assignment: organization-defined information system components] within [Assignment: organization-defined time period] of failure.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-1	MEDIA PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A media protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the media protection policy and associated media protection controls; and b. Reviews and updates the current: 1. Media protection policy [Assignment: organization-defined frequency]; and 2. Media protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-2	MEDIA ACCESS	The organization restricts access to [Assignment: organization-defined types of digital and/or non-digital media] to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-4	MEDIA STORAGE	The organization: a. Physically controls and securely stores [Assignment: organization-defined types of digital and/or non-digital media] within [Assignment: organization-defined controlled areas]; and b. Protects information system media until the media are destroyed or sanitized using approved equipment, techniques, and procedures.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
MP-5	MEDIA TRANSPORT	The organization: a. Protects and controls [Assignment: organization-defined types of information system media] during transport outside of controlled areas using [Assignment: organization-defined security safeguards]; b. Maintains accountability for information system media during transport outside of controlled areas; c. Documents activities associated with the transport of information system media; and d. Restricts the activities associated with the transport of information system media to authorized personnel.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-5(4)	MEDIA TRANSPORT | CRYPTOGRAPHIC PROTECTION	The information system implements cryptographic mechanisms to protect the confidentiality and integrity of information stored on digital media during transport outside of controlled areas.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-6	MEDIA SANITIZATION	The organization: a. Sanitizes [Assignment: organization-defined information system media] prior to disposal, release out of organizational control, or release for reuse using [Assignment: organization-defined sanitization techniques and procedures] in accordance with applicable federal and organizational standards and policies; and b. Employs sanitization mechanisms with the strength and integrity commensurate with the security category or classification of the information.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-7	MEDIA USE	The organization [Selection: restricts; prohibits] the use of [Assignment: organization-defined types of information system media] on [Assignment: organization-defined information systems or system components] using [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
MP-7(1)	MEDIA USE | PROHIBIT USE WITHOUT OWNER	The organization prohibits the use of portable storage devices in organizational information systems when such devices have no identifiable owner.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-1	PHYSICAL AND ENVIRONMENTAL PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A physical and environmental protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the physical and environmental protection policy and associated physical and environmental protection controls; and b. Reviews and updates the current: 1. Physical and environmental protection policy [Assignment: organization-defined frequency]; and 2. Physical and environmental protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-2	PHYSICAL ACCESS AUTHORIZATIONS	The organization: a. Develops, approves, and maintains a list of individuals with authorized access to the facility where the information system resides; b. Issues authorization credentials for facility access; c. Reviews the access list detailing authorized facility access by individuals [Assignment: organization-defined frequency]; and d. Removes individuals from the facility access list when access is no longer required.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-3	PHYSICAL ACCESS CONTROL	The organization: a. Enforces physical access authorizations at [Assignment: organization-defined entry/exit points to the facility where the information system resides] by; 1. Verifying individual access authorizations before granting access to the facility; and 2. Controlling ingress/egress to the facility using [Selection (one or more): [Assignment: organization-defined physical access control systems/devices]; guards]; b. Maintains physical access audit logs for [Assignment: organization-defined entry/exit points]; c. Provides [Assignment: organization-defined security safeguards] to control access to areas within the facility officially designated as publicly accessible; d. Escorts visitors and monitors visitor activity [Assignment: organization-defined circumstances requiring visitor escorts and monitoring]; e. Secures keys, combinations, and other physical access devices; f. Inventories [Assignment: organization-defined physical access devices] every [Assignment: organization-defined frequency]; and g. Changes combinations and keys [Assignment: organization-defined frequency] and/or when keys are lost, combinations are compromised, or individuals are transferred or terminated.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-3(1)	PHYSICAL ACCESS CONTROL | INFORMATION SYSTEM ACCESS	The organization enforces physical access authorizations to the information system in addition to the physical access controls for the facility at [Assignment: organization-defined physical spaces containing one or more components of the information system].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-4	ACCESS CONTROL FOR TRANSMISSION MEDIUM	The organization controls physical access to [Assignment: organization-defined information system distribution and transmission lines] within organizational facilities using [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-6	MONITORING PHYSICAL ACCESS	The organization: a. Monitors physical access to the facility where the information system resides to detect and respond to physical security incidents; b. Reviews physical access logs [Assignment: organization-defined frequency] and upon occurrence of [Assignment: organization-defined events or potential indications of events]; and c. Coordinates results of reviews and investigations with the organizational incident response capability.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-6(1)	MONITORING PHYSICAL ACCESS | INTRUSION ALARMS / SURVEILLANCE EQUIPMENT	The organization monitors physical intrusion alarms and surveillance equipment.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-6(4)	MONITORING PHYSICAL ACCESS | MONITORING PHYSICAL ACCESS TO INFORMATION SYSTEMS	The organization monitors physical access to the information system in addition to the physical access monitoring of the facility as [Assignment: organization-defined physical spaces containing one or more components of the information system].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-8	VISITOR ACCESS RECORDS	The organization: a. Maintains visitor access records to the facility where the information system resides for [Assignment: organization-defined time period]; and b. Reviews visitor access records [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PE-9	POWER EQUIPMENT AND CABLING	The organization protects power equipment and power cabling for the information system from damage and destruction.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-10	EMERGENCY SHUTOFF	The organization: a. Provides the capability of shutting off power to the information system or individual system components in emergency situations; b. Places emergency shutoff switches or devices in [Assignment: organization-defined location by information system or system component] to facilitate safe and easy access for personnel; and c. Protects emergency power shutoff capability from unauthorized activation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-11	EMERGENCY POWER	The organization provides a short-term uninterruptible power supply to facilitate [Selection (one or more): an orderly shutdown of the information system; transition of the information system to long-term alternate power] in the event of a primary power source loss.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-11(1)	EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - MINIMAL OPERATIONAL CAPABILITY	The organization provides a long-term alternate power supply for the information system that is capable of maintaining minimally required operational capability in the event of an extended loss of the primary power source.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-12	EMERGENCY LIGHTING	The organization employs and maintains automatic emergency lighting for the information system that activates in the event of a power outage or disruption and that covers emergency exits and evacuation routes within the facility.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-13	FIRE PROTECTION	The organization employs and maintains fire suppression and detection devices/systems for the information system that are supported by an independent energy source.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-14	TEMPERATURE AND HUMIDITY CONTROLS	The organization: a. Maintains temperature and humidity levels within the facility where the information system resides at [Assignment: organization - defined acceptable levels]; and b. Monitors temperature and humidity levels [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-15	WATER DAMAGE PROTECTION	The organization protects the information system from damage resulting from water leakage by providing master shutoff or isolation valves that are accessible, working properly, and known to key personnel.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PE-16	DELIVERY AND REMOVAL	The organization authorizes, monitors, and controls [Assignment: organization-defined types of information system components] entering and exiting the facility and maintains records of those items.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PL-1	SECURITY PLANNING POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A security planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the security planning policy and associated security planning controls; and b. Reviews and updates the current: 1. Security planning policy [Assignment: organization-defined frequency]; and 2. Security planning procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PL-2	SYSTEM SECURITY PLAN	The organization: a. Develops a security plan for the information system that: 1. Is consistent with the organization's enterprise architecture; 2. Explicitly defines the authorization boundary for the system; 3. Describes the operational context of the information system in terms of missions and business processes; 4. Provides the security categorization of the information system including supporting rationale; 5. Describes the operational environment for the information system and relationships with or connections to other information systems; 6. Provides an overview of the security requirements for the system; 7. Identifies any relevant overlays, if applicable 8. Describes the security controls in place or planned for meeting those requirements including a rationale for the tailoring decisions; and 9. Is reviewed and approved by the authorizing official or designated representative prior to plan implementation; b. Distributes copies of the security plan and communicates subsequent changes to the plan to [Assignment: organization-defined personnel or roles]; c. Reviews the security plan for the information system [Assignment: organization-defined frequency]; d. Updates the plan to address changes to the information system/environment of operation or problems identified during plan implementation or security control assessments; and e. Protects the security plan from unauthorized disclosure and modification.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PL-2(3)	SYSTEM SECURITY PLAN | PLAN / COORDINATE WITH OTHER ORGANIZATIONAL ENTITIES	The organization plans and coordinates security-related activities affecting the information system with [Assignment: organization-defined individuals or groups] before conducting such activities in order to reduce the impact on other organizational entities.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PL-4	RULES OF BEHAVIOR	The organization: a. Establishes and makes readily available to individuals requiring access to the information system, the rules that describe their responsibilities and expected behavior with regard to information and information system usage; b. Receives a signed acknowledgment from such individuals, indicating that they have read, understand, and agree to abide by the rules of behavior, before authorizing access to information and the information system; c. Reviews and updates the rules of behavior [Assignment: organization-defined frequency]; and d. Requires individuals who have signed a previous version of the rules of behavior to read and resign when the rules of behavior are revised/updated.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PL-8	INFORMATION SECURITY ARCHITECTURE	The organization: a. Develops an information security architecture for the information system that: 1. Describes the overall philosophy, requirements, and approach to be taken with regard to protecting the confidentiality, integrity, and availability of organizational information; 2. Describes how the information security architecture is integrated into and supports the enterprise architecture; and 3. Describes any information security assumptions about, and dependencies on, external services; b. Reviews and updates the information security architecture [Assignment: organization-defined frequency] to reflect updates in the enterprise architecture; and c. Ensures that planned information security architecture changes are reflected in the security plan, the security Concept of Operations (CONOPS), and organizational procurements/acquisitions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PL-8(1)	INFORMATION SECURITY ARCHITECTURE | DEFENSE-IN-DEPTH	The organization designs its security architecture using a defense-in-depth approach that: (a) Allocates [Assignment: organization-defined security safeguards] to [Assignment: organization-defined locations and architectural layers]; and (b) Ensures that the allocated security safeguards operate in a coordinated and mutually reinforcing manner.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-1	PERSONNEL SECURITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A personnel security policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the personnel security policy and associated personnel security controls; and b. Reviews and updates the current: 1. Personnel security policy [Assignment: organization-defined frequency]; and 2. Personnel security procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-2	POSITION RISK DESIGNATION	The organization: a. Assigns a risk designation to all organizational positions; b. Establishes screening criteria for individuals filling those positions; and c. Reviews and updates position risk designations [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-3	PERSONNEL SCREENING	The organization: a. Screens individuals prior to authorizing access to the information system; and b. Rescreens individuals according to [Assignment: organization -defined conditions requiring rescreening and, where re-screening is so indicated, the frequency of such rescreening].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-4	PERSONNEL TERMINATION	The organization, upon termination of individual employment: a. Disables information system access within [Assignment: organization-defined time period]; b. Terminates/revokes any authenticators/credentials associated with the individual; c. Conducts exit interviews that include a discussion of [Assignment: organization-defined information security topics]; d. Retrieves all security-related organizational information system-related property; e. Retains access to organizational information and information systems formerly controlled by terminated individual; and f. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-5	PERSONNEL TRANSFER	The organization: a. Reviews and confirms ongoing operational need for current logical and physical access authorizations to information systems/facilities when individuals are reassigned or transferred to other positions within the organization; b. Initiates [Assignment: organization-defined transfer or reassignment actions] within [Assignment: organization-defined time period following the formal transfer action]; c. Modifies access authorization as needed to correspond with any changes in operational need due to reassignment or transfer; and d. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-6	ACCESS AGREEMENTS	The organization: a. Develops and documents access agreements for organizational information systems; b. Reviews and updates the access agreements [Assignment: organization-defined frequency]; and c. Ensures that individuals requiring access to organizational information and information systems: 1. Sign appropriate access agreements prior to being granted access; and 2. Re-sign access agreements to maintain access to organizational information systems when access agreements have been updated or [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-7	THIRD-PARTY PERSONNEL SECURITY	The organization: a. Establishes personnel security requirements including security roles and responsibilities for third-party providers; b. Requires third-party providers to comply with personnel security policies and procedures established by the organization; c. Documents personnel security requirements; d. Requires third-party providers to notify [Assignment: organization-defined personnel or roles] of any personnel transfers or terminations of third-party personnel who possess organizational credentials and/or badges, or who have information system privileges within [Assignment: organization-defined time period]; and e. Monitors provider compliance.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PS-8	PERSONNEL SANCTIONS	The organization: a. Employs a formal sanctions process for individuals failing to comply with established information security policies and procedures; and b. Notifies [Assignment: organization-defined personnel or roles] within [Assignment: organization-defined time period] when a formal employee sanctions process is initiated, identifying the individual sanctioned and the reason for the sanction.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
RA-1	RISK ASSESSMENT POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A risk assessment policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the risk assessment policy and associated risk assessment controls; and b. Reviews and updates the current: 1. Risk assessment policy [Assignment: organization-defined frequency]; and 2. Risk assessment procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
RA-2	SECURITY CATEGORIZATION	The organization: a. Categorizes information and the information system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance; b. Documents the security categorization results (including supporting rationale) in the security plan for the information system; and c. Ensures that the security categorization decision is reviewed and approved by the authorizing official or authorizing official designated representative.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
RA-3	RISK ASSESSMENT	The organization: a. Conducts an assessment of risk, including the likelihood and magnitude of harm, from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information system and the information it processes, stores, or transmits; b. Documents risk assessment results in [Selection: security plan; risk assessment report; [Assignment: organization-defined document]]; c. Reviews risk assessment results [Assignment: organization-defined frequency]; d. Disseminates risk assessment results to [Assignment: organization-defined personnel or roles]; and e. Updates the risk assessment [Assignment: organization-defined frequency] or whenever there are significant changes to the information system or environment of operation (including the identification of new threats and vulnerabilities), or other conditions that may impact the security state of the system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
RA-5	VULNERABILITY SCANNING	The organization: a. Scans for vulnerabilities in the information system and hosted applications [Assignment: organization-defined frequency and/or randomly in accordance with organization-defined process] and when new vulnerabilities potentially affecting the system/applications are identified and reported; b. Employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by using standards for: 1. Enumerating platforms, software flaws, and improper configurations; 2. Formatting checklists and test procedures; and 3. Measuring vulnerability impact; c. Analyzes vulnerability scan reports and results from security control assessments; d. Remediates legitimate vulnerabilities [Assignment: organization-defined response times] in accordance with an organizational assessment of risk; and e. Shares information obtained from the vulnerability scanning process and security control assessments with [Assignment: organization-defined personnel or roles] to help eliminate similar vulnerabilities in other information systems (i.e., systemic weaknesses or deficiencies).	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
RA-5(1)	VULNERABILITY SCANNING | UPDATE TOOL CAPABILITY	The organization employs vulnerability scanning tools that include the capability to readily update the information system vulnerabilities to be scanned.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
RA-5(2)	VULNERABILITY SCANNING | UPDATE BY FREQUENCY / PRIOR TO NEW SCAN / WHEN IDENTIFIED	The organization updates the information system vulnerabilities scanned [Selection (one or more): [Assignment: organization-defined frequency]; prior to a new scan; when new vulnerabilities are identified and reported].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
