PROJECT MANUAL
DESIGN DEVELOPMENT – ***DRAFT SPEC NOT FOR CONSTRUCTION***
September 11, 2026

University Of Arkansas – Dillard Hall

122 Harmon Avenue
Fayetteville, AR 72712

Table of Contents

PROJECT INFORMATION & CONTACTS
DIVISION 00 - PROCUREMENT & CONTRACTING REQUIREMENTS
- SECTION 00 22 00 – SUPPLEMENTARY INSTRUCTIONS
- SECTION 00 31 32 – GEOTECHNICAL DATA
- SECTION 00 72 00 – GENERAL CONDITIONS
- SECTION 00 73 00 – SUPPLEMENTARY CONDITIONS

DIVISION 01 – GENERAL REQUIREMENTS
- SECTION 01 11 00 – SUMMARY OF WORK
- SECTION 01 14 19 – USE OF SITE
- SECTION 01 21 00 – ALLOWANCES
- SECTION 01 22 00 – UNIT PRICES
- SECTION 01 23 00 – ALTERNATES
- SECTION 01 25 00 – SUBSTITUTION PROCEDURES
- SECTION 01 26 00 – CONTRACT MODIFICATION REQUIREMENTS
- SECTION 01 26 13 – REQUESTS FOR INTERPRETATIONS (RFI'S)
- SECTION 01 29 00 – PAYMENT PROCEDURES
- SECTION 01 31 00 – MANAGEMENT & COORDINATION
- SECTION 01 32 16 – CONSTRUCTION & SUBMITTAL SCHEDULE
- SECTION 01 32 26 – CONSTRUCTION PROGRESS REPORTING
- SECTION 01 32 33 – PHOTOGRAPHIC DOCUMENTATION
- SECTION 01 33 00 – SUBMITTAL PROCEDURES
- SECTION 01 35 16 – ALTERATION PROJECT PROCEDURES
- SECTION 01 35 61 – VOLUNTARY SUSTAINABILITY GOALS
- SECTION 01 42 00 – DEFINITIONS & REFERENCES
- SECTION 01 43 39 – MOCKUPS
- SECTION 01 40 00 – QUALITY REQUIREMENTS
- SECTION 01 40 10 – STRUCTURAL TESTING AND INSPECTION
- SECTION 01 45 35 – STATEMENT OF SPECIAL INSPECTIONS
- SECTION 01 50 00 – TEMPORARY FACILITIES AND CONTROLS
- SECTION 01 60 00 – PRODUCT REQUIREMENTS
- SECTION 01 62 00 – PRODUCT OPTIONS
- SECTION 01 71 23 – FIELD ENGINEERING
- SECTION 01 73 00 – EXECUTION REQUIREMENTS
- SECTION 01 73 29 – CUTTING & PATCHING
- SECTION 01 74 19 – CONSTRUCTION WASTE MANAGEMENT
- SECTION 01 75 00 – OPERATION AND MAINTENANCE DATA INTEGRATION
- SECTION 01 77 00 – CLOSEOUT PROCEDURES
- SECTION 01 78 00 – CLOSEOUT SUBMITTALS
- SECTION 01 79 00 – MINIMUM OWNER TRAINING REQUIREMENTS
- SECTION 01 81 13 – LEED CERTIFICATION REQUIREMENTS
- SECTION 01 81 13 – PRODUCT DATA REPORTING FORM
- SECTION 01 81 19 – INDOOR AIR QUALITY MANAGEMENT
- SECTION 01 81 81 – SUSTAINABILITY CHECKLIST REQUIREMENTS
- SECTION 01 81 81 - LEED CHECKLIST
- SECTION 01 91 00 – COMMISSIONING
- SECTION 01 91 19 – EXTERIOR ENCLOSURE COMMISSIONING
- SECTION 01 91 23 – FIRE-RATED DOOR COMMISSIONING

DIVISION 02 - EXISTING CONDITIONS
- SECTION 02 22 00 – EXISTING CONDITIONS ASSESSMENT
- SECTION 02 26 00 – HAZARDOUS MATERIALS ASSESSMENT
- SECTION 02 41 13 – SELECTIVE SITE DEMOLITION
- SECTION 02 41 13 – UTILITY LINE BORES
- SECTION 02 41 16 – STRUCTURE DEMOLITION
- SECTION 02 41 19 – SELECTIVE DEMOLITION
- SECTION 02 82 00 – ASBESTOS REMEDIATION
- SECTION 02 83 00 – HEAVY METALS REMEDIATION
- SECTION 02 84 00 – POLYCHLORINATED BIPHENYL (PCB) REMEDIATION
- SECTION 02 85 00 – MOLD REMEDIATION

DIVISION 03 – CONCRETE

SECTION 03 30 00 – CAST-IN-PLACE CONCRETE
SECTION 03 35 05 – SEALED CONCRETE FINISHING
DIVISION 04 – MASONRY
SECTION 04 20 00 – UNIT MASONRY
SECTION 04 20 10 – REINFORCED UNIT MASONRY
SECTION 04 40 00 – SITE STONE ASSEMBLIES
DIVISION 05 – METALS
SECTION 05 12 00 – STRUCTURAL STEEL FRAMING
SECTION 05 31 00 – STEEL DECKING
SECTION 05 40 00 – COLD-FORMED METAL FRAMING
SECTION 05 50 00 – METAL FABRICATIONS
SECTION 05 70 00 – DECORATIVE METAL
SECTION 05 73 00 – DECORATIVE METAL RAILINGS
DIVISION 06 – WOOD, PLASTICS & COMPOSITES
SECTION 06 10 00 – ROUGH CARPENTRY
SECTION 06 16 00 – SHEATHING
SECTION 06 40 00 – ARCHITECTURAL WOODWORK
SECTION 06 41 00 – ARCHITECTURAL CASEWORK
SECTION 06 41 16 – PLASTIC LAMINATE-CLAD ARCHITECTURAL CABINETS
SECTION 06 64 13 – FIBERGLASS REINFORCED PLASTIC (FRP) PANELING
DIVISION-07 – THERMAL & MOISTURE PROTECTION
SECTION 07 08 00 – COMMISSIONING OF BUILDING EXTERIOR ENCLOSURE
SECTION 07 11 00 – DAMPPROOFING
SECTION 07 13 00 – FOUNDATION WATERPROOFING SYSTEM
SECTION 07 21 00 – THERMAL INSULATION
SECTION 07 21 19 – FOAMED-IN-PLACE INSULATION
SECTION 07 25 10 – FLUID-APPLIED WATER-RESISTIVE BARRIER (WRB)
SECTION 07 27 00 – AIR BARRIER REQUIREMENTS
SECTION 07 50 00 – MEMBRANE ROOFING SYSTEM
SECTION 07 62 00 – SHEET METAL FLASHING AND TRIM
SECTION 07 72 00 – ROOF ACCESSORIES
SECTION 07 81 00 – APPLIED FIREPROOFING
SECTION 07 84 00 – FIRESTOPPING
SECTION 07 92 00 – JOINT SEALANTS
DIVISION 08 – OPENINGS
SECTION 08 11 00 – METAL DOORS AND FRAMES
SECTION 08 11 73 – ACCORDION FIRE & SMOKE DOORS WITH EGRESS
SECTION 08 14 00 – FLUSH WOOD DOORS
SECTION 08 17 13 – INTEGRATED METAL DOOR OPENING ASSEMBLIES
SECTION 08 31 00 – ACCESS DOORS
SECTION 08 33 23 – OVERHEAD COILING DOORS
SECTION 08 41 13 – ALUMINUM ENTRANCE, CURTAIN WALLS AND STOREFRONT
SECTION 08 71 00 – DOOR HARDWARE
SECTION 08 80 00 – GLASS, GLAZING AND MIRRORS
SECTION 08 87 00 – GLAZING SURFACE FILMS
SECTION 08 90 00 – LOUVERS AND VENTS
DIVISION 09 – FINISHES
SECTION 09 05 61 – MOISTURE VAPOR EMISSION CONTROL
SECTION 09 21 16 – GYPSUM BOARD ASSEMBLIES
SECTION 09 21 17 – GYPSUM SHAFT WALL ASSEMBLIES
SECTION 09 22 26 – DRYWALL GRID SUSPENSION SYSTEM
SECTION 09 30 00 – TILING
SECTION 09 51 00 – SUSPENDED ACOUSTICAL CEILINGS
SECTION 09 54 00 – INTEGRATED CEILING ASSEMBLIES
SECTION 09 54 26 – SUSPENDED WOOD CEILINGS
SECTION 09 65 13 – RESILIENT BASE
SECTION 09 66 23 – THIN-SET EPOXY TERRAZZO FLOORING
SECTION 09 68 00 – CARPETING
SECTION 09 72 00 – WALLCOVERING AND WALL GRAPHICS
SECTION 09 84 00 – ACOUSTIC WALL TREATMENTS
SECTION 09 84 33 – SOUND ABSORBING WALL UNITS
SECTION 09 84 53 – ACOUSTIC MULLION TRIM

SECTION 09 91 00 – PAINTING
SECTION 09 96 00 – HIGH PERFORMANCE COATINGS
SECTION 09 24 00 – CEMENT PLASTERING
DIVISION 10 – SPECIALTIES
SECTION 10 11 00 – MARKERBOARDS AND TACKBOARDS
SECTION 10 14 00 – SIGNAGE
SECTION 10 21 13 – STAINLESS STEEL TOILET COMPARTMENTS
SECTION 10 22 26 – OPERABLE PARTITIONS
SECTION 10 26 00 – WALL PROTECTION
SECTION 10 28 00 – TOILET ACCESSORIES
SECTION 10 44 00 – FIRE PROTECTION SPECIALTIES
DIVISION 11 – EQUIPMENT
SECTION 11 13 19 – HYDRAULIC SCISSOR LIFTS
DIVISION 12 – FURNISHINGS
SECTION 12 24 00 – ROLLER WINDOW SHADES
SECTION 12 36 61 – SIMULATED STONE COUNTERTOPS
SECTION 12 48 13 – ENTRANCE FLOOR MATS AND FRAMES
SECTION 12 52 19 – UPHOLSTERED SEATING
SECTION 12 70 00 – MULTIPLE SEATING SYSTEMS
DIVISION 13 – SPECIAL CONSTRUCTION
NOT USED
DIVISION 14 – CONVEYING SYSTEMS
SECTION 14 21 00 – ELECTRIC STRACTION ELEVATORS
DIVISION 21 - FIRE SUPPRESSION
SECTION 21 00 00 GENERAL FIRE SUPPRESSION REQUIREMENTS
SECTION 21 13 14 AUTOMATIC FIRE SPRINKLER SYSTEM
DIVISION 22 - PLUMBING
SECTION 22 00 00 GENERAL PLUMBING REQUIREMENTS
SECTION 22 05 13 COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT
SECTION 22 05 20 PLUMBING EXCAVATION AND BACKFILL

DIVISION 00 - PROCUREMENT & CONTRACTING REQUIREMENTS

SECTION 00 22 00 – SUPPLEMENTARY INSTRUCTIONS

PART 1 - AIA DOCUMENT A701-2018 "INSTRUCTIONS TO BIDDERS" is included as a part of these documents by this reference. Copies are available from The American Institute of Architects, 1735 New York Avenue N. W., Washington, D. C. 20006, or the local AIA office.

THE FOLLOWING PARAGRAPHS modify, delete from, and/or add to the above referenced Instructions to Bidders, as if originally written therein. Where any Article of the Instructions is modified, or where any Paragraph, Subparagraph or clause thereof is modified or deleted by the following Supplementary Instructions, the unaltered provisions will remain in effect.

1.01 ADD the following paragraph to Article 1 - Definitions:

A. "1.10 STIPULATED SUM amounts must include ALL COSTS for materials, labor, equipment, testing and any and all items of expense, fees, taxes, overhead and profit for the Contractor's full and complete performance of the Work as set forth in the Contract Documents."

1.02 ADD Paragraph 2.1.7 to read as follows:

A. "2.1.7 the Bidder agrees that any deviations from or exceptions to the Specifications, Drawings, Terms and Conditions and/or any other Bid Document will be clearly defined and set forth in the Bidder's Proposal. If no exceptions are shown in the proposal, none will be considered at the time of Contract Award."

1.03 REPLACE Paragraph 3.3.2.2 to read as follows:

A. "3.3.2.2 Substitution of “named” or “Basis-of-Design” products must be approved by the Architect in writing (via email), in compliance with requirements of Section 01 25 00 – Substitution Procedures. Substitutions proposed by a Bidder that have not been approved in advance by the Architect are not to be included in the Base Bid amount but must be appropriately itemized on the Bid Form or attached thereto as a “Contractor’s Voluntary Alternate” with the corresponding add or deduct amount included. Substitution requests are not required for products indicated by performance requirements or criteria, or when indicated as “or equal”, however products not meeting the intent of the Construction Documents may be rejected by the Architect."

1.04 ADD Paragraph 3.3.6 as follows:

A. "3.3.6 Substitution requests will be received by the Architect only from General Contractor Bidders (manufacturers and sub-contractor requests must be forwarded through a General Contractor Bidder) and only when submitted on a “CSI Substitution Request Form” that has been fully executed by the GC bidder making the request. Note that Consideration of substitutions by the Architect is not guaranteed, as it is subject to the Owner’s option whether to compensate the Architect for the Additional Services required for its review. The burden of proof of the merit of a proposed substitute is upon the proposer. The Architect’s decision of approval or disapproval of a proposed substitution will be final. Substitution requests will not be considered by the Architect within 5 days (120 hours) of bid/proposal receipt time."

1.05 ADD Paragraph: "4.1.9 as follows:

A. “4.1.9 Bids will remain in effect for the number of days indicated on the Invitation to Bid."

1.06 DELETE Paragraph 4.2 in its entirety – as no bid security will be required.

1.07 ADD Paragraph: "5.1.1 as follows:

A. “Properly identified Bids received on time will be opened privately by the Owner or Architect as agent for the Owner. No information regarding bid abstracts or tabulations will be made available to any Bidders."

1.08 DELETE subparagraph 7.1.2 and ADD the following:

A. "7.1.2 Costs for Performance and Labor and Material Payment Bonds is to be indicated as an alternate cost on the Bid Form and is not to be included within the Base Bid amount. The Owner reserves the right to require such bonds to be furnished upon execution of the Contract (or subsequent to contract execution as a change order) in the amount specified on the Bid Form.

1.09 ADD the following Paragraph 8.1 – Form of Agreement:

A. “8.1 Form of Agreement: The Agreement form may be either AIA Document A101, or on an equivalent non-standard form with similar language acceptable to the Owner. If approval by both parties cannot be reached on the format of the non-standard form, then AIA Document A101 will be used.”

END OF SECTION 00 22 00

SECTION 00 31 32 – GEOTECHNICAL DATA

GEOTECHNICAL REPORT: The Owner has retained a "Soils Engineer" to prepare a Geotechnical Report for the work of this Project. The Geotechnical Report is available for review by the Contractor.
LIMITATIONS OF GEOTECHNICAL REPORT & TEST BORING LOG: Data contained in the Geotechnical Report, which includes a test boring log, IS NOT INTENDED as a representation or warranty of accuracy or continuity. Neither the Owner nor the Architect will be responsible for any interpretations or conclusions drawn there from by the Contractor.
AVAILABILITY OF REPORT: The Geotechnical Report is made available solely for the convenience and use by the Contractor.
ADDITIONAL BORINGS or other exploratory operations may be made by the Contractor at no cost to the Owner.

END OF SECTION 00 31 32

SECTION 00 72 00 – GENERAL CONDITIONS

GENERAL CONDITIONS: AIA Document A201 - 2017 Edition: "General Conditions of the Contract for Construction" is included as a part of the Contract Documents herein by reference. A copy is attached to this Project Manual and *DRAFT* copies are available from the American Institute of Architects (1-800-242-3837). www.aiacontracts.org
Participation in the Work of this Project is considered acknowledgement of the participants understanding of, and agreement with, all requirements of the Contract for Construction.
Maintain one (1) original, printed edition of the General Conditions at the Project Site during construction.

END OF SECTION 00 72 00

SECTION 00 73 00 – SUPPLEMENTARY CONDITIONS

PART 1 - THE FOLLOWING "SUPPLEMENTARY CONDITIONS" modify the above referenced "General Conditions" as if originally written therein. Where a portion of the General Conditions is modified or deleted by these Supplementary Conditions, the unaltered portions of the General Conditions will remain in full effect. The General Conditions may also be modified elsewhere in the Contract Documents by provisions located in other Sections of the Specifications.

1.01 ADD to paragraph 1.1.8 the following:

A. “The Initial Decision Maker” will be the Architect.”

1.02 ADD to paragraph 1.2, CORRELATION AND INTENT . . . the following:

A. 1.2.4 Although the Construction Documents have been prepared with due care and diligence, perfection is not guaranteed. Design and construction is complex, consequently every possible field condition cannot be anticipated or indicated. The Drawings may be diagrammatic, and all components required for complete installation may not be fully indicated.

B. 1.2.5 Unless otherwise indicated within the Construction Documents, all notes written in the imperative mood refer to action(s) to be performed by the Contractor - the words 'the Contractor shall' are always implied.”

C. 1.2.6 Figured dimensions and marked data will take precedence over scaled measurements, and details will take precedence over smaller scale general drawings of which they are intended to amplify. Details or conditions indicated for a portion of the Work but not carried out fully for other portions will apply throughout to similar portions of the Work, except as specifically noted.

D. 1.2.7 In case of conflict in or between requirements of the Contract Documents (including General and Supplementary Conditions, Division-01 General Requirements, Drawings and Specifications) or with manufacturer's product requirements, the Contractor will be deemed to have agreed to provide the greater quantity and better quality of materials and Work.

1.03 ADD to Paragraph 1.8 Building Information Models Use and Reliance, the following:

A. 1.8.1 Electronic media data (EMD) of the Contract Documents are the Architect’s ‘Instruments of Service’, who retains all common law, statutory law and other rights, including their copyright. No representation is made regarding the accuracy or completeness of EMD.

B. 1.8.2 If EMD files are transferred from the Architect to the Contractor, the Contractor will not use them for any purpose other than preparation of shop drawings, coordination drawings, or for Record Drawings of this Project. The Contractor agrees not to transfer the EMD to any entity not involved in the construction Work without the prior written consent of the Architect.

C. 1.8.3 The Contractor further agrees to waive all claims against the Owner and the Architect, resulting in any way from any use of the use of EMD. Use of EMD does not reduce or minimize in any way the Contractor’s responsibility to take field measurements, check dimensions, and to coordinate with other construction Work at the Project Site.

1.04 ADD to Paragraph 3.2.1, the following:

A. Execution of the Contract by the Contractor is a representation that the Contractor has carefully examined and understands the intent of the Contract Documents. No claims will be approved for additional time or costs resulting from the Contractor's lack of familiarization of the requirements of the Construction Contract.

1.05 ADD to Paragraph 3.5 the following:

A. 3.5.3 Equipment, material, or services provided by the Contractor that fail to receive approval by AHJ representatives are immediately rejected and constitute Contract default. The Contractor must correct such failure as expeditiously as possible in a manner acceptable to the AHJ and to the Owner within thirty (30) days of notice from the AHJ. If the Contractor does not correct such rejected Work within that time period, the Owner may make the required corrections, and deduct all costs incurred plus a ten percent (10%) administrative fee or $500 (whichever is greater) from the Contract Sum.

1.06 ADD to Paragraph 3.10 the following:

A. 3.10.4 If the Contractor fails to adhere to the Construction Schedule, the Contractor will furnish additional labor and/or services or work sufficient overtime as may be necessary to make construction progress conform to the Construction Schedule, at no additional cost to the Owner. Failure to adhere to the schedule, or failure to take steps to regain the schedule, will constitute Contract default.

1.07 ADD to Paragraph 3.12.10 the following:

A. 3.12.10.3 The Contractor will require that any entity engaged to provide Professional Design Services maintain Professional Liability Insurance with minimum limits of $1,000,000 per claim and annual aggregate. Insurance coverage must be maintained not less than one (1) year after Substantial Completion. Provide the Architect with a Certificate of Insurance evidencing coverage prior to performance of such services.

1.08 ADD to Article 4 – Architect”, the following:

A. 4.1.3 “ARCHITECT'S LIMITED-SCOPE CONSTRUCTION ADMINISTRATION SERVICES: The Architect's services during construction may be "limited" to a specific hourly maximum, or only on an "as-need" basis upon the Owner's request. As the services of the Architect are intended solely for the benefit of the Owner, the Contractor may not rely upon the performance of Architect's services. When the Architect is not involved in such instances, REVISE Article 4 from Paragraph 4.2, through Paragraph 4.6 inclusive, by substituting the word "Owner", wherever the word "Architect" is used.

1.09 ADD to Paragraph 4.2 the following:

A. 4.2.15 "The Architect's review does not constitute approval of safety provisions or procedures, and approval of any construction means, methods, techniques, sequences or procedures, unless specifically agreed to in writing and signed by the Architect, with specific reference to the submittal.

1.10 ADD to Paragraph 6.1 the following:

A. 6.1.5. The Contractor is not responsible for the control or management of the Owner's separate contractors, and the Owner releases this Contractor from any liabilities related to Work performed by separate contractors. Separate contractors will be required to comply with all safety requirements instituted by this Contractor (as applicable), and will not be allowed to interfere with this Contractor's construction operations.

1.11 ADD the following to Paragraph 8.3 – Delays and Extensions of Time:

A. "8.3.4 The Owner may direct Contractor to work overtime, and to accelerate the Work, and if so instructed, Contractor agrees to work overtime and accelerate the Work. If such direction is not due to causes within the Contractor's control, the Owner agrees to pay for overtime and accelerated Work, but only for related overtime charges which will consist of the premium or extra hourly wage incurred by the Contractor only. No insurance, taxes, overhead or profit will be paid by Owner based on any premium wage paid. Written authorization for payment of overtime charges must be received by the Contractor from the Owner in writing prior to performing the Work.

B. 8.3.5 Normal inclement weather and associated site conditions will not be considered as a valid cause for delay of the Work, as it is anticipated that the Contractor will estimate sufficiently for work stoppages due to reasonably anticipated inclement weather within the Construction Schedule.

C. 8.3.6 Notwithstanding the foregoing, if Contractor is delayed in the performance or progress of the Work by Abnormal Weather Conditions (as defined herein) then the Contractor will be entitled to an extension of the completion date for the impacted portion of the Work provided the Contractor makes claim not more than seven (7) days after the cause of the delay begins. "Abnormal Weather Conditions" are hereby defined as temperature and precipitation that are abnormal for the location of the Work as determined by the National Climatic Data Center, Asheville, North Carolina, based on the previous ten (10) year mean for the Work location. Abnormal Weather Conditions and causes beyond the control of the Contractor which delay the work, including but not limited to catastrophic weather events, fire or vandalism, theft, actions or stoppages by public officials, will extend the completion date by equal periods of time as the delay impacts the critical path of the Construction Schedule, provided the Contractor makes claim not more than seven (7) days after the cause of the delay begins and provides proof of impact on the critical path Work, which is not concurrent with a Contractor-caused delay.

D. 8.3.7 To qualify as an adverse weather day, weather conditions or related site conditions must prevent Work on critical path activities for 50 percent or more of the Contractor's scheduled work day.

1.12 ADD the following to Paragraph 9.3 – Applications for Payment:

A. ADD to Subparagraph 9.3.1, the following:

(1) 9.3.1.3 Unless otherwise indicated in the Owner – Contractor Agreement Form, the Owner will retain ten percent (10%) retainage of the amount of each progress payment application until Substantial Completion is obtained.

(2) 9.3.1.4 Upon Substantial Completion, and with the concurrence of the Architect and the Contractor's surety (if any), retainage may be reduced to an amount equal to 200% of the value of the Work remaining to be completed, including defective work not yet remedied (whether covered by a warranty or not) and Work yet to be performed or completed, plus an amount sufficient to protect the Owner for liquidated damages or other charges, liens or offsets due the Owner.

B. ADD to Subparagraph 9.7 Failure of Payment, the following:

(1) 9.7.1 If the Contractor has received payment for labor or materials and if a lien is subsequently filed by any Subcontractor claiming an interest in that labor or materials, and if same has not been released or insured over by the Owner's title company or bonded over by the Contractor within ten (10) days following the recording or filing of such Lien, the Contractor hereby authorizes and consents to an automatic deduction from the Contract Sum ("Lien Deduct Amount") in the sum of 150% of the Lien amount. Following such automatic Lien Deduct Amount, the Contractor acknowledges and agrees that the Owner may, at the Owner's sole option and discretion, have the right to: (a) place all or a portion of the Lien Deduct Amount in escrow with its title company and subsequently pay the Lien to the Lien claimant, including all accrued interest and penalties; or (b) immediately pay the Lien amount, including any accrued interest and penalties, to the Lien claimant.

(2) 9.7.2 The Contractor will have the right to contest and defend the Owner at the Contractor's sole expense, from and against any Lien which the Contractor contests in good faith. If the Contractor identifies qualified legal counsel to provide such defense and specifies the good faith reason to dispute the Lien, then the Owner agrees to hold the Lien Deduct Amount in escrow and not to exercise the Owner's right to pay the Lien pending resolution of such Lien claim and dispute. The Lien Deduct Amount is for the Owner's sole protection and is not for the benefit of the Contractor or any surety. The Owner may apply the Lien Deduct Amount in whole or in part to offset Owner's legal costs and to protect itself against the risk of paying twice for Work for which Contractor has been paid, and for improper claims asserted by Lien claimants.

(3) 9.7.3 The Contractor agrees and acknowledges that the Lien Deduct Amount, including any amount above the Lien amount paid, including all interest and penalties, will be retained by Owner until satisfactory resolution of such Lien without risk to the Owner or the Owner's property. If such Lien is not released, bonded or insured, and not fully and successfully defended by Contractor, the Owner may accept the full Lien Deduct Amount as liquidated damages. The parties recognize and agree that it would be extremely difficult to ascertain the extent of actual costs, expenses, time and damages associated with the recording of a mechanic's lien on the Property, and that any and all Lien Deduct Amounts above the Lien amount, including any and all interest and

penalty, represents as fair an approximation of the actual cost, expense, time and damage associated with resolving any Lien issues as the parties can now determine.

1.13 ADD the following new Paragraph 9.11:

A. 9.11 OWNER'S DIRECT PAYMENT TO SUBCONTRACTORS AND MATERIAL SUPPLIERS

(1) 9.11.1 The Owner reserves the right to make direct payments to any subcontractor or material supplier and to deduct such amounts from the Contract Sum due to the Contractor or to make payments jointly to the Contractor and to the Subcontractor as the Owner determines necessary to protect the Project Site from any liens.

(2) 9.11.2 The Owner is not obligated herein to make any direct payments to a Subcontractor or material supplier, and such payments do not create any obligation to make further payments to any Subcontractor or material supplier.

1.14 ADD to Subparagraph 11.1.1 the following:

A. Liability insurance must include all major divisions of coverage and must be on a comprehensive basis with specified limits listed below maintained specifically for this project. Coverages are to include: Personal Injury Liability with Employment Exclusion deleted, Contractual, including specified provisions for Contractor's obligation under Paragraph 3.18, Owned, non-owned and hired motor vehicles, and Broad Form Property Damage coverage. Premises-Operations, Independent Contractor's Protective, Products and Completed Operations, Owner's & Designers Protective Liability, and Broad Form Property Damage coverage. Property Damage Liability coverage must provide X, C, and U coverages, with Completed Operations and Products Liability coverage maintained for three (3) years after final payment. Include a “separation of insured” endorsement to provide cross-liability coverage. The following minimum limits are applicable to each incident occurrence as well as for the total annual aggregates - which must be dedicated to this project only. Minimum coverage amounts must be as listed below, or as required by law, whichever is greater:

	Prime Trade Contractor	Sub-contractors
Worker's Comp. & General Employer's Liability:	Statutory & $ 1,000,000.00	Statutory & $ 1,000,000.00
Comprehensive General Liability		
Property damage:	$ 2,000,000.00	$ 1,000,000.00
Bodily injury:	$ 2,000,000.00	$ 1,000,000.00
Contractual Liability:		
Property Damage:	$ 2,000,000.00	$ 1,000,000.00
Bodily injury:	$ 2,000,000.00	$ 1,000,000.00
Comprehensive Automobile Liability:		
Property Damage:	$ 1,000,000.00	$ 1,000,000.00
Bodily injury:	$ 1,000,000.00	$ 1,000,000.00
	$ 1,000,000.00	$ 1,000,000.00
Umbrella Excess Liability Insurance:	$ 5,000,000.00	
With an annual aggregate of:	$10,000,000.00	
Builder’s Risk insurance in the amount of the Contract Sum, insuring at a minimum against fire, lighting, vandalism, malicious mischief, explosion, riot and civil commotion, smoke, sprinkler leakage, water damages, windstorm, hail and property theft on the insurable portion of the Work on a 100% completed value basis, and including damage to equipment, structures or material.		

1.15 ADD to Subparagraph 11.1, the following:

A. 11.1.5 All certificates of insurance required herein must name the Owner and the Architect as additional insured.

B. 11.1.6 Provide “All Risk” property insurance on the Work of this Contract within the Contract Sum. Such insurance will include reasonable compensation for the Owner’s authorized agents including the Architect and the Architect’s Professional Consultants, and for the Contractor’s services and expenses required as a result of such insured loss.

1.16 MODIFY Subparagraph 12.2.2.1 by ADDING the following:

A. The "reasonable time" allowed for Correction of Work by the Contractor will be no more than thirty (30) days after receipt of notice.

1.17 ADD the following to Paragraph 15.1.5 Claims for Additional Cost:

A. Extensions of time for adverse weather conditions will not be considered justification for additional compensation to the Contractor for administrative or other ‘office overhead’ expenses.

PART 2 - ADDITIONAL OWNER REQUIREMENTS

2.01 The Contractor shall require all subcontractors to provide and maintain general commercial liability, automobile and workers’ compensation insurance coverage substantially similar to those required of the Contractor. The Contractor shall require certificates of insurance from all subcontractors as evidence of coverage. The Contractor will be the responsible party for any and all claims against or by a subcontractor if the subcontractor fails to have the insurance required by this Agreement.

2.02 The Contractor shall not commence work under this Contract until it has obtained all the bonds and insurance required, has filed the Certificates of Insurance with the Owner, and the certificates have been approved by the Owner. Each insurance policy shall contain a clause providing that it shall not be canceled by the insurance company without written notice to the Owner. All policies shall contain a waiver of the Contractor's right of subrogation against the Owner, the State of Arkansas, its departments, agencies, boards, commissions, colleges and its officers, officials, agents, and

employees for losses arising from work performed by or on behalf of the Contractor, and shall name the Owner as an additional insured or covered party.

END OF SECTION 00 73 00

DIVISION 01 – GENERAL REQUIREMENTS

SECTION 01 11 00 – SUMMARY OF WORK

PART 1 – PROJECT / WORK IDENTIFICATION:

1.01 SUMMARY BY REFERENCES: The Work of this Contract can be summarized by references to the Contract, General Conditions, Supplementary Conditions, Specification Sections, Drawings, Addenda and other modifications to the Contract Documents issued after the initial isse of this Project Manual, and including but not necessarily limited to printed material referenced by any of these. It is recognized that the Work of the Contract is also unavoidably affected or influenced by governing regulations, natural phenomenon including weather conditions and other forces in addition to these Contract Documents.

1.02 ABBREVIATED SUMMARY OF THE WORK: Briefly and without force and effect upon the Contract Documents, the Work of the Contract can be summarized to include the following, as indicated in the Drawings:

A. New Construction
B. SITEWORK, including site demolition, site improvements such as pavement, curbs and sitework appurtenances, installation or modification of site utilities; and new landscape and landscape irrigation system work throughout the Project site;
C. NEW BUILDING CONSTRUCTION to include general construction and finishes, with associated structural, fire-protection, mechanical, electrical and plumbing (MEP) systems:
D. ELECTRICAL POWER for phone/communications, controls, sound, security or data systems
E. FINAL CONNECTIONS of electrical, mechanical or plumbing services to casework, fixtures, signage, Food Service Equipment (FSE) and beverage dispensing equipment;
F. SELECTIVE DEMOLITION, to include removal and legal disposal of select, existing construction elements as required for installation of new work and not utilized within the new construction;
G. SUSTAINABILITY GOAL:

1.03 FOOD-SERVICE EQUIPMENT (FSE) COORDINATION AND WORK BY GENERAL CONTRACTOR: Unless otherwise indicated, FSE and beverage dispensing equipment will be furnished and installed by the Owner's FSE vendor and beverage suppliers, as applicable. The General Contractor is also required to provide the following:

A. FSE / BEVERAGE EQUIPMENT COORDINATION MEETING: Conduct an on-site meeting with the Owner's FSE and beverage equipment supplier representatives, and with applicable subcontractor representatives that will perform final service connections to such equipment. Coordinate with and notify the Owner not less than fourteen (14) calendar days prior to the proposed meeting time and date. Within the meeting, review equipment items being provided, and the required installation requirements and final connections necessary to make them operational – to assure that all components necessary will be available on-site for installation, with responsibility for installation coordinated between all parties. .
B. FINAL SERVICE CONNECTIONS of fire-protection, plumbing, mechanical / controls, and electrical systems to FSE and beverage dispensing equipment, as required by the equipment indicated to be provided, and as indicated below:

FOOD SERVICE EQUIPMENT RESPONSIBILITY SCHEDULE

ITEM / DESCRIPTION	CFCI	OFCI	NIC	NOTES:
Pest Control			X	By Owner's pest control vendor after Substantial Completion
Stainless Steel Wall Paneling			X	Furnish and install by Owner's FSE vendor, typically only at hoods unless otherwise indicated
Stainless Steel Corner Guards	X			Coordinate with S/S wall paneling installation
Building penetrations and weather seals of walls or roofs for equipment connections	X			GC to provide weather sealed openings for ductwork, refrigeration lines, electrical and control wiring, as applicable
Water filters at FSE, beverage equipment and ice-making equipment:		X		Owner's FSE or beverage equipment supplier to provide appropriate water filter – at each unit or manifolded when indicated, to be installed by the GC's plumbing subcontractor.
Hot and cold water service supplies and connections	X			GC's plumbing subcontractor: Provide quarter-turn lever-handled wall shut-off valves with escutcheons, water-supply strainers, and similar accessories. Provide approved backflow prevention devices with shut-offs at beverage-dispensing equipment (including coffee brewers, soda dispensers, and ice makers) manifolded as appropriate Provide "interconnection" piping from separate but related FSE units, such as: water piping from a booster heater to a dishwasher or power-wash sink basin; from a waste disposer to the disposer cone and sinks troughs; from a dishwasher drain tempering kit; from water

FOOD SERVICE EQUIPMENT RESPONSIBILITY SCHEDULE

ITEM / DESCRIPTION	CFCI	OFCI	NIC	NOTES:
				filters to ice machines, steamers and beverage dispensing equipment; and from control panels to water-wash hood systems.
Waste drains from FSE, beverage dispensing or ice-making equipment	X			GC's plumbing subcontractor: Install sink accessories such as basket-drains and lever-handled gate valves furnished by the Owner's FSE vendor and provide gate-valves at hot-food and soup wells in convenient, accessible locations below units. Typically provide "indirect connections" with a code-compliant air-gap to above a waste drain (floor drain or floor sink) , unless indicated to have a "direct connection" with a P-trap, and make all drain connections required for FSE and beverage equipment.
HAND SINKS (wall mounted or counter-mounted)		X		Furnished by Owner's FSE vendor – including faucets unless otherwise indicated. Mount to wall or countertop and seal to wall finish all around by GC's plumbing subcontractor.
- Soap dispenser, paper towel dispenser, waste receptacle, and hand-washing sign at hand sinks	X			GC to provide unless otherwise indicated. Install health-department approved "handwashing sign", at hand sinks or bathroom lavatories serving food-preparation areas.
SINKS: 3-compartment, vegetable prep and other food-service sinks			X	Install by Owner's FSE vendor (unless otherwise indicated) including anchorage and sealing to wall, with final water and drain connections installed by GC's plumbing subcontractor.
FSE with gas connections:		X		GC's plumbing subcontractor: Provide flexible gas hoses (unless otherwise indicated to be furnished by Owner's FSE vendor). Tighten and seal internal piping at manifolds of ranges, fryers, and similar equipment – which is typically provided only with "finger tight" internal connections.
Final electrical connections to FSE and beverage dispensing equipment	X			GC's electrical subcontractor: Provide flexible conduit, conductor and connections (except when FSE or beverage equipment is provided with a flexible power-cord "whip") and make final electrical power connection to a J-box unless furnished with a cord and plug. Provide power and control switches to booster heater at dishwashing equipment. Provide lamps in light fixtures within hoods and walk-in coolers and freezers.
Lamps in electrical light fixtures	X			GC's electrical subcontractor to provide appropriate lamps within light fixtures in exhaust hoods and walk-in coolers and freezers.
WALK-IN COOLERS / FREEZERS			X	Install by Owner's FSE vendor, including panel set-up and refrigeration system connections, except as follows:
- Floor preparation, insulated freezer floor, and floor finish at walk-in coolers and freezers	X			Provide level and smooth floor substrate aligned with floor finish outside of cooler / freezer units and provide floor finish inside walk-ins when a separate insulated floor is not indicated as part of walk-in system. Provide a separate, insulated floor-slab at walk-in freezers, unless a raised insulated floor is indicated in the FSE drawings.
- Building's Fire-suppression system at walk-in coolers / freezers (when exists)	X			Provide fire-suppression wet-pipe sprinklers inside walk-in coolers and freezers by GC's fire-system subcontractor. At freezers, provide freeze-resistant "glycol" protected heads, or a "pre-action" system that keeps water from entering the fire-suppression system piping inside the freezer compartment.
- Remote condensing units for walk-in coolers / freezers		X		Provide units by Owner's FSE vendor. GC to provide structural support and special inspections (when required), with final refrigerant connections by Owner's FSE vendor.
- Electrical door heater and light fixtures at walk-in coolers and freezers		X		Furnish as part of walk-in cooler system by Owner's FSE vendor, and connect to power by GC's electrical subcontractor
- Waste drains from walk-in cooler or freezer's condenser drip pans (located inside the walk-in compartment)	X			Provide by GC's plumbing subcontractor inside walk-in unit's compartments to nearest floor sink or drain outside of unit.
- Final electrical connections of walk-in coolers and freezers	X			GC's electrical subcontractor to make final electrical connections to both the interior walk-in's evaporator/fan coil unit, and to the condenser unit – whether on top of the unit, or remote on the roof.

FOOD SERVICE EQUIPMENT RESPONSIBILITY SCHEDULE

ITEM / DESCRIPTION	CFCI	OFCI	NIC	NOTES:
- Heat-trace wrap of walk-in freezer units condenser pan drain line	X			GC's electrical subcontractor to provide heat-trace tape and insulation wrap around freezer unit's evaporator pan drain line until it exits the freezer compartment
EXHAUST HOODS		X		Owner's FSE Vendor to furnish both NFPA Type I (grease) or Type II (non-grease) exhaust hoods. GC to provide structural support for hoods and Make-Up-Air (MUA) units and suspension rods for hoods and install / hang hood in place – including special inspections when required.
- Building's Fire-suppression systems at Type II exhaust hoods (when exists):	X			GC's wet-system fire-protection subcontractor to locate extinguisher heads of water-based sprinklers to protect space below Type II hoods without being blocked by the hood unit itself.
- Wet-chemical (Ansul) Fire-suppression systems at Type I exhaust hoods	X			GC's fire-system subcontractor: Provide system over (1) the cooking equipment, (2) within the hood (both sides of grease filters), and (3) inside Type I exhaust ductwork to the roof, Make connections from dry contacts in Type I hood system's fire-suppression control system to the building's fire-alarm system and provide appropriate programming of the building's fire-protection system necessary for hood operations. Provide functional testing of the fire-suppression system – completing all related MEP Work and with all FSE under the hood operational. Provide a portable "K-type" fire-extinguishers near the hood before requesting AHJ inspection.
- Gas shut-off valves to under-hood FSE		X		Furnish by Owner's FSE vendor (as part of hood system) – install by GC's plumbing subcontractor
- Gas regulators and lighting of gas pilot lights	X			Provide gas regulators unless indicated to be furnished by Owner's FSE vendor (on FSE drawings - FSE with up to one (1) inch gas pipe is typically provided with a regulator, but manifolded equipment is never furnished with a regulator). Light gas pilot lights when applicable. Furnish and install by GC's plumbing subcontractor, unless otherwise indicated to be furnished by Owner's FSE vendor
- Exhaust hood ductwork to exhaust units	X			GC's mechanical subcontractor must provide exhaust and MUA ductwork, to include duct sealing, duct insulation/wrap, and access panels for maintenance service and inspections, and make final connection to hoods and fans. Make final connections of hood controls to exhaust fans, as applicable.
- NFPA Type I exhaust hood ductwork:	X			GC must provide a 1-hour fire-rated drywall enclosure or approved thermal wrap from penetration of kitchen wall or ceiling, extending through concealed spaces and to forty (40) inches minimum above the roof. GC's mechanical subcontractor must fully weld seams and light-test ductwork after installation but before installation of fire-rated enclosure. Maintain minimum eighteen (18) inch clear to "combustible" materials including the paper face of drywall, or three (3) inches clear to non-combustible materials such as cement board or rock-wool insulation.
- Hood system make-up air supply system			X	Install by Owner's FSE vendor, with structural support and penetrations by GC, and final power connections by GC's electrical subcontractor.
- Electrical shunt-trip breakers to under-hood FSE	X			By GC's electrical subcontractor

1.04 CONTRACT TYPE: Unless otherwise indicated in the Owner / Contractor Agreement, this Work will be constructed under a single (prime) general construction contract.

1.05 PRE-APPROVED / REQUIRED / ASSIGNED SUBCONTRACTORS:

A. ENGAGE the following subcontractors that are specifically required and "pre-approved" by the Owner:

(1) N/A

B. RELATIONS AND RESPONSIBILITIES between the Contractor and the above Subcontractor(s) will be as defined in the Conditions of the Contract. In addition, the above subcontractors will provide to the Contractor:

1.06 BONDS: Labor and Material Payment bonds covering faithful performance of subcontracted work and payment of all obligations thereunder, if the Contractor is required to furnish such bonds to the Owner, and

1.07 LIABILITY INSURANCE purchased and maintained to protect the Contractor from claims for the same terms and liability limits that the Contractor is required to provide to Owner.

PART 2 - SEPARATE CONTRACTS:

2.01 THE OWNER RESERVES THE RIGHT TO AWARD Separate Contracts to furnish and/or to install portions of the Project, including but not necessarily limited to the following:

A. BUILDING SIGNAGE (except for building address numbers, and other code-required signs indicated herein
B. FOOD SERVICE EQUIPMENT (FSE) & Beverage Dispensing Equipment
C. FIXTURES AND FURNISHINGS including tables and chairs
D. TELECOMMUNICATIONS and/or data system network(s) within the building
E. CELL-PHONE ANTENNAS & SCREENS, including installation of cellular-equipment and accessory screens on the roof, and wiring connections from antennas to equipment in an equipment room within this Project
F. SECURITY SYSTEM, including card-access controls, surveillance cameras, and a monitoring control system

2.02 THE ABOVE LIST may be affected by Alternates accepted or rejected by the Owner.

2.03 COOPERATE FULLY WITH SEPARATE CONTRACTORS so that work on those contracts may be carried out smoothly, without interfering with or delaying work under this Contract.

2.04 REVIEW SHOP DRAWINGS prepared by separate contractor(s) or suppliers of related Work for general conformance with the intent of the Construction Documents, and for service-connections and clearances if required. Verify that required rough-ins, connections and clearances will be provided, and report any discrepancies.

2.05 PROVIDE SCHEDULED DATES for delivery and installation to Separate Contractors or suppliers, and notify them when construction is ready for their delivery and installation Work. Provide openings, delivery access, and staging space for installation. Contact the Owner if scheduling or communication problems arise regarding separate contractor(s).

PART 3 - CONTRACT DOCUMENT FORMATS AND CONVENTIONS

3.01 SECTION IDENTIFICATION: The Specifications use Section numbers and titles to help cross-referencing within the Contract Documents. Sections in the Project Manual are in numeric sequence; however, the sequence is incomplete as not all numbers are used. Consult the Table Of Contents at the beginning of the Project Manual to determine Section numbers and names of Specification Sections within the Contract Documents.

3.02 DIVISION-01 “GENERAL REQUIREMENTS” Sections apply to the Work of the entire Project, and to all Sections of the Specifications. When a more specific requirement is indicated within an individual Specification Section or is indicated with a note on the Drawings, that requirement takes precedence over the Division-01 requirement for that Section’s Work only.

3.03 CONTRACT DOCUMENT LANGUAGE: The Contract Documents (including the Drawings and Specifications) use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

3.04 ABBREVIATED LANGUAGE: Language used in the Contract Documents is abbreviated. Words and meanings will be interpreted as appropriate. Words implied, but not stated, will be inferred as the sense requires. Singular words will be interpreted as plural, and plural words will be interpreted as singular where applicable as the context of the Contract Documents indicates.

3.05 IMPERATIVE MOOD AND STREAMLINED LANGUAGE are generally used in the Contract Documents. Requirements expressed in the imperative mood are to be performed by Contractor. Occasionally, the indicative or subjunctive mood may be used for clarity to describe responsibilities that must be fulfilled indirectly by Contractor or by others when so noted.

3.06 THE WORDS "SHALL," "SHALL BE,", "SHALL COMPLY WITH," or “WILL, “MUST” or “MUST COMPLY WITH” - depending on the context, are implied where a colon (:) is used within a sentence or phrase.

3.07 CONSTRUCTION DOCUMENT TERMINOLOGY:

A. **C F C I:** Contractor Furnished, Contractor installed
B. **FURNISH**: Supply and deliver to the site, ready for unloading, unpacking, assembly, installation, or as applicable in each case.
C. **INSTALL:** To perform construction operations at the Project site, including but not limited to: unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations, as applicable in each instance.
D. **N I C:** Not In Contract (Owner Furnished and Owner Installed)
E. **O F C I**: Owner Furnished, Contractor installed
F. **O F O I**: Owner Furnished and Owner installed
G. **PROVIDE**: To both furnish AND install by the Contractor (CFCI), complete and ready for the Owner’s use.
H. OWNER FURNISHED – CONTRACTOR INSTALLED (OFCI) PRODUCTS:

(1) COORDINATE WITH AND INSTALL all Owner-Furnished products, including but not limited to providing schedule information regarding completion of prior work and allowable time periods for performance by the Separate Contractors, receiving at site, verifying receipt, handling, storage on-site, and mechanical/electrical/plumbing service connections, as applicable. The Owner will pay directly for the product costs including delivery to the Project Site. Provide all OFCI suppliers with an accurate address with accurate delivery directions and instructions.
(2) AT DELIVERY, INSPECT PRODUCTS FOR DAMAGE at the Project Site. If items are damaged, defective or missing, mark the bill of lading as necessary. Contact the freight line and request a damage inspection of the

items and submit a damage claim. Notify the owner within five (5) days of receipt of any missing, damaged or otherwise defective products – or replace/repair items at no cost to the Owner.

(3) PROTECT PRODUCTS from damage, including damage from exposure to the elements. Replace or repair items damaged as a result of Construction operations. Damage resulting from inappropriate storage or handling, including but not limited to environmental conditions, will be the responsibility of the Contractor. No claim for additional costs due to damage to stored products or equipment will be considered. Repair damage to Owner-furnished products caused by construction operations to the Owner's satisfaction

END OF SECTION 01 11 00

SECTION 01 14 19 – USE OF SITE

PART 1 - CONTRACTOR WILL HAVE FULL USE of the Project Site for construction operations during the construction period. The Contractor's use of premises is limited only by the Owner's right to engage separate contractors for other work at the Project Site.

1.01 CONFINE OPERATIONS to areas within the Contract limits indicated and/or within the property lines of the site, and if not specifically indicated, within areas designated or approved for use by the Owner. Portions of the site beyond areas in which construction operations are indicated are not to be disturbed. Confine stockpiling of materials and location of storage sheds, if any, to areas approved for such use.

A. Do not unreasonably encumber the site with materials or equipment. If additional storage is necessary, obtain and pay for such storage areas off-site.
B. Parking of workers's automobiles will be confined to defined areas.
C. Keep driveways and existing site entrances clear and unobstructed at all times. Do not use these areas for parking or storage of materials, except as otherwise authorized.
D. Schedule deliveries to minimize requirements for storage of materials.

1.02 PUBLIC STREET LIMITATIONS: Comply with AHJ representatives regarding regulations and/or restrictions on use of public streets.

1.03 POTENTIALLY DISRUPTIVE CONSTRUCTION ACTIVITIES: Limit the time and duration of potentially disruptive construction operations involving noise, vibration, odors, or any other activities that MAY be considered as objectionable by adjacent residential neighbors, and comply with rules and regulations of the AHJ as applicable. Coordinate as follows:

1.04 WORK HOURS: Limit exterior operations to occur between 6:00 AM and 6:00 PM on Mondays through Fridays, with weekend hours between 8:00 AM and 5:00 PM, except as otherwise authorized by the Owner in writing.

1.05 NOTIFY THE OWNER and appropriate AHJ representatives not less than two (2) days in advance of ANY potentially disruptive operations.

1.06 OBTAIN THE OWNER’S WRITTEN PERMISSION before proceeding with potentially disruptive operations.

PART 2 - EXISTING UTILITY INTERRUPTIONS: Do not interrupt existing public utilities serving this site or other adjacent properties without the prior written approval of the Owner, and as follows:

2.01 NOTIFY OWNER AND UTILITY SERVICE PROVIDER not less than five (5) days in advance of the proposed utility interruption

2.02 OBTAIN WRITTEN AUTHORIZATION by the Utility Service provider before proceeding with utility interruptions.

2.03 PARTIAL OWNER’S USE: The Owner reserves the right to install fixtures, furnishings, equipment, signage, and communication systems, including phone, data networks, security or control systems within completed areas of the Work before Substantial Completion, provided that such use is acceptable to the AHJ, and it does not interfere with completion of the Work. This use will not constitute acceptance or partial acceptance of the Work.

PART 3 - OWNER OCCUPIED DURING CONSTRUCTION

3.01 None

PART 4 - DEVELOPER / LANDLORD APROVALS

4.01 None

END OF SECTION 01 14 19

SECTION 01 21 00 – ALLOWANCES

PART 1 - INCLUDE WITHIN THE CONTRACT SUM adequate budget and bonding (when required) for the following allowance amounts, covering products and materials not selected or well defined prior to bidding.

1.01 INCLUDE ALL COSTS for materials and equipment delivered to the site, including applicable taxes, less applicable trade discounts, unless otherwise indicated below. The cost of installation, including unloading, handling, labor, installation costs, overhead, profit and other expenses related to the following allowance amounts is to be included within the Contract Sum – and not within the following amounts.

PART 2 - SCHEDULE OF CASH ALLOWANCES:

2.01 ALLOWANCE ITEM # 1 – ADDITIONAL FOOTING OVER-EXCAVATION & ENGINEERED FILL: The Soils Engineer anticipates that there will be some localized areas of inadequate bearing materials at footings or foundations. Therefore, include the following cash allowance for additional footing over-excavation and engineered fill, in addition to the limit and scope as indicated in the Drawings: **$25,000, per "Unit Price" amounts above**

2.02 **QUANTITY ALLOWANCE ITEM # 2 – ADDITIONAL SOIL EXCAVATION & FILL:** Include an additional 2,500 cubic yards of unsatisfactory soil excavation and of-site disposal and replace with satisfactory off-site soil materials, in accordance with Division-31 Section "Earth Moving." Coordinate this allowance with Unit-Prices.

2.03 **QUANTITY ALLOWANCE ITEM # 3 – ROCK REMOVAL**: Include an addition 1.000 cubic yards of rock removal and replacement with satisfactory soil material, in accordance with Division-31 Section "Earth Moving." Coordinate this allowance with Unit Prices.

END OF SECTION 01 21 00

SECTION 01 22 00 – UNIT PRICES

PART 1 - INCLUDE all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit. Refer to individual Specification Sections for work that requires establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections. The Owner reserves the right to reject the Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.

1.01 UNIT PRICE NO. ONE (1) – ADDITIONAL SOIL EXCAVATION: ADD for additional excavation and legal disposal of unsatisfactory soil materials, to include replacement with engineered fill using satisfactory borrow materials in accordance with applicable Division-31 Section, requirements of the Geotechnical Report, and with the Owner's on-site geotechnical testing and inspection entity. Coordinate this unit price with applicable Allowance indicated above.

A. Unit of Measurement: Cubic yard of soil material excavated, based on survey of volume removed.

1.02 UNIT PRICE NO. TWO (2) – ADDITIONAL ROCK EXCAVATION: ADD for additional excavation and legal disposal of rock, to include replacement with engineered fill using satisfactory borrow materials in accordance with applicable Division-31 Section, requirements of the Geotechnical Report, and with the Owner's on-site geotechnical testing and inspection entity. Coordinate this unit price with applicable Allowance indicated above.

A. Unit of Measurement: Cubic yard of rock excavated, based on survey of volume removed.

1.03 UNIT PRICE NO. ONE (1) – BULK ROCK EXCAVATION: ADD for excavation and legal disposal of rock in open excavations, per cubic yard.

1.04 UNIT PRICE NO. TWO (2) – TRENCH ROCK EXCAVATION: ADD for excavation and legal disposal of rock in utility trenches, per cubic yard.

1.05 UNIT PRICE NO. THREE (3) – OVER-EXCAVATION & ENGINEERED FILL BELOW FOUNDATIONS: Change the quantity as indicated in the Drawings when directed by the Owner's Soil's Engineer for excavation, controlled backfill and compaction of engineered fill below foundations, including legal disposal of excess unsatisfactory soil materials, ADD or DEDUCT per cubic yard.

1.06 UNIT PRICE NO. FOUR (4) – OVER-EXCAVATION & ENGINEERED FILL BELOW FLOOR-SLABS AND PAVEMENT: Change the quantity indicated in the Drawings when directed by the Owner's Soil's Engineer for excavation, controlled backfill and compaction of engineered fill below floor-slabs and pavement, including legal disposal of excess unsatisfactory soil materials, ADD or DEDUCT per cubic yard.

END OF SECTION 01 22 00

SECTION 01 23 00 – ALTERNATES

PART 1 - PROVIDE alternative proposals to be added to or deducted from the amount of the Base Bid amount if the corresponding change in scope is accepted by the Owner, in accordance with requirements listed herein. Include within the alternative proposal all associated costs, including but not limited to materials, labor, equipment and fees required to provide the Work item.

PART 2 - COORDINATE related Work and modify or adjust adjacent elements as necessary to ensure that the Work affected by each accepted alternate is complete and fully integrated into the Project. Immediately following Contract award, prepare and distribute to each party involved, notification of the status of each alternate. Indicate whether alternates have been accepted, rejected or deferred for consideration at a later date. Include a complete description of negotiated modifications to alternates. Include as part of each alternate, miscellaneous devices, accessory objects and similar items incidental to or required for a complete installation whether or not mentioned as part of the Alternate.

PART 3 - ALTERNATES

3.01 ALTERNATE # 1 - PROVIDE PERFORMANCE & LABOR/MATERIAL PAYMENT BONDS: If this Alternate is accepted by the Owner, provide bonds covering faithful performance of the Contract and payment of obligations arising thereunder, in amounts equal to one hundred percent (100%) of the Contract Sum. Obtain bonds through the Contractor's usual sources pending approval of Surety by the Owner. Deliver bonds to the Owner not later than three (3) days following the date the Agreement is entered into, or if the Work is to be commenced prior thereto in response to a letter of intent, submit evidence satisfactory to the Owner that the bond will be provided.

3.02 ALTERNATE # 2 – PROVIDE LIGHTNING PROTECTION: Under the Base Bid amount, no lightning protection will be provided. If this Alternate is accepted by the Owner, provide lightning protection to include necessary air terminals, down-conductors with wide-sweep bends outside of the building enclosure, with thermal bonding to the building's structural steel framing system and to the electrical system, and to include a single point grounding system with transient voltage surge suppression at the main electrical panel, in accordance with requirements for a "Master Label Certificate" as tested by UL.

END OF SECTION 01 23 00

SECTION 01 25 00 – SUBSTITUTION PROCEDURES

PART 1 - THIS SECTION includes administrative and procedural requirements for substitutions of products, systems, equipment or installation methods, and product options.

1.01 DEFINITIONS:

A. BASIS-OF-DESIGN PRODUCT SPECIFICATION: Where a specific manufacturer's product is named and accompanied by the words "Basis Of Design", including make or model number or other designation, that product establishes the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for the purpose of evaluating comparable products of other named manufacturers, through the substitutions process.

B. COMPARABLE PRODUCT: A Product that is demonstrated and approved through the substitution process, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of a specified product.

C. NAMED PRODUCTS: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, current as of date of the Contract Documents.

D. SUBSTITUTION: A change in products, materials, equipment, or methods of construction from those required by the Contract Documents as proposed by Contractor.

E. SUBSTITUTIONS FOR CAUSE: Changes proposed by the Contractor that are required due to changed Project conditions, such as unavailability of a product, regulatory changes, or unavailability of required warranty terms.

F. SUBSTITUTIONS FOR CONVENIENCE: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but that may offer advantage to either the Contractor or to the Owner.

PART 2 - SUBSTITUTION REQUESTS:

2.01 SUBMIT ELECTRONIC MEDIA FORMATTED REQUESTS only from the Contractor for consideration by the Architect. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles, as applicable.

2.02 SUBSTITUTION REQUEST FORM: Use CSI Form 13.1A – most recent edition

2.03 DOCUMENTATION: Show compliance with requirements for substitutions and the following, as applicable:

2.04 A STATEMENT indicating why specified material or product cannot be provided.

2.05 COORDINATION INFORMATION including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.

2.06 DETAILED COMPARISON of significant qualities of proposed substitution with those of the Work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.

2.07 PRODUCT DATA, including drawings and descriptions of products and fabrication and installation procedures.

2.08 SAMPLES, where applicable or requested.

2.09 LIST OF SIMILAR INSTALLATIONS for completed projects with project names and addresses and names and addresses of architects and owners.

2.10 MATERIAL TEST REPORTS from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.

2.11 RESEARCH/EVALUATION REPORTS evidencing compliance with building code in effect for Project, from a model code organization acceptable to AHJ representatives.

2.12 DETAILED COMPARISON OF CONSTRUCTION SCHEDULE using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating lack of availability or delays in delivery.

2.13 COST INFORMATION, including a proposal for change, if any, to the Contract Sum.

2.14 CONTRACTOR'S CERTIFICATION that proposed substitution complies with requirements in the Contract Documents and is appropriate for applications indicated.

2.15 CONTRACTOR'S WAIVER OF RIGHTS TO ADDITIONAL PAYMENT OR TIME that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

PART 3 - CONTRACTOR'S SUBSTITUTION ACTION (AFTER AWARD):

3.01 SUBSTITUTIONS FOR CAUSE: Submit immediately upon discovery of the need for change, but not later than fifteen (15) days prior to time required for preparation and review of related submittals.

3.02 SUBSTITUTIONS FOR CONVENIENCE: Submit within sixty (60) days after award of contract or notice to proceed. After that period, requested will be considered or rejected at the sole discretion of the Architect. In addition to the above requirements, the proposed Substitution must provide a substantial advantage to the Owner in cost, time, energy conservation and other considerations after deducting the added Owner's costs, including but not limited to additional compensation to the Architect for evaluation and redesign, increased cost of other construction, and similar considerations.

PART 4 - CONSIDERATION OF SUBSTITUTION REQUESTS will be made only if in the Architect's opinion, the following items are well documented and substantiated with the Substitution Request:

4.01 It is consistent with the Contract Documents and will produce the indicated results, without extensive revision to the Contract Documents

4.02 That it will not adversely affect the Construction Schedule

4.03 That it has received necessary approvals of AHJ's

4.04 That it has been coordinated with other portions of the Work, and is compatible with other products or materials

4.05 That it provides the specified warranty

PART 5 - ARCHITECT'S ACTION: If necessary, the Architect may request additional information or documentation for evaluation within one week of receipt of a request for substitution. Contractor will be notified of acceptance or rejection of the proposed substitution within fifteen (15) days of receipt of request, or seven (7) days of receipt of additional information or documentation, whichever is later. Use the original product specified if no decision on use of a proposed substitution is made within the time indicated.

5.01 FORM OF ACCEPTANCE: Change Order.

END OF SECTION 01 25 00

SECTION 01 26 00 – CONTRACT MODIFICATION REQUIREMENTS

PART 1 - THIS SECTION SPECIFIES administrative and procedural requirements for handling and processing Contract modifications.

1.01 SUPPLEMENTAL INSTRUCTIONS will be issued by the Architect authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time.

PART 2 - PROPOSAL REQUESTS

2.01 OWNER-INITIATED PROPOSAL REQUESTS: The Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

2.02 PROPOSAL REQUESTS ISSUED BY ARCHITECT ARE FOR INFORMATION ONLY. Do not consider them instructions either to stop work in progress or to execute the proposed change.

2.03 SUBMIT A QUOTATION estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change, within the time specified in Proposal Request after receipt.

2.04 INCLUDE A LIST OF QUANTITIES of products required or eliminated and unit costs, with total amount of purchases and credits to be made.

2.05 IF REQUESTED, FURNISH SURVEY DATA to substantiate quantities. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.

2.06 INCLUDE AN UPDATED CONTRACTOR'S CONSTRUCTION SCHEDULE that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

PART 3 - CONTRACTOR-INITIATED PROPOSALS: If latent or unforeseen conditions require modifications to the Contract, Contractor may propose changes by submitting a request for a change.

3.01 INCLUDE A STATEMENT OUTLINING REASONS FOR THE CHANGE and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.

3.02 INCLUDE A LIST OF QUANTITIES OF PRODUCTS required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.

3.03 INDICATE APPLICABLE TAXES, delivery charges, equipment rental, and amounts of trade discounts.

3.04 INCLUDE AN UPDATED CONTRACTOR'S CONSTRUCTION SCHEDULE that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

3.05 COMPLY WITH DIVISION-01 SECTION "PRODUCT REQUIREMENTS" if the proposed change requires substitution of one product or system for product or system specified.

3.06 PROPOSAL REQUEST FORM: Use AIA Document G709 for Proposal Requests, or other form approved in advance by the Architect.

PART 4 - ALLOWANCE ADJUSTMENTS

4.01 TO ADJUST ALLOWANCE AMOUNTS, base each Change Order proposal on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.

4.02 INCLUDE INSTALLATION COSTS in purchase amount only where indicated as part of the allowance.

4.03 PREPARE EXPLANATION AND DOCUMENTATION to substantiate distribution of overhead costs and other margins claimed, if requested.

4.04 SUBMIT SUBSTANTIATION OF A CHANGE IN SCOPE OF WORK, if any, claimed in Change Orders related to unit-cost allowances.

4.05 THE OWNER RESERVES THE RIGHT to establish the quantity of work-in-place by independent quantity survey, measure, or count.

4.06 SUBMIT CLAIMS FOR INCREASED COSTS because of a change in scope or nature of the allowance described in the Contract Documents, whether for the Purchase Order amount or Contractor's handling, labor, installation, overhead, and profit. Submit claims within 21 days of receipt of the Change Order or Construction Change Directive authorizing work to proceed. Owner will reject claims submitted later than 21 days after such authorization.

4.07 DO NOT INCLUDE CONTRACTOR'S OR SUB-CONTRACTOR'S INDIRECT EXPENSE in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.

4.08 NO CHANGE TO CONTRACTOR'S INDIRECT EXPENSE IS PERMITTED for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

PART 5 - CHANGE ORDER PROCEDURES

5.01 THE ARCHITECT WILL ISSUE CHANGE ORDERS on AIA Document G701 on a monthly basis (if necessary) for execution by the Owner and Contractor. Only those Proposal Requests or Requests for Proposals that have been previously approved by the Owner will be included.

END OF SECTION 01 26 00

SECTION 01 26 13 – REQUESTS FOR INTERPRETATIONS (RFI'S)

PART 1 - SUBMIT REQUEST FOR INTERPRETATION (RFI's) immediately up discovery of the need for a clarification after review of the Contract Documents and the field conditions. Include a detailed description of the issue encountered, together with recommendations for changing the Contract Documents. Submit requests on CSI Form 13.2A – "Request for Interpretation" or equivalent form approved for use in advance. Submit RFI's only from the Contractor – RFI's from subcontractors or suppliers must be forwarded to, reviewed by, approved by, and submitted directly from the Contractor.

1.01 SUBMIT RFI'S ONLY AFTER a thorough review of ALL applicable Contract Documents and the field-conditions, and ONLY if the Contractor is still not able to resolve the problem or clarify the issue based on the information contained therein.

1.02 RESPONSIBILITY FOR ADDITIONAL COSTS: If the information requested by the Contractor is apparent from field observations, or is in fact contained within the Contract Documents, or is reasonably inferable from either, the Contractor will be responsible to the Owner for all reasonable costs expended by the Owner, including the hourly costs of the Owner's Construction Representative and/or the professional fees and expenses of the Architect/Engineer, for the Additional Services required to provide such information.

1.03 RESPONSE TO RFI'S IS NOT AN AUTHORIZATION to proceed with additional or extra Work.

END OF SECTION 01 26 13

SECTION 01 29 00 – PAYMENT PROCEDURES

PART 1 - 15 DAYS (MINIMUM) PRIOR TO SUBMITTAL OF THE INITIAL APPLICATION FOR PAYMENT, the following items must be submitted:

1.01 (1) listing of subcontractors and principal suppliers and fabricators,

1.02 (2) the progress schedule,

1.03 (3) preliminary schedule of values,

1.04 (4) performance and/or payment bonds, if required, and

1.05 (5) copies of acquired building permits for performance of the Work.

PART 2 - SCHEDULE OF VALUES: Provide a breakdown of the Contract Sum, as required by the General Conditions. Coordinate preparation and correlate line item breakdown with Specification Sections, and as required to facilitate continued evaluation of payment requests and progress reports. Break down principal subcontract amounts into several line items, to the approval of the Owner and/or Architect. Provide a separate line-item for each allowance, or for each unit-cost allowance as a product of the unit cost multiplied by the measured quantity. Indicate temporary facilities or other major cost items that are not a direct cost of actual work-in-place as separate line items. Show overhead and profit as a separate line item amount – to facilitate review of lien-waivers from sub-contractors and material suppliers. Round-off individual amounts to the nearest whole dollar, but with the total equal to the Contract Sum. Arrange the schedule with columns to indicate the generic name of the item, related specification sections, the subcontractor, supplier, manufacturer or fabricator, change orders (numbers) which have affected the value, the dollar value of the item, and the percentage of the Contract Sum to the nearest one- hundredth percent and adjusted to total 100 percent.

2.01 PRIOR TO INITIAL PAYMENT APPLICATION SUBMITTAL, the following are required:

A. List of subcontractors.
B. Schedule of Values.
C. Contractor's Construction Schedule.
D. Products list.
E. Schedule of unit prices.
F. Submittals Schedule .
G. List of Contractor's staff assignments, and principal consultants.
H. Copies of all applicable building permits (except for those obtained directly by the Owner)
I. Copies of authorizations and licenses from AHJ representatives for performance of the Work.
J. Initial progress report.
K. Report of preconstruction conference.
L. Certificates of Insurance (AIA G705) and evidence that Contractor's insurance has been secured.
M. Performance and payment bonds (if required).

2.02 APPLICATIONS FOR PAYMENTS: Submit AIA Document G702/G703–Current Edition "Application and Certificate for Payment" and Continuation Sheets as applicable or an equivalent document approved in advance to the Architect. Complete every entry on the form, matching data on the Schedule of Values and correlated with the Contractor's Construction Schedule – using updated schedules if revisions have been approved. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Each Application must be consistent with previous applications. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements. Include amounts of Change Orders and Construction Change Directives as separate line-items.

2.03 TIMING: Unless otherwise noted in the Agreement Form, the required date for submittal will be the tenth (10th) day of each month.

2.04 TIME PERIOD: Unless otherwise noted in the Agreement Form, the time-period covered by each Application for Payment starts on the first (1st) day of a month and ends on the last day of the same month.

2.05 SUBMIT an email and deliver THREE (3) notarized originals for receipt within 24 hours of the email

2.06 ATTACHMENTS: Include a transmittal letter listing attachment and appropriate information regarding the Application, with an updated Schedule-of-Values and Construction Progress Schedule (if applicable) and partial lien-waivers (if required by Owner).

2.07 PARTIAL LIEN WAIVERS: At any time throughout the project, the Owner reserves the right to require submittal of partial lien waivers indicating that lien rights are "unconditionally released" for all amounts previously paid, and "conditionally released" or contingent only upon receipt and bank clearance of the current payment-application amounts then due. Unless otherwise required by the Owner, provide partial waivers from the Contractor, and for all subcontractors, sub-subcontractors, suppliers and any other entities lawfully entitled to file a lien more than One Thousand Dollars ($1,000.00) arising out of the Work of the Construction Contract. The Owner reserves the right to designate which entities involved in the Work must submit waivers. Submit all waivers on the 1990 Edition of the "Waiver and Release of Lien" form as issued by the Construction Industry Affairs Council of Greater Kansas City Inc (CIAC) or other form provided or approved by the Owner, fully executed in a manner acceptable to Owner.

PART 3 - PAYMENT APPLICATION AT SUBSTANTIAL COMPLETION: After the Certificate of Substantial Completion is issued, submit an Application for Payment showing 100 percent completion. Provide a copy of the Certificate of Occupancy from the applicable AHJ indicating that the Project can be occupied by the Owner, and a current accounting statement showing all changes to the Contract Sum.

3.01 INCLUDE WITH THE FINAL PAYMENT APPLICATION the following:

A. Unconditional lien-releases for all subcontractors and material suppliers
B. Evidence of completion of Project closeout requirements.
C. Insurance certificates for products and completed operations
D. Proof that all taxes, fees, and similar obligations were paid.
E. Updated final statement, accounting for final changes to the Contract Sum.
F. AIA Document G706, "Contractor's Affidavit of Payment of Debts and Claims."
G. AIA Document G706A, "Contractor's Affidavit of Release of Liens."
H. AIA Document G707, "Consent of Surety to Final Payment." Evidence that claims have been settled.
I. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
J. Final, liquidated damages settlement statement.

END OF SECTION 01 29 00

SECTION 01 31 00 – MANAGEMENT & COORDINATION

PART 1 - CONTRACT DOCUMENTS

1.01 CAREFULLY STUDY AND COMPARE the Contract Documents and drawings of the existing building (if available), with the existing conditions at the project-site. Report errors, inconsistencies or omissions discovered for clarification. The Contractor will be responsible for repair or correction costs if work is executed with knowledge that it involves an error, inconsistency or omission - without this notice.

1.02 CONTRACT DOCUMENTS ON-SITE: Maintain a complete set of the most recent Construction Documents (Drawings and Specifications) at all times, with all applicable contract modification documents including Supplemental Instructions and approved Change Orders applicable to the Work.

PART 2 - COORDINATION AND ADMINISTRATION

2.01 SCHEDULE AND COORDINATE THE WORK to assure an efficient and orderly sequence of installation of construction elements, with provisions for accommodating items to be installed later. Prepare general coordination drawings, schedules, and control site utilization, from beginning of construction throughout project close-out.

2.02 COORDINATE CONSTRUCTION OPERATIONS included in the various Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included that of other related Sections that depend upon each other for proper installation, connection, and operation.

2.03 SCHEDULE CONSTRUCTION OPERATIONS in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.

2.04 COORDINATE INSTALLATION of different components with other contractors to ensure maximum accessibility for required maintenance, service, and repair. Make adequate provisions to accommodate items scheduled for later installation.

2.05 COORDINATE THE WORK of fire-suppression, HVAC, plumbing, electrical and communication / control systems so that conflicts do not occur. Do not relocate an exposed, finished surface unless approved in advance by the Architect.

2.06 PREPARE MEMORANDA for distribution to each party involved, outlining special procedures required for coordination, if necessary. Include such items as required notices, reports, and list of attendees at meetings. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

2.07 ADMINISTRATIVE PROCEDURES: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

A. Preparation of Contractor's Construction Schedule.
B. Preparation of the Schedule of Values.
C. Installation and removal of temporary facilities and controls.
D. Delivery and processing of submittals.
E. Progress meetings.
F. Pre-installation conferences.
G. Project closeout activities.

2.08 CONSERVATION: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work.

2.09 PREPARE COORDINATION DRAWINGS if limited space availability necessitates maximum utilization of space for efficient installation of different components or if coordination is required for installation of products and materials fabricated by separate entities.

A. Indicate relationship of components shown on separate Shop Drawings.
B. Indicate required installation sequences.
C. Refer to applicable Specification Sections for specific coordination drawing requirements for mechanical and electrical installations.

2.10 ADMINISTRATIVE AND SUPERVISORY PERSONNEL - STAFF NAMES: Within 15 days of starting construction operations, submit a list of principal staff assignments, including superintendent, personnel at Project site, and administrative and supervisory personnel at main office. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home and office telephone numbers. Provide names, addresses, and telephone numbers of individuals assigned as standbys in the absence of individuals assigned to Project. Post copies of list in Project meeting room, in temporary field office, and by each temporary telephone.

2.11 IN ADDITION to the Project superintendent, provide administrative and supervisory personnel as required for proper performance of the Work. Include special personnel required for coordination of operations with other contractors.

2.12 PRECONSTRUCTION CONFERENCE: Schedule and conduct an “on-site” Pre-Construction Conference before starting construction activities, at a time and location convenient to the Owner - but no later than 15 days after execution of the Agreement. Arrange for “on-line” participation by parties not required to be on-site, including the Owner and the Architect (at their option), and for sub-contractor and supplier representatives not involved in the initial construction activities. On-site attendance is required of the Contractor’s superintendent, and major sub-contractor representatives. Minor sub-contractors, sub-subcontractors, manufacturers, suppliers and other concerned parties are to participate in the meeting on-line. Participants at the conference must be familiar with the Project and authorized to conclude matters relating to the Work. Discuss items of significance that could potentially affect progress, including but not limited to the following:

A. Identify responsible personnel of the Contractor and sub-contractors, and review their duties and responsibilities

B. Verify that all sub-contractors have a complete set of Contract Documents
C. Review the initial Construction Schedule, and any critical work sequencing, if applicable.
D. Review working hours for the construction project, and procedures necessary to work in non-typical hours
E. Review available temporary field-office and storage areas available for use
F. Review use of the existing site and/or building facility, and available parking stalls for workers, if any
G. Review requirements and responsibilities for temporary facilities and controls, and requirements for maintenance thereof
H. Review requirements for material and equipment deliveries to the site
I. Review policies and requirements established for safety, first-aid, and security of the construction site.
J. Review requirements of daily progress cleaning
K. Review procedures for processing field decisions or directives, supplemental instructions, and Change Orders.
L. Review requirements for submitting and processing submittals of Product Data, Shop Drawings, and samples
M. Review requirements for processing Applications for Payment – both periodic and for substantial and final completion
N. Review maintenance of "as-built" drawings during construction, and their documentation at project completion
O. Review requirements for completion of Punch-List Work determined at Substantial Completion
P. Review submittal of closeout documents after Substantial Completion,

2.13 CONSTRUCTION PROGRESS MEETINGS: Schedule and conduct periodic progress meetings at not less than once every two (2) weeks at the Project Site, and hold various other pre-installation and coordination conferences as required by construction activities. Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times at least five (5) working days prior to meetings. Prepare a meeting agenda, and distribute to all invited attendees. Record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within 3 days of the meeting. Discuss the following topics at each progress meeting, as appropriate:

A. Review and correct or approve minutes of previous progress meeting.
B. Review of work progress since previous meeting
C. Review the updating of the Record Documents of Work completed
D. Status of Contractor's Construction Schedule: Determine whether each activity is on time, ahead of schedule, or behind schedule. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
E. Review of pending work scheduled to be performed: If necessary, determine how construction behind schedule will be expedited; secure commitments from parties involved to do so.
F. Review construction quality, work standards and progress cleaning
G. Review any known problems and conflicts
H. Review status of Contractor's submittals
I. Review pending changes or Contract modifications, and documentation of supporting information
J. Proposed items for discussion at next meeting

END OF SECTION 01 31 00

SECTION 01 32 16 – CONSTRUCTION & SUBMITTAL SCHEDULE

PART 1 - SCHEDULE THE WORK OF THE ENTIRE PROJECT, including work performed by the Owner's separate contractors (as if affects the Work of this Contract) to assure an efficient and orderly sequence of installation of all elements – with provisions for accommodating items to be installed later.

1.01 CONSTRUCTION SCHEDULE: Prepare and submit a proposed progress schedule for the Work within fourteen (14) calendar days after award of Contract. Provide a separate line-item for each Work item listed in the Schedule of Values. Include appropriate time for project mobilization, procurement of products, review and approval of shop drawings, fabrication, installation, testing, and final cleanup. Identify each calendar day throughout the schedule. Highlight "critical path" elements of the schedule that are important to complete the Work on time. Correlate the schedule with critical "milestone dates" including but not limited to the Notice to Proceed, Substantial Completion, and the Final Completion dates.