RA-5(5)	VULNERABILITY SCANNING | PRIVILEGED ACCESS	The information system implements privileged access authorization to [Assignment: organization-identified information system components] for selected [Assignment: organization-defined vulnerability scanning activities].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-1	SYSTEM AND SERVICES ACQUISITION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and services acquisition policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and services acquisition policy and associated system and services acquisition controls; and b. Reviews and updates the current: 1. System and services acquisition policy [Assignment: organization-defined frequency]; and 2. System and services acquisition procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-2	ALLOCATION OF RESOURCES	The organization: a. Determines information security requirements for the information system or information system service in mission/business process planning; b. Determines, documents, and allocates the resources required to protect the information system or information system service as part of its capital planning and investment control process; and c. Establishes a discrete line item for information security in organizational programming and budgeting documentation	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-3	SYSTEM DEVELOPMENT LIFE CYCLE	The organization: a. Manages the information system using [Assignment: organization-defined system development life cycle] that incorporates information security considerations; b. Defines and documents information security roles and responsibilities throughout the system development life cycle; c. Identifies individuals having information security roles and responsibilities; and d. Integrates the organizational information security risk management process into system development life cycle activities.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SA-4	ACQUISITION PROCESS	The organization includes the following requirements, descriptions, and criteria, explicitly or by reference, in the acquisition contract for the information system, system component, or information system service in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, guidelines, and organizational mission/business needs: a. Security functional requirements; b. Security strength requirements; c. Security assurance requirements; d. Security-related documentation requirements; e. Requirements for protecting security-related documentation; f. Description of the information system development environment and environment in which the system is intended to operate; and g. Acceptance criteria.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-4(1)	ACQUISITION PROCESS | FUNCTIONAL PROPERTIES OF SECURITY CONTROLS	The organization requires the developer of the information system, system component, or information system service to provide a description of the functional properties of the security controls to be employed.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-4(2)	ACQUISITION PROCESS | DESIGN / IMPLEMENTATION INFORMATION FOR SECURITY CONTROLS	The organization requires the developer of the information system, system component, or information system service to provide design and implementation information for the security controls to be employed that includes: [Selection (one or more): security-relevant external system interfaces; high-level design; low-level design; source code or hardware schematics; [Assignment: organization-defined design/implementation information]] at [Assignment: organization-defined level of detail].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-4(7)	ACQUISITION PROCESS | NIAP-APPROVED PROTECTION PROFILES	The organization: (a) Limits the use of commercially provided information assurance (IA) and IA-enabled information technology products to those products that have been successfully evaluated against a National Information Assurance partnership (NIAP)-approved Protection Profile for a specific technology type, if such a profile exists; and (b) Requires, if no NIAP-approved Protection Profile exists for a specific technology type but a commercially provided information technology product relies on cryptographic functionality to enforce its security policy, that the cryptographic module is FIPS-validated.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-4(9)	ACQUISITION PROCESS | FUNCTIONS / PORTS / PROTOCOLS / SERVICES IN USE	The organization requires the developer of the information system, system component, or information system service to identify early in the system development life cycle, the functions, ports, protocols, and services intended for organizational use.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-4(10)	ACQUISITION PROCESS | USE OF APPROVED PIV PRODUCTS	The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-5	INFORMATION SYSTEM DOCUMENTATION	The organization: a. Obtains administrator documentation for the information system, system component, or information system service that describes: 1. Secure configuration, installation, and operation of the system, component, or service; 2. Effective use and maintenance of security functions/mechanisms; and 3. Known vulnerabilities regarding configuration and use of administrative (i.e., privileged) functions; b. Obtains user documentation for the information system, system component, or information system service that describes: 1. User-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms; 2. Methods for user interaction, which enables individuals to use the system, component, or service in a more secure manner; and 3. User responsibilities in maintaining the security of the system, component, or service; c. Documents attempts to obtain information system, system component, or information system service documentation when such documentation is either unavailable or nonexistent and [Assignment: organization-defined actions] in response; d. Protects documentation as required, in accordance with the risk management strategy; and e. Distributes documentation to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-8	SECURITY ENGINEERING PRINCIPLES	The organization applies information system security engineering principles in the specification, design, development, implementation, and modification of the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-9	EXTERNAL INFORMATION SYSTEM SERVICES	The organization: a. Requires that providers of external information system services comply with organizational information security requirements and employ [Assignment: organization-defined security controls] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance; b. Defines and documents government oversight and user roles and responsibilities with regard to external information system services; and c. Employs [Assignment: organization-defined processes, methods, and techniques] to monitor security control compliance by external service providers on an ongoing basis.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-9(1)	EXTERNAL INFORMATION SYSTEMS | RISK ASSESSMENTS / ORGANIZATIONAL APPROVALS	The organization: (a) Conducts an organizational assessment of risk prior to the acquisition or outsourcing of dedicated information security services; and (b) Ensures that the acquisition or outsourcing of dedicated information security services is approved by [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-9(2)	EXTERNAL INFORMATION SYSTEMS | IDENTIFICATION OF FUNCTIONS / PORTS / PROTOCOLS / SERVICES	The organization requires providers of [Assignment: organization-defined external information system services] to identify the functions, ports, protocols, and other services required for the use of such services.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SA-10	DEVELOPER CONFIGURATION MANAGEMENT	The organization requires the developer of the information system, system component, or information system service to: a. Perform configuration management during system, component, or service [Selection (one or more): design; development; implementation; operation]; b. Document, manage, and control the integrity of changes to [Assignment: organization-defined configuration items under configuration management]; c. Implement only organization-approved changes to the system, component, or service; d. Document approved changes to the system, component, or service and the potential security impacts of such changes; and e. Track security flaws and flaw resolution within the system, component, or service and report findings to [Assignment: organization-defined personnel].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-10(1)	DEVELOPER CONFIGURATION MANAGEMENT | SOFTWARE / FIRMWARE INTEGRITY VERIFICATION	The organization requires the developer of the information system, system component, or information system service to enable integrity verification of software and firmware components.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-11	DEVELOPER SECURITY TESTING AND EVALUATION	The organization requires the developer of the information system, system component, or information system service to: a. Create and implement a security assessment plan; b. Perform [Selection (one or more): unit; integration; system; regression] testing/evaluation at [Assignment: organization-defined depth and coverage]; c. Produce evidence of the execution of the security assessment plan and the results of the security testing/evaluation; d. Implement a verifiable flaw remediation process; and e. Correct flaws identified during security testing/evaluation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-12	SUPPLY CHAIN PROTECTION	The organization protects against supply chain threats to the information system, system component, or information system service by employing [Assignment: organization-defined security safeguards] as part of a comprehensive, defense-in-breadth information security strategy.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-15	DEVELOPMENT PROCESS, STANDARDS, AND TOOLS	The organization: a. Requires the developer of the information system, system component, or information system service to follow a documented development process that: 1. Explicitly addresses security requirements; 2. Identifies the standards and tools used in the development process; 3. Documents the specific tool options and tool configurations used in the development process; and 4. Documents, manages, and ensures the integrity of changes to the process and/or tools used in development; and b. Reviews the development process, standards, tools, and tool options/configurations [Assignment: organization-defined frequency] to determine if the process, standards, tools, and tool options/configurations selected and employed can satisfy [Assignment: organization-defined security requirements].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SA-19	COMPONENT AUTHENTICITY	The organization: a. Develops and implements anti-counterfeit policy and procedures that include the means to detect and prevent counterfeit components from entering the information system; and b. Reports counterfeit information system components to [Selection (one or more): source of counterfeit component; [Assignment: organization-defined external reporting organizations]; [Assignment: organization-defined personnel or roles]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-1	SYSTEM AND COMMUNICATIONS PROTECTION POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and communications protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and communications protection policy and associated system and communications protection controls; and b. Reviews and updates the current: 1. System and communications protection policy [Assignment: organization-defined frequency]; and 2. System and communications protection procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-2	APPLICATION PARTITIONING	The information system separates user functionality (including user interface services)from information system management functionality.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-5	DENIAL OF SERVICE PROTECTION	The information system protects against or limits the effects of the following types of denial of service attacks: [Assignment: organization-defined types of denial of service attacks or reference to source for such information] by employing [Assignment: organization-defined security safeguards].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-5(1)	DENIAL OF SERVICE PROTECTION | RESTRICT INTERNAL USERS	The information system restricts the ability of individuals to launch [Assignment: organization-defined denial of service attacks] against other information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-5(2)	DENIAL OF SERVICE PROTECTION | EXCESS CAPACITY / BANDWIDTH / REDUNDANCY	The information system manages excess capacity, bandwidth, or other redundancy to limit the effects of information flooding denial of service attacks.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-5(3)	DENIAL OF SERVICE PROTECTION | DETECTION / MONITORING	The organization: (a) Employs [Assignment: organization-defined monitoring tools] to detect indicators of denial of service attacks against the information system; and (b) Monitors [Assignment: organization-defined information system resources] to determine if sufficient resources exist to prevent effective denial of service attacks.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7	BOUNDARY PROTECTION	The information system: a. Monitors and controls communications at the external boundary of the system and at key internal boundaries within the system; b. Implements subnetworks for publicly accessible system components that are [Selection: physically; logically] separated from internal organizational networks; and c. Connects to external networks or information systems only through managed interfaces consisting of boundary protection devices arranged in accordance with an organizational security architecture.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(3)	BOUNDARY PROTECTION | ACCESS POINTS	The organization limits the number of external network connections to the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SC-7(4)	BOUNDARY PROTECTION | EXTERNAL TELECOMMUNICATIONS SERVICES	The organization: (a) Implements a managed interface for each external telecommunication service; (b) Establishes a traffic flow policy for each managed interface; (c) Protects the confidentiality and integrity of the information being transmitted across each interface; (d) Documents each exception to the traffic flow policy with a supporting mission/business need and duration of that need; and (e) Reviews exceptions to the traffic flow policy [Assignment: organization-defined frequency] and removes exceptions that are no longer supported by an explicit mission/business need.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(5)	BOUNDARY PROTECTION | DENY BY DEFAULT / ALLOW BY EXCEPTION	The information system at managed interfaces denies network communications traffic by default and allows network communications traffic by exception (i.e., deny all, permit by exception).	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(7)	BOUNDARY PROTECTION | PREVENT SPLIT TUNNELING FOR REMOTE DEVICES	The information system, in conjunction with a remote device, prevents the device from simultaneously establishing non-remote connections with the system and communicating via some other connection to resources in external networks.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(8)	BOUNDARY PROTECTION | ROUTE TRAFFIC TO AUTHENTICATED PROXY SERVERS	The information system routes [Assignment: organization-defined internal communications traffic] to [Assignment: organization-defined external networks] through authenticated proxy servers at managed interfaces.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(9)	BOUNDARY PROTECTION | RESTRICT THREATENING OUTGOING COMMUNICATIONS TRAFFIC	The information system: (a) Detects and denies outgoing communications traffic posing a threat to external information systems; and (b) Audits the identity of internal users associated with denied communications.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(11)	BOUNDARY PROTECTION | RESTRICT INCOMING COMMUNICATIONS TRAFFIC	The information system only allows incoming communications from [Assignment: organization defined authorized sources] routed to [Assignment: organization-defined authorized destinations].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(12)	BOUNDARY PROTECTION | HOST-BASED PROTECTION	The organization implements [Assignment: organization-defined host-based boundary protection mechanisms] at [Assignment: organization-defined information system components].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(13)	BOUNDARY PROTECTION | ISOLATION OF SECURITY TOOLS / MECHANISMS / SUPPORT COMPONENTS	The organization isolates [Assignment: organization-defined information security tools, mechanisms, and support components] from other internal information system components by implementing physically separate subnetworks with managed interfaces to other components of the system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(14)	BOUNDARY PROTECTION | PROTECTS AGAINST UNAUTHORIZED PHYSICAL CONNECTION	The organization protects against unauthorized physical connections at [Assignment: organization-defined managed interfaces].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-7(18)	BOUNDARY PROTECTION | FAIL SECURE	The information system fails securely in the event of an operational failure of a boundary protection device.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-8	TRANSMISSION CONFIDENTIALITY AND INTEGRITY	The information system protects the [Selection (one or more): confidentiality; integrity] of transmitted information.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-8(1)	TRANSMISSION CONFIDENTIALITY AND INTEGRITY | CRYPTOGRAPHIC OR ALTERNATE PHYSICAL PROTECTION	The information system implements cryptographic mechanisms to [Selection (one or more): prevent unauthorized disclosure of information; detect changes to information] during transmission unless otherwise protected by [Assignment: organization-defined alternative physical safeguards].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-8(2)	TRANSMISSION CONFIDENTIALITY AND INTEGRITY | PRE / POST TRANSMISSION HANDLING	The information system maintains the [Selection (one or more): confidentiality; integrity] of information during preparation for transmission and during reception.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-10	NETWORK DISCONNECT	The information system terminates the network connection associated with a communications session at the end of the session or after [Assignment: organization-defined time period] of inactivity.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-12	CRYPTOGRAPHIC KEY ESTABLISHMENT AND MANAGEMENT	The organization establishes and manages cryptographic keys for required cryptography employed within the information system in accordance with [Assignment: organization-defined requirements for key generation, distribution, storage, access, and destruction].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-13	CRYPTOGRAPHIC PROTECTION	The information system implements [Assignment: organization-defined cryptographic uses and type of cryptography required for each use] in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-15	COLLABORATIVE COMPUTING DEVICES	The information system: a. Prohibits remote activation of collaborative computing devices with the following exceptions: [Assignment: organization-defined exceptions where remote activation is to be allowed]; and b. Provides an explicit indication of use to users physically present at the devices.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-17	PUBLIC KEY INFRASTRUCTURE CERTIFICATES	The organization issues public key certificates under an [Assignment: organization defined certificate policy] or obtains public key certificates from an approved service provider.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-18	MOBILE CODE	The organization: a. Defines acceptable and unacceptable mobile code and mobile code technologies; b. Establishes usage restrictions and implementation guidance for acceptable mobile code and mobile code technologies; and c. Authorizes, monitors, and controls the use of mobile code within the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-18(1)	MOBILE CODE | IDENTIFY UNACCEPTABLE CODE / TAKE CORRECTIVE ACTIONS	The information system identifies [Assignment: organization-defined unacceptable mobile code] and takes [Assignment: organization-defined corrective actions].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-18(2)	MOBILE CODE | ACQUISITION / DEVELOPMENT / USE	The organization ensures that the acquisition, development, and use of mobile code to be deployed in the information system meets [Assignment: organization-defined mobile code requirements].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SC-18(3)	MOBILE CODE | PREVENT DOWNLOADING / EXECUTION	The information system prevents the download and execution of [Assignment: organization defined unacceptable mobile code].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-18(4)	MOBILE CODE | PREVENT AUTOMATIC EXECUTION	The information system prevents the automatic execution of mobile code in [Assignment: organization-defined software applications] and enforces [Assignment: organization-defined actions] prior to executing the code.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-19	VOICE OVER INTERNET PROTOCOL	The organization: a. Establishes usage restrictions and implementation guidance for Voice over Internet Protocol (VoIP) technologies based on the potential to cause damage to the information system if used maliciously; and b. Authorizes, monitors, and controls the use of VoIP within the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-20	SECURE NAME / ADDRESS RESOLUTION SERVICE (AUTHORITATIVE SOURCE)	The information system: a. Provides additional data origin authentication and integrity verification artifacts along with the authoritative name resolution data the system returns in response to external name/address resolution queries; and b. Provides the means to indicate the security status of child zones and (if the child supports secure resolution services) to enable verification of a chain of trust among parent and child domains, when operating as part of a distributed, hierarchical namespace.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-21	SECURE NAME / ADDRESS RESOLUTION SERVICE (RECURSIVE OR CACHING RESOLVER)	The information system requests and performs data origin authentication and data integrity verification on the name/address resolution responses the system receives from authoritative sources.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-22	ARCHITECTURE AND PROVISIONING FOR NAME / ADDRESS RESOLUTION SERVICE	The information systems that collectively provide name/address resolution service for an organization are fault-tolerant and implement internal/external role separation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-23	SESSION AUTHENTICITY	The information system protects the authenticity of communications sessions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-23(1)	SESSION AUTHENTICITY | INVALIDATE SESSION IDENTIFIERS AT LOGOUT	The information system invalidates session identifiers upon user logout or other session termination.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-23(3)	SESSION AUTHENTICITY | UNIQUE SESSION IDENTIFIERS WITH RANDOMIZATION	The information system generates a unique session identifier for each session with [Assignment: organization-defined randomness requirements] and recognizes only session identifiers that are system-generated.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-23(5)	SESSION AUTHENTICITY | ALLOWED CERTIFICATE AUTHORITIES	The information system only allows the installation of [Assignment: organization-defined certificate authorities] for verification of the establishment of protected sessions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-24	FAIL IN KNOWN STATE	The information system fails to a [Assignment: organization-defined known-state] for [Assignment: organization-defined types of failures] preserving [Assignment: organization-defined system state information] in failure.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-28	PROTECTION OF INFORMATION AT REST	The information system protects the [Selection (one or more): confidentiality; integrity] of [Assignment: organization-defined information at rest].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-28(1)	PROTECTION OF INFORMATION AT REST | CRYPTOGRAPHIC PROTECTION	The information system implements cryptographic mechanisms to prevent unauthorized disclosure and modification of [Assignment: organization-defined information] on [Assignment: organization-defined information system components].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-38	OPERATIONS SECURITY	The organization employs [Assignment: organization-defined operations security safeguards] to protect key organizational information throughout the system development life cycle.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-39	PROCESS ISOLATION	The information system maintains a separate execution domain for each executing process.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SC-41	PORT AND I/O DEVICE ACCESS	The organization physically disables or removes [Assignment: organization-defined connection ports or input/output devices] on [Assignment: organization-defined information systems or information system components].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-1	SYSTEM AND INFORMATION INTEGRITY POLICY AND PROCEDURES	The organization: a. Develops, documents, and disseminates to [Assignment: organization-defined personnel or roles]: 1. A system and information integrity policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and 2. Procedures to facilitate the implementation of the system and information integrity policy and associated system and information integrity controls; and b. Reviews and updates the current: 1. System and information integrity policy [Assignment: organization-defined frequency]; and 2. System and information integrity procedures [Assignment: organization-defined frequency].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-2	FLAW REMEDIATION	The organization: a. Identifies, reports, and corrects information system flaws; b. Tests software and firmware updates related to flaw remediation for effectiveness and potential side effects before installation; c. Installs security-relevant software and firmware updates within [Assignment: organization-defined time period] of the release of the updates; and d. Incorporates flaw remediation into the organizational configuration management process.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-2(1)	FLAW REMEDIATION | CENTRAL MANAGEMENT	The organization centrally manages the flaw remediation process.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-2(2)	FLAW REMEDIATION | AUTOMATED FLAW REMEDIATION STATUS	The organization employs automated mechanisms [Assignment: organization-defined frequency] to determine the state of information system components with regard to flaw remediation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SI-2(6)	FLAW REMEDIATION | REMOVAL OF PREVIOUS VERSIONS OF SOFTWARE / FIRMWARE	The organization removes [Assignment: organization-defined software and firmware components] after updated versions have been installed.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-3	MALICIOUS CODE PROTECTION	The organization: a. Employs malicious code protection mechanisms at information system entry and exit points to detect and eradicate malicious code; b. Updates malicious code protection mechanisms whenever new releases are available in accordance with organizational configuration management policy and procedures; c. Configures malicious code protection mechanisms to: 1. Perform periodic scans of the information system [Assignment: organization-defined frequency] and real-time scans of files from external sources at [Selection (one or more); endpoint; network entry/exit points] as the files are downloaded, opened, or executed in accordance with organizational security policy; and 2. [Selection (one or more): block malicious code; quarantine malicious code; send alert to administrator; [Assignment: organization-defined action]] in response to malicious code detection; and d. Addresses the receipt of false positives during malicious code detection and eradication and the resulting potential impact on the availability of the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-3(1)	MALICIOUS CODE PROTECTION | CENTRAL MANAGEMENT	The organization centrally manages malicious code protection mechanisms.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-3(2)	MALICIOUS CODE PROTECTION | AUTOMATIC UPDATES	The information system automatically updates malicious code protection mechanisms.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-3(10)	MALICIOUS CODE PROTECTION | MALICIOUS CODE ANALYSIS	The organization: (a) Employs [Assignment: organization-defined tools and techniques] to analyze the characteristics and behavior of malicious code; and (b) Incorporates the results from malicious code analysis into organizational incident response and flaw remediation processes.