1.02 REVISE CONSTRUCTION SCHEDULE after progress meetings when revisions to the schedule have been made or recognized. Issue a revised schedule concurrently with the report of each meeting.

1.03 COST-LOADED SCHEDULE: Show a two (2)-item cost correlation line, indicating both "pre-calculated" and "actual" costs as the Work progresses. This cost correlation line must show dollar-volume of work performed as of the same dates used for preparation of payment requests. In so far as it is practical, use the same units of Work in the Progress schedule as indicated in the "Schedule of Values" required by the General Conditions and further defined within these Specifications.

1.04 SUBMITTAL SCHEDULE: Submit a schedule of submittals, arranged in chronological order by dates required by the Construction Schedule. Coordinate the Submittal Schedule with the Construction Schedule, and include time required for review and re-submittal when establishing dates. Submit the Submittal Schedule concurrently with the Construction Schedule. Indicate if any submittals affect the "critical path" of the Construction Schedule, and those required early due to long lead time for manufacture or fabrication. Failure to provide a Submittal Schedule relieves the Architect and/or Engineer of responsibility for timely submittal review.

END OF SECTION 01 32 16

SECTION 01 32 26 – CONSTRUCTION PROGRESS REPORTING

PART 1 - SECTION INCLUDES administrative and procedural requirements for documenting the progress of construction during performance of the Work.

1.01 PROVIDE INFORMATIONAL SUBMITTALS, as follows:

A. Daily construction reports including count of all personnel at project site: submit at weekly intervals.
B. Material location reports: Submit at monthly intervals
C. Site condition reports: Submit at time of discovery of differing conditions
D. Special Conditions Reports: Submit at time of discovery of unusual event.
E. Work documentation, periodic site observations: Submit at weekly intervals.
F. Work documentation, construction progress photographs: submit at weekly intervals.

1.02 DAILY CONSTRUCTION REPORTS: Prepare daily construction reports recording the following information concerning events at Project site:

A. List of subcontractors at Project site.
B. List of separate contractors at Project site.
C. Approximate count of personnel at Project site.
D. Equipment at Project site.
E. Material deliveries.
F. High and low temperatures and general weather conditions, including presence of rain or snow.
G. Accidents.
H. Meetings and significant decisions.
I. Unusual events (see special reports).
J. Stoppages, delays, shortages, and losses.
K. Meter readings and similar recordings.
L. Emergency procedures.
M. Orders and requests of AHJ representatives.
N. Change Orders received and implemented.
O. Construction Change Directives received and implemented.
P. Services connected and disconnected.
Q. Equipment or system tests and startups.
R. Partial completions and occupancies.
S. Substantial Completions authorized.

1.03 MATERIAL LOCATION REPORTS: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:

A. Material stored prior to previous report and remaining in storage.
B. Material stored prior to previous report and since removed from storage and installed.
C. Material stored following previous report and remaining in storage.

1.04 SITE CONDITION REPORTS: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

1.05 SPECIAL REPORTS: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Submit directly to Owner within one (1) day of the occurance, and advise the Owner in advance if these events are known or predictable. Distribute copies of report to parties affected by the occurrence.

1.06 UPDATE AND MAINTAIN THE RECORD-SET of Construction Documents at not less than weekly intervals, indicating differences between the Construction Documents and the actual installed Work. Mark revisions made during construction with colored pencil - do not conceal any Work before revisions have been recorded. Note actual routing of under-slab plumbing and utility lines, if different from design drawings. In addition, maintain copies of the Owner's separate contractor's submittals as applicable. Do not construct or install any portion of the Work related to these drawings at any time without such drawings being available at the site.

END OF SECTION 01 32 26

SECTION 01 32 33 – PHOTOGRAPHIC DOCUMENTATION

PART 1 - PROVIDE DIGITAL PHOTOGRAPHIC DOCUMENTATION of the work progress.

1.01 PROVIDE DIGITAL images in JPEG format, with minimum sensor size of 8.0 megapixels. Provide un-cropped digital images with date stamps typically. With each photo, digitally record the following information:

A. Project Name
B. Date
C. General Description - indicating location and direction (by compass point).

1.02 WALL ROUGH-IN PHOTOS: Before covering wall framing with drywall or other finishes, take photographs of the wall framing showing electrical devices, wiring, piping and other items that will be concealed in the final work.

1.03 PERIODIC CONSTRUCTION PHOTOGRAPHS: Take a minimum of TWENTY (20) photographs on a weekly basis. Select vantage points to best show status of construction and progress for that time period.

1.04 FINAL COMPLETION CONSTRUCTION PHOTOGRAPHS: Take a minimum of one (1) photo in each room or space and as many as are necessary to document finished conditions of the project before Owner occupancy. Take adequate exterior photos to indicate all areas of the outside of the completed building.

1.05 SUBMIT DIGITAL PHOTOS on a USB compatible flash-drive / memory stick on a monthly basis, coinciding with cutoff date associated with each Application for Payment.

1.06 RETAIN ONE PRINTED SET of photographs in Field Office at Project site, available at all times for reference.

END OF SECTION 01 32 33

SECTION 01 33 00 – SUBMITTAL PROCEDURES

PART 1 - PROCEDURE

1.01 MAKE SUBMITTALS of Product Data, Shop Drawings and Samples when required by other Sections of these Specifications (submittals not required may be returned without review or comment). Submittal review is a gratuitous assistance to the Contractor, for purposes of general information, and to verify conformance with the design intent of the Contract Documents. Review of submittals does not relieve the Contractor from responsibility for errors which may exist in the submitted data.

1.02 "APPROVAL" OF SUBMITTALS will not be provided by the Architect, as the General Contractor is to approve submittals before submitting to the Architect per requirements of the General Conditions. Submittals may be marked by the Architect as "No Exceptions, Exceptions Noted, Revise and Resubmit or Rejected. If errors or omissions in submittals are subsequently discovered after review, revise and resubmit submittals as expeditiously as necessary not to delay the Work progress.

1.03 COORDINATE each submittal with other submittals and related activities that require sequential activity. Group transmittal of different kinds of submittals for the same unit of work so that information is available for checking each item when it is received.

1.04 CONSECUTIVELY NUMBER all submittals. When an item is resubmitted for any reason, transmit under a new letter of transmittal and with a new transmittal number.

1.05 CONTENT: All submittals must contain the date of submission; the Project Title; the Contractor's name, the name of the sub-contractor, supplier or manufacturer, as applicable; identification of the product being submitted; clear identification of field dimensions, verified by the Contractor; relation to adjacent or critical features of the Work; applicable standards; identification of deviations from the Contract Documents; and a clear space for the Contractor's approval stamps.

1.06 STAMP & APPROVE all submittals with the Contractor's approval stamp, dated, and initialed or signed, certifying approval of the submittal, verification of the product being submitted, and verification that the product submitted complies with the requirements of the Contract Documents. Failure to properly verify conformance and conditions at the job site will not relieve the Contractor of the responsibility to properly install the Work.

1.07 ELECTRONIC PRODUCT-DATA & SHOP DRAWING SUBMITTALS: In order to conserve paper, limit delivery/courier expenses, and to expedite the review process, provide electronic Product-Data submittals. Maintain one (1) set of printed, approved Product-Data and shop-drawing submittals at the Project Site, complete with applicable review and approval comments, if they exist. Make and distribute as many copies of Product Data and Shop Drawings as necessary for records, coordination, construction operations, and for incorporation into the Operations and Maintenance Manual.

1.08 ARCHITECT'S ELECTRONIC MEDIA DATA (EMD) DRAWING FILES: Upon request and execution of an agreement form regarding use of EMD data files by the Contractor with the Architect, the Electronic Media Data (EMD) files of the Drawings will be provided one (1) time only from the Architect to the Contractor for use in preparing Shop Drawing Submittals at no cost. Per General Conditions Paragraph 1.6.2, the Architect makes no representations as to the accuracy or completeness of the EMD provided, as it is not considered to be a part of the Contract Documents. EMD information may be provided in either AutoCAD's .DWG format, or as a "Revit" electronic model. Additional transfers of EMD from the Architect will be provided upon receipt of a Service Fee of $250.00 per issue together with an executed EMD use agreement form (if not being issued to the Contractor directly).

1.09 QUANTITY OF SAMPLES TO BE SUBMITTED: Submit three (3) samples of products when required by the Contract Documents, for return of one (1) sample to the Contractor. Costs for submittal and return of samples must be paid by the Contractor. Approval of samples does not imply acceptance of the finished in-place product. Color, texture, and patterns must conform to the samples submitted and if the range of texture, color or pattern varies, the work will be rejected.

1.10 REQUIRED PROCESSING TIME: Allow time for submittal review, and time for re-submittals, within the Construction Schedule. Allow additional time if processing must be delayed to permit coordination with subsequent submittals – until that information is submitted. If submittals are incomplete, the Architect will advise the Contractor as soon as possible, and the processing time will start when the additional information is received. No extension of the Contract Time will be authorized because of failure to transmit submittals in advance of the Work to permit processing time.

A. ALLOW 10 BUSINESS DAYS for initial review of each submittal, and for processing each resubmittal.

END OF SECTION 01 33 00

SECTION 01 35 16 – ALTERATION PROJECT PROCEDURES

PART 1 - GENERAL

1.01 ALTERATION WORK includes demolition, cutting, patching, removal, refinishing and relocation of existing construction, systems and equipment.

1.02 PERFORM ALTERATION WORK to existing buildings in a manner that will preserve the aesthetic and structural integrity of the existing materials and construction elements intended to remain.

1.03 PERFORM ALTERATION WORK of existing operational “critical facilities” to minimize the risk of interruption of the Owner’s ongoing business critical operations.

1.04 PERFORM DISRUPTIVE, NOISE OR DUST PRODUCING ALTERATION WORK in existing occupied facilities only during non-business hours, and then only with the Owner’s advance approval.

1.05 RELATED SECTIONS: Division-01 Section “Cutting and Patching” applies to the Work of this Section, as applicable.

PART 2 - DEFINITIONS:

2.01 REMOVE: Detach items from existing construction and legally dispose of them off-site, unless indicated to be removed and salvaged or removed and reinstalled.

2.02 REMOVE AND SALVAGE: Detach items from existing construction and deliver them to Owner, ready for reuse.

2.03 REMOVE AND REINSTALL: Detach items from existing construction, prepare them for reuse, and reinstall them where indicated.

2.04 SALVAGE: Carefully detach from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse. Include fasteners or brackets needed for reattachment elsewhere.

2.05 RECYCLE: Recovery of demolition waste for subsequent processing in preparation for reuse.

2.06 EXISTING TO REMAIN: Existing functional items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

PART 3 - CRITICAL FACILITIES & SYSTEMS:

3.01 CRITICAL SYSTEMS or EQUIPMENT

A. None

3.02 CRITICAL FACILITIES include existing occupied rooms or spaces that contain critical equipment or systems.

3.03 CRITICAL UTILITIES & SYSTEMS include the following associated support elements:

A. None

3.04 CRITICAL SYSTEMS WORK includes the shut-down or the potential risk of accidental shut-down of critical system, including the following:

A. None

3.05 NO DUST, WATER OR VIBRATION IS ACCEPTABLE

A. None

PART 4 - SUBMITTALS

4.01 SHUT-DOWN SCHEDULE: Submit a schedule of proposed shut-downs before starting Work at the Site. Notify the Architect and the Owner, in writing, of any planned utility outages required. Submit schedule not less than two (2) weeks in advance of need of planned shut-downs, and obtain the Owner’s approval before proceeding.

4.02 SUBMIT METHODS OF PROCEDURES (MOP’S):

A. PREPARE MOP’S for all activities related to “Critical Systems Work” and obtain the Owner’s “acceptance” before proceeding with the Work described. The Owner’s acceptance does not alter the Contractor’s sole responsibility for construction means and methods.

B. IDENTIFY ALL SUB-CONTRACTORS and their personnel that will be involved in the Work. Schedule Critical-System shut-downs no less than ninety-six (96) hours in advance of the Work. The Contractor’s Superintendent (or approved alternative with the same supervisory authority) must be present at the site during all Work covered by a MOP.

PART 5 - JOB CONDITIONS

5.01 VISIT THE PROJECT SITE to determine by inspection the existing conditions, including access to the Site, the nature of structures, objects, and materials to be encountered, and other salient facts concerning or affecting the Work. Information of existing conditions indicated on the Drawings does not constitute a guarantee that other conditions or items may not be found or encountered.

5.02 OBVIOUS EXISTING CONDITIONS, installations, and obstructions affecting the Work of this Section must be taken into consideration as being necessary Work and must be included as part of Work of this Section – as if completely shown or described.

PART 6 - PRODUCTS

6.01 TEMPORARY EQUIPMENT ENCLOSURES: Provide to prevent dust from construction operations to affect critical equipment. Construct with a framework of metal or fire-retardant wood studs with an 8 mil anti-static reinforced poly sheet (flame spread rating of 15 or less). Tape seal all internal and perimeter joints. Maintain existing critical system cooling

systems, or provide temporary cooling system with HEPA filters from the construction area, if necessary. Provide dustproof doors and walk-off mats.

6.02 TEMPORARY OVERHEAD PROTECTION PLATFORMS: Provide when any Work will be performed over critical equipment or systems. Construct with mineral-fiber board or fire-retardant wood plywood decking over metal or fire-retardant wood framing with a minimum 8-mil anti-static reinforced poly sheet (with a flame spread rating of 15 or less) enclosure, and a non-combustible walking surface above. Provide a toe-board on all sides to prevent tools and debris from falling onto critical equipment, and railings for worker's safety. Support temporary protection platforms without affecting existing critical equipment, maintaining all existing environmental cooling and exhaust systems ass applicable.

6.03 REPAIR AND MAINTAIN temporary protection of critical equipment during construction operations, and remove from site when no longer necessary.

PART 7 - EXECUTION

7.01 PERFORM THE WORK so that disruption to occupied areas is minimized and to maintain the Owner's ongoing use during normal hours of operations to the greatest extent feasible.

7.02 CAREFULLY REMOVE AND REPLACE EXISTING CONSTRUCTION indicated to remain upon completion, but which require removal to complete the Work. Match condition of construction prior to the start of the Work unless otherwise required. Carefully remove and store items indicated for relocations in new Work, or to be retained by Owner, to avoid damage. Thoroughly clean and reinstall as indicated or as directed. Protect and store items identified for reuse. Deliver salvaged items to a facility as directed by the Owner within ten (10) miles of the Project site.

7.03 EXISTING UTILITIES: Maintain existing utilities indicated to remain, and protect against potential damage during demolition operations. Do not interrupt existing utilities serving occupied facilities, except when so authorized in writing by the Owner. When necessary, provide temporary services during interruptions of existing utilities, acceptable to the local AHJ.

7.04 PREPARATION

A. Cut, move, or remove items as are necessary for access to alteration and renovation Work. Replace and restore at completion.
B. Remove unsuitable material not marked for salvage, such as rotted wood, corroded metals, and deteriorated masonry and concrete.
C. Replace materials as specified for finished Work.
D. Remove debris and abandoned items from area and from concealed spaces.
E. Prepare surface and remove surface finishes to provide for proper installation of new Work and finishes.
F. Close openings in exterior surfaces to protect existing Work and salvageable items from weather and extremes of temperature and humidity. Insulate ductwork and piping to prevent condensation in exposed areas.

7.05 INSTALLATION

A. Coordinate alteration and renovation Work to expedite completion, and in required sequences of Work to accommodate Owner occupancy, as applicable.
B. Remove, cut and patch Work in a manner to minimize damage and to provide restoring products and finishes to original and or specified condition.
C. Refinish visible existing surfaces to remain in renovated rooms and spaces, to specified condition for each material, with neat transition to adjacent finishes.
D. Restore existing operational plumbing, heating, ventilation, air conditioning, and electrical systems to full operational condition, when exists.
E. Recover and refinish Work that exposes mechanical and electrical Work that is exposed accidentally during the Work.
F. Install products and finish materials as indicated within individual Specification Sections.

7.06 TRANSITIONS

A. Where new Work abuts or aligns with existing construction, perform a smooth and even transition. Patch work to match existing adjacent Work in texture and appearance.
B. When finished surfaces are cut so that a smooth transition with new Work is not possible, terminate existing surface along a straight line at a natural line of division and make recommendation to the Architect.

7.07 ADJUSTMENTS

A. Where removal of partitions or walls result in adjacent spaces becoming one, rework floors, walls, and ceiling surfaces to a smooth plane without breaks, steps, or bulkheads.
B. Provide smooth transitions when a change of plane of 1/4 inch in twelve (12) inches occurs.
C. Trim existing doors as necessary to clear new floor finish. Refinish trim as required.
D. Fit Work at penetrations of surfaces to be flush and non-obtrusive.

7.08 REPAIR OF DAMAGED SURFACES: Patch or replace portions of existing surfaces that are damaged, lifted, discolored, or showing imperfections. Repair substrate prior to patching finishes.

7.09 FINISHES

A. Finish surfaces as specified in individual product specification sections.
B. Finish patches to produce uniform finish and texture over entire area. When finish cannot be matched, refinish entire surface to nearest intersections.

7.10 CRITICAL FACILITY CONSTRUCTION OPERATIONS:

A. DOWNTIME OR INTERRUPTION OF CRITICAL SYSTEMS must be kept to an absolute minimum. Electrical system shut-downs cannot exceed thirty (30) minutes unless a portable generator system is provided.

B. HAND DIG (POTHOLE) to locate critical utilities whenever excavation is required within five (5) feet of the marked, assumed position determined by the utility locator service.
C. CONSTRUCTION ABOVE CRITICAL FACILITIES (in ceiling plenum above or exposed directly above Critical Facilities): Provide sanitary waste, vent, and storm drainage piping with heavy-duty joint connections with a minimum 15 PSI pressure rating comply with requirements of Factory Mutual 1680.3. Provide cooling coil condensate and other piping conveying contents below 55 degrees F must be insulated and vapor sealed to prevent condensation. Locate HVAC equipment and fan-coil units outside of the Critical Facility area.

END OF SECTION 01 35 16

SECTION 01 35 61 – VOLUNTARY SUSTAINABILITY GOALS

PART 1 - COMPLY WITH REQUIREMENTS of this Section regarding sustainable design and construction requirements, and provide submittal documents and reports to verify conformance with the Owner's voluntary sustainability goals.

1.01 MAXIMUM VOC CONTENT REQUIREMENTS: For all field-applied applications inside the building envelope, provide products that do not exceed the following values, in accordance with Federal Standard 40 CFR 59, Subpart D:

Wood Glues: ..... 30 g/L.
Metal to Metal Adhesives: ..... 30 g/L.
Adhesives for Porous Materials (Except Wood): ..... 50 g/L.
Subfloor Adhesives: ..... 50 g/L.
Plastic Foam Adhesives: ..... 50 g/L.
Carpet Adhesives: ..... 50 g/L.
Carpet Pad Adhesives: ..... 50 g/L.
VCT and Asphalt Tile Adhesives: ..... 50 g/L.
Cove Base Adhesives: ..... 50 g/L.
Gypsum Board and Panel Adhesives: ..... 50 g/L.
Rubber Floor Adhesives: ..... 60 g/L.
Ceramic Tile Adhesives: ..... 65 g/L.
Multipurpose Construction Adhesives: ..... 70 g/L.
Fiberglass Adhesives: ..... 80 g/L.
Contact Adhesive: ..... 80 g/L.
Structural Glazing Adhesives: ..... 100 g/L.
Wood Flooring Adhesive: ..... 100 g/L.
Structural Wood Member Adhesive: ..... 140 g/L.
Top and Trim Adhesive: ..... 250 g/L.
Plastic Cement Welding Compounds: ..... 250 g/L.
ABS Welding Compounds: ..... 325 g/L.
CPVC Welding Compounds: ..... 490 g/L.
PVC Welding Compounds: ..... 510 g/L.
Adhesive Primer for Plastic: ..... 550 g/L.
Other Adhesives: ..... 250 g/L.
Architectural Sealants: ..... 250 g/L.
Nonmembrane Roof Sealants: ..... 300 g/L.
Single-Ply Roof Membrane Sealants: ..... 450 g/L.
Other Sealants: ..... 420 g/L.
Sealant Primers for Nonporous Substrates: ..... 250 g/L.
Sealant Primers for Porous Substrates: ..... 775 g/L.
Modified Bituminous Sealant Primers: ..... 500 g/L.
Other Sealant Primers: ..... 750 g/L.
Flat Paints, Coatings, and Primers: ..... 50 g/L.
Nonflat Paints, Coatings, and Primers: ..... 150 g/L.
Clear Wood Finishes, Varnishes: ..... 350 g/L.
Clear Wood Finishes, Lacquers: ..... 550 g/L.
Floor Coatings: ..... 100 g/L.
Shellacs, Clear: ..... 730 g/L.
Shellacs, Pigmented: ..... 550 g/L.
Stains: ..... 250 g/L.
Flat Interior Topcoat Paints: ..... 50 g/L.
Nonflat Interior Topcoat Paints: ..... 150 g/L.
Clear Wood Finishes, Lacquers: ..... 550 g/L.
Floor Coatings: ..... 100 g/L.
Shellacs, Clear: ..... 730 g/L.
Shellacs, Pigmented: ..... 550 g/L.
Primers, Sealers, and Undercoaters: ..... 200 g/L.
Dry-Fog Coatings: ..... 400 g/L.
Zinc-Rich Industrial Maintenance Primers: ..... 340 g/L
Special Purpose Contact Adhesive (used to bond melamine covered board, metal, unsupported vinyl, Teflon, ultra-high molecular weight polyethylene, rubber or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
Aerosol Adhesive, General Purpose Mist Spray: ..... 65 percent by weight.
Aerosol Adhesive, General Purpose Web Spray: ..... 55 percent by weight.
Special Purpose Aerosol Adhesive (All Types): ..... 70 percent by weight.
Anticorrosive and Antirust Paints Applied to Ferrous Metals: ..... 250 g/L.
Anticorrosive and Antirust Paints Applied to Ferrous Metals: ..... 250 g/L.
Clear Wood Finishes, Varnishes and Sanding Sealers: ..... 350 g/L.
Pretreatment Wash Primers: ..... 420 g/L.

1.02 AROMATIC COMPOUNDS: Paints and coatings must not contain more than 1.0 percent by weight total aromatic compounds (hydrocarbon compounds containing one or more benzene rings).

1.03 RESTRICTED COMPONENTS: Do not use any materials in the Project containing the following:

Acrolein
Acrylonitrile
Antimony
Benzene
Butyl benzyl phthalate
Cadmium
Di (2-ethylhexyl) phthalate
Di-n-butyl phthalate
Di-n-octyl phthalate
1,2-dichlorobenzene
Diethyl phthalate
Dimethyl phthalate
Ethylbenzene
Formaldehyde
Hexavalent chromium
Isophorone
Lead
Mercury
Methyl ethyl ketone
Methyl isobutyl ketone
Methylene chloride
Naphthalene
Toluene (methylbenzene)
1,1,1-trichloroethane
Vinyl chloride

1.04 DO NOT USE COMPOSITE WOOD or agrifiber products or adhesives that contain any urea-formaldehyde resin.

PART 2 - EXECUTION

2.01 CONSTRUCTION WASTE MANAGEMENT: Comply with Division-01 Section “Construction Waste Management and Disposal.".

2.02 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT: Comply with "SMACNA IAQ Guideline for Occupied Buildings under Construction."

A. If the Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period, provide filter media having a MERV 8 rating per ASHRAE 52.2 at each return-air inlet for the air-handling system used during construction. Replace all air filters immediately prior to occupancy.

END OF SECTION 01 35 61

SECTION 01 42 00 – DEFINITIONS & REFERENCES

PART 1 - REFER TO THE GENERAL CONDITIONS for basic Contract definitions, and as follows:

1.01 DIRECTED: A command or instruction by the Architect or the Architect's consultants. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."

1.02 INDICATED: Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

1.03 INSTALLER: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations. Using a term such as "carpentry" does not imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that requirements specified apply exclusively to tradespeople of the corresponding generic name.

1.04 EXPERIENCED: Having successfully completed a minimum of five (5) previous projects similar in size and scope to this Project; being familiar with special requirements indicated; and having complied with requirements of AHJ representatives.

1.05 FURNISH: To supply and deliver to Project site, unload and inspect for damage, ready to install.

1.06 INDICATED: Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including 'shown', 'noted', 'scheduled', and 'specified' have the same meaning as 'indicated'.

1.07 INSTALL: Operations at the Project Site, including but not limited to: temporarily storing, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, start up, protecting, cleaning, and similar operations making ready for use.

1.08 PROJECT SITE (or SITE): The designated interior-space or land-area upon which construction activities will be performed. The extent of the Project Site may not be identical to the legal description of the land on which Project is to be built.

1.09 PROVIDE: To furnish and install, complete and ready for the intended use."

1.10 REGULATIONS: Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules,

1.11 conventions, and agreements within the construction industry that control performance of the Work.

1.12 SUPPLY: Same as Furnish.

1.13 CONSTRUCTION DOCUMENT SCOPE ABBREVIATIONS:

A. C F C I: Contractor Furnished, Contractor installed (typical unless otherwise indicated)
B. N I C: Not In Contract (O F O I)
C. O F C I: Owner Furnished, Contractor installed
D. O F O I: Owner Furnished and Owner installed, by the Owner or by separate Owner contractor(s)

1.14 ABBREVIATIONS AND ACRONYMS: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they mean the recognized name of the entities indicated in Thomson Gale's "Encyclopedia of Associations" or in Columbia Books' "National Trade & Professional Associations of the U.S."

1.15 INDUSTRY STANDARDS

A. APPLICABILITY OF STANDARDS: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
B. PUBLICATION DATES: Comply with standards in effect as of date of the Contract Documents, unless otherwise indicated.
C. CONFLICTING REQUIREMENTS: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to Architect for a decision before proceeding. The quantity or quality level shown or specified will be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.
D. COPIES OF STANDARDS: Each entity engaged in construction on Project must be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source and make them available on request.

END OF SECTION 01 42 00

SECTION 01 43 39 – MOCKUPS

PART 1 - THIS SECTION INCLUDES administrative and procedural requirements of the Contractor, for temporary construction and demolition of mockups at the Project Site.

1.01 MOCKUPS are full-size physical assemblies constructed on-site, to verify color and finish selections made, to demonstrate the full range of aesthetic effects and workmanship, and: to indicated qualities of material finishes and application or execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.

A. CONSTRUCT MOCKUPS using the same workers that will be used during the construction of the Work, and with the same supervisory personnel.
B. CONSTRUCT MATERIAL MOCKUPS when required by other “technical” Sections at locations on-site approved by the Architect.

1.02 INTEGRATED EXTERIOR MOCKUP: Provide an assembly erected separately from the building on the Project Site, consisting of multiple exterior products and materials, assemblies and sub-assemblies, and as follows:

A. Location: where indicated on the Drawings, or if not indicated, at location approved by the Architect and in accordance with requirements of the AHJ.
B. Location: Fabricate on the back-side of the temporary Project Site required in other Division-01 Sections.
C. Fabricate in accordance with the layout and elevation(s) as indicated on the Drawings, or if not indicated, in accordance with a layout subsequently provided by the Architect.
D. SIZE: 12 feet high x 18 feet wide (or as otherwise indicated in the Drawings)
E. Include exterior materials used throughout the Project, including but not limited to the following, as indicated:
   (1) Masonry assemblies
   (2) Decorative stone assemblies
   (3) EIFS assemblies, including reveal, control joints and colors
   (4) Decorative wood and metal assemblies, including windows, doors and storefront systems
   (5) Paints, sealants, and flashings coordinated with full range of project color selections
   (6) Decorative roof assemblies of roofing materials exposed to view by the public
   (7) Roof membrane and parapet
   (8) Roof edge sheet metal trim, with overlap of roof membrane onto building face
F. Typical exterior wall assemblies with various wood, plaster/stucco and fiber-cement cladding, including reveals, control and expansion joints, flashings and sealant joints
G. The intent of this integrated exterior mockup is to physically test the weather-resistant and air-barrier assemblies and their connections with adjacent materials, and to establish quality and workmanship standards for construction of the entire building facility.
H. Note that “partial” approval will not be provided – the Integrated Exterior Mockup must be complete with all required materials and finishes, before testing operations will proceed.

1.03 ROOM MOCKUPS: Construct room mockups incorporating required materials and assemblies, finished according to requirements indicated in the Drawings. Provide required lighting and additional lighting where required to enable the Architect and the Owner to evaluate quality of the Work. Provide room mockups of the following rooms:

A. Two (2) room mockups at locations to be determined..
B. TIME: Construct mockups as soon as contract is awarded, once Contractor is available at the project site, and mockup design is determined by Architect. Note that no "partial" approvals of mockup will be provided – the mockup must be complete with ALL indicated finishes, materials and colors as indicated before approval will be granted.

PART 2 - NOTIFY ARCHITECT not less than seven (7) days in advance of dates and times when mockups will be constructed, and ready for review and approval.

2.01 OBTAIN ARCHITECT’S APPROVAL OF MOCKUPS before starting any work, fabrication, or construction of finishes included within the mockup.

2.02 MAINTAIN MOCKUPS DURING CONSTRUCTION in an undisturbed condition as a standard for judging the completed Work.

2.03 APPROVAL OF MOCKUP DOES NOT CONSTITUTE approval of deviations from the Contract Documents unless such deviations are specifically approved by Architect in writing.

2.04 DEMOLISH AND REMOVE MOCKUP before Substantial Completion, except as otherwise permitted to remain as a part of the Work.

PART 3 - PERFORMANCE TESTING OF INTEGRATED EXTERIOR MOCKUP:

3.01 THE OWNER WILL ENGAGE a qualified building-enclosure testing entity to perform performance testing of the completed Integrated Exterior Mockup, as follows:

A. Test protocols require that air infiltration testing will precede water tests. If it is necessary for water testing to be performed before air testing, the mockup will be allowed to completely dry before the air testing begins.
B. Note that the wind machine used for dynamic water testing will generate wind speeds equivalent to 10 PSF.
C. Center deflection readings will be taken for glass during testing.

3.02 TESTS THAT MAY BE PERFORMED, in the order indicated, include the following:

A. Preliminary wind-loading at code-required wind load value at the highest building elevation.
B. Air Infiltration (Static Pressure) testing per ASTME E783, except that test pressure difference will be 6.24 PSF.

C. Water Penetration (Cyclic Pressure) testing per ASTM E 1105, testing to full design pressure without derating.
D. No water intrusion will be acceptable.
   (1) The definition of water intrusion includes any water visible from the finished building interior, whether or not defined as being “controlled.”
E. Water penetration testing of exterior wall cladding per CBC Section 1403.2, testing to the code prescribed minimum pressure or building design pressure, whichever is greater.
F. Oscillating, single 3/4 inch diameter garden-sprinkler hose spray testing over a twenty-four (24) hour period with a five (5) PSF wind pressure, with no water intrusion observed.

3.03 CORRECTIVE MEASURES: Correct deficiencies in the mock-up observed during testing and repeat tests as necessary to indicated compliance with the specified performance requirements and per the Contract Documents.

A. Resubmit submittals and shop drawings affected by these corrections, with changes made to assemblies necessary to successfully complete the testing operations.
B. Deficiencies requiring repair or modification to the mock-up will require complete retesting of the mock-up beginning with the initial tests unless otherwise requested by the testing entity.
C. If compliance with the performance standards is not achieved after two (2) complete retests, the Contractor must completely reconstruct the mock-up assembly with revised construction installation techniques and workmanship, and initiate new testing operations.

3.04 INCORPORATE CORRECTIVE MEASURES indicated by the test report into the final exterior wall assemblies.

END OF SECTION 01 43 39

SECTION 01 40 00 – QUALITY REQUIREMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.
B. Testing and inspection services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document and AHJ requirements.
   (1) Specific quality-assurance and quality-control requirements for individual work results are specified in their respective Specification Sections. Requirements in individual Sections may also cover production of standard products.
   (2) Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
   (3) Requirements for Contractor to provide quality-assurance and quality-control services required by Architect, Owner, Commissioning Authority or authorities having jurisdiction are not limited by provisions of this Section.
C. Related Requirements:
   (1) Section 012100 "Allowances" for testing and inspection allowances.

1.03 DEFINITIONS

A. Experienced: When used with an entity or individual, "experienced," unless otherwise further described, means having successfully completed a minimum of [**five**] <**Insert number**> previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.
B. Field Quality-Control Tests and Inspections: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
C. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, subcontractor, or sub-subcontractor, to perform a particular construction operation, including installation, erection, application, assembly, and similar operations.
   (1) Use of trade-specific terminology in referring to a Work result does not require that certain construction activities specified apply exclusively to specific trade(s).
D. Mockups: Full-size physical assemblies that are constructed either as freestanding temporary built elements or as part of permanent construction. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
   (1) Integrated Exterior Mockups: Mockups of the exterior envelope constructed on-site as [**freestanding temporary built elements**] [**as indicated in-place portions of permanent construction**], consisting of multiple products, assemblies, and subassemblies, with cutaways enabling inspection of concealed portions of the Work.
      (a) Include each system, assembly, component, and part of the exterior wall [**and roof**] to be constructed for the Project. Colors of components shall be those selected by the Architect for use in the Project.
   (2) Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes; doors; windows; millwork; casework; specialties; furnishings and equipment; and lighting.
   (3) Product Mockups: Mockups that may include multiple products, materials, or systems specified in a single Section.
   (4) In-Place Mockups: Mockups constructed on-site in their actual final location as part of permanent construction.
E. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria. Unless otherwise indicated, copies of reports of tests or inspections performed for other than the Project do not meet this definition.
F. Product Tests: Tests and inspections that are performed by a nationally recognized testing laboratory (NRTL) according to 29 CFR 1910.7, by a testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program (NVLAP), or by a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.
G. Source Quality-Control Tests and Inspections: Tests and inspections that are performed at the source (e.g., plant, mill, factory, or shop).
H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. The term "testing laboratory" shall have the same meaning as the term "testing agency."
I. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work, to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

J. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work, to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Contractor's quality-control services do not include contract administration activities performed by Architect.

1.04 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

(1) If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated-Design Services Statement: Submit a statement signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.05 CONFLICTING REQUIREMENTS

A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements is specified and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, inform the Architect regarding the conflict and obtain clarification prior to proceeding with the Work. Refer conflicting requirements that are different, but apparently equal, to Architect for clarification before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.06 ACTION SUBMITTALS

A. Mockup Shop Drawings: For **integrated exterior** mockups.

(1) Include plans, sections, elevations, and details, indicating materials and size of mockup construction.
(2) Indicate manufacturer and model number of individual components.
(3) Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.07 INFORMATIONAL SUBMITTALS

A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.
B. Qualification Data: For Contractor's quality-control personnel.
C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility submitted to authorities having jurisdiction before starting work on the following systems:

(1) Seismic-force-resisting system, designated seismic system, or component listed in the Statement of Special Inspections.
(2) Primary wind-force-resisting system or a wind-resisting component listed in the Statement of Special Inspections.

D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.
E. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

(1) Specification Section number and title.
(2) Entity responsible for performing tests and inspections.
(3) Description of test and inspection.
(4) Identification of applicable standards.
(5) Identification of test and inspection methods.
(6) Number of tests and inspections required.
(7) Time schedule or time span for tests and inspections.
(8) Requirements for obtaining samples.
(9) Unique characteristics of each quality-control service.

F. Reports: Prepare and submit certified written reports and documents as specified.
G. Permits, Licenses, and Certificates: For Owner's record, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents established for compliance with standards and regulations bearing on performance of the Work.

1.08 CONTRACTOR'S QUALITY-CONTROL PLAN

A. Quality-Control Plan, General: Submit quality-control plan within **10** days of **Notice to Proceed**, and not less than **five** days prior to preconstruction conference. Submit in format acceptable to Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities and to coordinate Owner's quality-assurance and quality-control activities. Coordinate with Contractor's Construction Schedule.
B. Quality-Control Personnel Qualifications: Engage qualified personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.

(1) Project quality-control manager [may also serve as Project superintendent] [shall not have other Project responsibilities].
(2) <Insert qualifications appropriate to Project>.

C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.
D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:

(1) Contractor-performed tests and inspections, including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections. Distinguish source quality-control tests and inspections from field quality-control tests and inspections.
(2) Special inspections required by authorities having jurisdiction and indicated on the Statement of Special Inspections.
(3) Owner-performed tests and inspections indicated in the Contract Documents[, including tests and inspections indicated to be performed by Commissioning Authority].

E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring the Work into compliance with standards of workmanship established by Contract requirements and approved mockups.
F. Monitoring and Documentation: Maintain testing and inspection reports, including log of approved and rejected results. Include Work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming Work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.09 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections and herein. Include the following:

(1) Date of issue.
(2) Project title and number.
(3) Name, address, telephone number, and email address of testing agency.
(4) Dates and locations of samples and tests or inspections.
(5) Names of individuals making tests and inspections.
(6) Description of the Work and test and inspection method.
(7) Identification of product and Specification Section.
(8) Complete test or inspection data.
(9) Test and inspection results and an interpretation of test results.
(10) Record of temperature and weather conditions at time of sample-taking and testing and inspection.
(11) Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
(12) Name and signature of laboratory inspector.
(13) Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

(1) Name, address, telephone number, and email address of technical representative making report.
(2) Statement on condition of substrates and their acceptability for installation of product.
(3) Statement that products at Project site comply with requirements.
(4) Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
(5) Results of operational and other tests and a statement of whether observed performance complies with requirements.
(6) Statement of whether conditions, products, and installation will affect warranty.
(7) Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:

(1) Name, address, telephone number, and email address of factory-authorized service representative making report.
(2) Statement that equipment complies with requirements.
(3) Results of operational and other tests and a statement of whether observed performance complies with requirements.
(4) Statement of whether conditions, products, and installation will affect warranty.
(5) Other required items indicated in individual Specification Sections.

1.10 QUALITY ASSURANCE

A. Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units. As applicable, procure products from manufacturers able to meet qualification requirements, warranty requirements, and technical or factory-authorized service representative requirements.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
D. Installer Qualifications: A firm or individual experienced in installing, erecting, applying, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.
F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged in the activities indicated.
    (1) Requirements of authorities having jurisdiction shall supersede requirements for specialists.
G. Testing and Inspecting Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspection indicated, as documented in accordance with ASTM E329, and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect, demonstrate, repair, and perform service on installations of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following Contractor's responsibilities, including the following:
    (1) Provide test specimens representative of proposed products and construction.
    (2) Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
    (3) Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
    (4) Build site-assembled test assemblies and mockups, using installers who will perform same tasks for Project.
    (5) Build laboratory mockups at testing facility, using personnel, products, and methods of construction indicated for the completed Work.
    (6) When testing is complete, remove test specimens and test assemblies, [**and**]mockups[**, and laboratory mockups**]; do not reuse products on Project.
    (7) Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect[**and Commissioning Authority**][**, through Construction Manager**], with copy to Contractor. Interpret tests and inspections, and state in each report whether tested and inspected Work complies with or deviates from the Contract Documents.
K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
    (1) Build mockups of size indicated.
    (2) Build mockups in location indicated or, if not indicated, as directed by Architect[**or Construction Manager**].
    (3) Notify Architect[**and Construction Manager**] [**seven**] <**Insert number**> days in advance of dates and times when mockups will be constructed.
    (4) Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at Project.
    (5) Demonstrate the proposed range of aesthetic effects and workmanship.
    (6) Obtain Architect's[**and Construction Manager's**] approval of mockups before starting corresponding Work, fabrication, or construction.
        (a) Allow [**seven**] <**Insert number**> days for initial review and each re-review of each mockup.
    (7) Promptly correct unsatisfactory conditions noted by Architect's preliminary review, to the satisfaction of the Architect, before completion of final mockup.
    (8) Approval of mockups by the Architect does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
    (9) Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    (10) Demolish and remove mockups when directed unless otherwise indicated.
L. Integrated Exterior Mockups: Construct integrated exterior mockup **according to approved Shop Drawings**. Coordinate installation of exterior envelope materials and products for which mockups are required in individual Specification Sections, along with supporting materials. Comply with requirements in "Mockups" Paragraph.
    (1) Coordinate construction of the mockup to allow observation of air barrier installation, flashings, air barrier integration with fenestration systems, and other portions of the building air/moisture barrier and drainage assemblies, prior to installation of veneer, cladding elements, and other components that will obscure the work.

1.11 QUALITY CONTROL

A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility (typically “Special Inspections”), Owner will engage a qualified testing agency to perform these services.
   (1) Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspection they are engaged to perform.
   (2) Payment for these services will be made directly by the Owner.
   (3) Costs for retesting and reinspecting construction that replaces or is necessitated by Work that failed to comply with the Contract Documents will be charged to Contractor and the Contract Sum will be adjusted by Change Order.

B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities, whether specified or not, to verify and document that the Work complies with requirements.
   (1) Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
   (2) Engage a qualified testing agency to perform quality-control services.
      (a) Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
   (3) Notify testing agencies at least **24** hours in advance of time when Work that requires testing or inspection will be performed.
   (4) Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
   (5) Testing and inspection requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
   (6) Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

D. Testing Agency Responsibilities: Cooperate with Architect, Commissioning Authority and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
   (1) Notify Architect, Commissioning Authority, and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
   (2) Determine the locations from which test samples will be taken and in which in-situ tests are conducted.
   (3) Conduct and interpret tests and inspections, and state in each report whether tested and inspected Work complies with or deviates from requirements.
   (4) Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
   (5) Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
   (6) Do not perform duties of Contractor.

E. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."

F. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

G. Contractor's Associated Requirements and Services: Cooperate with agencies and representatives performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
   (1) Access to the Work.
   (2) Incidental labor and facilities necessary to facilitate tests and inspections.
   (3) Adequate quantities of representative samples of materials that require testing and inspection. Assist agency in obtaining samples.
   (4) Facilities for storage and field curing of test samples.
   (5) Coordinate delivery of samples to testing agencies if required with appropriate chain of custody documentation.
   (6) Preliminary design mix proposed for use for material mixes that require control by testing agency.
   (7) Security and protection for samples and for testing and inspection equipment at Project site.

H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspection.
   (1) Schedule times for tests, inspections, obtaining samples, and similar activities.

I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents[**as a component of Contractor's quality-control plan**]. Coordinate and submit concurrently with Contractor's Construction Schedule. Update and submit with each Application for Payment.
   (1) Schedule Contents: Include tests, inspections, and quality-control services, including Contractor- and Owner-retained services, commissioning activities, and other Project-required services paid for by other entities.

(2) Distribution: Distribute schedule to Owner, Architect,[**Commissioning Authority,**] [**Construction Manager,**] testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.12 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Owner will engage a qualified testing agency or special inspector to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner , as indicated in the Statement of Special Inspections attached to this Section, and as follows:

(1) Verifying that manufacturer maintains detailed fabrication and quality-control procedures, and reviewing the completeness and adequacy of those procedures to perform the Work.
(2) Notifying Architect, Commissioning Authority, and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
(3) Submitting a certified written report of each test, inspection, and similar quality-control service to Architect, Commissioning Authority, with copy to Contractor and to authorities having jurisdiction.
(4) Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
(5) Interpreting tests and inspections and stating in each report whether tested and inspected Work complies with or deviates from the Contract Documents.
(6) Retesting and reinspecting corrected Work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 TEST AND INSPECTION LOG

A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:

(1) Date test or inspection was conducted.
(2) Description of the Work tested or inspected.
(3) Date test or inspection results were transmitted to Architect.
(4) Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's[**, Commissioning Authority's,**][**and Construction Manager's**] [**and**] [**authorities' having jurisdiction**] reference during normal working hours.

(1) Submit log at Project closeout as part of Project Record Documents.

3.02 REPAIR AND PROTECTION

A. General: On completion of testing, inspection, sample-taking, and similar services, repair damaged construction and restore substrates and finishes.

(1) Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."

B. Protect construction exposed by or for quality-control service activities.
C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 01 40 00

SECTION 01 40 10 – STRUCTURAL TESTING AND INSPECTIONS

PART 3 - EXECUTION

3.01 JOBSITE TESTING AND INSPECTION REQUIREMENTS - GENERAL

A. General:

(1) Scope of Work:

(a) The Owner will engage a qualified inspection and testing agency(s) to perform special inspections and testing for all structural members and assemblies as noted herein.
(b) Special inspections are in addition to inspections by the authority having jurisdiction required by IBC 2021 Section 110.
(c) Refer to architectural/mechanical/electrical/civil specifications and drawings for additional special inspection and testing that may be required.

(2) Special inspections and testing are applicable to all revisions and/or future work added by amendments to the construction documents.

(3) Definitions:

(a) Special inspector: the agency engaged by the Owner and approved by the authority having jurisdiction to act as the designated representative to perform inspections.
(b) Special inspection: inspection performed by the special inspector according to IBC 2021 Section 1704 to ensure compliance with approved construction documents and referenced standards.
(c) (P) Periodic inspection: the part-time or intermittent observation by the special inspector of work being performed. Special inspector shall be present in the area where the work is being performed. Observation of all work (100% visual) shall be made at the completion of the work.
(d) (C) Continuous inspection: the full-time observation by the special inspector of work being performed. Special inspector shall be present in the area where the work is being performed. Observation of all work (100% visual) shall be made at the completion of the work.
(e) (100%): 100% observation / testing prior to concealment of indicated element.
(f) Testing and Inspection Type 1: Material Verification and Workman Certifications.
(g) Testing and Inspection Type 2: Site Inspection for Layout and Quantities.
(h) Testing and Inspection Type 3: Site Inspection for Procedures and Workmanship.
(i) Testing and Inspection Type 4: Site Testing for Material Properties and Workmanship.
(j) Testing and Inspection Type 5: Fabrication Facility Inspection and Testing for Workmanship.

(4) Deficiencies in Work:

(a) Correct deficiencies in work that tests and inspections indicate do not comply with the contract documents and referenced standards.
(b) All cost of additional testing and/or inspections for corrective work shall be borne by the Contractor.

B. Shop Fabrications:

(1) General:

(a) Perform inspections and testing for all shop fabricated structural members and assemblies as noted herein. Special inspector shall perform special inspections and testing unless the fabricator is registered and approved by the authority having jurisdiction to perform such work without special inspection or fabrication has a current ICC-ES evaluation report.
(b) Special inspector shall verify the fabricator maintains and follows detailed shop fabrication and quality control procedures, unless fabricator is registered and approved.
(c) At the completion of fabrication, the approved fabricator shall submit a certificate of compliance to the authority having jurisdiction according to IBC 2021 Section 1704.2.5.1.
(d) Approved fabricators may perform testing noted herein except that nondestructive testing (NDT) shall only be performed by personnel with qualifications that meet or exceed the criteria of AWS D1.1 Subclause 6.14.6 and American Society for Nondestructive Testing (ASNT) SNT-TC-1A or ASNT CP-189.

(2) Shop Fabrications Included:

(a) Shop fabricated structural steel including stairs and railing elements
(b) Shop fabricated cold formed steel elements

3.02 JOBSITE TESTING AND INSPECTION REQUIREMENTS FOR SOILS AND FOUNDATIONS

A. Soils Inspection and Testing:

(1) Excavation Extents and Depths:

(a) Type 2: Site inspection for Layout and Quantities.
(b) Criteria: Verify excavations are extended to the proper depth and have reached the proper material.
(c) Frequency: (P) Periodic inspection.

(2) Subgrade Material Verification:

(a) Type 2: Site inspection for Layout and Quantities.
(b) Criteria: Prior to placement of compacted fill, inspect subgrade and verify that site has been prepared properly.
(c) Frequency: (P) Periodic inspection.

(3) Fill Materials:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Perform classification and testing of compacted fill materials.
  (c) Frequency: (P) Periodic inspection.

(4) Controlled Fill Placement:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify use of proper materials, densities, compaction, and lift thicknesses during placement and compaction of compacted fill.
  (c) Frequency: (C) Continuous inspection.

(5) Bearing Material Verification:
  (a) Type 4: Site Testing for Material Properties and Workmanship.
  (b) Criteria: Verify bearing material is adequate to achieve the design bearing capacity.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: Geotechnical Investigation Report.

(6) See civil drawings and/or specifications for additional earthwork and utility inspection requirements.

(7) See civil drawings and/or specifications for classification and testing requirements for compacted fill and/or controlled low-strength material.

B. Drilled Piers Inspection and Testing:

(1) Shaft Location, Diameter, and Plumbness:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify placement, locations, and plumbness, confirm element diameters and bell diameters (if applicable). Inspect drilling operations and maintain complete and accurate records for each element.
  (c) Frequency: (C) Continuous inspection.

(2) Bearing Material Verification:
  (a) Type 4: Site Testing for Material Properties and Workmanship.
  (b) Criteria: Verify bearing material is adequate to achieve the design bearing capacity.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: Geotechnical Investigation Report.

(3) Penetration into Bedrock:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify depth of penetration into bearing material and overall length.
  (c) Frequency: (C) Continuous inspection.

(4) Reinforcing and Concrete Placement:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Inspect concrete and reinforcing steel per the jobsite testing and inspection requirements for concrete, record concrete volumes.
  (c) Frequency: See jobsite testing and inspection requirements for concrete.

3.03 JOBSITE TESTING AND INSPECTION REQUIREMENTS FOR CONCRETE

A. Cast-in-Place Concrete Inspection and Testing – Before Concrete Placement:

(1) Formwork Dimensional Layout:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Prior to placement of concrete inspect formwork of first pour of each type (grade beam, column, structural slab, slab-on-deck, etc.).
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: ACI 301-16 2.2-2.3

(2) Reinforcing Steel Placement:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify grade, finish, size, bar quantity, location, spacing, cover, hook lengths, splice lengths, splice locations, bend diameters, coating, surface conditions, and supports.
  (c) Frequency: 100% observation / testing.
  (d) Standard: ACI 301-16 3.2-3.3.

(3) Bolts and Embedments Placement:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify type, finish, diameter, length, quantity, embedment length, spacing and edge distances, use of placing template where specified.
  (c) Frequency: 100% observation / testing.

(4) Bolts and Embedments Welding:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Inspect per the jobsite testing and inspection requirements for steel.
  (c) Frequency: See jobsite testing and inspection requirements for steel.

(5) Reinforcement Welding:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify ASTM A706 reinforcing steel. Inspect all welds.
(c) Frequency: (C) Continuous inspection.
(d) Standard: AWS D1.4.

(6) Reinforcement Field Bending:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspect reinforcement field bending.
(c) Frequency: (P) Periodic inspection.
(d) Standard: ACI 301-16 3.3.2.8.

(7) Mechanical Connectors:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspect mechanical connectors.
(c) Frequency: (P) Periodic inspection.
(d) Standard: ICC-ES Report.

(8) Epoxy or Galvanized Reinforcing:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Inspect epoxy or galvanized reinforcing.
(c) Frequency: 100% observation / testing.
(d) Standard: ACI 301-16 3.2.1.2.

B. Cast-in-Place Concrete Inspection and Testing – During Concrete Placement:

(1) Verify Design Mix:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify use of approved design mixture for each truck load.
(c) Frequency: 100% observation / testing.
(d) Standard: ACI 318 Ch. 19, 26.4.3, 26.4.4.

(2) Concrete Placement Inspection:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspect placement of concrete per standard (see below).
(c) Frequency: (C) Continuous inspection.
(d) Standard: ACI 301-16 5.3.2.

(3) Concrete Curing Inspection:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspect curing of concrete per standard (see below).
(c) Frequency: (P) Periodic inspection.
(d) Standard: ACI 301-16 5.3.6.

C. Structural Concrete Testing:

(1) Note: Nondestructive testing may be permitted by the architect but will not be used as sole basis for approval or rejection of deficient concrete.
(2) Welding.

(a) Type 4: Site Testing for Material Properties and Workmanship;
(b) Criteria: Welding testing and inspection per the jobsite testing and inspection requirements for steel.
(c) Frequency: See jobsite testing and inspection requirements for steel.

(3) Composite Concrete Sample – f'c < 5000 PSI:

(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Obtain sample at point of placement. For drilled piers obtain near beginning of load prior to placement in shaft.
(c) Frequency: At least once a day or at least once for each 100 cubic yards of concrete or at least once for each 5,000 square feet of surface area for slabs and walls. Adjust frequency as required to provide minimum 5 total tests per mix but not more than one sample per truck load.
(d) Standard: ASTM C172.

(4) Composite Concrete Sample – f'c ≥ 5000 psi and Shotcrete:

(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Obtain sample at point of placement. For drilled piers obtain near beginning of load prior to placement in shaft.
(c) Frequency: At least once a day or at least once for each 50 cubic yards of concrete or at least once for each 5,000 square feet of surface area for slabs and walls. Adjust frequency as required to provide minimum 5 total tests per mix but not more than one sample per truck load.
(d) Standard: ASTM C172.

(5) Composite Concrete Sample – Drilled Piers:

(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Obtain sample at point of placement. For drilled piers obtain near beginning of load prior to placement in shaft.

(c) Frequency: Each shaft. Adjust frequency as required to provide minimum 5 total tests per mix but not more than one sample per truck load.
(d) Standard: ASTM C172.

(6) Slump/Slump Flow:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Specified slump shall be as submitted in the mix design ± 1 1/2". perform additional tests when concrete consistency appears to change.
(c) Frequency: Each composite sample (see above).
(d) Standard: ASTM C143 (slump) or ASTM C1611 (slump flow).

(7) Air content when air entrainment is specified and lightweight concrete:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Test per standard (see below).
(c) Frequency: Each composite sample (see above).
(d) Standard: ASTM C231 pressure method for normal weight concrete or ASTM C173 volumetric method for light weight concrete.

(8) Temperature:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Test per standard (see below). Required when air temperature is 40°F and below or 80°F and above.
(c) Frequency: Each composite sample (see above) and at 60 minute intervals.
(d) Standard: ASTM C1064.

(9) Unit weight for structural lightweight concrete:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Test per standard (see below).
(c) Frequency: Each composite sample (see above).
(d) Standard: ASTM C138.

(10) Cold Weather Curing:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Record maximum and minimum concrete temperature during curing period when daily average air temperature of 40°F or below is expected for 3 successive days during curing period.
(c) Frequency: N/A
(d) Standard: ASTM C1074.

(11) Compressive Strength:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Reports of compressive strength tests shall contain the following information: date of concrete placement, location of concrete batch in work, design 28-day compressive strength, concrete supplier and mixture ID number, time of batch and placement, ambient air temperature, site added water and admixtures, unit weight, and as required by ASTM C39. Acceptance criteria per ACI 318.
(c) Frequency: Test per schedule below:
(i) 7 days: 6x12 or 4x8
(ii) 28 days: 6x12 or 4x8
(iii) 56 days: 6x12 or 4x8 (if 28 day tests do not achieve specified 28 day strength).
(d) Standard: ASTM C31, ASTM C39. Either (4) 6x12 or (4) 4x8 cylinders.

D. Cast-in-Place Concrete Inspection and Testing - After Concrete Placement:
(1) Cold Weather Curing:
(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspect curing of concrete per standard (see below).
(c) Frequency: (P) Periodic inspection.
(d) Standard: ACI 301-16 5.3.6.
(e) Standard: ACI 301-16 9.3.6

(2) Floor Flatness and Levelness:
(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Perform measurements within 48 hours of finishing operations and prior to removal of shores or forms.
(c) Frequency: (P) Periodic inspection.
(d) Standard: ASTM E1155.

(3) Shore/Form Removal:
(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspect removal of shoring/forms for beams and structural slabs per standard (see below).
(c) Frequency: (P) Periodic inspection.
(d) Standard: ACI 301-16: 2.3.2.

E. Expansion, Sleeve and Screw Anchor Inspection and Testing – Before Anchor Installations:

(1) Verify Installation Procedure:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Review contractor's installation procedure.
  (c) Frequency: 100% observation / testing.
  (d) Standard: ICC-ES Report.

(2) Verify Anchor Type, Diameter, and Materials:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify anchor products to be used for compliance of anchor type, diameter, materials and product
  (c) Frequency: 100% observation / testing.
  (d) Standard: ICC-ES Report.

(3) Verify Max Allowed Impact Wrench Torque:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: For screw anchors, confirm the maximum allowed impact wrench torqued as defined by the manufacturer.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: ICC-ES Report.

F. Expansion, Sleeve and Screw Anchor Inspection and Testing – During Anchor Installations:

(1) Continuous inspection required regardless if periodic inspection is permitted by ICC-ES report.

(2) Verify Hole Layout:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify the hole layout matches the contract documents. Review of layout should include number of anchors, spacing, edge distances, and quantity.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: ICC-ES Report.

(3) Grout Extents Around Masonry Anchors:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: At masonry anchors, confirm the grout extents surrounding the anchor have been satisfied.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: ICC-ES Report.

(4) Verify Hole Diameter, Depth, Cleaning:
  (a) Type 2: Site inspection for Layout and Quantities.
  (b) Criteria: Verify the hole diameter and depth meet the manufacturer requirements and the requirements shown on the contract documents. Observe the hole cleaning procedure is in accordance with the anchor manufacturers recommendations.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: ICC-ES Report.

(5) Verify Anchor Installation:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify the anchor installation of the anchor is in accordance with the anchor manufacturer recommendations.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: ICC-ES Report.

G. Expansion, Sleeve and Screw Anchor Inspection and Testing – After Anchor Installations:

(1) Verify Installation of Attached Assembly:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify number, edge distances, and anchor flush with and perpendicular to the receiving surface.
  (c) Frequency: (C) Continuous inspection.

(2) Torque Test Anchors:
  (a) Type 4: Site Testing for Material Properties and Workmanship.
  (b) Criteria: Test anchor with calibrated torque wrench to 100% of the installation torque noted in ICC-ES report. Attain specified torque within 1/2 turn of the nut.
  (c) Frequency: 100% observation / testing.
  (d) Standard: ICC-ES Report.

H. Adhesive Anchors and Reinforcing Inspection and Testing - Before Anchor / Reinforcing Installation:

(1) Verify Installation Procedure:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Review contractor's installation procedure. Verify adhesive to be used for product type, manufacturer recommendations, expiration dates, pot life, working temperature ranges for adhesives, substrates and anchors.
  (c) Frequency: 100% observation / testing.
  (d) Standard: ICC-ES Report.

(2) Verify Anchor Type, Diameter and Materials:

(a) Type 2: Site inspection for Layout and Quantities.
(b) Criteria: Verify anchor to be used for compliance of anchor type, diameter, length, finish, and base material. Verify solid grouted area around anchors in grouted masonry
(c) Frequency: 100% observation / testing.
(d) Standard: ICC-ES Report.

I. Adhesive Anchors and Reinforcing Inspection and Testing - During Anchor/Reinforcing Installation:

(1) Continuous inspection required regardless if periodic inspection is permitted by ICC-ES report.
(2) Verify Hole Layout:

(a) Type 2: Site inspection for Layout and Quantities.
(b) Criteria: Verify the hole layout matches the contract documents. Review of layout should include number of anchors, spacing, edge distances, and quantity.
(c) Frequency: (C) Continuous inspection.
(d) Standard: ICC-ES Report.

(3) Grout Extents Around Masonry Anchors:

(a) Type 2: Site inspection for Layout and Quantities.
(b) Criteria: At masonry anchors, confirm the grout extents surrounding the anchor have been satisfied.
(c) Frequency: (C) Continuous inspection.
(d) Standard: ICC-ES Report.

(4) Verify Hole Diameter, Depth and Cleaning:

(a) Type 2: Site inspection for Layout and Quantities.
(b) Criteria: Verify the hole diameter and depth meet the manufacturer requirements and the requirements shown on the contract documents. Observe the hole cleaning procedure is in accordance with the adhesive manufacturer's recommendations.
(c) Frequency: (C) Continuous inspection.
(d) Standard: ICC-ES Report.

(5) Verify Anchor Installation:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify the anchor installation of the anchor is in accordance with the adhesive manufacturer's recommendations. Verify the temperatures of the adhesive, substrate and anchors are within the manufacturer recommended ranges.
(c) Frequency: (C) Continuous inspection.
(d) Standard: ICC-ES Report.

J. Adhesive Anchors and Reinforcing Inspection and Testing - After Anchor / Reinforcing Installation:

(1) Verify Installation of Attached Assembly:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify number, edge distances, and anchor flush with and perpendicular to the receiving surface. Verify full cure time has elapsed prior to application of torque or load to anchor.
(c) Frequency: (C) Continuous inspection.

(2) Tension Test Anchors / Reinforcing:

(a) Type 4: Site Testing for Material Properties and Workmanship.
(b) Criteria: Test the installation of the first 3 of each type, base material, and position (down, horizontal, overhead). Observe ASTM E488 minimum edge distances for determining test locations. Submit Proposed test locations and requests for required tension test load values to engineer.
(c) Frequency: First 3 and 1% of remaining. 100% observation / testing.
(d) Standard: ASTM E488 Static Tension.

3.04 JOBSITE TESTING AND INSPECTION REQUIREMENTS FOR MASONRY – LEVEL 2

A. General:

(1) Compliance with Approved Submittals.

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify Compliance with Approved Submittals.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art 1.5.

B. As Masonry Construction Begins:

(1) Verify f'm:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify Specified Compressive Strength of Masonry, f'm conforms to structural drawings and specifications.
(c) Frequency: 100% observation / testing.

(2) Proportions of Site-prepared Mortar:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify Proportions of Site-prepared Mortar conform to standard.
(c) Frequency: (P) Periodic inspection.

(d) Standard: TMS 602, Art. 2.1 and 2.6A.

(3) Construction of Mortar Joints:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify Construction of Mortar Joints conforms to standard.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 3.3B.

(4) Reinforcement, anchorages, connectors, embeds:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Grade, type, and size of reinforcement, connectors, anchor bolts, and prestressing tendons and anchorages.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS602, Art 3.4.

(5) Sample Panel Construction:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Use of materials and procedures accepted for the work. Minimum panel dimensions are 4 feet by 4 feet. The acceptable standard for the work is established by the accepted panel.
(c) Frequency: (P) Periodic Inspection.
(d) Standard: TMS 602, Art. 1.6D.

C. During Construction:

(1) Placement of Masonry Units and Mortar Joint Construction:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify placement of masonry units and mortar joint construction is in compliance with the standard.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 3.3B.

(2) Size and Location of Elements.

(a) Type 2: Site Inspection for Layout and Quantities:
(b) Criteria: Verify Size and Location of Structural Elements conforms to drawings and specifications.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 3.3F.

(3) Type, size and location reinforcement and embeds:

(a) Type 2: Material Verification and Workman Certifications.
(b) Criteria: Verify type, size, and location of anchors, including other details of anchorage of masonry to structural members, frames, or other constructions.
(c) Frequency: (P) Periodic inspection.

(4) Welding of Reinforcement:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Inspection and testing of welding of reinforcement per Steel table and specifications.
(c) Frequency: (C) Continuous inspection.
(d) Standard: Per Steel table and specifications.

(5) Cold (<40F) and Hot (>90F) Weather:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify Preparation, construction, and protection of masonry during hot and cold weather conform to standard.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 1.8C and 1.8D.

D. Prior to Grouting:

(1) Grout space:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify grout space is free of mortar droppings and debris, and cleanouts provided as required.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 3.2D and 3.2F.

(2) Reinforcement, Anchorages, Connectors, Embeds:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify type, size, quantity, location, spacing, cover, splice length, splice location, surface condition, support, and securing. See structural concrete table and specifications for field bending, coated reinforcement, and mechanical connectors.
(c) Frequency: (P) Periodic inspection, 100% observation/testing.
(d) Standard: TMS602, Art. 2.4 and 3.4, Structural concrete table and specifications.

(3) Proportions of Site Mixed Grout:

(a) Type 1: Material Verification and Workman Certifications.

(b) Criteria: Verify Proportions of Site Mixed Grout conform to ASTM C476.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 2.6B, ASTM C476.

(4) Mix Design for Off-Site Prepared Grout:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify Mix Design for Off-Site Prepared Grout conforms to standard.
(c) Frequency: 100% observation / testing.
(d) Standard: TMS 602, Art. 2.6B, ASTM C476.

(5) Construction of Mortar Joints:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify Construction of Mortar Joints conforms to standard.
(c) Frequency: (P) Periodic inspection.
(d) Standard: TMS 602, Art. 3.3B.

3.05 JOBSITE TESTING AND INSPECTION REQUIREMENTS FOR STEEL

A. Steel Testing and Inspection Definitions:

(1) UT – Ultrasonic Testing.
(2) MT – Magnetic Particle Testing.
(3) PT – Penetration Testing.
(4) SFRS – Seismic Force Resisting System.
(5) TTT – Tension Through Thickness.

B. Steel Framing – General:

(1) HDAS, HAS, DAS, Threaded studs.

(a) Type 5: Fabrication Facility Inspection and Testing for Workmanship.
(b) Criteria: Review manufacturer certifications for fastener materials.
(c) Frequency: 100% observation / testing.
(d) Standard: AISC 360, Chapter N.

(2) Non-USA Material ≥3/4" loaded in tension through-thickness (ASTM A435):

(a) Type 5: Fabrication Facility Inspection and Testing for Workmanship.
(b) Criteria: Not required for steel produced in USA. Any discontinuity causing a total loss of back reflection that cannot be contained within a circle 3 inches in diameter shall be rejected. Required where noted as 'TTT' in drawings.
(c) Frequency: 100% observation / testing.
(d) Standard: AISC 360, Chapter N, ASTM A435.

(3) Non-USA Material ≥3/4" embedded plate assemblies - UT Testing:

(a) Type 5: Fabrication Facility Inspection and Testing for Workmanship.
(b) Criteria: Not required for steel produced in USA. Test along centerline of plate width after welding.
(c) Frequency: 100% observation / testing.
(d) Standard: AISC 360, Chapter N.

(4) Non-USA Material ≥1 1/2" loaded in tension through-thickness (ASTM A898):

(a) Type 5: Fabrication Facility Inspection and Testing for Workmanship.
(b) Criteria: Not required for steel produced in USA. Criteria to be met 6 inches above and below each weld. Required where noted as 'TTT' in drawings
(c) Frequency: 100% observation / testing.
(d) Standard: AISC 360, Chapter N, ASTM A898 (Level 1 Criteria).

(5) MT or PT for thermally cut beam copes and access holes where material ≥2":

(a) Type 5: Fabrication Facility Inspection and Testing for Workmanship.
(b) Criteria: MT or PT for thermally cut beam copes and access holes where material ≥2". Any crack shall be deemed unacceptable regardless of size or location.
(c) Frequency: 100% observation / testing.
(d) Standard: AISC 360, Chapter N.

C. Prior to Bolting:

(1) Verify Manufacturer's Certifications:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify manufacturer's certifications available for fastener materials.
(c) Frequency: (C) Continuous inspection.
(d) Standard: AISC 360, Chapter N.

(2) Preinstallation bolt testing:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Pre-installation verification testing by installation personnel observed and documented for fastener assemblies and methods used. Not applicable for snug tight joints.
(c) Frequency: (C) Continuous inspection.
(d) Standard: AISC 360, Chapter N.

(3) Verify bolt material, diameter, handling:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Verify bolt material, diameter, and handling. Verify proper storage for fastener components. Verify fasteners marks in accordance with ASTM requirements.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AISC 360, Chapter N.

(4) Verify bolting procedure:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify proper fasteners (grade, type, bolt length if threads are to be excluded from shear plane) and bolting procedure selected for joint detail.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AISC 360, Chapter N.

(5) Verify connecting element preparation:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify connecting elements meet requirements (if specified), including hole preparation and faying surface condition.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AISC 360, Chapter N.

D. During Bolting:

(1) Verify bolts in all holes.
  (a) Type 3: Site Inspection for Procedures and Workmanship:
  (b) Criteria: Verify fastener assemblies of suitable condition placed in all holes and washers are positioned as required.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AISC 360, Chapter N.

(2) Verify bolts positioned as required:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify fasteners placed in all holes and positioned as required.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AISC 360, Chapter N.

(3) Installation at pretensioned and slip-critical:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Joint brought in snug-tight condition prior to pre-tensioning, fastener prevented from rotating. Fasteners pretensioned in proper sequence (from the most rigid point toward the free edges). Pretensioned and slip-critical joints using calibrated wrench or turn-of-nut method without matchmarking. Inspector shall be present during installation of fasteners.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N, RCSC Specification.

E. After Bolting:

(1) Document acceptance/rejection of joints:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Document acceptance/rejection of bolted connections, member or joint.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

F. Prior to Welding:

(1) Verify welder qualifications and ID system:
  (a) Type 1: Material Verification and Workman Certifications:
  (b) Criteria: Review manufacturer certifications for welding consumables and welding procedure specifications. Verify welder identification system. Note: The fabricator or erector, as applicable, shall maintain a system by which a welder who has welded a joint or member can be identified. Stamps, if used, shall be the low-stress type.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

(2) Verify WPS available:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Verify Welding Procedure Specification available.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

(3) Verify base material and weld material:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Verify base material and weld material are in conformance with approved documents.
  (c) Frequency: (P) Periodic inspection.

(d) Standard: AISC 360, Chapter N.

(4) Verify weld procedures and weld equipment:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify weld procedures and weld equipment are in conformance with approved documents.
(c) Frequency: (C) Continuous inspection.
(d) Standard: AISC 360, Chapter N.

(5) Verify joint fit-up, prep, backing, etc:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify fit up of groove welds (including joint geometry) meet requirements for joint preparation, dimensions (alignment, root opening, root face, bevel), cleanliness (condition of steel surfaces), tacking (tack weld quality and location), and backing type and fit (if applicable). Verify fit up of fillet welds meet requirements for dimensions (alignment, gaps at root), cleanliness (condition of steel surfaces), and tacking (tack weld quality and location). Verify configuration and finish of access holes.
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

G. During Welding:

(1) Use of qualified welders:

(a) Type 1: Material Verification and Workman Certifications:
(b) Criteria: Verify welder certifications.
(c) Frequency: (P) Periodic Inspection.
(d) Standard: AISC 360, Chapter N.

(2) Handling of welding consumables:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify proper control and handling of welding consumables including packaging and exposure control.
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

(3) No welding over cracked tack welds:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify no welding over cracked tack welds.
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

(4) Environment conditions (wind/temp, etc.):

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify Welding Procedure Specification is followed for Environment conditions. Verify wind speed, precipitation, and temperature are within limits.
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

(5) Verify WPS followed:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify use of qualified welders. Verify Welding Procedure Specification is followed for settings on welding equipment, travel speed, selected welding materials, shielding gas type/flow rate, preheat applied, interpass temperature maintained (minimum and maximum), proper position (F, V, H, OH).
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

(6) Welding techniques:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify proper welding techniques for single and multi-pass welds (interpass and final cleaning, each pass within profile limitations, each pass meets quality requirements).
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

H. After Welding:

(1) Verify welds cleaned:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify welds cleaned in accordance with standard.
(c) Frequency: (P) Periodic inspection.
(d) Standard: AISC 360, Chapter N.

(2) Verify weld size, length and location:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify weld size, length and location conform to approved documents.
(c) Frequency: (C) Continuous inspection.
(d) Standard: AISC 360, Chapter N.

(3) Welds meet visual acceptance criteria:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify welds meet visual acceptance criteria for crack prohibition, weld/base metal fusion, crater cross section, weld profiles, weld size, undercut, and porosity. Where inspector observes questionable welds, non-destructive testing shall be performed.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N, AWS D1.1.

(4) Arc strikes:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify no arc strikes are present in the base material. Arc strikes shall be tested using non-destructive methods and repaired if necessary.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

(5) Verify no cracking in k-areas and at weld access holes:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: When welding of doubler plates, continuity plate, or stiffeners has been performed in the k-area, visually inspect the web k-area for cracks within 3 inches of the weld.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

(6) Repair activities:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify repair activities conform to standard. Backing and weld tabs removed, and fillet welds added where required.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

(7) Document acceptance/rejection of joints:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Document acceptance/rejection of welded joints and/or members.
  (c) Frequency: (C) Continuous inspection.
  (d) Standard: AISC 360, Chapter N.

(8) UT CJP welds, material ≥5/16":
  (a) Type 4: Site Testing for Material Properties and Workmanship.
  (b) Criteria: Only applies for buildings assigned to Risk Category I or II. Ultrasonic testing of complete joint penetration groove welds subject to transversely applied tension loading in butt, T- and corner joints, in materials thicker than 5/16".
  (c) Frequency: 10% observation / testing. The rate of UT shall be increased to 100% if the reject rate of the first 20 inspections is greater than 5%.
  (d) Standard: AISC 360, Chapter N.

I. Inspection of Steel Composite Construction Prior to Concrete Placement:

(1) Verify installation of steel deck:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify placement and installation of steel deck is in conformance with the approved documents. Document acceptance or rejection of steel elements.
  (c) Frequency: 100% observation / testing.
  (d) Standard: AISC 360, Chapter N.

(2) Shear stud layout, count and testing:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify shear stud layout, count, and testing are in conformance with the approved documents. Document acceptance or rejection of steel elements.
  (c) Frequency: 100% observation / testing.
  (d) Standard: AISC 360, Chapter N.

J. Steel Deck Inspections and Testing - Prior to Deck Placement:

(1) Verify deck profile, grade and thickness:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Verify compliance of materials (deck and all deck accessories) with construction documents, including profiles, material properties, and base metal thickness.
  (c) Frequency: 100% observation / testing.
  (d) Standard: SDI QA/QC.

(2) Document acceptance/rejection of deck:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Document acceptance/rejection of deck and deck accessories.
  (c) Frequency: 100% observation / testing.

(d) Standard: SDI QA/QC.

(3) Fastener manufacturer installation instructions are available:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify fastener manufacturer installation instructions are available for mechanical fasteners.
(c) Frequency: (P) Periodic inspection.
(d) Standard: SDI QA/QC.

(4) Verify proper tools are available for deck installation:

(a) Type 1: Material Verification and Workman Certifications.
(b) Criteria: Verify proper tools are available for deck installation.
(c) Frequency: (P) Periodic inspection.
(d) Standard: SDI QA/QC.

(5) Verify deck fastener storage and handling:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify proper storage for mechanical fasteners.
(c) Frequency: (P) Periodic inspection.
(d) Standard: SDI QA/QC.

K. Steel Deck Inspections and Testing - During Deck Installation:

(1) Verify deck type and layout:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify deck type and layout conforms to approved documents.
(c) Frequency: (P) Periodic inspection.
(d) Standard: SDI QA/QC.

(2) Verify deck fastening (PAF / Screws / Welds) type, size, spacing and layout:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify deck fastening (PAF / Screws / Welds) type, size, spacing and layout conform to approved documents.
(c) Frequency: (P) Periodic inspection.
(d) Standard: SDI QA/QC.

(3) Verify fasteners are installed per manufacturer instructions and are fully seated:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify fasteners are installed per manufacturer instructions and are fully seated and positioned correctly.
(c) Frequency: (P) Periodic inspection.
(d) Standard: SDI QA/QC.

(4) Welding requirements - See welding requirements in Structural Steel:

(a) Type: See welding requirements in Structural Steel.
(b) Criteria: See welding requirements in Structural Steel.
(c) Frequency: See welding requirements in Structural Steel.
(d) Standard: See welding requirements in Structural Steel.

L. Steel Deck Inspections and Testing - After Deck Installation:

(1) Verify compliance of deck and deck accessories:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify compliance of deck and deck accessories comply with construction documents. Verify deck materials are represented by the mill certifications that comply with the construction documents.
(c) Frequency: 100% observation / testing.
(d) Standard: SDI QA/QC.

(2) Verify support and sidelap connection type, size, spacing and layout:

(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Check spacing, type, diameter, and installation of support, sidelap, and perimeter fasteners. Verify screws adequately penetrate base material (3 threads min). Verify repair activities. No popped screw heads or stripped screws are permitted. All damage screws shall be replaced. Verify PAF's are fully driven.
(c) Frequency: 100% observation / testing.
(d) Standard: SDI C, SDI NC, SDI RD, ICC-ES Reports.

(3) Inspect connection installation:

(a) Type 3: Site Inspection for Procedures and Workmanship.
(b) Criteria: Verify connection installation conforms to standard.
(c) Frequency: 100% observation / testing.
(d) Standard: SDI QA/QC, SDI C, SDI NC, SDI RD, ICC-ES Reports.

(4) Document acceptance/rejection of deck connections:

(a) Type 2: Site Inspection for Layout and Quantities.

(b) Criteria: Document acceptance/rejection of deck, accessories, and connections. Verify materials have been drawn together.
(c) Frequency: 100% observation / testing.
(d) Standard: SDI C, SDI NC, SDI RD.