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4	INFORMATION SYSTEM MONITORING	The organization: a. Monitors the information system to detect: 1. Attacks and indicators of potential attacks in accordance with [Assignment: organization-defined monitoring objectives]; and 2. Unauthorized local, network, and remote connections; b. Identifies unauthorized use of the information system through [Assignment: organization-defined techniques and methods]; c. Deploys monitoring devices: (i) strategically within the information system to collect organization-determined essential information; and (ii) at ad hoc locations within the system to track specific types of transactions of interest to the organization; d. Protects information obtained from intrusion-monitoring tools from unauthorized access, modification, and deletion; e. Heightens the level of information system monitoring activity whenever there is an indication of increased risk to organizational operations and assets, individuals, other organizations, or the Nation based on law enforcement information, intelligence information, or other credible sources of information; f. Obtains legal opinion with regard to information system monitoring activities in accordance with applicable federal laws, Executive Orders, directives, policies, or regulations; and g. Provides [Assignment: organization-defined information system monitoring information] to [Assignment: organization-defined personnel or roles] [Selection (one or more): as needed; [Assignment: organization-defined frequency]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(1)	INFORMATION SYSTEM MONITORING | SYSTEM-WIDE INTRUSION DETECTION SYSTEM	The organization connects and configures individual intrusion detection tools into an information system-wide intrusion detection system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(2)	INFORMATION SYSTEM MONITORING | AUTOMATED TOOLS FOR REAL-TIME ANALYSIS	The organization employs automated tools to support near real-time analysis of events.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(4)	INFORMATION SYSTEM MONITORING | INBOUND AND OUTBOUND COMMUNICATIONS TRAFFIC	The information system monitors inbound and outbound communications traffic [Assignment: organization-defined frequency] for unusual or unauthorized activities or conditions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(5)	INFORMATION SYSTEM MONITORING | SYSTEM-GENERATED ALERTS	The information system alerts [Assignment: organization-defined personnel or roles] when the following indications of compromise or potential compromise occur: [Assignment: organization-defined compromise indicators].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(10)	INFORMATION SYSTEM MONITORING | VISIBILITY OF ENCRYPTED COMMUNICATIONS	The organization makes provisions so that [Assignment: organization-defined encrypted communications traffic] is visible to [Assignment: organization-defined information system monitoring tools].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(11)	INFORMATION SYSTEM MONITORING | ANALYZE COMMUNICATIONS TRAFFIC ANOMALIES	The organization analyzes outbound communications traffic at the external boundary of the information system and selected [Assignment: organization-defined interior points within the system (e.g., subnetworks, subsystems)] to discover anomalies.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(12)	INFORMATION SYSTEM MONITORING | AUTOMATED ALERTS	The organization employs automated mechanisms to alert security personnel of the following inappropriate or unusual activities with security implications: [Assignment: organization-defined activities that trigger alerts].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(14)	INFORMATION SYSTEM MONITORING | WIRELESS INTRUSION DETECTION	The organization employs a wireless intrusion detection system to identify rogue wireless devices and to detect attack attempts and potential compromises/breaches to the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(15)	INFORMATION SYSTEM MONITORING | WIRELESS TO WIRELINE COMMUNICATIONS	The organization employs an intrusion detection system to monitor wireless communications traffic as the traffic passes from wireless to wireline networks.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(16)	INFORMATION SYSTEM MONITORING | CORRELATE MONITORING INFORMATION	The organization correlates information from monitoring tools employed throughout the information system.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
SI-4(19)	INFORMATION SYSTEM MONITORING | INDIVIDUALS POSING GREATER RISK	The organization implements [Assignment: organization-defined additional monitoring] of individuals who have been identified by [Assignment: organization-defined sources] as posing an increased level of risk.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(20)	INFORMATION SYSTEM MONITORING | PRIVILEGED USER	The organization implements [Assignment: organization-defined additional monitoring] of privileged users.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(22)	INFORMATION SYSTEM MONITORING | UNAUTHORIZED NETWORK SERVICES	The information system detects network services that have not been authorized or approved by [Assignment: organization-defined authorization or approval processes] and [Selection (one or more): audits; alerts [Assignment: organization-defined personnel and/or roles]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-4(23)	INFORMATION SYSTEM MONITORING | HOST-BASED DEVICES	The organization implements [Assignment: organization-defined host-based monitoring mechanisms] at [Assignment: organization-defined information system components].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-5	SECURITY ALERTS, ADVISORIES, AND DIRECTIVES	The organization: a. Receives information system security alerts, advisories, and directives from [Assignment: organization-defined external organizations] on an ongoing basis; b. Generates internal security alerts, advisories, and directives as deemed necessary; c. Disseminates security alerts, advisories, and directives to: [Selection (one or more): [Assignment: organization-defined personnel (identified by name and/or by role)]; [Assignment: organization-defined elements within the organization]; [Assignment: organization-defined external organizations]]; and d. Implements security directives in accordance with established time frames, or notifies the issuing organization of the degree of noncompliance.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-7	SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY	The organization employs integrity verification tools to detect unauthorized changes to [Assignment: organization-defined software, firmware, and information].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-7(1)	SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | INTEGRITY CHECKS	The information system performs an integrity check of [Assignment: organization-defined software, firmware, and information] [Selection (one or more): at startup; at [Assignment: organization-defined transitional states or security-relevant events]; [Assignment: organization-defined frequency]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-7(7)	SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | INTEGRATION OF DETECTION AND RESPONSE	The organization incorporates the detection of unauthorized [Assignment: organization-defined security-relevant changes to the information system] into the organizational incident response capability.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-7(8)	SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | AUDITING CAPABILITY FOR SIGNIFICANT EVENTS	The information system, upon detection of a potential integrity violation, provides the capability to audit the event and initiates the following actions: [Selection (one or more): generates an audit record; alerts current user; alerts [Assignment: organization-defined personnel or roles]; [Assignment: organization-defined other actions]].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-7(14)	SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | BINARY OR MACHINE EXECUTABLE CODE	The organization: (a) Prohibits the use of binary or machine-executable code from sources with limited or no warranty and without the provision of source code; and (b) Provides exceptions to the source code requirement only for compelling mission/operational requirements and with the approval of the authorizing official.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-8	SPAM PROTECTION	The organization: a. Employs spam protection mechanisms at information system entry and exit points to detect and take action on unsolicited messages; and b. Updates spam protection mechanisms when new releases are available in accordance with organizational configuration management policy and procedures.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-8(1)	SPAM PROTECTION | CENTRAL MANAGEMENT	The organization centrally manages spam protection mechanisms.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-8(2)	SPAM PROTECTION | AUTOMATIC UPDATES	The information system automatically updates spam protection mechanisms.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-10	INFORMATION INPUT VALIDATION	The information system checks the validity of [Assignment: organization-defined information inputs].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-10(3)	INFORMATION INPUT VALIDATION | PREDICTABLE BEHAVIOR	The information system behaves in a predictable and documented manner that reflects organizational and system objectives when invalid inputs are received.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-11	ERROR HANDLING	The information system: a. Generates error messages that provide information necessary for corrective actions without revealing information that could be exploited by adversaries; and b. Reveals error messages only to [Assignment: organization-defined personnel or roles].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-12	INFORMATION HANDLING AND RETENTION	The organization handles and retains information within the information system and information output from the system in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and operational requirements.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-16	MEMORY PROTECTION	The information system implements [Assignment: organization-defined security safeguards] to protect its memory from unauthorized code execution.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
SI-17	FAIL-SAFE PROCEDURES	The information system implements [Assignment: organization-defined fail-safe procedures] when [Assignment: organization-defined failure conditions occur].	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PM-1	INFORMATION SECURITY PROGRAM PLAN	The organization: a. Develops and disseminates an organization-wide information security program plan that: 1. Provides an overview of the requirements for the security program and a description of the security program management controls and common controls in place or planned for meeting those requirements; 2. Includes the identification and assignment of roles, responsibilities, management commitment, coordination among organizational entities, and compliance; 3. Reflects coordination among organizational entities responsible for the different aspects of information security (i.e., technical, physical, personnel, cyber-physical); and 4. Is approved by a senior official with responsibility and accountability for the risk being incurred to organizational operations (including mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation; b. Reviews the organization-wide information security program plan [Assignment: organization-defined frequency]; c. Updates the plan to address organizational changes and problems identified during plan implementation or security control assessments; and d. Protects the information security program plan from unauthorized disclosure and modification.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-2	SENIOR INFORMATION SECURITY OFFICER	The organization appoints a senior information security officer with the mission and resources to coordinate, develop, implement, and maintain an organization-wide information security program.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-3	INFORMATION SECURITY RESOURCES	The organization: a. Ensures that all capital planning and investment requests include the resources needed to implement the information security program and documents all exceptions to this requirement; b. Employs a business case/Exhibit 300/Exhibit 53 to record the resources required; and c. Ensures that information security resources are available for expenditure as planned.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-4	PLAN OF ACTION AND MILESTONES PROCESS	The organization: a. Implements a process for ensuring that plans of action and milestones for the security program and associated organizational information systems: 1. Are developed and maintained; 2. Document the remedial information security actions to adequately respond to risk to organizational operations and assets, individuals, other organizations, and the Nation; and 3. Are reported in accordance with OMB FISMA reporting requirements. b. Reviews plans of action and milestones for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-5	INFORMATION SYSTEM INVENTORY	The organization develops and maintains an inventory of its information systems.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-6	INFORMATION SECURITY MEASURES OF PERFORMANCE	The organization develops, monitors, and reports on the results of information security measures of performance.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-7	ENTERPRISE ARCHITECTURE	The organization develops an enterprise architecture with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-8	CRITICAL INFRASTRUCTURE PLAN	The organization addresses information security issues in the development, documentation, and updating of a critical infrastructure and key resources protection plan.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-9	RISK MANAGEMENT STRATEGY	The organization: a. Develops a comprehensive strategy to manage risk to organizational operations and assets, individuals, other organizations, and the Nation associated with the operation and use of information systems; b. Implements the risk management strategy consistently across the organization; and c. Reviews and updates the risk management strategy [Assignment: organization-defined frequency] or as required, to address organizational changes.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-10	SECURITY AUTHORIZATION PROCESS	The organization: a. Manages (i.e., documents, tracks, and reports) the security state of organizational information systems and the environments in which those systems operate through security authorization processes; b. Designates individuals to fulfill specific roles and responsibilities within the organizational risk management process; and c. Fully integrates the security authorization processes into an organization-wide risk management program.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-11	MISSION/BUSINESS PROCESS DEFINITION	The organization: a. Defines mission/business processes with consideration for information security and the resulting risk to organizational operations, organizational assets, individuals, other organizations, and the Nation; and b. Determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until achievable protection needs are obtained.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-12	INSIDER THREAT PROGRAM	The organization implements an insider threat program that includes a cross-discipline insider threat incident handling team.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-13	INFORMATION SECURITY WORKFORCE	The organization establishes an information security workforce development and improvement program.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Number	Control Title	Control Text	Status (Add, Remove, Generated)	Comments
PM-14	TESTING, TRAINING, AND MONITORING	The organization: a. Implements a process for ensuring that organizational plans for conducting security testing, training, and monitoring activities associated with organizational information systems: 1. Are developed and maintained; and 2. Continue to be executed in a timely manner; b. Reviews testing, training, and monitoring plans for consistency with the organizational risk management strategy and organization-wide priorities for risk response actions.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-15	CONTACTS WITH SECURITY GROUPS AND ASSOCIATIONS	The organization establishes and institutionalizes contact with selected groups and associations within the security community: a. To facilitate ongoing security education and training for organizational personnel; b. To maintain currency with recommended security practices, techniques, and technologies; and c. To share current security-related information including threats, vulnerabilities, and incidents.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.
PM-16	THREAT AWARENESS PROGRAM	The organization implements a threat awareness program that includes a cross-organization information-sharing capability.	Generated	Generated for LOW-MODERATE-MODERATE impact levels using DoD CCI generator.

Control Correlation Identifiers (CCI) List

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000017	AC-2(3)	The information system automatically disables inactive accounts after an organization-defined time period.	DoD-Defined Enclave Designer Non-Designer Impractical	User Accounts	Impractical: The controller does not support inactive account disablement.
CCI-000018	AC-2(4)	The information system automatically audits account creation actions.	Enclave Designer Impractical	ACCESS CONTROL REQUIREMENTS; User Accounts	The auditing system, to the extent that one is provideed, will be configured to audit account modifications.
CCI-000039	AC-6(2)	The organization requires that users of information system accounts or roles, with access to organization-defined security functions or security-relevant information, use non-privileged accounts, or roles, when accessing nonsecurity functions.	DoD-Defined Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The contractor ensures that the security system is implemented such that administrative or engineering functions addressing security are protected from non-privileged users. This level of implementation is dictated based on the limitations of the system.
CCI-000043	AC-7(a)	The organization defines the maximum number of consecutive invalid logon attempts to the information system by a user during an organization-defined time period.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	Impractical; the control system is used for life safety. As such, it can not be locked out for any extended periods of time.
CCI-000044	AC-7(a)	The information system enforces the organization-defined limit of consecutive invalid logon attempts by a user during the organization-defined time period.	Designer	Unsuccessful Logon Attempts	Impractical; the control system is used for life safety. As such, it can not be locked out for any extended periods of time.
CCI-000048	AC-8(a)	The information system displays an organization-defined system use notification message or banner before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance.	Enclave Designer Impractical	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000050	AC-8(b)	The information system retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access.	Enclave Designer	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-000054	AC-10	The information system limits the number of concurrent sessions for each organization-defined account and/or account type to an organization-defined number of sessions.	DoD-Defined Designer	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000055	AC-10	The organization defines the maximum number of concurrent sessions to be allowed for each organization-defined account and/or account type.	Designer Non-Designer	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-000056	AC-11(b)	The information system retains the session lock until the user reestablishes access using established identification and authentication procedures.	Enclave Designer Impractical	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-000058	AC-11(a)	The information system provides the capability for users to directly initiate session lock mechanisms.	Enclave Designer Impractical	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-000059	AC-11(a)	The organization defines the time period of inactivity after which the information system initiates a session lock.	DoD-Defined Enclave Designer Impractical	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-000061	AC-14(a)	The organization identifies and defines organization-defined user actions that can be performed on the information system without identification or authentication consistent with organizational missions/business functions.	Designer	Permitted Actions Without Identification or Authentication	The control system must require identification and authentication before allowing any actions except read-only actions by a user acting from a user interface which MINIMALLY or FULLY supports accounts.
CCI-000123	AU-2(a)	The organization determines the information system must be capable of auditing an organization-defined list of auditable events.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation;	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000125	AU-2(c)	The organization provides a rationale for why the list of auditable events is deemed to be adequate to support after-the-fact investigations of security incidents.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation;	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000130	AU-3	The information system generates audit records containing information that establishes what type of event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation;	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000131	AU-3	The information system generates audit records containing information that establishes when an event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000132	AU-3	The information system generates audit records containing information that establishes where the event occurred.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000133	AU-3	The information system generates audit records containing information that establishes the source of the event.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000134	AU-3	The information system generates audit records containing information that establishes the outcome of the event.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000135	AU-3(1)	The information system generates audit records containing the organization-defined additional, more detailed information that is to be included in the audit records.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000154	AU-6(4)	The information system provides the capability to centrally review and analyze audit records from multiple components within the system.	Designer	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000158	AU-7(1)	The information system provides the capability to process audit records for events of interest based on organization-defined audit fields within audit records.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000159	AU-8(a)	The information system uses internal system clocks to generate time stamps for audit records.	Designer	Audit Time Stamps	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000166	AU-10	The information system protects against an individual (or process acting on behalf of an individual) falsely denying having performed organization-defined actions to be covered by non-repudiation.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000169	AU-12(a)	The information system provides audit record generation capability for the auditable events defined in AU-2 a at organization defined information system	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000171	AU-12(b)	The information system allows organization-defined personnel or roles to select which auditable events are to be audited by specific components of the information	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000172	AU-12(c)	The information system generates audit records for the events defined in AU-2 d with the content defined in AU-3.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000173	AU-12(1)	The organization defines the level of tolerance for relationship between time stamps of individual records in the audit trail that will be used for correlation.	Designer Non-Designer	CYBERSECURITY SOFTWARE; Auditing Front-End Software; Audit Reduction and Report Generation in MODERATE Systems.	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000174	AU-12(1)	The information system compiles audit records from organization-defined information system components into a system-wide (logical or physical) audit trail that is time-correlated to within organization defined level of tolerance for relationship between time stamps of individual records in the audit trail.	Designer	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-000176	IA-5(b)	The organization manages information system authenticators by establishing initial authenticator content for authenticators defined by the organization.	Designer Non-Designer	---	The organization is responsible for managing control system authenticators by establishing initial authenticator content for authenticators defined by the organization.
CCI-000182	IA-5(g)	The organization manages information system authenticators by changing/refreshing authenticators in accordance with the organization defined time period by authenticator type.	DoD-Defined Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for managing control system authenticators by changing/refreshing authenticators in accordance with the organization-defined time period by authenticator type. DoD has defined the time period as CAC - every 3 years, or 1 year from term of contract Password: 60 days Biometrics: every 3 years.
CCI-000185	IA-5(2)(a)	The information system, for PKI-based authentication validates certifications by constructing and verifying a certification path to an accepted trust anchor including checking certificate status information.	Enclave Designer Impractical	---	Impractical; PKI or Certificates are not supported in Fire and Life Safety controllers and equipment.
CCI-000186	IA-5(2)(b)	The information system, for PKI-based authentication enforces authorized access to the corresponding private key.	Enclave Designer	---	Impractical; PKI or Certificates are not supported in Fire and Life Safety controllers and equipment.
CCI-000187	IA-5(2)(c)	The information system, for PKI-based authentication, maps the authenticated identity to the account of the individual or group.	Enclave Designer	---	Impractical; PKI or Certificates are not supported in Fire and Life Safety controllers and equipment.
CCI-000192	IA-5(1)(a)	The information system enforces password complexity by the minimum number of upper case characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one uppercase character. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000193	IA-5(1)(a)	The information system enforces password complexity by the minimum number of lower case characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one lowercase character. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000194	IA-5(1)(a)	The information system enforces password complexity by the minimum number of numeric characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to contain at least one numeric character. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000195	IA-5(1)(b)	The information system, for password-based authentication, when new passwords are created, enforces that at least an organization-defined number of characters are changed.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure that all password must differ from previous five (5) passwords, where differ is defined as changing at least fifty percent of the characters. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000196	IA-5(1)(c)	The information system, for password-based authentication, stores only cryptographically-protected passwords.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces are cryptographically protected during storage and transmission. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000197	IA-5(1)(c)	The information system, for password-based authentication, transmits only cryptographically-protected passwords.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces are cryptographically protected during storage and transmission. Contractor is required to determine and apply all applicable STIGs/SRGs.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000198	IA-5(1)(d)	The information system enforces minimum password lifetime restrictions.	Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Not applicable at the controller; This is managed at PIT L2 computer or above which allows for minimum lifetime of 24 hours which allows the use of a temporary password for system logons with an immediate change to a permanent password.
CCI-000199	IA-5(1)(d)	The information system enforces maximum password lifetime restrictions.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure that passwords have a maximum lifetime of 60 days. Contractor is required to determine and apply all applicable STIGs/SRGs
CCI-000200	IA-5(1)(e)	The information system prohibits password reuse for the organization defined number of generations.	Enclave Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure that all password must differ from previous five (5) passwords, where differ is defined as changing at least fifty percent of the characters. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000205	IA-5(1)(a)	The information system enforces minimum password length.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to have a minimum password length of 15 characters and for controllers Minimally Supporting Accounts must support passwords with a minimum length of four characters. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-000206	IA-6	The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.	Enclave Designer Impractical	Authenticator Feedback	This is addressed by requiring the contractor to employ devices that do not show authentication information on a display. Devices that momentarily display a character as it is entered are acceptable. For devices that have STIGs or SRGs related to CCI-000206 will comply with those requirements.
CCI-000207	PM-5	The organization develops and maintains an inventory of its information systems.	Designer Non-Designer Impractical	Control System Inventory Report	This is met requiring the contractor to complete a Control System Inventory report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators) that includes all components withing the authorization boundary of the system. Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. The organization is responsible for registering and maintaining their control systems in DITPR.
CCI-000217	AC-2(3)	The organization defines a time period after which inactive accounts are automatically disabled.	DoD-Defined Designer Impractical	User Accounts	Impractical; The control system does not support this functionality.
CCI-000232	AC-14(b)	The organization documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification and authentication.	Designer	Permitted Actions Without Identification or Authentication	The control system must require identification and authentication before allowing any actions except read-only actions by a user acting from a user interface which MINIMALLY or FULLY supports accounts.
CCI-000236	PM-11(b)	The organization determines information protection needs arising from the defined mission/business processes and revises the processes as necessary, until an achievable set of protection needs are obtained.	Enclave Designer Non-Designer	Control System Cybersecurity Documentation	The organization is responsible for determining information protection needs arising from the defined mission/business processes and revises the processes as necessary, until an achievable set of protection needs are obtained.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000258	CA-3(b)	The organization documents, for each interconnection, the interface characteristics.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule; CYBERSECURITY DURING CONSTRUCTION	This is met by requiring the contractor to meet Cybersecurity Requirements during Construction. Contractor is required to document, for each interconnection, the interface characteristics for each interconnection for any and all Contractor Computer Equipment, (e.g., OS, Anti-Malware Software, Passwords/Phrases, User-Based Authentication, any temporary IP networks if used, network connections, boundaries etc. as part of the requirements for CYBERSECURITY DURING CONSTRUCTION. Contractor is also required to provide a completed Cybersecurity Interconnection Schedule documenting network connections between the installed system and other systems including information for each device directly communicating between systems: Device Identifier, Device Description, Transport layer Protocol, Network Address, Port (if applicable), MAC (Layer 2) address (if applicable), Media, Application Protocol, Service (if applicable), Descriptive Purpose of communication. The organization is responsible to document any Interconnection security agreements which are required for systems connecting between enclaves which can include both DoD enclaves or non DoD enclaves.
CCI-000293	CM-2	The organization develops and documents a current baseline configuration of the information system.	Designer	---	This is met by requiring the Contractor to provide all baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices. The Government organization is responsible to continue to develop and document current baseline configuration of the control system, subsystem and devices throughout the lifecycle of the control system.
CCI-000298	CM-2(1)(c)	The organization reviews and updates the baseline configuration of the information system as an integral part of information system component installations.	Designer Non-Designer	---	This is met by requiring the Contractor to provide all baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices. The Government organization is responsble to review and update the baseline configuration of the system as an integral part of control system component installations, and to document each occurrence of these reviews and update all actions as an audit trail upon final acceptance of the system
CCI-000349	CM-5(2)	The organization reviews information system changes per organization defined frequency to determine whether unauthorized changes have occurred.	Designer Non-Designer	---	Non-Designer; The organization is responsible to address this control.
CCI-000363	CM-6(a)	The organization defines security configuration checklists to be used to establish and document configuration settings for the information system technology products employed.	Designer	REQUIREMENTS FOR LEAST FUNCTIONALITY	Do not provide devices with remote user interfaces or with full user interfaces where one is not required. Do not use a networked sensor or actuator where a non-networked sensor or actuator would suffice. Unless specifically required by the government, do not provide a capability to update device firmware over the network.
CCI-000364	CM-6(a)	The organization establishes configuration settings for information technology products employed within the information system using organization-defined security configuration checklists.	Designer	REQUIREMENTS FOR LEAST FUNCTIONALITY	Do not provide devices with remote user interfaces or with full user interfaces where one is not required. Do not use a networked sensor or actuator where a non-networked sensor or actuator would suffice. Unless specifically required by the government, do not provide a capability to update device firmware over the network.
CCI-000365	CM-6(a)	The organization documents configuration settings for information technology products employed within the information system using organization-defined security configuration checklists that reflect the most restrictive mode consistent with operational requirements.	DoD-Defined Designer Non-Designer Impractical	REQUIREMENTS FOR LEAST FUNCTIONALITY	DoD Components are automatically compliant with this CCI because they are covered by the DoD level security configuration or implementation guidance (e.g. STIGs, SRGs, NSA configuration guides, CTOs, DTMs etc.).
CCI-000380	CM-7(b)	The organization defines for the information system prohibited or restricted functions, ports, protocols, and/or services.	Designer	IP Control Networks;	Impractical; controllers do not have IP functionality.
CCI-000381	CM-7(a)	The organization configures the information system to provide only essential capabilities.	Designer	IP Control Networks;	Impractical; controllers do not have IP functionality.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000382	CM-7(b)	The organization configures the information system to prohibit or restrict the use of organization-defined functions, ports, protocols, and/or services.	Designer	IP Control Networks;	Impractical; controllers do not have IP functionality.
CCI-000388	CM-7(3)	The organization ensures compliance with organization-defined registration requirements for functions, ports, protocols, and services.	Designer Non-Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is to Ensure that all functions, ports, protocols, and services to be used have been assessed and planned for according DODI 8551.01, and that any unused port or interface not directly related to the full functionality of the control system has been disabled. Contractor must document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For non-IP communications, contractor is required to document communication protocol and media used. Contractor must include all documentation of these functions, ports, protocol and services as being disabled as part of the final Control System Cybersecurity Documentation submittal.
CCI-000389	CM-8(a)(1)	The organization develops and documents an inventory of information system components that accurately reflects the current information system.	Designer	Control System Inventory Report	The organization identifies the organization-defined software programs authorized to execute on the information system.
CCI-000392	CM-8(a)(2)	The organization develops and documents an inventory of information system components that includes all components within the authorization boundary of the information system.	Designer	Control System Inventory Report	The contractor is responsible for providing a Pre-Construction Control System Inventory Report and a Final Control System Inventory Report, using the Inventory Spreadsheet listed under the 25 05 11.XX at https://www.wbdg.org/dod/ufgs/ufgs-25-05-11. In the Control System Inventory Reports, document all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000398	CM-8(a)(4)	The organization defines information deemed necessary to achieve effective information system component accountability.	DoD-Defined Designer Non-Designer Impractical	Control System Inventory Report	The contractor is responsible for providing a Pre-Construction Control System Inventory Report and a Final Control System Inventory Report, using the Inventory Spreadsheet listed under the 25 05 11.XX at https://www.wbdg.org/dod/ufgs/ufgs-25-05-11. In the Control System Inventory Reports, document all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-000411	CM-8(2)	The organization employs automated mechanisms to help maintain an up-to-date inventory of information system components.	Designer Non-Designer	Control System Inventory Report Control System Cybersecurity Documentation	The contractor is responsible for providing a Pre-Construction Control System Inventory Report and a Final Control System Inventory Report, using the Inventory Spreadsheet listed under the 25 05 11.XX at https://www.wbdg.org/dod/ufgs/ufgs-25-05-11. In the Control System Inventory Reports, document all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. The organization is responsible for employing automated mechanisms to help maintain an up-to-date inventory of control system components.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000412	CM-8(2)	The organization employs automated mechanisms to help maintain a complete inventory of information system components.	Designer Non-Designer	Control System Inventory Report Control System Cybersecurity Documentation	The contractor is responsible for providing a Pre-Construction Control System Inventory Report and a Final Control System Inventory Report, using the Inventory Spreadsheet listed under the 25 05 11.XX at https://www.wbdg.org/dod/ufgs/ufgs-25-05-11. In the Control System Inventory Reports, document all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators). For each device provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet. The organization is responsible for employing automated mechanisms to help maintain a complete inventory of control system components.
CCI-000553	CP-10(2)	The information system implements transaction recovery for systems that are transaction-based.	Designer	---	For all controllers, the contractor is responsible for providing a backup of the controller configuration and the source code for all loaded application programs (all software that is not common to every controller of the same manufacturer and model). The organization is responsible for maintaining control system component backups and for documenting transaction recovery results as part of contingency plan testing.
CCI-000623	SA-4(1)	The organization requires the developer of the information system, system component, or information system service to provide a description of the functional properties of the security controls to be employed.	Designer Non-Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement .
CCI-000692	SA-10(c)	The organization requires the developer of the information system, system component, or information system service to implement only organization-approved changes to the system, component, or service.	Designer Non-Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement.
CCI-000694	SA-10(d)	The organization requires the developer of the information system, system component, or information system service to document approved changes to the system, component, or service.	Designer Non-Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement.
CCI-000764	IA-2	The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).	Enclave Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	Impractical; The control system is unable to authenticate organizational users.
CCI-000765	IA-2(1)	The information system implements multifactor authentication for network access to privileged accounts.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; The control system is unable to authenticate users via multi-factor methods.
CCI-000766	IA-2(2)	The information system implements multifactor authentication for network access to non-privileged accounts.	Enclave Designer Impractical	---	Impractical; The control system is unable to authenticate users via multi-factor methods.
CCI-000767	IA-2(3)	The information system implements multifactor authentication for local access to privileged accounts.	Enclave Designer Impractical	---	Impractical; The control system is unable to authenticate users via multi-factor methods.
CCI-000768	IA-2(4)	The information system implements multifactor authentication for local access to non-privileged accounts.	Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; The control system is unable to authenticate users via multi-factor methods.
CCI-000777	IA-3	The organization defines a list of specific and/or types of devices for which identification and authentication is required before establishing a connection to the information system.	DoD-Defined Enclave Designer Impractical	Control System Inventory Report; Device Identification and Authentication	Impractical; The controller does not support functions such as mobile devices or network connected endpoints. The system is closed.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-000778	IA-3	The information system uniquely identifies an organization defined list of specific and/or types of devices before establishing a local, remote, or network connection.	Enclave Designer Impractical	Control System Inventory Report; Device Identification and Authentication	Impractical; The controller does not support functions such as mobile devices or network connected endpoints. The system is closed.
CCI-000803	IA-7	The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.	Enclave Designer Impractical	Cryptographic Module Authentication	Impractical; The control system is closed and proprietary and does not support external cryptographic modules.
CCI-000865	MA-3	The organization approves information system maintenance tools.	Designer Non-Designer	SYSTEM MAINTENANCE TOOL SOFTWARE	The contractor must obtain permission from the government for each maintenance tool the contractor wants to employ.
CCI-000928	PE-3(1)	The organization enforces physical access authorizations to the information system in addition to the physical access controls for the facility at organization-defined physical spaces containing one or more components of the information system.	Designer Non-Designer	Physical Security	The organization enforces physical access authorizations to the control system in addition to the physical access controls for the facility at organization-defined physical spaces containing one or more components of the information system. The organization will ensure that these controls are separate from and independent of, the physical access controls established for the facility.
CCI-000936	PE-4	The organization controls physical access to organization-defined information system distribution and transmission lines within organizational facilities using organization-defined security safeguards.	Designer Non-Designer	Physical Security	The organization enforces physical access authorizations to the control system in addition to the physical access controls for the facility at organization-defined physical spaces containing one or more components of the information system. The organization will ensure that these controls are separate from and independent of, the physical access controls established for the facility.
CCI-001048	RA-3(a)	The organization conducts an assessment of risk of the information system and the information it processes, stores, or transmits that includes the likelihood and magnitude of harm from the unauthorized access, use, disclosure, disruption, modification, or destruction.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06. The organization is responsible to conduct a risk of the system and the information it processes, stores, or transmits that includes the likelihood and magnitude of harm from the unauthorized access, use, disclosure, disruption, modification, or destruction which is then documented by the Designer as per Section 3-1.1 Five Steps for Cybersecurity Design. This risk is revised during this processes as necessary, until the completion of the Design Review by the Government at the 35% Design Deliverable. The Design process concludes with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s) in which the Contractor will be required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices.
CCI-001054	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications on an organization-defined frequency.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001055	RA-5(a)	The organization defines a frequency for scanning for vulnerabilities in the information system and hosted applications.	DoD-Defined Enclave Designer Impractical	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001056	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications when new vulnerabilities potentially affecting the system/applications are identified and reported.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001057	RA-5(b)	The organization employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by using standards for: enumerating platforms, software flaws, and improper configurations; formatting checklists and test procedures; and measuring vulnerability impact.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001058	RA-5(c)	The organization analyzes vulnerability scan reports and results from security control assessments.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001059	RA-5(d)	The organization remediates legitimate vulnerabilities in organization-defined response times in accordance with an organizational assessment risk.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001062	RA-5(1)	The organization employs vulnerability scanning tools that include the capability to readily update the information system vulnerabilities to be scanned.	Enclave Designer	DATABASE AND WEB SERVER SOFTWARE; VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001067	RA-5(5)	The information system implements privileged access authorization to organization-identified information system components for selected organization-defined vulnerability scanning activities.	Enclave Designer	DATABASE AND WEB SERVER SOFTWARE; VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001082	SC-2	The information system separates user functionality (including user interface services) from information system management functionality.	Enclave Designer Non-Designer	Denial of Service Protection	To the greatest extent practical, implement control logic without reliance on the network. Except for networked input and outputs on input-output buses specifically designed to provide high reliability or redundancy, sensors and actuators must not rely on the network to exchange data with the controller executing the sequence of operation which uses the sensor value or determines the actuator command. Sensor values required by multiple devices may be shared over the network provided they are connected to a controller requiring the value for execution of the sequence and that controller shares the value on the network.
CCI-001097	SC-7(a)	The information system monitors and controls communications at the external boundary of the system and at key internal boundaries within the system.	DoD-Defined Enclave Designer Impractical	Physical Security; Denial of Service Protection	The system is protected by requiring the contractor to install and implement all of the system components within lockable enclosures. Additional levels of monitoring is not possible.
CCI-001109	SC-7(5)	The information system at managed interfaces denies network communications traffic by default and allows network communications traffic by exception (i.e., deny all, permit by exception).	Enclave Designer	Cybersecurity Interconnection Schedules; Physical Security; Process Isolation and Boundary Protection	Impractical; The system is not connected to an IP network and only functions using its proprietary, closed communications network. The ability to employ a firewall in this application is not possible.
CCI-001120	SC-7(13)	The organization defines key information security tools, mechanisms, and support components to be isolated.	Enclave Designer Non-Designer	Process Isolation and Boundary Protection	The organization is responsible for defining key information security tools, mechanisms, and support components to be isolated. When radios interfacing a local fire protection system to a supervisory system are not NIST FIPS 140-2 validated, use a relay panel interface between the local fire protection system and the radio. Install and configure the relay panel to prohibit initiating any action within the local fire protection system other than causing the system to play a pre-recorded message. Install relays using the normally closed contact such that they pass a signal when they open, and so that a relay that loses power or has a failed coil passes the signal. For fire suppression systems including a release panel, any network used in these systems must be dedicated to these systems and must be isolated from any other network, including other components of the Fire Alarm and Fire Suppression systems. Use only dry contacts and relays to transfer signals from these systems to any other systems. Install relays using the normally closed contact such that they pass a signal when they open, and so that a relay that loses power or has a failed coil passes the signal.
CCI-001126	SC-7(18)	The information system fails securely in the event of an operational failure of a boundary protection device.	Designer Impractical	Cybersecurity Interconnection Schedule Process Isolation and Boundary Protection	The control system fails as defined by the NFPA requirements.
CCI-001133	SC-10	The information system terminates the network connection associated with a communications session at the end of the session or after an organization-defined time period of inactivity.	Enclave Designer Impractical	Session Lock and Session Termination	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-001134	SC-10	The organization defines the time period of inactivity after which the information system terminates a network connection associated with a communications session.	DoD-Defined Designer Impractical	Session Lock and Session Termination	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001160	SC-18(a)	The organization defines acceptable and unacceptable mobile code and mobile code technologies.	Enclave Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001161	SC-18(b)	The organization establishes usage restrictions for acceptable mobile code and mobile code technologies.	Enclave Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001162	SC-18(b)	The organization establishes implementation guidance for acceptable mobile code and mobile code technologies.	Enclave Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001163	SC-18(c)	The organizations authorizes the use of mobile code within the information system.	Enclave Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001164	SC-18(c)	The organization monitors the use of mobile code within the information system.	Enclave Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001165	SC-18(c)	The organization controls the use of mobile code within the information system.	Enclave Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001166	SC-18(1)	The information system identifies organization-defined unacceptable mobile code.	Enclave Designer Non-Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001169	SC-18(3)	The information system prevents the download of organization-defined unacceptable mobile code.	Designer Non-Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001170	SC-18(4)	The information system prevents the automatic execution of mobile code in organization-defined software applications.	Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001184	SC-23	The information system protects the authenticity of communications sessions.	Enclave Designer Impractical	Device Identification and Authentication	Communications within the system performs it's own communications management and failure notification. This is performed via 'Trouble' indications. External communications is not performed using the session methodology. Session failures will result in pre-configured responses.
CCI-001185	SC-23(1)	The information system invalidates session identifiers upon user logout or other session termination.	Designer	Cryptographic Protection	The controller is not IP network connected. The controller will apply its own disconnection process upon user logout. External connection to the device is not possible for remote users.
CCI-001188	SC-23(3)	The information system generates unique session identifiers for each session with organization-defined randomness requirements.	Designer	Cryptographic Protection	The controller is not IP network connected. The controller will apply its own disconnection process upon user logout. External connection to the device is not possible for remote users.
CCI-001190	SC-24	The information system fails to an organization-defined known-state for organization-defined types of failures.	Designer	---	The control system will fail to a NFPA defined safe state. Any system failures will result in the system indicating an alarm notification and emergency personnel notified.
CCI-001191	SC-24	The organization defines the known states the information system should fail to in the event of a organization-defined system failure.	DoD-Defined Designer Impractical	---	The organization is responsible for defining the known states the control system should fail to in the event of a organization-defined system failure.
CCI-001192	SC-24	The organization defines types of failures for which the information system should fail to an organization-defined known state.	DoD-Defined Designer Impractical	---	The organization is responsible for defining the types of failures for which the control system should fail to an organization-defined known state.
CCI-001193	SC-24	The organization defines system state information that should be preserved in the event of a system failure.	DoD-Defined Designer Impractical	---	The organization is responsible for defining system state information that should be preserved in the event of a system failure.
CCI-001199	SC-28	The information system protects the confidentiality and/or integrity of organization-defined information at rest.	Enclave Designer Impractical	Protection of Information at Rest	Impractical; The system maintains no historical information. The system natively is intended to only react to immediate information.
CCI-001241	SI-3(c)(1)	The organization configures malicious code protection mechanisms to perform periodic scans of the information system on an organization-defined frequency.	Enclave Designer Non-Designer	Malicious Code Protection	Impractical; In isolated systems without a computer there scanning from a central source is not possible. Additionally, disconnected systems do not have the ability to update definition files.
CCI-001253	SI-4(a)(1)	The organization defines the objectives of monitoring for attacks and indicators of potential attacks on the information system.	DoD-Defined Enclave Designer Impractical	Malicious Code Protection	Impractical; The system is not IP-network connected, automated monitoring tools are unable to monitor the system.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001310	SI-10	The information system checks the validity of organization-defined inputs.	Designer Non-Designer	---	This CCI involves checking the syntax and semantics of the inputs, ensuring they match the specified definitions for format and content. See the UFGS 25 05 11 Notes for this section. This is partially met by requiring the contractor to add redundant sensors where sensed values are critical inputs to the sequence. Contractor is required to have confirmation dialogs prior to user input when this user input which could have serious adverse impact on the system and/or should configure the controller to ensure user inputs require validation by an additional user prior to input. Contractor to determine and apply all applicable STIGs and/or SRGs.
CCI-001312	SI-11(a)	The information system generates error messages that provide information necessary for corrective actions without revealing information that could be exploited by adversaries.	Designer	---	This CCI involves checking the syntax and semantics of the inputs, ensuring they match the specified definitions for format and content and that all error messages, provide information necessary for corrective actions without revealing information that could be exploited by adversaries.
CCI-001361	AC-2(2)	The organization defines a time period after which temporary accounts are automatically terminated.	DoD-Defined Enclave Designer Non-Designer Impractical	User Accounts	Impractical; the controller does not support Temporary accounts.
CCI-001365	AC-2(2)	The organization defines a time period after which emergency accounts are automatically terminated.	DoD-Defined Enclave Designer Non-Designer Impractical	---	Impractical; the controller does not support emergency accounts.
CCI-001368	AC-4	The information system enforces approved authorizations for controlling the flow of information within the system based on organization-defined information flow control policies.	Enclave Designer Impractical	Information Flow Enforcement	Impractical; the controller is part of a single vendor Life Safety system. Information flow is controlled and restricted to only that required by the system.
CCI-001403	AC-2(4)	The information system automatically audits account modification actions.	Enclave Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001404	AC-2(4)	The information system automatically audits account disabling actions.	Enclave Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001405	AC-2(4)	The information system automatically audits account removal actions.	Enclave Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001414	AC-4	The information system enforces approved authorizations for controlling the flow of information between interconnected systems based on organization-defined information flow control policies.	Enclave Designer Impractical	Information Flow Enforcement	Impractical; the controller is part of a single vendor Life Safety system. Information flow is controlled and restricted to only that required by the system.
CCI-001419	AC-6(2)	The organization defines the security functions or security-relevant information to which users of information system accounts, or roles, have access.	DoD-Defined Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The contractor ensures that the security system is implemented such that administrative or engineering functions addressing security are protected from non-privledged users. This level of implementation is disctated based on the limitations of the system.
CCI-001423	AC-7(a)	The organization defines the time period in which the organization-defined maximum number of consecutive invalid logon attempts occur.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	Impractical; the control system is used for life safety. As such, it can not be locked out for any extended periods of time.
CCI-001438	AC-18(a)	The organization establishes usage restrictions for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	The use of wireless and wired broadcast communication for fire protection systems within a facility is prohibited. Wireless communication may be used to provide communication from the fire protection system in a facility to the central monitoring station.
CCI-001439	AC-18(a)	The organization establishes implementation guidance for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	The use of wireless and wired broadcast communication for fire protection systems within a facility is prohibited. Wireless communication may be used to provide communication from the fire protection system in a facility to the central monitoring station.
CCI-001441	AC-18(b)	The organization authorizes wireless access to the information system prior to allowing such connections.	Designer Non-Designer	Wireless and Wired Broadcast Communication	The use of wireless and wired broadcast communication for fire protection systems within a facility is prohibited. Wireless communication may be used to provide communication from the fire protection system in a facility to the central monitoring station.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001443	AC-18(1)	The information system protects wireless access to the system using authentication of users and/or devices.	Designer Impractical	---	The use of wireless and wired broadcast communication for fire protection systems within a facility is prohibited. Wireless communication may be used to provide communication from the fire protection system in a facility to the central monitoring station.
CCI-001444	AC-18(1)	The information system protects wireless access to the system using encryption.	Designer Impractical	---	Impractical; there is no requirement to implement encryption for Fire & Life Safety communications between the facility and the Fire Alarm Reporting System (FARS).
CCI-001449	AC-18(3)	The organization disables, when not intended for use, wireless networking capabilities internally embedded within information system components prior to issuance and deployment.	Designer	---	Non-Designer; The organization is responsible to disable, when not intended for use, wireless networking capabilities internally embedded within control system components prior to issuance and deployment.
CCI-001459	AU-12(a)	The organization defines information system components that provide audit record generation capability.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001462	AU-14(2)	The information system provides the capability for authorized users to capture/record and log content related to a user session.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001464	AU-14(1)	The information system initiates session audits at system start-up.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001485	AU-2(d)	The organization defines the events which are to be audited on the information system on an organization-defined frequency of (or situation requiring) auditing for each identified event.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001487	AU-3	The information system generates audit records containing information that establishes the identity of any individuals or subjects associated with the event.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001488	AU-3(1)	The organization defines additional, more detailed information to be included in the audit records.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001544	IA-5(c)	The organization manages information system authenticators by ensuring that authenticators have sufficient strength of mechanism for their intended use.	Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by the contractor ensuring that authenticators have sufficient strength of mechanism for their intended use through the required instructions as provided for CCI-000192, CCI-000193, CCI-000194, CCI-000195, CCI-000196, CCI-000197, CCI-000198, CCI-000199, CCI-000200, CCI-000205. Where these requirements conflict the contractor is instructed to apply the following order of precedence: 1) If present, Device Specific Requirements take precedence over any other requirements; and then 2) multifactor authentication requirements take precedence over password requirements.
CCI-001548	AC-4	The organization defines the information flow control policies for controlling the flow of information within the system.	Enclave Designer Non-Designer Impractical	Information Flow Enforcement	Impractical; the controller is part of a single vendor Life Safety system. Information flow is controlled and restricted to only that required by the system.
CCI-001549	AC-4	The organization defines the information flow control policies for controlling the flow of information between interconnected systems.	Enclave Designer Non-Designer Impractical	Information Flow Enforcement	Impractical; the controller is part of a single vendor Life Safety system. Information flow is controlled and restricted to only that required by the system.
CCI-001550	AC-4	The organization defines approved authorizations for controlling the flow of information within the system.	Enclave Designer Non-Designer Impractical	Information Flow Enforcement	Impractical; the controller is part of a single vendor Life Safety system. Information flow is controlled and restricted to only that required by the system.
CCI-001551	AC-4	The organization defines approved authorizations for controlling the flow of information between interconnected systems.	Enclave Designer Non-Designer Impractical	Information Flow Enforcement	Impractical; the controller is part of a single vendor Life Safety system. Information flow is controlled and restricted to only that required by the system.
CCI-001558	AC-6(1)	The organization defines the security functions (deployed in hardware, software, and firmware) for which access must be explicitly authorized.	DoD-Defined Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The organization defines the security functions (deployed in hardware, software, and firmware) for which access must be explicitly authorized.
CCI-001571	AU-2(a)	The organization defines the information system auditable events.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001577	AU-12(1)	The organization defines the information system components from which audit records are to be compiled into the system-wide audit trail.	Designer Non-Designer	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001588	CM-6(a)	The organization-defined security configuration checklists reflect the most restrictive mode consistent with operational requirements.	DoD-Defined Designer Non-Designer Impractical	IP Control Networks;	The organization is responsible for ensuring that the organization-defined security configuration checklists reflect the most restrictive mode consistent with operational requirements.
CCI-001592	CM-7(2)	The organization defines the rules authorizing the terms and conditions of software program usage on the information system.	Designer	---	The organization is responsible for defining the rules authorizing the terms and conditions of software program usage on the control system.
CCI-001610	IA-5(g)	The organization defines the time period (by authenticator type) for changing/refreshing authenticators.	DoD-Defined Designer Non-Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the time period (by authenticator type) for changing/refreshing authenticators. DoD has defined the time period as CAC - every 3 years, or 1 year from term of contract Password: 60 days Biometrics: every 3 years.
CCI-001611	IA-5(1)(a)	The organization defines the minimum number of special characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the minimum number of special characters for password complexity enforcement. DoD has defined the minimum number of special characters for password complexity enforcement as one special character.
CCI-001612	IA-5(1)(a)	The organization defines the minimum number of upper case characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the minimum number of upper case characters for password complexity enforcement. DoD has defined the minimum number of upper case characters for password complexity enforcement as one upper-case character.
CCI-001613	IA-5(1)(a)	The organization defines the minimum number of lower case characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the minimum number of lower case characters for password complexity enforcement. DoD has defined the minimum number of lower case characters for password complexity enforcement as one lower-case character.
CCI-001614	IA-5(1)(a)	The organization defines the minimum number of numeric characters for password complexity enforcement.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the minimum number of numeric characters for password complexity enforcement. DoD has defined the minimum number of numeric characters for password complexity enforcement as one numeric character.
CCI-001615	IA-5(1)(b)	The organization defines the minimum number of characters that are changed when new passwords are created.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the minimum number of characters that are changed when new passwords are created. DoD has defined the minimum number of characters as 50% of the minimum password length.
CCI-001616	IA-5(1)(d)	The organization defines minimum password lifetime restrictions.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining minimum password lifetime restrictions. DoD has defined the minimum password lifetime restrictions as 24 hours.
CCI-001617	IA-5(1)(d)	The organization defines maximum password lifetime restrictions.	DoD-Defined Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining maximum password lifetime restrictions. DoD has defined the maximum password lifetime restrictions as 60 days.
CCI-001618	IA-5(1)(e)	The organization defines the number of generations for which password reuse is prohibited.	DoD-Defined Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	This is met by requiring the contractor to configure all controllers FULLY supporting accounts and supporting password-based authentication, and Passwords for Remote Interfaces to ensure that all password must differ from previous five (5) passwords, where differ is defined as changing at least fifty percent of the characters. Contractor is required to determine and apply all applicable STIGs/SRGs.
CCI-001619	IA-5(1)(a)	The information system enforces password complexity by the minimum number of special characters used.	Enclave Designer	USER IDENTIFICATION AND AUTHENTICATION	The contractor is responsible for configuring the control system device(s) to enforce password complexity by the minimum number of special characters used. DoD has defined the minimum number of special characters for password complexity used.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001641	RA-5(a)	The organization defines the process for conducting random vulnerability scans on the information system and hosted applications.	Enclave Designer Non-Designer Impractical	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001643	RA-5(a)	The organization scans for vulnerabilities in the information system and hosted applications in accordance with the organization-defined process for random scans.	Enclave Designer Non-Designer	VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001645	RA-5(5)	The organization identifies the information system components to which privileged access is authorized for selected organization-defined vulnerability scanning activities.	DoD-Defined Enclave Designer Impractical	DATABASE AND WEB SERVER SOFTWARE; VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-001662	SC-18(1)	The information system takes organization-defined corrective action when organization-defined unacceptable mobile code is identified.	Enclave Designer Non-Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001664	SC-23(3)	The information system recognizes only session identifiers that are system-generated.	Designer	Device Identification and Authentic...	Impractical; the controller does not implement IP session identifiers. The controller is limited to its core functionality and proprietary systems only.
CCI-001665	SC-24	The information system preserves organization-defined system state information in the event of a system failure.	Designer Impractical	---	Impractical; the system does not support organizational level criteria. The controller is a single function devices that provides proprietary information.
CCI-001682	AC-2(2)	The information system automatically removes or disables emergency accounts after an organization-defined time period for each type of account.	DoD-Defined Enclave Designer Non-Designer Impractical	---	Impractical; the controller does not support emergency accounts.
CCI-001683	AC-2(4)	The information system notifies organization-defined personnel or roles for account creation actions.	Enclave Designer	User Accounts	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001684	AC-2(4)	The information system notifies organization-defined personnel or roles for account modification actions.	Enclave Designer	User Accounts	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001685	AC-2(4)	The information system notifies organization-defined personnel or roles for account disabling actions.	Enclave Designer	User Accounts	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001686	AC-2(4)	The information system notifies organization-defined personnel or roles for account removal actions.	Enclave Designer	User Accounts	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001695	SC-18(3)	The information system prevents the execution of organization-defined unacceptable mobile code.	Designer Non-Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-001737	CM-2(7)a	The organization defines the information systems, system components, or devices that are to have organization-defined configurations applied when located in areas of significant risk.	Designer Non-Designer	---	This is partially met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a final submittal requirement. The organization is responsible to ensure these baseline configurations defined in CM-2 (7), CCI-001738 applied when located in areas of significant risk as part of the Control System Device Configuration Management Policy upon final acceptance of the system.
CCI-001738	CM-2(7)a	The organization defines the security configurations to be implemented on information systems, system components, or devices when they are located in areas of significant risk.	Designer Non-Designer	---	This is partially met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a final submittal requirement. The organization is responsible to ensure these baseline configurations defined in CM-2 (7), CCI-001738 applied when located in areas of significant risk as part of the Control System Device Configuration Management Policy upon final acceptance of the system.
CCI-001755	CM-6(c)	The organization defines the information system components for which any deviation from the established configuration settings are to be identified, documented and approved.	DoD-Defined Designer Non-Designer Impractical	IP Control Networks;	The organization is responsible for defining the control system components for which any deviation from the established configuration settings are to be identified, documented and approved.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001761	CM-7(1)(b)	The organization defines the functions, ports, protocols and services within the information system that are to be disabled when deemed unnecessary and/or nonsecure.	Designer	Information Flow Enforcement; IP Control Networks;	Impractical; controllers do not have IP functionality.
CCI-001762	CM-7(1)(b)	The organization disables organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure.	Designer Impractical	Information Flow Enforcement; IP Control Networks;	Impractical; controllers do not have IP functionality.
CCI-001763	CM-7(2)	The organization defines the policies regarding software program usage and restrictions.	Designer Non-Designer	---	The organization is responsible for defining the policies regarding software program usage and restrictions.
CCI-001764	CM-7(2)	The information system prevents program execution in accordance with organization-defined policies regarding software program usage and restrictions, and/or rules authorizing the terms and conditions of software program usage.	Designer	---	Impractical; The systems in question are either package systems or components. These are provided by the manufacturer to function as designed. The contractor is unable to expand or modify the componets beyond that which the manufacturer has provided.
CCI-001772	CM-7(5)a	The organization defines the software programs authorized to execute on the information system.	Designer	---	This is met requiring the contractor to complete a Control System Inventory report using the most current Inventory Spreadsheet listed at the www.wbdg.org documenting all devices, including networked devices, network infrastructure devices, non-networked devices, input devices (e.g. sensors) and output devices (e.g. actuators) that includes all components withing the authorization boundary of the system. Contractor is required that for each device, they must provide all applicable information for which there is a field on the spreadsheet in accordance with the instructions on the spreadsheet.
CCI-001773	CM-7(5)a	The organization identifies the organization-defined software programs authorized to execute on the information system.	Designer	---	The organization is responsible for identifying the organization-defined software programs authorized to execute on the control system.
CCI-001774	CM-7(5)b	The organization employs an deny-all, permit-by-exception policy to allow the execution of authorized software programs on the information system.	Designer	---	The organization is responsible for employing a deny-all, permit-by-exception policy to allow the execution of authorized software programs on the control system.
CCI-001812	CM-11(2)	The information system prohibits user installation of software without explicit privileged status.	Designer Non-Designer	User Accounts	The contractor must configure the information system to prevent the installation of software by non-privileged users. The organization must define the specific limitations for each user account type. Any user interface supporting user accounts (either FULLY or MINIMALLY) must limit access according to specified limitations for each account. Install and configure any device having a STIG or SRG per that STIG or SRG.
CCI-001813	CM-5(1)	The information system enforces access restrictions.	Designer Non-Designer	User Accounts	The contractor must configure the information system to prevent the installation of software by non-privileged users. The organization must define the specific limitations for each user account type. Any user interface supporting user accounts (either FULLY or MINIMALLY) must limit access according to specified limitations for each account. Install and configure any device having a STIG or SRG per that STIG or SRG.
CCI-001814	CM-5(1)	The Information system supports auditing of the enforcement actions.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001875	AU-7(a)	The information system provides an audit reduction capability that supports on-demand audit review and analysis.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001876	AU-7(a)	The information system provides an audit reduction capability that supports on-demand reporting requirements.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001877	AU-7(a)	The information system provides an audit reduction capability that supports after-the-fact investigations of security incidents.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001878	AU-7(a)	The information system provides a report generation capability that supports on-demand audit review and analysis.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001879	AU-7(a)	The information system provides a report generation capability that supports on-demand reporting requirements.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001880	AU-7(a)	The information system provides a report generation capability that supports after-the-fact investigations of security incidents.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001881	AU-7(b)	The information system provides an audit reduction capability that does not alter original content or time ordering of audit records.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001882	AU-7(b)	The information system provides a report generation capability that does not alter original content or time ordering of audit records.	Enclave Designer Impractical	Audit Reduction and Report Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001889	AU-8(b)	The information system records time stamps for audit records that meets organization-defined granularity of time measurement.	Designer	Audit Time Stamps	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001890	AU-8(b)	The information system records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT).	Designer	Audit Time Stamps	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001891	AU-8(1)	The information system compares internal information system clocks on an organization-defined frequency with an organization-defined authoritative time source.	Designer	Audit Time Stamps	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001892	AU-8(1)	The organization defines the time difference which, when exceeded, will require the information system to synchronize the internal information system clocks to the organization-defined authoritative time source.	Designer Non-Designer	Audit Time Stamps	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001899	AU-10	The organization defines the action to be covered by non-repudiation.	DoD-Defined Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001910	AU-12(b)	The organization defines the personnel or roles allowed select which auditable events are to be audited by specific components of the information system.	DoD-Defined Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001914	AU-12(3)	The information system provides the capability for organization-defined individuals or roles to change the auditing to be performed on organization-defined information system components based on organization-defined selectable event criteria within organization-defined time thresholds.	Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001919	AU-14(b)	The information system provides the capability for authorized users to select a user session to capture/record or view/hear.	Designer Non-Designer	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-001942	IA-2(9)	The information system implements replay-resistant authentication mechanisms for network access to non-privileged accounts.	Designer Impractical	Cryptographic Protection	Impractical; this level of functionality is not provided in the controller or devices.
CCI-001953	IA-2(12)	The information system accepts Personal Identity Verification (PIV) credentials.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the system and controller are not network connected and do not support the ability to authenticate a PIV/CAC.
CCI-001954	IA-2(12)	The information system electronically verifies Personal Identity Verification (PIV) credentials.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; the system and controller are not network connected and do not support the ability to authenticate a PIV/CAC.
CCI-001958	IA-3	The information system authenticates an organization defined list of specific and/or types of devices before establishing a local, remote, or network connection.	Enclave Designer Impractical	Control System Inventory Report; Device Identification and Authentication	Impractical; the system does not support mobile devices.
CCI-001959	IA-3(1)	The organization defines the specific devices and/or type of devices the information system is to authenticate before establishing a connection.	DoD-Defined Designer Impractical	Cryptographic Protection	Impractical; the control system does not support IP networked devices. Networked densing and notification devices operate on a proprietary network and do not support this control.
CCI-001967	IA-3(1)	The information system authenticates organization-defined devices and/or types of devices before establishing a local, remote and/or network connection using bidirectional authentication that is cryptographically based.	Designer Impractical	Cryptographic Protection	Impractical; the control system does not support IP networked devices. Networked densing and notification devices operate on a proprietary network and do not support this control.
CCI-001989	IA-5(e)	The organization manages information system authenticators by changing default content of authenticators prior to information system installation.	Designer	USER IDENTIFICATION AND AUTHENTICATION	For all devices with a password, change the password from the default password. Coordinate selection of passwords with the Government. Do not use the same password for more than one device unless specifically instructed to do so. Provide a Confidential Password Report documenting the password for each device and describing the procedure to change the password for each device.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-001991	IA-5(2)(d)	The information system, for PKI-based authentication, implements a local cache of revocation data to support path discovery and validation in case of inability to access revocation information via the network.	Enclave Designer	---	Impractical; PKI or Certificates are not supported in Fire and Life Safety controllers and equipment.
CCI-001996	IA-5(4)	The organization defines the requirements required by the automated tools to determine if password authenticators are sufficiently strong.	DoD-Defined Designer Non-Designer	---	The organization is responsible to ensure the requirements required by the automated tools to determine if password authenticators are sufficiently strong in their complexity as identified in IA-5 (1) Part A, as defined by the DoD.
CCI-001997	IA-5(4)	The organization employs automated tools to determine if password authenticators are sufficiently strong to satisfy organization-defined requirements.	Designer Non-Designer Impractical	---	The organization is responsible to employ automated tools to determine if password authenticators are sufficiently strong to satisfy organization-defined requirements.
CCI-002002	IA-5(11)	The organization defines the token quality requirements to be employed by the information system mechanisms for token-based authentication.	DoD-Defined Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; this control is not supported on controllers that are not FULLY implementing passwords via the network. The controller is not connected to a network that allows for PKI credentials.
CCI-002003	IA-5(11)	The information system, for token-based authentication, employs mechanisms that satisfy organization-defined token quality requirements.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; this control is not supported on controllers that are not FULLY implementing passwords via the network. The controller is not connected to a network that allows for PKI credentials.
CCI-002007	IA-5(13)	The information system prohibits the use of cached authenticators after an organization defined time period.	Designer Non-Designer	USER IDENTIFICATION AND AUTHENTICATION	Unless otherwise indicated, all user interfaces supporting accounts (either FULLY or MINIMALLY) must implement Identification and Authorization via passwords. For all non-computing components, (e.g., PLC's, RTU's, and Human Machine Interface (HMI)'s) that cannot meet the password requirements, use the strongest password that is technically feasible as long as this does not interfere with the full functionality of the control system component and the control system it supports, as designed. All devices and software must not use cached authenticators. The organization is responsible for ensuring all policies and user training, including advising users not to use the same password for domains of differing classification levels. more than one domain of a classification level (e.g., internal agency network and Intelink), and more than one privilege level (e.g., user, administrator) upon final acceptance of the system.
CCI-002041	IA-5(1)(f)	The information system allows the use of a temporary password for system logons with an immediate change to a permanent password.	Enclave Designer Impractical	USER IDENTIFICATION AND AUTHENTICATION	Impractical; controllers do not support termporary password functionality.
CCI-002046	AU-8(1)	The information system synchronizes the internal system clocks to the authoritative time source when the time difference is greater than the organization-defined time period.	Designer	Audit Time Stamps	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-002047	AU-12(3)	The organization defines the information system components on which the auditing that is to be performed can be changed by organization-defined individuals or roles.	Designer Non-Designer	CYBERSECURITY AUDITING; Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-002054	AT-3(4)	The organization defines indicators of malicious code to recognize suspicious communications and anomalous behavior in organizational information systems.	Designer Non-Designer	---	The organization is responsible for defining indicators of malicious code to recognize suspicious communications and anomalous behavior in organizational control systems.
CCI-002059	CM-6(1)	The organization defines the information system components for which the organization will employ automated mechanisms to centrally manage, apply, and verify configuration settings.	Designer Non-Designer	---	The organization is responsible for defining the control system components for which the organization will employ automated mechanisms to centrally manage, apply, and verify configuration settings.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002102	CA-9(a)	The organization defines the information system components or classes of components that that are authorized internal connections to the information system.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For non-IP communications, contractor is required to document communication protocol and media used. The organization is responsible to define and document any other system components or classes of components that that are authorized internal connections to the system upon final acceptance of the system as DoD has determined the information system components are not appropriate to define at the Enterprise level.
CCI-002103	CA-9(b)	The organization documents, for each internal connection, the interface characteristics.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For non-IP communications, contractor is required to document communication protocol and media used.
CCI-002104	CA-9(b)	The organization documents, for each internal connection, the security requirements.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For non-IP communications, contractor is required to document communication protocol and media used. Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION.
CCI-002105	CA-9(b)	The organization documents, for each internal connection, the nature of the information communicated.	Designer	Network Communication Report	This is met by requiring the contractor to provide a network communication report. For each networked device, contractor is required to document the communication characteristics of the device including communication protocols, services used, encryption employed, and a general description of what information is communicated over the network. For non-IP communications, contractor is required to document communication protocol and media used. Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION.
CCI-002110	AC-2(a)	The organization defines the information system account types that support the organizational missions/business functions.	Designer	User Accounts	This is met by requiring the contractor to ensure that any user interface supporting user accounts (either FULLY or MINIMALLY) must limit access according to specified limitations for each account. Contractor is required to install and configure any device having a STIG or SRG in accordance with that STIG or SRG. Contractor is required to ensure that all user interfaces FULLY supporting accounts must implement user-based authentication where each account is uniquely assigned to a specific user. Contractor is required to ensure User interfaces FULLY supporting accounts must implement at least three (3) levels of user account privilege including: 1) an account with read-only permissions 2) an account with full permissions including account creation and modification and 3) an account with greater permissions than read-only but without account creation and modification.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002130	AC-2(4)	The information system automatically audits account enabling actions.	Enclave Designer Impractical	User Accounts; Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-002132	AC-2(4)	The information system notifies organization-defined personnel or roles for account enabling actions.	Enclave Designer	User Accounts; Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-002146	AC-2(12)(a)	The organization defines atypical usage for which the information system accounts are to be monitored.	Designer Non-Designer	---	Non-Designer; The organization is responsible to define and document atypical usage for which the system accounts are to be monitored as DoD has determined atypical usage is not appropriate to define at the Enterprise level.
CCI-002221	AC-6(1)	The organization defines the security-relevant information for which access must be explicitly authorized.	DoD-Defined Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for defining the security-relevant information for which access must be explicitly authorized.
CCI-002222	AC-6(1)	The organization explicitly authorizes access to organization-defined security functions.	DoD-Defined Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for explicitly authorizing access to organization-defined security functions.
CCI-002223	AC-6(1)	The organization explicitly authorizes access to organization-defined security-relevant information.	DoD-Defined Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The organization is responsible for explicitly authorizing access to organization-defined security-relevant information.
CCI-002234	AC-6(9)	The information system audits the execution of privileged functions.	Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-002235	AC-6(10)	The information system prevents non-privileged users from executing privileged functions to include disabling, circumventing, or altering implemented security safeguards/countermeasures.	Designer Impractical	User Accounts; USER IDENTIFICATION AND AUTHENTICATION	The contractor ensures that the security system is implemented such that administrative or engineering functions addressing security are protected from non-privileged users. This level of implementation is dictated based on the limitations of the system.
CCI-002236	AC-7(b)	The organization defines the time period the information system will automatically lock the account or node when the maximum number of unsuccessful attempts is	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	Impractical; the control system is used for life safety. As such, it can not be locked out for any extended periods of time.
CCI-002237	AC-7(b)	The organization defines the delay algorithm to be employed by the information system to delay the next login prompt when the maximum number of unsuccessful attempts is exceeded.	DoD-Defined Designer Impractical	Unsuccessful Logon Attempts	Impractical; the control system is used for life safety. As such, it can not be locked out for any extended periods of time.
CCI-002238	AC-7(b)	The information system automatically locks the account or node for either an organization-defined time period, until the locked account or node is released by an administrator, or delays the next login prompt according to the organization-defined delay algorithm when the maximum number of unsuccessful attempts is exceeded.	Designer Impractical	Unsuccessful Logon Attempts	Impractical; the control system is used for life safety. As such, it can not be locked out for any extended periods of time.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002243	AC-8(a)(1)	The organization-defined information system use notification message or banner is to state that users are accessing a U.S. Government information system.	DoD-Defined Enclave Designer Impractical	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-002244	AC-8(a)(2)	The organization-defined information system use notification message or banner is to state that information system usage may be monitored, recorded, and subject to audit.	DoD-Defined Enclave Designer Impractical	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors All other requirements for this CCI must be met at the ENCLAVE. Per UFC 4-010-06, Section 3-5.1 Identifiers by Responsibility: The CCI contains a requirement which is expected to be implemented at the Platform Enclave… Platform Enclave is not the designer's responsibility, (Source: UFC-4-010-06).
CCI-002245	AC-8(a)(3)	The organization-defined information system use notification message or banner is to state that unauthorized use of the information system is prohibited and subject to criminal and civil penalties.	DoD-Defined Enclave Designer Impractical	System Use Notification	For networked devices with Remote User Interfaces which are capable, Contractor is required to configure the device to display a warning banner meeting the requirements of DTM 08-060 on screen. For Devices which are connected to a network and have a local user interface Contractor must ensure these display a warning banner meeting the requirements of DTM 08-060 on the user interface screen if capable of doing so and must have a permanently affixed label with an approved banner from DTM 08-060 if unable to display the warning banner on the screen. Where it is impractical (perhaps due to device size) to affix the label to the device, affix the label to the device enclosure.Labels must be machine printed or engraved, plastic or metal, designed for permanent installation, must use a font no smaller than 14 point, and must provide a high contrast between font and background colors All other requirements for this CCI must be met at the ENCLAVE. CCI-002252	AC-10	The organization defines the accounts for which the information system will limit the number of concurrent sessions.	DoD-Defined Designer Non-Designer	Session Lock and Session Termination	Non-Designer: The organization is responsible for addressing this control

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002323	AC-18(a)	The organization establishes configuration/connection requirements for wireless access.	Designer Non-Designer	Wireless and Wired Broadcast Communication	The use of wireless and wired broadcast communication for fire protection systems within a facility is prohibited. Wireless communication may be used to provide communication from the fire protection system in a facility to the central monitoring station.
CCI-002338	AC-20(3)	The organization restricts or prohibits the use of non-organizationally owned information systems, system components, or devices to process, store, or transmit organizational information.	Designer Non-Designer	---	Non-Designer; The organization is responsible to restrict or prohibit the use of non-organizationally owned information systems, system components, or devices to process, store, or transmit organizational information.
CCI-002360	AC-12	The organization defines the conditions or trigger events requiring session disconnect to be employed by the information system when automatically terminating a user session.	Enclave Designer Impractical	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-002361	AC-12	The information system automatically terminates a user session after organization-defined conditions or trigger events requiring session disconnect.	Enclave Designer Impractical	Session Lock and Session Termination Requirements	Impractical; Session Locking and Termination is not appropriate for Life Safety systems.
CCI-002398	SC-7(9)(a)	The information system detects outgoing communications traffic posing a threat to external information systems.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule Process Isolation and	Non-Designer; the organization must evaluate this requirement and address this control.
CCI-002399	SC-7(9)(a)	The information system denies outgoing communications traffic posing a threat to external information systems.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule Process Isolation and	Non-Designer; This control is addresses by the Enclave
CCI-002400	SC-7(9)(b)	The information system audits the identity of internal users associated with denied outgoing communications traffic posing a threat to external information systems.	Designer Impractical	Audit Events, Content of Audit Records, and Audit Generation	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement auditing.
CCI-002401	SC-7(11)	The organization defines the authorized sources from which the information system will allow incoming communications.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule	The organization is responsible for defining the authorized sources from which the control system will allow incoming communications.
CCI-002402	SC-7(11)	The organization defines the authorized destinations for routing inbound communications.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule	The organization is responsible for defining the authorized destinations for routing inbound communications.
CCI-002403	SC-7(11)	The information system only allows incoming communications from organization-defined authorized sources routed to organization-defined authorized destinations.	Enclave Designer Non-Designer	Cybersecurity Interconnection Schedule	The contractor is responsible for configuring the control system device(s) to only allow incoming communications from organization-defined authorized sources routed to organization-defined authorized destinations.
CCI-002404	SC-7(12)	The organization defines the host-based boundary protection mechanisms that are to be implemented at organization-defined information system components.	Enclave Designer Non-Designer	---	Non-Designer; The organization is responsible for this control.
CCI-002405	SC-7(12)	The organization defines the information system components at which organization-defined host-based boundary protection mechanisms will be implemented.	Enclave Designer Non-Designer	---	Non-Designer; The organization is responsible for this control.
CCI-002406	SC-7(12)	The organization implements organization-defined host-based boundary protection mechanisms at organization-defined information system components.	Enclave Designer Non-Designer	---	Non-Designer; The organization is responsible for this control.
CCI-002418	SC-8	The information system protects the confidentiality and/or integrity of transmitted information.	Designer	Cryptographic Protection; Physical Security	Install all device media inside the mission space in intermediate metallic conduit and all device media outside the mission space in rigid metallic conduit.
CCI-002419	SC-8(1)	The organization defines the alternative physical safeguards to be employed when cryptographic mechanisms are not implemented to protect information during transmission.	DoD-Defined Designer	Physical Security	The organization is responsible for defining the alternative physical safeguards to be employed when cryptographic mechanisms are not implemented to protect information during transmission. The contractor adheres to these safeguards when configuring the control system and placing the components of the control system.
CCI-002420	SC-8(2)	The information system maintains the confidentiality and/or integrity of information during preparation for transmission.	Designer	---	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement cryptography to protect the confidentiality and/or integrity of information during preparation for transmission.
CCI-002421	SC-8(1)	The information system implements cryptographic mechanisms to prevent unauthorized disclosure of information and/or detect changes to information during transmission unless otherwise protected by organization-defined alternative physical safeguards.	Designer	Cryptographic Protection	The contractor will ensure that all system components are contained in lockable enclosures. Electronic cryptographic devices are not supported by the controller or system components.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002422	SC-8(2)	The information system maintains the confidentiality and/or integrity of information during reception.	Designer	---	Impractical; there is no requirement for the Fire & Life Safety device(s) to implement cryptography to maintain the confidentiality and/or integrity of information during reception.
CCI-002449	SC-13	The organization defines the cryptographic uses, and type of cryptography required for each use, to be implemented by the information system.	DoD-Defined Enclave Designer Impractical	Cryptographic Protection	Impractical; the control system is proprietary and only supports the cryptographic methodology that is built into the system.
CCI-002450	SC-13	The information system implements organization-defined cryptographic uses and type of cryptography required for each use in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards.	Enclave Designer Impractical	Cryptographic Protection	Impractical; the control system is proprietary and only supports the cryptographic methodology that is built into the system.
CCI-002457	SC-18(1)	The organization defines the corrective actions to be taken when organization-defined unacceptable mobile code is identified.	Enclave Designer Non-Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-002458	SC-18(1)	The organization defines what constitutes unacceptable mobile code for its information systems.	Enclave Designer Non-Designer	Mobile Code	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-002460	SC-18(4)	The information system enforces organization-defined actions prior to executing the code.	Designer	---	Impractical; the Fire and Life Safety device(s) do not support mobile code.
CCI-002470	SC-23(5)	The information system only allows the use of organization-defined certificate authorities for verification of the establishment of protected sessions.	Designer	Device Identification and Authentic...	Impractical; the controller and system does not provide the ability to support PKI certificates or web based communications.
CCI-002472	SC-28	The organization defines the information at rest that is to be protected by the information system.	Designer Non-Designer Impractical	Protection of Information at Rest	This CCI is impractical because the control system is incapable of supporting it.
CCI-002475	SC-28(1)	The information system implements cryptographic mechanisms to prevent unauthorized modification of organization-defined information at rest on organization-defined information system components.	DoD-Defined Designer Impractical	Protection of Information at Rest	This CCI is impractical because the control system is incapable of supporting it.
CCI-002476	SC-28(1)	The information system implements cryptographic mechanisms to prevent unauthorized disclosure of organization-defined information at rest on organization-defined information system components.	DoD-Defined Designer Impractical	Protection of Information at Rest	This CCI is impractical because the control system is incapable of supporting it.
CCI-002530	SC-39	The information system maintains a separate execution domain for each executing process.	Designer	---	Not Applicable and/or Impractical; For computers this function is managed by the computer's operating system. This is a function of the operating system that cannot be configured or managed by an administrator or an integrator. It is managed by the Hardware Abstraction Layer (HAL). For OT Controllers/Devices, this is not supported.
CCI-002544	SC-41	The organization defines the information systems or information system components on which organization-defined connection ports or input/output devices are to be physically disabled or removed.	Enclave Designer Non-Designer	IP Control Networks	The organization is responsible for defining the control systems or control system components on which organization-defined connection ports or input/output devices are to be physically disabled or removed.
CCI-002545	SC-41	The organization defines the connection ports or input/output devices that are to be physically disabled or removed from organization-defined information systems or information system components.	Enclave Designer Non-Designer	IP Control Networks	The organization is responsible for defining the connection ports or input/output devices that are to be physically disabled or removed from organization-defined control systems or control system components.
CCI-002546	SC-41	The organization physically disables or removes organization-defined connection ports or input/output devices on organization-defined information systems or information system components.	Designer Impractical	IP Control Networks	The contractor is responsible for physically disabling or removing organization-defined input/output devices on organization-defined control systems or control system components.
CCI-002623	SI-3(c)(1)	The organization defines the frequency for performing periodic scans of the information system for malicious code.	DoD-Defined Designer Impractical	Malicious Code Protection	Impractical; In isolated systems without a computer there scanning from a central source is not possible. Additionally, disconnected systems do not have the ability to update definition files.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002645	SI-4(b)	The organization defines the techniques and methods to be used to identify unauthorized use of the information system.	Enclave Designer Non-Designer	Information System Monitoring	This is partially met by requiring the contractor to provide all Control System Cybersecurity Documentation in accordance with all required Control System Cybersecurity Documentation submittals in accordance with SA-5 (a),(b),(c), CCI-003124, CCI-003125, CCI-003126, CCI-003127, CCI-003128, CCI-003129, CCI-003130, CCI-003131 as applicable which documents techniques and methods to be used to identify unauthorized use of the control system. For all other requirements, the organization is responsible to determine any additional techniques and methods (such as use of/connection to and enclave) as DoD has determined these are not appropriate to define at the Enterprise level.
CCI-002686	SI-4(23)	The organization defines the information system components at which organization-defined host-based monitoring mechanisms are to be implemented.	DoD-Defined Designer Non-Designer	---	Non-Designer; The organization is responsible to address this control.
CCI-002703	SI-7	The organization defines the software, firmware, and information which will be subjected to integrity verification tools to detect unauthorized changes.	Enclave Designer	---	Non-Designer; The organization is responsible to define the software, firmware, and information which will be subjected to integrity verification tools to detect unauthorized changes.
CCI-002705	SI-7(1)	The organization defines the software on which integrity checks will be performed.	Enclave Designer	---	Non-Designer; The organization is responsible to define the software on which integrity checks will be performed.
CCI-002706	SI-7(1)	The organization defines the firmware on which integrity checks will be performed.	Enclave Designer	---	Non-Designer; The organization is responsible to define the firmware on which integrity checks will be performed.
CCI-002707	SI-7(1)	The organization defines the information on which integrity checks will be performed.	Enclave Designer	---	Non-Designer; The organization is responsible to define the information on which integrity checks will be performed.
CCI-002710	SI-7(1)	The information system performs an integrity check of organization-defined software at startup, at organization-defined transitional states or security-relevant events, or on organization-defined frequency.	Enclave Designer	---	Enclave; This can only be performed at the Enclave level. Controllers and associated systems are not capable of performing self-checks.
CCI-002711	SI-7(1)	The information system performs an integrity check of organization-defined firmware at startup, at organization-defined transitional states or security-relevant events, or on organization-defined frequency.	Enclave Designer	---	Enclave; This can only be performed at the Enclave level. Controllers and associated systems are not capable of performing self-checks.
CCI-002712	SI-7(1)	The information system performs an integrity check of organization-defined information at startup, at organization-defined transitional states or security-relevant events, or on organization-defined frequency.	Enclave Designer	---	Enclave; This can only be performed at the Enclave level. Controllers and associated systems are not capable of performing self-checks.
CCI-002723	SI-7(8)	The information system, upon detection of a potential integrity violation, provides the capability to audit the event.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-002724	SI-7(8)	The information system, upon detection of a potential integrity violation, initiates one or more of following actions: generates an audit record; alerts current user; alerts organization-defined personnel or roles; and/or organization-defined other actions.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-002737	SI-7(14)(a)	The organization prohibits the use of binary or machine-executable code from sources with limited or no warranty and without the provision of source code.	Designer Non-Designer Impractical	SOFTWARE LICENSING	This is met by requiring the contractor to provide a single Software Licenses submittal with documentation of the software licenses for all software provided. The organization is responsible to prohibit the use of binary or machine-executable code obtained from sources without vendor support or with no warranty and without the provision of source code upon final acceptance of the system.
CCI-002744	SI-10	The organization defines the inputs the information system is to conduct validity checks.	DoD-Defined Designer	---	Non-Designer; The organization is responsible to address this control.
CCI-002754	SI-10(3)	The information system behaves in a predictable and documented manner that reflects organizational and system objectives when invalid inputs are received.	Designer Impractical	SAFE MODE AND FAIL SAFE OPERATION	This CCI is impractical because the control system is incapable of supporting it.

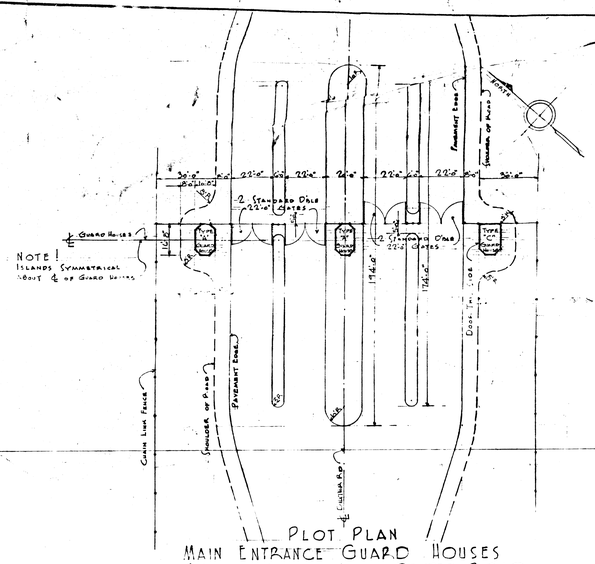
CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-002773	SI-17	The organization defines the fail-safe procedures to be implemented by the information system when organization-defined failure conditions occur.	Designer	Control System Inventory Report; SAFE MODE AND FAIL SAFE OPERATION	The organization is responsible for defining the fail-safe procedures to be implemented by the control system when organization-defined failure conditions occur.
CCI-002774	SI-17	The organization defines the failure conditions which, when they occur, will result in the information system implementing organization-defined fail-safe procedures.	Designer	Control System Inventory Report; SAFE MODE AND FAIL SAFE OPERATION	The organization is responsible for defining the failure conditions which, when they occur, will result in the control system implementing organization-defined fail-safe procedures.
CCI-002775	SI-17	The information system implements organization-defined fail-safe procedures when organization-defined failure conditions occur.	Designer	Control System Inventory Report; SAFE MODE AND FAIL SAFE OPERATION	The control system implements organization-defined fail-safe procedures when organization-defined failure conditions occur.
CCI-002855	CP-12	The information system, when organization-defined conditions are detected, enters a safe mode of operation with organization-defined restrictions of safe mode of operation.	Designer	SAFE MODE AND FAIL SAFE OPERATION	The control system, when organization-defined conditions are detected, enters a safe mode of operation with organization-defined restrictions of safe mode of operation. For all control system components with an applicable STIG or SRG, configure the component in accordance with all applicable STIGs and SRGs.
CCI-002856	CP-12	The organization defines the conditions, that when detected, the information system enters a safe mode of operation with organization-defined restrictions of safe mode of operation.	Designer	SAFE MODE AND FAIL SAFE OPERATION	The contractor is required to configure the control system so that when organization-defined conditions are detected, enters a safe mode of operation with organization-defined restrictions of safe mode of operation. For all control system components with an applicable STIG or SRG, configure the component in accordance with all applicable STIGs and SRGs.
CCI-002857	CP-12	The organization defines the restrictions of safe mode of operation that the information system will enter when organization-defined conditions are detected.	Designer	SAFE MODE AND FAIL SAFE OPERATION	The contractor is required to configure the control system so that when the organization defines the restrictions of safe mode of operation the information system will enter when organization-defined conditions are detected. For all control system components with an applicable STIG or SRG, configure the component in accordance with all applicable STIGs and SRGs.
CCI-002906	RA-5(5)	The organization defines the vulnerability scanning activities in which the information system implements privileged access authorization to organization-identified information system components.	Enclave Designer	DATABASE AND WEB SERVER SOFTWARE; VULNERABILITY SCANNING	Impractical; The controller does not support this level of functionality. The controller is not connected to an IP network.
CCI-002926	PE-3(1)	The organization defines the physical spaces containing one or more components of the information system that require physical access authorizations and controls at the facility.	Designer Non-Designer	Physical Security	The organization is responsible for defining the physical spaces containing one or more components of the control system that require physical access authorizations and controls at the facility.
CCI-002930	PE-4	The organization defines information system distribution and transmission lines within organizational facilities to control physical access using organization-defined security safeguards.	Designer Non-Designer	Physical Security	Install all device media inside the mission space in intermediate metallic conduit and all device media outside the mission space in rigid metallic conduit.
CCI-002931	PE-4	The organization defines security safeguards to control physical access to organization-defined information system distribution and transmission lines within organizational facilities.	Designer Non-Designer	Physical Security	Install all device media inside the mission space in intermediate metallic conduit and all device media outside the mission space in rigid metallic conduit.
CCI-003051	PL-2(a)(2)	The organization's security plan for the information system explicitly defines the authorization boundary for the system.	Enclave Designer Non-Designer	Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which defines the authorization boundary for the system. The organization is responsible to use this diagram as the supporting rationale to define within the security plan the security categorization of the system upon final acceptance of the control system.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003053	PL-2(a)(4)	The organization's security plan for the information system provides the security categorization of the information system including supporting rationale.	Designer Non-Designer	Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which defines the authorization boundary for the system. The organization is responsible to use this diagram as the supporting rationale to define within the security plan the security categorization of the system upon final acceptance of the control system.
CCI-003072	PL-8(a)	The organization develops an information security architecture for the information system.	Designer Non-Designer	Cybersecurity Interconnection Schedule; Network Communication Report; Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which shows the security architecture for the system. Contractor is to provide a network communication report for each networked device documenting the communication characteristics of the device (e.g., communication protocols, services used, any encryption employed, and a general description of what information is communicated over the network). For non-IP communications, contractor to document communication protocol and media used. Contractor is to document any requirements or submittals related to network communication, such as Points Schedules (CCI-002105). The organization is responsible for using this diagram to document a security architecture for the system upon final acceptance.
CCI-003073	PL-8(a)(1)	The organization's information security architecture for the information system describes the overall philosophy, requirements, and approach to be taken with regard to protecting the confidentiality, integrity, and availability of organizational information.	Designer Non-Designer	Cybersecurity Interconnection Schedule; Network Communication Report; Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which shows the security architecture for the system. Contractor is to provide a network communication report for each networked device documenting the communication characteristics of the device (e.g., communication protocols, services used, any encryption employed, and a general description of what information is communicated over the network). For non-IP communications, contractor to document communication protocol and media used. Contractor is to document any requirements or submittals related to network communication, such as Points Schedules (CCI-002105). The organization is responsible for using this diagram to document a security architecture for the system upon final acceptance.
CCI-003075	PL-8(a)(3)	The organization's information security architecture for the information system describes any information security assumptions about, and dependencies on, external services.	Designer Non-Designer	Cybersecurity Interconnection Schedules; Network Communication Report; Cybersecurity Riser Diagram	Contractor is required to provide a copy of a riser diagram in one-line format overlayed on a facility schematic as part of the final CYBERSECURITY DOCUMENTATION which shows the security architecture for the system. Contractor is to provide a network communication report for each networked device documenting the communication characteristics of the device (e.g., communication protocols, services used, any encryption employed, and a general description of what information is communicated over the network). For non-IP communications, contractor to document communication protocol and media used. Contractor is to document any requirements or submittals related to network communication, such as Points Schedules (CCI-002105). The organization is responsible for using this diagram to document a security architecture for the system upon final acceptance.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003081	PL-8(1)(a)	The organization designs its security architecture using a defense-in-depth approach that allocates organization-defined security safeguards to organization-defined locations.	Designer Non-Designer	---	Defining and documenting its security architecture using a defense-in-depth approach that allocates security safeguards defined in PL-8 (1), CCI-003083 to locations defined in PL-8 (1), CCI 3085 for the control system device is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement as part of the full and final Control System Cybersecurity Documentation. Upon final acceptance of the system the organization is responsible to continue to ensure that its security architecture uses a defense-in-depth approach that allocates security safeguards defined in PL-8 (1), CCI-003083 to locations defined in PL-8 (1), CCI-003085 for the control system device.
CCI-003082	PL-8(1)(a)	The organization designs its security architecture using a defense-in-depth approach that allocates organization-defined security safeguards to organization-defined architectural layers.	Designer Non-Designer	---	Defining and documenting the security architecture using a defense-in-depth approach that allocates security safeguards defined in PL-8 (1), CCI-003084 to architectural layers defined in PL-8 (1), CCI 3086 for the control system device is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement as part of the full and final Control System Cybersecurity Documentation. Upon final acceptance of the system the organization is responsible to continue to ensure that security architecture using a defense-in-depth approach is allocated for security safeguards defined in PL-8 (1), CCI-003084 to architectural layers defined in PL-8 (1), CCI-003086 for the control system device.
CCI-003083	PL-8(1)(a)	The organization defines the security safeguards to be allocated to organization-defined locations.	Designer Non-Designer	---	Defining and documenting the security safeguards to be allocated to organization-defined locations for the control system device is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement as part of the full and final Control System Cybersecurity Documentation. Upon final acceptance of the system the organization is responsible to continue to ensure that the security safeguards are allocated to organization-defined locations for the control system device.

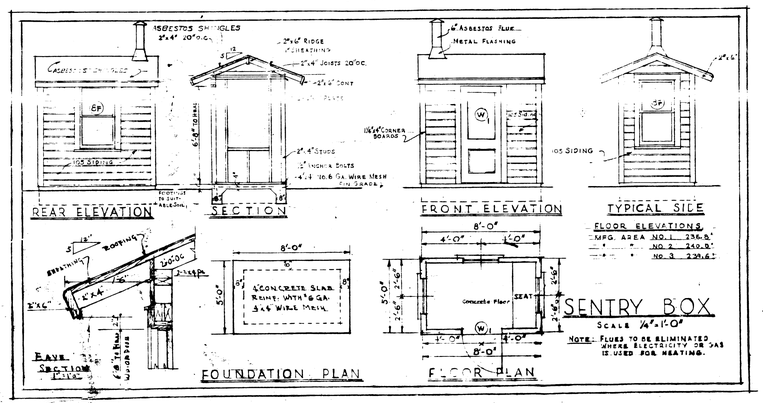
CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003084	PL-8(1)(a)	The organization defines the security safeguards to be allocated to organization-defined architectural layers.	Designer Non-Designer	---	Defining and documenting the security safeguards to be allocated to organization-defined architectural layers for the control system device is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement as part of the full and final Control System Cybersecurity Documentation. Upon final acceptance of the system the organization is responsible to continue to ensure that the security safeguards are allocated to organization-defined architectural layers for the control system device.
CCI-003085	PL-8(1)(a)	The organization defines the locations to which it allocates organization-defined security safeguards in the security architecture.	Designer Non-Designer	---	Defining and documenting the locations to which it allocates organization-defined security safeguards in the security architecture for the control system device is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement as part of the full and final Control System Cybersecurity Documentation. Upon final acceptance of the system the organization is responsible to continue to ensure that organization-defined security safeguards in the security architecture for the control system device.
CCI-003086	PL-8(1)(a)	The organization defines the architectural layers to which it allocates organization-defined security safeguards in the security architecture.	Designer Non-Designer	---	Defining and documenting the architectural layers to which it allocates organization-defined security safeguards in the security architecture for the control system device is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11.XX UFGS Specification for the identified Control System(s). Then, the Contractor is required to provide baseline Control System Cybersecurity Documentation at project end for all Control System, subsystems, and devices as a submittal requirement as part of the full and final Control System Cybersecurity Documentation. Upon final acceptance of the system the organization is responsible to continue to ensure allocation of organization-defined security safeguards in their security architecture throughout the lifecycle of the system.
CCI-003087	PL-8(1)(b)	The organization designs its security architecture using a defense-in-depth approach that ensures that the allocated security safeguards operate in a coordinated and mutually reinforcing manner.	Designer Non-Designer	---	The organization is responsible for designing its security architecture using a defense-in-depth approach that ensures that the allocated security safeguards operate in a coordinated and mutually reinforcing manner.
CCI-003101	SA-4(2)	The organization requires the developer of the information system, system component, or information system service to provide design information for the security controls to be employed that includes security-relevant external system interfaces, high-level design, low-level design, source code, hardware schematics and/or organization-defined design/information at organization-defined level of detail.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003102	SA-4(2)	The organization requires the developer of the information system, system component, or information system service to provide implementation information for the security controls to be employed that includes security-relevant external system interfaces, high-level design, low-level design, source code and/or hardware schematics organization-defined implementation information at organization-defined level of detail.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-003103	SA-4(2)	The organization defines the design information that the developer of the information system, system component, or information system service is required to provide for the security controls to be employed.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-003104	SA-4(2)	The organization defines the implementation information that the developer of the information system, system component, or information system service is required to provide for the security controls to be employed.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-003105	SA-4(2)	The organization defines the level of detail the design information of the security controls is required to be provided by the developer of the information system, system component, or information system services.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-003106	SA-4(2)	The organization defines the level of detail the implementation information of the security controls is required to be provided by the developer of the information system, system component, or information system services.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-003114	SA-4(9)	The organization requires the developer of the information system, system component, or information system service to identify early in the system development life cycle, the functions, ports, protocols, and services intended for organizational use.	Designer Non-Designer Impractical	---	Non-Designer; The organization is responsible to address this control.
CCI-003116	SA-4(10)	The organization employs only information technology products on the FIPS 201-approved products list for Personal Identity Verification (PIV) capability implemented within organizational information systems.	Enclave Designer Impractical	FIPS 201-2 REQUIREMENT	Not Applicable. Control system is not on the FIPS 201-2 approved Product list. Fire and Life Safety device(s) do not support PIV.
CCI-003124	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure configuration of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide documentation that describes secure configuration of the device where this is applicable, or documentation stating that specifically that there are no secure configuration steps that apply.
CCI-003125	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure installation of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	For Controllers and other devices where applicable - This is met by requiring the contractor to provide documentation that describes the secure installation of the device.
CCI-003126	SA-5(a)(1)	The organization obtains administrator documentation for the information system, system component, or information system services that describes secure operation of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	This is met by requiring the contractor to provide a Control System Cybersecurity Documentation submittal for the information system, system component or information system service that describe secure operation of the system, component, or service, and containing the indicated information for each device and software application in accordance with CCI-003124, CCI-003125, CCI-003127, CCI-003128, CCI-003129, CCI-003130, and CCI-003131
CCI-003127	SA-5(a)(2)	The organization obtains administrator documentation for the information system, system component, or information system services that describes effective use and maintenance of security functions/mechanisms.	Designer Non-Designer	Control System Cybersecurity Documentation	For Controllers and other devices where applicable - This is met by requiring the contractor to provide documentation that describes effective use and maintenance of security functions or mechanisms for the device; or a specific indication that there are no security functions or mechanisms in the device.

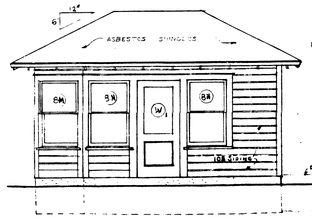


CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003128	SA-5(a)(3)	The organization obtains administrator documentation for the information system, system component, or information system services that describes known vulnerabilities regarding configuration and use of administrative (i.e. privileged) functions.	Designer Non-Designer	Control System Cybersecurity Documentation	For Controllers and other devices where applicable - This is met by requiring the contractor to provide Documentation that describes known vulnerabilities regarding configuration and use of administrative (i.e. privileged) functions for the device.
CCI-003129	SA-5(b)(1)	The organization obtains user documentation for the information system, system component, or information system service that describes user-accessible security functions/mechanisms and how to effectively use those security functions/mechanisms.	Designer Non-Designer	Control System Cybersecurity Documentation	For Controllers and other devices where applicable - This is met by requiring the contractor to provide documentation that describes user-accessible security functions or mechanisms in the device and how to effectively use those security functions or mechanisms; or a specific indication that there are no user-accessible security functions or mechanisms in the device.
CCI-003130	SA-5(b)(2)	The organization obtains user documentation for the information system, system component or information system service that describes methods for user interaction which enables individuals to use the system, component, or service in a more secure manner.	Designer Non-Designer	Control System Cybersecurity Documentation	For Controllers and other devices where applicable - This is met by requiring the contractor to provide documentation that describes methods for user interaction which enables individuals to use the device in a more secure manner.
CCI-003131	SA-5(b)(3)	The organization obtains user documentation for the information system, system component or information system service that describes user responsibilities in maintaining the security of the system, component, or service.	Designer Non-Designer	Control System Cybersecurity Documentation	For Controllers and other devices where applicable - This is met by requiring the contractor to provide documentation that describes user responsibilities in maintaining the security of the device
CCI-003155	SA-10(a)	The organization requires the developer of the information system, system component, or information system service to perform configuration management during system, component or service design, development, implementation and/or operation.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to perform configuration management during system, component or service design, development, implementation and/or operation. The configuration management process applies to: 1. Documentation developed or used in the lifecycle, including requirements and interface specifications; 2. Elements including design libraries; 3. Tools including design tools and test tools; 4. Technical data including test data; and 5. Information on element and system lifecycle processes
CCI-003156	SA-10(b)	The organization requires the developer of the information system, system component, or information system service to document the integrity of changes to organization-defined configuration items under configuration management.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to document the integrity of changes to organization-defined configuration items under configuration management.
CCI-003157	SA-10(b)	The organization requires the developer of the information system, system component, or information system service to manage the integrity of changes to organization-defined configuration items under configuration management.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to manage the integrity of changes to organization-defined configuration items under configuration management.
CCI-003158	SA-10(b)	The organization requires the developer of the information system, system component, or information system service to control the integrity of changes to organization-defined configuration items under configuration management.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to control the integrity of changes to organization-defined configuration items under configuration management.
CCI-003159	SA-10(b)	The organization defines the configuration items under configuration management that require the integrity of changes to be documented, managed and controlled.	Designer Non-Designer Impractical	---	The organizationis responsible for defining the configuration items under configuration management that require the integrity of changes to be documented, managed and controlled.
CCI-003160	SA-10(d)	The organization requires the developer of the information system, system component, or information system service to document the potential security impacts of approved changes to the system, component, or service.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to document the potential security impacts of approved changes to the system, component, or service.

CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003161	SA-10(e)	The organization requires the developer of the information system, system component, or information system service to track security flaws within the system, component, or service.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to track security flaws within the system, component, or service.
CCI-003162	SA-10(e)	The organization requires the developer of the information system, system component, or information system service to track flaw resolution within the system, component, or service.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to track flaw resolution within the system, component, or service.
CCI-003163	SA-10(e)	The organization requires the developer of the information system, system component, or information system service to report security flaws and flaw resolution within the system, component, or service findings to organization-defined personnel.	Designer Non-Designer Impractical	---	The organization is responsible for requiring the developer of the control system, system component, or control system service to report security flaws and flaw resolution within the system, component, or service findings to organization-defined personnel.
CCI-003171	SA-11(a)	The organization requires the developer of the information system, system component, or information system service to create a security assessment plan.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	This CCI is impractical because the control system is incapable of supporting it.
CCI-003172	SA-11(a)	The organization requires the developer of the information system, system component, or information system service to implement a security assessment plan.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	This CCI is impractical because the control system is incapable of supporting it.
CCI-003173	SA-11(b)	The organization requires the developer of the information system, system component, or information system service to perform unit, integration, system, and/or regression testing/evaluation at organization-defined depth and coverage.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	The organization is responsible for requiring the developer of the control system, system component, or control system service to perform unit, integration, system, and/or regression testing/evaluation at organization-defined depth and coverage.
CCI-003174	SA-11(b)	The organization defines the depth and coverage to perform unit, integration, system, and/or regression testing/evaluation.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	The organization is responsible for defining the depth and coverage to perform unit, integration, system, and/or regression testing/evaluation.
CCI-003175	SA-11(c)	The organization requires the developer of the information system, system component, or information system service to produce evidence of the execution of the security assessment plan.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	This CCI is impractical because the control system is incapable of supporting it.
CCI-003176	SA-11(c)	The organization requires the developer of the information system, system component, or information system service to produce the results of the security testing/evaluation.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	This CCI is impractical because the control system is incapable of supporting it.
CCI-003177	SA-11(d)	The organization requires the developer of the information system, system component, or information system service to implement a verifiable flaw remediation process.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	This CCI is impractical because the control system is incapable of supporting it.
CCI-003178	SA-11(e)	The organization requires the developer of the information system, system component, or information system service to correct flaws identified during security testing/evaluation.	Designer Non-Designer Impractical	CONTROL SYSTEM CYBERSECURITY TESTING	This CCI is impractical because the control system is incapable of supporting it.
CCI-003233	SA-15	The organization requires the developer of the information system, system component, or information system service to follow a documented development process.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the Lead Engineer/developer of the control system, system component, or control system service follows the documented development process as outlined in the UFC.



CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003234	SA-15(a)(1)	The documented information system, system component, or information system service development process explicitly addresses security requirements.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the Lead Engineer/developer follows this documented development process for the control system, system component, or control system service development process which explicitly to addressed security requirements in accordance with this UFC.
CCI-003235	SA-15(a)(2)	The documented information system, system component, or information system service development process identifies the standards used in the development process.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the Lead Engineer/developer provides the documentation for the control system, system component, or control system service development process which identifies the standards used in the development process according in accordance with this UFC.
CCI-003236	SA-15(a)(2)	The documented information system, system component, or information system service development process identifies the tools used in the development process.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the Lead Engineer/developer provides the documented control system, system component, or control system service development process identifying the tools used in the development process in accordance with this UFC.
CCI-003237	SA-15(a)(3)	The documented information system, system component, or information system service development process documents the specific tool options and tool configurations used in the development process.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the developer of the system, system component, or service documents the specific tool options and tool configurations used in the development process. The government organization is responsible for oversight to ensure the contractor executes the appropriate 25 05 11.XX contracts/agreements related to the control system
CCI-003238	SA-15(a)(4)	The documented information system, system component, or information system service development process documents changes to the process and/or tools used in development.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the developer of the system, system component, or service documents any changes to the process and/or tools used in development process. The government organization is responsible for oversight to ensure the contractor executes the appropriate 25 05 11.XX contracts/agreements related to the control system.



CCI	800-53 Control Text Indicator	CCI Definition	Responsibility	UFGS Reference	Implementation Status
CCI-003239	SA-15(a)(4)	The documented information system, system component, or information system service development process manages changes to the process and/or tools used in development.	Designer Impractical	---	This is met by implementation of the Cybersecurity Design Process as required by UFC 4-010-06 with the provision of the appropriate 25 05 11 UFGS Specification for the identified Control System(s). The Contractor is required to execute the government approved, Issued For Construction specification of the appropriate 25 05 11.XX which ensures that the developer of the system, system component, or service manages changes to the process and/or tools used in development of the system. The government organization is responsible for oversight to ensure the contractor executes the appropriate 25 05 11.XX contracts/agreements related to the control system.
CCI-003240	SA-15(a)(4)	The documented information system, system component, or information system service development process ensures the integrity of changes to the process and/or tools used in development. MEMORANDUM FOR CLAYTON JOHNSON

SUBJECT: Asbestos Inspection/Assessment

Per your request, IH has conducted an asbestos inspection. The attached list of buildings or structures indicate where asbestos was collected or historical data indicated that asbestos was found during previous IH inspections. Some of the tanks and steam pipe lines were not accessible and a couple of the areas were not found. If you would show us where the places are that we missed, IH will collect those samples and get you results within the next week. The inspection was performed to comply with EPA, Arkansas Regulation 21, and OSHA Regulations. These regulations require that Asbestos Containing Materials (ACM) be identified in buildings and areas prior to renovation or demolition. Also, the inspection/assessment was conducted by an Arkansas Certified Inspector/Assessor. The inspection/assessment is required prior to letting the contract to prevent any delays to the project.

If you have any questions, please contact the undersigned at 3450 or 543-9887.