3.06 JOBSITE TESTING AND INSPECTION REQUIREMENTS FOR COLD FORMED STEEL

A. Note: Martin/Martin recommends the special inspections in this section for load bearing framing and non-load bearing framing supporting the gravity loads of heavy veneers. The actual code requirements per IBC 2018 are listed below:
(1) Where a cold-formed steel truss clear span is 60 feet or greater, the special inspector shall verify that the temporary installation restraint/bracing and the permanent individual truss member restraint/bracing are installed in accordance with the approved truss submittal package.
(2) In wind Exposure Category B, where Vasd is 120 mph or greater or in wind exposure C or D, where Vasd is 110 mph or greater:
(a) Periodic special inspection is required for welding operations of elements of the main windforce-resisting system.
(b) Periodic special inspection is required for screw attachment, bolting, anchoring, and other fastening of elements of the main windforce-resisting system, where the specified fastener spacing at panel edges is more than 4 inches on center.
(c) Exception: Special inspections are not required for cold-formed steel light-frame shear walls and diaphragm, including screwing, bolting, anchoring, and other fastening to components of the windforce-resisting system where either of the following applies:
(i) The sheathing is gypsum board or fiberboard.
(ii) The sheathing is wood structural panel or steel sheets on only one side of the shear wall, shear panel, or diaphragm assembly and the fastener spacing of the sheathing is more than 4 inches on center.
(3) For the seismic force-resisting systems assigned to Seismic Design Category C, D, E, or F:
(a) Periodic special inspection is required for welding operations of elements of the seismic force-resisting system.
(b) Periodic special inspection is required for screw attachment, bolting, anchoring, and other fastening of elements of the seismic force-resisting system, including shear walls, braces, diaphragms, collectors (drag struts), and hold-downs.
(c) Exception: Special inspections are not required for cold-formed steel light-frame shear walls and diaphragm, including screwing, bolting, anchoring, and other fastening to components of the seismic force-resisting system where either of the following applies:
(i) The sheathing is gypsum board or fiberboard.
(ii) The sheathing is wood structural panel or steel sheets on only one side of the shear wall, shear panel, or diaphragm assembly and the fastener spacing of the sheathing is more than 4 inches on center.
(d) Exception: The above special inspections are not required if:
(i) The structure consists of light-frame construction, SDS does not exceed 0.5, and the building height of the structure does not exceed 35 feet.
(ii) The structure is a detached one or two family dwelling not exceeding two stories above grade plane and does not have any of the following horizontal or vertical irregularities in accordance with ASCE 7: torsional or extreme torsional irregularity, nonparallel systems irregularity, stiffness-soft story or stiffness-extreme soft story irregularity, discontinuity in lateral strength-weak story irregularity.
(4) Periodic special inspection shall be provided for the installation of cold-formed steel special bolted moment frames in the seismic force-resisting systems of structures assigned to Seismic Design Category D, E, or F.
(a) Exception: The above special inspections are not required if:
(i) The structure consists of light-frame construction, SDS does not exceed 0.5, and the building height of the structure does not exceed 35 feet.
(ii) The structure is a detached one or two family dwelling not exceeding two stories above grade plane and does not have any of the following horizontal or vertical irregularities in accordance with ASCE 7: torsional or extreme torsional irregularity, nonparallel systems irregularity, stiffness-soft story or stiffness-extreme soft story irregularity, discontinuity in lateral strength-weak story irregularity.

B. Framing:
(1) Members and connections:
(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify type, size, location, spacing.
(c) Frequency: (P) Periodic inspection.
(2) Bridging and blocking layout and connections:
(a) Type 2: Site Inspection for Layout and Quantities.
(b) Criteria: Verify type, location, and attachment.
(c) Frequency: (P) Periodic inspection.

(3) No field cuts / notches through flanges:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: No cuts or notches through section flanges permitted.
  (c) Frequency: (P) Periodic inspection.

(4) No member splices except where shown:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: No splicing of structural members permitted unless specified on the construction documents.
  (c) Frequency: (P) Periodic inspection.

(5) Punchouts are away from bearings/connections:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify spacing requirements from bearings and connections and reinforcing is used where required.
  (c) Frequency: (P) Periodic inspection.

(6) Studs seated in tracks per details:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify stud seated tightly within the top and bottom track with gap not exceeding permitted dimension, where gap is exceeded verify shims are provided.
  (c) Frequency: (P) Periodic inspection.

C. Welded Attachments:

(1) Procedures, materials, qualifications:
  (a) Type 1: Material Verification and Workman Certifications.
  (b) Criteria: Verify filler materials, welding procedures, welder qualifications, and manufacturer's certificate of compliance.
  (c) Frequency: 100% observation / testing.
  (d) Standard: AWS D1.1/D1.3.

(2) During welding:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify welds type, size, layout, and procedure are in accordance with the approved documents.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AWS D1.3.

(3) After welding:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify welds type, size, layout, and procedure are in accordance with the approved documents.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: AWS D1.3.

(4) Corrosion resistance treatment:
  (a) Type 3: Site Inspection for Procedures and Workmanship.
  (b) Criteria: Verify welded areas are treated with approved treatment to match corrosion resistance of effected area.
  (c) Frequency: (P) Periodic inspection.

D. Screwed Attachments:

(1) Type, diameter, length, spacing, edge distance:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify type, diameter, length, spacing, and edge distance are installed in accordance with the approved documents. Verify installation is in conformance with ICC-ES Report.
  (c) Frequency: (P) Periodic inspection.
  (d) Standard: ICC-ES Report.

(2) Penetration:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify screws are fully driven with a minimum penetration of 3 threads through the last material joined.
  (c) Frequency: (P) Periodic inspection.

(3) Connected materials drawn together:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: Verify connected materials have been drawn together.
  (c) Frequency: (P) Periodic inspection.

(4) No popped screw heads/stripped threads:
  (a) Type 2: Site Inspection for Layout and Quantities.
  (b) Criteria: No popped screw heads/stripped threads are permitted. All damaged screws shall be replaced.
  (c) Frequency: (P) Periodic inspection.

E. Power-Actuated Fasteners:

(1) Type, diameter, length, spacing, edge distance:
   (a) Type 2: Site Inspection for Layout and Quantities.
   (b) Criteria: Verify type, diameter, length, spacing, finish, base material, and edge distance are installed in accordance with the approved documents. Verify connected materials have been drawn together.
   (c) Frequency: (P) Periodic inspection. First of each fastener type and base material type.

(2) Conformance with ICC-ES Report:
   (a) Type 1: Material Verification and Workman Certifications.
   (b) Criteria: Verify installation is in conformance with ICC-ES Report.
   (c) Frequency: (P) Periodic inspection.
   (d) Standard: ICC-ES Report.

END OF SECTION 01 40 10

SECTION 01 45 35 – STATEMENT OF SPECIAL INSPECTIONS

PART 1 - GENERAL

The project requires Special Inspections as required by 2021 ICC Chapter 17: Section 1705 and as follows:

PART 2 - SCHEDULE OF SPECIAL INSPECTIONS

2.01 Section 1705.1.1: Special cases.
Special inspections and tests shall be required for proposed work that is, in the opinion of the building official, unusual in its nature, such as, but not limited to, the following examples:

A. Construction materials and systems that are alternatives to materials and systems prescribed by this code.
B. Unusual design applications of materials described in this code.
C. Materials and systems required to be installed in accordance with additional manufacturer's instructions that prescribe requirements not contained in this code or in standards referenced by this code.

2.02 Section 1705.2: Steel construction.
The special inspections and non-destructive testing of steel construction in buildings, structures, and portions thereof shall be in accordance with this section.

A. Section 1705.2.1: Structural steel
Special inspections and nondestructive testing of structural steel elements in buildings, structures and portions thereof shall be in accordance with the quality assurance inspection requirements of AISC 360.
B. Section 1705.2.2: Cold-formed steel deck
Special inspections and qualification of welding special inspectors for cold-formed steel floor and roof deck shall be in accordance with the quality assurance inspection requirements of SDI QA/QC. Section 1705.2.3: Open-web steel joist and joist girders
C. Section 1705.2.3: Open-web steel joists and joist girders.
Special inspections of open-web steel joists and joist girders in buildings, structures and portions thereof shall be in accordance with Table 1705.2.3.

TABLE 1705.2.3: REQUIRED SPECIAL INSPECTIONS OF OPEN-WEB STEEL JOISTS AND JOIST GIRDERS

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION	REFERENCED STANDARD
1.Installation of open-web steel joists and joist girders.			
a. End connections – welding or bolted.	—	X	SJI specifications listed in Section 2207.1.
b. Bridging – horizontal or diagonal.	—	—	
1. Standard bridging.	—	X	SJI specifications listed in Section 2207.1.
2. Bridging that differs from the SJI specifications listed in Section 2207.1.	—	X	

D. Section 1705.2.4: Cold-formed steel trusses spanning 60 feet or greater
Where a cold-formed steel truss clear span is 60 feet (18 288 mm) or greater, the special inspector shall verify that the temporary installation restraint/bracing and the permanent individual truss member restraint/bracing are installed in accordance with the approved truss submittal package.

2.03 Section 1705.3: Concrete construction.
Special inspections and tests of concrete construction shall be performed in accordance with this section and Table 1705.3.

TABLE 1705.3
REQUIRED SPECIAL INSPECTIONS AND TESTS OF CONCRETE CONSTRUCTION

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION	REFERENCED STANDARDa	IBC REFERENCE
1. Inspect reinforcement, including prestressing tendons, and verify placement.	—	X	ACI 318: Ch. 20, 25.2, 25.3, 26.6.1-26.6.3	1908.4
2. Reinforcing bar welding: a. Verify weldability of reinforcing bars other than ASTM A706; b. Inspect single-pass fillet welds, maximum $^{5}/_{16}$"; c. Inspect all other welds.	— X X	X X	AWS D1.4 ACI 318: 26.6.4	—
3. Inspect anchors cast in concrete.	—	X	ACI 318: 17.8.2	—
4. Inspect anchors post-installed in hardened concrete members.[b] a. Adhesive anchors installed in horizontally or upwardly inclined orientations to resist sustained tension loads. b. Mechanical anchors and adhesive anchors not defined in 4.a.	X	 X	ACI 318: 17.8.2.4 ACI 318: 17.8.2	—
5. Verify use of required design mix.	—	X	ACI 318: Ch. 19, 26.4.3, 26.4.4	1904.1, 1904.2, 1908.2, 1908.3
6. Prior to concrete placement, fabricate specimens for strength tests, perform slump and air content tests, and determine the temperature of the concrete.	X	—	ASTM C172 ASTM C31 ACI 318: 26.5, 26.12	1908.10
7. Inspect concrete and shotcrete placement for proper application techniques.	X	—	ACI 318: 26.5	1908.6, 1908.7, 1908.8
8. Verify maintenance of specified curing temperature and techniques.	—	X	ACI 318: 26.5.3-26.5.5	1908.9
9. Inspect prestressed concrete for: a. Application of prestressing forces; and b. Grouting of bonded prestressing tendons.	X X	— —	ACI 318: 26.10	—
10. Inspect erection of precast concrete members.	—	X	ACI 318: 26.9	—
11. For precast concrete diaphragm connections or reinforcement at joints classified as moderate or high deforability elements (MDE or HDE) in structures assigned to Seismic Design Category C, D, E or F, inspect such connections and reinforcement in the filed for: a. Installation of the embedded parts b. Completion of the continuity of reinfoecment across joints. c. Completion of connections in the field.	 X X X	ACI 318: 26.13.1.3 — — —	ACI 550.5	—
12. Inspect installation tolerances of precast concrete diaphragm connections for compliance with ACI 550.5	—	X	ACI 318: 26.13.1.3	—
13. Verify in-situ concrete strength, prior to stressing of tendons in post-tensioned concrete and prior to removal of shores and forms from beams and structural slabs.	—	X	ACI 318: 26.11.2	—
14. Inspect formwork for shape, location and dimensions of the concrete member being formed.	—	X	ACI 318: 26.11.1.2(b)	—
For SI: 1 inch = 25.4 mm.				

a. Where applicable, see Section 1705.12, Special inspections for seismic resistance.
b. Specific requirements for special inspection shall be included in the research report for the anchor issued by an approved source in accordance with 17.8.2 in ACI 318, or other qualification procedures. Where specific requirements are not provided, special inspection requirements shall be specified by the registered design professional and shall be approved by the building official prior to the commencement of the work.

A. Section 1705.3.1: Welding of reinforcing bars. Special inspections of welding and qualifications of special inspectors for rein-forcing bars shall be in accordance with the requirements of AWS D1.4 for special inspection and of AWS D1.4 for special inspector qualification.
B. Section 1705.3.2: Material Tests. In the absence of sufficient data or documentation providing evidence of conformance to quality standards for materials in Chapters 19 and 20 of ACI 318, the building official shall require testing of materials in accordance with the appropriate standards and criteria for the material in Chapters 19 and 20 of ACI 318.

2.04 Section 1705.4: Masonry construction:
Special inspections and tests of masonry construction shall be performed in accordance with the quality assurance program requirements of TMS 402 and TMS 602.

A. Section 1705.4.1: Glass unit masonry and masonry veneer in Risk Category IV. Special inspections and tests for empirically designed masonry, glass unit masonry or masonry veneer designed in accordance with Section 2109, 2110 or Chapter 14, respectively, where they are part of a structure classified as Risk Category IV shall be performed in accordance with TMS 402, Level B Quality Assurance.
B. Section 1705.4.2: Vertical masonry foundation elements. Special inspections and tests of vertical masonry foundation elements shall be performed in accordance with Section 1705.4.

2.05 Section 1705.5: Wood construction.
Special inspections of prefabricated wood structural elements and assemblies shall be in accordance with Section 1704.2.5. Special inspections of site-built assemblies shall be in accordance with this section.

A. Section 1705.5.1: High-load diaphragms.
High-load diaphragms designed in accordance with Section 2306.2 shall be installed with special inspections as indicated in Section 1704.2. The special inspector shall inspect the wood structural panel sheathing to ascertain whether it is of the grade and thickness shown on the approved construction documents. Additionally, the special inspector must verify the nominal size of framing members at adjoining panel edges, the nail or staple diameter and length, the number of fastener lines and that the spacing between fasteners in each line and at edge margins agrees with the approved construction documents.
B. Section 1705.5.2: Metal-plate-connected wood trusses.
Special inspections of wood trusses with overall heights of 60 inches (1524 mm) or greater shall be performed to verify that the installation of the permanent individual truss member restraint/bracing has been installed in accordance with the approved truss submittal package. For wood trusses with a clear span of 60 feet (18 288 mm) or greater, the special inspector shall verify during construction that the temporary installation restraint/bracing is installed in accordance with the approved truss submittal package.

2.06 Section 1705.6: Soils.
Special inspections and tests of existing site soil conditions, fill placement and load-bearing requirements shall be performed in accordance with this section and Table 1705.6. The approved geotechnical report and the construction documents prepared by the registered design professionals shall be used to determine compliance. During fill placement, the special inspector shall verify that proper materials and procedures are used in accordance with the provisions of the approved geotechnical report.

TABLE 1705.6: REQUIRED SPECIAL INSPECTIONS AND TESTS OF SOILS

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION
1. Verify materials below shallow foundations are adequate to achieve the design bearing capacity.	—	X
2. Verify excavations are extended to proper depth and have reached proper material.	—	X
3. Perform classification and testing of compacted fill materials.	—	X
4. Verify use of proper materials, densities and lift thicknesses during placement and compaction of compacted fill.	X	—
5. Prior to placement of compacted fill, inspect subgrade and verify that site has been prepared properly.:	—	X

2.07 Section 1705.7: Driven deep foundations.
Special inspections and tests shall be performed during installation of driven deep foundation elements as specified in Table 1705.7. The approved geotechnical report and the construction documents prepared by the registered design professionals shall be used to determine compliance.

TABLE 1705.7: REQUIRED SPECIAL INSPECTIONS AND TESTS OF DRIVEN DEEP FOUNDATION ELEMENTS

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION
1. Verify element materials, sizes and lengths comply with the requirements.	X	—
2. Determine capacities of test elements and conduct additional load tests, as required.	X	—
3. Inspect driving operations and maintain complete and accurate records for each element.	X	—
4. Verify placement locations and plumbness, confirm type and size of hammer, record number of blows per foot of penetration, determine required penetrations to achieve design capacity, record tip and butt elevations and document any damage to foundation element.	X	—
5. For steel elements, perform additional special inspections in accordance with Section 1705.2.	—	—
6. For concrete elements and concrete-filled elements, perform tests and additional special inspections in accordance with Section 1705.3.	—	—
7. For specialty elements, perform additional inspections as determined by the registered design professional in responsible charge.	—	—

2.08 Section 1705.8: Cast-in-place deep foundations.
Special inspections and tests shall be performed during installation of cast-in-place deep foundation elements as specified in Table 1705.8. The approved geotechnical report and the construction documents prepared by the registered design professionals shall be used to determine compliance.

TABLE 1705.8: REQUIRED SPECIAL INSPECTIONS AND TESTS OF CAST-IN-PLACE DEEP FOUNDATION ELEMENTS

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION
1. Inspect drilling operations and maintain complete and accurate records for each element.	X	—
2. Verify placement locations and plumbness, confirm element diameters, bell diameters (if applicable), lengths, embedment into bedrock (if applicable) and adequate end-bearing strata capacity. Record concrete or grout volumes.	X	—
3. For concrete elements, perform tests and additional special inspections in accordance with Section 1705.3.	—	—

2.09 Section 1705.9: Helical pile foundations.
Continuous special inspections shall be performed during installation of helical pile foundations. The information recorded shall include installation equipment used, pile dimensions, tip elevations, final depth, final installation torque and other pertinent installation data as required by the registered design professional in responsible charge. The approved geotechnical report and the construction documents prepared by the registered design professional shall be used to determine compliance.

2.10 Section 1705.10: Fabricated items.
Special inspections of fabricated items shall be performed in accordance with Section 1704.2.5.

2.11 Section 1705.11: Special inspections for wind resistance.
Special inspections for wind resistance specified in Sections 1705.11.1 through 1705.11.3, unless exempted by the exceptions to Section 1704.2, are required for buildings and structures constructed in the following areas:
In wind Exposure Category B, where V_{asd} as determined in accordance with Section 1609.3.1 is 120 miles per hour (52.8 m/sec) or greater.
In wind Exposure Category C or D, where V_{asd} as determined in accordance with Section 1609.3.1 is 110 mph (49 m/sec) or greater.

A. Section 1705.11.1: Structural wood.
Continuous special inspection is required during field gluing operations of elements of the main windforce-resisting system. Periodic special inspection is required for nailing, bolting, anchoring and other fastening of elements of the main wind force-resisting system, including wood shear walls, wood diaphragms, drag struts, braces and hold-downs.

B. Section 1705.11.2: Cold-formed steel light-frame construction.
Periodic special inspection is required for welding operations of elements of the main windforce-resisting system. Periodic special inspection is required for screw attachment, bolting, anchoring and other fastening of elements of the main wind-force-resisting system, including shear walls, braces, diaphragms, collectors (drag struts) and hold-downs.

C. Section 1705.11.3: Wind-resisting components.
Periodic special inspection is required for fastening of the following systems and components:

(1) Roof covering, roof deck and roof framing connections.
(2) Exterior wall covering and wall connections to roof and floor diaphragms and framing.

2.12 Section 1705.12: Special inspections for seismic resistance.
Special inspections for seismic resistance shall be required as specified in Sections 1705.12.1 through 1705.12.9, unless exempted by the exceptions of Section 1704.2.

A. Section 1705.12.1: Structural steel.
Special inspections for seismic resistance shall be in accordance with Section 1705.12.1.1 or 1705.12.1.2, as applicable.

(1) Section 1705.12.1.1: Seismic force-resisting systems.
Special inspections of structural steel in the seismic force-resisting systems in buildings and structures assigned to Seismic Design Category B, C, D, E or F shall be performed in accordance with the quality assurance requirements of AISC 341.
(2) Section 1705.12.1.2: Structural steel elements.
Special inspections of structural steel elements in the seismic force-resisting systems of buildings and structures assigned to Seismic Design Category B, C, D, E or F other than those covered in Section 1705.12.1.1, including struts, collectors, chords and foundation elements, shall be performed in accordance with the quality assurance requirements of AISC 341.

B. Section 1705.12.2: Structural wood.
For the seismic force-resisting systems of structures assigned to Seismic Design Category C, D, E or F:

(1) Continuous special inspection shall be required during field gluing operations of elements of the seismic force-resisting system.
(2) Periodic special inspection shall be required for nailing, bolting, anchoring and other fastening of elements of the seismic force-resisting system, including wood shear walls, wood diaphragms, drag struts, braces, shear panels and hold-downs.

C. Section 1705.12.3: Cold-formed steel light-frame construction.
For the seismic force-resisting systems of structures assigned to Seismic Design Category C, D, E or F, periodic special inspection shall be required for both:

(1) Welding operations of elements of the seismic force-resisting system.
(2) Screw attachment, bolting, anchoring and other fastening of elements of the seismic force-resisting system, including shear walls, braces, diaphragms, collectors (drag struts) and hold-downs.

D. Section 1705.12.4: Designated seismic systems.
For structures assigned to Seismic Design Category C, D, E or F, the special inspector shall examine designated seismic systems requiring seismic qualification in accordance with Section 13.2.2 of ASCE 7 and verify that the label, anchorage and mounting conform to the certificate of compliance.

E. Section 1705.12.5: Architectural components.
Periodic special inspection is required for the erection and fastening of exterior cladding, interior and exterior nonbearing walls and interior and exterior veneer in structures assigned to Seismic Design Category D, E or F.

(1) Section 1705.12.5.1: Access floors. Periodic special inspection is required for the anchorage of access floors in structures assigned to Seismic Design Category D, E or F.

F. Section 1705.12.6: Plumbing, mechanical and electrical components.
Periodic special inspection of plumbing, mechanical and electrical components shall be required for the following:

(1) Anchorage of electrical equipment for emergency and standby power systems in structures assigned to Seismic Design Category C, D, E or F.
(2) Anchorage of other electrical equipment in structures assigned to Seismic Design Category E or F.
(3) Installation and anchorage of piping systems designed to carry hazardous materials and their associated mechanical units in structures assigned to Seismic Design Category C, D, E or F.
(4) Installation and anchorage of ductwork designed to carry hazardous materials in structures assigned to Seismic Design Category C, D, E or F.
(5) Installation and anchorage of vibration isolation systems in structures assigned to Seismic Design Category C, D, E or F where the approved construction documents require a nominal clearance of 1/4 inch (6.4 mm) or less between the equipment support frame and restraint.
(6) Installation of mechanical and electrical equipment, including duct work, piping systems and their structural supports, where automatic fire sprinkler systems are installed in structures assigned to Seismic Design Category C, D, E or F to verify one of the following:
(7) Minimum clearances have been provided as required by Section 13.2.3 ASCE/SEI 7.
(8) A nominal clearance of not less than 3 inches (76 mm) has been provided between fire protection sprinkler system drops and sprigs and: structural members not used collectively or independently to support the sprinklers; equipment attached to the building structure; and other systems' piping.
(9) Where flexible sprinkler hose fittings are used, special inspection of minimum clearances is not required.

G. Section 1705.12.7: Storage racks.
Periodic special inspection is required for the anchorage of storage racks that are 8 feet (2438 mm) or greater in height in structures assigned to Seismic Design Category D, E or F.

H. Section 1705.12.8: Seismic isolation systems.
Periodic special inspection shall be provided for seismic isolation systems in seismically isolated structures assigned to Seismic Design Category B, C, D, E or F during the fabrication and installation of isolator units and energy dissipation devices.

I. Section 1705.12.9: Cold-formed steel special bolted moment frames.
Periodic special inspection shall be provided for the installation of cold-formed steel special bolted moment frames in the seismic force-resisting systems of structures assigned to Seismic Design Category D, E or F.

2.13 Section 1705.13: Testing for seismic resistance.
Testing for seismic resistance shall be required as specified in Sections 1705.13.1 through 1705.13.4, unless exempted from special inspections by the exceptions of Section 1704.2.

A. Section 1705.13.1: Structural steel.
Nondestructive testing for seismic resistance shall be in accordance with Section 1705.13.1.1 or 1705.13.1.2, as applicable.

(1) Section 1705.13.1.1: Seismic force-resisting systems.
Nondestructive testing of structural steel in the seismic force-resisting systems in buildings and structures assigned to Seismic Design Category B, C, D, E or F shall be performed in accordance with the quality assurance requirements of AISC 341.

(2) Section 1705.13.1.2: Structural steel elements.
Nondestructive testing of structural steel elements in the seismic force-resisting systems of buildings and structures assigned to Seismic Design Category B, C, D, E or F other than those covered in Section 1705.13.1.1, including struts, collectors, chords and foundation elements, shall be performed in accordance with the quality assurance requirements of AISC 341.

B. Section 1705.13.2: Nonstructural components.
For structures assigned to Seismic Design Category B, C, D, E or F, where the requirements of Section 13.2.1 of ASCE 7 for nonstructural components, supports or attachments are met by seismic qualification as specified in Item 2 therein, the registered design professional shall specify on the approved construction documents the requirements for seismic qualification by analysis, testing or experience data. Certificates of compliance for the seismic qualification shall be submitted to the building official as specified in Section 1704.5.

C. Section 1705.13.3: Designated seismic systems.
For structures assigned to Seismic Design Category C, D, E or F and with designated seismic systems that are subject to the requirements of Section 13.2.2 of ASCE 7 for certification, the registered design professional shall specify on the approved construction documents the requirements to be met by analysis, testing or experience data as specified therein. Certificates of compliance documenting that the requirements are met shall be submitted to the building official as specified in Section 1704.5.

D. Section 1705.13.4: Seismic isolation systems.
Seismic isolation systems in seismically isolated structures assigned to Seismic Design Category B, C, D, E or F shall be tested in accordance with Section 17.8 of ASCE 7.

2.14 Section 1705.14: Sprayed fire-resistant materials.
Special inspections and tests of sprayed fire-resistant materials applied to floor, roof and wall assemblies and structural members shall be performed in accordance with Sections 1705.14.1 through 1705.14.6. Special inspections shall be based on the fire-resistance design as designated in the approved construction documents. The tests set forth in this section shall be based on samplings from specific floor, roof and wall assemblies and structural members. Special inspections and tests shall be performed after the rough installation of electrical, automatic sprinkler, mechanical and plumbing systems and suspension systems for ceilings, where applicable.

A. Section 1705.14.1: Physical and visual test.
The special inspections and tests shall include the following to demonstrate compliance with the listing and the fire-resistance rating:

(1) Condition of substrates.
(2) Thickness of application.
(3) Density in pounds per cubic foot (kg/m 3).
(4) Bond strength adhesion/cohesion.
(5) Condition of finished application.

B. Section 1705.14.2: Structural member surface conditions.
The surfaces shall be prepared in accordance with the approved fire-resistance design and the written instructions of approved manufacturers. The prepared surface of structural members to be sprayed shall be inspected by the special inspector before the application of the sprayed fire-resistant material.

C. Section 1705.14.3: Application.
The substrate shall have a minimum ambient temperature before and after application as specified in the written instructions of approved manufacturers. The area for application shall be ventilated during and after application as required by the written instructions of approved manufacturers.

D. Section 1705.14.4: Thickness.
Not more than 10 percent of the thickness measurements of the sprayed fire-resistant materials applied to floor, roof and wall assemblies and structural members shall be less than the thickness required by the approved fire-resistance design, and none shall be less than the minimum allowable thickness required by Section 1705.14.4.1.

(1) Section 1705.14.4.1: Minimum allowable thickness.
For design thicknesses 1 inch (25 mm) or greater, the minimum allowable individual thickness shall be the design thickness minus 1/4 inch (6.4 mm). For design thicknesses less than 1 inch (25 mm), the minimum allowable individual thickness shall be the design thickness minus 25 percent. Thickness shall be determined in accordance with ASTM E605. Samples of the sprayed fire-resistant materials shall be selected in accordance with Sections 1705.14.4.2 and 1705.14.4.3.

(2) Section 1705.14.4.2: Floor, roof and wall assemblies.
The thickness of the sprayed fire-resistant material applied to floor, roof and wall assemblies shall be determined in accordance with ASTM E605, making not less than four measurements for each 1,000 square feet (93 m 2) of the sprayed area, or portion thereof, in each story.

(3) Section 1705.14.4.4: Fluted decks.
Thickness measurements shall be selected from a square area, 12 inches by 12 inches (305 mm by 305 mm) in size. Not fewer than four measurements shall be made, located symmetrically within the square area, including one each of the following: valley, crest and sides. The average of the measurements shall be reported.

(4) Section 1705.14.4.5 Structural members.
The thickness of the sprayed fire-resistant material applied to structural members shall be determined in accordance with ASTM E605. Thickness testing shall be performed on not less than 25 percent of the structural members on each floor.

(5) Section 1705.14.4.6: Beams and girders.
At beams and girders thickness measurements shall be made at nine locations around the beam or girder at each end of a 12-inch (305 mm) length.

(6) Section 1705.14.4.7: Joists and trusses.
At joists and trusses, thickness measurements shall be made at seven locations around the joist or truss at each end of a 12-inch (305 mm) length.

(7) Section 1705.14.4.8: Wide-flanged columns.
At wide-flanged columns, thickness measurements shall be made at 12 locations around the column at each end of a 12-inch (305 mm) length.

(8) Section 1705.14.4.9: Hollow structural section and pipe columns.
At hollow structural section and pipe columns, thickness measurements shall be made at not fewer than four locations around the column at each end of a 12-inch (305 mm) length.

E. Section 1705.14.5: Density.
The density of the sprayed fire-resistant material shall be not less than the density specified in the approved fire-resistance design. Density of the sprayed fire-resistant material shall be determined in accordance with ASTM E605. The test samples for determining the density of the sprayed fire-resistant materials shall be selected as follows:

(1) From each floor, roof and wall assembly at the rate of not less than one sample for every 2,500 square feet (232 m2) or portion thereof of the sprayed area in each story.

(2) From beams, girders, trusses and columns at the rate of not less than one sample for each type of structural member for each 2,500 square feet (232 m 2) of floor area or portion thereof in each story.

F. Section 1705.14.6: Bond strength.
The cohesive/adhesive bond strength of the cured sprayed fire-resistant material applied to floor, roof and wall assemblies and structural members shall be not less than 150 pounds per square foot (psf) (7.18 kN/ m2). The cohesive/adhesive bond strength shall be determined in accordance with the field test specified in ASTM E736 by testing in-place samples of the sprayed fire-resistant material selected in accordance with Sections 1705.14.6.1 through 1705.14.6.3.

(1) Section 1705.14.6.1: Floor, roof and wall assemblies.
The test samples for determining the cohesive/adhesive bond strength of the sprayed fire-resistant materials shall be selected from each floor, roof and wall assembly at the rate of not less than one sample for every 2,500 square feet (232 m2) of the sprayed area, or portion thereof, in each story.

(2) Section 1705.14.6.2: Structural members.
The test samples for determining the cohesive/adhesive bond strength of the sprayed fire-resistant materials shall be selected from beams, girders, trusses, columns and other structural members at the rate of not less than one sample for each type of structural member for each 2,500 square feet (232 m2) of floor area or portion thereof in each story.

(3) Section 1705.14.6.3: Primer, paint and encapsulant bond tests.
Bond tests to qualify a primer, paint or encapsulant shall be conducted where the sprayed fire-resistant material is applied to a primed, painted or encapsulated surface for which acceptable bond-strength performance between these coatings and the fire-resistant material has not been determined. A bonding agent approved by the SFRM manufacturer shall be applied to a primed, painted or encapsulated surface where the bond strengths are found to be less than required values.

2.15 Section 1705.15 Mastic and intumescent fire-resistant coatings.
Special inspections and tests for mastic and intumescent fire-resistant coatings applied to structural elements and decks shall be performed in accordance with AWCI 12-B. Special inspections and tests shall be based on the fire-resistance design as designated in the approved construction documents.

2.16 Section 1705.16: Exterior insulation and finish systems (EIFS).
Special inspections shall be required for all EIFS applications.

A. Section 1705.16.1 Water-resistive barrier coating.
A water-resistive barrier coating complying with ASTM E2570 requires special inspection of the water-resistive barrier coating where installed over a sheathing substrate.

2.17 Section 1705.17: Fire-resistant penetrations and joints.
In high-rise buildings or in buildings assigned to Risk Category III or IV, special inspections for through-penetrations, membrane penetration firestops, fire-resistant joint systems and perimeter fire barrier systems that are tested and listed in accordance with Sections 714.4.1.2, 714.5.1.2, 715.3 and 715.4 shall be in accordance with Section 1705.17.1 or 1705.17.2.

A. Section 1705.17.1: Penetration firestops.
Inspections of penetration firestop systems that are tested and listed in accordance with Sections 714.4.1.2 and 714.5.1.2 shall be conducted by an approved agency in accordance with ASTM E2174.

B. Section 1705.17.2: Fire-resistant joint systems.
Inspection of fire-resistant joint systems that are tested and listed in accordance with Sections 715.3 and 715.4 shall be conducted by an approved agency in accordance with ASTM E2393.

2.18 Section 1705.18: Testing for smoke control.
Smoke control systems shall be tested by a special inspector.

A. Section 1705.18.1: Testing scope.
The test scope shall be as follows:

(1) During erection of ductwork and prior to concealment for the purposes of leakage testing and recording of device location.
(2) Prior to occupancy and after sufficient completion for the purposes of pressure difference testing, flow measurements and detection and control verification.

B. Section 1705.18.2: Qualifications.
Approved agencies for smoke control testing shall have expertise in fire protection engineering, mechanical engineering and certification as air balancers.

END OF SECTION 01 45 35

SECTION 01 50 00 – TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide temporary construction facilities and controls, and remove upon completion of the Work.

1.02 INCLUDE ALL COSTS within the Contract Sum for installation, maintenance, fuel, operation and removal. Adjustments to costs or usage charges will be made only if the Contract Time is adjusted due to scope changes, and then through a Change Order.

1.03 ALLOW OTHER ENTITIES TO USE TEMPORARY FACILITIES without cost, including, but not limited to, the following:

A. Owner's separate contractors.
B. Architect and consulting Engineers,
C. Testing and Inspection agencies.
D. Personnel of AHJ's.

1.04 QUALITY ASSURANCE

A. STANDARDS: Comply with ANSI A10.6, NECA's "Temporary Electrical Facilities," and NFPA 241.
B. TRADE JURISDICTIONS: Assigned responsibilities for installation and operation of temporary utilities are not intended to interfere with trade regulations and union jurisdictions.
C. ELECTRIC SERVICE: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
D. TESTS AND INSPECTIONS: Arrange for representatives of AHJ's to test and/or inspect temporary utilities before use when required, and obtain required certifications and permits.
E. COMPLY WITH GOVERNING REGULATIONS and rules or recommendations of utility companies. Comply with specific requirements indicated and with applicable local industry standards including but not limited to the following:
   (1) Building codes, including local requirements for permits, testing and inspection
   (2) Health and safety regulations, including applicable federal statues, laws or regulations
   (3) Police and Fire department rules and recommendations
   (4) Environmental protection regulations governing use of water and energy, and the control of dust, noise and other nuisances.

1.05 PROVIDE NONCOMBUSTIBLE CONSTRUCTION for offices, shops and sheds located within the construction area, or within 30 feet of building lines.

1.06 OPERATE temporary services and facilities in a safe and efficient manner. Do not overload temporary services or facilities, and do not permit them to interfere with the progress of the work. Do not allow unsanitary conditions, public nuisances or hazardous conditions to develop or persist on the site.

1.07 TEMPORARY SITE UTILITIES: For electrical, sewer, water or other utility services necessary for construction operations, engage the appropriate local utility service providers to bring temporary services to the Project Site. Obtain and pay for temporary permits or easements necessary, if permanent easements cannot be utilized for that purpose. Pay for all service, use and removal costs required.

1.08 UTILITY CHANGEOVER: At earliest feasible time, when acceptable to Owner, change over from use of temporary utility service to use of permanent services. Contractor will be responsible for operation, maintenance, and protection of permanent utility services until Substantial Completion.

1.09 CONDITIONS OF USE: Keep temporary services and facilities clean and neat. Relocate temporary utility services as required by progress of the Work.

1.10 CONNECT TO EXISTING BUILDING SYSTEMS for water, electrical power, lighting and heat necessary for construction operations, unless otherwise indicated. The Owner will pay for service / use costs through their existing service agreements.

PART 2 - PRODUCTS

2.01 MATERIALS AND EQUIPMENT – GENERAL: Provide new or undamaged, previously used items in serviceable condition, suitable for use intended.

2.02 FIELD OFFICE: Maintain an on-site office for the management of the Work. Provide space to review project drawings and for storage of construction documents, shop drawings, and samples. Provide table, chairs and and on-site meeting room space for conferences for up to 10 people minimum. Costs of the space and furnishing thereof, including heating, cooling, power and lighting must be included in the Contract Sum.

2.03 TEMPORARY EXTERIOR ENCLOSURE: Provide a temporary weather-resistant building enclosure when existing building enclosure elements are removed. Enclosure must consist of a minimum 10 mil polyethylene sheet attached to a solid sheathing panel (non-combustible if existing building is non-combustible) with the supporting framework filled with minimum 3-1/2 inch thick fiberglass insulation when exterior temperatures are typically below 40 degrees.

2.04 TEMPORARY INTERIOR ENCLOSURE SCREEN (when applicable): Provide a dust-proof enclosure/screen separating the construction area from existing occupied areas. Relocate as required to facilitate construction operations. Completely remove at completion of the Work and arrange for legal disposal. Comply with Landlord requirements, when applicable.

A. Dust-resistant Barrier: Reinforced, fire-resistive 10-mil minimum thick polyethylene sheet, with flame-spread rating of 15 or less per ASTM E 84 and passing NFPA 701 Test Method 2.

2.05 DUST-RESISTANT WALK-OFF MATS: Provide minimum 36 inch wide x 60 inch deep mats with dust-control adhesive surface at all entrances to construction work areas from existing interior finished areas, and at exterior entrances to finished new construction work.

2.06 EXTERIOR PROJECT IDENTIFICATION SIGN: Provide and maintain one (1) project identification sign at location indicated in the Drawings, or if not indicated, provide at a location approved by the Owner and applicable AHJ representatives, including but not limited to code and zoning officials. Construct sign as a part of the Construction Mockup required in other Division-1 Sections. Engage an experienced signage company to provide PSV graphics on the panel in accordance with a design designated by the Architect. In general, the sign will include the project name & logo (1/2 of total area), the name and logo of the Architect (1/4 of total area), and the name and logo of the General Contractor. No other signs will be allowed to be displayed at the project site.

A. Size: 8 feet high by 12 feet wide

2.07 INTERIOR PROJECT IDENTIFICATION SIGN: Provide a project identification sign at location indicated in the Drawings, or if not indicated, provide at a location approved by the Landlord. The sign will include the project name & logo (1/2 of total area), the name and logo of the Architect (1/4 of total area), and the name and logo of the General Contractor (1/4 of total area). No other signs will be allowed to be displayed at the project site.

A. Size: 4 feet high by 8 feet wide (verify with Architect prior to construction start).

2.08 FIRE EXTINGUISHERS: Provide UL rated Type ABC fire extinguishers mounted at locations reasonably effective in extinguishing fires, by personnel at project site. Comply with NFPA No. 10. Post warning and instructions at each extinguisher, and instruct personnel on proper use. Post fire department call number on each telephone at project site.

2.09 TEMPORARY HEAT AND VENTILATION: Unless the Owner authorizes use of permanent HVAC systems per requirements as follows, provide temporary units to maintain adequate environmental conditions to facilitate progress of the Work, to meet specified minimum conditions for the installation and proper curing of materials, to protect materials and finishes from damage due to temperature or humidity, and to prevent hazardous accumulations of dust, fumes, vapors or gases.

A. For new building areas, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control. Provide listed and labeled units, by a testing agency acceptable to the AHJ, and marked for intended use for type of fuel being consumed.
B. When new systems are operational, they may be used for temporary heating and cooling only if: (1) all registers diffusers and filters are cleaned before substantial completion, and (2) warranty periods remain unchanged, starting from the date of Substantial Completion.

2.10 POTABLE WATER: Provide portable containers of potable water for construction operations, except when specifically authorized to utilize existing systems by the Owner. If connecting to existing systems, provide branch piping with outlets located so that water is available by the use of hoses.

2.11 EXTERIOR SANITARY FACILITIES: Provide temporary exterior toilets, wash facilities and drinking water fixtures for the use of workers on the job site. Provide single-occupant units of chemical, aerated recirculation, or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material. Provide separate facilities for male and female personnel when both sexes are working at project site. Provide containerized tap-dispenser, bottled-water drinking-water units, including paper cup supply. Comply with all applicable regulations of OSHA or health departments for the type, number, location, operation and maintenance of fixtures and facilities. Provide toilet tissue, paper towels, paper cups and similar disposable materials for each facility. Provide covered waste containers for used material.

2.12 EXISTING SANITARY FACILITIES may not be used by construction personnel, unless specifically approved by the Owner. If so used, such facilities must be checked by Contractor's supervisory personnel not less than two (2) times per day, and cleaning must be performed at completion of each day's construction operations.

2.13 TEMPORARY ELECTRICAL POWER: Provide a grounded power distribution system with overload protection, sufficient to accommodate construction operations requiring power, use of power tools, electrical heating, lighting, and start-up testing of permanent electric-powered equipment prior to its permanent connection to electrical system.

A. Locate multiple outlets (minimum of 4-gang) spaced so that the entire area of construction can be reached by power tools on a single extension cord of 50' maximum length.
B. Provide properly configured, NEMA-polarized outlets to prevent insertion of 110- to 120-V plugs into higher-voltage outlets; equipped with ground-fault circuit interrupters, reset button, and pilot light.
C. Where permitted and when overhead and exposed for surveillance, wiring circuits, not exceeding 125-V ac, 20-A rating, and lighting circuits may be nonmetallic sheathed cable.

2.14 TEMPORARY LIGHTING: Provide temporary lighting fixtures in areas where ceilings and existing fixtures are removed. Re-use existing lighting fixtures when possible and suspend from the existing structure. Remove temporary lighting fixtures when permanent fixtures are operational.

2.15 PROVIDE TEMPORARY COMMUNICATIONS EQUIPMENT as follows:

A. Computer for use by and communications with the Contractor's Superintendent
B. Broadband internet service, and a secured, wireless router for use by the Architect and Owner's representatives

2.16 WASTE DISPOSAL: Provide dumpsters and collect waste from construction areas and elsewhere daily. Comply with requirements of NFPA 241 for removal of combustible waste material and debris. Do not hold materials more than 7 days during normal weather or 3 days when the temperature is expected to rise above 80 deg F. Handle hazardous, dangerous, or unsanitary waste materials separately from other waste by containerizing properly. Dispose of material in a lawful manner.

2.17 TEMPORARY SITE ENCLOSURE FENCE: Before construction operations begin, install a site enclosure fence around the entire Project site (or portion sufficient to accommodate construction operations), to prevent people and animals from easily entering except at gates. Maintain security by limiting the number of keys to gates and restricting distribution to authorized personnel, with one set of keys provided to the Owner. At partially completed Work, provide lockable entrances

to prevent unauthorized entrance, vandalism, theft and similar violations of security, and lock entrances at end of each work day.

A. TEMPORARY CHAIN-LINK FENCING: Minimum 2-inch (opening) x 0.148-inch- thick, galvanized-steel, chain-link fabric fencing mounted to a galvanized-steel pipe post framework of minimum 2-3/8-inch- OD line posts with 2-7/8-inch-OD corner and pull posts and 1-5/8-inch- OD top rails. When necessary, provide portable fencing units with galvanized-steel base supports.
B. Minimum Height: Eight (8) feet

2.18 TEMPORARY ROADS AND PAVED AREAS: Construct and maintain temporary roads and paved areas adequate for construction operations. Locate temporary roads and paved areas within construction limits indicated on Drawings. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.

A. TEMPORARY USE OF PERMANENT ROADS AND PAVED AREAS: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

(1) Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
(2) Prepare subgrade and install subbase and base for temporary roads and paved areas according to applicable Division-31 “Earthwork” Sections.
(3) Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.
(4) Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course per requirements of applicable Division-32 “Paving” Sections.

PART 3 - EXECUTION

3.01 REVIEW site conditions and factors which affect construction procedures and temporary facilities, including adjacent properties and public facilities which may be affected by execution of the Work.

3.02 INSTALLATION - GENERAL: Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.03 INSPECT and test services before placing temporary utilities in use. Arrange for required inspections and tests by AHJ representatives, and obtain required certifications and permits for use.

3.04 OPERATE temporary services and facilities in a safe and efficient manner. Do not overload temporary services or facilities, and do not permit them to interfere with the progress of the work. Do not allow unsanitary conditions, public nuisances or hazardous conditions to develop or persist on the site.

3.05 SUPERVISION: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

3.06 MAINTENANCE: Maintain facilities in good operating condition until removal. Protect from damage caused by freezing temperatures and similar elements. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage. Prevent water-filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

3.07 PROGRESS CLEANING: At all times, keep the project areas free from accumulation of waste materials or rubbish caused by construction operations. Maintain the premises and site in a reasonably neat and order condition. Keep electrical closets, pipe or duct shafts or chases, furred spaces and similar areas clean and free from rubbish, construction material debris, or dust and dirt at all times. Clean-up immediately upon completion of each trade’s Work.

3.08 LOCK UP all site parked mobile equipment or make otherwise inoperable when not in use.

3.09 TEMPORARY FIRE PROTECTION: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; and manage fire-prevention program by:

A. Prohibit smoking in construction areas.
B. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of AHJ’s.

3.10 TEMPORARY CONSTRUCTION CONTROLS:

A. BARRIERS: Provide barriers required to prevent public entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations.
B. POST DANGER SIGNS warning against hazards created by construction operations including but not limited to protruding nails, hoists, well holes, elevator hatchways, scaffolding, window openings, stairways and falling materials.
C. PROVIDE RED WARNING LIGHTS for night time hours at such hazards that can be dangerous to foot traffic and vehicular traffic.

3.11 RAMPS: Provide temporary ramps if access is through existing parking area, to completely protect existing curbs, underground fuel storage tanks, etc.

3.12 SCAFFOLDING: Provide all scaffolding and construction aids required, including guard rails, lights and platforms necessary for the completion of the Work, and for the protection of the workmen and the public.

3.13 SITE ACCESS: Provide temporary access to the site from public thorough fares. Repair all damage to existing property, roads, curbs and parking areas by job related vehicles or personnel at no cost to the Owner. Provide temporary fencing with lockable gates to match existing to ensure that the facility remains secure at all times.

3.14 DEWATERING FACILITIES AND DRAINS: Comply with requirements of AHJ, maintaining Project Site, excavations, and construction free of water. Dispose of rainwater in a lawful manner that will not result in flooding the Project or adjoining properties or endanger permanent Work or temporary facilities. Remove snow and ice as required to minimize accumulations.

3.15 TEMPORARY EROSION, SEDIMENTATION & STORMWATER CONTROLS: Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, in accordance with requirements of 2003 EPA's "Construction General Permit" or other requirements of the AHJ, whichever is more stringent. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant- protection zones. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

3.16 CONSTRUCTION NOISE: Avoid use of tools and equipment which produce harmful noise. Restrict use of noise making tools and equipment to hours that will minimize complaints from persons or firms near the site.

3.17 MOISTURE & MOLD CONTROL:

A. PREPARE A MOISTURE-PROTECTION PLAN, to avoid trapping water in the finished work. Document visible signs of mold that may appear during construction. Comply with the following, as applicable:

B. AT EXPOSED CONSTRUCTION and before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect the Work as follows:

(1) Protect porous materials from water damage.
(2) Protect stored and installed material from flowing or standing water.
(3) Keep porous and organic materials from coming into prolonged contact with concrete.
(4) Remove standing water from decks.
(5) Keep deck openings covered or dammed.

C. AT PARTIALLY ENCLOSED CONSTRUCTION after installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

(1) Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
(2) Keep interior spaces reasonably clean and protected from water damage.
(3) Periodically collect and remove waste containing cellulose or other organic matter.
(4) Discard or replace water-damaged material.
(5) Do not install material that is wet.
(6) Discard, replace, or clean stored or installed material that begins to grow mold.
(7) Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.

D. AFTER BUILDING ENCLOSURE but before full operation of permanent HVAC systems, maintain as follows:

(1) Control moisture and humidity inside building by maintaining effective dry-in conditions.
(2) Use permanent HVAC system to control humidity.
(3) Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.
(4) Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 24 hours are considered defective.
(5) Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
(6) Remove materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.18 TERMINATION AND REMOVAL:

A. REMOVE TEMPORARY FACILITIES when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

(1) Materials and facilities that constitute temporary facilities are the property of Contractor. The Owner reserves right to take possession of the Project identification signs – at the sole option of the Owner.
(2) Remove temporary paving not intended for or acceptable for integration into permanent paving. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil.
(3) Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns.
(4) Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by AHJ representatives.
(5) At Substantial Completion, clean and renovate permanent facilities used during construction period. Comply with final cleaning requirements in Division-01 Section "Closeout Procedures."

END OF SECTION 01 50 00

SECTION 01 60 00 – PRODUCT REQUIREMENTS

PART 1 - THIS SECTION includes administrative and procedural requirements for products, including delivery, storage, and handling; and manufacturers' warranties on products or special warranties. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1.01 DEFINITIONS

A. MANUFACTURER'S WARRANTY: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
B. SPECIAL WARRANTY: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

1.02 SUBMITTALS

A. SUBMIT A PRODUCT LIST, in tabular from, showing products, systems or equipment to be furnished. Include generic names of products, and manufacturer's name and proprietary product names for each product.
B. COORDINATE PRODUCT LIST with Contractor's Construction Schedule and the Submittals Schedule.
C. FORM: Tabulate information for each product, system or equipment item under the following column headings:
   (1) Specification Section number and title.
   (2) Generic name used in the Contract Documents.
   (3) Proprietary name, model number, and similar designations.
   (4) Manufacturer's name and address.
   (5) Supplier's name and address.
   (6) Installer's name and address.
   (7) Projected delivery date or time span of delivery period.
   (8) Identification of items that require early submittal approval for scheduled delivery date.
D. INITIAL SUBMITTAL: WITHIN THIRTY (30) DAYS after date of commencement of the Work, submit an initial product list. Include a written explanation for omissions of data and for variations from Contract requirements. At Contractor's option, initial submittal may be limited to product selections and designations that must be established early in Contract period.
E. COMPLETED PRODUCT LIST: WITHIN SIXTY (60) DAYS after date of commencement of the Work, submit two (2) copies of completed product list. Include a written explanation for omissions of data and for variations from Contract requirements.
F. ARCHITECT'S ACTION: The Architect will respond in writing to Contractor within fifteen (15) days of receipt of the initial Product List. Response will include a list of unacceptable product selections and a brief explanation of reasons for this action. Lack of response does not constitute a waiver of requirement that products comply with the Contract Documents.

1.03 PRODUCT WARRANTIES

A. WARRANTIES SPECIFIED in other Sections are in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
B. SPECIAL WARRANTIES: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.
   (1) Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
   (2) Specified Form: Forms are included with the Specifications. Prepare a written document using appropriate form properly executed.
   (3) Refer to other Sections for specific content requirements and particular requirements for submitting special warranties.

1.04 SUBMITTAL TIME: Comply with requirements in Division-01 Section "Closeout Procedures."

1.05 QUALITY ASSURANCES FOR PRODUCTS

A. DELIVER, STORE, AND HANDLE PRODUCTS using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.
B. SCHEDULE DELIVERY to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
C. COORDINATE DELIVERY WITH INSTALLATION time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
D. DELIVER PRODUCTS in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
E. INSPECT PRODUCTS ON DELIVERY to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.
F. STORE PRODUCTS to allow for inspection and measurement of quantity or counting of units, and as follows:
   (1) Store materials in a manner that will not endanger the existing building structure.
   (2) Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation. For exterior storage of fabricated products, place on sloped supports above ground. Cover products subject to deterioration with impervious sheet covering; with ventilation to avoid condensation
   (3) Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.

(4) Protect stored products from damage.

G. COMPATIBILITY OF OPTIONS: If Contractor is given option of selecting between two or more products for use, product selected must be compatible with products previously selected, even if previously selected products were also options.

H. PRODUCTS IN QUANTITIES must be alike and interchangeable. Where additional amounts of a product are likely to be needed by the Owner at a later date for maintenance and repair, provide standard, domestically produced products which are likely to be available to the Owner at such later date.

I. SUPPLY PRODUCTS COMPLETE with all standard devices, trim finish, and all accessories indicated in the latest edition of the manufacturer's catalog or brochure published at the date of the award of the Contract. Furnish such items complete with component parts necessary for the obvious and intended use and installation, whether or not descriptions or catalog numbers contain all supplemental information and/or numbers of such components.

J. EQUIPMENT NAMEPLATES: Provide permanent nameplates on each item of service-connected or power operated equipment. Indicate manufacturer, product name, model number, serial number, capacity, speed, rating, and similar essential operating data. Locate nameplates on an easily accessible surface.

K. LABELS: Locate required labels and stamps on an accessible surface which, in occupied spaces, is not conspicuous.

END OF SECTION 01 60 00

SECTION 01 62 00 – PRODUCT OPTIONS

PART 1 - WHEN PRODUCTS, SYSTEMS OR EQUIPMENT are identified in the Construction Document, they are indicated to establishing a standard of required function, availability, physical properties, dimension, color, appearance, quality, in-service performance, operation and maintenance.

1.01 NO SUBSTITUTIONS OF NAMED OR BASIS-OF-DESIGN PRODUCTS: When Construction Documents indicate a single product (including systems or equipment), manufacturer, or supplier (by reference to a manufacturer's or supplier's name or product name, make or model number, as applicable), provide only the indicated product that complies with indicated requirements. If multiple manufacturers or vendors are indicated, provide products only by one of the listed manufacturers or vendors.

1.02 SUBMIT OTHER PRODUCTS or Manufacturers only as a "Substitution for Cause" / Substitution Request per other Sections of the General Requirements, and substantiate the cause in detail. Unless approved in advance by the Architectd, other products or manufacturers will not be considered, and are not acceptable.

1.03 FOR "OR-EQUAL" or "PERFORMANCE-BASED" products specified by performance requirements, characteristics, and/or referenced standards, provide products of any manufacturer or vendor meeting those requirements and characteristics, which will perform adequately the duties imposed by the specified item, and which will not cause a delay in the construction schedule due to procurement of such item. The burden of suitability is upon the Contractor, and products not meeting the intent of the Construction Documents may be rejected by the Architect.

END OF SECTION 01 62 00

SECTION 01 71 23 – FIELD ENGINEERING

PART 1 - GENERAL REQUIREMENTS

1.01 ESTABLISH REFERENCE LINES AND PERMANENT BENCH MARKS from which building lines and elevations will be taken. Identify existing survey control points and property line corner stakes, or building reference grids, as applicable. Verify layout information indicated within the Drawings, in relation to the property survey and existing benchmarks, before proceeding to lay out the Work. Locate and protect existing benchmarks and control points. Preserve permanent reference points during construction.

1.02 ENGAGE A LAND SURVEYOR registered in the state where the Project is located, to perform the initial building-layout and verification, and to set new benchmarks and other control points at the site.

1.03 BENCHMARKS: Establish and maintain a minimum of 2 permanent benchmarks, referenced to data established by survey control points. Promptly replace lost or destroyed Project control points. Base replacements on the original survey control points. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.

1.04 EXISTING UTILITIES AND EQUIPMENT: The existence and location of underground and other utilities and construction indicated as existing is not guaranteed. Before beginning any work at the site, investigate and verify the existence and location of underground utilities and other construction. Prior to construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping. Furnish information necessary to adjust, move, or relocate existing structures, utility poles, lines, services, or other appurtenances located in or affected by construction. Coordinate with applicable AHJ representatives.

1.05 WORK FROM LINES AND LEVELS established from the property survey or existing building information. Establish benchmarks and markers to set lines and levels at each story of construction and elsewhere as needed to locate each element of the Project.

1.06 CALCULATE AND MEASURE required dimensions by instrumentation or other appropriate means, within indicated or recognized tolerances.

1.07 DO NOT SCALE DRAWINGS to determine dimensions unless directed to do so.

1.08 ADVISE ENTITIES ENGAGED IN CONSTRUCTION ACTIVITIES of marked lines and levels provided for their use. As construction proceeds, check every major construction component or element for line, level, and plumb.

1.09 MAINTAIN A LOG of controls and other survey work. Make this log available for reference. Record deviations from required lines and levels, and notify if deviations that exceed indicated or recognized tolerances are detected. On Project Record Drawings, record deviations that are accepted and not corrected.

1.10 UPON COMPLETION of foundation walls, major site improvements, and other work requiring field-engineering, record actual dimensions, locations, angles, and elevations of construction and site-work, noting all deviations from the design intent.

1.11 FOR SITE IMPROVEMENTS, locate and lay out site improvements, including pavements, stakes for grading, fill and topsoil placement, utility slopes, and invert elevations.

1.12 FOR BUILDING LINES AND LEVELS, locate and lay out batter boards for structures, building foundations, column grids and locations, floor levels, and control lines and levels.

1.13 WORK LAYOUT: Establish and maintain new benchmarks, chalk-lines or other markers to set lines and levels for the Work as needed to properly locate all elements of the Project, including partitions, casework, electrical and plumbing connections and “fixed” casework or fixtures.

1.14 PREPARE EQUIPMENT AND CASEWORK-FIXTURE TEMPLATES cut from stiff cardboard for each size of equipment or fixture unit being installed. To verify layout of the project, place templates on the floor where indicated, and permanently mark their locations with paint as soon as feasible.

1.15 TAKE FIELD MEASUREMENTS as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.16 MARK CASEWORK & FIXTURE locations with ceiling light fixtures temporarily marked on the floor substrate before construction of any partitions. Coordinate with casework or fixture shop drawings for size of units and alignment to fit the space as indicated.

END OF SECTION 01 71 23

SECTION 01 73 00 – EXECUTION REQUIREMENTS

PART 1 - GENERAL

1.01 PERFORM INSTALLATION WORK by persons qualified to produce workmanship of specified quality, in accordance with manufacturer's installation recommendations and requirements.

1.02 UPON REQUEST BY THE ARCHITECT, arrange for the product, system or equipment manufacturer's representative to visit the site, to instruct tradespersons or mechanics in the recommended means and methods for installation, and to verify that the product, system or equipment item is installed in accordance with the Manufacturer's recommendations.

1.03 EXAMINATION AND ACCEPTANCE OF CONDITIONS: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present, for compliance with requirements for installation tolerances and other conditions affecting performance of the installed Work, and record observations:

A. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
B. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
C. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
D. Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
   (1) Description of the Work.
   (2) List of detrimental conditions, including substrates.
   (3) List of unacceptable installation tolerances.
   (4) Recommended corrections.
E. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work constitutes acceptance of that Work and assumption of responsibility for satisfactory installation.

1.04 INSPECT EACH ITEM OF MATERIAL OR EQUIPMENT immediately prior to installation. Reject damaged and defective items.

PART 2 - PREPARATION

2.01 FIELD MEASUREMENTS: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

2.02 SPACE REQUIREMENTS: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

2.03 REVIEW OF CONTRACT DOCUMENTS AND FIELD CONDITIONS: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a Request for Interpretation (RFI) to Architect per other Division-01 Sections.

PART 3 - GENERAL INSTALLATION REQUIREMENTS (applies to all Work and Specification Sections):

3.01 INSTALL DURING CONDITIONS of temperature, humidity, exposure, forecasted weather, and status of the project completion that will ensure the best possible results for each unit of Work. Maintain such conditions until Substantial Completion.

3.02 LOCATE THE WORK and components of the Work accurately, in correct alignment and elevation. Make vertical work plumb and make horizontal work level. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.

3.03 CONCEAL PIPES, DUCTS, AND WIRING in finished areas unless otherwise indicated. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces unless otherwise noted.

3.04 COMPLY WITH MANUFACTURER'S WRITTEN INSTRUCTIONS and recommendations for installing products in applications indicated.

3.05 CONDUCT CONSTRUCTION OPERATIONS so that no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

3.06 SEQUENCE THE WORK and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.

3.07 HARMFUL NOISE: Do not use tools or equipment that produce harmful noise levels.

3.08 TEMPLATES: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

3.09 ATTACHMENT: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

3.10 MOUNTING HEIGHTS: Where mounting heights are not indicated, mount components at industry-recognized standard mounting heights for the applications indicated. Refer questionable mounting height choices to Architect for final direction.

3.11 ALLOW FOR BUILDING MOVEMENT, including thermal expansion and contraction. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

3.12 JOINTS AND VISUAL EFFECT: Provide uniform joint widths in exposed Work, organized for the best possible visual effect. Fit exposed connections together to form hairline joints. Recheck measurements and dimensions of the Work, as an integral step of starting each installation. Refer questionable visual-effect choices to Architect for final decision of acceptability.

3.13 NON-HAZARDOUS MATERIALS: Use products, cleaners, and installation materials that are not considered hazardous.

3.14 BRACE PARTITIONS, suspend ceilings or soffits, and brace platforms, suspended items or similar construction only to structural elements – even if not specifically noted. Do not brace elements to the roof deck, plumbing / sprinkler pipes, ductwork, electrical conduit or similar elements.

3.15 AT PROJECTIONS OF FINISHED SURFACES, including pilasters or thickened walls, return all exposed surface finishes back to the primary surface even if not specifically noted.

3.16 ALIGN SURFACES of new finishes with existing finishes and match existing finish-surface conditions except as otherwise indicated. Patch existing surfaces and refinish to match adjacent existing surfaces, as applicable.

3.17 PROVIDE TEMPORARY COVERINGS AND PROTECTION after installation, to protect installed products from damage from traffic and construction operations, and remove when no longer required. Repair and replace damaged items, at no additional cost to the Owner. Additional time required to secure replacements and to make repairs will not be considered as justification for an extension of time to complete the Work.

PART 4 - PROGRESS CLEANING

4.01 SUPERVISE CONSTRUCTION OPERATIONS to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposures during the construction period.

4.02 CLEAN WORK AREAS DAILY, including the project site and common areas, as applicable. Enforce cleaning requirements strictly. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations. Use containers intended for holding waste materials of type to be stored.

4.03 CLEAN AREAS where work is in progress to the level of cleanliness necessary for proper execution of the Work. Remove liquid spills promptly. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

4.04 KEEP INSTALLED WORK CLEAN, cleaning surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

4.05 IN CONCEALED SPACES, remove debris before enclosing the space.

4.06 CLEAN EXPOSED SURFACES in finished areas and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

4.07 DURING HANDLING AND INSTALLATION, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

PART 5 - STARTING AND ADJUSTING

5.01 START EQUIPMENT AND OPERATING COMPONENTS to confirm proper operation. Remove malfunctioning units, replace with new units, and retest. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

5.02 TEST EACH PIECE OF EQUIPMENT to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

5.03 PROVIDE FINAL PROTECTION AND MAINTAIN CONDITIONS that ensure installed Work is without damage or deterioration at time of Substantial Completion. Comply with manufacturer's written instructions for temperature and relative humidity.

END OF SECTION 01 73 00

SECTION 01 73 29 – CUTTING & PATCHING

PART 1 - GENERAL

1.01 DEFINITION: "Cutting and patching" includes cutting into construction elements (either new or existing) to provide for the installation or performance of other work and the subsequent fitting and patching required to restore surfaces to their original condition. "Cutting and patching" is performed for coordination of the Work, to uncover Work for access or inspection, to obtain samples for testing, to permit alterations to be performed, or for other similar purposes.

1.02 DO NOT cut and patch structural elements in a manner that would reduce their load-carrying capacity or load-deflection ratio. Do not cut and patch operating elements or safety related components in a manner that would result in reducing their capacity to perform as intended, or result in increased maintenance, or decreased operational life or safety. Do not cut and patch construction exposed on the exterior or in occupied spaces, in a manner that would, in the Architect's

opinion, reduce the building's aesthetic qualities, or result in visual evidence of cutting and patching. Remove and replace Work cut and patched in a visually unsatisfactory manner.

1.03 "CUTTING AND PATCHING" DOES NOT INCLUDE work performed during the manufacturing of products. It does not include the drilling of holes for installation of fasteners or similar operations. Demolition of selected portions of the building for alterations is included in Division-2 Specification Sections.

1.04 USE MATERIALS that are identical to existing materials. If identical materials are not available or cannot be used where exposed surfaces are involved, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials whose installed performance will equal or surpass that of existing materials.

1.05 INSPECTION: Before cutting existing surfaces, examine surfaces to be cut and patched and conditions under which cutting and patching is to be performed. Take corrective action before proceeding, if unsafe or unsatisfactory conditions are encountered.

1.06 PROVIDE TEMPORARY SUPPORT AND PROTECTION of Work to be cut. Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the Project that might be exposed during cutting and patching operations.

1.07 TAKE ALL PRECAUTIONS necessary to avoid cutting existing pipe, conduit or ductwork serving the building, but scheduled to be removed or relocated until provisions have been made to bypass them. Employ skilled workmen to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

1.08 CUT existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition. Cut existing construction using methods least likely to damage elements to be retained or adjoining construction.

1.09 IN GENERAL, use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.

1.10 BY-PASS UTILITY SERVICES such as pipe or conduit, before cutting, where services are shown or required to be removed, relocated or abandoned. Cut-off pipe or conduit in walls or partitions to be removed. Cap, valve or plug and seal the remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after by-passing and cutting.

1.11 PATCH with durable seams that are as invisible as possible. Comply with specified tolerances. Where feasible, inspect and test patched areas to demonstrate integrity of the installation. Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

1.12 THOROUGHLY CLEAN all areas and spaces where cutting and patching is performed or used as access. Remove completely paint, mortar, oils, putty and items of similar nature. Thoroughly clean piping, conduit and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

END OF SECTION 01 73 29

SECTION 01 74 19 – CONSTRUCTION WASTE MANAGEMENT

PART 1 - GENERAL

1.01 SUMMARY:

A. Waste Management Requirements: This section specifies diversion of Construction and Demolition (C&D) waste from the landfill.

(1) Owner requires that this project generate the least amount of trash and waste possible.
(2) Employ processes that ensure the generation of as little waste as possible due to error, poor planning, breakage, mishandling, contamination, or other factors.
(3) Waste Management Goals:

(a) Identify at least 5 materials targeted for diversion and how they will be separated.
(b) A minimum of 75% of the total project waste should be diverted from landfill, calculated by either 1) weight or 2) volume, whichever shows a larger percentage at the end of the project.

(4) Provide contract documents, including a waste management plan, to show evidence of recycling, and reuse of recovered materials.
(5) Inform owner and architect where Construction and Demolition (C&D) Waste Management requirements could detrimentally impact C&D schedule.
(6) Provide separate itemization of cost related to C&D Waste Management.
(7) Effect optimum management of solid wastes via a materials management hierarchy.
(8) The materials management hierarchy shall be: reduce, reuse, and recycle.
(9) Prevent environmental pollution and damage.
(10) Minimize trash/waste disposal in landfills; reuse, salvage, or recycle as much waste as economically feasible.
(11) Owner may decide to pay for additional recycling, salvage, and/or reuse based on Landfill Alternatives Proposal specified below.
(12) Required Recycling, Salvage, and Reuse: The following may not be disposed of in landfills or by incineration:

(a) Aluminum and plastic beverage containers.
(b) Corrugated cardboard.
(c) Wood pallets.
(d) Clean dimensional wood: May be used as blocking or furring.
(e) Land clearing debris, including brush, branches, logs, and stumps: See Section 02 23 00 for use options.
(f) Concrete: May be crushed and used as riprap, aggregate, sub-base material, or fill.
(g) Metals, including packaging banding, metal studs, sheet metal, structural steel, piping, reinforcing bars, door frames, and other items made of steel, iron, galvanized steel, stainless steel, aluminum, copper, zinc, lead, brass, and bronze.
(h) Glass.
(i) Gypsum drywall and plaster.
(j) Plastic buckets.
(k) Fluorescent lamps (light bulbs).

(13) LEED Certification for this project is dependent on diversion of at least 75 percent, by weight, of potential landfill trash/waste by recycling and/or salvage.
(14) Contractor shall submit periodic Waste Disposal Reports; all landfill disposal, recycling, salvage, and reuse must be reported regardless of to whom the cost or savings accrues; use the same units of measure on all reports.
(15) Contractor shall develop and follow a Waste Management Plan designed to implement these requirements.
(16) Methods of trash/waste disposal that are not acceptable are:

(a) Burning on the project site.
(b) Burying on the project site.
(c) Dumping or burying on other property, public or private.
(d) Other illegal dumping or burying.
(e) Incineration, either on- or off-site.

(17) Regulatory Requirements: Contractor is responsible for knowing and complying with regulatory requirements, including but not limited to Federal, State and local requirements, pertaining to legal disposal of all construction and demolition waste materials.

1.02 ENVIRONMENTAL CONSIDERATIONS: This project is designed and constructed with practices and procedures to meet the project's environmental considerations and goals. These considerations and goals are to establish a facility which is environmentally responsible, profitable, and a healthy place to live and work. To guide this process, this project is pursuing LEED Silver certification per the v4 Green Building Design and Construction Reference Guide for New Construction. Compliance with all credits and prerequisites shown in the checklist attached to section 01 81 81.02 is required. All team members will be required to perform some amount of associated documentation. Refer to Sections listed below for environmental considerations and goals, and applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these considerations and goals, as defined in the Contract Documents, are implemented to the fullest extent.

1.03 RELATED SECTIONS

A. Drawings and general provisions of the Contract, including General Conditions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

(1) Divisions 2 through 16 Sections for LEED Requirements specific to the Work of each of those Sections.
(2) Section 01 35 04 - LEED Requirements
(3) Section 01 81 19 - Indoor Air Quality Management
(4) Section 07 25 00 - Building Envelope Testing
(5) Section 01 91 13 - General Commissioning Requirements
(6) Section 01 79 00 - Commissioning Training Requirements
(7) Document Number - Summary of the Work.
(8) Document Number - Submittals.
(9) Document Number - Construction Facilities and Temporary Controls.
(10) 01 74 19 - Construction Waste Management.

1.04 DEFINITIONS:

A. Inert Fill – A permitted facility that accepts inert waste such as asphalt and concrete exclusively.
B. Class III Landfill - A landfill that accepts non-hazardous waste such as household, commercial, and industrial waste, including construction, remodeling, repair, and demolition operations.
C. Construction and Demolition Waste – Including solid wastes, such as building materials, packaging, rubbish, debris, and rubble resulting from construction, remodeling, repair, and demolition operations.

(1) Rubbish: Including both combustible and noncombustible wastes, such as paper, boxes, glass, crockery, metal and lumber scrap, tin cans, and bones.
(2) Debris: Including both combustible and noncombustible wastes, such as leaves and tree trimmings that result from construction or maintenance and repair work.

D. Weight Conversion Factor – It is the rate set forth in the standardized Weight Conversion Table 1 approved by the US Green Building Council for the use in estimating the volume or weight of materials identified in the Waste Management Plan.
E. Deconstruction - The process of removing existing building materials from renovation and demolition projects for the purposes of reuse, and recycling, in a efficient and safe manner possible.
F. Divert – Using material for any purpose other than disposal in a landfill.
G. Waste Materials – Large and small pieces of listed materials which are excess to contract requirements and generally include materials to be recycled and/or recovered from existing construction and items of trimmings, cuttings, and damaged goods resulting from new installations, which can be effectively used in the Work.
H. Reuse – Using a material or product that is recovered from construction, renovation, or demolition activities.
I. Recycling – The process of collecting and preparing recyclable materials in their original form or in manufacturing processes that do not cause the destruction/contamination of recyclable materials in a manner that precludes further use.
J. Recovery – Any process that reclaims materials, substances, energy, or other products contained within or derived from waste on-site. It includes waste-to-energy, composting, and other processes.
K. Sources Separation – Sorting the recovered materials into specific material types with no or a minimum amount of contamination on site.
L. Time-Based Separation – Collecting waste during each phase of construction or deconstruction which results in primarily one major type of recovered material. The material is removed before it becomes mixed with the material from the next phase of construction.
M. Commingled or Off-site Separation – Collecting all material types into a single bin or mixed collection system and separating the waste materials into recyclable material types in an off-site facility.

1.05 SUBMITTALS:

A. See Section 01 30 00 – Administrative Requirements, for submittal procedures
B. Landfill Alternatives Proposal: Within 10 calendar days after receipt of Notice of Award of Bid, or prior to any trash or waste removal, whichever occurs sooner, submit a projection of trash/waste that will require disposal and alternatives to landfilling, with net costs.

(1) Submit to Architect for Owner's review and approval.
(2) If Owner wishes to implement any cost alternatives, the Contract Sum will be adjusted as specified elsewhere.
(3) Include an analysis of trash/waste to be generated and landfill options as specified for Waste Management Plan described below.
(4) Describe as many alternatives to landfilling as possible:

(a) List each material proposed to be salvaged, reused, or recycled
(b) List the proposed local market for each material.
(c) State the estimated net cost resulting from each alternative, after subtracting revenue from sale of recycled or salvaged materials and landfill tipping fees saved due to diversion of materials from the landfill.

C. Once Owner has determined which of the landfill alternatives addressed in the Proposal above are acceptable, prepare and submit Waste Management Plan; submit within 10 calendar days after notification by Architect.
D. Waste Management Plan: Include the following information:

(1) Analysis of the trash and waste projected to be generated during the entire project construction cycle, including types and quantities.
(2) Landfill Options: The name, address, and telephone number of the landfill(s) where trash/waste will be disposed of, the applicable landfill tipping fee(s), and the projected cost of disposing of all project trash/waste in the landfill(s).
(3) Landfill Alternatives: List all waste materials that will be diverted from landfills by reuse, salvage, or recycling.

(4) List each material proposed to be salvaged, reused, or recycled. Alternative Daily Cover (ADC) does not qualify as material diverted from disposal. Land clearing debris cannot be included.
(5) List the local market for each material.
(6) State the estimated net cost, versus landfill disposal.
(7) Estimate at least 4 material streams that will be diverted.
(8) Meetings: Describe regular meetings to be held to address waste prevention, reduction, recycling, salvage, reuse, and disposal.
(9) Materials Handling Procedures: Describe the means by which materials to be diverted from landfills will be protected from contamination and prepared for acceptance by designated facilities; include separation procedures for recyclables, storage, and packaging.
(10) Transportation: Identify the destination and means of transportation of materials to be recycled; i.e. whether materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler.

E. Waste Disposal Reports: Submit at specified intervals, with details of quantities of trash and waste, means of disposal or reuse, and costs; show both totals to date and since last report.

(1) Submit updated Report with each Application for Progress Payment; failure to submit Report will delay payment.
(2) Submit Report on a form acceptable to Owner.
(3) Landfill Disposal: Include the following information:

(a) Identification of material and material stream.
(b) Amount, in tons and cubic yards, of trash/waste material from the project disposed of in landfills.
(c) State the identity of landfills, total amount of tipping fees paid to landfill, and total disposal cost.
(d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.

(4) Recycled and Salvaged Materials: Include the following information for each:

(a) Identification of material, including those retrieved by installer for use on other projects.
(b) Amount, in tons and cubic yards, date removed from the project site, and receiving party.
(c) Transportation cost, amount paid or received for the material, and the net total cost or savings of salvage or recycling each material.
(d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
(e) Certification by receiving party that materials will not be disposed of in landfills or by incineration.

(5) Material Reused on Project: Include the following information for each:

(a) Identification of material and how it was used in the project.
(b) Amount, in tons and cubic yards.
(c) Include weight tickets as evidence of quantity.

(6) Other Disposal Methods: Include information similar to that described above, as appropriate to disposal method.

F. C&D Waste Management Plan: Before the start of demolition, submit a C&D waste management plan to the Owner and the architect for approval. The attached sample plan can be used as an example, but the final plan shall include the following:

(1) Indicate how the Contractor proposes to recover at least 75% of the C&D wastes for reuse and recycling.
(2) The C&D Waste Management Plan should coordinate the recovery effort with the construction, and renovation / demolition schedule.
(3) Indicate compliance with Section 1.7 QUALITY ASSURANCE.
(4) Include a list of reuse facilities, recycling facilities and processing facilities that will be receiving the recovered materials (including take back by Owner or on-site auctions.)
(5) If some of the materials will be donated or sold on-site auctions, describe the process and identify the organizations that may receive the materials.
(6) Identify materials that are not recyclable or not recovered which will be disposed of in a landfill (or other means acceptable by state and local ordinance and regulations) and explain why the materials are not recovered.
(7) List the permitted landfill, or other permitted disposal facilities, that will be accepting the disposed waste materials.
(8) Indicate instances or situations where compliance with the requirements of this specification do not apply or do not appear to be possible.
(9) Identify each type of waste material to be reused or recycled and estimate the amount, by weight.
(10) Provide estimate of time requirements for demolition and for the removal of valuable reusable items and materials.
(11) Prepare building engineering survey and worker safety plan, assessment of building condition and all potential hazards.
(12) Provide a C&D site management plan.
(13) Provide final accounting of disposition of recovered materials upon completion of project for final payments.

G. C&D Waste Management Summary Reports: Provide the C&D Waste Management Coordinator with delivery receipts for the recovered materials and waste materials sent to the permitted recycling facilities, processing facilities, or landfill with the following information:

(1) Name of firm accepting the recovered materials or waste materials
(2) Specify type of facility (e.g. retail facility, recycler, processor, Class III landfill, MRF)
(3) Location of the facility

(4) Type of materials
(5) Net weights and volume of each type of material
(6) Date of delivery
(7) Value of the materials or tipping fee paid
This information will be collated in the "Contractor Tracking Document" tab for waste tracking. This tab will be submitted for the Application for Progress Payment as stated below.

H. Application for Progress Payment: The following should be submitted with the Application for Progress Payment:

(1) C&D Waste Management Summary Report as stated above in section 1.5 SUBMITTALS, B. C&D Waste Management Summary Reports, with the C&D Waste Manager approval on each of the report.
(2) Payment could be withheld until diversion goals are met. The Contractor is ultimately responsible for implementation of the C&D Waste Management Plan and achieving the diversion goals.

1.06 RECYCLING PROGRAM:

A. The recycling program could utilize one or a combination of any of the following common waste diversion strategies:

(1) Sources Separation
(2) Time-Based Separation
(3) Commingled or Off-site Separation
(4) Back haul of packaging
(5) On-site sales auctions and removal.

B. Waste Material management hierarchy can be viewed as: reuse on-site, recycle on-site, reuse off-site, and recycle off-site.

C. Other innovative approaches to achieve the minimum diversion rate are encouraged and should be specified and described in the C&D Waste Management Plan.

D. Minimum diversion rate may be achieved by recovering and recycling the following materials:

(1) Asphalt
(2) Concrete and concrete blocks
(3) Brick, tile and masonry materials
(4) Ferrous metal
(5) Non-ferrous metals: copper, aluminum … etc
(6) Untreated lumber
(7) Plywood, OSB and particle board
(8) Gypsum wallboard scrap
(9) Paper and cardboard
(10) Beverage containers
(11) Insulation
(12) Rigid foam
(13) Glass
(14) Carpet and pad
(15) Trees and shrubs
(16) Soil
(17) Plumbing fixtures
(18) Windows
(19) Doors
(20) Cabinets
(21) Architectural fixtures
(22) Millwork, paneling and other similar interior finishes
(23) Electric fixtures, motors, switch gear and other similar equipment
(24) HVAC equipment, duct work, control systems, switches and other similar equipment
(25) Others as appropriate

1.07 QUALITY ASSURANCE:

A. Regulatory Requirements: Comply with applicable requirements of the State, local ordinances and regulations concerning management of construction, clearing, and inert materials.

B. Disposal Site, Recyclers and Waste Materials Processors: Use only facilities properly permitted by the State, and/or by local authorities where applicable.

C. Pre-C&D Waste Management Meeting

(1) Prior to beginning work at the site, schedule and conduct a meeting to review the C&D Waste Management Plan and discuss procedures, schedules, coordination and specific requirements for waste materials recycling and disposal. Discuss coordination and interface between Contractor, sub-contractors, architect, engineers, project manager, Owner, and other C&D activities. Identify and resolve problems of compliance with requirements. Record minutes of the meeting, identifying conclusions reached and matters requiring further resolution. Maintain waste management as an agenda item at future construction meetings.
(2) Attendees: Contractor and related contractor personnel associated with work of this section, including personnel in charge of the waste management program; C&D Quality Manager; architect; engineers; material and equipment suppliers where appropriate; and such additional Owner personnel as Owner deems appropriate.
(3) Plan Revision: Make revisions to C&D Waste Management Plan agreed upon during the meeting and incorporate resolutions agreed to be made subsequent to the meeting. Submit revised plan to architect or the Owner personnel as Owner deems appropriate for approval.

D. Implementation
   (1) Designate an on-site party responsible for instructing workers and implementing the C&D Waste Management Plan.
   (2) Distribute copies of C&D Waste Management Plan to job site foreman and each subcontractor.
   (3) Include waste management and recycling in worker orientation.
   (4) Provide on-site instruction on appropriate separation, handling, recycling, and recovery methods to be used by all parties at the appropriate stages of the work at the site.
   (5) Also include discussion of waste management and recycling in regular job meeting and job safety meetings conducted during the course of work at the site.

E. The Contractor will be responsible for ensuring that the appropriate governmental entities are notified of the work.
F. Remove and relocate reusable materials to be reinstalled or retained in a manner to prevent damage or contamination.
G. Conduct construction and demolition in such a manner to minimize damage to trees, plants and natural landscape environment.
H. Arrange for adequate collection, and transportation to deliver the recovered materials to the approved recycling center or processing facility. Maintain records accessible to the architect or C&D Quality Manager for verification of diversion of recovered waste materials.

1.08 STORAGE AND HANDLING:

A. Site Storage
   (1) Remove materials for recycling and recovery from the work locations to approved containers or storage area as required. Failure to remove waste or recovered materials will be considered cause for withholding payment and termination of Contract.
   (2) Position containers for recyclable and recoverable waste materials at a designated location on the Project Site. If materials are sorted on site, also provide a sorting area and necessary storage containers.
   (3) Change-out loaded containers for empty containers, as demand requires.
   (4) If recovered materials are stored on-site for project duration provide adequate security from pilferage.

B. Handling
   (1) Deposit indicated recyclable, and recoverable materials in storage areas or containers in a clean (no mud, adhesive, solvents, petroleum contamination), debris-free condition. Do not deposit contaminated materials into the containers until such time as such materials have been cleaned.
   (2) Insure all recovered materials are made safe for handling and storage.
   (3) If the contamination chemically combines with the material so that it cannot be cleaned, do not deposit into the recycle containers. In such case, request resolution by the C&D Quality Manager for disposal of the contaminated material. Directions from the C&D Quality Manager do not relieve the Contractor of responsibility for compliance with all legal and regulatory requirements for disposal, nor shall such directions cause a request for modification of the Contract.

1.09 PROJECT CONDITIONS:

A. Environmental Requirements:
   (1) Transport recyclable and recoverable waste materials from the Work Area to containers and carefully deposit in the containers without excess noise and interference with other activities, to minimize noise and dust.
   (2) The Contractor shall ensure adequate erosion control and storm water control, if required, to prevent or minimize the negative impact to its surrounding environment.
   (3) Provide measures to insure the containment of lead-based paint and dust, nails, asbestos-based products and any biological contaminants that may affect environmental health and safety conditions.

B. Site Condition:
   (1) Signs and instructions should be clear, and easy to understand. All recycling containers should be clearly labeled and lists of acceptable and unacceptable materials will be posted throughout the site. Whenever possible, they should be in multiple-languages, especially in Spanish, and in graphic symbols.
   (2) The Contractor shall ensure the safety of all personnel involved in the C&D process.
   (3) A C&D site management plan shall be created including: work areas, materials processing areas, materials storage and disposal areas, worker hand-washing and changing stations, first aid and medical information.

PART 2 - PRODUCTS

2.01 SALVAGED AND REUSE MATERIALS:

A. The following components and fixtures are collected for reuse:
   (1) Plumbing fixtures
   (2) Windows
   (3) Doors
   (4) Cabinets
   (5) Bricks
   (6) Millwork, paneling and other similar interior finishes
   (7) Electric fixtures, motors, switch gear and other similar equipment
   (8) HVAC equipment, duct work, control systems, switches and other similar equipment
   (9) Architectural fixtures
   (10) Others as appropriate

B. Wood collected for reuse is sorted by:
   (1) Type
   (2) Size, dimension
   (3) Protected from the ground, bending, and moisture

2.02 RECYCLED MATERIALS:

A. The following materials are collected for recycling:
   (1) Asphalt
   (2) Concrete and concrete blocks
   (3) Tile and masonry materials
   (4) Ferrous metal
   (5) Non-ferrous metals: copper, aluminum … etc
   (6) Untreated lumber
   (7) Plywood, OSB and particle board
   (8) Gypsum wallboard scrap
   (9) Paper and cardboard
   (10) Beverage containers
   (11) Insulation
   (12) Rigid foam
   (13) Glass
   (14) Carpet and pad
   (15) Trees and shrubs
   (16) Soil
   (17) Others as appropriate

PART 3 - EXECUTION

3.01 N/A

END OF SECTION 01 74 19

SECTION 01 75 00 – OPERATION AND MAINTENANCE DATA INTEGRATION

PART 1 - GENERAL

A. SECTION INCLUDES

1. General Requirements
2. Related Documents
3. Definitions and Abbreviations
4. Operations and Maintenance Data Integration Team
5. Team Member Responsibilities
6. Operations and Maintenance Data Integration Submittals
7. Scheduling
8. Specific Asset Data Requirements

B. General Requirements

1. The work under this Section is subject to requirements of the Contract Documents including the Owner's General Conditions and articles of the Construction Manager's General Conditions.
2. General Commissioning of the project will be executed outside of the general contract by an independent consultant to the University of Arkansas. This document states the requirements of the Construction Manager/General Contractor to assist the Commissioning Agent in the executionof their work.
3. This section shall in no way diminish the responsibility of the Contractors, Subs and Suppliers in performing all aspects of work and testing as outlined in the contract documents. Any requirements outlined in this section are in addition to requirements outlined in other divisions within the project specifications.

C. RELATED DOCUMENTS

1. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.
2. The requirements in this section are in addition to those specifically outlined in:
    a. Section 01 81 13 – LEED Requirements
    b. Section 01 79 00 – Minimum Owner Training Requirements
    c. Section 07 08 00 – Commissioning of Building Envelope
    d. Section 22 08 00 – Commissioning of Plumbing Systems
    e. Section 23 08 00 – Commissioning of HVAC Systems
    f. Section 26 08 00 – Commissioning of Electrical Systems

D. DEFINITIONS & ABBREVIATIONS

1. AD: Asset Documents
2. A/E: Architect/Engineer
3. Asset: Refers to any System or Sub-System included in this section.
4. Acceptance Phase: Phase of construction after startup and initial checkout when Functional Performance Testing, O&M documentation review and training occurs.
5. BAS: Building Automation System
6. CC: Controls Contractor
7. CMMS: Computerized Maintenance Management System
8. Commissioning Authority (CxA): An independent party, not otherwise associated with the A/E team members or the GC/CM oversees, though he/she may be hired as a subcontractor to them. The CxA directs the day-to-day commissioning activities.
9. Construction Phase: Phase of construction that begins once construction commences and continues until TAB and Functional Performance Testing. This phase includes the commissioning submittal review, development and execution of Pre-Functional Checklists, site observations and equipment startup.
10. EC: Electrical Contractor
11. FAMA: Facilities Management
12. FAMIS: Facility Asset Management Information System
13. GC/CM: General Contractor / Construction Manager
14. HVAC: Heating, Ventilating and Air Conditioning
15. MC: Mechanical Contractor
16. O&M: Operation and Maintenance
17. Occupancy Phase: Phase of the project after the Acceptance Phase. During this phase, commissioning requirements are to correct any remaining Commissioning Issues, carry out any required re-testing, deferred or seasonal testing, close-out documentation review and warranty review.
18. OR: Owner's Representative
19. PC: Plumbing Contractor
20. Subs: Subcontractors
21. Subsystem: A portion of a system with characteristics similar to a system.
22. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

E. OPERATIONS AND MAINTENANCE DATA INTEGRATION TEAM

1. To ensure successful Operations and Maintenance data integration, it requires the participation of all project team members to be an effective and efficient process. This team is made of individuals from the University of Arkansas FAMA, Commissioning and Construction teams as identified in this section.
2. Operations and Maintenance Data Integration Team members appointed by the University of Arkansas FAMA:

a. CxA – Commissioning Authority
b. CMMS Administrator
c. Maintenance Coordinator
d. Director of Operations and Maintenance
e. Construction Coordinator
f. Asset Coordinator

3. Operations and Maintenance Data Integration Team members appointed by the Contractor(s):

(1) Note: Edit as necessary to align with the project scope

b. GC/CM – General Contractor/Construction Manager
c. MC – Mechanical Contractor
d. EC – Electrical Contractor
e. PC – Plumbing Contractor
f. CC – Controls Contractor
g. TABC – TAB Contractor
h. Equipment Suppliers and Vendors

F. TEAM MEMBER RESPONSIBILITIES

1. The general responsibilities of various parties in the Operations and Maintenance Data Integration process are provided in this subsection.
2. Owner's Responsibilities:

a. Attend initial Operations and Maintenance Data Integration meeting and additional meetings as necessary.
b. Provide the necessary type and quantity of barcodes to the GC/CM.
c. As applicable, provide to the GC/CM the current asset list for the project. This will be reviewed during the initial Operations and Maintenance Data Integration meeting.
d. Provide the Operations and Maintenance Data Integration document to the GC/CM. This will be provided in a cloud-based collaborative spreadsheet or sent directly to the GC/CM by the CMMS Administrator.
e. Review and approve the GC/CM submitted Operations and Maintenance Data Integration document once completed by the GC/CM.

3. General Contractor/Construction Manager Responsibilities:

a. Schedule and facilitate the initial Operations and Maintenance Data Integration meeting. Provide meeting minutes after meeting is completed.
b. Obtain barcodes from the Owner.
c. Install the barcodes for the project specific assets. The location of the barcode in relation to the asset is dependent on the type of asset receiving the barcode.
d. Document the required data for each asset in the Operations and Maintenance Data Integration document provided by the Owner and provide all the necessary information as required.
e. If GC/CM is removing asset equipment from the project that includes existing barcodes, the GC/CM shall document that information on the Operations and Maintenance Data Integration document.
f. Submit the Operations and Maintenance Data Integration documentation to the CxA for review and verification.

4. Commissioning Authority (CxA) Responsibilities:

a. Attend initial Operations and Maintenance Data Integration meeting and additional meetings as necessary.
b. Review and verify through sampling the Operations and Maintenance Data Integration documentation submitted by the GC/CM.
c. Recommend approval, and submit the documentation to the CMMS Administrator for final approval.

G. OPERATIONS AND MAINTENANCE DATA INTEGRATION SUBMITTALS

1. This section identifies the Operations and Maintenance Data Integration submittals that the GC/CM is responsible for providing to the CxA and/or FAMA for completion of related tasks.
2. Completed Operations and Maintenance Data Integration Documentation:

a. The GC/CM shall provide an electronic copy of the completed Operations and Maintenance Data documentation to the CxA for review and verification prior to the final submission to FAMA. Once the CxA approves the completed documentation, the GC/CM shall provide the final documentation to the CMMS Administrator of FAMA for approval.

H. SCHEDULING

1. All completed Operations and Maintenance Data Integration documentation must be submitted and approved prior to substantial completion of the project. Failure to adhere to this requirement will result in retainage being withheld.
2. The initial Operations and Maintenance Data Integration meeting shall be scheduled by the GC/CM prior to installation of any asset belonging to an asset type identified by section 1.9 of this specification.
3. The GC/CM shall provide a list of all asset types of new assets being installed by the project as well as the respective quantity of each asset type following both the initial Operations and Maintenance Data Integration meeting and approval of equipment submittals. Anticipated startup dates for each asset type should be identified as part of this list.
4. The owner will provide necessary type and quantity of barcodes to the GC/CM at least 2 weeks prior to scheduled startup of the assets.

I. Specific Asset Data Requirements

1. Each asset listed below applies to this specification as applicable to the project, and the following sections outline the data to be recorded for each asset, as well as the required location of the barcode for the asset.
    1. Acid Neutralization System
    2. ADA Access Door Opener
    3. Air Compressor, Building
    4. Air Compressor, Lab
    5. Air Compressor, Plant
    6. Air Compressor, Portable
    7. Air Dryer, Building
    8. Air Dryer, Plant
    9. Appliance, Dishwasher, Commercial
    10. Appliance, Dishwasher, Residential
    11. Appliance, Ice Machine
    12. Appliance, Refrigerator
    13. Automated External Defibrillator (AED)
    14. Backflow Preventer
    15. Backflow Preventer Test Gauge
    16. Blow Down Drain, Fire Sprinkler
    17. Boiler, Domestic Hot Water
    18. Boiler, Heating Water
    19. Boiler, Steam
    20. Chemical Feeder
    21. Chemical Pot
    22. Chemical Treatment System
    23. Chemical Water Softener System
    24. Condenser, Air Cooled
    25. Condenser, Water Cooled
    26. Cooler, Evaporative
    27. Cooler, Oil
    28. Cooling Tower System
    29. Curtain, Fire, Sliding
    30. Deaerator, Boiler Feed Water
    31. Disposal, Garbage
    32. Door, Emergency Egress
    33. Door, Exterior
    34. Door, Fire, Rollup
    35. Door, Fire, Sliding
    36. Door, Fire, Swinging
    37. Door, Interior
    38. Door, Overhead, Electric
    39. Door, Overhead, Manual
    40. Elevator
    41. Environmental Chamber
    42. Eyewash Station, Emergency
    43. Eyewash/Facewash Station, Emergency
    44. Eyewash/Facewash/Shower Combo, Emergency
    45. Eyewash/Shower Combo, Emergency
    46. Fan, Ceiling Industrial
    47. Fan, Exhaust, Fume Hood
    48. Fan, Exhaust, Kitchen
    49. Fan, Exhaust, Plant
    50. Fan, Exhaust, Smoke
    51. Fan, Exhaust, Space / Restroom
    52. Fan, Make-up Air
    53. Fan, Portable
    54. Fan, Return Air
    55. Filter Heater Skid, Natural Gas
    56. Filter, HEPA
    57. Fire Alarm System
    58. Fire Extinguisher
    59. Fire Hydrant
    60. Fire Suppression System, Chemical
    61. Fire Suppression System, Dry Pipe
    62. Fire Suppression System, Wet Pipe
    63. Flag Pole
    64. Fume Hood, Biological
    65. Fume Hood, Chemical
    66. Fume Hood, Radiological
    67. Furnace, Electric
    68. Furnace, Natural Gas

69. Gate
70. Generator, Gas Turbine
71. Generator, Installed (Emergency)
72. Generator, Portable
73. Heat Exchanger, Domestic Hot Water
74. Heat Exchanger, Plate Frame
75. Heat Exchanger, Steam
76. HVAC Unit, Air Handling
77. HVAC Unit, Air Handling UV Sterilization
78. HVAC Unit, CRAC
79. HVAC Unit, Fan Coil
80. HVAC Unit, Heater, Electric
81. HVAC Unit, Heater, Hydronic
82. HVAC Unit, Heater, Natural Gas
83. HVAC Unit, Make-up Air
84. HVAC Unit, Package
85. HVAC Unit, Rooftop
86. HVAC Unit, Split Air Conditioner
87. HVAC Unit, Window Air Conditioner
88. HVAC, Air Compressor
89. HVAC, Chilled Beam
90. HVAC, Chiller
91. HVAC, Chiller System, Departmental
92. HVAC, Dehumidifier, Installed
93. HVAC, Dehumidifier, Portable
94. HVAC, Heat Pump
95. HVAC, Humidifier, Installed
96. HVAC, Humidifier, Portable
97. HVAC, VAV Terminal Unit Non Fan-Powered
98. HVAC, VAV Terminal Unit Fan-Powered
99. Inverter
100. Landscape Feature (fountain, statue, etc.)
101. Lift, Materials
102. Lift, Stage
103. Lift, Wheelchair
104. Light, Emergency Egress
105. Light, Emergency Exit
106. Light, Exterior, Building Mounted
107. Light, Exterior, Crosswalk
108. Light, Exterior, Ground
109. Light, Exterior, Pole
110. Lighting, Control System
111. Meter, Electric
112. Meter, Condensate
113. Meter, Flow, Chilled Water
114. Meter, Flow, Domestic
115. Meter, Flow, Steam
116. Meter, Heating Hot Water
117. Meter, Natural Gas
118. Motor
119. Motor Control Center
120. Phone, Emergency/Information
121. Pipeline, Natural Gas
122. Pump, Boiler Feed Water
123. Pump, Chemical Injection
124. Pump, Chilled Water
125. Pump, Condensate, Primary
126. Pump, Condensate, Secondary
127. Pump, Domestic High Rise
128. Pump, Domestic Hot Water
129. Pump, Fire
130. Pump, Glycol
131. Pump, Heating Hot Water
132. Pump, Sewer
133. Pump, Sump
134. Pump, Sump, Non-building
135. Pump, Tower Water
136. Pump, Vacuum, Building
137. Pump, Vacuum, Lab
138. Pump, Vacuum, Portable

139. Restroom Fixtures
140. Roof, Built-up
141. Roof, Green
142. Roof, Membrane
143. Roof, Metal
144. Roof, Shingle
145. Roof, Tile/Slate
146. Sensor, Differential Pressure
147. Separator, Air/Dirt
148. Separator, Oil/Water
149. Shower, Emergency
150. Sink, Custodial
151. Sink, Kitchen
152. Sink, Lab
153. Smoke Detector
154. Snorkels
155. Stormwater Detention System
156. Strainer, Chilled Water
157. Strainer, Cooling Tower
158. Switch, Automatic Transfer (ATS)
159. Switch, Busway
160. Switch, Disconnect
161. Switch, MV, Air
162. Switch, MV, Gas Filled
163. Switch, MV, Oil Filled
164. Switchboard / Main Distribution Panel (MDP)
165. Switchgear, MV System
166. Tank, Chilled Water Holding
167. Tank, Compressed Air Storage
168. Tank, Domestic Hot Water Storage
169. Tank, Expansion
170. Tank, Fuel Storage
171. Tank, Gasoline Storage
172. Transformer, MV, Dry
173. Transformer, MV, Oil Filled
174. Transformer, Secondary, Dry
175. Trap, Grease/Sediment
176. Valve, Gas Line Break
177. Valve, Pressure Reducing, Air
178. Valve, Pressure Reducing, Gas
179. Valve, Pressure Reducing, Steam
180. Valve, Safety Relief, Air
181. Valve, Safety Relief, Gas
182. Valve, Safety Relief, Steam
183. Valve, Safety Relief, Water
184. Variable Frequency Drive
185. Walk In Cooler
186. Walk In Freezer
187. Water Fountain
188. Water Fountain w/ Bottle Filler
189. Water Heater, Domestic, Electric
190. Water Heater, Domestic, Gas
191. Water Heater, Domestic, Steam
192. Water System, Deionized
193. Water System, Reverse Osmosis

J. Provide the following data for each specific asset and record the information on the Operations and Maintenance Data Integration document.

1. Acid Neutralization System

a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes

(1) Location of Tag
(2) Other Identifying Information

2. ADA Access Door Opener
   a. Barcode Number
      (1) 1 Tag/Floor/Type of Asset
   b. Asset ID/Label
   c. Asset Floor Location
   d. Warranty Start Date
   e. Warranty End Date
   f. General Notes
      (1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
      (2) Total number of that Asset on that floor with location for each (Ex. Typical of 4 Exterior Doors on 1st Floor list each location. Lobby 100, Corridor 128, Main Lobby 140, Corridor 182)
3. Air Compressor, Building
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information
4. Air Compressor, Lab
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information
5. Air Compressor, Plant
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information
6. Air Compressor, Portable
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes

(1) Location of Tag
(2) Other Identifying Information

7. Air Dryer, Building
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information
8. Air Dyer, Plant
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information
9. Appliance, Dishwasher, Commercial
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Other Identifying Information
10. Appliance, Dishwasher, Residential
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Other Identifying Information
11. Appliance, Ice Machine (Human Consumption Only)
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date

j. General Notes
   (1) Location of Tag
   (2) Other Identifying Information

12. Appliance, Refrigerator
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Other Identifying Information
13. Automated External Defibrillator
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Other Identifying Information
14. Backflow Preventer
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Asset Type and Service
       (3) Other Identifying Information
15. Backflow Preventer Test Gauge
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Asset Type and Service
       (3) Other Identifying Information
16. Blow Down Drain, Fire Sprinkler
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number

f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Other Identifying Information

17. Boiler, Domestic Hot Water
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Boiler Type
(3) Filter Type, Size and Quantity (if applicable)

18. Boiler, Heating Water
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Boiler Type
(3) Filter Type, Size and Quantity (if applicable)

19. Boiler, Steam
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Boiler Type
(3) Filter Type, Size and Quantity (if applicable)

20. Chemical Feeder
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Other Identifying Information

21. Chemical Pot

a. Barcode Number
   (1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
   (1) Location of Tag
   (2) Other Identifying Information

22. Chemical Treatment System
    a. Barcode Number
       (1) 1 Tag/System
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Other Identifying Information
23. Chemical Water Softener System
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Other Identifying Information
24. Condenser, Air Cooled
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Associated Indoor Unit(s) and Barcode Number(s)
25. Condenser, Water Cooled
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes

(1) Location of Tag
(2) Associated Indoor Unit(s) and Barcode Number(s)

26. Cooler, Evaporative
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
27. Cooler, Oil
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
28. Cooling Tower System
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Number of Cooling Tower Fan Motors
29. Curtain, Fire, Sliding
    a. Barcode Number
       (1) 1 Tag / Building
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Total number of assets within building with location of each documented
       (3) Other Identifying Information
30. Deaerator, Boiler Feed Water
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date

i. Warranty End Date
j. General Notes
(1) Other Identifying Information

31. Disposal, Garbage
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Total number of assets within building with location of each documented
(3) Other Identifying Information

32. Door, Emergency Egress
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building with location of each documented
(3) Other Identifying Information

33. Door, Exterior
a. Barcode Number
(1) 1 Tag/Floor/Type of Asset
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building per floor
(3) Other Identifying Information

34. Door, Fire, Rollup
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building with location of each documented
(3) Other Identifying Information

35. Door, Fire, Sliding
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building with location of each documented
(3) Other Identifying Information

36. Door, Fire, Swinging
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building with location of each documented
(3) Other Identifying Information

37. Door, Interior
a. Barcode Number

(1) 1 Tag/Floor/Type of Asset
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building per floor
(3) Other Identifying Information

38. Door, Overhead, Electric
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building
(3) Other Identifying Information

39. Door, Overhead, Manual
a. Barcode Number
(1) 1 Tag/Building
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
(2) Total number of assets within building with location for each door
(3) Other Identifying Information

40. Elevator
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Other Identifying Information

41. Environmental Chamber
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Other Identifying Information

42. Eyewash Station, Emergency
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Floor Location
d. General Notes
(1) Location of Tag
(2) Emergency Eye Wash Station Type
(3) Other Identifying Information

43. Eyewash / Facewash Station, Emergency
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label

c. Asset Floor Location
d. General Notes
   (1) Location of Tag
   (2) Emergency Eye Wash Station Type
   (3) Other Identifying Information

44. Eyewash / Facewash / Shower Combo, Emergency
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Floor Location
    d. General Notes
       (1) Location of Tag
       (2) Emergency Eye Wash Station Type
       (3) Other Identifying Information
45. Eyewash / Shower Combo, Emergency
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Floor Location
    d. General Notes
       (1) Location of Tag
       (2) Emergency Eye Wash Station Type
       (3) Other Identifying Information
46. Fan, Ceiling
    a. Barcode Number
       (1) 1 Tag/Asset/Floor
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag
       (2) Total number of assets within building per floor
       (3) Other Identifying Information
47. Fan, Exhaust, Fume Hood
    a. Barcode Number
       (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
       (1) Location of Tag (pop rivet to housing if outside)
       (2) Exhaust Fan Type
       (3) Area of Service and/or Equipment (associate to equipment asset tag)
       (4) Belt Size and Number of Belts (if applicable) or note as Direct Drive
       (5) Filter Size and Quantity
48. Fan, Exhaust, Kitchen
    a. Barcode Number
       (1) 1 Tag / Asset within Space / Room
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes

(1) Location of Tag (pop rivet to housing if outside)
(2) Exhaust Fan Type
(3) Area of Service and/or Equipment (associate to equipment asset tag)
(4) Belt Size and Number of Belts (if applicable) or note as Direct Drive
(5) Filter Size and Quantity

49. Fan, Exhaust, Plant
    a. Barcode Number
        (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag (pop rivet to housing if outside)
        (2) Exhaust Fan Type
        (3) Area of Service and/or Equipment (associate to equipment asset tag)
        (4) Belt Size and Number of Belts (if applicable) or note as Direct Drive
        (5) Filter Size and Quantity
50. Fan, Exhaust, Smoke
    a. Barcode Number
        (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag (pop rivet to housing if outside)
        (2) Exhaust Fan Type
        (3) Area of Service and/or Equipment (associate to equipment asset tag)
        (4) Belt Size and Number of Belts (if applicable) or note as Direct Drive
        (5) Filter Size and Quantity
51. Fan, Exhaust, Space / Restroom
    a. Barcode Number
        (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag (pop rivet to housing if outside)
        (2) Exhaust Fan Type
        (3) Area of Service and/or Equipment (associate to equipment asset tag)
        (4) Belt Size and Number of Belts (if applicable) or note as Direct Drive
        (5) Filter Size and Quantity
52. Fan, Make-up Air
    a. Barcode Number
        (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date

j. General Notes
   (1) Location of Tag
   (2) Other Identifying Information

53. Fan, Portable
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information

54. Fan, Return Air
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Unit served
      (3) Other Identifying Information

55. Filter Heater Skid, Natural Gas
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Other Identifying Information

56. Filter, HEPA
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Equipment/Space Served
      (3) Other Identifying Information

57. Fire Alarm System
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model

e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
    (1) Location of Tag
    (2) Other Identifying Information

58. Fire Extinguisher
    a. Barcode Number
        (1) 1 Tag/Building
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag (Ex. Tag Location on side of door in L100 Corridor)
        (2) Total number of assets within building
        (3) Other Identifying Information
59. Fire Hydrant
    a. Barcode Number
        (1) 1 Tag/Building
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag
        (2) Total number of assets within building
        (3) Other Identifying Information
60. Fire Suppression System, Chemical
    a. Barcode Number
        (1) 1 Tag/Asset

75. Heat Exchanger, Steam
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Other Identifying Information

76. HVAC Unit, Air Handling
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model

e. Asset Serial Number
f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
   (1) Location of Tag
   (2) Belt Size and Number of Belts (if applicable) or note if motors are Direct Drive
   (3) Supply Fan Motor Size and Number of Supply Fan Motors
   (4) Return Fan Motor Size and Number of Return Fan Motors
   (5) Exhaust Fan Motor Size and Number of Exhaust Fan Motors
   (6) Energy Wheel Motor Size
   (7) Supply Pre-Filter Size and Quantity
      a) Ensure different size filters are listed (if applicable)
      b) Filter location if not located in unit
   (8) Supply Final-Filter Size and Quantity
      a) Ensure different size filters are listed (if applicable)
      b) Filter location if not located in unit
   (9) Exhaust/Return Filter Size and Quantity
      a) Ensure different size filters are listed (if applicable)
      b) Filter location if not located in unit
   (10) Any Specific Attribute Information
      a) Specific component warranty durations

77. HVAC Unit, Air Handling UV Sterilization
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag
      (2) Belt Size and Number of Belts (if applicable) or note if motors are Direct Drive
      (3) Model and Quantity of UV lights
      (4) Supply Fan Motor Size and Number of Supply Fan Motors
      (5) Return Fan Motor Size and Number of Return Fan Motors
      (6) Exhaust Fan Motor Size and Number of Exhaust Fan Motors
      (7) Energy Wheel Motor Size
      (8) Supply Pre-Filter Size and Quantity
         a) Ensure different size filters are listed (if applicable)
         b) Filter location if not located in unit
      (9) Supply Final-Filter Size and Quantity
         a) Ensure different size filters are listed (if applicable)
         b) Filter location if not located in unit
      (10) Exhaust/Return Filter Size and Quantity
         a) Ensure different size filters are listed (if applicable)
         b) Filter location if not located in unit
      (11) Any Specific Attribute Information
         a) Specific component warranty durations

78. HVAC Unit, CRAC
   a. Barcode Number
      (1) 1 Tag/Asset
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date

j. General Notes
   (1) Location of Tag
   (2) Associated Outdoor Unit and Barcode Number
   (3) Belt Size and Number of Belts (if applicable) or note if motors are direct drive
   (4) Filter Size and Quantity
      a) Ensure different size filters are listed (if applicable)
      b) Filter location if not located in unit
   (5) Any Specific Attribute Information
      a) Specific component warranty durations

79. HVAC Unit, Fan Coil
   a. Barcode Number
      (1) 1 Tag/Floor/Asset Type
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag (Ex. Tag Location on side of unit in L100 Corridor)
      (2) Total number of that Asset on that floor with locations (Ex. Typical of 30 Fan-Powered Variable Air Volume Units on 1st Floor, list each location)
      (3) Filter Size and Quantity of Filters (ensure different sizes are listed)
      (4) Motor Size (ensure different sizes are listed)
      (5) Other identifying information

80. HVAC Unit, Heater, Electric
   a. Barcode Number
      (1) 1 Tag/Floor/Asset Type
   b. Asset ID/Label01
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag (Ex. Tag Location on side of unit in L100 Corridor)
      (2) Unit Heater Type
      (3) Total number and location of that Asset on that floor
      (4) Other identifying information

81. HVAC Unit, Heater, Hydronic
   a. Barcode Number
      (1) 1 Tag/Floor/Asset Type
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number
   f. Asset Room Location
   g. Asset Floor Location
   h. Warranty Start Date
   i. Warranty End Date
   j. General Notes
      (1) Location of Tag (Ex. Tag Location on side of unit in L100 Corridor)
      (2) Unit Heater Type
      (3) Total number and location of that Asset on that floor
      (4) Other identifying information

82. HVAC Unit, Heater, Natural Gas
   a. Barcode Number
      (1) 1 Tag/Floor/Asset Type
   b. Asset ID/Label
   c. Asset Make
   d. Asset Model
   e. Asset Serial Number

f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
    (1) Location of Tag (Ex. Tag Location on side of unit in L100 Corridor)
    (2) Unit Heater Type
    (3) Total number and location of that Asset on that floor
    (4) Other identifying information

83. HVAC Unit, Make-up Air
    a. Barcode Number
        (1) 1 Tag/Asset with filter/belt sizes
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag
        (2) Belt Size and Number of Belts (if applicable) or note if motors are Direct Drive
        (3) Supply Fan Motor Size and Number of Supply Fan Motors
        (4) Filter Size and Quantity
            a) Ensure different size filters are listed (if applicable)
            b) Filter location if not located in unit
        (5) Any Specific Attribute Information
            a) Specific component warranty durations

84. HVAC Unit, Package
    a. Barcode Number
        (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number
    f. Asset Room Location
    g. Asset Floor Location
    h. Warranty Start Date
    i. Warranty End Date
    j. General Notes
        (1) Location of Tag
        (2) Belt Size and Number of Belts (if applicable) or note if motors are Direct Drive
        (3) Supply Fan Motor Size and Number of Supply Fan Motors
        (4) Return Fan Motor Size and Number of Return Fan Motors
        (5) Exhaust Fan Motor Size and Number of Exhaust Fan Motors
        (6) Energy Wheel Motor Size
        (7) Supply Pre-Filter Size and Quantity
            a) Ensure different size filters are listed (if applicable)
            b) Filter location if not located in unit
        (8) Supply Final-Filter Size and Quantity
            a) Ensure different size filters are listed (if applicable)
            b) Filter location if not located in unit
        (9) Exhaust/Return Filter Size and Quantity
            a) Ensure different size filters are listed (if applicable)
            b) Filter location if not located in unit
        (10) Any Specific Attribute Information
            a) Specific component warranty durations

85. HVAC Unit, Rooftop
    a. Barcode Number
        (1) 1 Tag/Asset
    b. Asset ID/Label
    c. Asset Make
    d. Asset Model
    e. Asset Serial Number

f. Asset Room Location
g. Asset Floor Location
h. Warranty Start Date
i. Warranty End Date
j. General Notes
(1) Location of Tag
(2) Belt Size and Number of Belts (if applicable) or note if motors are Direct Drive
(3) Supply Fan Motor Size and Number of Supply Fan Motors
(4) Return Fan Motor Size and Number of Return Fan Motors
(5) Exhaust Fan Motor Size and Number of Exhaust Fan Motors
(6) Energy Wheel Motor Size
(7) Supply Pre-Filter Size and Quantity
a) Ensure different size filters are listed (if applicable)
b) Filter location if not located in unit
(8) Supply Final-Filter Size and Quantity
a) Ensure different size filters are listed (if applicable)
b) Filter location if not located in unit
(9) Exhaust/Return Filter Size and Quantity
a) Ensure different size filters are listed (if applicable)
b) Filter location if not located in unit
(10) Any Specific Attribute Information
a) Specific component warranty durations

86. HVAC Unit Split Air Conditioner
a. Barcode Number
(1) 1 Tag/Asset
b. Asset ID/Label
c. Asset Make
d. Asset Model
e. Asset Serial Number
f. Asset Room Location

PART 2 - PRODUCTS

A. EQUIPMENT

1. Barcodes shall be provided by the CMMS Administrator with the University of Arkansas.
2. The Operations and Maintenance Data Integration Document shall be provided by the CMMS Administrator with the University of Arkansas.
3. All equipment required to install barcodes and document data into the Operations and Maintenance Data Integration Document shall be provided by the GC/CM or Subs.

PART 3 - EXECUTION

A. OVERVIEW OF THE OPERATION AND MAINTENANCE DATA INTEGRATION PROCESS

1. The following narrative provides a brief overview of the typical Operations and Maintenance Data Integration tasks during construction and the general order in which they occur.
   a. The process begins with a meeting conducted by the GC/CM where the process is reviewed with the Operations and Maintenance Data Integration team members. This meeting shall be held during a scheduled monthly/biweekly contractors' meeting and all Operations and Maintenance Data Integration team members should attend. This meeting will occur prior to the installation of any of the assets outlined in this specification, and the general meeting agenda shall be as follows:
      (1) Review roles and responsibilities of the Operations and Maintenance Data Integration Team.
      (2) Determine responsibility and timing of when FAMA barcodes will be provided.
      (3) Confirm project specific assets and review barcoding requirements for each asset.
      (4) Review current asset list provided by FAMA for the project to determine which assets may be removed and the process for documenting information of the removed assets.
      (5) Review Operations and Maintenance Data Integration documentation requirements.
      (6) Establish electronic documentation access.
      (7) Confirm Operations and Maintenance Data Integration documentation review process and procedures.
      (8) Review construction schedule to establish estimated completion date of Operations and Maintenance Data Integration documentation and installation of the barcodes.
   b. Depending on the duration and complexity of the project, additional meetings maybe required throughout construction, scheduled by the GC/CM with the Operations and Maintenance Data Integration team to plan, coordinate, and schedule future activities, as well as resolve issues or answer questions.
   c. The CMMS Administrator or Construction Coordinator with the University of Arkansas FAMA provides the necessary type and quantity of barcodes to the GC/CM to be installed on the assets.
   d. The CMMS Administrator or Construction Coordinator with the University of Arkansas FAMA provides the Operations and Maintenance Data Integration document to the GC/CM. This will be provided in a cloud-based collaborative spreadsheet or sent directly to the GC/CM by the CMMS Administrator or Construction Coordinator.
   e. The GC/CM and Subs install the barcodes for the project specific assets. The location of the barcode in relation to the asset is dependent on the type of asset receiving the barcode. Refer to other sections of this specification for the requirements of installing the barcodes.
   f. The GC/CM and Subs document the required data for each asset in the Operations and Maintenance Data Integration document and provide all the necessary information as required by FAMA. Refer to other sections of this specification for direction on properly documenting asset data.
   g. If the GC/CM and Subs are removing asset equipment from the project that includes existing barcodes, the GC/CM shall document that information on the Operations and Maintenance Data Integration document in the Removed Asset worksheet. Specifically, the following information of removed assets must be documented:
      (1) Asset Barcode (if multiple tags are present, all barcode numbers must be documented)
      (2) Asset Make
      (3) Asset Model Number
   h. Once the GC/CM completes the installation of all the barcodes for all of the required assets and completes documentation for each asset in the Operation and Maintenance Data Integration document for all the required assets, the GC/CM shall submit the Operations and Maintenance Data Integration documentation to the CxA for review and verification. The CxA will then recommend approval, and submit the documentation to the Asset Coordinator for final approval.
   i. The GC/CM must provide unused barcodes to the CMMS Administrator or Construction Coordinator prior to Substantial Completion.
   j. The GC/CM must compete the installation of all barcodes for all the required assets associated with the project prior to Substantial Completion.

k. The GC/CM must complete and submit documentation for each asset in the Operation and Maintenance Data Integration document for all the required assets associated with the project prior to Substantial Completion.

END OF SECTION 01 75 00

SECTION 01 77 00 – CLOSEOUT PROCEDURES

PART 1 - FINAL CLEANING:

1.01 PRIOR TO OWNER OCCUPANCY, clean all surfaces including fixtures and equipment, for use by the Owner. Employ experienced workers or professional cleaners for final cleaning. Leave all metal surfaces, hardware, fixtures and equipment in a bright, clean and polished conditions. Comply with the manufacturer's instructions for operations.

1.02 CLEAN TRANSPARENT MATERIALS, including mirrors and glass in doors and windows, to a polished condition. Remove putty and other substances which are noticeable as vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials.

1.03 PROVIDE AND MAINTAIN PROTECTIVE MATS on finished floors to provide a path of travel through the project for inspection by the AHJ and for observation by the Architect and Owner. Provide non-staining reinforced Kraft paper or cardboard mats throughout the spaces, with adhesive surfaced walk-off “tack” mats at entrances from the exterior.

1.04 CLEAN EXPOSED EXTERIOR and interior hard-surfaced finishes to a dust-free condition, free of dust, stains, films and similar noticeable distracting substances. Restore reflective surfaces to their original reflective condition. Leave concrete floors and pavement broom clean. Vacuum carpeted surfaces.

1.05 MECHANICAL AND ELECTRICAL EQUIPMENT must be wiped clean. Remove excess lubrication and other substances. Clean plumbing fixtures to a sanitary condition. Clean light fixtures and lamps.

1.06 CLEAN THE PROJECT SITE, including landscape development areas, of rubbish, litter and other foreign substances. Sweep paved areas to a broom clean condition; remove stains, spills and other foreign deposits. Rake grounds that are neither paved nor planted, to a smooth even-textured surface.

PART 2 - SUBSTANTIAL COMPLETION PROCEDURES:

2.01 SET ALL TIME CLOCKS, thermostats and similar devices to the current local time. Provide a printed list of names, addresses and phone numbers of all sub-contractors and material suppliers used.

2.02 AFTER FINAL CLEANING is completed, and when the Project is ready for Owner occupancy, obtain an occupancy permit on behalf of the Owner, and arrange for inspections by other required AHJ representatives - including but not limited to health-department officials, when applicable (Contractor is not responsible for AHJ acceptance or approval of Work performed by Owner’s separate contractors).

2.03 SUBMIT WRITTEN REQUEST FOR INSPECTION per requirements of the General Conditions, certifying that the Work is Substantially Complete and is therefore ready for the Owner's beneficial use and occupancy. Accompany that request with the “comprehensive list” required by the General Conditions, of items yet to be completed or corrected before final completion (the initial “punch list”).

2.04 ARCHITECT’S ACTION: Following inspection of the Work, the Architect will either prepare a certificate of Substantial Completion, or will advise the Contractor of additional Work which must be completed before the certificate will be issued. Results of the Architect’s Substantial Completion inspection, together with the Contractor’s comprehensive list of items to be completed or corrected, will form the final “punch-list” for final completion.

PART 3 - PREREQUISITES TO FINAL COMPLETION:

3.01 COMPLETE ALL “PUNCH-LIST” WORK ITEMS as expeditiously as possible, providing labor at times when the facility is not in operation, if necessary. Coordinate with the Owner's representative and perform the Work so that it will not interfere with the Owner's operations.

3.02 COMPLETE FINAL TESTING of systems, and instruct Owner's personnel in the operation, adjustment, maintenance of all mechanical, plumbing, fire protection, monitoring and electrical systems.

3.03 REMOVE TEMPORARY FACILITIES and controls, and temporary utility services from the project site, along with construction tools, field office, mock-ups and similar elements.

3.04 TOUCH-UP AND REPAIR or restore marred exposed finishes. Deliver spare parts, tools, extra stock of materials and similar physical items.

3.05 SUBMIT FINAL CLOSEOUT SUBMITTALS before instruction of Owner’s personnel, and use the Operations & Owner’s Manuals as the basis for instruction.

3.06 INSTRUCTION OF OWNER'S PERSONNEL: Arrange for each installer of operating equipment and other work that requires regular or continuing maintenance, to meet at the site with the Owner's personnel to provide necessary basic instructions in the proper operation and maintenance of the entire Work. Where installers are not experienced in the required procedures, include instruction by the manufacturer's representatives.

3.07 SUBMIT WRITTEN CERTIFICATION that: (1) the Contract Documents have been reviewed, (2) the Work has been inspected for compliance with the Contract Documents, (3) the Work has been completed in accordance with the Contract Documents, (4) equipment and systems have been tested in the presence of the Owner's representative and are operational, and (5) the Work is completed and ready for final inspection.

3.08 ARCHITECT’S ACTION: Following final inspection, the Architect will either prepare the certificate of final acceptance, or will advise the Contractor of additional Work which must be performed before the certificate will be issued.

3.09 RE-INSPECTION FEES: Should the Architect perform re-inspections (for either Substantial Completion or for Final Completion) due to the failure of the Work to comply with the claims of status of completion made by the Contractor, the Owner will compensate the Architect for such additional services and will deduct the amount of such compensation and the Owner’s direct costs from the final payment to the Contractor.

END OF SECTION 01 77 00

SECTION 01 78 00 – CLOSEOUT SUBMITTALS

PART 1 - PREPARE AND SUBMIT final Closeout Submittals as required within this Section.

1.01 ORGANIZE CLOSEOUT SUBMITTAL INFORMATION into suitable sets of manageable content and size, and identified within the file structure with the title of the subject matter (such as "OPERATION AND MAINTENANCE MANUAL" or "RECORD DRAWINGS" or "WARRANTIES", as applicable), and include the Project name, Project address, the name of the Contractor, and the date prepared/submitted.

1.02 FORMAT OF SUBMITTAL (USB FLASH-DRIVES): Submit two (2) sets of Electronic Media Formatted (EMF) closeout documents before Final Completion, with document contents prepared typically in PDF format. Provide each set of Closeout Documents on a single, USB type flash-drive of sufficient capacity to contain all files on a single EMF device. Attach a concise, clearly printed label or tag to the drive to identify its contents.

1.03 CLOSEOUT SUBMITTALS

A. CONTRACT CLOSEOUT DOCUMENTS: Submit the following:

(1) FINAL OCCUPANCY PERMIT, and other legal releases necessary for the Owner' complete and unrestricted use.
(2) FINAL LISTING of all sub-contractors and material suppliers, with their products as used on the project.
(3) UPDATED FINAL STATEMENT accounting for additional changes (additions and deductions) to the Contract Sum. Identify amounts for change orders, liquidated damages (addition or deduction), deductions for uncorrected work, deductions for re-inspection payments, and previous payments.
(4) THE FINAL PAYMENT REQUEST with final unconditional lien releases from all sub-contractors and material suppliers, and other supporting documentation not previously submitted or accepted.
(5) LIEN WAIVERS indicating that lien rights are "unconditionally released" for all amounts previously paid by the Owner to the contractor, and "conditionally released" or contingent only upon receipt and bank clearance of the final payment amount yet due to the Contractor.

(a) PROVIDE LIEN WAIVERS FROM the Contractor, all subcontractors, sub-subcontractors, suppliers and any other entities lawfully entitled to file a lien more than One Thousand Dollars ($1,000.00) arising out of the Work of the Construction Contract. The Owner reserves the right to designate which entities involved in the Work must submit waivers.
(b) FORM OF WAIVER: Submit lien waivers on the 1990 Edition of the "Waiver and Release of Lien" form by the Construction Industry Affairs Council of Greater Kansas City Inc (CIAC) or other form provided or approved by the Owner, fully executed in a manner acceptable to Owner.

(6) FINAL, COMPLETED PUNCH-LIST(s) with the Contractor's signed statement indicating that all items have been completed or otherwise resolved for acceptance.
(7) EVIDENCE OF CONTINUING INSURANCE COVERAGE complying with requirement of the Contract Documents, including certificates of on-going insurance for products and completed operations coverage.
(8) RECORD DRAWINGS: Maintain and submit one (1) set of blue- or black-line white "prints" of the Contract Drawings and Shop Drawings.

(a) IDENTIFY AND DATE each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.
(b) DO NOT USE PROJECT RECORD DRAWINGS for construction purposes. Protect Project Record Drawings from deterioration and loss. Provide access to Project Record Drawings for Architect's reference during normal working hours.
(c) MARK RECORD DRAWINGS to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to prepare the marked-up Record Drawings. Give particular attention to information on concealed elements that cannot be readily identified and recorded later. Accurately record information in an understandable drawing technique. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations. Mark Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. Where Shop Drawings are marked, show cross-reference on Record Drawings.

(i) MARK WITH ERASABLE, RED-COLORED PENCIL. Use other colors to distinguish between changes for different categories of the Work at the same location.
(ii) MARK IMPORTANT ADDITIONAL INFORMATION that was either shown schematically or omitted from original Drawings.
(iii) NOTE CONTRACT MODIFICATION REFERENCES, including Construction Change Directive numbers, Change Order numbers, alternate numbers, and similar identification where applicable.

(d) RECORD SPECIFICATIONS: Submit one (1) copy of the Project's Specifications, including addenda and contract modifications. Mark copy to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.

(i) MARK COPY with the proprietary name and model number of products, materials, and equipment actually furnished, including substitutions and product options selected.
(ii) NOTE related Change Orders, Record Drawings, and Product Data, where applicable.

(9) RECORD PRODUCT DATA:

(a) SUBMIT ONE (1) COPY of each Product Data submittal. Mark one set to indicate the actual product installation where installation varies substantially from that indicated in Product Data.

(b) INCLUDE SIGNIFICANT CHANGES in the product delivered to Project site and changes in manufacturer's written instructions for installation.
(c) NOTE related Change Orders, Record Drawings, and Record Specifications, where applicable.

(10) MISCELLANEOUS RECORD SUBMITTALS:

(a) ASSEMBLE MISCELLANEOUS RECORDS required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.
(b) SUBMIT OTHER MARKED-UP RECORD DOCUMENTS (whether prepared by the GC or by the Owner's direct suppliers), Operations and Maintenance manuals, damage or settlement survey, extra copies of drawings and specifications, and similar final record information. Provide one-set of half-size drawings at the Project Site for the Owner's use.

(11) ELECTRONIC PROJECT RECORD DOCUMENTS: Immediately before the Architect's inspection for Substantial Completion, review the marked-up Record Documents with the Architect. When authorized, scan paper originals of the reviewed Record Drawings, Record Specifications, Record Product Data and miscellaneous Record Submittals to PDF files for the Owner's record and future use.

1.04 OPERATION AND MAINTENANCE (O&M) MANUALS

A. ASSEMBLE A COMPLETE SET of operation and maintenance data indicating the operation and maintenance of each system, subsystem, and piece of equipment not part of a system. Include operation and maintenance data required in individual Specification Sections and as follows:

(1) OPERATION DATA:

(a) Emergency instructions and procedures.
(b) System, subsystem, and equipment descriptions, including operating standards.
(c) Operating procedures, including startup, shutdown, seasonal, and weekend operations.
(d) Description of controls and sequence of operations.
(e) Piping diagrams.

(2) MAINTENANCE DATA:

(a) Manufacturer's information, including list of spare parts.
(b) Name, address, and telephone number of Installer or supplier.
(c) Maintenance procedures.
(d) Maintenance and service schedules for preventive and routine maintenance.
(e) Maintenance record forms.
(f) Sources of spare parts and maintenance materials.
(g) Copies of maintenance service agreements.
(h) Copies of warranties and bonds.

1.05 WARRANTIES

A. SUBMITTAL TIME: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.
B. PARTIAL OCCUPANCY: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.
C. ORGANIZE WARRANTY DOCUMENTS into an orderly sequence based on the Table of Contents of the Project Manual.
D. PROVIDE COPIES OF EACH WARRANTY within applicable sections of the Operation and Maintenance Manuals.

END OF SECTION 01 78 00

SECTION 01 79 00 – MINIMUM OWNER TRAINING REQUIREMENTS

PART 1 - GENERAL

A. SUMMARY

(1) This section is intended to clearly define the requirements for Owner Training. If other sections within the contract documents contain owner training requirements, the most stringent requirements shall supersede.
(2) The term “Owner Training” shall encompass both “demonstration” and “training” as outlined in this specification section and throughout the project.
(3) The Commissioning Agent will be responsible for reviewing and approving all Owner Training for commissioned systems. Non-commissioned systems will be reviewed and approved by the Architect/Engineer.

B. RELATED DOCUMENTS

(1) Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.
(2) Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them.

C. GENERAL

(1) The GC/CM shall coordinate the Owner Training. Owner Training shall be completed according the requirements outlined within this and other specification sections within the contract documents.

D. APPLICABLE EQUIPMENT AND SYSTEMS

(1) At a minimum, Contractor shall provide training on all systems including, but not limited to, the following (as applicable to the Project):

(a) Architectural Finishes
(b) Heating, Ventilating and Air Conditioning equipment; including both air and water side equipment
(c) Building Automation System
(d) Electrical System; including Normal and Emergency Power service and distribution equipment as well as interior and exterior lighting and associated controls
(e) Pluming System; including Booster Pumps, Water Heaters, Circulation Pumps, Water Treatment, Natural Gas, Fuel Oil etc.
(f) Life Safety Systems; including Fire Alarm, Voice Annunciation, Fire Suppression, Smoke Control/Evacuation, Stairwell Pressurization, Controls Systems, etc.
(g) Low Voltage Systems; including Wired and Wireless Networks, Nurse Call, Public Address, Audio and Visual Equipment, etc.
(h) Security Systems; including access control, video monitoring, etc.
(i) Conveyance System; including elevators and escalators
(j) Refrigeration Systems
(k) Medical Systems; including Med Gasses, Vacuum, etc.
(l) Laboratory Systems
(m) Other Systems as Directed by the Owner

E. SUBMITTALS

(1) Training Plan: At least 30 days prior to the start of Owner Training, the GC/CM shall provide the training plan to the Architect, Owner and Commissioning Agent for review and approval. The GC/CM shall revise and resubmit until acceptable. The Training Plan shall include the following at a minimum:

(a) Overall schedule showing all Owner Training sessions.
(b) Include at least the following for each training session:
(c) Identification, date, time, and duration.
(d) Description of products and/or systems to be covered.
(e) List of all subjects to be covered. See training session requirements located in section 3.2.
(f) Name of firm and person conducting training; include qualifications.
(g) Intended audience, such as job description.
(h) Objectives of training and suggested methods of ensuring adequate training.
(i) Methods to be used, such as classroom lecture, live demonstrations, hands-on, etc.
(j) Media to be used, such as slides, hand-outs, etc.
(k) Training equipment required, such as projector, projection screen, etc., to be provided by Contractor.
(l) Sample attendance record.
(m) Sample Owner Training Evaluation Forms. Custom forms shall be created for each equipment system to ensure key learning objectives have been achieved.

(2) Training Manuals: The GC/CM shall provide a training manual for each attendee; allow for minimum of two (2) attendees per training session.

(a) Include applicable portion of O&M manuals.
(b) Include copies of all hand-outs, slides, overheads, video presentations, etc., that are not included in O&M manuals.
(c) Provide one (1) extra copy of each training manual to be included with operation and maintenance data.

(3) Scheduling – The GC/CM shall coordinate with the Architect, Engineer, Owner and Commissioning Agent on the date(s) of Owner Training and shall provide at least 14 days’ notice prior to training.

(4) Training Reports:

(a) Identification of each training session, date, time, and duration.
(b) Sign-in sheet showing names and job titles of attendees.
(c) List of attendee questions and written answers given, including copies of and references to supporting documentation required for clarification; include answers to questions that could not be answered in original training session.
(d) Completed Owner Training Evaluation Forms.

(5) Video Recordings: Submit digital video recording of all Owner Training for Owner's subsequent use.

(a) Format: DVD Disc and Electronic Format.
(b) Label each disc and container with session identification and date.
(c) Training video shall be broken up, edited, and labeled for each piece of equipment and/or training session.
(d) Electronic Copies shall be included in the Close-Out documentation.

F. QUALITY ASSURANCE

(1) Instructor Qualifications: Factory authorized and trained individual who is familiar with the design, operation, maintenance and troubleshooting of the relevant products and systems.

(a) Provide as instructors the most qualified trainer of those contractors and/or installers who actually supplied and installed the systems and equipment.
(b) Where a single person is not familiar with all aspects, provide specialists with necessary qualifications.

PART 2 - PRODUCTS – NOT USED

2.01

PART 3 - EXECUTION

A. DEMONSTRATION - GENERAL

(1) Demonstrations conducted during system start-up do not qualify as demonstrations for the purposes of this section, unless approved in advance by Owner and Commissioning Agent and satisfy all other requirements of this specification.
(2) Demonstrations conducted during Functional Performance Testing need not be repeated unless Owner personnel require additional information.
(3) Demonstration may be combined with training sessions if applicable.
(4) Dynamic Equipment and Systems: Demonstrate operation in all modes, including start-up, shut-down, seasonal changeover, emergency conditions, and troubleshooting, and maintenance procedures, including scheduled and preventive maintenance.

(a) Perform demonstrations not less than two (2) weeks prior to Substantial Completion.
(b) For equipment or systems requiring seasonal operation, perform demonstration for other season within six (6) months.

(5) Static Equipment or Systems: Demonstrate cleaning, scheduled and preventive maintenance, and repair procedures.

(a) Perform demonstrations not less than two (2) weeks prior to Substantial Completion.

B. TRAINING - GENERAL

(1) GC/CM will prepare the Training Plan based on draft plans submitted.
(2) Conduct Owner Training on-site unless otherwise indicated.
(3) Owner will provide classroom and seating at no cost to Contractor.
(4) Where applicable, do not start Owner Training until Functional Performance Testing is complete, unless otherwise specified or approved by the Commissioning Authority.
(5) Each training session shall cover the following topics at a minimum:

(a) Basis of Design and Operational Requirements including but not limited to:
(b) General systems and equipment description and function
(c) Performance and design criteria
(d) Operational parameters including setpoints, schedules, etc.
(e) Limiting conditions including safeties, interlocks, alarms, etc.
(f) Location of all control devices including sensors, actuators, controllers, etc.
(g) Review of project documents including but not limited to:
(h) Location of turnover documents within the facility
(i) Location of equipment and systems within facility
(j) As-Built project record drawings
(k) O&M Manuals
(l) Recommended maintenance forms and checklists
(m) Troubleshooting guides and decision trees
(n) Warranty information and maintenance agreements
(o) Normal Operation
(p) Startup process and procedures
(q) Normal shutdown process and procedures
(r) Normal operating instructions
(s) As-built control sequences for all modes of operation
(t) As-built setpoints and schedules

(u) Safety procedures
(v) Seasonal, weekend and holiday operating instructions
(w) Emergency Operation
(x) Explanation of warnings, alarms, trouble indicators and error messages
(y) Emergency shutdown process and procedures
(z) Non-normal operation instructions for operating outside normal limits, including failure of components, sensors or subsystems
(aa) Safety procedures
(bb) Maintenance and Adjustments
(cc) Alignments and adjustments
(dd) Noise and vibration
(ee) Routine cleaning and inspections, including frequency, materials and tools required
(ff) Preventative maintenance activities and frequency, including checklists, materials and tools required
(gg) Troubleshooting and Repairs
(hh) Identification and diagnostic instructions
(ii) Test and inspection procedures
(jj) Disassembly instructions, including removal and replacement
(kk) Repair instructions
(ll) Identification of parts and components
(mm) Review of attic stock and recommended spare parts

C. MINIMUM TRAINING HOURS

(1) The total minimum owner training hours required for each system/equipment are identified below. If the contractor believes hours are insufficient, additional time shall be included in the project to ensure sufficient understanding of all operation and maintenance requirements of equipment and systems. Reference all specifications and minimum training hours is whatever is the most stringent in the specifications.

EQUIPMENT/SYSTEM TYPE	SPECIFICATION SECTION	MINIMUM TRAINING HOURS
GENERAL SYSTEMS		
Membrane Roofing System	07 5000	1
Sheet Metal Roofing	07 6100	1
Coiling Doors	08 3300	1
Accordian Folding Fire Doors	08 3513.23	2
Ceiling Assemblies	09 5100, 09 5400, 09 5426, 09 5453	2
EQUIPMENT		
Commercial Laundry Equipment	11 1100	2
Commercial Equipment	11 2000	2
Suspended Maintenance and Fall Protection Equipment	11 2400	1
Laboratory Equipment	11 5300	4
Laboratory Fume Hoods	11 5313	4
Biological Safety Cabinets	11 6531	4
SPECIAL CONSTRUCTION		
Environmental Rooms	13 0380	2
MRI Radiofrequency Enclosure	13 0950	2
CONVEYING SYSTEMS		
Traction Service Elevators	14 2113	1
Traction Passenger Elevators	14 2123	1
MECHANICAL		
Motors	20 0513	2
Variable Frequency Drive (VFD) System	20 0514	2
FIRE SUPPRESSION		
Standpipe System	21 1200	2
Automatic Fire Sprinkler System	21 1314	2

PLUMBING		
Domestic Water System Balance	22 0594	1
Water Distribution System	22 1118	2
Sanitary Waste and Storm Drainage Systems	22 1314	2
Plumbing Specialties	22 2114	3
Water Heating Equipment	22 3314	4
Plumbing Fixtures and Controls	22 4000	4
Laboratory Compressed Air System	22 6114	4
Laboratory Vacuum Piping System	22 6214	4
Nitrogen, Carbon Dioxide and Special Gas Piping Systems	22 6314	3
HVAC		
Controls System Integration	23 0901	20
Control Instrumentation	23 0903	10
Direct Digital Controllers and Networks	23 0923	10
Pumps	23 2123	3
Chemical Treatment Systems	23 2514	2
Fans	23 3400	2
Air Terminal Devices	23 3600	8
Laboratory Temperature and Airflow Control System	23 3614	8
Filters	23 4114	4
Primary Cooling Equipment	23 6000	8
Heat Recovery Equipment	23 7114	6
Factory Fabricated Custom Air Handling Units	23 7328	10
Heating and Cooling Terminal Units	23 7328	6
Coils	23 8216	2
Humidification Equipment	23 8413	6
ELECTRICAL		
Power Distribution Acceptance Tests and Test Tables	260812 26 0813	2
Network Lighting Controls	26 0943	6
Pad Mounted, Liquid-Filled, Medium-Voltage Transformers	26 1219	4
Low-Voltage Transformers	26 2200	4
Low-Voltage Switchgear	26 2200	4
Switchboards	26 2300	4
Lighting and Appliance Panelboards	26 2416.13	2
Distribution Panelboards	26 2416.16	2
Electrical Metering	26 2713	4
Photovoltaic Electrical Generating System	26 3110	4
Engine Generators	26 3213	6
Uninterruptible Power Supply With Battery Storage	26 3353	4
Automatic Transfer Switches	26 3623	2
Lightning Protection For Structures	26 4113	1
Surge Protective Devices	26 4300	1
Lighting	26 5000	4
COMMUNICATIONS		
Two-Way Communication System	27 5129	1
Audio Visual System	27 4100	2

Emergency Responder Radio Reinforcement System	27 5319	1
ELECTRONIC SAFETY AND SECURITY		
Electronic Access Control	28 1000	4
Video Surveillance	28 2000	4
Fire Dection and Alarm Systems	28 3113	8
LANDSCAPE		
Landscape Irrigation	TBD	2
Plants	32 9300	1
UTILITIES		
Distribution, Service, and Isolation	33 0000	4

D. SCHEDULING

(1) Training schedule will be subject to availability of Owner's personnel to be trained; re-schedule training sessions as required by Owner; once schedule has been approved by Owner failure to conduct sessions according to schedule will be cause for Owner to charge Contractor for personnel "show-up" time.
(2) No single training session may last more than 90 minutes without a minimum of a 15-minute break between sessions.
(3) No more than seven (7) hours of training may be completed in a single day.
(4) Total training hours identified above are intended to be utilized throughout the one-year warranty period as outlined below. Contractor shall plan training time according to enable onsite support at a minimum of each point:

(a) Initial owner training at turnover.
(b) Three to six (3-6) months after turnover or at first major preventative maintenance cycle to answer questions and re-train on specific items as necessary.
(c) Participate at the 10-month warranty review or prior to completion of the 1-year warranty to answer any remaining questions and ensure sufficient knowledge on operation of equipment.

E. VIDEO RECORDING

(1) Video recording of all Owner Training shall comply with the following requirements:

(a) Video recording shall be done on a device specifically intended for this purpose. Tripods or other stabilizing devices shall be used to ensure a stable, high quality video.
(b) Remote microphones shall be utilized to ensure high quality audio and understanding of trainer.
(c) Ensure sufficient lighting is provided to observe instructor and all components being trained on.

(2) Any of the following will result in rejection of the training video and require re-training at no additional cost to the owner or count against the minimum hours listed above:

(a) Use of cellular phones or tablets for recording device.
(b) Use of video cameras without tripods or other stabilizing devices.
(c) Poor audio quality due to not using remote microphones or excessive ambient noise.
(d) Poor lighting resulting in inability to clearly see equipment or components.

F. TRAINING ACCEPTANCE

(1) The Commissioning Agent and/or Architect will review all Owner Training with the Owner’s operating personnel and determine if training provided was satisfactory. If training is determined to be insufficient to ensure proper operation and maintenance, additional training will be provided by the contractor a no cost to the owner.
(2) Training will not be deemed acceptable until the following have been completed:

(a) Training plan has been approved.
(b) All required turnover documents have been received (O&M Manuals, As-Builts, etc.)
(c) Training manuals have been approved.
(d) Training reports have been approved.
(e) Video Recordings have been approved.
(f) Owner competence has been confirmed.

END OF SECTION 01 79 00

SECTION 01 81 13 – LEED CERTIFICATION REQUIREMENTS

PART 1 - GENERAL

1.01 DESCRIPTION

A. ENVIRONMENTAL CONSIDERATIONS: This project is designed and constructed with practices and procedures to meet the project's environmental considerations and goals. These considerations and goals are to establish a facility which is environmentally responsible, profitable, and a healthy place to live and work. To guide this process, this project is pursuing LEED certification per the v4 USGBC Green Building Design and Construction Reference Guide for New Construction. Compliance with all credits and prerequisites shown in the checklist attached to section 01 81 81 is required. All team members will be required to perform some amount of associated documentation. Refer to Sections listed below for environmental considerations and goals, and applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these considerations and goals, as defined in the Contract Documents, are implemented to the fullest extent.

B. The Design Professionals have selected materials and utilized integrated design processes that achieve the Owners objectives. Contractor is responsible to maintain and support these objectives in developing means and methods for performing work and in proposing product substitutions or changes to specified processes. By submitting a change or substitution of materials or processes, contractor must demonstrate its diligence in performing the level of investigation and comparison required to achieve required credits under the USGBC LEED Rating system.

C. This project is pursuing certification through a Third-Party Certification program. Provide construction related sustainability documentation to verify achievement of LEED V4 Certification. Provide documentation for the following LEED Credits and as detailed and required throughout the specifications. Contractor is responsible for all costs associated with constructing and demonstrating that project complies with approved Third-Party Certification requirements, including but not limited to:

(1) TPC coordination with client and other consultants, Third Party Certification website requirements, and management for construction related documentation.

(2) It is the intent of the project that this project achieves LEED certification. Entegrity Consulting has been contracted to work with the contractor on coordinating the LEED certification documentation during construction.

(3) Commissioning scope as required for Construction Phase Fundamental and Enhanced Commissioning. Entegrity Consulting has been contracted to provide this service. Contractor will be required to coordinate with Entegrity consulting for Commissioning related items.

(4) Construction work required to incorporate TPC credits and documentation requirements required for the following credits.

(a) Sustainable Sites: Heat Island Reduction
(b) Sustainable Sites: Construction Activity Pollution Prevention
(c) Water Efficiency: Indoor Water Use Reduction prerequisite and credit
(d) Energy and Atmosphere: Fundamental and Enhanced Commissioning
(e) Materials and Resources: Building Product Disclosure and Optimization – Environmental Product Declarations
(f) Materials and Resources: Building Product Disclosure and Optimization - Sourcing of Raw Materials
(g) Materials and Resources: Building Product Disclosure and Optimization – Material Ingredients
(h) Materials and Resources: Construction and Demolition Waste Management Planning and 75% Reduction
(i) Indoor Environmental Quality: Construction Indoor Air Quality Management Plan
(j) Indoor Environmental Quality: Low-Emitting Materials
(k) Indoor Environmental Quality: Indoor Air Quality Assessment (IAQ Testing)

1.02 RELATED WORK

A. Section 01 50 00 TEMPORARY FACILITIES AND CONTROLS
B. Section 01 74 19 CONSTRUCTION WASTE MANANGEMENT
C. Section 01 81 19 INDOOR AIR QUALITY MANAGEMENT
D. Section 01 81 81 SUSTAINABLE CHECKLIST REQUIREMENTS
E. Section 01 91 13 GENERAL COMMISSIONING REQUIREMENTS

1.03 DEFINITIONS

A. Total Materials Cost: A tally of actual material cost from specification divisions 03 through 10, 31 (applicable to foundations) and 32 (applicable to paving, site improvements, and planting). Alternatively, 45 percent of total construction hard costs in those specification divisions.

B. Recycled Content: Recycled content of materials is defined according to Federal Trade Commission Guides for the Use of Environmental Marketing Claims (16 CFR Part 260). Recycled content value of a material assembly is determined by weight. Recycled fraction of assembly is multiplied by cost of assembly to determine recycled content value.

(1) "Post-Consumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.

(2) "Pre-Consumer" material is defined as material diverted from waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind, or scrap generated in a process and capable of being reclaimed within the same process that generated it.

C. Low Pollutant-Emitting Materials: Materials and products which are minimally odorous, irritating, or harmful to comfort and well-being of installers and occupants.
D. Permanently Installed Products: an item that arrives on the project site either as a finished element ready for installation or as a component to another item assembled on–site.
E. Volatile Organic Compounds (VOC): Chemicals that are emitted as gases from certain solids or liquids. VOCs include a variety of chemicals, some of which may have short- and long-term adverse health effects.
F. Chain-of-Custody Certificates: Certificates signed by manufacturers certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship." Certificates must include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. The status of chain of custody certification can be verified at http://info.fsc.org/certificate.php.
G. Regional Materials: Materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of project site. If only a fraction of a product or material is extracted or harvested or recovered and manufactured locally, then only that percentage (by weight) must contribute to regional value.
H. Biobased Material: Products which meet the Sustainable Agriculture Network's Sustainable Agriculture Standard. Biobased raw materials other than wood must be tested using ASTM Test Method D6866 and be legally harvested, as defined by the exporting and receiving country. Exclude hide products, such as leather and other animal skin material.
I. Salvaged or reused materials: Construction materials recovered from existing buildings or construction sites and reused. Common salvaged materials include structural beams and post, flooring, doors, cabinetry, brick, and decorative items.
J. Refurbished materials: Products that could have been disposed of as solid waste. These products have completed their life cycle as consumer items and are then refurbished for reuse without substantial alteration of their form. Refurbishing includes renovating, repairing, restoring, or generally improving appearance, performance, quality, functionality, or value of a product.
K. Environmental Product Declaration (EPD): A compliant EPD is a third-party declaration with external verification; is product-specific (not industry-wide); conforms to ISO 14025 and EN 15804 or ISO 21930; and has at least a cradle-to-gate scope.
L. Health Product Declaration (HPD): A compliant HPD provides full disclosure of known hazards and demonstrates chemical inventory of the product to at least 0.1 percent (1000 ppm).
M. Extended producer responsibility (EPR): An environmental policy approach in which a producer's responsibility for a product is extended to the postconsumer stage of the product's lifecycle. An extended producer responsibility policy shifts responsibility (physically and/or economically, fully, or partially) upstream toward the producer and away from municipalities; and creates incentives for producers to consider environmental considerations when designing their products. EPR should help in shifting cost of disposal to the manufacturer, the programs must demonstrate that the manufacturer is responsible for the cost. If EPR involves shipping and handling cost that is acceptable, but EPR cannot enforce project team to purchase more products.
N. Green power: A subset of renewable energy comprised of grid-based electricity produced from renewable energy sources.
O. Carbon offset: A unit of carbon dioxide equivalent that is reduced, avoided, or sequestered to compensate for emissions occurring elsewhere.
P. Renewable energy certificates (RECs):
Q. Scope 1 emissions: Direct greenhouse gas emissions from sources owned or controlled by the entity, such as emissions from fossil fuels burned on site.
R. Scope 2 emissions: Indirect greenhouse gas emissions associated with the generation of purchased electricity, heating/cooling, or steam off site, through a utility provider for the entity's consumptions.

1.05 SUBMITTALS

A. All submittals to be provided by contractor to Architect(s) and to include the Product Data Reporting Form attached to section 01 81 13.
B. Sustainability Action Plan:
   (1) Submit documentation as required by this section; provide additional copies of typical submittals required under technical sections when sustainable construction requires copies of record submittals.
   (2) Within 30 days after Preconstruction Meeting provide a narrative plan for complying with requirements stipulated within this section.
   (3) Sustainability Action Plan must:
      (a) Make reference to sustainable construction submittals defined by this section.
      (b) Address all items listed under PERFORMANCE CRITERIA.
      (c) Indicate individual(s) responsible for implementing the plan.
   (4) Provide monthly progress reports of plan criteria.
C. Project Materials Cost Data Spreadsheet: Within 30 days after the Preconstruction Meeting provide a preliminary Project Materials Cost Data Spreadsheet. The Project Materials Cost Data Spreadsheet must be an electronic file and indicate all materials in Divisions 3 through 10, 31, and 32 used for Project (excluding labor costs and excluding all mechanical, electrical, and plumbing system components), and be organized by specification section. Additional materials may be added from mechanical and plumbing specifications sections depending on material qualities. The spreadsheet must include the following:
   (1) Identify each reused or salvaged material, its cost, and its replacement value.
   (2) Identify each recycled-content material, its post-consumer and pre-consumer recycled content as a percentage the product's weight, its cost, its combined recycled content value, defined as the sum of post-consumer recycled content value plus one-half of pre-consumer recycled content value, and total combined recycled content value for all materials as a percentage of total materials costs.
   (3) Identify each biobased material, its source, its cost, and total value of biobased materials as a percentage of total materials costs.
   (4) Total cost for Project and total cost of building materials used for Project.
D. Low Pollutant-Emitting Materials Tracking Spreadsheet: Within 30 days after Preconstruction Meeting provide a preliminary Low Pollutant-Emitting Materials Tracking Spreadsheet. The Low Pollutant-Emitting Materials Tracking Spreadsheet must be an electronic file and include all materials on Project in categories described under Low Pollutant-Emitting Materials in 01 81 13 and additional product performance criteria for Low Pollutant-Emitting Materials as described in Section 01 81 81 SUSTAINABLE CHECKLIST REQUIREMENTS.
E. Construction Indoor Air Quality (IAQ) Management Plan:
   (1) Not more than 30 days after Preconstruction Meeting provide a Construction IAQ Management Plan as an electronic file including descriptions of the following:
      (a) Instruction procedures for meeting or exceeding minimum requirements of ANSI/SMACNA 008-2008, Chapter 3, including procedures for HVAC Protection, Source Control, Pathway Interruption, Housekeeping, and Scheduling.
      (b) Instruction procedures for protecting absorptive materials stored on-site or installed from moisture damage.
      (c) Schedule of submission of photographs of on-site construction IAQ management measures such as protection of ducts and on-site stored oil installed absorptive materials. Photos to be provided from entire construction timeframe.
      (d) Instruction procedures if air handlers must be used during construction, including a description of filtration media to be used at each return air grille.
      (e) Instruction procedure for replacing all air-filtration media immediately prior to occupancy after completion of construction, including a description of filtration media to be used at each air handling or air supply unit, date of start-up and date of filter replacement.
      (f) Instruction procedures and schedule for implementing building flush-out.
      (g) Additional information included in Section 01 81 19 Indoor Air Quality Management.
F. Sustainable Construction Progress Reports: Concurrent with each Application for Payment, submit a Sustainable Construction Progress Report to confirm adherence with Sustainability Action Plan.
   (1) Include narratives of revised strategies for bringing work progress into compliance with plan and product submittal data and calculations to demonstrate compliance with thresholds based on materials costs.
   (2) Include updated and current Project Materials Cost Data Spreadsheet.
   (3) Include updated and current Low Pollutant-Emitting Materials Tracking Spreadsheet.

4. Include construction waste tracking, in tons or cubic yards, including waste description, whether diverted or landfilled, hauler, and percent diverted for comingled quantities; and excluding land-clearing debris and soil. Provide haul receipts and documentation of diverted percentages for comingled wastes.

1.06 PRODUCT SUBMITTALS

A. Submittals must include LEED Tracking Form for all submittals within divisions 3-10, 31, 32 and Mechanical and Plumbing adhesives and sealants. Additional verification documentation described below must also be supplied.

B. Recycled Content: Submit product data from manufacturer indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content (excluding MEP systems equipment and components). Include submitting for plumbing piping, mechanical ductwork and insulation if recycled content exists.
C. Low Pollutant-Emitting Materials: Submit product data confirming compliance with relevant requirements for all materials showing compliance with performance criteria listed in Part 2 and as described below.
D. Additional Product Submittals to be provided with all manufacturer documentation:
   (1) Life-cycle assessment conforming to ISO 14044 with cradle to gate scope.
   (2) Environmental Product Declaration.
   (3) Evidence of manufacturer participation in an extended producer responsibility program.
   (4) Health Product Declaration.
   (5) Regional Materials: Indicate location and distance from project site of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and fraction by weight that is considered regional.
   (6) Biobased Materials: Include statement indicating cost of each relevant product and fraction by weight that is considered biobased material. Submittals for products to be installed or used included on the USDA BioPreferred program's product category lists. Data to include biobased content percentage and source of biobased material; indicating name of manufacturer and cost of each material as described above.
   (7) Provide chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each product with certified wood and fraction by weight that is certified wood.
   (8) For paints and coatings applied on site within the weatherproofing membrane provide documentation of compliance with low-emitting materials requirements:
      (a) Third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.
      (b) Third-party certification in compliance with the California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017 must also state range of total VOCs after 14 days (336 hours), measured as specified in the CDPH Standard Manual v1.1 or v2.1: 0.5 mg/cubic meter or less; between 0.5 and 5.0 mg/cubic meter; or 5.0 mg/cubic meter or more. **Certificates must be dated less than 3 years of construction start date.**
      (c) VOC content for each product in grams per liter (g/L). VOC content from the manufacturer should demonstrate that the products has been tested following the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC).
   (9) For adhesives and sealants applied on site within the weatherproofing membrane provide documentation of compliance with low-emitting material requirements:
      (a) Third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.
      (b) Third-party certification in compliance with the California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017 must also state the range of total VOCs after 14 days (336 hours), measured as specified in the CDPH Standard Manual v1.1 or v2.1: 0.5 mg/cubic meter or less; between 0.5 and 5.0 mg/cubic meter; or 5.0 mg/cubic meter or more. **Certificates must be dated less than 3 years of construction start date.**
      (c) VOC content for each product in grams per liter (g/L). VOC content from the manufacturer should demonstrate that the products has been tested following the SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264).
   (10) For flooring installed on site within the weatherproofing membrane provide documentation of compliance with low-emitting material requirements:
      (a) Third-party certification in compliance with the California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017 which states the exposure scenario used to determine compliance. **Certificates must be dated less than 3 years of construction start date.**
   (11) Composite wood products: Provide third-party certificate confirming products meet one of the following requirements: EPA TSCA Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins, California Air Resources Board (CARB) ATCM for formaldehyde requirements for ultra-low emitting formaldehyde (ULEF) resins, EPA TSCA Title VI formaldehyde requirements for no added formaldehyde resins (NAF), or CARB ATCM formaldehyde requirements for no added formaldehyde resin (NAF). Note manufacturer's claims for meeting above-mentioned requirements do not meet LEED standards.
   (12) Ceiling, wall, thermal and acoustic insulation products:
      (a) Third-party certification of compliance with the California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017 which states the exposure scenario used to determine compliance. **Certificates must be dated less than 3 years of construction start date.**

1.07 CLOSEOUT SUBMITTALS

A. Within 14 days after Substantial Completion provide the following:
   (1) Final version of Project Material Cost Data Spreadsheet.
   (2) Final version of Low Pollutant-Emitting Materials Tracking Spreadsheet.
   (3) Manufacturer's cut sheets and product data highlighting the Minimum Efficiency Reporting Value (MERV) for filtration media installed at return air grilles during construction if permanently installed air handling units are used during construction.

(4) Manufacturer's cut sheets and product data highlighting the Minimum Efficiency Reporting Value (MERV) for final filtration media in air handling units.
(5) Minimum 25 construction photographs including six photographs taken on five different occasions during construction of ANSI/SMACNA 008-2008, Chapter 3 approaches employed, along with a brief description of each approach, documenting implementation of IAQ management measures, such as protection of ducts and on-site stored or installed absorptive materials.
(6) Provide the final completed documentation for the following prerequisites and credits:

(a) Construction activity pollution prevention.
(b) Construction and demolition waste management planning.
(c) Building product disclosure and optimization – environmental product declaration.
(d) Building product disclosure and optimization – sourcing of raw materials.
(e) Building product disclosure and optimization – material ingredients.
(f) Construction and demolition waste management.
(g) Low-emitting materials.
(h) Construction indoor air quality management plan.
(i) Indoor air quality assessment (see Section 01 81 19 – Indoor Air Quality Management)

(i) Flush out documentation meeting either the before occupancy or during occupancy LEED required thresholds.

OR

(ii) Indoor Air Quality testing report from third party qualified subcontractor that is compliant with LEED v4.1 requirements.

(7) Final submittals required to demonstrate compliance and provided to client;

(a) Approved LEED checklist
(b) One LEED Certification Certificate
(c) One LEED Certification Sticker.

1.08 QUALITY ASSURANCE

A. Preconstruction Meeting: After award of Contract and prior to commencement of Work, schedule and conduct meeting with Sustainability Consultant to discuss the Project Sustainable Action Plan content as it applies to submittals, project delivery, required Construction Indoor Air Quality (IAQ) Management Plan, and other Sustainable Construction Requirements. The purpose of this meeting is to develop a mutual understanding of the Sustainable Construction Requirements and coordination of contractor's management of these requirements with the Contracting Officer and the Construction Quality Manager.
B. Sub-Contractor Training Meeting: Prior to foundation work schedule a meeting with all applicable sub-contractors, site superintendent and Sustainability Consultant to review expectations of submittals and roles and responsibilities regarding implementation of the Project Sustainable Action Plan.
C. Construction Job Conferences: Status of compliance with Sustainable Construction Requirements of these specifications will be an agenda item at regular job meetings conducted during the course of work at the site.
D. Weekly jobsite meetings: Waste Management, IAQ and Erosion Control shall be included at weekly jobsite meetings with site superintendent and sub-contractors.
E. Third Party Certification

(1) Bear all costs associated with constructing and demonstrating that project complies with the LEED requirements, including but not limited to:

(a) Coordination with LEED consultant and associated documentation.
(b) Complying with Sustainable Checklist Requirements per 01 81 81.
(c) Construction work required to incorporate LEED requirements including but not limited to;

(i) Enhanced Commissioning Construction Services
(ii) Indoor Air Quality Testing or Building Flush Out

(d) Submittals required to demonstrate compliance with LEED checklists.

1.09 APPLICABLE PUBLICATIONS

A. Publications listed below form a part of this specification to extent referenced. Publications are referenced in text by basic designation only. Comply with applicable provisions and recommendations of the following, except as otherwise shown or specified.
B. South Coast Air Quality Management District (SCAQMD) Rule 1113, Architectural Coatings, February 5, 2016.
C. South Coast Air Quality Management District (SCAQMD) Rule 1168, October 6, 2017.
D. Sheet Metal and Air Conditioning National Contractors' Association (SMACNA) IAQ Guidelines for Occupied Buildings under Construction, 2nd Edition (ANSI/SMACNA 008-2008), Chapter 3.
E. California Department of Public Health Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, version 1.1 or v1.2, Emission Testing method for California Specification 01350 (CDPH Standard Method V1.1-2010 or CDPH Standard Method v1.2-2017).
F. Federal Trade Commission Guides for the Use of Environmental Marketing Claims (16 CFR Part 260).
G. ASHRAE Standard 52-2010.

PART 2 - PRODUCTS

2.01 PERFORMANCE CRITERIA

A. Construction waste diversion from landfill disposal must comprise at least **50 percent** of total construction waste, excluding land clearing debris and soil. Alternative daily cover (ADC) does not qualify as material diverted from disposal.

B. Low Pollutant-Emitting Materials:
   1. Liquid Applied Products must be 75% percent by volume of interior paints and coatings and adhesives and sealants must be compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. 100% of liquid/wet applied product must meet the VOC content requirements. **Certificates must be dated less than 3 years of construction start date.**
   2. Adhesives, sealants, and sealant primers applied on site within the weatherproofing membrane must comply with VOC limits of SCAQMD Rule 1168:
      a. Adhesives for Architectural Applications:
         1) Building envelope membrane adhesive: 250 g/L.
         2) Carpet pad adhesives: 50 g/L
         3) Ceramic glass, porcelain, & stone tile adhesive: 65 g/L
         4) Cove base adhesives: 50 g/L
         5) Dry wall and panel adhesives: 50 g/L
         6) Multi-purpose construction adhesives: 70 g/L
         7) Roofing- sinlge ply roof membrane adhesive: 250 g/L
         8) Roofing- all other roof adhesives: 250 g/L
         9) Rubber floor adhesives: 60 g/L
         10) Structural glazing adhesives: 100 g/L
         11) Structural wood member adhesive: 140 g/L
         12) Subfloor adhesive: 50 g/L
         13) VCT and asphalt tile adhesives: 50 g/L
         14) Wood flooring adhesive: 100 g/L
         15) All other indoor floor covering adhesives: 50 g/L
         16) All other outdoor floor covering adhesives: 50 g/L
      b. Specialty Applications
         1) Computer diskette manufacturing adhesive: 350 g/L.
         2) Contact adhesive: 80 g/L
         3) Edge glue adhesive: 250 g/L
         4) ABS welding cement: 325 g/L
         5) ABS to PVC transition cement: 510 g/L
         6) CPVC welding cement: 490 g/L
         7) PVC welding cement: 510 g/L
         8) All other plastic cement welding cements: 100 g/L
         9) Rubber Vulcanization Adhesive: 250 g/L
         10) Special purpose contact adhesive: 250 g/L
         11) Thin metal laminating adhesive: 780 g/L
         12) Tire tread adhesive: 100 g/L
         13) Top and trim adhesive: 250 g/L
         14) Waterproof resorcinol glue: 170 g/L
         15) All other adhesives: 250 g/L
      c. Substrate Specific Applications
         1) Metal substrate-specific adhesives: 30 g/L
         2) Plastic foam substrate-specific adhesives: 50 g/L
         3) Porous material (except wood) substrate-specific adhesives: 50 g/L
         4) Wood substrate-specific adhesives: 30 g/L
         5) Fiberglass substrate-specific adhesives: 80 g/L
         6) Reinforced plastic composite substrate-specific adhesives: 200 g/L
      d. Sealants for Architectural Applications
         1) Clear, paintable, and immediately water-resistant sealant:250 g/L
         2) Foam insulation: 250 g/L
         3) Grout: 250 g/L
         4) Roadway sealant: 250 g/L
         5) Non-staining plumbing putty: 250 g/L
         6) Potable water sealant: 250 g/L
         7) Roofing - single ply roof membrane sealant: 450 g/L
         8) Roofing - all other roof sealants: 300 g/L
         9) All other architectural sealants: 50 g/L
         10) Marine deck sealant: 760 g/L
         11) All other sealants: 420 g/L
      e. Adhesive Primers
         1) Plastic adhesive primers: 550 g/L
         2) Pressure sensitive adhesive primers: 250 g/L
         3) Traffic marking tape adhesive primers: 150 g/L
         4) Vehicle glass adhesive primers: 250 g/L
         5) All other adhesive primers: 250 g/L
      f. Sealant Primers
         1) Architectural non-porous sealant primer: 250 g/L
         2) Architectural porous sealant primer: 775 g/L
         3) Modified bituminous sealant primer: 500 g/L
         4) Marine deck sealant primer: 760 g/L

5) All other sealant primers: 750 g/L

g. Other adhesives, adhesive bonding primers, adhesive primers, or any other primers: 250 g/L.

3. Aerosol adhesives must not be applied on site within the weatherproofing membrane.
4. Paints and coatings applied on site within the weatherproofing membrane must comply with the following criteria:
   a. Clear wood finishes, floor coatings, stains, primers, sealers, and shellacs applied to interior elements must not exceed VOC content limits established in SCAQMD Rule 1113.
   b. Comply with the following VOC content limits:
      1) Bond breakers: 350 g/L.
      2) Colorant - Architectural coatings, excluding IM coatings: 50 g/L
      3) Colorant - Solvent-based IM: 600 g/L.
      4) Colorant - Waterborne IM: 50 g/L.
      5) Concrete - Curing compounds: 100 g/L
      6) Concrete - Curing compounds for roadways and bridges: 350 g/L
      7) Concrete surface retarder: 50 g/L
      8) Driveway sealer: 50 g/L
      9) Dry-fog coatings: 50 g/L
      10) Faux finishing coatings - Clear topcoat: 100 g/L
      11) Faux finishing coatings - Decorative coatings 350 g/L
      12) Faux finishing coatings – Glazes: 350 g/L
      13) Faux finishing coatings – Japan: 350 g/L
      14) Faux finishing coatings - Trowel applied coatings: 50 g/L
      15) Fire-proofing coatings: 150 g/L
      16) Flats: 50 g/L
      17) Floor coatings: 50 g/L
      18) Form release compound: 100 g/L
      19) Graphic arts (sign) coatings: 200 g/L
      20) Industrial maintenance coatings: 100 g/L
      21) Industrial maintenance coatings - color indicating safety coatings: 480 g/L
      22) Industrial maintenance coatings - High temperature IM coatings: 420 g/L
      23) Industrial maintenance coatings - Non-sacrificial anti-graffiti coatings: 100 g/L
      24) Industrial maintenance coatings - Zinc-rich IM primers: 100 g/L
      25) Magnesite cement coatings: 450 g/L
      26) Mastic coatings: 100 g/L
      27) Metallic pigmented coatings: 150 g/L
      28) Multi-Color coatings: 250 g/L
      29) Non-flat coatings: 50 g/L
      30) Pre-treatment wash primers: 420 g/L
      31) Primers, sealers, and undercoaters: 100 g/L
      32) Reactive penetrating sealers: 350 g/L
      33) Recycled coatings: 250 g/L
      34) Roof coatings: 50 g/L
      35) Roof coatings, aluminum: 100 g/L
      36) Roof primers, bituminous: 350 g/L
      37) Rust preventative coatings: 100 g/L
      38) Sacrificial anti-graffiti coatings: 50 g/L
      39) Shellac – Clear: 730 g/L
      40) Shellac – Pigmented: 550 g/L
      41) Specialty primers: 100 g/L
      42) Stains: 100 g/L
      43) Stains, interior: 250 g/L
      44) Stone consolidants: 450 g/L
      45) Swimming pool coatings – Repair: 340 g/L
      46) Swimming pool coatings – Other: 340 g/L
      47) Tile and stone sealers: 100 g/L
      48) Traffic coatings: 100 g/L
      49) Tub and tile refinish coatings: 420 g/L
      50) Waterproofing sealers: 100 g/L
      51) Waterproofing concrete/masonry sealers: 100 g/L
      52) Wood coatings – varnish: 275 g/L
      53) Wood coatings - sanding sealers: 275 g/L
      54) Wood coatings – lacquer: 275 g/L
      55) Wood conditioners: 100 g/L
      56) Wood preservatives: 350 g/L
      57) Low solids coatings: 120 g/L
5. Carpet installed in building interior must comply with one of the following:
   a. Meet testing and product requirements of the Carpet and Rug Institute Green Label Plus program.
   b. Maximum VOC concentrations specified in CDPH Standard Method V1.1-2010 or CDPH Standard Method v1.2-2017, using office scenario at the 14-day time point.

6. Each non-carpet flooring element installed in building interior which is not inherently non-emitting (stone, ceramic, powder-coated metals, plated or anodized metal, glass, concrete, clay brick, and unfinished or untreated solid wood flooring) must comply with one of the following:
   a. Meet requirements of the FloorScore standard as shown with testing by an independent third-party.
   b. Maximum VOC concentrations specified in CDPH Standard Method V1.1-2010 or CDPH Standard Method v1.2-2017, using office scenario at 14-day time point.
7. Composite wood products within the weatherproofing membrane must be documented to have low formaldehyde emissions, and a third-party certificate confirming products meet one of the following requirements: EPA TSCA Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins, California Air Resources Board (CARB) ATCM for formaldehyde requirements for ultra-low emitting formaldehyde (ULEF) resins, EPA TSCA Title VI formaldehyde requirements for no added formaldehyde resins (NAF), or CARB ATCM formaldehyde requirements for no added formaldehyde resin (NAF) must be provided.
8. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies must not contain added urea-formaldehyde.

C. Recycled and Regional Content:
1. Provide recycled content (post-consumer and pre-consumer content) and regional content (manufactured and extraction locations) for all products installed on the project and at minimum the following products and as listed elsewhere in the specifications.
   a. Building insulation.
   b. Cement and concrete.
   c. Masonry
   d. Consolidated and reprocessed latex paint.
   e. Flooring
   f. Flowable fill.
   g. Laminated paperboard.
   h. Nonpressure pipe.
   i. Hardscape pavers
   j. Roofing materials.
   k. Shower and restroom dividers/partitions.
   l. Structural fiberboard.
   m. Lawn and garden edging.
   n. Plastic lumber landscaping timbers and posts.
   o. Site furnishings
   p. Site Fencing
   q. Bike racks.
2. Provide building materials with recycled content such that post-consumer recycled content value plus half the pre-consumer recycled content value constitutes a minimum of 25 percent of cost of materials used for Project, exclusive of mechanical, electrical, and plumbing components, specialty items such as elevators, and labor and delivery costs.

D. Biobased Content:
1. Materials and equipment being installed or used that are listed on the USDA BioPreferred program product category list must provide documentation showing compliance with ASTM Test Method D6866 and be legally harvested.
   a. USDA BioPreferred program categories include:
      1) Adhesive and Mastic Removers.
      2) Carpets.
      3) Composite Panels.
      4) Erosion Control Materials.
      5) Floor Coverings (Non-Carpet).
      6) Mulch and Compost Materials.
      7) Multipurpose Cleaners.
      8) Multipurpose Lubricants.
      9) Packaging Films.
      10) Paint Removers.
      11) Batt and Roll Insulation.
      12) Pipe and Duct Insulation.
      13) Plastic Insulating Foam.
      14) Roof Coatings.
      15) Wood and Concrete Sealers.
      16) Wood and Concrete Stains.

E. Materials, products, and equipment being installed which fall into a category covered by the WaterSense program (toilets, urinals, lavatory faucets and showerheads) must be WaterSense-labeled, unless disallowed for infection control reasons.

F. At least 20 permanently installed products from at least 5 different manufacturers must have one of the following:
1. Publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that has at least a cradle to gate scope. For credit calculation purposes, this is valued at one whole of a product.
2. Environmental Product Declarations (EPD):
   a. Product-Specific Type III EPD – Internally Reviewed: Products with an internally critically reviewed LCA in accordance with ISO 14071. Products with product-specific internal EPDs which conform to ISO 14025, and EN 15804 or ISO 21930 and have at least a cradle to gate scope are valued as one whole product for the purposes of credit achievement calculation.
   b. Industry-wide (generic) EPD – Products with third-party certification (Type III), including external verification in which the manufacturer is explicitly recognized as a participant by the program operator. Products with industry-

wide EPDs, which conform to ISO 14025, and EN 15804 or ISO 21930 and have at least a cradle to gate scope are valued as one whole product for the purposes of credit achievement calculation.

c. Product-specific Type III EPD – EPD's which conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope. Products with such EPD's having third-party certification (Type III), including external verification, in which the manufacturer is explicitly recognized as the participant by the program operator are valued as 1.5 products for the purposes of credit achievement calculation. [OR]

G. Products that comply with one of the criteria below contributes for Embodied Carbon/LCA Optimization:
   1. Third party certified products that demonstrate impact reduction below industry average in at least three of the following categories:
      - Embodied Carbon/LCA Optimization.
      - Reductions in Embodied Carbon: less than 10% reduction in Global Warming Potential (GWP) relative to baseline.
      - Reductions in Embodied Carbon: 10%+ reduction in GWP relative to baseline
      - Reductions in Embodied Carbon: 20% + reduction in GWP and 5% + reduction in tow additional impact categories, relative to baseline.

H. For Credit achievement calculation, these products are valued at 100 percent of their cost for credit achievement calculations. Products sourced (extracted, manufactured, purchased) within 100 miles (160 km) of project site are valued at 200 percent of their base contributing cost.

I. Products that meet at least one of the responsible extraction criteria below account for at least 15 percent by cost of total value of permanently installed products:
   1. Responsible extraction criteria:
      a. Extended producer responsibility. Products purchased from a manufacturer (producer) that participates in an extended producer responsibility program or is directly responsible for extended producer responsibility. Products meeting extended producer responsibility criteria are valued at 50 percent of their cost for the purposes of credit achievement calculation.
      b. Biobased materials. Biobased products must meet the Sustainable Agriculture Network's Sustainable Agriculture Standard. Biobased raw materials must be tested using ASTM Test Method D6866 and be legally harvested, as defined by the exporting and receiving country. Exclude hide products, such as leather and other animal skin material. Products meeting biobased materials criteria are valued at 100 percent of their cost for the purposes of credit achievement calculation.
      c. Wood products. Wood products must be certified by the Forest Stewardship Council or USGBC-approved equivalent. Products meeting wood products criteria are valued at 100 percent of their cost for the purposes of credit achievement calculation.
      d. Materials reuse. Reuse includes salvaged, refurbished, or reused products. Products meeting materials reuse criteria are valued at 100 percent of their cost for the purposes of credit achievement calculation.
      e. Recycled content. Recycled content is the sum of post-consumer recycled content plus one-half the pre-consumer recycled content, based on cost. Products meeting recycled content criteria are valued at 100 percent of their cost for the purposes of credit achievement calculation.
      f. USGBC approved program. Other USGBC approved programs meeting leadership extraction criteria.
   2. For credit achievement calculation, products sourced (extracted, manufactured, and purchased) within 100 miles (160 km) of project site are valued at 200 percent of their base contributing cost. For credit achievement calculation, the base contributing cost of individual products compliant with multiple responsible extraction criteria is not permitted to exceed 100 percent its total actual cost (before regional multipliers) and double counting of single product components compliant with multiple responsible extraction criteria is not permitted and in no case is a product permitted to contribute more than 200 percent of its total actual cost.

J. At least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm).
   a. ANSI ANSI/BIFMA e3 Furniture Sustainability Standard. The documentation from the assessor or scorecard from BIFMA must demonstrate the product earned at least 3 points under 7.5.1.3 Advanced Level in e3-2014 or 3 points under 7.4.1.3 Advanced Level in e3-2012.
   b. Cradle to Cradle. Product has Material Health Certificate or is Cradle to Cradle Certified™ under standard version 3 or later with a Material Health achievement level at the bronze level or higher.
   c. Declare. The Declare product label must meet the following requirements:
   - Declare labels designated as Red List Free, LBC Red List Free, or Declared.
   - Declare labels designated as LBC Red List Approved or LBC Compliant that demonstrate content inventory to 0.1% (1000 ppm).
   d. Facts – NSF/ANSI 336: Sustainability Assessment for Commercial Furnishings Fabric at any certification level.
   e. Global Green TAG PHD labels issued after January 1, 2020.
   f. Health Product Declaration: The end use product has a published, complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration open Standard.
   g. Living Product Challenge. The included Declare product label must demonstrate content inventory to 0.1% (1000 ppm).
   h. Manufacturer Inventory: The manufacturer has published complete content inventory for the product following these guidelines:
   - A publicly available inventory of all ingredients identified by name and Chemical Abstract Service Registration Number (CASRN) and/or European Community Number (EC Number).
   - Materials defined as trade secret or intellectual property may withhold the name and/or CASRN/EC Number but must disclose ingredient/chemical role, amount and hazard score/class using either:
     - Greenscreen List Translator (LT) score and/or Full GreenScreen Benchmark (BM).

- The Globally Harmonized System of Classification and Labeling of Chemicals rev.6 (2015) (GHS).

i. Product Lens Certification.

Any compliant reports above with third-party verification that includes the verification of content inventory are worth 1.5 products for credit achievement calculations.

K. Use at least 5 permanently installed products sourced from at least different manufacturers. Use the products that have at least one of the following compliant material ingredients optimization report or action plan:
   a. Material Ingredient Screening and Optimization Action Plan
   b. Advanced Inventory & Assessment
   c. Material Ingredient optimization.

PART 3 - EXECUTION

3.01 FIELD QUALITY CONTROL

A. Construction Indoor Air Quality Management:

(1) During construction, meet or exceed recommended control measures of ANSI/SMACNA 008-2008, Chapter 3.
(2) Protect stored on-site and installed absorptive materials from moisture damage.
(3) If permanently installed air handlers are used during construction, filtration media with a minimum efficiency reporting value (MERV) of 8 must be used at each return air grille, as determined by ASHRAE Standard 52.2-1999 (with errata but without addenda). Replace all filtration media immediately prior to occupancy.
(4) Provide construction dust control as needed and documentation of methods chosen for dust control.
(5) Provide Indoor Air Quality Testing as described in 01 81 91.

NOTES / DEFINITIONS:

1. Furnish Costs include all expenses to deliver the material to the project site, including taxes, transport, fabrication and profit. Do not include site labor or installation.

2. Within 100 miles distance is defined as travel by air to the project site, not travel distance by road. http://www.distancefromto.net/

3. Environmental Product Declarations which conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope. http://productguide.ulenvironment.com/QuickSearch.aspx

4. The end use product has a published, complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration open Standard. https://www.hpd-collaborative.org/

5. Extended producer responsibility. Products purchased from a manufacturer (producer) that participates in an extended producer responsibility program or is directly responsible for extended producer responsibility. (e.g. Closed Loop or Take Back Program)

7. Wood products must be certified by the Forest Stewardship Council (FSC) and must be provide proof of vendor FSC Chain-of-Custody with this Product Data Submittal. As an alternative option they can also meet SFI Certification with a few additional critiera. Contact your LEED Consultant if you have SFI products. http://info.fsc.org/certificate.php

8. Post-Consumer Recycled Content: Sourced from recovered Consumer Waste and used as a raw material (e.g. plastic bottles, newspaper, etc).

9. Pre-Consumer Recycled Content: Recovered Industrial Materials diverted from municipal solid waste for use in a different mfg. process, prior to use by a consumer. Note: "home scrap" from the original mfg. process that are reused / reprocessed do not qualify.

10. TVOC Emissions for Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010 or or CDPH Standard Method v1.2-2017. http://www.usgbc.org/resources/low-emitting-materials-third-party-certification-table

11. All paints and coatings wet-applied on site must meet applicable VOC limits of the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016. All adhesives and sealants wet-applied on site must meet the applicable chemical content requirements of SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168.

12. Composite Wood Evaluation as defined by the California Air Resources Board (CARB), Airborne Toxic Measure to Reduce Formaldehyde Emissions from Composite Wood Products Regulation, must provide third-party certificate confirming products meet one of the following requirements: EPA TSCA Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins, California Air Resources Board (CARB) ATCM for formaldehyde requirements for ultra-low emitting formaldehyde (ULEF) resins, EPA TSCA Title VI formaldehyde requirements for no added formaldehyde resins (NAF), or CARB ATCM formaldehyde requirements for no added formaldehyde resin (NAF).

SECTION 01 81 19 – INDOOR AIR QUALITY MANAGEMENT

PART 1 - PART 1 GENERAL

1.01 SECTION INCLUDES

A. Construction procedures to promote adequate indoor air quality during construction to achieve LEED Indoor Air Quality Management Plan – During Construction and LEED Indoor Air Quality Management Plan - Before Occupancy.

1.02 PROJECT GOALS

A. See Section 01 81 13 LEED Certification Requirements, for overall project goals relating to environment and energy.
B. Dust and Airborne Particulates: Prevent deposition of dust and other particulates in HVAC ducts and equipment.
   (1) Cleaning of ductwork is not contemplated under this Contract.
   (2) Contractor shall bear the cost of cleaning required due to failure to protect ducts and equipment from construction dust.
C. Airborne Contaminants: Procedures and products have been specified to minimize indoor air pollutants.
   (1) Furnish products meeting the specifications.
   (2) Avoid construction practices that could result in contamination of installed products leading to indoor air pollution.
   (3) Perform either a building flush-out or indoor air quality testing to assure indoor air pollutant levels are at a minimum.
   (4) Prohibit the use of tobacco products inside the building and within 25 feet of the building entrance during construction.

1.03 DEFINITIONS

A. Adsorptive Materials: Gypsum board, acoustical ceiling tile and panels, carpet and carpet tile, fabrics, fibrous insulation, and other similar products.
B. Contaminants: Gases, vapors, regulated pollutants, airborne mold and mildew, and the like, as specified.
C. Particulates: Dust, dirt, and other airborne solid matter.
D. Wet Work: Concrete, plaster, coatings, and other products that emit water vapor or volatile organic compounds during installation, drying, or curing.

1.04 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.
B. Indoor Air Quality Management Plan: Describe in detail measures to be taken to promote adequate indoor air quality upon completion; use SMACNA IAQ Guidelines for Occupied Buildings Under Construction as a guide.
   (1) Submit not less than 60 days before enclosure of building.
   (2) Identify potential sources of odor and dust.
   (3) Identify construction activities likely to produce odor or dust.
   (4) Identify areas of project potentially affected, especially occupied areas.
   (5) Evaluate potential problems by severity and describe methods of control.
   (6) Describe construction ventilation to be provided, including type and duration of ventilation, use of permanent HVAC systems, types of filters and schedule for replacement of filters.
   (7) Describe cleaning and dust control procedures.
   (8) Describe coordination with commissioning procedures.
C. Interior Finishes Installation Schedule: Identify each interior finish that either generates odors, moisture, or vapors or is susceptible to adsorption of odors and vapors, and indicate air handling zone, sequence of application, and curing times.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Low VOC Materials: See other sections for specific requirements for materials with low VOC content.
B. Auxiliary Air Filters: MERV of 8, minimum, when tested in accordance with ASHRAE 52.2.

PART 3 - PART 3 EXECUTION

3.01 CONSTRUCTION PROCEDURES

A. Prevent the absorption of moisture and humidity by adsorptive materials by:
   (1) Sequencing the delivery of such materials so that they are not present in the building until wet work is completed and dry.
   (2) Delivering and storing of such materials in fully sealed moisture-impermeable packaging.
   (3) Store such materials on pallets to avoid exposure to moisture on the ground.
   (4) Provide sufficient ventilation for drying within reasonable time frame.
   (5) Discard and replace such materials damaged by moisture.
B. Begin construction ventilation when building is substantially enclosed.
C. HVAC equipment and supply air ductwork may be used for ventilation during construction:
   (1) Ensure that air filters are correctly installed prior to starting use; replace filters when they lose efficiency.
D. Do not store construction materials or waste in mechanical or electrical rooms.

E. Prior to use of return air ductwork without intake filters clean up and remove dust and debris generated by construction activities.
   (1) Inspect duct intakes, return air grilles, and terminal units for dust.
   (2) Clean plenum spaces, including top sides of lay-in ceilings, outsides of ducts, tops of pipes and conduit.
   (3) Clean tops of doors and frames.
   (4) Clean mechanical and electrical rooms, including tops of pipes, ducts, and conduit, equipment, and supports.
   (5) Clean return plenums of air handling units.
   (6) Remove intake filters last, after cleaning is complete.

F. Do not perform dusty or dirty work after starting use of return air ducts without intake filters.

G. Use other relevant recommendations of SMACNA IAQ Guideline for Occupied Buildings Under Construction for avoiding unnecessary contamination due to construction procedures.

H. Contractor is responsible for contracting and managing Indoor Air Quality testing to obtain 1 point under IEQ Credit 4 – Indoor Air Quality Assessment.
   (1) LEED v4.1: Air Testing – 2 points.
      (a) Conduct baseline IAQ testing after construction ends and prior to occupancy, using testing protocols consistent with EPA Compendium of Methods for the Determination of Air Pollutants in Indoor Air.
         (i) The contractor shall contract with a qualified sub-contractor to provide IAQ testing.
         (ii) The contractor is to coordinate construction activities to prepare for the IAQ testing, which will take place after all construction activities are complete and prior to owner furniture move in.
         (iii) The building is to be cleaned with Green Seal or equivalent cleaning chemicals.
         (iv) Vacuum cleaners with HEPA filters to be used.
         (v) Outside air to be used flush out the building as much as practical.
         (vi) Filtration media to be replaced prior to testing.
   (2) If initial Indoor Air Quality test fails, contractor shall flush the building, limiting humidity to a maximum of 60 percent and temperature to a minimum of 60 degrees, and retest the building. Contractor shall incur all costs for flush and retesting.

END OF SECTION 01 81 19

SECTION 01 81 81 – SUSTAINABILITY CHECKLIST REQUIREMENTS

PART 1 - GENERAL

1.01 DESCRIPTION:

A. All credits/prerequisites in the attached checklist must be achieved and are necessary to contribute to sustainability certification under the LEED v4 for New Construction and Major Renovations rating system (LEED NC v4). This section is compatible with 01 81 13 LEED CERTIFICATION REQUIREMENTS.

(1) A copy of the LEED NC v4 Project Checklist is attached at the end of this section.

1.02 RELATED WORK

SECTION 01 91 00 – COMMISSIONING

PART 1 - GENERAL

1.01 WORK INCLUDED: Commission various, completed building systems to verify that they are installed in accordance with the Contract Documents, and to verify and demonstrate proper operation and control in accordance with the requirements indicated. Provide all labor, equipment, materials and physical activities necessary to perform building system commissioning indicated herein.

1.02 COMMISSIONING AGENT (CA): The Owner will engage the CA independently.

1.03 COMMISSIONING AGENT (CA): The Contractor is to engage the CA as part of the Work of this Section.

1.04 DEFINITIONS

A. COMMISSIONING AGENT (CA): An entity who must plan, manage and coordinate the overall energy-system commissioning process. The CA is also to provide an unbiased and objective opinion of energy related systems installation, operation, and performance to the Owner and to the Contractor. Activities and duties of the CA do do not affect the Contractor's responsibility to provide a finished and complete project, installed and fully functional in accordance with requirements of the Contract Documents.

(1) The CA will prepare appropriate energy-system "pre-functional checklists" before commissioning operations begin.

B. COMMISSIONING TEAM: Members include representatives of the General Contractor and appropriate trade subcontractors, including but not limited to the Building Automation System (BAS) controls subcontractor, as well as the Testing, Adjusting and Balancing (TAB) subcontracted entity. During the commissioning process, The Contractor and appropriate representatives of each trade subcontractor must be present on-site when commissioning activities involve their Work or equipment.

1.05 SYSTEMS REQUIRED TO BE COMMISSIONED

A. MECHANICAL - ENERGY RELATED SYSTEM COMMISSIONING: Inspect, test and certify that the building's energy related mechanical systems are complete and operational as intended by the system design, and then operate in the presence of the CA. Commission the following energy related elements:
B. DUCTS AND AIR HANDLING SYSTEMS: Perform installation and verification checks of ductwork insulation and seals, and confirm completion of flow balancing operations, and duct-system leak testing.
C. SUPPLY, RETURN, RELIEF, & EXHAUST FANS: Perform installation and verification checks of rotation, sound levels, motor current draw, airflows, and pressures, as applicable.
D. AIR HANDLING UNITS: Perform installation and verification checks of units, including performance of checkout and start-up procedures by the manufacturer's representative; complete with documented capacity tests for heating, cooling, air flow, and static pressures; operation of all controls; and sound levels.
E. ENERGY RECOVERY UNITS: Work includes installation inspections and checks, checkout and start-up by manufacturer's representative as specified; documented capacity tests for heating, cooling, air flow, and static pressures; operation of all controls; and sound levels.
F. BUILDING AUTOMATION SYSTEMS (BAS): Perform installation and verification checks and operation of all controlled devices; point-to-point verification of control units; calibration of all control sensors and devices, providing graphical trend logs of all HVAC systems, complete operation of all control sequences; in coordination with commissioning of all controlled systems.

1.06 PROVIDE TREND LOGS prepared by the "Controls" subcontractor after all equipment has passed its functional testing. Prepare in graphical format, including all control points requested by the CA. Trending must occur over seven (7) consecutive days at 15 minute intervals. Print trend logs in color, and provided copies to the CA and include in the O&M Manual.

1.07 THE CA WILL INDICATE which equipment is to be trended. The Controls Contractor will include in the project scope, trending of each piece of equipment installed, however the CA may only select a sampling of certain types of equipment.

1.08 MONITOR CONTROL POINTS continuously and maintain on the BAS hard drive for a minimum of thirty (30) consecutive days. The Owner must be able to obtain trend logs of any control point.

PART 2 - TEAM MEMBER RESPONSIBILITIES:

2.01 COMMISSIONING AGENT (CA) RESPONSIBILITIES:

A. Plan, organize, and implement the commissioning process for energy-related systems.
B. Prepare commissioning plan and pre-functional checklists, and ensure distribution for review and comment,
C. Revise commissioning plan as required during construction
D. In conjunction with activities of the General Contractor, coordinate commissioning activities among all sub-contractors, sub-trades, and suppliers.
E. Monitor execution of pre-functional checklists and ensure that results are documented.
F. Monitor controls point-to-point checks done by control subcontractor and ensure that results are documented.
G. Observe sampling of start-up and initial system operational tests and checks.
H. Direct the Contractor to operate equipment and systems as required to ensure that all functional tests required are carried out for verification purposes.
I. Witness all functional tests and document results.
J. Review and comment on all trend logs prepared and submitted by the controls subcontractor.
K. Document all deficiencies for the Contractor to correct.

L. Re-evaluate all corrected deficiencies as tested and trended by the controls subcontractor.
M. Prepare and submit a Commissioning Report which documents all checks and tests done throughout the commissioning process and the results from each.

2.02 GENERAL CONTRACTOR RESPONSIBILITIES: The General Contractor is responsible for the overall completion of the Project, and must:

A. Participate in the Commissioning process.
B. Ensure that the appropriate subcontractors perform assigned commissioning responsibilities as specified herein.
C. Ensure the cooperation and participation in the commissioning process of other sub-contractors as applicable.
D. The General Contractor will submit the name of the person assigned as their representative to the CA, the Architect, the Mechanical Contractor and to the Owner within one month after executing the construction Contract. This person will have the authority to make decisions on behalf of the General Contractor regarding details and the scheduling of the commissioning process.
E. In the event that any scheduled equipment of system start-up or functional tests are terminated because the CA or the Mechanical Engineer discover deficient or incomplete Work, or because of non-attendance of required personnel at required activities, the Contractor will be responsible for paying the reasonable, additional costs for time and travel by the CA (if engaged by the Owner), the Mechanical Engineer, and the Architect if they were physically present to witness the start-up or functional testing.

2.03 TESTING AND BALANCING (TAB) AGENCY RESPONSIBILITIES:

A. Attend commissioning meetings scheduled by CA prior to and during on-site TAB work being done.
B. Submit proposed TAB procedures to the CA and to the Mechanical Engineer for review and acceptance.
C. Provide the Owner and the Mechanical Engineer a TAB progress reports listing deficiencies discovered during the TAB process that need to be corrected before completing final TAB report.
D. At the completion of the TAB Work, submit the final TAB report to the Owner with copies to the CA and to the Mechanical Engineer.
E. Participate in verification of the TAB report for diagnostic purposes and in solving field problems.

2.04 MECHANICAL SYSTEMS SUBCONTRACTOR

A. The Mechanical Subcontractor and all mechanical sub-subcontractors or suppliers within the Mechanical Division must cooperate with the CA to facilitate successful completion of the commissioning process.
B. The Mechanical Subcontractor must submit the name of the person assigned as their representative to the CA, the Architect, the Mechanical Engineer and the Owner within one month after signing the construction contract. This person will attend all commissioning meetings and have the authority to make decisions on behalf of the mechanical subcontractor regarding details and the scheduling of the commissioning process.
C. Each subcontractor or sub-subcontractor will include in their quotes the cost of participating in the commissioning process as specified.
D. Ensure that the automatic temperature control subcontractor performs the commissioning responsibilities as indicated.
E. Ensure participation of major equipment suppliers in appropriate start-up, testing, and training activities.
F. Notify the CA two weeks in advance of scheduled equipment and system start-up so that the CA may witness functional testing and equipment and system start-ups.
G. Provide sufficient personnel to assist the CA as required during functional testing.
H. Prior to start-up of equipment and/or systems requiring CA verification, inspect, check and confirm that the installation is correct and complete. Document the results of all inspections, complete the check lists provided in the commissioning plan, and sign them.
I. Provide equipment and systems start-up resources as specified or required.
J. Carry out performance checks to ensure that all equipment and systems are fully functional and ready for the CA to witness the formal Functional Tests (FT).
K. Operate equipment and systems for FT's in accordance with the commissioning plan and as directed by the CA. If improper functionality, incomplete work, or other deficiencies affecting system performance are discovered, the FT will be suspended by the CA. Those responsible for the deficient or incomplete work will be responsible for the costs in accordance with this Section. Correct all deficiencies, retest the systems to confirm correct operation and notify the CA to schedule another FT.

2.05 CONTROLS SUBCONTRACTOR:

A. Include the cost of commissioning requirements in the quoted price.
B. Review design for controllability with respect to equipment selected for the project;
C. Review and confirm in writing that a proper hardware specification exists to permit functional testing as required by the specifications and sequence of operation.
D. Review and confirm in writing that proper safeties and interlocks are included in design.
E. Ensure the proper sizing of control valves and actuators based on design pressure drop and flow. Ensure that the control valve authority will result in capacity control as specified. Include valve sizing and authority information in submittals.
F. Ensure the proper sizing of control dampers. Ensure control damper authority to control air flows as specified. Review and confirm in writing proper damper positions for mixing and to prevent stratification. Ensure correct actuator vs. damper movement for smooth operation. Include damper sizing, control authority and actuator selection in submittals.
G. Ensure the proper selection of sensor ranges and include data with submittals.
H. Clarify all questions concerning sequences of operation with the mechanical engineer.
I. Attend all commissioning meetings.

J. Inspect, check, and confirm the proper installation and performance of controls/BAS hardware, and software provided by others.
K. Integrate installation and programming scheduling with construction and commissioning schedules.
L. Inspect, check and confirm the correct installation and operation of input and output field point and devices through documented and signed off point-to-point checkouts.
M. In conjunction with the mechanical subcontractor, demonstrate system performance to the CA including all modes of system operation (i.e. occupied, unoccupied, and emergency) during the functional tests (FTs). If improper functionality, incomplete work, or other deficiencies affecting system performance are discovered, the FTs will be stopped by the CA. Those responsible for deficient or incomplete work will be responsible for costs in accordance with this Section.
N. Provide trend logs of all equipment as requested by the CA.
O. Provide control system technician to assist during system verification and functional testing.
P. Provide support and coordination with TAB subcontractor on all interfaces between controls and TAB scope of work. Provide, at no additional cost to the TAB and commissioning agent, all devices, such as portable operator's terminals and all software for the TAB agency to use in completing TAB procedures.

2.06 ELECTRICAL SUBCONTRACTOR:

A. Include the cost of commissioning requirements in the quoted price.
B. Review design with respect to providing power to the equipment.
C. Verify that proper hardware specifications exist for functional performance and sequence of operation required by the specifications
D. Verify that proper safeties and interlocks are included in the design of electrical connections to the equipment.
E. Attend commissioning meetings scheduled by the CA.
F. Schedule work so that required electrical installations are completed and performance of all electrical service provided.
G. Provide electrical system technicians to assist during system verification and functional performance testing.

END OF SECTION 01 91 00

SECTION 01 91 19 – EXTERIOR ENCLOSURE COMMISSIONING

PART 1 - WORK INCLUDED: Provide labor, equipment, temporary materials and procedures necessary to pressure test the exterior enclosure of the building (without occupants), and to substantiate compliance with the International Energy Conservation Code (IECC), as follows:

1.01 MAXIMUM ALLOWABLE LEAKAGE RATE: 0.40 CFM/SF (Cubic Feet per Minute per Square Foot) at a pressure differential of 0.3 inches water gauge (WG) per ASTM E 779, or an equivalent AHJ approved method.

1.02 PROVIDE THE SERVICES OF a “Certified Professional” in air-barrier testing methods and procedures by the National Environmental Balancing Bureau (NEBB - www.NEBB.org), who will determine the testing means and methods and who will supervise the on-site testing operations.

1.03 IF TEST RESULTS exceed the maximum allowable air-leakage rate indicated, evaluate the installed enclosure system, and provide immediate corrective improvements and re-testing until satisfactory compliance is achieved, at no additional cost to the Owner.

PART 2 - CALCULATION METHODS:

2.01 APPLICABLE BUILDING AREAS: Add the “footprint” area in square feet (SF) of the bottom floor, plus the area of the top floor’s ceiling or roof membrane (depending on where the air-barrier is located), and add overhanging soffits of conditioned spaces that are enclosed by the air-barrier system, plus the area of exterior wall surfaces between the top and bottom layers (including below-grade walls and fenestrations consisting of storefront, doors, or windows).

2.02 CALCULATE A BASE-LINE VALUE representing the maximum air-leakage rate permitted.

2.03 THE LEAKAGE RATE is the quantity of air-leakage in CFM divided by the sum of the above SF areas.

PART 3 - EXECUTION

3.01 PREPARE THE BUILDING as required by the referenced standards, installing tightly sealed blower units at exterior doors typically on the leeward side of the building. Isolate and close-off any areas not applicable to testing, such as adjacent tenant spaces or other existing areas that are not a part of this Project, as applicable. Seal-off fans with back-draft or motorized dampers and exhausts for equipment requiring combustion air, including kitchen equipment. Seal-off floor drains and plumbing traps, and elevator pressure relief openings.

3.02 TEST AIR-LEAKAGE in accordance with the required, referenced standard, and document the average, actual leakage rate per the above requirements. Take not less than ten (10) leakage readings at setpoint pressures averaged over a ten (10) second period, or as otherwise required by the referenced standard.

3.03 PROVIDE CERTIFIED, SATISFACTORY TEST RESULTS copied electronically to the Architect, MEP Engineer and to the Owner, within 48 hours of testing.

END OF SECTION 01 91 19

SECTION 01 91 23 – FIRE-RATED DOOR COMMISSIONING

PART 1 - GENERAL

1.01 WORK INCLUDED: Prior to the request for inspection at Substantial Completion, inspect and test fire-rated doors and openings throughout the Project

1.02 PERFORM TESTING by the building hardware supplier's certified Architectural Hardware Consultant (AHC) or other entity knowledgeable with their operation who is approved in advance by the Architect.

1.03 COMPLY WITH requirements of NFPA 80 "Standard for Fire Doors and Other Opening Protectives", including but not limited to its "Paragraph 5.2.3 – Acceptance Testing." Include physical closing of each unit by all means of activation. Record results of the inspections and submit to the Owner for potential future review by the AHJ.

1.04 PREPARE AND SUBMIT A REPORT of testing, including modifications made and recommendations for continuing maintenance and management of fire-rated doors and openings by the Owner. Submit report to the Architect and Owner before making request for inspection at Substantial Completion, and maintain a printed copy at the site at occupancy inspection, for use by the AHJ, if requested.

PART 2 - REQUIREMENTS

2.01 FOR SWINGING FIRE-DOORS, Verify each of the following, as applicable:

A. Labels are clearly visible and legible.
B. No open holes or breaks exist in surfaces of either the door or the frame
C. Glazing, vision light frames, and glazing beads are intact and securely fastened in place, if so equipped,
D. The door, frame, hinges, hardware, and noncombustible thresholds are secured, aligned and in working order with no visible signs of damage.
E. No parts are missing or broken
F. Door clearances do not exceed clearances as listed in NFPA 4.8.4 and 6.3.1.7.
G. The self-closing device is operational; that is the active door completely closes when operated from the full open position.
H. If a coordinator is installed, the inactive leaf closes before the active leaf.
I. Latching hardware operates and secures the door when it is in the closed position.
J. Auxiliary hardware items that interfere or prohibit operation are not installed on the door or frame.
K. No field modifications to the door assembly have been performed that void the label.
L. Meeting edge protection, gasketing and edge seals, where required, are inspected to verify their presence and integrity.
M. Signage affixed to a door meets the requirements listed in NFPA 80 – Paragraph 4.1.4.

2.02 FOR HORIZONTALLY SLIDING, VERTICALLY SLIDING OR ROLLING FIRE DOORS, verify the following:

A. Labels are clearly visible and legible.
B. No open holes or breaks exist in surface of either the door or the frame.
C. Slats, end locks, bottom boar, guide assembly, curtain entry, hood and flame baffle are correctly installed and intact for rolling steel fire doors.
D. Glazing, vision light frames, and glazing beads are intact and securely fastened in place, if so equipped.
E. Curtain, barrel, and guides are aligned, leveled, plumbed and true for rolling steel fire doors.
F. Expansion clearance is maintained in accordance with the manufacturer's listing.
G. Drop release arms and weights are not blocked or wedged.
H. Mounting and assembly bolts are intact and secured.
I. Attachments to jambs are with bolts, expansion anchors, or as otherwise required by the listing.
J. Smoke detectors, if equipped, are installed and operational.
K. No parts are missing or broken
L. Fusible links, if equipped, are in the location; chain/cable, S-hooks, eyes and so forth are in good conditions; the cable or chain is not kinked, pinched, twisted or inflexible; and links are not painted or coated with duct or grease.
M. Auxiliary hardware items that interfere or prohibit operation are not installed on the door or frame.
N. No field modifications to the door assembly have been performed that void the label.
O. Doors must have an average closing speed of not less than 6 inches/second or more than 24 inches/second.

2.03 FOR CLOSING DEVICES, all fire doors, fire shutters, and fire window assemblies must be inspected and tested to check for proper operation and full closure. Resetting of the automatic-closing devices must be done in accordance with the manufacturer's instructions.

END OF SECTION 01 91 23

END OF DIVISION 1

DIVISION 02 - EXISTING CONDITIONS

SECTION 02 22 00 – EXISTING CONDITIONS ASSESSMENT

PART 1 - PRIOR TO COMMENCEMENT OF WORK, verify existing conditions, control points, principal lines and elevations, the presence of underground utilities, at or related to the site and the existing building, and also examine adjacent facilities upon which the work is in any way dependent.

PART 2 - SURVEY THE EXISTING BUILDING prior to the start of construction, to document any existing defects. This record shall serve as a basis for determination of subsequent damage resulting from the Contractor's operations at the site.

PART 3 - IN THE EVENT OF ANY INCONSISTENCY or conflict, between existing conditions and the Construction Documents, immediate notify the Architect of the inconsistency or conflict. Do not undertake any phase of the Work affected by such inconsistency or conflict, pending the issuance of Supplemental Instructions by the Architect.

PART 4 - ELEVATIONS OF EXISTING GRADES, floors, tops of walls, parapets, beams and locations of existing columns, walls and similar elements are based on drawings of the existing building and limited verification by the Architect. However, the Architect or Owner assumes no responsibility for the accuracy of that information. It is the intent of the Contract Drawings to integrate new Work with the existing work and the Contractor must verify and confirm the actual building conditions.

PART 5 - REVIEW EXISTING FLOOR SUBSTRATE elevations and conditions to verify if any of the following exist, and notify the Architect if they do:

5.01 Variation of over 1/2 inch or more over entire floor area

5.02 Slopes of over 1/8th inch in 10 feet in any area

5.03 Rough or un-stable flooring substrates requiring extensive repair

PART 6 - REVIEW CONDITIONS of other existing construction elements to be reused in the new construction, and verify that they will provide an acceptable substrate for new materials and finishes indicated.

PART 7 - REPORT all un-acceptable substrate or existing materials to the Architect in writing.

END OF SECTION 02 22 00

SECTION 02 26 00 – HAZARDOUS MATERIALS ASSESSMENT

PART 1 - GENERAL

1.01 THE PRESENCE OF HAZARDOUS MATERIALS is not anticipated by the Owner.

1.02 THIS SECTION INCLUDES REQUIREMENTS to provide a Phase II Environmental Site/Building Assessment (ESA) of hazardous materials.

1.03 IF HAZARDOUS MATERIALS ARE DISCOVERED, PROVIDE PROPOSED WORK PLANS for the removal, abatement or remediation of materials discovered, for review and approval by the Owner, as a change in scope to the Construction Contract. Include in the Work Plan, a description of the proposed means and methods to be used, and an assessment of alternative methods, costs and logistics, including recommended steps to perform site cleanup and follow-up monitoring for residual contaminates, as applicable.

1.04 PROVIDE an ENVIRONMENTAL SITE ASSESSMENT & RECOMMENDATIONS REPORT of the site and existing building, in accordance with ASTM E 1903 to include testing for petroleum hydrocarbons, heavy metals (including lead and mercury), pesticides, solvents, asbestos and mold, including priority pollutants and other hazardous or regulated materials, and in accordance with requirements of this Section.

1.05 HAZARDOUS MATERIALS INSPECTION AGENCY: Engage the Professional Services of a company legally qualified and certified to provide EPA Phase II and III site and building inspections, to take samples of existing site and building materials for testing and analysis, and to make recommendations to the Owner regarding the recommended scope of hazardous materials removal or remediation Work. Provide an inspection agency, or multiple agencies, employing the following individuals:

1.06 FOR ASBESTOS INSPECTIONS, provide an individual who has EPA Model Accreditation Plan (MAP) "Building Inspector" training; accreditation as required by 40 CFR 763 - Subpart E, Appendix C, and who possesses an EPA/State certification or license as a “Building Inspector".

1.07 FOR HEAVY METALS INSPECTIONS, including Lead-Based Paints and Paints Containing Leads (LBPs) inspections, employ a Certified Industrial Hygienist (CIH) who has been certified for comprehensive practice by the American Board of Industrial Hygiene, or a Certified Safety Professional (CSP) certified by the Board of Certified Safety Professionals.

A. This facility was constructed prior to 1978, and is therefore likely to have painted surfaces containing lead-based paints.

1.08 FOR POLYCHLORINATED BIPHENYLS (PCBs) inspection, provide a person who is a Certified Industrial Hygienist (CIH) certified for comprehensive practice by the American Board of Industrial Hygiene, and with demonstrable experience in removal of PCBs.

1.09 FOR MICROBIAL (MOLD) INSPECTIONS, the Inspection Agency (IA) must employ an individual who is an Industrial Hygienist (IH) that is qualified by education, training, and experience to anticipate, recognize, evaluate, and develop controls for occupational and indoor air quality hazards. Education must include a minimum 12 semester hours or quarter hour equivalent of chemistry and 18 additional semester hours or quarter hour equivalent of courses in any combination of chemistry, physics, engineering, health physics, environmental health, biostatistics, biology, physiology, toxicology, epidemiology, or industrial hygiene. An IH for mold inspections must be supervised by a CIH, who is also trained and experienced in mold hazards in accordance with current federal, State, and local regulations.

1.10 ENGAGE A TESTING LABORATORY (TL) or multiple laboratories (if necessary) to perform testing and analysis of building materials taken for Hazardous Materials Assessments.

A. For testing ACMs, use an OSHA approved and accredited laboratory by either the American Association for Laboratory Accreditation (A2LA) or the American Industrial Hygiene Association (AIHA).
B. For testing lead materials, use a laboratory accredited under the EPA National Lead Laboratory Accreditation Program (NLLAP) by either the American Association for Laboratory Accreditation (A2LA) or the American Industrial Hygiene Association (AIHA) and that is successfully participating in the Environmental Lead Proficiency Analytical Testing (ELPAT) program to perform sample analysis. Laboratories selected to perform blood lead analysis shall be OSHA approved.

1.11 THE OWNER RESERVES THE RIGHT to engage a separate Hazardous Inspector and Testing Laboratory to review and consult with the Owner in regards to the assessments and recommendations specified herein.

END of SECTION 02 26 00

SECTION 02 4113 - SELECTIVE SITE DEMOLITION

PART 1 - GENERAL

1.01 SUMMARY

A. Selective demolition work, complete, as indicated, specified, and required for new work, including removal and disposal of demolished materials.

B. Removal, protection, and storage of items designated to be reused.

C. Removal, protection, and delivery of items designated as Owner's salvage to location as directed by Owner.

1.02 RELATED WORK

A. Not in this Phase

1.03 SUBMITTALS:

A. Before commencing selective demolition work, submit for review and approval of the Engineer, a schedule showing the commencement, order, and completion dates for the various parts of this work. Include coordination for shut-off, capping, and continuation of utility services as required, together with details for dust and noise protection.

B. Before starting any work relating to existing utilities that will temporarily discontinue service to adjacent buildings, notify the Engineer / Owner 72 hours in advance and obtain approval before proceeding with work. Do not disconnect or disrupt service without Engineer's prior approval.

1.04 PROJECT CONDITIONS:

A. Condition of Structure: Owner assumes no responsibility for actual condition of items or portions of structures to be demolished.

B. Salvageable Items:

C. Salvage items indicated. Store at location as directed by Owner.

D. Items indicated to be removed, and not designated for Owner's salvage or for reuse, may be salvaged by the Contractor. Transport salvaged items from site as they are removed. Storage or sale of removed items on site will not be permitted.

E. Protections:

F. Provide protective measures as required to protect personnel and general public from injury due to selective demolition work.

G. Provide adequate fire protection in accordance with local Fire Department requirements.

H. Damages: Promptly repair, to the satisfaction of the Engineer, damages caused to contents by demolition work or due to insufficiency of protection provided, at no cost to Owner. Replace damaged work, as directed by the Engineer, if not satisfactory.

I. Traffic: Conduct selective demolition operations and debris removal in a manner to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities.

J. Explosives: Use of explosives will not be permitted.

K. Environmental Controls: Use water sprinkling, temporary enclosures, and other suitable methods to limit dust and dirt rising and scattering in air to lowest practicable level. Comply with governing regulations pertaining to environmental protection.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 DEMOLITION

A. Refer to drawings and provide selective demolition as indicated and as required for new work.

B. Proceed in a systematic manner. Use such methods as required to complete work in accordance with demolition schedule and governing regulations.

C. Demolish concrete in small sections. Cut concrete at junctures with construction to remain using power-driven masonry saw or hand tools: do not use power driven impact tools.

3.02 DISPOSAL OF DEMOLISHED MATERIAL

A. Remove debris, rubbish, and other materials resulting from demolition operations as the work progresses. Transport and legally dispose of materials off site. Burning of debris will not be permitted on site.

3.03 CLEAN UP AND REPAIR

A. Upon completion of selective demolition work, remove tools, equipment and demolished materials from site. Remove protections.

B. Repair demolition performed in excess of that required. Return structures and surfaces to remain to condition existing prior to commencement of selective demolition work. Repair construction or surfaces soiled or damaged by selective demolition work.

END OF SECTION 02 41 13

SECTION 02 4114 - UTILITY LINE BORES

PART 1 GENERAL

1.01 WORK INCLUDED

A. Providing encasement pipe jacked through bored tunnel for crossing of utility pipelines under roadways and railroad tracks where noted on Drawings.

B. Providing sand packing of encasement pipe around pressure lines.

C. Pulling or jacking carrier pipe through encasement pipe.

D. Providing brick closures at ends of encasement pipe.

1.02 RELATED WORK

A. Section 33 3100 – Sanitary Sewer Gravity Line.

B. Utility crossings under existing streets where boring is noted.

1.03 REFERENCE

A. American Society for Testing and Materials (ASTM):

1. ASTM A 139: Specification for Electric-Fusion (ARC) – Welded Steel Pipe (sizes 4 inch and over).
2. ASTM D41.1 Specification for Spiral-Welded Steel or Iron Pipe.

B. American Welding Society (AWS):

1. AWS D1.1 Structural Welding Code.

1.04 SUBMITTALS

A. See Related Work

PART 2 PRODUCTS

2.01 MATERAILS

A. Encasement pipe: Smooth wall steel pipe conforming to ASTM A139 (Grade B), ASTM A211, or AWWA C202 (Grade B) with ends prepared for welded joints.

B. Welding materials: Type required materials being welded and conforming to applicable AWS Specifications.

C. Sand: Clean industrial sand, concrete sand, masonry sand, or other type approved by Engineer.

D. Skids or chocks: Pressure-treated wood shaped to fit underside of carrier pipe and bottom of encasement pipe. Size skids to allow carrier pipe to be installed at designated grade.

E. Furnish stainless steel bands to secure skids or chocks to carrier pipe.

F. Brick: New or used day brick; or concrete brick.

G. Mortar: Type “M”.

PART 3 EXECUTION

3.01 SUBSURFACE INVESTIGATION

A. Do not set up equipment or begin excavating pit on state highway without permission of Arkansas State Highway and Transportation Department District Engineer or his authorized representative. Refer to Section 01 1000.

B. Do not begin boring and jacking operation for railroad crossings without permission of railroad company’s Area Road master or his designated representative.

3.02 INSTALLATION, ENCASEMENT PIPE

A. General: Install encasement pipe at grade and alignment shown on Drawing. Allow for height of skids or chocks when establishing grade for gravity line encasement pipe.

B. Bores:

1. Excavate pits and trenches required at each side of crossing to minimum width and length necessary for boring and jacking operation and carrier pipe installation.
2. Carefully set timer or steel guide rails in pit to attain specified grade and alignment.
3. Keep pit pumped free of standing water. Maintain pit bottom to provide stable base for rails and equipment and firm footing for workmen. Granular material used in bottom of pit will not be paid for as “Extra gravel in trench”.
4. Provide temporary sheeting and bracing as necessary to prevent earth-slides. Leave in place until it can be safely removed.
5. Bore tunnel and simultaneously jack encasement pipe forward one section at a time. Connect sections by full penetration butt welding performed in accordance with AWS D1.1.
6. Remove excavated soil from boring operation as it enters pit and dispose of it offsite.

C. Open Cut:

1. Trenches shall be constructed as described in Section 33 3100.
2. Provide temporary sheeting and bracing as necessary to prevent earth-slides. Leave in place until it can be safely removed.
3. Connect encasement pipe sections by full penetration butt welding performed in accordance with AWS D1.1.

3.03 INSTALLATION, CARRIER PIPE

A. General: Joint pipe as specified in Sections 33 1100, 33 1219, and 33 3100, as applicable. Pull or jack carrier pipe through encasement pipe. Do not allow cables or jacks to be in direct contact with carrier pipe while pulling or jacking pipe. Use timber or padded steel member.

B. Pressure lines: Install in encasement pipe with weight of pipe resting on pipe barrels and sliding directly on bottom of encasement pipe.

C. Gravity lines: Strap skids or chocks to carrier pipe, two per pipe length near ends. Refer to Detail Drawings bound in Project Manual.

3.04 INSTALLATION, SAND

A. Pressure lines: Fill void between encasement pipe and carrier pipe with sand. Install vertical single wythe mortared brick wall in ends of encasement pipe, sealing around carrier pipe.

3.05 BACKFILL

A. Use material excavated from pit.

B. Backfill against ends of encasement pipe.

C. Backfill pit and around carrier pipe in same manner as specified in Sections 33 3100 and 33 1219.

3.06 CLEANUP

A. Cleanup ground surface around work area in same manner as specified for line work in Sections 33 1219 and 33 3100.

END OF SECTION 02 41 14

SECTION 02 41 16 – STRUCTURE DEMOLITION

PART 1 - GENERAL

1.01 WORK INCLUDED: Demolish and remove the existing building structure and site improvements, as indicated on the Drawings, as required to facilitate the new construction, and as specified herein. Backfill excavations, when applicable.

1.02 MATERIALS OWNERSHIP: The Owner reserves the right to claim any existing product or material from the project site for reuse, at their discretion. Except for items or materials so claimed, demolished materials will become the Contractor's property and must be removed from the site with further disposition at the Contractor's option.

1.03 PROMPTLY REPAIR DAMAGE to existing conditions and facilities caused by demolition operations and restore to original operational conditions.

1.04 PROTECTION:

A. PROVIDE TEMPORARY BARRICADES and other forms of protection as required to protect adjacent Work, the Owner's personnel or the public from injury due to demolition work.
B. EXISTING TO REMAIN: Protect construction indicated or intended to remain against damage and soiling during selective demolition. Items may be removed to a suitable, protected storage location during selective demolition and then cleaned and reinstalled in their original locations.

1.05 QUALITY ASSURANCES:

A. TRAFFIC: Conduct selective demolition operations and debris removal in a manner to ensure minimum interference with other adjacent occupied or used facilities.
B. REGULATORY REQUIREMENTS: Comply with governing EPA notification regulations before starting selective demolition. Comply with hauling and disposal regulations of applicable AHJ representatives.

1.06 PROJECT CONDITIONS

A. EXISTING CONDITIONS: The Owner and the Architect do not accept or assume any responsibility for the condition of items or building elements intended to be demolished.
B. HAZARDOUS MATERIALS: It is not expected that asbestos, PCB's, lead-based paints or other hazardous materials will be encountered. If any material is uncovered that is suspected to contain a hazardous material, do not disturb the material – and notify the Architect immediately.
C. CONDITIONS EXISTING at time of inspection for bidding purpose will be maintained by the Owner to the greatest extent practical.
D. STORAGE OR SALE OF REMOVED ITEMS or materials on-site will not be permitted.

1.07 EXAMINATION

A. EXAMINE areas and conditions under which the Work of this Section will be performed. Do not proceed if conditions exist that are detrimental to proper and timely completion. Commencement of this Work will be construed as acceptance of existing conditions, and assumption of responsibility for satisfactory completion.

1.08 UTILITY SERVICES

A. MAINTAIN EXISTING UTILITIES in service and protect them against damage during demolition operations.
B. DO NOT INTERRUPT EXISTING UTILITIES serving any occupied or operating facilities, except when authorized in writing by the Owner.
C. UTILITY REQUIREMENTS: Locate, identify, disconnect, and seal or cap off indicated utility services serving structures to be demolished. Arrange to shut off indicated utilities with utility companies.
D. VERIFY THAT UTILITIES have been disconnected and capped before start of demolition operations.

PART 2 - PREPARATION - GENERAL:

2.01 CONDUCT DEMOLITION OPERATIONS and remove debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities

2.02 CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY to people and damage to adjacent buildings and facilities to remain. Ensure safe passage of people around selective demolition area. Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways.

2.03 PROVIDE AND MAINTAIN SHORING, bracing, or structural support to preserve stability and prevent movement, settlement, or collapse of buildings or elements to be demolished and to adjacent buildings or elements intended to remain. Strengthen or add new supports when required during progress of demolition.

PART 3 - PREPARATION FOR BUILDING DEMOLITION:

3.01 DO NOT CLOSE OR OBSTRUCT STREETS, walks, or other adjacent occupied or used facilities without permission from the Owner.

3.02 PROVIDE ALTERNATE ROUTES around closed or obstructed roads if necessary.

3.03 PROTECT EXISTING SITE IMPROVEMENTS, appurtenances, and landscaping to remain.

3.04 ERECT A FENCE around drip line of individual trees or around perimeter drip line of groups of trees to remain.

3.05 BELOW-GRADE DEMOLITION WORK: Demolish foundation walls and other below-grade construction, as follows:

A. REMOVE BELOW GRADE CONSTRUCTION, including foundation walls, completely.
B. BELOW GRADE CONCRETE SLABS: break up and remove in entirety.

PART 4 - DISPOSAL OF DEMOLISHED MATERIALS

4.01 PROMPTLY DISPOSE of demolished materials. Do not allow demolished materials to accumulate on-site.

4.02 DO NOT BURN demolished materials on-site.

4.03 TRANSPORT DEMOLISHED MATERIALS off the property and legally dispose of.

END OF SECTION 02 41 16

SECTION 02 41 19 – SELECTIVE DEMOLITION

PART 1 - GENERAL

1.01 WORK INCLUDED: Demolish and remove existing site improvements and building components, as indicated on the Drawings, as required to facilitate the new construction Work, and as specified herein.

1.02 RELATED SECTIONS: Division-31 “Earthwork” Section for backfill of excavations, when applicable.

1.03 MATERIALS OWNERSHIP: The Owner reserves the right to claim any existing product or material for reuse, at their discretion. Except for items or materials so claimed, demolished materials will become the Contractor's property and must be removed from the site with further disposition at the Contractor's option.

1.04 PROMPTLY REPAIR DAMAGE to existing conditions and facilities caused by demolition operations and restore to original operational conditions.

1.05 QUALITY ASSURANCES:

A. TRAFFIC: Conduct selective demolition operations and debris removal in a manner to ensure minimum interference with other adjacent occupied or used facilities.
B. REGULATORY REQUIREMENTS: Comply with governing EPA notification regulations before starting selective demolition. Comply with hauling and disposal regulations of applicable AHJ representatives.

1.06 PROJECT CONDITIONS

A. EXISTING CONDITIONS: The Owner and the Architect do not accept or assume any responsibility for the condition of items or building elements intended to be demolished.
B. HAZARDOUS MATERIALS: It is not expected that asbestos, PCB’s, lead-based paints or other hazardous materials will be encountered with this Project. If any material is uncovered that is suspected to contain a hazardous material, do not disturb the material – and notify the Architect immediately.
C. CONDITIONS EXISTING at the time of inspection for bidding will be maintained by the Owner to the greatest extent practical.

1.07 STORAGE OR SALE OF REMOVED ITEMS or materials on-site will not be permitted.

A. PROVIDE REPAIR MATERIALS identical to existing materials, whose installed performance equals or surpasses that of the exiting materials. Where identical materials are unavailable or cannot be used for exposed surfaces, use materials that visually match existing adjacent surfaces to the fullest extent possible.

PART 2 - EXECUTION

2.01 EXAMINATION

A. EXAMINE areas and conditions under which the Work of this Section will be performed. Do not proceed if conditions exist that are detrimental to proper and timely completion. Commencement of this Work will be construed as acceptance of existing conditions, and assumption of responsibility for satisfactory completion.
B. SURVEY EXISTING CONDITIONS and correlate with requirements indicated to determine extent of selective demolition required.
C. INVENTORY AND RECORD THE CONDITION of items to be removed and reinstalled and items to be removed and salvaged. Photograph existing damage to structural surfaces, equipment or to surrounding properties which could be misconstrued as damage resulting from selective demolition work; file with Architect prior to starting work.
D. IF UNANTICIPATED mechanical, electrical, or structural elements which conflict with the intended function of design are encountered, investigate and measure both nature and extent of the conflict. Submit report to the Architect in written, accurate detail. Pending receipt of directive from the Architect, rearrange selective demolition schedule as necessary to continue overall job progress without delay.
    (1) SURVEY THE CONDITION OF THE BUILDING to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of the structure or adjacent structures during selective demolition. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

2.02 PROTECTION:

A. PROVIDE TEMPORARY BARRICADES and other forms of protection as required to protect adjacent Work, the Owner's personnel or the public from injury due to selective demolition work.
B. EXISTING TO REMAIN: Protect construction indicated or intended to remain against damage and soiling during selective demolition. Items may be removed to a suitable, protected storage location during selective demolition and then cleaned and reinstalled in their original locations.

2.03 BUILDING SERVICES

A. MAINTAIN EXISTING SERVICES in operation and protect them against damage during demolition operations.
B. DO NOT INTERRUPT EXISTING SERVICES serving any other occupied or operating facilities, except when indicated in the Drawings or so authorized in writing by the Owner and with concurrence of AHJ representatives.
C. PROVIDE TEMPORARY SERVICES during interruptions of existing services, acceptable to the Owner and to AHJ’s.
D. LOCATE, IDENTIFY, DISCONNECT AND SEAL OR CAP OFF services associated with selective demolition operations, and verify that services have been disconnected and capped before start of selective demolition operations.

2.04 PREPARATION - GENERAL:

A. CONDUCT SELECTIVE DEMOLITION OPERATIONS and remove debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities
B. CONDUCT OPERATIONS TO PREVENT INJURY to people and damage to adjacent buildings and facilities to remain. Ensure safe passage of people around selective demolition area. Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways.
C. PROVIDE AND MAINTAIN SHORING, bracing, or structural support to preserve stability and prevent movement, settlement, or collapse of buildings or elements to be demolished and to adjacent buildings or elements intended to remain. Strengthen or add new supports when required during progress of demolition.
D. PROVIDE TEMPORARY WEATHER PROTECTION, during interval between demolition and removal of existing construction, on exterior surfaces to ensure that no water leakage or damage occurs to structure or interior areas.

2.05 PREPARATION FOR SELECTIVE SITE DEMOLITION:

A. DO NOT CLOSE OR OBSTRUCT STREETS, walks, or other adjacent occupied or used facilities without permission from the Owner, and if required, from AHJ's.
B. PROVIDE ALTERNATE ROUTES around closed or obstructed roads if required by AHJ's.
C. PROTECT EXISTING SITE IMPROVEMENTS, appurtenances, and landscaping to remain.
D. ERECT A FENCE around drip line of individual trees or around perimeter drip line of groups of trees to remain.
E. PREPARATION FOR INTERIOR SELECTIVE DEMOLITION:
F. PROTECT WALLS, CEILINGS, FLOORS, and other existing finishes that are to remain and are exposed during demolition operations.
G. COVER AND PROTECT furniture, furnishings, and equipment that have or will not be removed. Protect air-handling equipment from dust or debris.
H. ERECT AND MAINTAIN DUSTPROOF PARTITIONS and temporary enclosures to limit dust and dirt migration and to separate areas from fumes and noise. Construct dustproof partitions of not less than nominal 4-inch studs, 5/8-inch gypsum wallboard with joints taped on occupied side, and 2-inch fire-retardant plywood on the demolition side. Insulate partition to provide noise protection to occupied areas. Seal joints and perimeter. Equip partitions with dustproof doors and security locks.

2.06 POLLUTION CONTROLS:

A. UTILIZE water mist, temporary enclosures, and other suitable methods to limit the spread of dust and dirt. Comply with governing environmental protection regulations, as applicable.
B. DO NOT CREATE HAZARDOUS or objectionable conditions, such as ice, flooding, and pollution, when using water, and do not create objectionable odors from use of chemicals.
C. REMOVE AND TRANSPORT DEBRIS in a manner that will prevent spillage on adjacent surfaces and areas. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level.

PART 3 - SELECTIVE DEMOLITION OPERATIONS: Demolish and remove existing construction elements only to the extent required by new construction or as indicated. Use methods required to complete Work within limitations of governing regulations and as follows:

3.01 NEATLY CUT OPENINGS AND HOLES plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. To minimize disturbance of adjacent surfaces, use hand or small power tools designed for sawing or grinding, not hammering and chopping. Temporarily cover openings to remain

3.02 CUT OR DRILL FROM THE EXPOSED OR FINISHED SIDE into concealed surfaces to avoid marring existing finished surfaces. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain portable fire-suppression devices during flame-cutting operations. Maintain adequate ventilation when using cutting torches

3.03 REMOVE DECAYED, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.

3.04 RETURN ELEMENTS OF CONSTRUCTION AND SURFACES TO REMAIN to condition existing before start of demolition operations.

3.05 DEMOLISH CONCRETE AND MASONRY in small sections. Cut concrete and masonry at junctures with construction to remain, using power-driven masonry saw or hand tools; do not use power-driven impact tools.

3.06 REMOVE RESILIENT FLOOR COVERINGS and adhesive according to recommendations of the Resilient Floor Covering Institute's (RFCI) "Recommended Work Practices for the Removal of Resilient Floor Coverings" and Addendum. Remove residual adhesive and prepare substrate for new floor coverings by one of the methods recommended by RFCI.

3.07 REMOVE AIR-CONDITIONING EQUIPMENT without releasing refrigerants.

3.08 BELOW-GRADE DEMOLITION WORK: Demolish foundation walls and other below-grade construction, as follows:

A. REMOVE BELOW GRADE CONSTRUCTION, including foundation walls completely.
B. BELOW GRADE CONCRETE SLABS: break up and remove unless otherwise indicated to remain..

3.09 PATCHING AND REPAIRS

A. PROMPTLY PATCH AND REPAIR holes and damaged surfaces caused to adjacent construction by selective demolition operations. Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.
B. RESTORE EXPOSED FINISHES of patched areas and extend finish restoration into adjoining construction to remain in a manner that eliminates evidence of patching and refinishing.

C. PATCH AND REPAIR FLOOR AND WALL SURFACES in the new space where demolished walls or partitions extend one finished area into another. Provide a flush and even surface of uniform color and appearance. Closely match texture and finish of existing adjacent surface. Patch with durable seams that are as invisible as possible.
D. WHERE PATCHING SMOOTH PAINTED SURFACES, extend final paint coat over entire unbroken surface containing the patch after the surface has received primer and second coat
E. REMOVE EXISTING FLOOR AND WALL COVERINGS and replace with new materials, if necessary, to achieve uniform color and appearance.

3.10 DISPOSAL OF DEMOLISHED MATERIALS

A. PROMPTLY DISPOSE of demolished materials. Do not allow demolished materials to accumulate on-site.
B. DO NOT BURN demolished materials on-site.
C. TRANSPORT DEMOLISHED MATERIALS off the property and legally dispose of.

3.11 CLEANING

A. SWEEP THE SITE AND BUILDING broom clean on completion of selective demolition operation.
B. CHANGE FILTERS ON AIR-HANDLING EQUIPMENT on completion of selective demolition operations.

END OF SECTION 02 41 19

SECTION 02 82 00 – ASBESTOS REMEDIATION

PART 1 – GENERAL

1.01 THE SCOPE OF WORK of this Section will be authorized by the Owner after submittal and review of the Hazardous Materials Assessment and Work Plan proposed, as required in Division-02 Section “Hazardous Materials Assessment”. Based upon specific direction and authorization by the Owner, provide Asbestos Remediation, that may include the following.

A. REMOVE AND CONTROL existing Asbestos-Containing Materials (ACMs) discovered, by application of proper cleaning techniques, engineered controls and through application of best management practices. The Work may include containment and disposal of ACM’s, and includes handling, legal disposal, and procedures and equipment required to protect workers, the environment, building occupants, and the existing building, from contact with asbestos.

1.02 THIS SECTION INCLUDES various cleaning, removal and disposal protocols on existing building materials. The level of containment and requirements for cleaning and remediation of materials will depend on the existing conditions of the space and the materials being remediated. As so authorized by the Owner, provide labor, materials, services, and equipment necessary in accordance with applicable Federal, State, and local regulations, and as follows:

A. ENGAGE THE SERVICES OF A COMPETENT PERSON (CP) to prepare an Asbestos Control Work Plan (ACWP). Engage the CP to determine the specific needs for personnel protective equipment (PPE) to be used with the ACWP, and include an assessment of the risk for people to occupy areas adjoining the remediation areas while remediation work is occurring. The CP must be onsite whenever remediation activities are ongoing.

B. COORDINATE with Work being performed in adjacent areas. Detail coordination procedures in the ACWP and detail how asbestos exposure will be prevented to other Work, workers or other personnel performing Work unrelated to asbestos remediation activities.

1.03 THE OWNER RESERVES THE RIGHT to engage a separate CP to review and approve the ACM Assessment Survey, the ACWP, to monitor activities at the site at any time while Work is in progress, and to verify compliance with the ACWP, including verification of clearance testing. Remove Worker from the site if the Owner’s CP observes their non-compliance with the quality requirements specified herein.

1.04 LICENSES, PERMITS AND NOTIFICATIONS: Obtain necessary licenses, permits and notifications in conjunction with ACM abatement, transportation and disposal actions and provide timely notification of such actions as required by federal, state, regional, and local AHJ’s. Notify the Regional Office of the USEPA and/or the state's environmental protection agency responsible for asbestos air emissions in writing, at least ten (10) days prior to commencement of work, in accordance with 40 CFR 61, Subpart M, and state and local requirements to include the mandatory "Notification of Demolition and Renovation Record" form and other required notification documents. Notification must be by Certified Mail, Return Receipt Requested. Furnish copies of receipts to the Owner in writing, prior to the commencement of work.

1.05 DEFINITIONS:

A. ASBESTOS-CONTAINING MATERIAL (ACM): Any materials containing more than one percent (1%) asbestos.

B. CLASS I ASBESTOS WORK: Activities defined by OSHA involving the removal of thermal system insulation (TSI) and surfacing ACM’s.

C. CLASS II ASBESTOS WORK: Activities defined by OSHA involving removal of ACM which is not thermal system insulation or surfacing material., including but not limited to removal of asbestos-containing gypsum board, floor tile and floor sheeting, roofing and siding shingles, and construction mastic. Certain "incidental" roofing materials such as mastic, flashing and cements when they are still intact are excluded from Class II asbestos work. Removal of small amounts of these materials which would fit into a glovebag may be classified as a Class III job.

D. CLASS III ASBESTOS WORK: Activities defined by OSHA that involve repair and maintenance operations, where ACM, including TSI and surfacing ACM, is likely to be disturbed. Operations may include drilling, abrading, cutting a hole, cable pulling, crawling through tunnels or attics and spaces above the ceiling, where asbestos is actively disturbed or asbestos-containing debris is actively disturbed.

E. CLASS IV ASBESTOS WORK: Maintenance and custodial construction activities during which employees contact but do not disturb ACM and activities to clean-up dust, waste and debris resulting from Class I, II, and III activities. This may include dusting surfaces where ACM waste and debris and accompanying dust exists and cleaning up loose ACM debris from TSI or surfacing ACM following construction.

F. COMPETENT PERSON (CP): As used in this section, refers to a person employed by the Contractor who is legally qualified to inspects buildings for asbestos and who has EPA Model Accreditation Plan (MAP) "Building Inspector" training; accreditation as required by 40 CFR 763 - Subpart E, Appendix C, and who possesses an EPA/State certification or license as a “Building Inspector".

G. DISPOSAL BAG: A 6 mil thick, leak-tight plastic bag, pre-labeled in accordance with 29 CFR 1926.1101, used for transporting asbestos waste from containment to disposal site.

H. DISTURBANCE: Activities that disrupt the matrix of ACM, crumble or pulverize ACM, or generate visible debris from ACM. Disturbance includes cutting away small amounts of ACM, no greater than the amount which can be contained in 1 standard sized glove-bag or waste-bag - size no larger than sixty (60) inches in length and width - in order to access a building component.

I. GLOVEBAG: Not more than a 60 by 60 inch impervious plastic bag-like enclosure affixed around an asbestos-containing material, with glove-like appendages through which material and tools may be handled.

J. HIGH-EFFICIENCY PARTICULATE AIR (HEPA) FILTER: A filter capable of trapping and retaining at least 99.97 percent of all mono-dispersed particles of 0.3 micrometers in diameter.

K. INDEPENDENT TESTING LABORATORY (for ACM work activities): An entity completely independent from the Contractor or Owner that is recognized by federal, state or local regulations, selected to perform the sample analyses and report the results.
L. NESHAP: National Emission Standards for Hazardous Air Pollutants. The USEPA NESHAP regulation for asbestos is at 40 CFR 61, Subpart M.
M. NONFRIABLE ACM: A NESHAP term defined in 40 CFR 61, Subpart M and EPA 340/1-90/018 meaning any material containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure.
N. NONFRIABLE ACM (CATEGORY I): A NESHAP term defined in 40 CFR 61, Subpart E and EPA 340/1-90/018 meaning asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos.
O. NONFRIABLE ACM (CATEGORY II): A NESHAP term defined in 40 CFR 61, Subpart E and EPA 340/1-90/018 meaning any material, excluding Category I nonfriable ACM, containing more than 1 percent asbestos.
P. REGULATED AREA: An OSHA term defined in 29 CFR 1926.1101 meaning an area established to demarcate areas where Class I, II, and III asbestos work is conducted; including also any adjoining area where debris and waste from such asbestos work accumulate; and an area within which airborne concentrations of asbestos exceed, or there is a reasonable possibility they may exceed, the permissible exposure limit.
Q. REMOVAL: All operations where ACM is taken out or stripped from structures or substrates, and includes demolition operations.
R. REPAIR: Overhauling, rebuilding, reconstructing, or reconditioning of structures or substrates, including encapsulation or other repair of ACM attached to structures or substrates.
S. SURFACING ACM: Asbestos-containing material which contains more than 1% asbestos and is sprayed-on, troweled-on, or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing, or other purposes.
T. THERMAL SYSTEM INSULATION (TSI) ACM: ACM which contains more than 1% asbestos and is applied to pipes, fittings, boilers, breeching, tanks, ducts, or other interior structural components to prevent heat loss or gain or water condensation.

1.06 REFERENCED STANDARDS AND REGULATIONS: comply with applicable regulatory requirements, including the latest editions and most recent addenda, revisions and supplements of regulatory agencies, codes, and similar requirements, including but not limited to:

A. Occupational Safety and Health Administration (OSHA):
(1) Title 29 Code of Federal Regulations, Section 1910.134(d) - air Quality.
(2) Title 29 Code of Federal Regulations, Section 1926.1101- Construction Industry, including:
(a) Appendix A - OSHA Reference Method.
(b) Appendix B - Detailed Procedures for Asbestos Sampling and Analysis.
(c) Appendix C - Qualitative and Quantitative Fit Testing Procedures.
(d) Appendix D - Medical Questionnaires.
(e) Appendix E - Interpretation and Classification of Chest Roentgenograms.
(f) Appendix F - Work Practices and Engineering Controls for Major Demolition Operations.
(g) Appendix G - Work Practices and Controls for Small Scale, Short Duration Renovation Activities.
(3) Title 29 Code of Federal Regulations, Section 1926.59 - Hazard Communication Standard.

B. Environmental Protection Agency (EPA):
(1) Title 40 CFR Part 763 Subpart G - Asbestos Abatement Projects; worker Protection
(2) Title 40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants

1.07 SUBMITTALS

A. SUBMIT PRODUCT DATA for Vacuum Filters and Respirators
B. SUBMIT TEST REPORTS for sampling results, and the Occupational and Environmental Assessment Data Report.
C. SUBMIT CERTIFICATES including Qualifications of CP, Testing Laboratory qualifications, Occupant Notification, Training Certification of Workers and Supervisors, Notification of the Commencement of ACM Hazard Abatement.
D. QUALITY CONTROL SUBMITTALS, Submit the ACWP with CP approval (including signature, date, and certification number), Rental equipment notification, Respiratory Protection Program, Hazard Communication Program, EPA or State approved hazardous waste treatment, storage, or disposal facility for lead disposal, Lead Waste Management Plan, and Vacuum filter certifications.
E. CLOSEOUT SUBMITTALS: Clearance Certifications, Completed and signed hazardous waste manifest from treatment or disposal facility, Certification of Medical Examinations, Employee Training Certification, and Waste turn-in documents or weight tickets for non-hazardous wastes that are disposed of at sanitary or construction and demolition landfills.

1.08 QUALITY ASSURANCES

A. QUALIFICATIONS OF CP: Submit name, address, and telephone number of the Contractor’s CP. Provide previous experience of the CP, and include proper documentation that the CP is trained, licensed or otherwise certified in accordance with Federal, State, and local laws and the requirements of this Section.
B. TRAINING CERTIFICATION: Submit a certificate for each employee and supervisor, signed and dated by an authorized training provider, stating that the employee or supervisor has received the required training in ACM remediation procedures, and is certified to perform such activities. Submit proof the work will be performed by a certified firm.

C. TESTING LABORATORY (TL): Submit the name, address, and telephone number of the entity selected to perform the air and wipe sampling, testing, and reporting. Use an OSHA approved and accredited laboratory for testing ACMs by either the American Association for Laboratory Accreditation (A2LA) or the American Industrial Hygiene Association (AIHA).

D. COMPETENT PERSON (CP) RESPONSIBILITIES

(1) Verify that training meets all federal, State, and local requirements.
(2) Review and approve the ACP for conformance with applicable standards. Ensure that work is performed in strict accordance with specifications at all times.
(3) Continuously inspect removal/control work for conformance with the approved plan.
(4) Perform air and wipe sampling.
(5) Control work to prevent hazardous exposure to human beings and to the environment at all times.
(6) Certify the conditions of the work as called for elsewhere in this specification.

E. ASBESTOS CONTROL PLAN (ACP): Submit a detailed job-specific plan of the work procedures to be performed. Include drawings indicating the location, size, and details of control areas, location and details of decontamination facilities, viewing ports, and mechanical ventilation system. Include a description of equipment and materials, controls and job responsibilities for each activity from which ACM will be removed. Include in the plan, eating, drinking, smoking and sanitary procedures, interface of trades, sequencing of ACM related work, collected waste water and debris disposal plan, air sampling plan, respirators, personal protective equipment, and a detailed description of the method of containment of the operation to ensure that ACMs are not released outside the control area. Include site preparation, cleanup and clearance procedures. Include occupational and environmental sampling, training, sampling methodology, frequency, duration of sampling, and qualifications of sampling personnel in the air sampling portion of the plan. Include a description of arrangements made among contractors on multi-contractor worksites to inform affected employees and to clarify responsibilities to control exposures.

F. PRE-ABATEMENT MEETING: Schedule and manage a meeting with the CP, the Architect, Owner representative, and other entities involved in abatement activities, before execution of the Work of this Section. Discuss and document the following:

(1) Preparation of regulated areas.
(2) Personal protective equipment to be used, including respiratory protection and protective clothing.
(3) Experience, training, certification, and assigned responsibilities of all individuals involved in the Work
(4) Decontamination procedures for personnel, regulated area and equipment.
(5) Abatement methods and procedures to be utilized.
(6) Required air monitoring procedures.
(7) Procedures for handling and disposing of waste materials.
(8) Procedures for final decontamination and cleanup.
(9) Work sequence and performance schedule.
(10) Procedures for dealing with heat stress, and other emergency procedures
(11) Methods of adhering plastic sheeting to the surfaces to be covered.

G. PROVIDE MATERIALS AND EQUIPMENT, including but not limited to respirators, protective wear, protective sheeting and other items as approved for use by the applicable regulatory agency and suitable for the intended purposes involved in the required abatement Work.

H. REGULATED AREAS: Conduct all Class I, II, and III Asbestos Work within regulated areas, which are demarcated to minimize the number of persons within the area and to protect persons outside the area from exposure to airborne asbestos. Access to regulated areas will be limited to authorized persons.

I. CONTROL MEASURES: Utilize one or any combination of the following control methods to achieve compliance with the "Permissible Exposure Limits":

(1) Local exhaust ventilation equipped with HEPA filter dust collection systems.
(2) General dilution ventilation equipped with HEPA filtration systems on both exhaust and return air.
(3) Vacuum cleaners equipped with HEPA filters.
(4) Enclosure or isolation of processes producing airborne asbestos fibers and dust.
(5) Use of wet methods, wetting agents or removal encapsulants
(6) Dry removal methods when wet methods would result in equipment damage or a safety hazard
(7) Prompt disposal of wastes contaminated with asbestos in leak-tight containers.

J. SUPPLEMENTAL CONTROL MEASURES: If above measures are not sufficient to reduce exposures, continue use to maintain exposure to lowest levels attainable and supplement with use of appropriate respiratory protection and protective clothing.

1.09 PREPARATION OF REGULATED AREAS

A. POST WARNING SIGNS at all approaches to a regulated area. Post signs at a distance sufficiently far enough away from the regulated area to permit any person to read the sign and take the necessary measures to avoid exposure.

B. SHUTDOWN AND LOCK OUT all heating, cooling and air conditioning system (HVAC) components that are in, supply or pass through regulated areas. Appropriate equipment and control measures must be utilized to prevent contamination of adjacent building spaces. Seal all intake and exhaust vents in the regulated areas with tape and two layers of poly sheeting. Seal any seams in system components that pass through the regulated areas.

C. DISCONNECT all electrical circuits to regulated areas. Provide temporary electrical service to regulated areas and other uncontaminated areas that are dependent on disconnected electrical circuits. Equip temporary electrical circuits with combination ground fault interrupter and circuit breakers meeting requirements of UL Class A, Group 1 devices, per requirements of the NEC. The ground fault interrupter portion must be solid state type, insulated and

isolated from the breaker mechanism. A test mechanism must provide overload and short circuit protection and must be operated by a toggle switch with over-center switching mechanism so that contact cannot be held closed.

D. PRE-CLEAN OBJECTS within regulated areas using a HEPA filtered vacuum or wet cleaning methods as appropriate. Clean machinery and behind grills or gratings where access may be difficult but contamination significant, and clean wall, floor and ceiling penetrations behind fixed items. After cleaning, enclose fixed objects in polyethylene sheeting and seal securely in place with tape. Remove movable cleaned objects from regulated areas to an uncontaminated location and store temporarily.

E. PRE-CLEAN SURFACES in regulated areas using HEPA filtered vacuums and/or wet cleaning methods as appropriate. Do not use any methods that would raise dust such as dry sweeping or vacuuming with equipment not equipped with HEPA filters. Do not disturb asbestos containing materials during the pre-cleaning phase.

F. SEAL OFF windows, doorways, elevator openings, corridors, entrances, drains, ducts, grills, grates, diffusers, skylights and any other openings between the regulated areas and uncontaminated areas outside the regulated areas (including the outside of the building, attics and crawl spaces) with poly sheeting and tape.

G. WALL PROTECTION: Cover with two (2) layers of poly sheeting, starting at top of wall and extending down and across the floor area until it meets in the center of the floor – and tape together to form a monolithic covering which completely encases the regulated area. Size poly sheets to minimize seams. Stagger seams and separate by a distance of at least six (6) feet. Secure wall protection to prevent it from falling away from the walls – providing additional support and attachment methods when negative pressure ventilation systems are utilized.

H. FLOOR PROTECTION: Cover the floor area previously covered with poly sheeting extended from the walls with one additional layer of minimum 6 mil poly sheeting. Provide additional protection such as plywood, canvas, or extra plastic sheeting for floors requiring special protection such as carpeting, hardwood flooring and tile floors which may be damaged by water leakage, ladder feet or scaffold wheels. Additional layers of sheeting may be utilized as drop cloths to aid in cleanup of bulk materials. Size sheeting to minimize seams. Locate necessary seams on successive layers of sheeting staggered a minimum of six (6) feet to reduce potential for water penetration into the flooring material. Do not locate any parallel seams at wall/floor joints. Extend floor protection at least 24" up the side walls of the work area.

I. WORKER DECONTAMINATION ENCLOSURE SYSTEM: Provide at each location where workers will enter or exit a regulated area. Portable, prefabricated units may be used, or construct of six (6) mil opaque black or white poly sheeting or equivalent materials for privacy. Provide a clean room, shower room, and an equipment room, each separated from each other and from the regulated area by air locks, and as follows:

J. AIRLOCKS: Access between any two rooms in the decontamination enclosure system and entry and exit from the decontamination enclosures must be through airlocks with at least three (3) feet separating each curtained doorway. Pathways into (from clean to contaminated) and out from (contaminated to clean) the regulated area must be clearly designated. Fabricate curtained doorways of two sheets of overlapping six (6) mil polyethylene sheeting, secured at the top and one side opposite each other. Provide curtains with weights attached to the bottom to insure that they hang straight and maintain a seal over the doorway when not in use.

K. CLEAN ROOM: Size to adequately accommodate work crews. Provide clean, disposable clothing, replacement filters for respirators, disposable towels and other necessary items in adequate supply, and a location for postings within each clean room.

L. SHOWER ROOM: Provide one or more shower heads as required to adequately accommodate workers. Supply each shower head with hot and cold water adjustable by a tap. Construct to insure against leakage of any kind. Provide an adequate supply of soap and disposable towels available at all times. Drain shower water, collect and filter as required by applicable regulations.

M. EQUIPMENT ROOM: Provide for storage of equipment and tools at the end of a shift after workers have been decontaminated. Store replacement filters (in sealed containers until used) for HEPA vacuums and negative pressure ventilation equipment, extra tools, containers or surfactant and other materials and equipment that may be required during the abatement operations. Provide a water-filled walk-off pan located in the regulated area just outside the equipment room for workers to clean off foot coverings after leaving the regulated area and prevent excessive contamination of the worker decontamination enclosure system. Provide a drum lined with a labeled six (6) mil polyethylene bag for collection of disposable clothing located in this room. Store contaminated rubber boots or other reusable footwear in this area for reuse the following workday.

N. WASTE CONTAINER PASS-OUT AIRLOCK SYSTEM: Construct away from Worker Decontamination Enclosure System, located where there is direct access from the regulated area to the outside of the building. The airlock system consists of an airlock, a container staging area, and another airlock with access to outside the regulated area. Construct similar to the Worker Decontamination Enclosure System using similar materials with airlock and curtain doorway designs. Do not use this airlock system to enter or exit the regulated area, and tightly seal when not in use.

O. EMERGENCY EXITS: Establish and clearly mark to permit easy location from anywhere within the regulated area – secured to prevent access from uncontaminated areas, but still permit emergency exiting. Properly seal these exits with sheeting which can be cut to permit egress if needed. Emergency exits may pass through the decontamination enclosure, the waste pass-out airlock, other alternative exits satisfactory to AHJ representatives.

P. TEMPORARY ISOLATION PARTITIONS: Provide within large rooms or open areas that require temporary air tight barriers to separate a contaminated regulated area from an uncontaminated area, constructed as follows:

(1) WALLS: Construct of wood or metal framing to support barriers in all openings larger than 4' x 8'.
(2) APPLY SHEATHING MATERIAL (plywood, drywall) of at least 3/8" thickness to work side of barrier.
(3) COVER work side of partition with double layer of four (4) mil poly sheeting with staggered joints and seal in place.
(4) WINDOW: One (1) each min. 12 x 12 inch heavy gage plastic sealed unit to view regulated area

Q. ENCLOSURE SYSTEM MAINTENANCE: After installation of system enclosures, initiate negative pressure system and allow overnight settling to insure that barriers will remain intact and secured to walls and fixtures before beginning actual abatement activities. Inspect all poly barriers and decontamination system enclosures at least twice daily prior to start of each day's abatement activities and after completion. Document inspections and observations in the daily project log.

(1) IMMEDIATELY REPAIR damage and defects in the enclosure system upon discovery.
(2) TEST EFFECTIVENESS of barrier system using smoke tubes
(3) STOP ALL WORK ACTIVITIES of abatement when visible abatement related dust or debris is observed outside of the regulated area or if damage occurs to barriers. Repair barriers as required and clean debris/residue using appropriate HEPA vacuuming and wet mopping procedures.

R. MAKE NEGATIVE AIR-PRESSURE OPENINGS in the Enclosure system airtight using tape and sealant. When multiple openings are provided, test individually, checking the integrity of barriers for secure attachment and provide additional reinforcement if required. Insure that adequate power supply is available to satisfy the requirements of the ventilating and exhaust units. Exhaust negative pressure units to the outside of the building – not into occupied areas of the building. Provide careful installation and daily inspections to insure that the ducting does not release fibers into uncontaminated building areas.

S. DO NOT USE enclosure systems until the following are completed:

(1) Enclosure systems are constructed, inspected, and tested.
(2) Negative pressure systems are functioning adequately.
(3) Pre-abatement submissions, notifications, postings and permits have been provided and approved
(4) All equipment for abatement, cleanup and disposal are placed at the Project Site.
(5) All worker training is completed.
(6) Written Notice-To-Proceed is received from applicable regulatory authorities

PART 2 - WORKPLACE ENTRY AND EXIT PROCEDURES

2.01 ENTRY TO REGULATED AREAS by workers and other authorized personnel must be made only through a Decontamination Enclosure System. Post required procedures in both the clean room and the equipment room. All persons must sign the registration log located in the clean room, both upon entry and exiting the area. All persons must proceed first to the clean room, remove all street clothes, and appropriately install respiratory protection, disposable coveralls, head covering and foot covering in addition to hard hats, eye protection and gloves required for operations. Provide clean respirators and protective clothing for use by each person for each separate entry into the regulated area. Personnel wearing designated personal protective equipment must then proceed from the clean room through the decontamination enclosure system to the regulated area.

2.02 UPON LEAVING THE REGULATED AREAS, all persons must remove gross contamination from the outside of respirators and protective clothing by brushing or wet wiping procedures, using small HEPA vacuums with brush attachments or equivalent equipment. Bottoms of protective footwear must be cleaned in the walk-off pan just prior to entering the equipment room. Persons are then to proceed to the equipment room where they remove all protective equipment except respirators. Deposit disposable clothing into appropriately labeled containers for disposal. Store reusable, contaminated footwear in the equipment room when not in use in the regulated area – and dispose as asbestos contaminated waste upon completion. Decontaminate rubber boots at completion of the abatement for reuse. Still wearing respirators, all persons must proceed to the shower area, clean the outside of the respirators and the exposed face area under running water prior to removal of respirator, and shower and shampoo to remove residual asbestos contamination. After showering and drying off, persons are to proceed to the clean room and apply their street clothing.

2.03 NO EATING, DRINKING, SMOKING gum chewing or tobacco chewing is permitted within regulated areas.

2.04 WASTE CONTAINER PASS-OUT PROCEDURES

A. TRANSPORT CONTAINERIZED CONTAMINATED WASTE out of regulated areas through the waste container pass-out airlock (or through the decontamination enclosure if a separate airlock has not been constructed).

B. CLEAN THE ENTIRE SURFACE, including bottoms of properly labeled bags, using HEPA vacuums and wet wiping techniques and transport them into the waste container pass-out airlock where they will be placed into another properly labeled bag by personnel inside the enclosure wearing protective clothing and respirators appropriate for the contaminated regulated area. No worker from the inside team may further exit the regulated area through this airlock. Workers outside the regulated area wearing appropriately assigned respirators, must enter the airlock from outside the regulated area. No worker from the outside team may further enter the regulated area through this airlock. Secure the exit from the airlock to prevent unauthorized entry.

C. WATER COLLECTION AND DISPOSAL: Collect all water waste resulting from pre-cleaning operation, excess from floor of regulated area and final cleaning operation into sealed containers for disposal as contaminated material. Collect water from the decontamination shower in a holding tank and filter to remove particles of 0.5 microns or larger size before draining water into sanitary sewer system.

2.05 WET ABATEMENT REMOVAL PROCEDURE

A. WET ALL ACM'S with an amended water solution, or removal encapsulant, using equipment capable of providing a fine spray mist, in order to reduce airborne fiber concentrations when the material is disturbed. Saturate the material to the substrate. Keep all removed material wet to prevent fiber release until it can be containerized for disposal. If regulated area temperatures are below 32 degrees F and amended water is subject to freezing, provide anti-freeze components. Maintain high humidity in the regulated area by misting or spraying to assist in fiber settling and reduce airborne concentrations.

B. REMOVE SATURATED ACM'S in manageable sections and place into containers before moving to a new location for continuance of work. Spray adjacent areas periodically to maintain in a wet condition until visible material is cleaned up.
C. REMOVE ACM's from building structures or components as intact sections or components whenever possible and carefully lower to the floor – do not drop or throw. For materials between 15 and 50 feet AFF, containerize at elevated levels or drop onto inclined chutes or scaffolding for subsequent collection and containerization.
D. FILL BAGS until half of their capacity is reached, and securely seal to prevent accidental opening and leakage by tying tops of bags in an overhand knot or by taping in gooseneck fashion – do not seal bags with wire or cord.
E. WRAP LARGE REMOVED COMPONENTS intact in two (2) layers of six (6) mil polyethylene sheeting secured with tape for transport to the approved disposal site.
F. PLACE ACM MATERIALS WITH SHARP-EDGED COMPONENTS (nails, screws, metal lath, metal sheeting) into drums for disposal in lieu of polyethylene bags. Mark such drums to differentiate contents from those drums containing bagged material.
G. WET BRUSH AND SPONGE substrate surfaces from which ACM's have been removed after completion of stripping work to remove all visible residue.

2.06 CEILING SYSTEM REMOVAL

A. REMOVE, CLEAN AND ENCLOSE ceiling mounted objects including lights and other items that may interfere with the abatement process that were not previously cleaned and sealed off. Use localized spraying of amended water, or HEPA vacuums, to reduce fiber dispersal during the removal of these fixtures.
B. REMOVE CEILING PANELS OR TILES within the regulated area carefully. If panels are to be reused, vacuum them with a HEPA filtered vacuum cleaner and carefully damp sponge and wrap cleaned units in poly sheeting, seal with tape, and store outside the regulated area. If units are to be discarded it is not necessary to clean them, but wrap in a similar fashion and stage for disposal in the waste container pass-out airlock.
C. CEILING GRID: When suspended ceiling grid components must be removed, HEPA vacuum and wet sponge each piece after removal from hangers. Wrap clean grid pieces in poly sheeting, seal with tape and store outside the regulated area or in the waste staging area if designated for disposal. When removal is not required, leave system in place and clean properly following completion of abatement.
D. REMOVE ACM CONTAMINATED CEILINGS complete with lath, furring channels, wire mesh, ties, clips, screws, nails and other accessory items and dispose as asbestos contaminated waste material. Spray ceiling materials and debris with amended water to keep wet until containerized for disposal as Work progresses.

2.07 FLOOR FINISH REMOVAL: Use solvents to remove flooring adhesive completely so that the substrate has no adhesive residue or debris remaining upon completion. Wash substrate with soap and water to remove all solvent. Repair or replace substrate building components damaged by excessive use of solvents.

A. GLOVE-BAG ABATEMENT: Use for small-scale, short-duration removal only when permitted by AHJ representatives.
B. PREPARE AREAS around glove-bag abatement using poly sheeting drop-cloths on floor and wall in a twelve (12) foot perimeter of the removal area and providing a negative air machine exhausting air through a HEPA filter. Install glove-bags under negative pressure during removal operations. In rooms smaller than the above area, seal door, window and all other openings with poly sheeting, shut-down the HVAC system, and introduce negative air-pressure to the affected area before using glove-bags.
C. WORKERS USING GLOVE-BAGS must wear (as a minimum) half mask dual--cartridge HEPA--equipped respirator, and full protective clothing to protect against the possibility of accidental leakage.
D. PLACE TOOLS and materials that will be required during the removal procedure into the Glove-Bag tool pouch. Apply glove-bag so that it completely encompassed the surface where removal work will take place. Cut side seams of the glove-bag the appropriate length to accommodate a size that will fit over the removal area. Place glove-bag into position and fold bag edges together and seal with tape. Seal all openings in the bag with tape, and seal the bottom seam with tape to prevent leakage.
E. GLOVE-BAG ABATEMENT: Remove ACM's within the glove-bag by thoroughly wetting with a wetting agent or removal encapsulant, applied with an airless sprayer through the side port of the glove-bag. After ACM's are removed, the exposed base surface must be thoroughly cleaned and wet wiped until all traces of ACM's is removed. Create constant negative pressure by running a HEPA vacuum hose into bag. Encapsulate exposed edges of ACM's that will remain after bag is removed with a bridging encapsulant to seal the material from releasing fibers to the atmosphere.

2.08 MINI-ENCLOSURE METHOD:

A. USE MINI-ENCLOSURES WHEN Work is too large for glove-bag abatement but of small-scale and short duration that a large enclosure is not warranted. A mini-enclosure can be small enough to restrict the space to use by one worker. Provide a small Changing Room contiguous to the mini-enclosure, a minimum of three (3) feet square.
B. CONSTRUCT by affixing plastic sheeting to existing walls and covering the floor with poly sheeting extending up walls at least 24 inches and sealed with tape. If existing walls are not available, construct a 2 x 4 wood framework with two (2) layers of poly sheeting sealed with tape applied to the interior side to allow clean "take-down," upon completion. Provide double poly curtains at the exit and the entrance to the mini-work enclosure – secure both curtains in each opening at the top and one side opposite from the other. Extend a hose from a HEPA vacuum through the enclosure and seal tight with tape. Run the HEPA vacuum continuously while abatement operations are ongoing.
C. PERFORM ABATEMENT WORK in a mini-enclosure using the wet removal method. All debris from such work must be bagged and disposed of as contaminated material. Upon completion, clean the interior surfaces of the regulated area and spray with an encapsulant. The abatement worker must wear two (2) Tyvek R or equivalent disposable work suit with appropriate HEPA filtered dual cartridge respiratory protection. Upon completion of the Work and

before leaving the change area, the abatement worker is to remove the outer work suit and then proceed to a shower that is not contiguous with the work area. Collapse the entire Mini-Enclosure unit inwardly – including the regulated area and the change room – bag and dispose of as contaminated material.

2.09 ENCAPSULATION PROCEDURES: Clean and isolate the regulated areas as previously indicated in “Preparation of Regulated Areas”. Repair damaged and missing areas of existing materials with nonasbestos-containing substitutes. Material must adhere adequately to existing surfaces and provide an adequate base for application of encapsulating agents. Apply filler material applied in accordance with manufacturer's recommended specifications. Spray apply with airless equipment with low nozzle pressure to all surfaces where asbestos is removed or surfaces containing asbestos that are to remain in place. Spray material to completely encapsulate any remaining asbestos, permanently locking it in place. Apply a minimum of one (1) coat with coverage in strict accordance with manufacturer's recommendations. Surfaces must be dry and free of dirt, oil and dust.

2.10 ENCLOSURE PROCEDURE: Clean and isolate the regulated areas as previously indicated in “Preparation of Regulated Areas”. Spray areas that will be disturbed during the installation of hangers or other support/framing materials for the enclosure with water containing surfactant. Keep these areas damp to reduce airborne fiber concentrations. Remove loose or hanging ACM’s. After installation of hangers and other fixing devices and before installation of the enclosure, repair damaged areas of fireproofing/thermal insulation materials using non-asbestos-containing replacement materials. Prepare surfaces and apply replacement material in accordance with manufacturer's recommendations.

2.11 AIR SAMPLING & MONITORING: Take air-samples with a high volume pump with a capacity of 10 to 16 liters per minute (not including a breathing zone pump). Engage an independent entity to perform air-samples per requirements of the AHJ. As a minimum, conform with requirements of OSHA Standard 29 CFR 1926.1101 – Appendix A for sample collection procedures and evaluations in determining exposure levels. Provide both “base” tests and clearance testing. Analyze all air-samples collected by a laboratory accredited by the American Industrial Hygiene Association. Submit results of each analysis to the AHJ when required, and copy to the Owner and Architect. Include the following documentation, as a minimum:

2.12 AIR SAMPLING PROCEDURES: Sampling times; sampling locations (with appropriate diagrams); evidence of periodic inspection of sampling equipment; documentation of pre and post calibration of equipment; detailed description of work conditions; description of worker protective devices; and a description of any atypical environmental conditions.

2.13 AIR SAMPLING ANALYSIS: Sample identification; sample duration; sample flow rate; total air volume; total fibers counted; total fields counted; blank filter analysis; reticule field area; and fiber concentration in fibers per cubic centimeter. Determine the concentration of fibers by the membrane filter method at 400-450X (magnification) (4 millimeter objective) with phase contrast illumination (PCI).

2.14 BASELINE TEST: Provide prior to the commencement of work. Take a 1,200 liter ambient air-sample (AHERA PCM protocol) within each regulated area, within the confines of the building in close proximity to the regulated area, and also outside of the building area.

A. OSHA P.E.L. As required by 29CFR 1926.1101(c). Within the breathing zone of each worker category (i.e., wetter, receiver, bagger) 25% of the crew or one per job category.

2.15 DAILY PERSONAL AIR MONITORING (OSHA Compliance): Perform daily determination of employee exposure by collecting one or more breathing zone samples that are representative of a full-shift exposure for each employee within each regulated area; and one or more breathing zone air samples that are representative of 30-minute exposures associated with operations that are most likely to produce exposures above the excursion limit for employes in each regulated area. Do not perform daily testing when employees are equipped with supplied-air respirators operated in a positive-pressure mode while performing abatement work.

PART 3 - CLEANUP PROCEDURES

3.01 REMOVE AND CONTAINERIZE all visible accumulations of asbestos containing material and asbestos contaminated debris utilizing rubber dust pans and rubber squeegees to move material around. Do not use metal shovels to pick up or move accumulated waste. Special care must be taken to minimize damage to floor sheeting.

3.02 WET CLEAN all surfaces in the regulated area using rags, mops and sponges as appropriate. (Note: Some HEPA vacuums might not be wet-dry vacuums.)

3.03 SPRAY SHEETING with an encapsulant before removing the inner layer of plastic sheeting, so that any residue remaining will be adhered to the plastic sheeting. Remove the cleaned inner layer of plastic sheeting from walls and floors. Windows, doors, HVAC system vents and all other openings must remain sealed. The negative pressure ventilation units must remain in continuous operation. Decontamination enclosure systems must remain in place and be utilized.

3.04 REMOVE ALL CONTAINERIZED WASTE from the regulated area and waste container pass-out airlock.

3.05 AFTER CLEANING THE REGULATED AREA, either spray the remaining barrier material with encapsulant or, wait at least 24 hours to allow fibers to settle and HEPA vacuum and wet clean all objects and surfaces in the regulated area again. Decontaminate all tools and equipment and remove at the appropriate time in the cleaning sequence. Clean until the regulated areas are in compliance with clearance testing.

3.06 AFTER SATISFACTORY CLEARANCE TESTING of air-samples, remaining barriers and properly disposed of prior to other trades occupying the area. Uncover and thoroughly clean all fixed objects within the area, which were covered with poly prior to abatement work. A final visual inspection may be preformed by the AHJ to insure that no contamination remains in the regulated area. Provide additional cleaning and air-testing if unsatisfactory conditions exist until satisfactory clearance testing is obtained.

3.07 CLEARANCE TESTING BY PHASE CONTRAST MICROSCOPY (PCM):

A. PERFORM CLEARANCE SAMPLING and analysis only after completion of abatement work. Conduct air-sampling for final clearance using collection procedures in accordance with NIOSH Standard Analytical Method 7400. Provide sufficient air-volumes to provide reliable results down to a concentration of 0.01 fibers per cubic centimeter of air (f/cc) or lower. Minimum air volumes of 1,200 liters must be collected on a 25 mm filter. Perform sampling with portable fans circulating air in the Work area to simulate actual use conditions – negative pressure ventilation units are not to be used for this purpose.
B. PROVIDE a minimum of three (3) samples for each 1,000 square feet of enclosed area or as otherwise required by the AHJ.
C. ANALYZE AIR-SAMPLES by the Phase Contrast Microscopy (PCM) method except where Transmission Electron Microscopy (TEM) is required by the AHJ. All samples analyzed must indicate concentrations of airborne fibers less than 0.01 f/cc, or less than the average of the fiber count established by Base Testing for outside containment air, whichever is greater. Re-clean areas exceeding this level until satisfactory levels are obtained. Protective barriers can be removed only when tests meet the acceptable level.
D. PROVIDE INITIAL CLEARANCE TESTING in addition to all retesting required due to failure to meet requirements for clearance

3.08 CLEARANCE TESTING BY TRANSMISSION ELECTRON MICROSCOPY (TEM)

A. PERFORM CLEARANCE SAMPLING and analysis only after abatement work area is completely cleaned and visually inspected. Collect five (5) samples simultaneously within the enclosed work area and collect five (5) additional samples outside the enclosure area for the purpose of comparison. The volume of air drawn for each sample collected must be equal to or greater than 1200 liters of air using a 25 mm filter, or 2800 liters of air using a 37 mm filter. An additional three samples (referred to as field blanks) must be provided. Two (2) samples must be taken by removing the cap for 30 seconds and replacing it. These samples must be made at entrance to enclosure and at an ambient site. The third sample must remain sealed and kept with the other samples.
B. ANALYZE SAMPLES using the TEM method specified in EPA regulation 40 CFR Part 763, Appendix A to Subpart E. If the average concentration of asbestos in the five samples does not exceed the filter background level of 70 structures per square millimeter, then the area may be declared clear of asbestos. If the average concentration of asbestos in the five samples collected from the enclosed work area exceeds the filter background level of 70 structures per square millimeter, then a comparison of the ten samples must be made to determine if the average of the enclosure samples is significantly larger than the average of the outside samples and the three field blanks. A statistical comparison using the Z-test found in 40 CFR Part 763, Appendix A to Subpart E must be used to determine if the two averages are significantly different. Should the test indicate no significant difference, the area will be considered clear of asbestos. If a significant difference is noted, the cleaning procedure must be repeated and retesting must be required.

3.09 ABATEMENT CLOSEOUT & DISPOSAL PROCEDURES

A. REMOVE AND TRANSPORT sealed and labeled containers of ACM waste directly to the pre-arranged NESHAP authorized disposal location as the Work progresses to prevent exceeding the available storage capacity on site. Use of an intermediate storage location is not acceptable. Mark vehicles used to transport ACM containing waste materials in accordance with NR 447.12(4)(a)1 to 3.
B. PROVIDE CHAIN-OF-CUSTODY DOCUMENTATION in the form of a transportation and disposal manifest that will provide a chain-of-custody record of all ACM waste from the project site to the disposal site. All ACM waste generated must be accounted for by these records and copies of all such records must be delivered to the Owner.
C. PROVIDE A LOCKABLE WASTE CONTAINER consisting of a truck, trailer or dumpster, for storage and transportation of ACM waste. Lock unit while unattended and during transportation of waste. Load bags directly into the waste container for transportation upon removal from the regulated area. Unit must be free of debris and lined with poly sheeting to prevent contamination from leaking. Install floor sheeting first and extend up the side walls – and overlap wall sheeting and tape into place. Place drums on level surface in the waste container and pack tightly together to prevent shifting and tipping. Secure large components to prevent shifting and place bags on top. Do not throw ACM containers into the waste container. Protect personnel loading ACM containing waste containers with disposable clothing including head, body and foot protection and at a minimum, half-face-piece, air-purifying, dual cartridge respirators equipped with HEPA filters. Immediately clean any debris or residue observed on containers or surfaces outside of the regulated area resulting from cleanup or disposal activities using HEPA filtered vacuum equipment and/or wet methods.
D. DISPOSAL AT LANDFILL: Upon reaching the landfill, trucks are to approach the dump location as closely as possible for unloading of the asbestos containing waste. Inspect bags, drums and components as they are off-loaded at the disposal site. Carefully tape shut damaged containers and re-packed into drums or bags as required. Place waste containers on the ground at the disposal site, not pushed or thrown out of trucks. Personnel off-loading containers at the disposal site must wear protective equipment consisting of disposable head, body and foot protection and, at a minimum, half-facepiece, air-purifying, dual cartridge respirators equipped with HEPA filters. After removal of all containerized waste, de-contaminate the truck cargo area using HEPA vacuums and wet methods to meet the no visible residue criteria. Remove poly sheeting and discarded with contaminated cleaning materials and protective clothing, in bags or drums at the disposal site.

3.10 REESTABLISHMENT OF REGULATED ABATEMENT AREAS can occur only after completion of cleanup procedures and after clearance air monitoring has been performed and documented. Re-secure objects removed from their original locations during area preparation activities. Re-secure and relocate objects removed to temporary locations back to their original positions. Reestablish HVAC, mechanical and electrical systems in proper working order as originally existed. Remove potentially contaminated HVAC system filters and dispose of as asbestos contaminated waste. Decontaminate filter assembly using HEPA vacuums and wet cleaning techniques.

END OF SECTION 02 82 00

SECTION 02 83 00 – HEAVY METALS REMEDIATION

PART 1 – GENERAL

1.01 THE SCOPE OF WORK of this Section will be authorized by the Owner after submittal and review of the Hazardous Materials Assessment and Work Plan proposed, as required in Division-02 Section “Hazardous Materials Assessment”. Based upon specific direction and authorization by the Owner, provide provide Heavy Metals Remediation, that may include the following:

1.02 REMOVE AND CONTROL existing Heavy-Metal Materials (HMMs) discovered by application of proper cleaning techniques, engineered controls and application of best management practices. The Work includes containment and disposal of HMMs, and includes handling, legal disposal, and procedures and equipment required to protect workers, the environment, building occupants, and the existing building, from contact with HMMs, including the following:

A. Lead-Based Paint or Paint with Lead (LBPs),
B. Mercury containing lighting and switches

1.03 THIS SECTION INCLUDES various cleaning, removal and disposal protocols of existing building materials. The level of containment and requirements for cleaning and remediation of materials will depend on the existing conditions of the space and the materials being remediated. Furnish labor, materials, services, and equipment necessary in accordance with applicable Federal, State, and local regulations, and as follows:

1.04 ENGAGE THE SERVICES OF A COMPETENT PERSON (CP) who is a qualified and certified Planner / Project Designer to prepare a Heavy-Metals Remediation Control Plan (HM/RCP). Engage the CP to determine the specific needs for personnel protective equipment (PPE) to be used with the HM/RCP, and include an assessment of the risk for people to occupy areas adjoining the remediation areas while remediation work is occurring.

1.05 COORDINATE with Work being performed in adjacent areas. Detail coordination procedures in the HM/RCP and detail how lead exposure will be prevented to other Work, workers or other personnel performing Work unrelated to lead remediation activities.

1.06 THE OWNER RESERVES THE RIGHT to engage a separate CP to review and approve the HMM Assessment Survey, the HM/RCP, to monitor activities at the site at any time while Work is in progress, and to verify compliance with the HM/RCP, including verification of clearance testing. Remove Worker from the site if the Owner’s CP observes their non-compliance with the quality requirements specified herein.

1.07 REFERENCE STANDARDS AND REGULATORY AGENCIES: comply with applicable regulatory requirements, including the latest editions and most recent addenda, revisions and supplements of regulatory agencies, codes, and similar requirements, including but not limited to:

A. AMERICAN INDUSTRIAL HYGIENE ASSOCIATION (AIHA)
   (1) AIHA Z88.6: (2006) Respiratory Protection - Respirator Use-Physical Qualifications for Personnel
B. U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT (HUD)
   (1) HUD 6780: (1995; Errata Aug 1996;Rev Ch. 7 - 1997) Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing
C. U.S. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION (NARA)
   (1) 29 CFR 1926.103: Respiratory Protection
   (2) 29 CFR 1926.21: Safety Training and Education
   (3) 29 CFR 1926.33: Access to Employee Exposure and Medical Records
   (4) 29 CFR 1926.55: Gases, Vapors, Fumes, Dusts, and Mists
   (5) 29 CFR 1926.59: Hazard Communication
   (6) 29 CFR 1926.62: Lead
   (7) 29 CFR 1926.65: Hazardous Waste Operations and Emergency Response
   (8) 40 CFR 260: Hazardous Waste Management System: General
   (9) 40 CFR 261: Identification and Listing of Hazardous Waste
   (10) 40 CFR 262: Standards Applicable to Generators of Hazardous Waste
   (11) 40 CFR 263: Standards Applicable to Transporters of Hazardous Waste
   (12) 40 CFR 264: Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities
   (13) 40 CFR 265: Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities
   (14) 40 CFR 268: Land Disposal Restrictions
   (15) 40 CFR 745: Lead-Based Paint Poisoning Prevention in Certain Residential Structures
   (16) 49 CFR 172: Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements
   (17) 49 CFR 178: Specifications for Packagings
D. UNDERWRITERS LABORATORIES (UL)
   (1) UL 586: (2009) Standard for High-Efficiency Particulate, Air Filter Units

1.08 DEFINITIONS

A. ABATEMENT: means any set of measures designed to permanently eliminate lead-based paint hazards in accordance with standards established by appropriate Federal agencies. Such term includes:

(1) The removal of lead-based paint and lead-contaminated dust, the permanent containment or encapsulation of lead-based paint, the replacement of lead-painted surfaces or fixtures, and the removal or covering of lead contaminated soil; and
(2) All preparation, cleanup, disposal, and post-abatement clearance testing activities associated with such measures.

B. ACTION LEVEL: Employee exposure, without regard to use of respirators, to an airborne concentration of lead of 30 micrograms per cubic meter of air averaged over an 8 hour period in a work environment.
C. AREA SAMPLING: Sampling of lead concentrations within the lead control area and inside the physical boundaries, which is representative of the airborne lead concentrations but is not collected in the breathing zone of personnel.
D. COMPETENT PERSON (CP): As used in this section, refers to a person employed by the Contractor who is trained in the recognition and control of lead hazards in accordance with current federal, State, and local regulations. The CP for this Project must be either a Certified Industrial Hygienist (CIH) who has been certified for comprehensive practice by the American Board of Industrial Hygiene, or a Certified Safety Professional (CSP) certified by the Board of Certified Safety Professionals. The CP must have completed an EPA Lead-Safe Certification Program and be certified by the EPA to conduct lead-based paint activities and renovations under the EPA's Lead-Based Paint Renovation, Repair and Painting (RRP) Program.
E. CONTAMINATED ROOM: Refers to a room for removal of contaminated personal protective equipment (PPE).
F. DECONTAMINATION SHOWER FACILITY: An enclosure that contains a clean clothing storage room, and a contaminated clothing storage and disposal rooms, with a shower facility in between.
G. DELEADING: Activities conducted by a person who offers to eliminate lead-based paint or lead-based paint hazards or to plan such activities in commercial buildings, bridges or other structures.
H. EIGHT-HOUR TIME WEIGHTED AVERAGE (TWA): Airborne concentration of lead to which an employee is exposed, averaged over an 8 hour workday as indicated in 29 CFR 1926.62.
I. HIGH EFFICIENCY PARTICULATE AIR (HEPA) FILTER EQUIPMENT: HEPA filtered vacuuming equipment with a UL 586 filter system capable of collecting and retaining lead-contaminated paint dust. A high efficiency particulate filter means 99.97 percent efficient against 0.3 micron or larger size particles.
J. LEAD: Metallic lead, inorganic lead compounds, and organic lead soaps.
K. LEAD-BASED PAINT (LBP): Paint or other surface coating that contains lead in excess of 1.0 milligrams per centimeter squared or 0.5 percent by weight.
L. LEAD-BASED PAINT ACTIVITIES: Lead-based paint activities include; a lead-based paint inspection, a risk assessment, or abatement of lead-based paint hazards.
M. LEAD-BASED PAINT HAZARD (LBP HAZARD): Any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, lead-based paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects.
N. PAINT WITH LEAD (PWL): Any paint that contains lead as determined by the testing laboratory using a valid test method. The requirements of this section does not apply if no detectable levels of lead are found using a quantitative method for analyzing paint using laboratory instruments with specified limits of detection (usually 0.01 percent). An X-Ray Fluorescence (XRF) instrument is not considered a valid test method.
O. LEAD CONTROL AREA: A system of control methods to prevent the spread of lead dust, paint chips or debris to adjacent areas that may include temporary containment, floor or ground cover protection, physical boundaries, and warning signs to prevent unauthorized entry of personnel. HEPA filtered local exhaust equipment may be used as engineering controls to further reduce personnel exposures or building/outdoor environmental contamination.
P. LEAD PERMISSIBLE EXPOSURE LIMIT (PEL): Fifty micrograms per cubic meter of air as an 8 hour time weighted average as determined by 29 CFR 1926.62. If an employee is exposed for more than eight hours in a workday, the PEL shall be determined by the following formula:
Q. PEL (micrograms/cubic meter of air) = 400/No. hrs worked per day
R. PERSONAL SAMPLING: Sampling of airborne lead concentrations within the breathing zone of an employee to determine the 8 hour TWA concentration in accordance with 29 CFR 1926.62. Samples must be representative of the employees' work tasks. Breathing zone shall be considered an area within a hemisphere, forward of the shoulders, with a radius of 6 to 9 inches and centered at the nose or mouth of an employee.
S. PHYSICAL BOUNDARY: Area physically roped or partitioned off around an enclosed lead control area to limit unauthorized entry of personnel. As used in this section, "inside boundary" shall mean the same as "outside lead control area but inside the physical boundary."

1.09 SUBMITTALS

A. PRODUCT DATA for Vacuum Filters and Respirators
B. TEST REPORTS for sampling results, and the Occupational and Environmental Assessment Data Report.
C. CERTIFICATES including Qualifications of CP, Testing Laboratory qualifications, Occupant Notification, Training Certification of Workers and Supervisors, Notification of the Commencement of LBP Hazard Abatement.
D. QUALITY CONTROL SUBMITTALS, including Lead-Based Paint / Paint with Lead Removal / Control Plan (RCP) including CP approval (with signature, date, and certification number), Rental equipment notification, Respiratory Protection Program, Hazard Communication Program, EPA or State approved hazardous waste treatment, storage, or disposal facility for lead disposal, Lead Waste Management Plan, and Vacuum filter certifications.
E. CLOSEOUT SUBMITTALS: Clearance Certifications, Completed and signed hazardous waste manifest from treatment or disposal facility, Certification of Medical Examinations, Employee Training Certification, and Waste turn-in documents or weight tickets for non-hazardous wastes that are disposed of at sanitary or construction and demolition landfills.

1.10 QUALITY ASSURANCES

A. QUALIFICATIONS OF CP: Submit name, address, and telephone number of the CP selected to perform responsibilities specified in paragraph entitled "Competent Person (CP) Responsibilities." Provide previous experience of the CP. Submit proper documentation that the CP is trained [and licensed] [and certified] in accordance with Federal, State, and local laws.
B. TRAINING CERTIFICATION: Submit a certificate for each employee and supervisor, signed and dated by the authorized training provider meeting 40 CFR 745 (Subpart L) requirements, stating that the employee or supervisor has received the required lead training and is certified to perform or supervise deleading or lead removal. Submit proof the work will be performed by a certified firm.
C. TESTING LABORATORY (TL): Submit the name, address, and telephone number of the entity selected to perform the air and wipe sampling, testing, and reporting of airborne concentrations of lead. Use a laboratory accredited under the EPA National Lead Laboratory Accreditation Program (NLLAP) by either the American Association for Laboratory Accreditation (A2LA) or the American Industrial Hygiene Association (AIHA) and that is successfully participating in the Environmental Lead Proficiency Analytical Testing (ELPAT) program to perform sample analysis. Laboratories selected to perform blood lead analysis shall be OSHA approved.

1.11 COMPETENT PERSON (CP) RESPONSIBILITIES

A. Verify training meets all federal, State, and local requirements.
B. Review and approve lead-based paint/paint with lead removal/control plan for conformance to the applicable standards. Ensure work is performed in strict accordance with specifications at all times.
C. Continuously inspect lead-based paint removal/control work for conformance with the approved plan.
D. Perform air and wipe sampling.
E. Control work to prevent hazardous exposure to human beings and to the environment at all times.
F. Certify the conditions of the work as called for elsewhere in this specification.

1.12 HEAVY METALS REMOVAL & CONTROL PLAN (HM/RCP): Submit a detailed job-specific plan of the work procedures to be used in the removal/control of HMMs. Include drawings indicating the location, size, and details of lead control areas, location and details of decontamination facilities, viewing ports, and mechanical ventilation system. Include a description of equipment and materials, controls and job responsibilities for each activity from which lead is emitted. Include in the plan, eating, drinking, smoking and sanitary procedures, interface of trades, sequencing of lead related work, collected waste water and paint debris disposal plan, air sampling plan, respirators, personal protective equipment, and a detailed description of the method of containment of the operation to ensure that lead is not released outside the lead control area. Include site preparation, cleanup and clearance procedures. Include occupational and environmental sampling, training, sampling methodology, frequency, duration of sampling, and qualifications of sampling personnel in the air sampling portion of the plan. Include a description of arrangements made among contractors on multi-contractor worksites to inform affected employees and to clarify responsibilities to control exposures.

1.13 OCCUPATIONAL AND ENVIRONMENTAL ASSESSMENT DATA REPORT

A. IF INITIAL MONITORING IS NECESSARY, submit occupational and environmental sampling results to the Architect within three working days of collection, signed by the testing laboratory employee performing the analysis, the employee that performed the sampling, and the CP.
B. TO REDUCE THE FULL IMPLEMENTATION of 29 CFR 1926.62, the Contractor must provide documentation. Submit a report that supports the determination to reduce full implementation of the requirements of 29 CFR 1926.62 and supporting the HM/RCP.
C. THE INITIAL MONITORING SHALL REPRESENT each job classification, or if working conditions are similar to previous jobs by the same employer, provide previously collected exposure data that can be used to estimate worker exposures per 29 CFR 1926.62. The data shall represent the worker's regular daily exposure to lead for stated work.
D. SUBMIT WORKER EXPOSURE DATA gathered during the task based trigger operations of 29 CFR 1926.62 with a complete process description. This includes manual demolition, manual scraping, manual sanding, heat gun, power tool cleaning, rivet busting, cleanup of dry expendable abrasives, abrasive blast enclosure removal, abrasive blasting, welding, cutting and torch burning where lead containing coatings are present.
E. THE INITIAL ASSESSMENT WILL DETERMINE the requirement for further monitoring and the need to fully implement the control and protective requirements including the lead compliance plan per 29 CFR 1926.62.
F. MEDICAL EXAMINATIONS: Initial medical surveillance as required by 29 CFR 1926.62 shall be made available to all employees exposed to lead at any time (1 day) above the action level. Full medical surveillance shall be made available to all employees on an annual basis who are or may be exposed to lead in excess of the action level for more than 30 days a year or as required by 29 CFR 1926.62. Adequate records shall show that employees meet the medical surveillance requirements of 29 CFR 1926.33, 29 CFR 1926.62, and 29 CFR 1926.103. Maintain complete and accurate medical records of employees for a period of at least 30 years or for the duration of employment plus 30 years, whichever is longer.

1.14 TRAIN EACH EMPLOYEE performing paint removal, disposal, and air sampling operations prior to the time of initial job assignment and annually thereafter, in accordance with 29 CFR 1926.21, 29 CFR 1926.62, and State and local regulations where appropriate.

1.15 RESPIRATORY PROTECTION PROGRAM: Provide each employee required to wear a respirator a respirator fit test at the time of initial fitting and at least annually thereafter as required by 29 CFR 1926.62. Establish and implement a respiratory protection program as required by AIHA Z88.6, 29 CFR 1926.103, 29 CFR 1926.62, and 29 CFR 1926.55.

1.16 HAZARD COMMUNICATION PROGRAM: Establish and implement a Hazard Communication Program as required by 29 CFR 1926.59.

1.17 HMM WASTE MANAGEMENT: Prepare a HMM Waste Management Plan to comply with applicable requirements of federal, State, and local hazardous waste regulations and as follows:

A. Identification and classification of hazardous wastes associated with the Work.

B. Estimated quantities of wastes to be generated and disposed of.
C. Names and qualifications of each contractor that will be transporting, storing, treating, and disposing of the wastes. Include the facility location(s) and operator and a 24-hour point of contact. Furnish proof of EPA State and/or local hazardous waste permit applications, permits, manifests, and EPA Identification numbers or Transporter Number, as applicable.
D. Names and qualifications (experience and training) of personnel who will be working on-site with hazardous wastes.
E. List of waste handling equipment to be used in performing the work, to include cleaning, volume reduction, and transport equipment.
F. Spill prevention, containment, and cleanup contingency measures including a health and safety plan to be implemented in accordance with 29 CFR 1926.65.
G. Work plan and schedule for waste containment, removal and disposal. Wastes shall be cleaned up and containerized daily. Proper containment of the waste includes using acceptable waste containers (e.g., 55-gallon drums) as well as proper marking/labeling of the containers.
H. Unit cost for waste disposal according to this plan.

1.18 ENVIRONMENTAL, SAFETY AND HEALTH COMPLIANCE: In addition to the detailed requirements of this specification, comply with laws, ordinances, rules, and regulations of Federal, State, and local authorities regarding removing, handling, storing, transporting, and disposing of lead waste materials. Comply with the applicable requirements of the current issue of 29 CFR 1926.62. Where specification requirements and the referenced documents vary, the most stringent requirement shall apply.

1.19 PRE-CONSTRUCTION CONFERENCE: Along with the CP, meet with the Architect and Owner to discuss in detail the lead waste management plan and the HM/RCP, including work procedures and precautions for the removal plan.

1.20 PROJECT/SITE CONDITIONS - PROTECTION OF EXISTING WORK TO REMAIN: Perform paint removal work without damage or contamination of adjacent areas. Where existing work is damaged or contaminated, restore work to its original condition or better.

PART 2 - EQUIPMENT

2.01 RESPIRATORS: Furnish appropriate respirators approved by the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services, for use in atmospheres containing lead dust. Respirators shall comply with the requirements of 29 CFR 1926.62.

2.02 SPECIAL PROTECTIVE CLOTHING: Furnish personnel who will be exposed to lead-contaminated dust with proper [disposable] [uncontaminated, reusable] protective whole body clothing, head covering, gloves, and foot coverings as required by 29 CFR 1926.62. Furnish proper disposable plastic or rubber gloves to protect hands. Reduce the level of protection only after obtaining approval from the CP.

2.03 RENTAL EQUIPMENT NOTIFICATION: If rental equipment is to be used during lead-based paint handling and disposal, notify the rental agency in writing concerning the intended use of the equipment. Include a copy of the written notification with the Closeout Documents.

2.04 VACUUM FILTERS: Provide UL 586 labeled units with HEPA filters.

2.05 EQUIPMENT FOR ARCHITECT / OWNER'S REPRESENTATIVES: Provide up to two (2) complete sets of PPE daily for entry into and inspection of the paint removal work within the lead controlled area. PPE provided must include disposable whole body covering, including appropriate foot, head, and hand protection. PPE shall remain the property of the Contractor, for disposal.

PART 3 - EXECUTION

3.01 NOTIFY THE ARCHITECT twenty (20) days prior to the start of any HMM removal work.

3.02 NOTIFICATION OF THE COMMENCEMENT OF HMM HAZARD ABATEMENT: Submit a copy of the notification of the commencement of HMMs hazard abatement to appropriate AHJ's as required by applicable laws and regulations.

3.03 BOUNDARY REQUIREMENTS: Provide physical boundaries around the lead control area by roping off the area designated in the work plan or providing curtains, portable partitions or other enclosures to ensure that lead will not escape outside the lead control area.

3.04 PROVIDE WARNING SIGNS at approaches to lead control areas. Locate signs at such a distance that personnel may read the sign and take the necessary precautions before entering the area. Signs shall comply with the requirements of 29 CFR 1926.62.

3.05 FURNISHINGS: The Owner will remove furniture and equipment from the building before lead-based paint removal work begins.

3.06 HEATING, VENTILATING AND AIR CONDITIONING (HVAC) SYSTEMS: Shut down, lock out, and isolate HVAC systems that supply, exhaust, or pass through the lead control areas. Seal intake and exhaust vents in the lead control area with 6 mil plastic sheet and tape. Seal seams in HVAC components that pass through the lead control area. Provide temporary HVAC system for areas in which HVAC has been shut down outside the lead control area.

3.07 DECONTAMINATION SHOWER FACILITY: Provide clean and contaminated change rooms and shower facilities in accordance with this specification and 29 CFR 1926.62.

3.08 EYE WASH STATION: Where eyes may be exposed to injurious corrosive materials, suitable facilities for quick drenching or flushing of the eyes shall be provided within the work area.

3.09 MECHANICAL VENTILATION SYSTEM: Use adequate ventilation to control personnel exposure to lead in accordance with 29 CFR 1926.62. To the extent feasible, use local exhaust ventilation connected to HEPA filters or other collection systems, approved by the CP. Local exhaust ventilation systems shall be evaluated and maintained in accordance with 29

CFR 1926.62. Vent local exhaust outside the building only and away from building ventilation intakes. Use locally exhausted, power actuated, paint removal tools.

3.10 PERSONNEL PROTECTION: Personnel shall wear and use protective clothing and equipment as specified herein. Eating, smoking, or drinking or application of cosmetics is not permitted in the lead control area. No one will be permitted in the lead control area unless they have been appropriately trained and provided with protective equipment.

3.11 LEAD CONTROL AREA REQUIREMENTS: Establish a lead control area by situating critical barriers and physical boundaries around the area or structure where LBP removal/control operations will be performed. For full containment, contain removal operations by the use of critical barriers and HEPA filtered exhaust or a negative pressure enclosure system with decontamination facilities and with HEPA filtered exhaust when required by the CP. For containment areas larger than 1,000 square feet install a minimum of two 18 inch square viewing ports. Locate ports to provide a view of the required work from the exterior of the enclosed contaminated area. Glaze ports with laminated safety glass.

3.12 WORK PROCEDURES: Perform removal of lead-based paint in accordance with approved lead-based paint/paint with the HM/RCP. Use procedures and equipment required to limit occupational and environmental exposure to lead when lead-based paint is removed in accordance with 29 CFR 1926.62. Dispose of removed paint chips and associated waste in compliance with Environmental Protection Agency (EPA), State, and local requirements.

3.13 LEAD-BASED PAINT REMOVAL/CONTROL/DELEADING:

A. MANUAL OR POWER SANDING of interior and exterior surfaces is not permitted unless tools are equipped with HEPA attachments or wet methods. The dry sanding or grinding of surfaces that contain lead is prohibited. Provide methodology for LBP removal/control in work plan. Remove paint within the areas designated on the drawings in order to completely expose the substrate. Take whatever precautions necessary to minimize damage to the underlying substrate. Avoid flash rusting or other deterioration of the substrate. Provide surface preparations for painting in accordance with Division-09 Section: “Painting”.

B. PROVIDE METHODOLOGY FOR LBP REMOVAL or abatement / control and processes to minimize contamination of work areas outside the control area with lead-contaminated dust or other lead-contaminated debris/waste and to ensure that unprotected personnel are not exposed to hazardous concentrations of lead. Describe this removal/control process in the HM/RCP.

C. INDOOR PAINT REMOVAL: Perform manual, mechanical, thermal or chemical paint removal in lead control areas using enclosures, barriers, or containments and powered locally exhausted paint removal tools. Collect residue debris for disposal in accordance with federal, State, and local requirements.

D. OUTDOOR PAINT REMOVAL: Perform outdoor removal as indicated in federal, State, and local regulations and in accordance with the HM/RCP. The worksite preparation (barriers or containments) shall be job dependent and presented in the HM/RCP.

E. PERSONNEL EXITING PROCEDURES: Whenever personnel exit the lead-controlled area, they shall perform the following procedures and shall not leave the work place wearing any clothing or equipment worn during the work day:

(1) Vacuum themselves off.
(2) Remove protective clothing in the contaminated change room, and place them in an approved impermeable disposal bag.
(3) Washing hands and face at the site, don appropriate disposable or uncontaminated reusable clothing; move to an appropriate facility and shower.
(4) Change to clean clothes prior to leaving the physical boundary designated around the lead control area.

3.14 FIELD QUALITY CONTROL

A. PERFORM AIR AND WIPE SAMPLING for lead in accordance with 29 CFR 1926.62 and as specified herein. Air and wipe sampling shall be directed or performed by the CP.

(1) The CP shall be on the job site directing the air and non-clearance wipe sampling and inspecting the lead-based paint removal/control work to ensure that the requirements of the Contract have been satisfied during the entire lead-based paint removal operation.
(2) Collect personal air samples on employees who are expected to have the greatest risk of exposure as determined by the CP. In addition, collect air samples on at least 25 percent of the work crew or a minimum of two employees, whichever is greater, during each work shift.
(3) Submit results of air samples, within 72 hours after the air samples are taken.

3.15 BASELINE SAMPLES: Before any work begins, collect and analyze baseline wipe samples in accordance with methods defined in federal, State, and local standards inside and outside of the physical boundary to assess the degree of dust contamination in the facility prior to lead-based paint removal/control.

A. Collect surface wipe samples at a location no greater than 10 feet outside the lead control area at a frequency of once per day while lead removal work is conducted. Surface wipe results shall meet criteria in paragraph "Clearance Certification."

3.16 AIR SAMPLING DURING PAINT REMOVAL WORK: Conduct area air sampling daily, on each shift in which LBP removal operations are performed, in areas immediately adjacent to the lead control area.

A. Sufficient area monitoring shall be conducted to ensure unprotected personnel are not exposed at or above 30 micrograms per cubic meter of air.

B. If 30 micrograms per cubic meter of air is reached or exceeded, stop work, correct the conditions(s) causing the increased levels. Determine if condition(s) require any further change in work methods.

C. Removal work shall resume only after the CP gives approval.

D. For outdoor operations, at least one sample on each shift shall be taken on the downwind side of the lead control area.

3.17 SAMPLING AFTER PAINT REMOVAL/CONTROL: After the visual inspection, collect wipe samples according to the HUD protocol contained in HUD 6780 to determine the lead content of settled dust and dirt in micrograms per square meter foot of surface area.

3.18 TESTING OF REMOVED PAINT AND USED ABRASIVE: Test removed paint and used abrasive in accordance with 40 CFR 261 for hazardous waste.

3.19 CLEANUP: Maintain surfaces of the lead control area free of accumulations of paint chips and dust. Restrict the spread of dust and debris; keep waste from being distributed over the work area, and comply with the following:

A. Do not dry sweep or use compressed air to clean up the area.
B. At the end of each shift and when the paint removal operation has been completed, clean the area of visible lead paint contamination by vacuuming with a HEPA filtered vacuum cleaner, wet mopping the area and wet wiping the area as indicated by the CP.
C. Re-clean areas showing dust or residual paint chips or debris. After visible dust, chips and debris is removed, wet wipe and HEPA vacuum all surfaces in the work area.
D. If adjacent areas become contaminated at any time during the work, clean, visually inspect, and then wipe sample all contaminated areas.
E. The CP shall then certify in writing that the area has been cleaned of lead contamination before restarting work.

3.20 CLEARANCE CERTIFICATION

A. THE CP SHALL CERTIFY IN WRITING that air samples collected outside the lead control area during paint removal operations are less than 30 micrograms per cubic meter of air; the respiratory protection used for the employees was adequate; the work procedures were performed in accordance with 29 CFR 1926.62 and 40 CFR 745; and that there were no visible accumulations of material and dust containing lead left in the work site. Do not remove the lead control area or roped off boundary and warning signs prior to the certification by the CP.

(1) Certify that surface wipe samples are not significantly greater than the initial surface loading determined prior to work.
(2) For exterior paint removal/control work, soil samples taken at the exterior of the work site shall be used to determine if soil lead levels had increased at a statistically significant level (significant at the 95 percent confidence limit) from the soil lead levels prior to the work. If soil lead levels do show a statistically significant increase or is above any applicable Federal or State standard for lead in soil, the soil shall be remediated back to the pre-work level.
(3) Clear the lead control area in industrial facilities of all visible dust and debris.
(4) For lead-based paint hazard abatement work, surface wipe and soil sampling shall be conducted and clearance determinations made according to the work practice standards presented in 40 CFR 745.227.

3.21 DISPOSAL: Collect lead-contaminated waste, scrap, debris, bags, containers, equipment, and lead-contaminated clothing that may produce airborne concentrations of lead particles. Label the containers in accordance with 29 CFR 1926.62 and 40 CFR 262. Dispose of lead-contaminated waste material at an EPA or State approved hazardous waste treatment, storage, or disposal facility off the Owner's property.

A. Place waste materials in U.S. Department of Transportation (49 CFR 178) approved 55 gallon drums. Properly label each drum to identify the type of waste (49 CFR 172) and the date the drum was filled. For hazardous waste, the collection drum requires marking/labeling in accordance with 40 CFR 262 during the accumulation/collection timeframe.
B. Handle, transport, and dispose lead or lead-contaminated material classified as hazardous waste in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, and 40 CFR 265. Comply with land disposal restriction notification requirements as required by 40 CFR 268.
C. All material, whether hazardous or non-hazardous shall be disposed in accordance with laws and provisions and Federal, State, or local regulations. Ensure waste is properly characterized. The result of each waste characterization (TCLP for RCRA materials) will dictate disposal requirements.

3.22 DISPOSAL DOCUMENTATION: Submit written evidence to demonstrate the hazardous waste treatment, storage, or disposal facility (TSD) is approved for lead disposal by the EPA, State or local regulatory agencies. Submit one copy of the completed hazardous waste manifest, signed and dated by the initial transporter in accordance with 40 CFR 262. Contractor shall provide a certificate that the waste was accepted by the disposal facility.

END OF SECTION 02 83 00

SECTION 02 84 00 – POLYCHLORINATED BIPHENYL (PCB) REMEDIATION

PART 1 – GENERAL

1.01 PROVIDE REMOVAL AND CONTROL of existing PCBs, by application of proper cleaning techniques, engineered controls and application of best management practices. The Work includes containment and disposal of PCB contaminated materials, and includes handling, legal disposal, and procedures and equipment required to protect workers, the environment, building occupants, and the existing building, from contact with PCBs.

1.02 THIS SECTION INCLUDES various removal and disposal protocols. The level of containment and requirements for cleaning and removal of materials will depend on the condition of the existing contaminated equipment. Furnish labor, materials, services, and equipment necessary in accordance with applicable Federal, State, and local regulations, and as follows:

A. Obtain advance approval of PCB disposal site
B. Maintain an access log of employees working in the PCB control area(s)
C. Inspect PCB and PCB-contaminated items and waste containers for leaks
D. Maintaining inspection, inventory and spill records, and
E. Package and mark PCB and legally dispose of off the site.

1.03 ENGAGE THE SERVICES OF A COMPETENT PERSON (CP), to prepare a PCB Removal Plan (PCB/RP). Engage the CP to determine the specific needs for personnel protective equipment (PPE) to be used with the PCB/RP, and include an assessment of the risk for people to occupy areas adjoining the remediation areas while remediation work is occurring. The CP must be onsite whenever remediation activities are ongoing.

A. The CP must be a Certified Industrial Hygienist (CIH) who has been certified for comprehensive practice by the American Board of Industrial Hygiene, and with demonstrable experience in removal of PCBs.

1.04 COORDINATE with Work being performed in adjacent areas. Detail coordination procedures in the PCB/RP and detail how PCB exposure will be prevented to other Work, workers or other personnel performing Work unrelated to PCB removal activities.

1.05 PROTECT WORKERS, supervisory personnel, subcontractors, or consultants from the hazard of exposure to PCBs, including but not limited to procedures and methods described herein, regulations of the U.S. Occupational Safety & Health Administration (OSHA), the U.S. Environmental Protection Agency (EPA), and applicable state and local regulations or requirements of AHJ representatives.

1.06 THE FINAL SCOPE OF WORK for this Section will be authorized by the Owner after submittal and review of the Hazardous Materials Assessment required under other Division-02 Sections. Based on specific directions regarding the Scope of Work to be performed, prepare and submit the PCB/RP for execution.

1.07 THE OWNER RESERVES THE RIGHT to engage a separate CP to review and approve the PCB Assessment Survey, the PCB/RP, to monitor activities at the site at any time while Work is in progress, and to verify compliance with the PCB/RP, including verification of clearance testing. Remove Worker from the site if the Owner's CP observes their non-compliance with the quality requirements specified herein.

1.08 REFERENCE STANDARDS AND REGULATORY AGENCIES: comply with applicable regulatory requirements, including the latest editions and most recent addenda, revisions and supplements of regulatory agencies, codes, and similar requirements, including but not limited to:

A. EPA: Environmental Protection Agency
B. CFR: CODE OF FEDERAL REGULATIONS, including but not limited to:
C. 40 CFR 761: Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions
D. NIOSH: National Institute for Occupational Safety and Health
E. OSHA: Occupational Safety and Health Administration
F. USEPA: United States Environmental Protection Agency
G. Applicable state and local laws and regulations in which the Project is located

1.09 DEFINITIONS

A. LEAK: Leak or leaking means any instance in which a PCB Article, PCB Container, or PCB Equipment has any PCBs on any portion of its external surface.
B. PCBs: as used in this specification, means the same as PCBs, PCB Article, PCB Article Container, PCB Container, PCB Equipment, PCB Item, PCB Transformer, PCB-Contaminated Electrical Equipment, as defined in 40 CFR 761, Section 3, Definitions
C. PERMISSIBLE EXPOSURE LIMITS (PEL): For PCBs, the PEL is 3.1 E-08 lb/cubic foot on an 8-hour time weighted average basis.
D. SPILL: Both intentional and unintentional spills, leaks, and other uncontrolled discharges when the release results in any quantity of PCBs running off or about to run off the external surface of the equipment or other PCB source, as well as the contamination resulting from those releases.

1.10 SUBMITTALS

A. PRODUCT DATA, including manufacturer's catalog sheets, specifications, and application instructions for removal materials or products, if used.
B. WORKER'S QUALIFICATIONS DATA, including the name of each person who will be performing the Work and their employer's name, business address and telephone number. Include the names and addresses of three (3) similar projects that each person has worked on during the past three (3) years and documentation of completion of

appropriate PCB/Hazardous Waste training program and supervisors with appropriate PCB/Hazardous Waste supervisor training. Submit worker training certificates, prior to the start of work but after the PCB Removal Work Plan submittals, signed and dated by the CP and by each employee stating that the employee has received appropriate training. Certificates shall be organized by individual worker, not grouped by type of certificates.

C. QUALIFICATION OF the CP, including the name, address, and telephone number, and documentation of certification, including certification number and date of certification/recertification.
D. THE PCB/RP required under the following Quality Assurance requirements.
E. WASTE TRANSPORTER'S current waste transporter permit.
F. CLOSEOUT SUBMITTALS - DISPOSAL SITE RECEIPTS: Submit copy of waste shipment record and disposal site receipt showing the PCB-containing materials have been properly disposed of.

1.11 QUALITY ASSURANCES

A. INSTRUCT EMPLOYEES, supervisory personnel, and authorized observers of the Construction Work on dangers of PCB exposure, respirator use, decontamination, and applicable OSHA and EPA regulations related to PCB removal.
B. WORKER'S QUALIFICATIONS: Persons performing PCB removal must be personally experienced in PCB removal work and shall have been regularly employed by a company performing PCB removal for a minimum of 3 years. Train workers per OSHA and EPA requirements, arrange for medical clearances, including a recently issued pulmonary function test (PFT) and respirator fit tested by a trained professional.
C. PRE-WORK CONFERENCE: Before the Work of this Section begins, coordinate a conference at the Site to review the Contract Documents, discuss requirements for the Work, and to review the necessary Work procedures. Arrange for attendance by the Contractor, the PCB removal subcontractor, and the testing/monitoring laboratory.
D. PCB REMOVAL WORK PLAN (PCB/RP): At the conclusion of the pre-work conference but before the physical PCB removal Work begins, prepare a detailed, job-specific plan of the Work procedures to be used in the removal of PCB containing materials. Include drawings indicating the location, size, and details of PCB control areas, locations and details of decontamination rooms, change rooms, shower facilities, and mechanical ventilation system, as required. Include eating, drinking, and restroom procedures, interface of trades, sequencing of PCB related work, PCB disposal plan, respirators, protective equipment, and a detailed description of the method of containment of the operation to ensure that PCB contamination is not spread or carried outside of the control area.
E. PCB DISPOSAL PLAN: Comply with applicable requirements of Federal, State, and local PCB waste regulations and address the following:
    (1) Identification of PCB wastes associated with the work.
    (2) Spil prevention and containment measures to be implemented
    (3) Estimated quantities of wastes to be generated and disposed of.
    (4) Names and qualifications of the entity that will be transporting, storing, treating, and disposing of the wastes. Include the facility location and a 24-hour point of contact. Furnish two copies of applicable EPA, State or local PCB waste permits, as applicable.
    (5) Names and qualifications (experience and training) of personnel who will be working on-site with PCB wastes.
    (6) List of waste handling equipment to be used in performing the work, to include cleaning, volume reduction, and transport equipment.
    (7) Work plan and schedule for PCB waste containment, removal and disposal. Wastes shall be cleaned up and containerized daily.
F. PREPARE AN EMERGENCY PREPAREDNESS PLAN detailing as a minimum, the information required in this Section and as required by applicable laws or regulations. Develop this plan before start of any removal operations, and include the following:
    (1) Spill cleanup contingency measures to be implemented.
    (2) Include consideration for fire, electrical hazards, slips, trips and falls, spills or releases of hazardous materials and heat related injury. Develop written procedures and instruct workers of same.
    (3) Train employees in evacuation procedures in the event of work place emergencies.
    (4) For Non-Life-Threatening Situations, employees injured or otherwise incapacitated are to decontaminate following normal procedures with assistance from fellow workers, before exiting the work place to obtain proper medical treatment.
    (5) For Life-Threatening Injury or Illness, Worker decontamination shall take least priority. After measures to stabilize the injured worker, the injured worker shall be removed from the work place and secure proper medical treatment.
    (6) Include phone numbers of emergency response personnel, and prominently postin the clean area and equipment room, along with the location of the nearest telephone.
G. PROVIDE WRITTEN NOTIFICATIONS to police, fire and emergency medical personnel of planned removal activities, work schedule and layout of work area, particularly barriers that may affect response capabilities.

1.12 JOB CONDITIONS

A. POST REGULATION including, at all times in view at the job site management area.
B. POSTING REGULATIONS: Display the following documents in the clean changing area, and at the job-site management area in public view, for the full duration of the PCB removal Work:
    (1) Document 29 CFR 1910.1000 - 40 CFR 761,
    (2) The PCB/RP
    (3) Instructions for removing injured persons from the work area.
    (4) Emergency action plan, including phone numbers for hospital, doctor and Fire Department agencies.
C. PROTECTION OF EXISTING CONSTRUCTION: Perform PCB Removal Work without damage or contamination of adjacent areas and existing construction. Install 2 layers of 6 mil fire-retardant polyethylene sheeting over the inside

of all openings within 25 feet of the removal area to prevent contamination of the interior from the affected areas. Provide 6 mil fire retardant polyethylene drop cloths to collect debris from removal operation. Remove PCB contaminated materials to the exterior and place into drums or other suitable containers.

D. SURVEILLANCE PERSONNEL may enter PCB control areas for brief periods of time provided they wear disposable polyethylene gloves and disposal polyethylene foot covers, as a minimum. Additional protective equipment may be required if respiratory hazard or skin contact with PCBs is involved.

PART 2 - PRODUCTS & EQUIPMENT

2.01 PERSONAL PROTECTIVE EQUIPMENT (PPE), including but not limited to hard hats meeting the requirements of ANSI Standard Z89.1-1981, eye protection meeting the requirements of ANSI Standard Z87.1-1979, safety shoes meeting the requirements of ANSI Standard Z41.1- 1967, disposable PVC gloves or other work gloves. Furnish to workers and to authorized visitors, including representatives of the Owner or Architect. Provide non-skid footwear to removal workers, adequately sealed to disposable clothing to prevent body contamination.

2.02 RESPIRATORS: Approved for use by the Mine Safety and Health Administration (MSHA), Department of Labor, or the National Institute for Occupational Safety and Health (NIOSH), as applicable.

2.03 PROTECTIVE SUITS, protective gloves, eye protection and a minimum of half-face respirator with HEPA filter cartridges must be used by all Workers. Comply with OSHA regulation 1910.134 and ANSI Z88.2, as applicable.

2.04 REMOVAL EQUIPMENT: Provide a sufficient supply of the following:

2.05 DISPOSAL DRUMS: Metal or fiberboard units with locking ring tops, with warning labels as required by OSHA, and/or EPA.

2.06 PLASTIC SHEETING: Minimum 6 mil., opaque, fire-retardant polyethylene sheets. For floor-protective layer, provide a minimum 10 mil, reinforced polyethylene sheets.

2.07 CONSTRUCTION EQUIPMENT, including scaffolding, ladders, lifts, and hand tools such as scrapers, wire cutters, brushes, utility knives, or wire saws.

2.08 CLEANING EQUIPMENT, including disposable mops, rags, and sponges for work area decontamination.

2.09 VACUUM CLEANERS: Equip with HEPA filters.

2.10 PCB CAUTION LABELS: Comply with 40 CFR 761, Subpart C. Affix labels to PCB waste containers and other PCB-contaminated items. Provide label with sufficient print size to be clearly legible, with bold print on a contrasting background, displaying the following: “CAUTION: Contains PCBs (Polychlorinated Biphenyls)”.

2.11 PCB CAUTION SIGNS: Comply with 29 CFR 1910.145, providing signs at approaches to PCB control areas. Locate signs at such a distance that personnel may read the sign and take the necessary precautions before entering the area.

2.12 PCB SPILL KIT: Assemble and maintain at site, to include the following: six (6) pairs of polyethylene disposable gloves, 6 pairs of gloves with a high degree of impermeability to PCBs, four (4) each disposable coveralls with permeation resistance to PCBs, two (2) each chemical safety goggles, six (6) pairs of disposable polyethylene foot covers, two (2) each PCB Caution Signs, reading: “PCB Spill – Authorized Personnel Only”, 100 feet of banner guard or equivalent banner material, absorbent materials, five (5) bags of blue polyethylene waste bags, five (5) each cloth backed tape rolls, one (1) roll of blank area access logs, ten (10) 6 x 6 feet Brattice cloths, rags, ball-point pens, two (2) ea 4 x 4 ft Herculite panels, one (1) ea 8 x 8 ft Herculite panels, blank metal signs and grease pencils, and two (2) each 55 gallon waste container drums, used as a container for the spill kit.

PART 3 - EXECUTION:

3.01 NOTIFIY the Architect not less than TWENTY (20) working days prior to the start of PCB Removal Work.

3.02 WORK CONTROL AREAS: Provide materials and labor to construct a temporary (1) decontamination room, (2) clean room and a (3) shower facility room with doors and connect to the exit ways of PCB work areas. Rooms shall be of sufficient size to accommodate operation within. Existing facilities with water closets, wash basins and showers may be used if available, or provide portable toilet and shower facilities. Locate shower facilities between the clean room and decontamination room. Provide separate clothing lockers or containers in each room to prevent contamination of street and work clothes. Remove PCB-contaminated PPE’s in the decontamination room. Workers shall then proceed to showers. Workers shall shower before lunch and at the end of each day's work. Hot water, towels, soap, and hygienic conditions are the responsibility of the Contractor

3.03 PCB CONTROL AREA: Isolate by physical boundaries to prevent unauthorized entry of personnel. Food, drink and smoking materials shall not be permitted in areas where PCBs are handled or PCB items are stored.

3.04 WORKERS MUST WEAR AND USE PPE’S as recommended by the Industrial Hygienist, upon entering a PCB control area. If PPE’s is not required per the CP, specify in the PCB Removal Work Plan. Worker’s footwear must remain inside the work area until completion of the job.

3.05 PERFORM PCB REMOVAL WORK in accordance with the PCB Removal Work Plan. Use procedures and equipment as required to limit occupational and environmental exposure to PCB’s when PCB-containing materials are removed. Limit the production and dissemination of debris as much as possible. Perform manual wet scraping to the maximum extent feasible.

3.06 PCB REMOVAL: Select PCB removal procedure to minimize contamination of work areas with PCB or other PCB-contaminated debris/waste. Handle PCBs such that no skin contact occurs. PCB removal process should be described in the work plan.

3.07 CONFINED SPACES: As feasible, do not carry out PCB handling operations in confined spaces. A confined space shall mean a space having limited means of egress and inadequate cross ventilation.

3.08 CONTROL AREA: Establish a PCB control area around the PCB item as specified in paragraph entitled "PCB Control Area." Only personnel briefed on the elements in the paragraph entitled "Training" and on the handling precautions shall be allowed into the area.

3.09 SOLVENT CLEANING: Clean contaminated tools, containers, etc., after use by rinsing three times with an appropriate solvent or by wiping down three times with a solvent wetted rag. Suggested solvents are stoddard solvent or hexane.

3.10 SCRAPE RESIDUAL SURFACES of PCB contaminated materials to a bare, clean surface, using wet methods.

3.11 COLLECT all removed PCB contaminated materials and the contaminated poly sheeting and properly drum or otherwise containerize for disposal or incineration in accordance with applicable State and Federal regulations.

3.12 PCB TRANSFORMERS:

A. DRAIN TRANSFORMERS of free-flowing liquid prior to transportation. Place the drained liquids in DOT Spec 17E drums, not contain more than 50 gallons each. If equipment cannot be drained, then place it in DOT Spec 17C drums.
B. MARKINGS: Provide drums and drained PCB-contaminated electrical equipment with caution label markings as specified in paragraph entitled "PCB Caution Label."
C. LABORATORY ANALYSIS: Arrange for transformers to have a laboratory analysis for turn-in, unless the transformer is hermetically sealed (solder sealed or fusion sealed with no access ports or openings), or if the name plate states that the transformer contains pyranol, interteen, etc. Attach a copy of the lab analysis to both the DD 1348-1 and the transformer itself.
D. MARKINGS: Comply with DOT requirements for labels and stencil markings, to include date drum was filled, ppm's, serial number of transformer liquid originated, and other regulations. Do not mix different ppms in the same drum. Drums must have a 2 inch ullage space from the top of the drum.

3.13 CLEANUP

A. REMOVE POLYETHYLENE SHEETING from openings after clearance testing has confirmed complete removal of PCB containing materials. Include removed poly sheeting in disposal drum/container for disposal as PCB contaminated material.
B. CERTIFICATION OF REMOVAL: Schedule visual clearance inspection at the site, when the Work area is ready for clearance testing. Obtain a written affidavit and final assessment report from the testing laboratory stating that the visual clearance assessment conforms to standards set forth by applicable AHJ's. The Owner will have final authority to determine the acceptable clearance level.

3.14 DISPOSAL OF PCB WASTE MATERIALS

A. ARRANGE FOR legal transportation and disposal of PCB waste materials to an EPA approved recycling or incineration facility. Maintain appropriate records of materials packaging, labeling, transporting, disposal and other documents associated with the PCB waste and disposal in accordance with federal, state and local regulations, and include in Closeout Documentation.
B. CAREFULLY LOAD contaminated waste onto trucks or other appropriate vehicles for transport. Take necessary precautions so that no unauthorized persons will have access to the materials, before and during transport.
C. TRANSPORT CONTAINERIZED WASTE by a licensed transportation hauler with a valid, current permit issued in accordance with appropriate regulations. Provide the hauler with appropriate shipping records at the time of transfer. All waste manifests must show a complete chain-of-custody certification, from the site to the recycling or incineration facility. Transporters of PCB waste materials are prohibited from "back hauling" any other freight until decontamination of the vehicle and/or trailer is assured.
D. OBTAIN a tracking / manifest form executed by the recycling or incineration facility's authorized representative, certifying to receipt of the PCB materials delivered. Provide follow-up activities to assure that the PCB waste materials were received by the designated waste site in a timely manner and in accordance with applicable regulations.

3.15 RESTORATION: Remove temporary decontamination facilities and restore the area designated for these facilities to its original or better condition. When existing construction is damaged or contaminated by the Work of this Section, restore that Work to its original or better condition.

END OF SECTION 02 84 00

SECTION 02 85 00 – MOLD REMEDIATION

PART 1 - GENERAL

1.01 THE SCOPE OF WORK of this Section will be authorized by the Owner after submittal and review of the Hazardous Materials Assessment and Work Plan proposed in Division-02 Section “Hazardous Materials Assessment”. Based upon specific direction and authorization by the Owner, provide Mold Remediation, that may include the following.

1.02 REMOVE AND CONTROL existing mold, mildew spore fallout, and other microbial based environmental contaminates (herein afterwards referred to as “mold”), by application of proper cleaning techniques, engineered controls and application of best management practices. The Work includes containment and disposal of mold contaminated materials, and includes handling, legal disposal, and procedures and equipment required to protect workers, the environment, building occupants, and the existing building, from contact with mold. As a minimum, provide the following:

A. Damp wipe and HEPA vacuum all surfaces.
B. Remove and dispose of porous building materials with visible mold contamination

1.03 THIS SECTION INCLUDES various cleaning, removal and disposal protocols on existing building materials. The level of containment and requirements for cleaning and remediation of materials will depend on the existing conditions of the space and the materials being remediated. Furnish labor, materials, services, and equipment necessary in accordance with applicable Federal, State, and local regulations, and as follows:

A. MOLD ASSESSMENT SURVEY: The total scope of known mold contamination is not known to the Owner, Therefore, provide the services of a Testing and Inspection Entity qualified in inspection and analysis of mold to review conditions of the existing building, and to assess and recommend specific containment categories and remediation methods recommended for the various Work Areas of the existing building. Include the following, at a minimum:
B. ENGAGE THE SERVICES OF A COMPETENT PERSON (CP) to prepare a Mold Remediation Plan (MRP). Engage the CP to determine the specific needs for personnel protective equipment (PPE) to be used with the MRP, and include an assessment of the risk for people to occupy areas adjoining the remediation areas while remediation work is occurring. The CP must be onsite whenever remediation activities are ongoing.
C. COORDINATE with Work being performed in adjacent areas. Detail coordination procedures in the HM/RCP and detail how lead exposure will be prevented to other Work, workers or other personnel performing Work unrelated to lead remediation activities.
D. THE OWNER RESERVES THE RIGHT to engage a separate CP to review and approve the Mold Assessment Survey, the MRP, to monitor activities at the site at any time while Work is in progress, and to verify compliance with the MRP, including verification of clearance testing. Remove Worker from the site if the Owner’s CP observes their non-compliance with the quality requirements specified herein.

1.04 REFERENCE STANDARDS AND REGULATORY AGENCIES: comply with applicable regulatory requirements, including the latest editions and most recent addenda, revisions and supplements of regulatory agencies, codes, and similar requirements, including but not limited to:

A. AMERICAN INDUSTRIAL HYGIENE ASSOCIATION (AIHA)
   (1) AIHA IMOM08-679 - (2008) Recognition, Evaluation, and Control of Indoor Mold
   (2) AIHA Z9.2 - (2006) Fundamentals Governing the Design and Operation of Local Exhaust Ventilation Systems
B. INSTITUTE OF INSPECTION, CLEANING, AND RESTORATION CERTIFICATION (IICRC)
   (1) IICRC S100 - (2002) Standard Reference Guide for Professional Carpet Cleaning
   (2) IICRC S500 - (2006) Standard and Reference Guide for Professional Water Damage Restoration
C. NATIONAL AIR DUCT CLEANERS ASSOCIATION (NADCA)
   (1) ACR - (2006) Standard for Assessment, Cleaning, and Restoration of HVAC Systems
D. U.S. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION (NARA)
   (1) 29 CFR 1910.134 - Respiratory Protection
   (2) 29 CFR 1926.1101 – Asbestos
E. UNDERWRITERS LABORATORIES (UL)
   (1) UL 586 - (2009) Standard for High-Efficiency Particulate, Air Filter Units
F. APPLICABLE STATE AND LOCAL LAWS and regulations in which the Project is located

1.05 DEFINITIONS

A. AFU: Air filtration unit with High Efficiency particulate air (HEPA) filtered vacuum and / or exhaust ventilation equipment with a filter system capable of collecting and retaining microbial contamination AIHA Z9.2. Filters shall retain 99.97 percent of particles 1.2 by 10-6 inch or larger as indicated in UL 586.
B. CATEGORIES OF WATER: (IICRC S500)
   (1) Category 1 Water: Water originating from a source that does not pose substantial harm to humans. Also referred to as "clean water."
   (2) Category 2 Water: Water containing a significant degree of chemical, biological and/or physical contamination and having the potential to cause discomfort or sickness if consumed by or exposed to humans. Also referred to as "gray water."
   (3) Category 3 Water: Grossly unsanitary water, containing pathogenic agents, arising from sewage or other contaminated water sources and having the likelihood of causing discomfort or sickness if consumed by or

exposed to humans. This category includes all forms of seawater, ground surface water and rising water from rivers or streams. Also referred to as "black water."

C. CONTAINMENT: Physical separation and engineering controls required to prevent contamination of undamaged materials and occupied areas. The level of containment varies depending on the extent of the contamination.

D. SOURCE CONTAINMENT: Use when the contaminated surface area is less than 10 square feet, in non-residential buildings only. At a minimum, source containment shall include the following:

(1) ISOLATION OF WORK AREAS: Install polyethylene barriers to isolate the areas or material to be demolished / remediated from non-remediation areas.
(2) FLOOR PROTECTION: Maintain protection for finished floors through all construction activities.
(3) HEPA VACUUMING: to control dust created during the demolition. Hold HEPA vacuum intake at source of dust.
(4) LIMITED CONTAINMENT: Use when contaminated surface area is between 10 square feet and 100 square feet per room in non-residential buildings and contaminated surface area less than 100 square feet per room in residential buildings. At a minimum, limited containment must include the following:

E. CONTAINMENT: For residential buildings, a containment shall include the entire room where work is being performed. The containment shall not extend past the extents of the room unless there are instances of contamination extending from one room to the next. For non-residential buildings, the containment shall include the area to be remediated, plus enough additional area to allow for all equipment and work activities.

(1) ISOLATION OF WORK AREAS: Install polyethylene barriers to isolate the areas to be demolished / remediated.
(2) FLOOR PROTECTION: Maintain protection for finished floors through all construction activities.
(3) AIR FILTRATION / PRESSURIZATION CONTROL. Install AFUs with HEPA filters in the containment. Configure the AFUs with splitters / diverters to allow some of the air to recirculate within the containment. Discharge the remainder of the air directly to the outside to maintain an overall negative pressure in the containment of 0.02 inch water column minimum to 0.04 inch water column maximum relative to the outside and other adjacent spaces not undergoing remediation. AFUs shall filter a minimum of four air changes per hour and a maximum of six air changes per hour.
(4) PROTECTION FOR ALL ITEMS REMAINING IN THE CONTAINMENT: Protective devices shall prevent physical damage (e.g., scratches and dents) and shall provide a positive seal to prevent dust from settling in or on the items.
(5) CONTAINMENT ENTRANCE: Install a triple-flap poly "door" to be used during demolition to minimize egress and provide a good separation between containment and occupied areas of the building.

F. FULL CONTAINMENT: Use when contaminated surface area is greater than 100 square feet in both residential or nonresidential buildings. At a minimum, full containment must include the following:

(1) CONTAINMENT. For residential buildings, a containment shall include the entire room where work is being performed. The containment shall not extend past the extents of the room unless there are instances of contamination extending from one room to the next. For non-residential buildings, the containment shall include the area to be remediated, plus enough additional area to allow for all equipment and work activities.
(2) ISOLATION OF WORK AREAS. Construct polyethylene barriers to isolate the areas to be demolished / remediated.
(3) FLOOR PROTECTION. Maintain protection for finished floors through all construction activities.
(4) AIR FILTRATION / PRESSURIZATION CONTROL. Install AFUs with HEPA filters in the containment. Configure the AFUs with splitters / diverters to allow some of the air to recirculate within the containment. Discharge the remainder of the air directly to the outside to maintain an overall negative pressure in the containment of 0.02 inch water column minimum to 0.04 inch water column maximum relative to the outside and other adjacent spaces not undergoing remediation. AFUs shall filter a minimum of four air changes per hour and a maximum of six air changes per hour.
(5) PROTECTION FOR ALL ITEMS REMAINING IN THE CONTAINMENT. Protective devices shall prevent physical damage (e.g., scratches and dents) and shall provide a positive seal to prevent dust from settling in or on the items.
(6) DECONTAMINATION. Construct a decontamination airlock for entry into and exit from the work area. The airlock shall be used to HEPA vacuum the sealed bags of contaminated debris. When possible, the decontamination airlock shall be located so that the sealed bags can be passed directly from the airlock to the outside, through a door or window.
(7) CONTAINMENT ENTRANCE. Install a triple-flap poly "door" at the entrance to the airlock, and between the airlock and the work area during demolition to minimize egress and provide a good separation between containment and occupied areas of the house / building.

G. COMPETENT PERSON (CP): As used in this section, refers to a person employed by the Contractor who an Industrial Hygienist (IH), being qualified by education, training, and experience to anticipate, recognize, evaluate, and develop controls for occupational and indoor air quality hazards. Education must include a minimum 12 semester hours or quarter hour equivalent of chemistry and 18 additional semester hours or quarter hour equivalent of courses in any combination of chemistry, physics, engineering, health physics, environmental health, biostatistics, biology, physiology, toxicology, epidemiology, or industrial hygiene. The Industrial Hygienist must be supervised by a Certified Industrial Hygienist, trained and experienced in mold hazards in accordance with current federal, State, and local regulations.

H. UNOCCUPIED BUILDING CONTAINMENT: Use when a building is unoccupied and large amounts of mold growth are present throughout the building:

(1) CONTAINMENT: The containment consists of the entire building. Install AFUs with HEPA filters in the building. Configure the AFUs to recirculate within the active remediation area. AFUs shall filter a minimum of four air changes per hour and a maximum of six air changes per hour based on the size of the area undergoing active remediation.
(2) ISOLATION OF WORK AREAS: Install polyethylene barriers to isolate the areas where remediation is not required. AFU discharge may be used to positively pressurize non-remediation areas from areas undergoing remediation to prevent the movement of spores into "clean" areas.
(3) FLOOR PROTECTION: Maintain protection for finished floors through all construction activities.
(4) PROTECTION FOR ALL ITEMS REMAINING IN THE CONTAINMENT: Protective devices shall prevent physical damage (e.g., scratches and dents) and shall provide a positive seal to prevent dust from settling in or on the items.
(5) DECONTAMINATION: Construct a decontamination airlock for entry into and exit from the building.
(6) CONTAINMENT ENTRANCE: A triple-flap poly "door" shall be used at the entrance to the work area during demolition to minimize egress.

I. CLEANING CONTAINMENT: A temporary containment structure set up to clean items removed from the containment. At a minimum, the cleaning area shall contain:

(1) TWO CHAMBERS: Construct walls with polyethylene. Items will be cleaned in the first chamber. The clean items shall be stored in the second chamber.
(2) AIR FILTRATION / PRESSURIZATION CONTROL CLEANING CHAMBER: Install AFUs with HEPA filters in the cleaning chamber. Configure the AFUs with splitters / diverters to allow some of the air to recirculate within the containment. Discharge the remainder of the air directly to the outside to maintain an overall negative pressure in the containment of 0.02 inch water column minimum to 0.04 inch water column (maximum) relative to the storage chamber.
(3) AIR FILTRATION, STORAGE CHAMBER: Install AFUs with HEPA filters in the storage chamber. The AFUs shall be configured to allow air to recirculate within the chamber. AFUs shall filter a minimum of four air changes per hour and a maximum of six air changes per hour.
(4) CONTAINMENT ENTRANCE: Install a triple-flap poly "door" at the entrance to the cleaning chamber, between the cleaning and storage chambers, and at the exit of the storage chamber to minimize egress and provide a good separation between the chambers.

J. DAILY LOG: The Microbial Remediation Supervisor’s daily written, project records documenting not less than the following: Work Date, Name of Industrial Hygienist monitoring work area, Number of workers on site, equipment utilized, Brief description of daily work activities, and a listing of any non-compliance noted, emergencies, stop work orders (with detailed explanation), exhaust system pressure differential recordings and descriptions of any other significant events.
K. DECONTAMINATION UNIT (AIRLOCK): An enclosed area adjacent to, and connected to, a regulated work area. It consists of various rooms that are used for the decontamination of workers, equipment, and materials.
L. DEHUMIDIFIER: Mechanism or machine to remove moisture from the air.
M. DETERGENT: A cleaning agent. The term refers to a prepared compound that may include surfactants, builders, dry solvents, softeners, etc, but does not include true soap.
N. DISINFECTANTS OR BIOCIDE SANITIZING SOLUTIONS: One of three groups of antimicrobials registered by the EPA for public health uses. The EPA considers an antimicrobial to be a disinfectant when it destroys or irreversibly inactivates infectious or other undesirable organisms, but not necessarily their spores.
O. FUNGICIDAL AGENT: A coating material that contains an EPA registered fungicide that inhibits the spread and growth of mold with the ability to withstand moist and humid conditions.
P. HEPA FILTER: A High Efficiency Particulate Air (HEPA) filter capable of trapping and retaining 99.97 percent of all particulate larger than 1.2 by 10-6 inch.
Q. NON-POROUS MATERIAL: A material that does not absorb nor is easily penetrated by liquids, especially water. Generally, non-porous materials have a permeable factor of less than 1. Some examples are metal, glass, plastic, ceramic tile, etc.
R. OCCUPIED SPACES (Areas): The phrase "occupied space" within this Section refers to spaces that are occupied by unprotected non-remediation personnel while work is in progress. It also refers to areas adjacent to work areas that are not currently undergoing remediation.
S. POROUS MATERIAL: Permeable materials having the physical properties that allow liquids or gasses to pass through. These materials include but are not limited to the following: gypsum wall board, insulation, wallpaper, ceiling material, carpet, padding, paper goods (i.e., cardboard boxes, loose paper, books, etc.), stuffed furniture, wicker, fabrics, etc.
T. PRESSURE DIFFERENTIAL MEASURING INSTRUMENT: Device used to measure the relative pressure difference between the work area and areas outside the work area. For mold remediation, the device must measure accurately in the 0 to 0.04 inch range.
U. SEMI-POROUS MATERIAL: A material that can absorb liquids if exposed over long periods of time. These materials include but are not limited to wood, concrete, linoleum, vinyl wall covering, wooden or hardboard furniture, plaster, etc.
V. WORK AREA: The area where remediation operations are actively performed and controlled to prevent the spread of dust / spores and entry by unauthorized personnel. A work area is the space, group of spaces, or the building, as defined by the Microbial Assessment Survey.

1.06 SUBMITTALS

A. PRODUCT DATA including manufacturer’s catalog sheets, specifications, and application instructions as applicable. Include Product Data for Personal Protective Equipment (PPE), Air Filtration Units; Dehumidifiers; Pressure

Differential Measuring Instrument; Fungicidal Agents, Disinfectants or Biocide Sanitizing Solutions, and other materials or equipment that will be used.

B. WORKER'S QUALIFICATIONS DATA including the name of each person who will be performing the Work and their employer's name, business address and telephone number. Include the names and addresses of three (3) similar projects that each person has worked on during the past three (3) years and documentation of completion of appropriate training program and supervisors with appropriate supervisor training. Submit worker training certificates, prior to the start of work but after the MRP submittals, signed and dated by the CP and by each employee stating that the employee has received appropriate training. Certificates shall be organized by individual worker, not grouped by type of certificates.
C. QUALIFICATION OF the CP, including the name, address, and telephone number, and documentation that the CP is certified as an Industrial Hygienist, including certification number and date of certification/recertification.
D. THE MRP required under the following Quality Assurance requirements.
E. THE MICROBIAL REMEDIATION SUPERVISOR'S qualifications and training certificates.
F. SUBMIT QUALIFICATIONS of the Ventilation System Mold Remediator, and submit the Contractor's Respiratory Protection Program.
G. SUBMIT THE WASTE TRANSPORTER'S current waste transporter permit.
H. CLOSEOUT SUBMITTALS - DISPOSAL SITE RECEIPTS: Submit copy of waste shipment record and disposal site receipt showing the PCB-containing materials have been properly disposed of.
I. CLOSEOUT PROJECT RECORDS: Within fourteen (14) days of completion of the Work of this Section, submit the following to the Architect for record: the Supervisor Logs, IH Daily Reports, Photographic Logs, and the Contractor's Industrial Hygienist Report certifying that the microbial remediation Work is complete.

1.07 QUALITY ASSURANCES

A. CONTRACTOR QUALIFICATIONS: The Work of this Section must be performed by a qualified remediation contractor, with Comprehensive General Liability insurance as required by Division-00 Contract Requirements that specifically covers mold remediation. The Remediation Contractor must employ a Microbial Remediation Supervisor (as follows).
B. MICROBIAL REMEDIATION SUPERVISOR The Remediation Contractor's on-site work supervisor, who will be responsible for the execution of the MRP. The Supervisor must be onsite whenever microbial remediation Work is being performed. Set-up activities may be performed without the supervisor being present, but the Supervisor must review the set-up activities before starting the Work of this Section. The designated supervisor must have one of the following certifications:
   (1) Certified Mold Remediator (CMR),
   (2) Certified Mold Remediation Supervisor (CMRS), or
   (3) Applied Microbial Remediation Specialist (AMRS).
C. MOLD REMEDIATION WORKERS must be provided training in PPE and mold remediation activities by the Remediation Contractor. The Microbial Remediation Plan is required to provide details of worker training.
D. HVAC CLEANING CONTRACTOR QUALIFICATIONS: The HVAC cleaning contractor must be a certified member of NADCA., and must have at least one individual with Ventilation System Mold Remediator (VSMR) Qualifications by the North American Duct Cleaning Association (NADCA) who will be at the Project Site during duct and HVAC system cleaning.
E. MICROBIAL REMEDIATION PLAN (MRP): Prepare a Project-specific, detailed work plan approved by the Contractor's CP for submittal to the Owner before the start of Work at the site. The plan shall address the following items at a minimum:
   (1) Description of materials to be remediated, providing location and quantities (with drawings) and methods to be used for remediation.
   (2) Types of biocides and fungicidal agents to be used
   (3) Containment procedures to include description and locations of engineering controls and decontamination unit to include entry and exit procedures (provide sketch of floor plan showing location of containment barriers and decontamination units). Plan shall include locations of AFUs and AFU discharges to the outside.
   (4) Description of personal protective equipment to be used during the remediation.
   (5) Construction barricades and barriers in occupied areas.
   (6) HVAC Shut down and start-up procedures.
   (7) HVAC Evaluation and remediation procedures.
   (8) Moisture and relative humidity control procedures and equipment.
   (9) Packaging and disposal procedures.
   (10) Safety Precautions, to include lockout / tag-out, fall protection, confined space entry procedures, and fire protection.
   (11) Description of the methods to be employed to control cross contamination of areas not in the work area. This shall include a risk assessment related to the suitability of people to occupy areas adjoin the remediation area while remediation activities are ongoing.
   (12) IH Quality Control procedures to include visual inspection.
   (13) Procedures to control, abate, and dispose of Asbestos Containing Materials (ACM) or Lead Based Paint (LBP) coincident with microbial remediation. Before Work in areas containing ACM and PACM is begun; identify the presence, location, and quantity of ACM, and/or PACM therein pursuant to paragraph (k)(1) of 29 CFR 1926.1101.
F. PRE-WORK CONFERENCE: Before the Work of this Section begins, coordinate a conference at the Site to review the Contract Documents, discuss requirements for the Work of this Section, and to review the Microbial Remediation Plan. Arrange for attendance by the Contractor, the microbial remediation subcontractor, and the testing/monitoring

laboratory. The prepared Plan will be enforced as if a part of this Section. Any variances to the requirements of this Section in the Plan must be specifically identified to allow for discussion and approval by the Owner in writing prior to starting work. Before work in areas containing Asbestos Containing Material (ACM) and Presumed Asbestos Containing Materials (PACM) and Lead is begun, identify the presence, location, and quantity of ACM, PACM and Lead. Ensure proper notification of regulatory authorities.

1.08 JOB CONDITIONS

A. POSTING REGULATIONS: Display the following documents in the clean changing area, and at the job-site management area in public view, for the full duration of the microbial remediation Work:

(1) The MRP and applicable regulations governing the Work of this Section
(2) Instructions for removing injured persons from the work area.
(3) Emergency action plan, including phone numbers for hospital, doctor and Fire Department agencies.

B. PROTECTION OF EXISTING WORK AREAS: Perform work in a manner to minimize damage or contamination to areas outside or directly adjacent to work areas. Inspect areas inside and outside work areas to identify existing damage. Where materials outside the work area are damaged or contaminated by the Contractors operations, restore the Work to its original condition or decontaminate at no expense to the Owner. If adjacent or outside areas become contaminated by Contractor's operations, stop the work immediately, and clean the newly contaminated areas. The work may proceed again at the discretion of the IH when the area has been verified as being restored.

C. TEMPORARY FIRE PROTECTION: Provide portable fire extinguishers within the containment areas and outside the decontamination unit. Fire extinguishers shall be rated for the class of fire hazards in the work area and shall be sized for coverage of the areas within the containment. At a minimum, one 10 pound ABC fire extinguisher for every 1,000 square feet shall be strategically placed around the containment. Personnel shall be trained for emergency egress and the use of fire extinguishers.

D. CONSTRUCTION BARRIERS: Provide interior shoring, bracing, or support to prevent movement, settlement, or collapse of structure or element to be demolished and adjacent facilities or work to remain. Shoring, bracing or support will be necessary when structural wood studs or metal framing need to be removed and replaced when they cannot be cleaned.

(1) Do not disturb microbial-contaminated building materials while isolating work areas. This precaution prevents the release of microbial spores.
(2) Workers shall wear respirators and other PPE as outlined in the microbial remediation plan when installing critical barriers where microbial contaminated surfaces (walls or surfaces with visible settled dusts) are likely to be disturbed. Operate an AFU if disturbance is likely during setup.
(3) Monitor the air pressure differential across work area containments. The monitoring system shall be in place before the start of remedial activities. Verification by the Industrial Hygienist is required prior to the start of the microbial remediation.

PART 2 - PRODUCTS & EQUIPMENT

2.01 DISINFECTANTS, BIOCIDES, SANITIZING SOLUTIONS AND FUNGICIDAL AGENTS: Provide materials approved by EPA for the use detailed in the Microbial Remediation Plan, and use in accordance with the manufacturer's specifications.

2.02 PROVIDE PROTECTIVE CLOTHING AND RESPIRATORS as required by the Microbial Remediation Plan for use by workers and authorized visitors. Provide manufacturer's certificate of compliance for all equipment used to contain the microbial contamination.

2.03 RESPIRATORS: Select units from those approved by the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services. Provide personnel engaged in set-up, pre-cleaning, cleanup, handling, and removal of contaminated materials with the appropriate respiratory protection as specified in 29 CFR 1910.134. Microbial remediation plan shall consider Table 17.1 in AIHA IMOM08-679 "Recognition, Evaluation, and Control of Indoor Mold", which lists the minimum levels of respiratory protection based on the activity and size of the remediated area.

2.04 PROTECTIVE CLOTHING: Provide workers with protective clothing as appropriate for the work being accomplished, as required by the Microbial Remediation Plan. Do not permit any person to enter the work area without the appropriate protective clothing and equipment.

2.05 WARNING SIGNS AND LABELS: Provide warning signs at all approaches to the work areas. Locate signs at such a distance that personnel may read the sign and take the necessary protective steps required before entering the area. Warning signs may be in the form of continuous plastic tape. Warning signs shall have black characters on a yellow background, and read as follows (or alternative approved language):

A. "WARNING
DO NOT ENTER
MICROBIAL REMEDIATION WORK IN PROGRESS"

2.06 DEHUMIDIFIERS: Install and use dehumidifiers as needed during the remediation to maintain relative humidity below 60 percent in the work area. Drain the condensate water to a permanent drain, or empty as needed to prevent water overflowing from the dehumidifiers.

2.07 AIR FILTRATION UNITS (AFU): Install and use AFUs with HEPA filters, and manufacturer specified pre-filters, as part of the exhaust ventilation system to develop and maintain the specified desired air pressure differential inside the enclosed work area relative to the outside areas. The Contractor will be responsible for acquiring and paying for any licenses needed for use of any equipment, including but not limited to, air pressure differential systems and air filtration systems.

A. Replace HEPA filters and pre-filters for AFUs as required to maintain pressurization performance requirements during demolition and cleaning. Do not reuse filters. Bag used filters at a minimum in clear 6 mil polyethylene bags within the containment and disposed as contaminated waste.

B. Discharge air from any AFUs located in the work area containment to the outside environment when creating a negative pressure containment to create a negative pressure relative to occupied areas of 0.02 inch H2O to 0.04 inch H20. Discharge air in excess of that required for creating the proper negative pressure to the work area. The AFUs shall provide four to six air changes per hour in the work area. Under no circumstances may air from AFUs discharge to an occupied area. Coordinate location of window sashes or doors required for discharge openings. Seal around openings used for discharge of exhaust air airtight. Exhaust discharge openings may be constructed of plywood.
C. Seal all exhaust and intake openings in AFUs with one layer of 6 mil polyethylene sheeting when not in use.

2.08 VACUUM CLEANERS EQUIPPED WITH HEPA FILTERS: Provide vacuum cleaners equipped with HEPA filters designed for continuous operation to perform the work in a timely and efficient manner. Provide nozzle attachments as required to adequately remove all dust. As a minimum, nozzle attachments shall include crevice and extended bristle brush nozzles. Any vacuum that is not equipped with a HEPA filter shall not be used at anytime. Provide sufficient vacuum cleaners equipped with HEPA filters designed for continuous operation in the work area during microbial remediation inside the containment area. Provide additional vacuum cleaners equipped with HEPA filters in the enclosed work area during remediation or cleaning work as required by the size (area) of the containment and to maintain timely progress of the work.

PART 3 - EXECUTION:

3.01 WASTE MANAGEMENT AND REMOVAL – GENERAL: Maintain the site and work areas free from accumulations of dust, waste materials, or rubbish caused by Work operations and free from flammable materials or other sources of fire hazard. Remove waste materials and rubbish from the work site in strict accordance with the specifications and applicable codes and regulations.

3.02 NOTIFIY the Architect not less than TWENTY (20) working days prior to the start of PCB Removal Work.

3.03 WORKERS MUST WEAR AND USE PPE'S as recommended by the CP, upon entering a control area. If PPE's is not required per the CP, specify in the Work Plan.

3.04 PERFORM REMOVAL WORK in accordance with the MRP. Use procedures and equipment as nessary or required to limit occupational and environmental exposure of workers. Limit the production and dissemination of debris as much as possible.

3.05 REMEDIATION OF FUNGALLY CONTAMINATED BUILDING MATERIALS: The removal of contaminated materials shall follow in general the listed sequence of work, making minor changes to improve work flow. Provide level of containment and PPE as required by the Microbial Remediation Plan. Disable all HVAC units and exhaust fans in the area to be remediated. Protect materials to remain in work area. Where possible, all materials to be salvaged should be cleaned in place to prevent possible cross-contamination created by moving materials through non-remediation areas. Remove undamaged items and materials to be cleaned and salvaged from the work area. Materials shall be stored in an area with relative humidity maintained below 60 percent and where temperatures will not damage the material. Notify the Architect of existing damage to items prior to removal, and proceed as follows:

A. Set up containments, including protection of materials remaining within the containment and AFUs.
B. Demolition and removal / cleaning of contaminated materials.
C. Perform final cleaning within the containment.
D. Clean carpet in the containment.
E. Perform clearance inspection by the CP.
F. Perform Duct and HVAC cleaning, if necessary.
G. Perform de-construction of containment, and removal of AFUs.
H. Clean previously removed items prior to returning to occupied area.

3.06 REMEDIATION PROCEDURES: Procedures for remediation depend on the amount of mold growth and the type of material with fungal growth.

3.07 REMEDIATION OF NON-POROUS MATERIALS: The method of remediating non-porous items includes the following:

A. HEPA vacuum all surfaces.
B. Damp wipe all surfaces using clean water or a detergent solution.

3.08 SEMI-POROUS MATERIALS (UNFINISHED WOOD): The method of remediating unfinished wood-based items, including wood and wood framing in wall cavities, includes the following:

A. CLEANING
B. HEPA vacuum all surfaces.
C. Scrub surfaces with a brush and detergent to remove mold.
D. HEPA vacuum all surfaces to remove dust.
E. Repair finishes as required to match original.
F. REMOVAL: Where unfinished wood product has been structurally damaged, remove and replace with an equivalent product, including but not limited to wall studs and sheathing used in flooring, wall, or roof construction.

3.09 SEMI-POROUS MATERIALS: The method of surface cleaning semi-porous materials such as concrete, vinyl wall covering, linoleum, leather furniture, and finished wood products includes the following:

A. HEPA vacuum all surfaces.
B. Damp wipe surfaces with using clean water or a detergent solution. Avoid over-wetting the material.

3.10 POROUS MATERIALS

A. CARPET: Removal carpet that has remained wet for 48 hours or longer. Use a dry absorbent compound cleaning method as designated by IICRC S100. This method uses an absorbent compound to dissolve, suspend and absorb carpet soils. It does not add moisture back into the carpet.
B. DRYWALL (GYPSUM WALLBOARD - GWB): Replace GWB that has remained wet for 48 hours or longer, or has visible mold growth. Where removal of GWB exposes insulation with visible mold growth, remove and replace the insulation with an insulation having equal characteristics for insulating value and permeability. Where GWB has a small amount of surface mold growth and the GWB is structurally sound, a surface cleaning method may be used. The method of surface cleaning GWB shall be HEPA vacuum of all surfaces. Surface cleaning cannot be used where mold growth penetrates wallboard substrate.
C. CEILING TILE: Remove ceiling tile that has remained wet for 48 hours or longer, or has visible mold growth. Where settled dust on ceiling tiles contains mold spores and the ceiling tile is structurally sound, is not sagging, and has not been wet, a surface cleaning method may be used only. The method of surface cleaning ceiling tile shall be HEPA vacuuming all surfaces, unless mold growth is visible on ceiling tiles.
D. TEXTILES: Discard textiles with visible mold growth. Clean textile based items, that do not have visible mold growth, but have been wet, in standard commercial or residential washing machines with standard washing machine detergent. Dry all items completely before returning to the building. When possible, use dryers to dry items. If dryers would cause irreversible harm to an item, hang the item on a drying rack in a temperature and humidity controlled space. Discard items not dry within 48 hours.

3.11 DETAILED SEQUENCES OF WORK FOR MOLD REMOVAL UNDER CONTAINMENT

A. PREPARATION FOR REMEDIATION WORK: Provide level of containment and PPE required for the remediation based on the Microbial Remediation Plan, and as follows:
   (1) Disable all HVAC units and exhaust fans in the area to be remediated.
   (2) Remove undamaged materials from the work area if they are to be salvaged but cannot be cleaned in place. Store materials in an area with relative humidity maintained below 60 percent and where temperatures will not damage the material. Notify Contracting Officer of existing damage to items prior to removal. Clean materials using procedures detailed in Remediation Procedures.
   (3) Remove supply diffusers, return grilles and exhaust grilles. Clean diffusers and grilles using procedures detailed in Remediation Procedures.
   (4) Construct containment barriers. Existing walls can be used as a portion of the containment barriers if existing openings in walls (such as doors, wall openings, vents, etc.) are sealed using polyethylene.
   (5) Install the AFUs and dehumidifiers.
   (6) Seal supply, return, and exhaust openings with polyethylene sheeting and protect intakes to air handling units. Air handling units shall remain off.
   (7) Install all equipment needed for removal work in the containment area to minimize egress during demolition.
   (8) Inspect the containment to verify that the containment is properly constructed and the containment area has an overall negative pressure of 0.02 to 0.04 inch water column relative to the outside and adjacent work areas not undergoing active remediation, prior to beginning demolition work.
B. DEMOLITION
   (1) REMOVE MOLD CONTAMINATED MATERIALS to be discarded, such as paper, and furniture. Double bag material in 6 mil poly bags. Seal poly bags using duct tape inside the containment. HEPA vacuum bags before removing them from the containment or airlock. When possible, pass the bags directly from the containment or airlock to the outside. Transport bags to a dumpster. Do not leave the bags at the building.
   (2) REMOVE CONTAMINATED GYPSUM WALLBOARD (GWB) at the preliminary limits of demolition specified in the Microbial Remediation Plan. Inspect back side of removed GWB. If mold is observed on the back side of the GWB, report this condition to the Contracting Officer. After obtaining Contracting Officer approval, continue removing GWB until no mold is observed. If hidden mold is discovered that will extend past the extents of the containment, stop work immediately and reconstruct the containment to extend past the suspected contamination. Re-evaluate level of containment and PPE. Continue to operate AFUs during reconfiguring of containment.
      (a) Remove drywall by cutting in pieces as large as possible to minimize aerosolization of fungal spores. Drywall screws can either be backed out during removal or later during cleanup.
      (b) Use dust collection attachments on all power tools, such as sanders, saws, etc., to capture dust created when using the tools. Outlet of dust collector should discharge into inlet of AFU.
      (c) Remove fiberglass insulation behind removed gypsum board.
      (d) If wood studs are contaminated, scrub them with a brush and detergent to remove mold. Replace wood studs with damage severe enough to reduce the structural capacity of the member. Prior to removal of any structural member consult with the Contracting Officer.
      (e) Clean all metal framing with a dilute detergent solution. Clean metal framing with light rust using steel wool and coat with a rust inhibiting paint. Replace metal framing with rust damage severe enough to reduce the structural capacity of the member.
      (f) Remove contaminated carpet scheduled for removal.
      (g) Place removed gypsum board, insulation, carpet and remaining debris in two layers of 6 mil poly bags. Seal poly bags using duct tape inside the containment. HEPA vacuum bags before removing them from the containment or airlock. When possible pass the bags directly from the containment or airlock to the outside. Transport bags to a dumpster. Do not leave the bags inside the building. Remediation workers shall HEPA vacuum their PPE, then remove them within the airlock chamber. Discard disposable coverall suits into a 6 mil poly bag.

C. POST-DEMOLITION INSPECTION: Inspect the containment area to verify that all contaminated materials have been removed. Allow a minimum of 12 hours after completion of removal work, with AFUs operating, for airborne dust in the containment to settle and / or be removed by the AFUs.

3.12 CLEANING AFTER DEMOLITION, AND CLEANING OF SETTLED SPORES FROM POROUS / NON-POROUS MATERIALS: Continue to operate AFUs during cleaning. Clean exposed surfaces, and as follows:

A. HEPA vacuum all surfaces.
B. Damp wipe all non-porous exposed surfaces including polyethylene sheets used to protect materials, external surfaces of ductwork, studs, and floors with clean rag and clean potable water or detergent solution.
C. Remove poly sheeting inside the containment.
D. HEPA vacuum all surfaces protected by poly sheeting.
E. Damp wipe non-porous surfaces protected by poly sheeting with clean water or a detergent solution.
F. Clean carpet using procedures in Remediation of Fungally Contaminated Building Materials.

3.13 DUCT AND HVAC SYSTEM CLEANING

A. THE CP MUST VISUALLY INSPECT the HVAC system serving all work areas and determine if additional remediation is needed to clean the HVAC system, thus preventing re-contamination. If necessary and only upon approval by the Owner, proceed with HVAC microbial remediation, as follows:
   (1) Follow requirements of the NADCA ACR "Standard for Assessment, Cleaning, and Restoration of HVAC Systems".
   (2) Use of "gassing" or "fogging" cleaning methods with gaseous chlorine dioxide or ozone will not be allowed.
   (3) Disable all HVAC equipment prior to cleaning any component of the system.
   (4) Clean air handling units, terminal units, blowers and exhaust fans as follows:
   (5) Construct a limited containment around equipment to be cleaned. Provide appropriate PPE for workers.
   (6) Remove filters. Seal filters in 6 mil poly bags for disposal.
   (7) Disassemble units as necessary to clean components. Contractor is responsible for reassembling equipment after cleaning.
   (8) Clean disassembled components within the containment or in a separate two chamber cleaning containment. Seal disassembled components in 6 mil poly bags for transport out of building / house.
   (9) HEPA vacuum all surfaces.
   (10) Damp wipe all non-porous surfaces and components with clean water or a detergent solution.
   (11) The method of cleaning HVAC coils shall be:
   (12) Clean coils using a method which will render the coil visibly clean. Coil cleaners shall be non-acidic / alkaline, detergent based. Clean condensate drain pans. The drain for the condensate drain pan shall be operational during the cleaning.
   (13) Rinse coils and drain pans with clean water to remove any latent residues. Cleaning methods shall not cause damage to the coil surface or fins. Cleaning must restore the coil pressure drop to within 10 percent of the pressure drop measured when the coil was first installed. If the original pressure drop is not known, the coil shall be considered clean only if the coil is free of foreign matter and chemical residue.

B. Clean duct systems as follows:
   (1) During cleaning, connect a vacuum collection system to the downstream end of the section being cleaned. The vacuum collection device must be of sufficient power to render all areas of duct being cleaned under negative pressure relative to rooms and areas of duct not being cleaned. Negative pressure must be verified at the furthest point from the collection system with a micromanometer and verification measurements included in the Daily Report.
   (2) Equip the vacuum collection systems with HEPA filters. Exhaust the vacuum collection systems directly to the outside.
   (3) Use mechanical agitation devices to dislodge debris adhered to the ductwork, such that debris may be safely conveyed to vacuum collection devices. Cleaning methods shall not damage the integrity of the ductwork, nor damage porous surface materials such as liners inside the ductwork.
   (4) HEPA vacuum duct surfaces.
   (5) When possible, damp wipe metal duct surfaces with clean water or detergent solution. Do not wet fibrous glass thermal or acoustical insulation.
   (6) Identify areas where there is evidence of damage to or uncleanable mold in duct insulation, and discard contaminated insulation.
   (7) Final clearance of HVAC and duct system will be based on a visual assessment (no visible dust, no visible mold) by the CP.

3.14 CLEARANCE CRITERIA: Remediation clearance will be based on a visual assessment that visible mold is removed - visible dust is removed, based on a "white glove" test to be performed by the by CP. Testing must consist of wiping the surfaces with a clean cloth of a color suitable to reveal expected type of dust. For most surfaces, a white cloth is suitable. For drywall dust, a dark cloth may be more appropriate. Remediation areas that fail clearance testing must be re-cleaned and AFUs kept in operation not less than twelve (12) hours after testing, followed by another “white-glove” clearance assessment. Subsequent failures will follow the same routine until passing.

3.15 CLEAN-UP AND DISPOSAL

A. RESTORATION: Remove temporary decontamination facilities and restore the area designated for these facilities to its original or better condition. When existing construction is damaged or contaminated by the Work of this Section, restore that Work to its original or better condition.
B. DISPOSAL OF MATERIAL: Dispose of contaminated bagged waste materials removed during this remediation as general construction debris. Follow all applicable local, State, and Federal requirements for the disposal.

C. MATERIAL PACKAGING: Place waste, as waste is removed, into a disposal container promptly. Disposal containers shall consist of at a minimum, two layers of clear 6 mil polyethylene bags. Tape bags in a gooseneck fashion to form an airtight seal and label appropriately. Bag waste from vacuums equipped with HEPA filters in 6 mil polyethylene bags.
D. BUILDING EXIT (WASTE DISPOSAL): HEPA vacuum and damp wipe bags of contaminated waste material prior to removal from the building.

END OF SECTION 02 85 00

DIVISION 03 – CONCRETE

SECTION 03 30 00 – CAST-IN-PLACE CONCRETE

SECTION 03 35 05 – SEALED CONCRETE FINISHING

SECTION 03 30 00 – CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:

(1) Footings.
(2) Foundation walls.
(3) Slabs-on-grade.
(4) Suspended slabs.
(5) Concrete toppings.
(6) Building frame members.
(7) Building walls.

B. Related Sections:

(1) Section 033713 "Shotcrete" for shotcrete applied by wet or dry mix process.
(2) Section 033816 "Unbonded Post-Tensioned Concrete" for post tensioning reinforcement and accessories and post tensioning operations.
(3) Section 312000 "Earth Moving" for drainage fill under slabs-on-grade.
(4) Section 316329 "Drilled Concrete Piers and Shafts" for drilled pier operations.
(5) Section 321313 "Concrete Paving" for concrete pavement and walks.
(6) Section 321316 "Decorative Concrete Paving" for decorative concrete pavement and walks.

1.03 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

(1) Indicate amounts of mixing water to be withheld for later addition at Project site.
(2) Submit substantiating data for each concrete mix design contemplated for use to the Architect no less than four weeks prior to first concrete placement. Data for each mix shall include the following:

(a) Mix identification number (unique for each mix submitted).
(b) Statement of intended mix use.
(c) Mixture proportions.
(d) Water/cementitious materials ratio.
(e) Wet and dry unit weight.
(f) Total air content.
(g) Design slump and allowable range after additions of all admixtures.
(h) Time limits on discharge: If time of discharge exceeds ACI 301 90 minute time limit, submit concrete properties criteria at permissible time of discharge and additional special inspection and testing requirements associated with time limits.
(i) Compressive strength tests.

(3) Shrinkage testing per ASTM C 157.
(4) Lightweight Concrete:

(a) Submit data relating strength to cement content.
(b) Submit data demonstrating splitting tensile strength exceeds 5.7 times the square root of specified design compressive strength, f'c.
(c) For lightweight concrete placed by pumping, separate mix designs are required for each 100 feet of vertical or horizontal distance from pump to point of discharge. Requirement may be waived if evidence acceptable to Architect is submitted demonstrating, by previous successful experience, that proposed mix will meet all requirements of these specifications, when sampled at point of discharge over full range of distances required.
(d) Data correlating air-dry unit weight to fresh unit weight.

(5) Maximum embodied carbon of Concrete Mix. Reference drawings for embodied carbon goals.
(6) Concrete strength maturity curves: For concrete specified with a 56-day f'c concrete strength, either develop and submit strength-maturity relationship curves in accordance with ASTM C 1074 with maturity testing extended to 56 days or submit compressive strength test results at 7, 28 and 56 days.

C. Before submitting concrete design mixtures to the architect for review, contractor shall review concrete design mixture for applications, state on the submittal where the concrete mix will be used, establish procedures for ensuring quality of concrete materials and verify suitability of mix design for placement and finishing.
D. Mass concrete thermal control plans. See “Concrete Mixtures, General – Mass Concrete Performance and Design Requirements” section of this specification.
E. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.
   (1) Show all reinforcing, top and bottom profile of concrete element, supports below, including beams, columns and walls, grade beams, concrete walls, joists, etc. framing into elements.
   (2) Provide one continuous elevation at 1/4" (1:48) scale for all beams, joists or walls in a continuous line. Show pockets and openings in shear walls, structural slabs, beams, elevations of top of beams, walls, columns, sections through beams, pilasters, columns, and placing sequence of reinforcing for items with more than one reinforcing layer.
   (3) Show locations of approved construction joints, locations of pour strips, splices of reinforcing, type of splice used and splice location. Identify all ASTM A706 and epoxy coated reinforcing locations.
F. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
   (1) Location of construction joints is subject to approval of Architect.
G. Samples: For waterstops, vapor retarder, expansion joint material, decorative paving finishes.
H. Void Forms: Provide manufacturer’s data on factory made void pieces. Submit evidence void is of proper size and shape after concrete placement. Submit evidence of void form material degradation as specified herein.

1.05 INFORMATIONAL SUBMITTALS

A. Material Certificates: For each of the following, signed by manufacturers:
   (1) Cementitious materials.
   (2) Admixtures.
   (3) Form materials and form-release agents.
   (4) Steel reinforcement and accessories.
   (5) Fiber reinforcement.
   (6) Waterstops.
   (7) Curing compounds.
   (8) Floor and slab treatments.
   (9) Bonding agents.
   (10) Adhesives.
   (11) Vapor retarders.
   (12) Semirigid joint filler.
   (13) Joint-filler strips.
   (14) Repair materials.
   (15) Supplementary Cementitious materials.
   (16) Corrosion inhibitors.
B. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:
   (1) Aggregates: Submit test reports indicating that aggregates are not potentially reactive based on the ASTM C295 or ASTM 1260 testing limits set forth in section 5.1 of “Guide Specification for Concrete Subject to Alkali-Silica Reactions” (2007 Portland Cement Association). Alternatively, submit ASTM C1567 test reports indicating that the combination of mix ingredients reduces the expansion due to Alkali aggregate reactivity such that the mix complies with section 5.2 of “Guide Specification for Concrete Subject to Alkali-Silica Reactions” (2007 Portland Cement Association). All tests for submitted reports shall have been performed within one year of the submittal date.
C. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork.
   (1) Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.
D. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.
E. Field quality-control reports.
F. Minutes of preinstallation conference.
G. Placement Notification: Advance notification of concrete placement. Submit notification to Architect at least 24 hours in advance of placement.
H. Certification of chloride screen effectiveness for penetrating sealers.
I. Proposed location of saw cut joints not indicated on Drawings.
J. Curing compound data demonstrating specified moisture loss performance.
K. Evaporative retarder product and application data.
L. Mass concrete thermal monitoring records.
M. Corrosion Inhibitor testing results.
N. Sustainability Submittals:
   (1) Submit product data or other published information verifying that this product has an environmental product declaration (EPD). Submit in accordance with Section 018113.

(2) Concrete Mix environmental product declaration (EPD) Disclosure: For each concrete mix type used on the project provide a current, product specific, third party verified, type III EPD conforming to ISO 14025 and the North American product category rule (PCR) for ready mix concrete.

(a) Submitted EPDs shall demonstrate conformance to the global warming potential limits indicated in the construction documents.

(3) Steel reinforcement environmental product declaration (EPD) disclosure: Provide a current, product specific, third party verified, type III EPD conforming to ISO 14025 and the North American product category rule (PCR) for steel construction products for all deformed bar reinforcing and welded wire reinforcing utilized on the project.

(a) If steel reinforcement is sourced from multiple facilities, EPD data shall be provided for each facility with a statement outlining the applicability of each EPD submitted.
(b) Submitted EPDs shall demonstrate conformance to the global warming potential limits indicated in the construction documents.

(4) For products having recycled content, submit documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
(5) Location Valuation Factor

(a) Submit product data or other published information verifying the location of manufacturing facility including name, address, and distance between manufacturing facility and the project site. Provide manufacturer's documentation indicating location where the base materials were extracted, mined, quarried, harvested, etc. and the distance between this location and the project site. Also include material cost (excluding costs of installation).
(b) Include information on USGBC's v4.1 Building Product Disclosure and Optimization Calculator.

(6) General Contractor's Sustainability Statement Letter: In the event that a sustainability goal or submittal requirement will not be met, contractor shall state in a letter the reasons why the goal or submittal requirement is not being met. Letter shall state whether alternative sustainability measures are viable for the project. If there are viable alternatives, letter shall include details of proposed alternatives and associated project costs and schedule impacts (if any) for the Owner's consideration.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Associate and a supervisor who is an ACI-certified [Advanced] Concrete Flatwork Finisher.
B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

(1) Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

(1) Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
(2) Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.
(3) Personnel inspecting concrete reinforcing steel have current certification as an ACI Concrete Construction Inspector or have experience in concrete construction acceptable to the Architect.

D. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
E. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."
F. Formwork: Contractor shall be responsible for design and engineering of formwork. Design of formwork and preparation of formwork drawings shall be performed under supervision of a qualified engineer registered in the state of the project.
G. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

(1) ACI 301, "Specifications for Structural Concrete," Sections 1 through 5 and Section 7, "Lightweight Concrete".
(2) ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

H. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.
I. Mockups: Cast concrete slab-on-grade and formed-surface panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship.

(1) Build panel approximately 200 sq. ft. for slab-on-grade and 100 sq. ft. for formed surface in the location indicated or, if not indicated, as directed by Architect.
(2) Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

J. Preinstallation Conference: Conduct conference at Project site or by video conference call.

(1) Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

(a) Contractor's superintendent.
(b) Independent testing agency responsible for concrete design mixtures.
(c) Ready-mix concrete manufacturer.
(d) Concrete subcontractor.
(e) Special concrete finish subcontractor.
(f) Owner's Testing/Inspection Agency.
(g) Engineer by video call
(h) Architect by video call

(2) Review as applicable to Project special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, methods for achieving floor and slab flatness and levelness, floor and slab flatness and levelness measurement, concrete repair procedures, concrete protection, field sampling procedures for concrete cylinders and air testing, initial curing and field curing of field test cylinders (ASTM C31/C31M), protection of field cured field test cylinders.

(3) Minutes of the meeting shall be recorded by Contractor and distributed to all parties within five days. Provide one copy to Owner's representative and Architect.

K. Record of Work: Maintain a record listing time and date of all structural concrete placement. Such record shall be kept until completion of Project and shall be available to Architect for examination at any time.

L. Pre-Placement Inspection: Formwork installation, reinforcing steel placement and installation of all items to be embedded or cast into concrete shall be verified by Contractor prior to placement.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement if present.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.01 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

(1) Plywood, metal, or other approved panel materials.

(2) Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

(a) High-density overlay, Class 1 or better.
(b) Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
(c) Structural 1, B-B or better; mill oiled and edge sealed.
(d) B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.

D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

E. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads. Provide factory-made sections with curved, closed faces around drilled piers. Curved face diameter shall match drilled pier diameter. Void forms intended to remain in place after concrete placement shall degrade sufficiently within three months after concrete placement.

F. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch minimum.

G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

H. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

(1) Formulate form-release agent with rust inhibitor for steel form-facing materials.

I. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

(1) Furnish units that will leave no corrodible metal closer than 1 1/2" inch to the plane of exposed concrete surface.

(2) Furnish ties that, when removed, will leave holes no larger than 1 inch in diameter in concrete surface.

(3) Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.02 STEEL REINFORCEMENT

A. Recycled Content of Steel Products: Total recycled content not less than 95 percent.

B. All steel reinforcement shall be produced using an electric arc furnace.

C. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 deformed.

D. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed, where welding of reinforcement or field bending is noted on Drawings.

E. Epoxy-Coated Reinforcing Bars: ASTM A 615/A 615M, Grade 60, ASTM A 706/A 706M for bars that may be field bent, deformed bars, ASTM A 775/A 775M or ASTM A 934/A 934M for bars that are prefabricated, epoxy coated, with less than 2 percent damaged coating in each 12-inch bar length.
F. Plain-Steel Wire: ASTM A 82/A 82M, as drawn.
G. Deformed-Steel Wire: ASTM A 496/A 496M.
H. Epoxy-Coated Wire: ASTM A 884/A 884M, Class A, Type 1 coated, as-drawn, plain and deformed steel wire, with less than 2 percent damaged coating in each 12-inch wire length.
I. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from as-drawn steel wire into flat sheets.
J. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
K. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A coated, Type 1, plain and deformed steel.

2.03 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.
B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, ASTM A 775/A 775M epoxy coated.
C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.
D. Zinc Repair Material: ASTM A 780, zinc-based solder, paint containing zinc dust, or sprayed zinc.
E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:
   (1) For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
   (2) For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.
F. Mechanical Splices: Mechanical Splices shall comply with ASTM A1034, Type 2.
G. Deformed Bar Anchors: Heads on deformed bar anchors shall conform to ASTM A970 including Annex A1 requirements for class HA heads.

2.04 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
   (1) Ordinary Portland Cement: ASTM C 150, Type as indicated on drawings, gray. Alternate cementitious materials, when proposed to control alkali-silica reactions and tested as part of a representative concrete mix in accordance with ASTM C1567, may be used subject to approval.
   (2) Blended Hydraulic Cement: ASTM C 595, Type IL, portland-limestone.
   (3) Performance-Based Hydraulic Cement: ASTM C1157, Type GU, general use, Type HE, high early strength, Type MS, moderate sulfate resistance, Type HS, high sulfate resistance, Type MH, moderate heat of hydration, Type LH, low heat of hydration.
   (4) Supplementary Cementitious Materials (SCM): Of proportions and type to meet concrete performance criteria as indicated in the structural drawings. Available SCM's that may be incorporated into the Work include, but are not limited to, the following:
      (a) Fly Ash or Natural Pozzolans: ASTM C 618, Class F, C or N.
      (b) Slag Cement: ASTM C 989, Grade 100 or 120.
      (c) Silica Fume: ASTM C 1240, amorphous silica.
      (d) Ground Glass Pozzolan: ASTM C1866, Type GS or GE.
B. Normal-Weight Aggregates: ASTM C 33, Class 3S coarse aggregate or better, graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials. All coarse and fine aggregate shall be tested per ASTM C 295 or ASTM C 1293 in accordance with section 5.1 of "Guide Specification for Concrete Subject to Alkali-Silica Reactions" (2007 Portland Cement Association).
   (1) Maximum Coarse-Aggregate Size: As indicated on Drawings.
   (2) Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
C. Lightweight Aggregate: ASTM C 330, with size as indicated on Drawings.
D. Water: ASTM C 1602 tested non-potable which is compatible with admixtures. Provide sample and obtain approval from architect of color and finish of exposed concrete mixes where non-potable water is used.

2.05 ADMIXTURES

A. Air-Entraining Admixture: ASTM C 260.
B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
   (1) Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
   (2) Retarding Admixture: ASTM C 494/C 494M, Type B.
   (3) Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
   (4) High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
   (5) High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.

(6) Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
(7) Mid-Range Water Reducing Admixture: ASTM C 494/C 494M, Type A.
(8) Carbon Dioxide Mineralization: ASTM C494 Type S.

C. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and not containing more chloride ions than are present in municipal drinking water and complying with ASTM C 494/C 494M, Type C for set accelerating use and ASTM C1582 for corrosion-inhibitor use.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) Axim Italcementi Group, Inc.; CATEXOL CN-CI.
(b) BASF Construction Chemicals - Building Systems; Rheocrete CNI.
(c) Euclid Chemical Company (The), an RPM company; ARRMATECT, EUCON BCN, or EUCON CIA.
(d) Grace Construction Products, W. R. Grace & Co.; DCI.
(e) Sika Corporation; Sika CNI.

D. Non-Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, non-set-accelerating, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete complying with and ASTM C1582 for corrosion-inhibitor use.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) BASF Construction Chemicals - Building Systems; Rheocrete 222+.
(b) Cortec Corporation; MCI- 2000 or 2005NS.
(c) Grace Construction Products, W. R. Grace & Co.; DCI-S.
(d) Sika Corporation; FerroGard 901.

2.06 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

(1) Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(a) Greenstreak.
(b) Williams Products, Inc.

(2) Profile: As indicated in drawings.
(3) Dimensions: Non-tapered.

B. Chemically Resistant Flexible Waterstops: Thermoplastic elastomer rubber waterstops, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints; resistant to oils, solvents, and chemicals. Factory fabricate corners, intersections, and directional changes.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) JP Specialties, Inc.; Earth Shield TPE-Rubber.
(b) Vinylex Corp.; PetroStop.
(c) WESTEC Barrier Technologies, Inc.; 600 Series TPE-R.

(2) Profile: As indicated in drawings.
(3) Dimensions: Non-tapered.

C. Flexible PVC Waterstops: CE CRD-C 572, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

(1) Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(a) BoMetals, Inc.
(b) Greenstreak.
(c) Paul Murphy Plastics Company.
(d) Vinylex Corp.

(2) Profile: As indicated in drawings.
(3) Dimensions: Non-tapered.

D. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) Carlisle Coatings & Waterproofing, Inc.; MiraSTOP.
(b) CETCO; Volclay Waterstop-RX.
(c) Concrete Sealants Inc.; Conseal CS-231.
(d) Greenstreak; Swellstop.
(e) Henry Company, Sealants Division; Hydro-Flex.
(f) JP Specialties, Inc.; Earth Shield Type 20.

E. Self-Expanding Rubber Strip Waterstops: Manufactured rectangular or trapezoidal strip, bentonite-free hydrophilic polymer modified chloroprene rubber, for adhesive bonding to concrete, 3/8 by 3/4 inch.
   (1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Adeka Ultra Seal/OCM, Inc.; Adeka Ultra Seal.
      (b) Greenstreak; Hydrotite.
      (c) Vinylex Corp.; Swellseal.

2.07 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.
   (1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Carlisle Coatings & Waterproofing, Inc.; Blackline 400.
      (b) Fortifiber Building Systems Group; Moistop Ultra [15] [10].
      (c) Grace Construction Products, W. R. Grace & Co.; Florprufe 120.
      (d) Insulation Solutions, Inc.; Viper VaporCheck [16] [10] [6.5].
      (e) Meadows, W. R., Inc.; Perminator [15 mil] [10 mil].
      (f) Raven Industries Inc.; Vapor Block [15] [10].
      (g) Reef Industries, Inc.; Griffolyn [Type-105] [Type-65G] [15 mil Green] [10 mil Green].
      (h) Stego Industries, LLC; Stego Wrap [15 mil Class A] [10 mil Class A].

B. Sheet Vapor Retarder: ASTM E 1745, Class B. Include manufacturer's recommended adhesive or pressure-sensitive tape.
   (1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Fortifiber Building Systems Group; Moistop Ultra 6.
      (b) Raven Industries Inc.; Griffolyn [Type-65] [10 mil Green].
      (c) Stego Industries, LLC; Stego Wrap, 10 mil Class A.

C. Sheet Vapor Retarder: ASTM E 1745, Class C. Include manufacturer's recommended adhesive or pressure-sensitive joint tape.
   (1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Fortifiber Building Systems Group; Moistop Plus.
      (b) Raven Industries Inc.; Vapor Block 6.
      (c) Reef Industries, Inc.; Griffolyn [Type-65] [Type-85].
      (d) Stego Industries, LLC; Stego Wrap, 10 mil Class C.

D. Sheet Vapor Retarder: Polyethylene sheet, ASTM D 4397, not less than 10 mils thick.

E. Bituminous Vapor Retarder: 110-mil-thick, semiflexible, 7-ply sheet membrane consisting of reinforced core and carrier sheet with fortified asphalt layers, protective weathercoating, and removable plastic release liner. Furnish manufacturer's accessories including bonding asphalt, pointing mastics, and self-adhering joint tape.
   (1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Meadows, W. R., Inc.; Premoulded Membrane Vapor Seal.
   (2) Water-Vapor Permeance: 0.00 grains/h x sq. ft. x inches Hg; ASTM E 154.
   (3) Tensile Strength: 140 lbf/inch (24.5 kN/m); ASTM E 154.
   (4) Puncture Resistance: 90 lbf (400N); ASTM E 154.

F. Granular Fill: Clean mixture of crushed stone or crushed or uncrushed gravel; ASTM D 448, Size 57, with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 8 sieve.

G. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 448, Size 10, with 100 percent passing a 3/8-inch, 10 to 30 percent passing a No. 100 sieve, and at least 5 percent passing No. 200 sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.

H. Vapor Barrier Accessories: Provide accessories manufactured by or recommended in writing by vapor barrier Manufacturer for sealing seams, penetrations and perimeter edges, including; seam tape, mastics, edge termination bar, double-sided tape, and other special tapes and accessories for complete under-slab vapor barrier assembly.
   (1) Seam Tape: 4-inch minimum width; water vapor transmission less than 0.3 perms per ASTM F 1249 or ASTM E 96.
   (2) Pipe Boots: Construct and install pipe boots from vapor barrier material and pressure sensitive tape in accordance with Manufacturer's instructions.

2.08 FLOOR AND SLAB TREATMENTS

A. Slip-Resistive Emery Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive, crushed emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials with 100 percent passing No. 4 sieve.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) Anti-Hydro International, Inc.; Emery.
(b) Dayton Superior Corporation; Emery Tuff Non-Slip.
(c) Lambert Corporation; EMAG-20.
(d) L&M Construction Chemicals, Inc.; Grip It.
(e) Metalcrete Industries; Metco Anti-Skid Aggregate.

B. Slip-Resistive Aluminum Granule Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of not less than 95 percent fused aluminum-oxide granules.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) Anti-Hydro International, Inc.; A-H Alox.
(b) BASF Construction Chemicals - Building Systems; Frictex NS.
(c) L&M Construction Chemicals, Inc.; Grip It AO.

C. Emery Dry-Shake Floor Hardener: Pigmented or unpigmented, factory-packaged, dry combination of portland cement, graded emery aggregate, and plasticizing admixture; with emery aggregate consisting of no less than 60 percent of total aggregate content.

(1) Color: As selected by Architect from manufacturer's full range.

D. Metallic Dry-Shake Floor Hardener: Pigmented or unpigmented, factory-packaged, dry combination of portland cement, graded metallic aggregate, rust inhibitors, and plasticizing admixture; with metallic aggregate consisting of no less than 65 percent of total aggregate content.

(1) Color: As selected by Architect from manufacturer's full range.

E. Unpigmented Mineral Dry-Shake Floor Hardener: Factory-packaged dry combination of portland cement, graded quartz aggregate, and plasticizing admixture.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) BASF Construction Chemicals - Building Systems; Maximent.
(b) ChemMasters; ConColor.
(c) Conspec by Dayton Superior; Conshake 500.
(d) Dayton Superior Corporation; Quartz Tuff.
(e) Edoco by Dayton Superior; Burke Non Metallic Floor Hardener 250.
(f) Euclid Chemical Company (The), an RPM company; Surflex.
(g) Kaufman Products, Inc.; Tycron.
(h) Lambert Corporation; Colorhard.
(i) L&M Construction Chemicals, Inc.; Quartzplate FF.
(j) Metalcrete Industries; Floor Quartz.
(k) Scofield, L. M. Company; Lithochrome Color Hardener.
(l) Symons by Dayton Superior; Hard Top.

F. Pigmented Mineral Dry-Shake Floor Hardener: Factory-packaged, dry combination of portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) BASF Construction Chemicals - Building Systems; Mastercron.
(b) ChemMasters; ConColor.
(c) Conspec by Dayton Superior; Conshake 600 Colortone.
(d) Dayton Superior Corporation; Quartz Tuff.
(e) Edoco by Dayton Superior; Burke Non Metallic Floor Hardener 200 - 205.
(f) Euclid Chemical Company (The), an RPM company; Surflex.
(g) Kaufman Products, Inc.; Tycron.
(h) Lambert Corporation; Colorhard.
(i) L&M Construction Chemicals, Inc.; Quartz Plate FF.
(j) Metalcrete Industries; Floor Quartz.
(k) Scofield, L. M. Company; Lithochrome Color Hardener.
(l) Symons by Dayton Superior; Color Hardener.

(2) Color: As selected by Architect from manufacturer's full range.

2.09 LIQUID FLOOR TREATMENTS

A. VOC Content: Liquid floor treatments shall have a VOC content of 100 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or siliconate materials and proprietary components; odorless; that penetrates, hardens, and densifies concrete surfaces. Shall not be less than 40% silane or 9% polysiloxane or shall be 20% siloxane. Provide certification of 90% chloride screen effectiveness when tested in accordance with the procedure in NCHRP Report Number 244 “Southern Climate Exposure”.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) ChemMasters; Chemisil Plus.
(b) ChemTec Int'l; ChemTec One.
(c) Conspec by Dayton Superior; Intraseal.
(d) Curecrete Distribution Inc.; Ashford Formula.
(e) Dayton Superior Corporation; Day-Chem Sure Hard (J-17).
(f) Edoco by Dayton Superior; Titan Hard.
(g) Euclid Chemical Company (The), an RPM company; Euco Diamond Hard.
(h) Kaufman Products, Inc.; SureHard.
(i) L&M Construction Chemicals, Inc.; Seal Hard.
(j) Meadows, W. R., Inc.; LIQUI-HARD.
(k) Metalcrete Industries; Floorsaver.
(l) Nox-Crete Products Group; Duro-Nox.
(m) Symons by Dayton Superior; Buff Hard.
(n) US SPEC, Division of US Mix Products Company; US SPEC Industraseal.
(o) Vexcon Chemicals, Inc.; Vexcon StarSeal PS Clear

C. Penetrating Liquid Floor Treatments for Polished Concrete Finish: Clear, waterborne solution of inorganic silicate or siliconate materials and proprietary components; odorless; that penetrates, hardens, and is suitable for polished concrete surfaces. Shall not be less than 40% silane or 9% polysiloxane or shall be 20% siloxane. Provide certification of 90% chloride screen effectiveness when tested in accordance with the procedure in NCHRP Report Number 244 “Southern Climate Exposure”.

(1) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) Advanced Floor Products; Retro-Plate 99.
(b) L&M Construction Chemicals, Inc.; FGS Hardener Plus.
(c) QuestMark, a division of CentiMark Corporation; DiamondQuest Densifying Impregnator Application.

D. Penetrating Liquid Floor Treatment for Vehicular Surfaces: Material suitable for application on horizontal surfaces subject to vehicle traffic shall contain not less than 40% silane. Provide certification of 95% chloride screen effectiveness when tested in accordance with procedure of NCHRP Report Number 244 “Southern Climate Exposure” at manufacturer’s recommended rate of application. Also provide certification that product meets Alberta Transportation and Utilities BT-003 at 45% relative moisture results greater than 85% both initial and post abrasion performance.

2.10 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

(1) VOC Content: Evaporation retarders shall have a VOC content of 780 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
(2) Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(a) Axim Italcementi Group, Inc.; CATEXOL CimFilm.
(b) BASF Construction Chemicals - Building Systems; Confilm.
(c) ChemMasters; SprayFilm.
(d) Conspec by Dayton Superior; Aquafilm.
(e) Dayton Superior Corporation; Sure Film (J-74).
(f) Edoco by Dayton Superior; BurkeFilm.
(g) Euclid Chemical Company (The), an RPM company; Eucobar.
(h) Kaufman Products, Inc.; Vapor-Aid.
(i) Lambert Corporation; LAMBCO Skin.
(j) L&M Construction Chemicals, Inc.; E-CON.
(k) Meadows, W. R., Inc.; EVAPRE.
(l) Metalcrete Industries; Waterhold.
(m) Nox-Crete Products Group; MONOFILM.
(n) Sika Corporation; SikaFilm.
(o) SpecChem, LLC; Spec Film.
(p) Symons by Dayton Superior; Finishing Aid.
(q) TK Products, Division of Sierra Corporation; TK-2120 TRI-FILM.
(r) Unitex; PRO-FILM.
(s) Vexcon Chemicals, Inc.; Certi-Vex Envio Set.

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
D. Water: Potable.
E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating. Film must chemically break down in a four to six week period. Membrane-Forming Curing Compounds shall have a VOC content of 350 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

F. Clear, Solvent-Borne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A. Curing and sealing Compounds shall have a VOC content of 100 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.11 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.
B. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
C. Reglets: Fabricate reglets of not less than 0.022-inch-thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.
D. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034-inch-thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.12 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.
   (1) Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
   (2) Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
   (3) Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
   (4) Compressive Strength: Not less than 4100 psi at 28 days when tested according to ASTM C 109/C 109M.
B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.
   (1) Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
   (2) Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
   (3) Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
   (4) Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

2.13 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
   (1) Use a qualified testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.
B. Supplementary Cementitious Materials: Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement while meeting the embodied carbon limits listed on the drawings. Where indicated on the drawings, limit percentage, by weight, of cementitious materials other than Portland cement in concrete.
C. Limit water-soluble, chloride-ion content in hardened concrete as listed on the drawings.
D. Admixtures: Use admixtures according to manufacturer's written instructions.
   (1) Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
   (2) Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
   (3) Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
   (4) Use corrosion-inhibiting admixture in concrete mixtures where indicated.
E. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.
F. Performance and Design Requirements:
   (1) Shrinkage: Shrinkage strain, determined in accordance with ASTM C 157 as amended and modified herein, shall not exceed the values below for each concrete class:
      (a) Amendments and modifications to ASTM C 157:
         (i) Storage: After initial 24 hour comparator reading, specimens are placed back in lime saturated water until age of seven days. At seven days another comparator reading is taken. This reading is used as the base reading which is used to calculate percent shrinkage. The specimens are stored at 50% humidity and 73° F.
         (ii) Test Reports: Report gage length (average of three) after 4, 7, 14, 28, and 56 days. In addition to the information required by ASTM C 157, Section 11, shrinkage test reports shall include gage lengths (initial length measurements) used to determine reported shrinkage strains.
      (b) 28 Day Shrinkage Strain: Shrinkage strains shall not exceed the following:
         (i) Concrete for slab-on-grade placed directly on vapor barrier: 0.046%.
         (ii) Concrete for bearing walls (basement walls excluded) and/or columns: 0.046%.

(2) Mass Concrete Requirements: See drawings for dimensional limits on structural elements requiring a thermal control plan. Contractor to submit thermal control plan for mass concrete elements following the requirements of ACI 301-20, Section 8. Thermal control plan for mass concrete shall be prepared by qualified concrete specialty engineer. Maximum post placement concrete temperature shall not exceed 160°F unless substantiating data is submitted indicating higher temperature is acceptable. Maximum differential temperature shall not exceed 35°F. Thermal monitoring to verify compliance with thermal control plan is required. Monitoring locations shall be indicated in plan. Qualified Consultants: MJ2 Consulting, mj2consulting.com. Other qualified specialty consultants are acceptable; submit qualifications.

2.14 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Proportion structural normal-weight concrete mixture as noted on Drawings, unless aggregates are “potentially reactive” with alkalis based on the ASTM C 295 or ASTM C 1260 or ASTM C 1293 testing limits of Section 5.1 of “Guide Specification of Concrete Subject to Alkali-Silica Reactions” (2007 Portland Cement Association). When aggregates are “potentially reactive”, compliance with Section 5.2 of “Guide Specification for Concrete Subject to Alkali-Silica Reactions” (2007 Portland Cement Association) must be established through ASTM C 1567 testing for proposed alternate concrete mixture. Submit test reports in accordance with Part I of this Specification.

2.15 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.16 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and ASTM C 1116/C 1116M, and furnish batch ticket information.

(1) When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

(1) For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
(2) For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd.
(3) Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.01 FORMWORK

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.
B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117. Concrete adjacent to elevator hoistway shall be installed to tolerances required by elevator manufacturer.
C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

(1) Class A, 1/8 inch for smooth-formed finished surfaces.
(2) Class B, 1/4 inch for rough-formed finished surfaces.
(3) The permissible irregularity is a cumulative value due to all sources including layout, plumbness, member size, formwork offsets, joints, and member levelness. The permissible irregularity shall also apply between adjacent concrete surfaces on opposite sides of construction joint, expansion joint or shrinkage pour strip if present.

D. Construct forms tight enough to prevent loss of concrete mortar.
E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

(1) Install keyways, reglets, recesses, and the like, for easy removal.
(2) Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.
G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.
H. Chamfer exterior corners and edges of permanently exposed concrete.
I. At intersecting planes, provide sharp, clean corners without visible edges.
J. Form openings, chases, offsets, depressions, recesses, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
K. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.
L. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

M. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement. Form release agent shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
N. Protect void form from moisture at all times before concrete placement.
O. Voids: Provide voids of full-size and extent shown on Drawings. Specified void form may be used at the Contractor's option. Where void forms are used below structural slab-at-grade, provide protective cover sheet in accordance with void manufacturer's recommendations. Prevent concrete from entering void space.
P. All formwork surfaces that support concrete exposed to view must be accepted by Architect prior to concrete placement.

3.02 EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   (1) Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303 "Code of Standard Practice for Steel Buildings and Bridges."
      (a) Tolerance of Embedded Items: Comply with ACI 117.
         (i) Anchor Rods:
            1. Plumbness: Within +/- 1/16 inch over anchor rod projection.
         (ii) Embedded Plates and Weldments:
            1. Location: +/- 1 inch vertical, +/- 1 inch horizontal.
            2. Plumb and Alignment: 1/4 inch in 12 inches (1:48).
   (2) Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
   (3) Install dovetail anchor slots in concrete structures as indicated. Where masonry or veneer intersects concrete, provide one vertical dovetail slot for each 8 inches of masonry thickness. Where concrete serves as the backup, space slots at 16 inches on center.

3.03 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.
   (1) Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
   (2) Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.
   (3) Leave formwork and shoring in place a minimum of 15 days after concrete placement unless reshoring is used.
B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.
C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.04 SHORES AND RESHORES

A. Comply with ACI 301 for design, installation, and removal of shoring, backshoring and reshoring.
   (1) Do not remove shoring or reshoring until measurement of slab tolerances is complete.
B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.
C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.
D. Reshoring:
   (1) If formwork and shoring are removed before concrete is 15 days old, reshoring shall remain in place a minimum of 15 days after placement irrespective of concrete strength.
   (2) For multi-story construction, reshoring shall remain in place a minimum of 15 days after placing of concrete deck above irrespective of concrete strength.

3.05 VAPOR RETARDERS

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.
   (1) Lap joints 6 inches and seal with manufacturer's recommended tape.
B. Bituminous Vapor Retarders: Place, protect, and repair bituminous vapor retarder according to manufacturer's written instructions.
C. Granular Course: Cover vapor retarder with granular fill or fine-graded granular material, moisten, and compact with mechanical equipment to elevation tolerances of plus 0 inch or minus 3/4 inch.
   (1) Place and compact a 1/2-inch-thick layer of fine-graded granular material over granular fill.

3.06 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.
   (1) Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete in accordance ASTM E1643.
B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.
C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.
   (1) Weld reinforcing bars according to AWS D1.4/D 1.4M, where indicated.
D. Size, length, number and placement of supports shall be sufficient as to maintain reinforcing position within specified tolerances during construction traffic and concrete placement.
E. On vertical formwork, use approved bar chairs or spacers as required to maintain concrete cover and bar position. Do not staple or use any other metallic fastener to secure bolsters, chairs, etc. to formwork for concrete surfaces exposed to exterior.
F. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
G. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.
H. Epoxy-Coated Reinforcement: Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M. Use epoxy-coated steel wire ties to fasten epoxy-coated steel reinforcement.
I. Zinc-Coated Reinforcement: Repair cut and damaged zinc coatings with zinc repair material according to ASTM A 780. Use galvanized steel wire ties to fasten zinc-coated steel reinforcement.

3.07 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.
B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
   (1) Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated.
   (2) Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
   (3) Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
   (4) Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
   (5) Space vertical joints in walls as indicated. Locate joints beside pilasters integral with walls, near corners, and in concealed locations where possible. Locate at centerline of support or middle third of span.
   (6) Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
   (7) Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:
   (1) Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8 inch. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
   (2) Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
   (3) Interior Slabs-on-Grade to Receive Carpet or Wood Floor Covering: Construct slabs as large a placement area as practical. Unless noted otherwise on Drawings, locate construction joints on column centerlines. Provide control joints at column centerlines and at intervals not more than 30 feet each way.
   (4) All Other Interior Slabs-on-Grade: Unless noted otherwise on Drawings, locate construction joints on column centerlines. Locate control joints where shown on Drawings. If not shown, provide control joints at column centerlines and at intervals not more than 10 feet each way.
D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
   (1) Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
   (2) Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
   (3) Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.
E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.
F. Joints in Slabs-on-Metal Deck: Locate construction joints as shown on Drawings. For slabs with welded wire reinforcing, continue reinforcing through construction joint and lap in adjacent pour. For slabs without welded wire

reinforcing, provide #4 bar 4 feet in length spaced at 12 inches on center staggered along the joint. Do not provide control joints.

G. Topping Slabs Exposed to View: Locate control joints where shown on the Contract Drawings. If not shown, locate topping slab control joints at column centerlines, over girders and at intervals not more than 10 feet each way.

3.08 WATERSTOPS

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.09 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

(1) Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

(1) Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
(2) Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
(3) Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

(1) Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
(2) Maintain reinforcement in position on chairs during concrete placement.
(3) Screed slab surfaces with a straightedge and strike off to correct elevations.
(a) Slabs supported by metal deck shall be gaged to provide the specified slab thickness over beams.
(b) Slabs supported by metal deck shall be poured level except that variation in slab thickness at any point shall be equal to or less than minus ¼ inch, plus 1 ½ inch.
(4) Slope surfaces uniformly to drains where required.
(5) Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

F. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

(1) When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
(2) Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
(3) Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

G. Hot-Weather Placement: Comply with ACI 301 and as follows:

(1) Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
(2) Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

(1) Apply to concrete surfaces not exposed to public view or as noted in architectural drawings.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

(1) Apply to concrete surfaces exposed to public view or as noted in architectural drawings.

C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:

(1) Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.

(2) Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix one part portland cement to one and one-half parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

(3) Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix one part portland cement and one part fine sand with a 1:1 mixture of bonding agent and water. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, re-straightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

(1) Apply scratch finish to surfaces as indicated in the architectural drawings.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and re-straightening until surface is left with a uniform, smooth, granular texture.

(1) Apply float finish to surfaces as indicated in the architectural drawings.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

(1) Apply a trowel finish to surfaces as indicated in the architectural drawings.

E. Top of surface for slabs:

(1) Slabs on ground shall be +/- 0.75”.
(2) Formed suspended slabs, before removal of supporting shores +/- 0.75”.

F. Slab surface finish tolerance: Finish slab surfaces to the following tolerances according to ASTM E 1155 (ASTM E 1155M) for a randomly trafficked floor surface:

Surface Type	**SOF(F) Overall Flatness**	**SOF(L) Overall Levelness**	**MLF(F) Min. Local Flatness**	**MLF(L) Min. Local Levelness**
Slabs on grade (conventional)	20	15	17	15
Slabs on grade (moderately flat)	25	20	17	15
Slabs on grade (flat)	35	25	24	17
Suspended formed slabs (values prior to formwork removal)	30	20	20	15
Suspended slabs on metal deck	30	No limit	20	No limit
Slabs on grade (very flat)	45	35	30	24
Slabs on grade (Super flat)	60	40	36	27

(1) Floor Finishes that require local flatness numbers more restrictive than those specified above shall be achieved by the use of floor leveling compound or by grinding.

(2) At construction joints, finish and measure surface so gap at any point along the joint between concrete surface and an unleveled, freestanding, 10-ft.-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch. Grind or fill-in surface of concrete to meet limits above at construction joints.

(3) Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 10-ft.-long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4 inch.

G. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces as indicated in the architectural drawings. While concrete is still plastic, slightly scarify surface with a fine broom.

(1) Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

H. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

(1) Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

I. Slip-Resistive Finish: Before final floating, apply slip-resistive aggregate or aluminum granule finish where indicated and to concrete stair treads, platforms, and ramps. Apply according to manufacturer's written instructions and as follows:

(1) Uniformly spread 25 lb/100 sq. ft. of dampened slip-resistive aggregate or aluminum granules over surface in one or two applications. Tamp aggregate flush with surface, but do not force below surface.
(2) After broadcasting and tamping, apply float finish.
(3) After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive aggregate or aluminum granules.

J. Dry-Shake Floor Hardener Finish: After initial floating, apply dry-shake floor hardener to surfaces according to manufacturer's written instructions and as follows:

(1) Uniformly apply dry-shake floor hardener at a rate of 100 lb/100 sq. ft. unless greater amount is recommended by manufacturer.
(2) Uniformly distribute approximately two-thirds of dry-shake floor hardener over surface by hand or with mechanical spreader, and embed by power floating. Follow power floating with a second dry-shake floor hardener application, uniformly distributing remainder of material, and embed by power floating.
(3) After final floating, apply a trowel finish. Cure concrete with curing compound recommended by dry-shake floor hardener manufacturer and apply immediately after final finishing.

3.12 MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.
B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.
D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.
B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.
D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

(1) Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

(a) Water.
(b) Continuous water-fog spray.
(c) Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

(2) Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape. Moisture-retaining-cover shall be inspected each day by Contractor. Any areas which do not show condensation on underside of cover or any slab areas which are not wet shall be immediately rewetted and cover replaced to prevent moisture loss.

(a) Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
(b) Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
(c) Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.

(3) Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

(a) Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer.

(4) Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.14 LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.
   (1) Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
   (2) Do not apply to concrete that is less than 28 days' old.
   (3) Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.

B. Polished Concrete Floor Treatment: Apply polished concrete finish system to cured and prepared slabs to match accepted mockup.
   (1) Machine grind floor surfaces to receive polished finishes level and smooth.
   (2) Apply penetrating liquid floor treatment for polished concrete in polishing sequence and according to manufacturer's written instructions, allowing recommended drying time between successive coats.
   (3) Continue polishing with progressively finer grit diamond polishing pads to gloss level to match approved mockup.
   (4) Control and dispose of waste products produced by grinding and polishing operations.
   (5) Neutralize and clean polished floor surfaces.

C. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.15 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.
   (1) Defer joint filling until concrete has aged at least six month(s). Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.16 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning and that are unacceptable to Architect. Allow Architect and Structural Engineer to observe concrete surfaces upon removal of forms and prior to repair of surface defects. Defects in structural concrete shall be brought to the attention of the Architect and Structural Engineer.
   (1) Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   (2) Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
   (3) Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template. Submit proposed repair to Architect for review prior to commencement of work.
   (1) Repair finished surfaces containing defects that are unacceptable to Architect. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.031 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
   (2) After concrete has cured at least 14 days, correct high areas by grinding.
   (3) Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
   (4) Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
   (5) Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

(6) Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.

(7) Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.17 FIELD QUALITY CONTROL

A. Testing and Inspection: As indicated on Drawings.

3.18 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION 03 30 00

SECTION 03 35 05 – SEALED CONCRETE FINISHING

PART 1 - GENERAL

1.01 PROVIDE SEALED CONCRETE FINISH at interior exposed concrete floor surfaces that are not indicated to be finished with other finish materials or concrete surface treatments on the Drawings, including but not limited to exposed concrete floors or slabs, stair treads and risers, and stair platforms. Provide sealed concrete finish even if not specifically indicated or scheduled on the Drawings.

PART 2 - PRODUCTS

2.01 SEALED CONCRETE FINISH: Clear, high-solids, water based, non-yellowing membrane-forming, inorganic curing, sealing and hardener, material for treatment of uncovered concrete floor surfaces, complying with ASTM C 1315 – Type 1, Class A, and being classified as “low-odor” with a VOC content of less than 350 g/L. Do not apply to concrete surfaces that will receive subsequent cementitious toppings, sealers, hardeners, ceramic tile, resilient flooring, wood flooring, carpeting, or resinous flooring systems, unless sealer manufacture certifies that their product conforms to requirements required by the floor finish manufacturer and will not adversely affect floor finish application.

A. BASIS-OF-DESIGN: “MasterKure HD 200WB” by Master Builders Solutions, or approved equivalent

2.02 PARKING GARAGE CONCRETE SEALER (for all floor slab surfaces of parking garage): clear, solvent-based, water and chloride-ion repelling, penetrating sealer of 100% silane penetrating sealer, which reacts chemically with the concrete surface to function as a chloride Ion screen with a minimum 90% factor when tested in accordance with NCHRP #244, Series II:

A. BASIS-OF-DESIGN: “MasterProtect H1001” (Hydrozo 100 Plus), by Master Builders Solutions, or approved equal

PART 3 - INSTALLATION

3.01 CONCRETE SEALER INSTALLATION: Install a minimum of TWO (2) COATS, in accordance with Manufacturer’s recommendations.

END OF SECTION 03 35 05

END OF DIVISION 3

DIVISION 04 – MASONRY

SECTION 04 20 00 – UNIT MASONRY

SECTION 04 20 10 – REINFORCED UNIT MASONRY

SECTION 04 40 00 – SITE STONE ASSEMBLIES

SECTION 04 20 00 – UNIT MASONRY

PART 1 - GENERAL

1.01 PROVIDE UNIT MASONRY where indicated on the drawings and as specified herein. Install steel lintels and shelf angles for unit masonry where indicated.

1.02 PRODUCTS INSTALLED, BUT NOT FURNISHED, under this Section include the following:

A. Steel lintels and shelf angles for unit masonry, furnished under Division-05 Section "Metal Fabrications."

1.04 SUBMITTALS

A. PRODUCT DATA: For each different masonry unit, accessory, and other manufactured product specified.
B. SHOP DRAWINGS: Show fabrication and installation details for the following:
C. REINFORCING STEEL. Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement."
D. MASONRY TRIM: Indicate profiles of custom-fabricated trim units
E. MATERIAL SAMPLES FOR PRODUCT VERIFICATION:

(1) FULL-SIZE UNITS of each different exposed masonry unit required, showing the full range of exposed colors, textures, and dimensions to be expected in the completed construction.
(2) CUSTOM BRICK SHAPES required for the Project
(3) WEEP HOLES/VENTS in color to match mortar color.
(4) ACCESSORIES EMBEDDED in the masonry

F. LIST OF MOCKUP MATERIALS: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents, unless such deviations are specifically brought to the attention of the Architect and approved in writing.
G. ADVERSE-WEATHER PROCEDURES: Detailed description of methods, materials, and equipment to be used to comply with either cold- or hot-weather requirements.

1.05 QUALITY ASSURANCE

A. SOURCE LIMITATIONS FOR MASONRY UNITS: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, through one source from a single manufacturer for each product required.
B. SOURCE LIMITATIONS FOR MORTAR MATERIALS: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from one manufacturer for each cementitious component and from one source or producer for each aggregate.
C. PRECONSTRUCTION TESTING: Provide the services of a qualified independent testing agency to perform preconstruction testing indicated below as a part of the Work of this Section.

(1) Concrete Masonry Unit Test: For each concrete masonry unit indicated, per ASTM C 140.
(2) Mortar Test: For mortar properties per ASTM C 270.
(3) Grout Test: For compressive strength per ASTM C 1019.

D. FIRE-RESISTANCE RATINGS: Where indicated, provide materials and construction identical to those of assemblies with fire-resistance ratings determined per ASTM E 119 by a testing and inspecting agency, by equivalent concrete masonry thickness, or by another means, as acceptable to authorities having jurisdiction.

1.06 MOCKUP:

A. PROVIDE MASONRY MATERIALS for construction of a field mockup of each different exposed masonry material and color indicated, showing the full range of exposed colors, textures, and dimensions to be expected in the completed construction. Materials include but are not limited to:

(1) MASONRY UNITS of each different exposed masonry unit, including special shapes, if applicable.
(2) WEEP HOLES/VENTS
(3) ACCESSORIES EMBEDDED in the masonry

B. BEFORE INSTALLING UNIT MASONRY, build mockup to verify selections made under sample Submittals and to demonstrate aesthetic effects. Refer to Division-1 Section Quality Requirements for general requirements of Mockup. Clean exposed faces of mockup panels with masonry cleaner indicated.

1.07 DELIVERY, STORAGE, AND HANDLING

A. STORE MASONRY UNITS on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
B. PROTECT CONCRETE MASONRY UNITS from moisture absorption so that, at the time of installation, the moisture content is not more than the maximum allowed at the time of delivery.
C. STORE CEMENTITIOUS MATERIALS on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
D. DELIVER PREBLENDED, DRY MORTAR MIX in moisture-resistant containers designed for lifting and emptying into dispensing silo. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in a metal dispensing silo with weatherproof cover.
E. STORE MASONRY ACCESSORIES, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.08 PROJECT CONDITIONS

A. WEATHER PROTECTION: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress. Extend cover a minimum of 24 inches down both sides and hold cover securely in place. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.
B. DO NOT APPLY UNIFORM FLOOR OR ROOF LOADS for at least 12 hours and concentrated loads for at least 3 days after building masonry walls or columns.
C. PREVENT GROUT, MORTAR, AND SOIL FROM STAINING the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface. Protect sills, ledges, and projections from mortar droppings. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
D. COLD-WEATHER REQUIREMENTS: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602. Use liquid cleaning methods only when air temperature is 40 deg F and above and will remain so until masonry has dried, but not less than 7 days after completing cleaning.
E. HOT-WEATHER REQUIREMENTS: Protect unit masonry work when temperature and humidity conditions produce excessive evaporation of water from mortar and grout. Provide artificial shade and wind breaks and use cooled materials as required. When ambient temperature exceeds 100 deg F, or 90 deg F with a wind velocity greater than 8 mph, do not spread mortar beds more than 48 inches ahead of masonry. Set masonry units within one minute of spreading mortar.

PART 2 - PRODUCTS

2.01 CONCRETE MASONRY UNITS (CMU's):

A. PROVIDE NORMAL WEIGHT (unless otherwise indicated) ASTM C 90 open-ended per allowable shrinkage rate of C-90 paragraph 5.2, with minimum average net-area compressive strength of 1900 PSI; face size: 8 inches nominal - 7-5/8 inches actual height x 16" nominal – 15-5/8 inch actual width, in total nominal wall thickness as indicated in the Drawings. Provide manufacturer's standard light-gray colored units with "smooth" (not textured) exposed face surface suitable for painting typically, and, provide textured-face units made with gap-graded aggregates where units are indicated to receive a direct application of plaster or similar material.
B. PROVIDE SPECIAL SHAPED CMU'S at lintels, corners, jambs, sash, control joints, headers, bonding, and other similar conditions.
C. PROVIDE BULLNOSE CORNER CMU'S at all exposed outside corners, unless otherwise indicated.
D. PRECAST CMU LINTELS OR BOND BEAMS: Provide either prefabricated concrete lintels or built-in place masonry lintels using bond beam shapes with reinforcing bars indicated and filled with coarse grout. Fabricate from concrete matching CMU color, texture, joint pattern and compressive strength, and with reinforcing bars as required. Cure precast lintels by same method used for the concrete masonry units.

2.02 FACE BRICK:

A. PROVIDE CLAY UNITS complying with ASTM C 216, Grade SW, Type FBX, FBS, FBA, with initial rate of absorption less than 30 g/30 sq. In. per minute when tested per ASTM C 67, "not effloresced" when tested per ASTM C-79, and with no observable surface coloring difference in applied finish when viewed from 10 feet after 50-cycles of freezing and thawing per ASTM C-67 (except for flashed or sand-finished units).

B. **E-BV1: Exterior Units**

(1) AMBASSADOR UNIT SIZE: Provide units manufactured to actual dimensions of 3-5/8 inches wide x 2-1/4 high by 15-5/8 inches long, except when indicated otherwise.
(2) Manufacturer: Taylor Clay Products
(3) Color: #316 Gray
(4) Finish: Smooth
(5) Install: Offset Running Bond

C. **E-BV2: Exterior Units**

(1) MODULAR UNIT SIZE: Provide units manufactured to actual dimensions of 3-5/8 inches wide x 2-1/4 high by 7-5/8 inches long, except when indicated otherwise.

(2) Manufacturer: Taylor Clay Products
(3) Color: #316 Gray
(4) Finish: Smooth
(5) Install: Custom Stepping Pattern as indicated in the Drawings.

D. **E-BV3: Exterior Units**

(1) AMBASSADOR UNIT SIZE: Provide units manufactured to actual dimensions of 3-5/8 inches wide x 2-1/4 high by 15-5/8 inches long, except when indicated otherwise.
(2) Manufacturer: Endicott Clay Products
(3) Color: Medium Ironspot 46
(4) Finish: Wirecut
(5) Install: Offset Running Bond

E. **BV1: Interior Units**

(1) AMBASSADOR UNIT SIZE: Provide units manufactured to actual dimensions of 1 inches wide x 2-1/4 high by 15-5/8 inches long, except when indicated otherwise.
(2) Manufacturer: Taylor Clay Products
(3) Color: #316 Gray
(4) Finish: Smooth
(5) Install: Offset Running Bond

F. MANUFACTURER/PRODUCT COLOR & TEXTURE: Provide brick as indicated in the Drawings. Do not substitute materials or colors indicated without approval of the Architect.

2.03 CAST-STONE MASONRY PARAPET CAPS AND TRIM UNITS

A. High-density pre-finished concrete masonry trim-units conforming to ASTM C90-96, typically fabricated with an integral-cut drip-edge on bottom surface and with sloped surfaces where exposed, in special profile shapes as indicated in the Drawings for “Cast Stone” trims or parapet caps. Provide shop-drawings of special-shapes or product-data submittals for standard shaped products. Provide units manufactured by the following, or approved equal (sawn-faces are not acceptable):

2.04 MORTAR AND GROUT MATERIALS

A. PORTLAND CEMENT-LIME MIX: Provide pre-packaged blend of natural or white Portland cement (as required to produce mortar color required), complying with ASTM C 150, Type I or Type II (except that Type III may be used for cold-weather construction), with hydrated lime complying with ASTM C 207, Type S. Masonry cement mixes are not acceptable.
B. PROVIDE INTEGRAL WATER-REPELLENT ADMIXTURE factory blended in mix complying with ASTM E-514 when tested as a wall assembly obtaining a Class E Rating, at all exterior masonry wall construction (including masonry veneers).
C. PRE-PACKAGED COLORED CEMENT: Project WILL include colored mortar. Provide pre-packaged Portland cement-lime mix containing pigments to produce color indicated, or if not indicated, as selected from manufacturer’s standard colors. Pigments shall not exceed 10 percent of Portland cement by weight.

(1) Basis Of Design: SpecMix

D. AGGREGATE FOR MORTAR: ASTM C 144. For mortar exposed to view, use washed aggregate consisting of natural sand or crushed stone. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve. Provide natural white sand if necessary to produce required mortar color.
E. AGGREGATE FOR GROUT: ASTM C 404.
F. COLD-WEATHER ADMIXTURE: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494, Type C, and recommended by the manufacturer for use in masonry mortar of composition indicated Available products include:

(1) Accelguard 80; Euclid Chemical Co.
(2) Polarset; GCP Applied Technologies.
(3) MasterSet FP 20; Master Builders Solutions

G. WATER-REPELLENT ADMIXTURE: Liquid water-repellent mortar admixture intended for use with concrete masonry units, containing integral water repellent by same manufacturer. Available products include:

(1) BlockTite; Euclid Chemical
(2) Dry-Block Mortar Admixture; GCP Applied Technologies..
(3) MasterPel 240MA; Master Builders Solutions.

H. WATER: Potable.

2.05 RELATED MASONRY MATERIALS:

A. REINFORCING STEEL: Uncoated steel reinforcing bars: ASTM A 615/A 615M; ASTM A 616/A 616M, including Supplement 1; or ASTM A 617/A 617M, Grade 60 (Grade 400).
B. JOINT REINFORCEMENT: ASTM A 951, hot-dip galvanized, carbon-steel wire for both interior and exterior walls, with W2.8 or 0.188-inch diameter side-rods and W2.8 or 0.188-inch diameter cross-rods. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units. For single-wythe masonry, provide either ladder or truss type with single pair of side rods and cross rods spaced not more than 16 inches o.c. At multi-wythe masonry, provide ladder type with perpendicular cross rods spaced not more than 16 inches o.c. and 1 side rod for each face shell of hollow masonry units more than 4 inches (in width, plus 1 side rod for each wythe of masonry 4 inches (or less in width).

C. TIES AND ANCHORS - GENERAL: ASTM A-82 hot-dip galvanized carbon-steel wire with ASTM A 153, Class B-2 coating; ASTM A-653 steel sheet with G60 hot-dipped galvanized coating, and ASTM A-36 steel plates, shapes, and bars with G60 hot-dipped galvanized. coating.

D. BENT WIRE TIES: Rectangular units with closed ends and not less than 4 inches wide. Z-shaped ties with ends bent 90 degrees to provide hooks not less than 2 inches long may be used for masonry constructed from solid units or hollow units laid with cells horizontal. Fabricated from 3/16-inch- diameter, hot-dip galvanized steel wire.

E. ADJUSTABLE ANCHORS FOR CONNECTING TO STEEL FRAME: Two-piece assemblies that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall. Fabricate anchor section of crimped 1/4-inch- diameter, hot-dip galvanized steel wire for welding to steel. Fabricate tie section of triangular-shaped 0.1875-inch diameter hot-dip galvanized steel wire, sized to extend within 1 inch of masonry face.

F. ANCHORS FOR CONNECTING TO CONCRETE: Two-piece assemblies that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall. Fabricate dovetail anchor section from 0.0966-inch- thick, steel sheet, galvanized after fabrication. Fabricate tie section from triangular-shaped 0.1875-inch-diameter, hot-dip galvanized steel wire, sized to extend within 1 inch of masonry face, made from.

G. ADJUSTABLE MASONRY-VENEER ANCHORS: Two-piece assemblies that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to wood or metal studs, capable of withstanding a 100-lbf load in both tension and compression without deforming or developing play in excess of 0.05 inch. Fabricate anchor section from rib-stiffened, 0.0677-inch thick sheet metal plate galvanized after fabrication with screw holes top and bottom, 2-3/4 inches wide by 3 inches high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit anchor section.. Fabricate wire-tie section from triangular- shaped 0.1875-inch- diameter hot-dip galvanized steel wire tie sized to extend at least halfway through veneer but with at least 5/8-inch cover on outside face. Subject to compliance with requirements, products that may be incorporated into the work include, but are not limited to, the following:

(1) Thermal HB-213; Hohmann & Barnard, Inc.
(2) 2-SEAL Thermal Wing Anchor; Hohmann & Barnard, Inc.
    (a) 2X-HOOK; Hohmann & Barnard, Inc.

H. THERMAL BRICK SUPPORT SYSTEM: Multi-piece, hot-dipped galvanized, thermally-broken brick veneer support system.

(1) TBS System; Hohmann & Barnard, Inc.

I. STEEL DRILL SCREWS FOR STEEL STUDS: No 10 diameter minimum ASTM C 954 except manufactured with hex washer head and with neoprene washer, length required to penetrate steel stud flange by not less than 3 exposed threads, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.

(1) Dril-Flex; Elco Industries, Inc.
(2) Hohmann & Barnard, Inc.
(3) Traxx; ITW-Buildex.

J. ANCHOR BOLTS: Headed type steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153, Class C; of diameter and length indicated.

K. THRU-WALL MASONRY FLASHING SYSTEM: Provide a fully integrated thru-wall masonry flashing system throughout the project as manufactured by

(1) Basis of Design: “Illinois Products Corporation” (IPCO), phone: 800-383-8183, website: Illinois Products Flashing System or;
    (a) Mortar Net; Mortar Net USA, Ltd.

Including the following components:

(2) Self Adhering Membrane Flashing; min. 40 mil thickness, to be integrated with the stainless steel flashing drip edge behind the masonry as counter flashing.
(3) Pre-formed flashing corners and end-dams
(4) 3/8” (exposed hemmed drip edge) x 0.015 x 3-inch deep sheet metal drip-edge
    (a) Stainless steel
(5) Pre-formed inside and outside drip-edge corners
(6) 15 mil (28 gage) Type 304 stainless steel cavity bridges
(7) Rubberized asphalt flashing mastic, to seal edges of flashing

L. COMPRESSIBLE FILLER: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 50 percent; of width and thickness indicated; formulated from neoprene urethane or PVC.

M. PREFORMED CONTROL-JOINT GASKETS: Material as indicated below, designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

(1) STYRENE-BUTADIENE-RUBBER COMPOUND: ASTM D 2000, Designation M2AA-805.
(2) PVC: ASTM D 2287, Type PVC-65406.

N. BOND-BREAKER STRIPS: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

O. RECTANGULAR PLASTIC WEEP/VENTS: Clear butyrate or PVC , 3/8 by 1-1/2 by 3-1/2:

(1) Cell Vent; Dur-O-Wal, Inc., or Hohmann & Barnard # 343 louvered Weep Vent or equal

P. CAVITY DRAINAGE MATERIAL: 1-inch- thick, free-draining mesh; made from polyethylene strands and shaped to avoid being clogged by mortar droppings.

(1) Mortar Break; by Advanced Building Products, Inc.
(2) Polytite MortarStop, by Dayton Superior Corporation, Dur-O-Wal Division
(3) Mortar Net; Mortar Net USA, Ltd.

Q. REINFORCING BAR POSITIONERS: Wire units designed to fit into mortar bed joints spanning masonry unit cells with loops for holding reinforcing bars in center of cells. Units are formed from 0.142-inch steel wire, hot-dip galvanized after fabrication. Provide units with either two loops or four loops as needed for number of bars indicated.

(1) D/A 811; Dur-O-Wal, Inc.
(2) D/A 816; Dur-O-Wal, Inc.
(3) No. 376 Rebar Positioner; Heckman Building Products, Inc.
(4) #RB Rebar Positioner; Hohmann & Barnard, Inc.
(5) #RB-Twin Rebar Positioner; Hohmann & Barnard, Inc.
(6) Double O-Ring Rebar Positioner; Wirebond.
(7) O-Ring Rebar Positioner; Wirebond.

R. MASONRY CLEANER: Provide standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by manufacturer of masonry units being cleaned.

2.06 MORTAR AND GROUT MIXES

A. DO NOT USE admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated. Do not use calcium chloride in mortar or grout.
B. ADD COLD-WEATHER ADMIXTURE (IF USED) at the same rate for all mortar, regardless of weather conditions, to ensure that mortar color is consistent.
C. PREBLENDED, DRY MORTAR MIX: Furnish dry mortar ingredients in the form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
D. MORTAR FOR UNIT MASONRY: Comply with ASTM C 270, Property Specification, and as follows:

(1) Typical Unit masonry or masonry veneer: Type N.
(2) For masonry below grade, in contact with earth, and where indicated, use Type M.
(3) For reinforced masonry and where specifically indicated, use Type S.

E. GROUT FOR UNIT MASONRY: Comply with ASTM C 476, and provide material with 2,000 PSI compressive strength when tested at 28 days, unless noted otherwise. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 5 of ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C 143.
F. EPOXY POINTING MORTAR: Mix epoxy pointing mortar to comply with mortar manufacturer's directions.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance.

(1) Verify that foundations are within tolerances specified.
(2) Verify that reinforcing dowels are properly placed.
(3) Proceed with installation only after unsatisfactory conditions have been corrected.

B. Before installation, examine rough-in and built-in construction to verify actual locations of piping connections.

3.02 INSTALLATION, GENERAL

A. THICKNESS: Build cavity and composite walls and other masonry construction to the full thickness shown. Build single-wythe walls to the actual widths of masonry units, using units of widths indicated.
B. BUILD CHASES AND RECESSES to accommodate items specified in this Section and in other Sections of the Specifications.
C. LEAVE OPENINGS FOR EQUIPMENT TO BE INSTALLED before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to the opening.
D. CUT MASONRY UNITS with motor-driven saws to provide clean, sharp, unchipped edges. Cut units as required to provide a continuous pattern and to fit adjoining construction. Where possible, use full-size units without cutting. Allow units cut with water-cooled saws to dry before placing, unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
E. SELECT AND ARRANGE UNITS for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
F. WETTING OF BRICK: Wet brick before laying if the initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at the time of laying.

3.03 CONSTRUCTION TOLERANCES

A. COMPLY WITH ACI 530.1/ASCE 6/TMS 602 and the following:

(1) FOR CONSPICUOUS VERTICAL LINES, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/4 inch in 20 feet, nor 1/2 inch maximum.

(2) FOR VERTICAL ALIGNMENT OF EXPOSED HEAD JOINTS, do not vary from plumb by more than 1/4 inch in 10 feet, nor 1/2 inch maximum.
(3) FOR CONSPICUOUS HORIZONTAL LINES, such as exposed lintels, sills, parapets, and reveals, do not vary from level by more than 1/4 inch in 20 feet, nor 1/2 inch maximum.
(4) FOR EXPOSED BED JOINTS, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch. Do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
(5) FOR EXPOSED HEAD JOINTS, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.

3.04 LAYING MASONRY WALLS

A. LAY OUT WALLS IN ADVANCE for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Lay exposed masonry in “running bond” or as otherwise indicated in the Drawings. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 2 inches. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.
B. STOPPING AND RESUMING WORK: In each course, rake back one-half-unit length for one-half running bond or one-third-unit length for one-third running bond; do not tooth. Clean exposed surfaces of set masonry, wet clay masonry units lightly if required, and remove loose masonry units and mortar before laying fresh masonry.
C. BUILT-IN WORK: As construction progresses, build in items specified under this and other Sections of the Specifications. Fill in solidly with masonry around built-in items.
D. FILL SPACE BETWEEN HOLLOW-METAL FRAMES and masonry solidly with grout, unless otherwise indicated.
E. WHERE BUILT-IN ITEMS ARE TO BE EMBEDDED in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.
F. FILL CORES IN HOLLOW CMU’s with grout 24 inches under bearing plates, beams, lintels, posts, and similar items, unless otherwise indicated.
G. BUILD NON-LOAD-BEARING INTERIOR PARTITIONS full height of story to underside of solid floor or roof structure above, unless otherwise indicated. Install compressible filler in joint between top of partition and underside of structure above. At fire-rated partitions, install firestopping in joint between top of partition and underside of structure above to comply with Division 7 Section "Firestopping."

3.05 MORTAR BEDDING

A. LAY HOLLOW MASONRY UNITS with full mortar coverage on horizontal and vertical face shells. Bed webs in mortar in starting course on footings and in all courses of piers, columns, and pilasters, and where adjacent to cells or cavities to be filled with grout. For starting course on footings where cells are not grouted, spread out full mortar bed, including areas under cells.
B. LAY SOLID BRICK-SIZE MASONRY UNITS with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
C. SET CAST-STONE TRIM UNITS in full bed of mortar with full vertical joints (except as required for sealant joints noted below). Fill all dowel, anchor, and similar holes. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water. Wet joint surfaces thoroughly before applying mortar.

3.06 JOINTING

A. TOOL EXPOSED MORTAR JOINTS SLIGHTLY CONCAVE when thumbprint hard, using a jointer larger than the joint thickness, unless otherwise indicated.
B. CUT JOINTS FLUSH FOR MASONRY WALLS to receive plaster or other direct-applied finishes (other than paint), unless otherwise indicated.
C. SEALANT JOINTS: Rake-back mortar 3/4 inch deep minimum, sponge clean, and provide sealant joints in accordance with Division-7 Section “Joint Sealers” at the following locations:
(1) Head joints of all horizontal surfaces on solid masonry copings
(2) Between all brick and CMU or cast-stone masonry units
(3) At horizontal surfaces of all projecting masonry units, including sills or running trims
(4) At all horizontal relieving angles
(5) At all masonry control-joints or building expansion joints

3.07 MASONRY JOINT REINFORCEMENT

A. PROVIDE CONTINUOUS MASONRY JOINT REINFORCEMENT by installing entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches. Space reinforcement not more than 16 inches o.c. typically, and at not more than 8 inches o.c. in foundation walls, free-standing enclosure walls, and parapet walls. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings, in addition to continuous reinforcement.
B. CUT OR INTERRUPT JOINT REINFORCEMENT at control and expansion joints, unless otherwise indicated. Provide continuity at corners and wall intersections by using prefabricated "L" and "T" sections. Cut and bend reinforcing units as directed by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures, and other special conditions.
C. ANCHOR MASONRY TO STRUCTURAL MEMBERS where masonry abuts or faces structural members by providing an open space not less than 1/2 inch in width between masonry and structural member, unless otherwise indicated. Keep open space free of mortar and other rigid materials. Install anchors embedded in masonry joints and attached to structure. Space anchors not more than 24 inches o.c. vertically and 36 inches o.c. horizontally or more as indicated on the Drawings.

D. ANCHOR MASONRY VENEERS to wall framing with masonry-veneer anchors by fastening screw-attached anchors through sheathing to wall framing with a minimum of two (2) metal fasteners unless anchor design only uses one fastener. Apply sealant at all penetrations of anchors through sheathing material – either before or after anchor installation to maintain the air-moisture barrier at the sheathing face. Embed tie sections in masonry joints. Locate anchor sections to allow maximum vertical differential movement of ties up and down. Space anchors as indicated, but not more than 16 inches o.c. vertically and 24 inches o.c. horizontally. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches around perimeter.

3.08 CONTROL AND EXPANSION JOINTS

A. PROVIDE MASONRY CONTROL JOINTS where indicated on the Drawings, and as follows:

(1) Install control joints at spacing not to exceed 24 feet horizontally if not indicated on the drawings.
(2) Install control joints above both sides of lintels or shelf-angles when the open span exceeds six (6) feet in width.

B. EXPANSION JOINTS: Build-in related items as masonry progresses. Do not form a continuous span through movement joints unless provisions are made to prevent in-plane restraint of wall or partition movement.

C. FORM CMU CONTROL JOINTS by (1) fitting bond-breaker strips into hollow contour at ends of units on one side of control joint, filling resultant core with grout, and raking joints in the exposed faces., or (2) by using control-joint gaskets designed to fit standard sash block, or (3) by installing special shaped interlocking units designed specifically for control joints. Install bond-breaker strips at all control joints. Keep head joints free and clear of mortar or rake out joint for application of sealant. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete.

D. FORM CONTROL JOINTS IN BRICK by forming open joint of not less than 3/8 inch for installation of sealant and backer rod specified in Division 7 Section "Joint Sealants." Keep joint free and clear of mortar.

E. CONSTRUCT HORIZONTAL, PRESSURE-RELIEVING JOINTS by inserting a compressible filler of 3/8-inch high minimum for installing sealant and backer rod specified in Division 7 Section "Joint Sealants." Locate horizontal, pressure-relieving joints beneath all shelf angles supporting masonry veneer and attached to structure behind masonry veneer.

3.09 FLASHING, WEEPS AND CAVITY DRAINAGE

A. INSTALL EMBEDDED FLASHING AND WEEP HOLES in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.

B. PREPARE MASONRY SURFACES so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.

C. AT MASONRY-VENEER WALLS, extend flashing through veneer, across air space behind veneer, and up face of sheathing at least 8 inches; with upper edge tucked under building paper or building wrap, or behind exterior sheathing board when building paper does not exist, lapping flashings at least 4 inches.

D. INSTALL SELF-ADHERING FLASHING SYSTEM in strict accordance with flashing system manufacturer's installation instructions and recommendations. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1 inch back from outside face of wall and adhere flexible flashing to top of metal drip edge. Install cavity-bridge units to span any openings that would not support the flashing material. Place metal drip-edge in a bead of urethane sealant, and apply flashing material to top of drip-edge starting 1 inch from outside edge of masonry. Apply flashing material to the face of glass-mat gypsum sheathing panels with the flashing manufacturer's primer, and extend up face of sheathing at least 8 inches. Seal top edge with manufacturer's flashing mastic per manufacturer's recommendations.

E. INSTALL WEEP UNITS in the head joints in exterior wythes of the first course of masonry immediately above embedded flashing, spaced at 24 inches o.c. Place cavity drainage material immediately above flashing in cavities at each weep.

F. INSTALL CAVITY VENTS in the highest available head joint (excluding rowlocks) at the top of ALL cavity spaces at same spacing as weep vents.This includes below all through wall flashing and/or lintels with brick below and above. *NOTICE: INTENT IS TO HAVE AIR FLOW BEHIND THE MASONRY*

G. INSTALL REGLETS AND NAILERS for flashing and other related construction where they are shown to be built into masonry.

3.10 REINFORCED UNIT MASONRY INSTALLATION

A. TEMPORARY FORMWORK AND SHORES: Construct formwork and shores to support reinforced masonry elements during construction. Construct formwork to conform to shape, line, and dimensions shown. Make it sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other temporary loads that may be placed on them during construction.

B. PLACING REINFORCEMENT: Comply with requirements of ACI 530.1/ASCE 6/TMS 602.

C. GROUTING: Do not place grout until entire height of masonry to be grouted has attained sufficient strength to resist grout pressure. Comply with requirements of ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.

3.11 FIELD QUALITY CONTROL

A. ENGAGE A TESTING AGENCY to perform field quality-control testing of installed Work.

B. FREQUENCY: Each 5000 SF of wall area or portion thereof maximum.

C. MORTAR PROPERTIES: ASTM C 780.

D. GROUT COMPRESSIVE STRENGTH: ASTM C 1019.

E. BRICK of each type and grade used: ASTM C 67.
F. CMU's of each type used: ASTM C 140.
G. MASONRY PRISMS: For each type of wall construction indicated to be "Prism-Tested", prepare prisms per ASTM C-1314 standards, 1 set for testing at 7 days, and a second set for testing at 28 days.

3.12 REPAIRING, POINTING, AND CLEANING

A. REMOVE AND REPLACE masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
B. POINTING: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application.
C. IN-PROGRESS CLEANING: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

3.13 FINAL CLEANING:

A. AFTER MORTAR IS THOROUGHLY SET AND CURED, clean all exposed masonry. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Protect adjacent surfaces from contact with cleaner by covering with liquid strippable masking agent, polyethylene film, or waterproof masking tape. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing the surfaces thoroughly with clear water.
B. CLEAN brick by the bucket-and-brush hand-cleaning method described in BIA Technical Notes No. 20, using job-mixed detergent solution. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions that is approved for use by the manufacturer of the masonry. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2 applicable to type of stain on exposed surfaces.
C. REMOVE ALL EXCESS MASONRY from Project site.

END OF SECTION 04 20 00

SECTION 04 20 10 – REINFORCED UNIT MASONRY

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

(1) Concrete masonry units.
(2) Decorative concrete masonry units.
(3) Pre-faced concrete masonry units.
(4) Hollow brick.
(5) Mortar and grout.
(6) Steel reinforcing bars.
(7) Masonry joint reinforcement.
(8) Miscellaneous masonry accessories.

1.03 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).
B. Reinforced Unit Masonry: Masonry containing reinforcing steel in grouted cells.

1.04 PERFORMANCE REQUIREMENTS

A. Provide reinforced unit masonry that develops indicated net-area compressive strengths at 28 days, as indicated on drawings.

(1) Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to Tables 1 and 2 in TMS 602/ACI 530.1/ASCE 6.

1.05 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Contractor will engage a qualified independent testing agency to perform preconstruction testing indicated below. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense. Materials tested shall be the same in every way to the materials used to construct this project and shall be from the same lots or batches used for constructing this project.

Material / Unit Type	Test	Property Tested	Standard
Clay Masonry Units	Clay Masonry Unit Test	Compressive strength	ASTM C 67
Concrete Masonry Units	Concrete Masonry Unit Test	Compressive strength	ASTM C 140
Mortar (Property Specification)	Mortar Test	Compressive strength	ASTM C 109/C 109M
Grout	Grout Test	Compressive strength	ASTM C 1019
Masonry Assembly (Prism)	Prism Test	Compressive strength	ASTM C 1314

1.06 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
B. LEED Submittals:

(1) Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Shop Drawings: For the following:

(1) Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
(2) Stone Trim Units: Show sizes, profiles, and locations of each stone trim unit required.
(3) Reinforcing Steel: Detail bending and placement of reinforced unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." Show elevations of reinforced walls. Drawings shall include:

(a) 1/4” scale elevations of all beams, columns, and walls with all openings and reinforcing shown.
(b) Top and bottom elevations of walls and bearing elevations of all elements supported.
(c) Size and location of all openings, pockets, embedments, and anchor bolts.
(d) Bar sizes, location and quantities of reinforcing steel.
(e) Location and arrangement of supporting and spacing devices.
(f) Bending and cutting schedules.
(g) All control joints, expansion joints and horizontal relief joints.

(h) All other framing and/or special conditions affecting the work.
(i) Mechanical rebar splice locations.

1.07 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.
B. Material Certificates: For each type and size of the following:
   (1) Masonry units.
      (a) Include material test reports substantiating compliance with requirements.
      (b) Include data and calculations establishing average net-area compressive strength of units.
   (2) Cementitious materials. Include brand, type, and name of manufacturer.
   (3) Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
C. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
   (1) Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
   (2) Grout: Submit grout strength test data. Data shall be in conformance with the requirements for concrete mix designs per Division 3 section "Cast-in-Place Concrete."
      (a) Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.
      (b) For self-consolidating grout, include test reports for slump flow and visual stability index (VSI) as determined by ASTM C 1611.
D. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in TMS 602/ACI 530.1/ASCE 6.
E. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.08 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.
B. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
C. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.
D. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6 latest edition unless modified by requirements in the Contract Documents.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
D. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.
E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.10 PROJECT CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
   (1) Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
   (2) Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.
B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
   (1) Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
   (2) Protect sills, ledges, and projections from mortar droppings.
   (3) Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
   (4) Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace reinforced unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
   (1) Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 - PRODUCTS

2.01 CONCRETE MASONRY UNITS

A. CMUs: ASTM C 90.
   (1) Unit Compressive Strength: Provide units with minimum average net-area compressive strength as required to meet the specified prism strength, but in no case shall units be less than 1900 psi.
   (2) Density Classification: Lightweight unless otherwise indicated.

2.02 MASONRY LINTELS

A. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout. Cure prefabricated lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.03 BRICK

A. Hollow Brick: ASTM C 652, Grade SW, Class H60V (void areas between 40 and 60 percent of gross cross-sectional area).
   (1) Unit Compressive Strength: Provide units with minimum average net-area compressive strength as required to meet the specified prism strength, but in no case shall units be less than 3500 psi.

2.04 MORTAR AND GROUT MATERIALS

A. Blended Hydraulic Cement: ASTM C 595 Type IL, Portland-limestone cement.
B. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
C. Hydrated Lime: ASTM C 207, Type S.
D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
E. Aggregate for Mortar: ASTM C 144.
F. Aggregate for Grout: ASTM C 404.
G. Water: Potable.
H. Additives: None permitted, except as specified herein. Specifically do not lower freezing point of mortar or grout by use of calcium chloride or other antifreeze agents.

2.05 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.
B. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.
   (1) Interior Walls: Galvanized, carbon steel.
   (2) Exterior Walls: Hot-dip galvanized, carbon steel.
   (3) Wire Size for Side Rods: As indicated on drawings.
   (4) Wire Size for Cross Rods: 0.148-inch diameter.
   (5) Wire Size for Veneer Ties: 0.148-inch diameter.
   (6) Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
   (7) Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.
C. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.
D. Masonry Joint Reinforcement for Multiwythe Masonry: Provide one of the following:
   (1) Ladder type with 1 side rod at each face shell of hollow masonry units more than 4 inches wide, plus 1 side rod at each wythe of masonry 4 inches wide or less.
   (2) Tab type, ladder design, with 1 side rod at each face shell of backing wythe and with rectangular tabs sized to extend at least halfway through facing wythe but with at least 5/8-inch cover on outside face.
   (3) Adjustable (two-piece) type, ladder design, with one side rod at each face shell of backing wythe and with separate adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches. Size ties to extend at least halfway through facing wythe but with at least 5/8-inch cover on outside face.

2.06 MISCELLANEOUS ANCHORS

A. Dovetail Slots in Concrete: Furnish dovetail slots with filler strips, of slot size indicated, fabricated from 0.034-inch, galvanized steel sheet.
B. Anchor Bolts: Headed steel bolts complying with ASTM F1554 Grade 36, or ASTM A307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.

2.07 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
   (1) Do not use calcium chloride in mortar or grout.

(2) For reinforced masonry, use portland cement-lime mortar.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Reinforced Unit Masonry: Comply with ASTM C 270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated.

(1) For masonry below grade or in contact with earth, use Type S.
(2) For reinforced masonry, use Type S.
(3) Mix cementitious materials and aggregates between 3 and 5 minutes in a mechanical batch mixer with a sufficient amount of water to produce a workable consistency. Unless acceptable, do not hand mix mortar. Maintain workability of mortar by remixing or retempering. Discard mortar which has begun to stiffen or is not used within 2-1/2 hours after initial mixing.

D. Grout for Reinforced Unit Masonry: Comply with ASTM C 476.

(1) Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 7 in TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.
(2) Grout shall attain a minimum compressive strength of 2000 psi at 28 days when tested in accordance with ASTM C 1019.
(3) Except for self-consolidating grout, mix and proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated.
(4) Provide grout with a slump of 8 to 11 inches for grout heights less than 5 feet 4 inches, or 10 to 11 inches for grout lift heights greater than 5 feet 4 inches as measured according to ASTM C 143/C 143M, unless self-consolidating grout is used.
(5) Self-consolidating grout, if used, shall comply with the material requirements of ASTM C 476; have a slump flow of 24 to 30 inches as determined by ASTM C 1611/C 1611M; and has a Visual Stability Index (VSI) less than or equal to 1 as determined in accordance with ASTM C 1611/C 1611M, Appendix X.1.
(6) Proportioning of self-consolidating grout at the project site is not permitted. Do not add water at the project site except in accordance with the self-consolidating grout manufacturer's recommendations.
(7) Do not use admixtures unless acceptable. Field addition of admixtures is not permitted in self-consolidating grout.

PART 3 - EXECUTION

3.01 LAYING MASONRY WALLS

A. Bond Pattern: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

B. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.

C. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

3.02 MORTAR BEDDING AND JOINTING

A. Lay hollow CMUs as follows:

(1) With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
(2) With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
(3) With webs fully bedded in mortar each side of grouted cells.

3.03 COMPOSITE MASONRY

A. Bond wythes of composite masonry together using one of the following methods:

(1) Masonry Joint Reinforcement: Installed in horizontal mortar joints.

(a) Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes.
(b) Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.

(2) Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not over 8 inches clear horizontally and 16 inches clear vertically.

B. Bond wythes of composite masonry together using bonding system indicated on Drawings.

C. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.

D. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.

(1) Provide continuity with masonry joint reinforcement at corners by using prefabricated L-shaped units as well as masonry bonding.

E. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:

(1) Provide individual metal ties not more than 8 inches o.c.
(2) Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.
(3) Provide rigid metal anchors not more than 24 inches o.c. If used with hollow masonry units, embed ends in mortar-filled cores.

3.04 MASONRY JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.
   (1) Space reinforcement not more than 16 inches o.c.
   (2) Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
   (3) Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.
B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
C. Provide continuity at wall intersections by using prefabricated T-shaped units.
D. Provide continuity at corners by using prefabricated L-shaped units.

3.05 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:
   (1) Provide an open space not less than 1/2 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
   (2) Anchor masonry with anchors embedded in masonry joints and attached to structure.
   (3) Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.06 CONTROL AND EXPANSION JOINTS

A. General: Install control and expansion joint materials in reinforced unit masonry as masonry progresses, as indicated on drawings.

3.07 LINTELS

A. Install steel lintels where indicated.
B. Provide masonry lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.
C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.08 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
   (1) Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
   (2) Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.
B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6, latest edition.
   (1) Support reinforcement to prevent displacement caused by construction loads or by placement of grout or mortar, beyond the allowable tolerances.
   (2) Completely embed reinforcing bars in grout.
   (3) Maintain clear distance between reinforcing bars and the interior of masonry unit or formed surface of at least 1/4 inch for fine grout and 1/2 inch for coarse grout, except where cross webs of hollow units are used as supports for horizontal reinforcement.
   (4) Place reinforcing bars maintaining the following minimum cover:
      (a) Masonry face exposed to earth or weather: 2 inches for bars larger than No. 5; 1-1/2 inches for No. 5 bars or smaller.
      (b) Masonry not exposed to earth or weather: 1-1/2 inches.
   (5) Maintain minimum clear distance between parallel bars of the nominal bar size or 1 inch, whichever is greater.
   (6) In columns and pilasters, maintain minimum clear distance between vertical bars of one and one-half times the nominal bar size or 1-1/2 inches, whichever is greater.
   (7) Splice only where indicated on the Project Drawings, unless otherwise acceptable. When splicing by welding, provide welds in conformance with the provisions of AWS D1.4.
   (8) Unless accepted by the Architect/Engineer, do not bend reinforcement after it is embedded in grout or mortar.
   (9) Noncontact Lap Splices: Position bars spliced by noncontact lap splice no farther apart transversely than one-fifth the specified length of lap nor more than 8 inches.
   (10) Joint Reinforcement:
      (a) Place joint reinforcement so that longitudinal wires are embedded in mortar with a minimum cover of 1/2 inch when not exposed to weather or earth; or 5/8 inch when exposed to weather or earth.
      (b) Provide minimum 6-inch lap splices for joint reinforcement.
      (c) Ensure that all ends of longitudinal wires of joint reinforcement at laps are embedded in mortar or grout.
   (11) Placement Tolerances:
      (a) Place reinforcing bars in walls and flexural elements within a tolerance of 1/2 inch.
      (b) Place vertical bars within:
         (i) 2 inches of the required location along the length of the wall when the wall segment length exceeds 24 inches.
         (ii) 1 inch of the required location along the length of the wall when the wall segment length does not exceed 24 inches.

(c) If it is necessary to move bars more than one bar diameter or a distance exceeding the tolerance stated above to avoid interference with other reinforcing steel, conduits, or embedded items, notify the Architect/Engineer for acceptance of the resulting arrangement of bars.
(d) Foundation dowels that interfere with unit webs are permitted to be bent to a maximum of 1 inch horizontally for every 6 inches of vertical height.

C. Cleanouts: Provide cleanouts in the bottom course of masonry for each grout pour when the grout pour height exceeds 5 feet 4 inches.
(1) Construct cleanouts so that the space to be grouted can be cleaned and inspected. In solid grouted masonry, space cleanouts horizontally a maximum of 32 inches on center.
(2) Construct cleanouts with an opening of sufficient size to permit removal of debris. The minimum opening dimension shall be 3 inches.
(3) After cleaning, close cleanouts with closures braced to resist grout pressure.

D. Grout Placement:
(1) Placing Time: Place grout within 1-1/2 hours from introducing water in the mixture and prior to initial set.
(a) Discard site-mixed grout that does not meet the specified slump without adding water after initial mixing.
(b) For ready-mixed grout:
(i) Addition of water is permitted at the time of discharge to adjust slump.
(ii) Discard ready-mixed grout that does not meet the specified slump without adding water, other than the water that was added at the time of discharge. The time limitation is waived as long as the ready-mixed grout meets the specified slump.
(2) Confinement: Confine grout to the areas indicated on the Project Drawings. Use material to confine grout that permits bond between masonry units and mortar.
(3) Grout Pour Height:
(a) Definition: The total height of masonry to be grouted prior to erection of additional masonry. A grout pour consists of one or more grout lifts.
(b) Do not exceed the maximum grout pour height given in TMS 602/ACI 530.1/ASCE 6, Table 7.
(4) Grout Lift Height:
(a) Definition: An increment of grout height within a total grout pour. A grout pour consists of one or more grout lifts.
(b) For grout except self-consolidating grout:
(i) Where the following conditions are met, place grout in lifts not exceeding 12 feet 8 inches.
1. The masonry has cured for at least 4 hours.
2. The grout slump is maintained between 10 and 11 inches.
3. No intermediate reinforced bond beams are placed between the top and the bottom of the pour height.
(ii) When there are intermediate bond beams within the grout pour, limit the grout lift height to the bottom of the lowest bond beam that is more than 5 feet 4 inches above the bottom of the lift, but do not exceed a grout lift height of 12 feet 8 inches.
(iii) When the conditions above are not met, place grout in lifts not exceeding 5 feet 4 inches.
(5) For self-consolidating grout:
(a) When placed in masonry that has cured for at least 4 hours, place in lifts not exceeding the grout pour height.
(b) When placed in masonry that has not cured for at least 4 hours, place in lifts not exceeding 5 feet 4 inches.

E. Consolidation:
(1) Consolidate grout at the time of placement.
(a) Consolidate grout pours 12 inches or less in height by mechanical vibration or by puddling.
(b) Consolidate pours exceeding 12 inches in height by mechanical vibration and reconsolidate by mechanical vibration after initial water loss and settlement has occurred.
(c) Consolidation or reconsolidation is not required for self-consolidating grout.

F. Grout Key: When grouting, form grout keys between grout pours. Form grout keys between grout lifts when the first lift is permitted to set prior to placement of the subsequent lift.
(1) Form a grout key by terminating the grout a minimum of 1-1/2 inches below a mortar joint.
(2) Do not form grout keys within beams.
(3) At beams or lintels laid with closed bottom units, terminate the grout pour at the bottom of the beam or lintel without forming a grout key.

G. At the top of wall, grout shall be flush with the top of the masonry units.

3.09 FIELD QUALITY CONTROL

A. Testing and inspection requirements: [As indicated on Drawings and Division 01 quality requirements — coordinate special inspection scope with structural engineer of record].

END OF SECTION 04 20 10

SECTION 04 40 00 - SITE STONE ASSEMBLIES

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.02 SECTION INCLUDES

A. The Work of this Section includes all labor, materials, equipment, and services necessary to complete the site stone assemblies as shown on the drawings and/or specified herein, including but not necessarily limited to the following:

(1) Granite steps.
(2) Native sandstone steps.
(3) Monolithic native sandstone seatwall.
(4) Stacked native sandstone ledge retaining wall.
(5) Monolithic granite retaining wall.
(6) Monolithic granite seatwall.
(7) Granite stone flush curb

1.03 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who has completed stone masonry similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance. General contractor to receive bids from subcontractor for both the fabrication of the stone and for the masonry.
B. Standard Practice: The Landscape Architect reserves the right to approve the material supplier for cut stone before this portion of the work is awarded.
C. Stone and workmanship quality for stone shall be in accordance with Industry Standards and Practices
D. Source Limitations for Stone: Obtain each variety of stone from a single quarry with resources to provide materials of consistent quality in appearance and physical properties without delaying the work.
E. Source Limitations for Mortar Grout Materials: Obtain mortar ingredients of uniform quality for each cementitious component from a single manufacturer and aggregate from one source or producer.
F. Cutting and Setting Drawings: The cut stone supplier shall prepare and submit to the Landscape Architect for approval, complete cutting and setting drawings for all of the cut stone work. Such drawings shall show in detail the sizes, sections, and dimensions of stone, the arrangement of joints and bonding, anchoring and other necessary details. All jointing as shown by the Landscape Architect on the contract drawings shall be followed, unless modifications are agreed upon in writing, or indicated upon the approved shop drawings. If the contract drawings do not show the intent of the jointing, it will be the fabricator's responsibility to establish the jointing in accordance with industry standards and practices. The general contractor shall furnish all field dimensions necessary for fabrication.
G. The cutting and setting drawings shall be based upon and follow the drawings and details prepared by the Landscape Architect except where it is agreed in writing or shown on the approved shop drawings that changes be made. Each stone indicated on the setting drawings shall bear the corresponding number marked on an unexposed surface. Provision for the anchoring, dowelling, and cramping of work, in keeping with standard practices, and for the support of stone by shelf angles and loose steel, etc., when required, shall be clearly indicated on the cutting, and setting drawings.
H. Cutting and Drilling for Other Trades: Any miscellaneous cutting and drilling of stone necessary to accommodate other trades will be done by the cut stone fabricator only when necessary information is furnished in time to be shown on their shop drawings and details, and when work can be executed before fabrication. Cutting and fitting, due to jobsite conditions, will be the responsibility of the general contractor.
I. Incidental cutting such as for gate frame clips, etc., which is normally not considered to be the responsibility of the stone supplier, will be provided only by arrangement by the contractor with the stone supplier.
J. Loading and Shipment: The cut stone shall be carefully packed for transportation with exercise of all customary and reasonable precautions against damage in transit. All cut stone under this contract shall be loaded and shipped in the sequence and quantities mutually agreed upon by the general contractor or erector and the material supplier.
K. Mockups: Before installing stone masonry, construct sample units of work to verify selections made under Sample submittals and to demonstrate aesthetic effects and qualities of stone materials indicated for completed work.

(1) Locate mockups in the locations indicated or, if not indicated as directed by the Landscape Architect.
(2) Build mockups for each type of stone masonry:

(a) One (1) section of at least three (3) granite steps.
(b) One (1) section of at least three (3) native sandstone steps.
(c) One (1) 6-foot-long min. section of monolithic native sandstone seatwall.
(d) One (1) 6-foot-long min. section of stacked native sandstone ledge retaining wall.
(e) One (1) 6-foot-long min. section of monolithic granite retaining wall.
(f) One (1) 6-foot-long min. section of monolithic granite seatwall.

(g) One (1) 6-foot-long min. section of granite stone flush curb.

(3) Notify Landscape Architect 10 days in advance of the dates and times when mockups will be constructed.

(4) Maintain mockups during construction in an undisturbed condition as a standard for judging the completed work.

(5) Approval of mockups does not constitute approval of deviations from Contract Documents contained in mockups, unless such deviations are specifically approved by Landscape Architect in writing.

(6) Approved mockups may become part of the completed work if undisturbed at time of substantial completion.

1.04 SUBMITTALS

A. Product Data: For each variety of stone, stone accessory, and other manufactured product specified.

B. Stone Samples for Verification: Sets for each color, grade, finish, and variety of stone required. Include 2 or more Samples in each set showing the full range of variations expected in these characteristics.

C. Colored Pointing Mortar Samples for Verification: For each color required.

D. Qualification Data: For firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names, and addresses of architects and owners, and other information specified.

1.05 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to Project site in undamaged condition.

B. Store and Handle stone and related materials to prevent deterioration or damage due moisture, temperature changes, contaminants, corrosion, breaking, chipping, or other causes.

C. Store cementitious materials off the ground, under cover, and in a dry location.

D. Store aggregates, covered and in a dry location, where grading and other required characteristics can be maintained and contamination avoided.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.06 PROJECT CONDITIONS

A. Protection of Stone Masonry. During erection, cover tops of walls, projections, and sills with waterproof sheeting at the end of each day's work. Extend cover a minimum of 48 inches down both sides of wall and hold securely in place. Cover partially completed stone masonry when construction is not in progress.

B. Stain Prevention: Immediately remove grout, mortar, and soil to prevent them from staining the face of stone masonry.

(1) Protect base of walls from rain-splashed mud and mortar splatter by coverings spread on the ground and over the wall surface.

(2) Protect sills, ledges, and projections from mortar droppings.

(3) Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

(4) Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt on completed stone masonry.

C. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace stone masonry damaged by frost or freezing conditions. Lime mortar to be protected from freezing for at least 28 days.

(1) Cold-Weather Construction: When ambient temperature is within limits indicated, use the following procedures:

(a) 40-32 deg. F and below: Heat mixing water and sand to produce mortar temperatures between 40 and 80 deg. F. Maintain mortar above freezing until used in masonry. Heat stone to 40 deg F. Provide enclosures and use heat on both sides of walls under construction to maintain temperatures above 40 deg F within enclosures.

(2) Cold-Weather Protection: When mean daily temperature is within limits indicated, provide the following protection:

(a) 40 deg F and below: Provide enclosure and heat to maintain temperatures above 40 deg F within enclosure for 48 hours after construction.

(3) Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg and above and will remain so until stone masonry has dried out, but not less than 7 days after completing cleaning.

D. Hot-Weather Requirements: Protect stone masonry work when temperature and humidity conditions produce excessive evaporation of water from mortar. Provide artificial shade and wind breaks and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg F. and above.

E. Other Weather Requirements: Protect lime mortar from sun, wind, and rain for at least 14 days after setting stone.

PART 2 - PRODUCTS

2.01 STONE SOURCES

A. Varieties and Sources: Subject to compliance with requirements, provide stone varieties as approved through the job-site mock-up and as specified in the finished schedule on the drawings.

2.02 STONE

A. Match Landscape Architect's samples for variety, color, finish, and other stone characteristics relating to aesthetic effects. Minimum 4'-0" to 6'-0" sections for granite and native sandstone steps; minimum 6'-0" to 8'-0" sections for monolithic native sandstone seatwall, stacked native sandstone ledge retaining wall, monolithic granite retaining wall, and monolithic granite seatwall, and 4-0" to 8'-0" sections of granite stone flush curb unless otherwise noted or approved by Landscape Architect.
   (1) Arkansas sandstone, finish per drawings, from Ibison Stone Supply in Hackett, AR.
   (2) Washburn Granite, thermal finish all exposed faces, from Quarra Stone in Madison, WI.

2.03 LIME MORTAR

A. General: Mortar mix shall be 1 part lime putty to 2 parts sand. (Other mix may be used in mock-up and approved for use by Owner or Landscape Architect.)
B. Lime Putty: ASTM C 1489.
C. Aggregate: ASTM C 144 and as indicated below:
   (1) For joints narrower than 1/4 inch use aggregate graded with 100 percent passing No. 16 sieve.
   (2) For pointing mortar, use aggregate graded with 100 percent passing No. 16 sieve.
   (3) Colored-Mortar Aggregates: Natural, colored sand or ground marble, granite, or other sound stone as approved.
D. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes. Use only pigments with record of satisfactory performance in stone masonry mortars.
E. Sealer: Prosoco Block Guard and Graffiti Control or equivalent as approved, if needed.
F. Water: Potable.

2.04 MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Type 2, Class A, Grade 1; compressible up to 35 percent; of width and thickness indicated; formulated from the following material:
   (1) Urethane.

2.05 MASONRY CLEANERS

A. Job-Mixed Detergent Solution: Solution of 1/2-cup dry-measure tetrasodium polyphosphate and 1/2-cup dry-measure laundry detergent dissolved in 1 gal. of water.

2.06 STONE FABRICATION

A. General: All stone shall be cut accurately to shape and dimensions and full to the square with jointing as shown on approved shop drawings.
B. Dress joints (bed and vertical) straight and at right angle to face, unless otherwise indicated.
C. Shape stone for type of masonry (pattern) indicated: Reference drawings for patterns.
D. Finish exposed faces and edges of stone to comply with requirements indicated for finish and to match approved samples and mockups. Reference requirements above and drawings for finishes.
E. Carefully inspect stone units at quarry or fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units before shipment.
F. Cutting for Anchoring, Supporting, and Lifting Devices: Holes and sinkages shall be cut in stones for all anchors, cramps, dowels, and other support devices per industry standard practice and/or approved shop drawings. However, expansion anchor holes shall be drilled at jobsite by mason or erector to facilitate alignment.
G. No holes or sinkages will be provided for contractor's handling devices unless arrangement for this service is made by the contractor with the stone supplier.
H. NOTE: It is not recommended that Lewis pins be used for stones less than 3 ½" thickness.

PART 3 - EXECUTION

3.01 EXAMINATION

A. All stone shall be received and unloaded at the site with necessary care in handling to avoid damaging or soiling.
B. Stone to be examined by mason and Landscape Architect to verify compliance with specifications and submittals.
C. Stone shall be stored clear of the ground on non-staining skids (cypress, white pine, poplar, or yellow pine without an excessive amount of resin). Chemically treated wood should not be used. DO NOT use chestnut, walnut, oak, fir, and other woods containing tannin.
D. Stone shall be covered with waterproof paper, clean canvas, or polyethylene.

3.02 PREPARATION

A. Advise installers of other work about specific requirements for placement of reinforcement, anchors, ties, flashing, and similar items to be built into stone masonry.
B. Protect stone masonry during erection as directed in 1.06 "Project Conditions."
C. Protect adjacent surfaces from mortar droppings.
D. Clean stone surfaces that have become dirty or stained by removing soil, stains, and foreign materials before setting. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

3.03 SETTING STONE MASONRY, GENERAL

A. Execute stone masonry by skilled masons experienced with the kind and form of stone and installation method indicated.
   (1) Employ skilled stone fitters at the Project site to do necessary field cutting as stone is set. Use power saws to cut stone. Produce lines cut straight and true, with edges eased slightly to prevent snipping.
   (2) Arrange stones for good fit with joint widths within tolerances indicated, and to provide offset between vertical joints as indicated.
B. Set stone to comply with requirements indicated on Drawings. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone masonry in place. Set stone accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.
C. Maintain uniform joint widths, except for variations due to stone size variations and minor variations required to maintain bond alignment, if any. Lay walls with joints as indicated on Drawings.
D. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.
   (1) Sealing expansion and other joints with sealant approved during submittal process.
   (2) Keep expansion joints free of mortar and other rigid materials.
E. All stone shall be set accurately in strict accordance with the contract and shop drawings.
F. When necessary, before setting in the wall, all stones shall be thoroughly cleaned on all exposed surfaces by washing with fiber brush and soap powder, followed by a thorough drenching with clear water.
G. All stone joint surfaces not thoroughly wet shall be drenched with clear water just prior to setting.
H. Joints, if mortared, can be tooled when initial set has occurred, or raked out 1" and pointed later.
I. All stone areas either partially or totally horizontal should be set with unfilled vertical joints.
J. In cold weather, International Masonry Industry All Weather Council recommendations for setting from 40 degrees to 20 degrees F shall be followed, except that no additives shall be used in the setting mortar, and below 40 degrees F all work shall be done in heated enclosures.

3.04 CONSTRUCTION TOLERANCES

A. Measure variation from plumb, level, and position shown in plan as the variation of the average plane of the face of each stone from a plumb, level, or dimensioned plane.
B. Variation in Mortar-Joint Thickness: Do not vary from joint size range indicated.
C. Variation in Plane between Adjacent Stones and on the Face of Individual Stone: Do not exceed tolerances as approved in the mock-up.

3.05 INSTALLING STONE MASONRY

A. Fill collar joint solid as stone is set.

3.06 STONE ANCHORS AND ATTACHMENTS

A. Provide anchors and attachments of type and size required to support the stone work fabricated from the following metals for conditions indicated below:
   (1) Stainless Steel, AISI Type 304 or 316, for anchors and expansion bolts embedded within the stone.

3.07 POINTING

A. Prepare stone joint surfaces for pointing with mortar (if called out to be mortared on the plans) by removing dust and mortar particles. Where setting mortar was removed to depths greater than surrounding areas, apply pointing mortar first in layers not greater than 3/8 inch until a uniform depth is formed.
B. Point stone joints by placing and compacting pointing mortar in layers not greater than 3/8 inch. Compact each layer thoroughly and allow to become thumbprint hard before applying next layer.
C. Tool joints, when pointing mortar is thumbprint hard, with a smooth jointing tool to produce the approved joint profile from the mock-up:
   (1) Joint Profile: Raked 3/4" minimum below surface, refer to drawings and to mock-up.

3.08 PROTECTION OF FINISHED WORK

A. Receipt, storage, and protection of cut stonework prior to, during and subsequent to installation shall be the responsibility of the mason contractor.

B. During construction, tops of walls shall be carefully covered at night, and especially during any precipitation or other inclement weather.
C. At all times, walls shall be adequately protected from droppings.
D. Whenever necessary, substantial wooden covering shall be placed to protect the stonework. Non-staining building paper or membrane shall be used under the wood. Maintain all covering until removed to permit final clearing of the stonework.

3.09 ADJUSTING AND CLEANING

A. Remove and replace stone masonry of the following description:
   (1) Broken, chipped, stained, or otherwise damaged stone.
   (2) Defective joints.
   (3) Stone masonry and joints not matching approved samples and mockups.
   (4) Stone masonry not complying with other requirements indicated.
B. Replace in a manner that results in stone masonry units matching approved samples and mockups, complying with other requirements, and showing no evidence of replacement.
C. In-Progress Cleaning: Clean stone masonry as work progresses. Remove mortar fins and smears before tooling joints.
D. Final Cleaning: After mortar is thoroughly set and cured, clean stone masonry as follows:
   (1) Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
   (2) Test cleaning methods on mockup; leave one-half of panel uncleaned for comparison purposes. Obtain Landscape Architect's approval of sample cleaning before proceeding with cleaning of masonry.
   (3) Protect adjacent stone and non-masonry surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film, or waterproof masking tape.
   (4) Wet stone surfaces with water before applying cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
   (5) Wash stone with fiber brushes, mild soap powder or detergent and clean water or approved mechanical cleaning process.
E. Protection: Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure stone masonry is without damage and deterioration at the time of Substantial Completion.

3.10 EXCESS MATERIALS AND WASTE

A. Excess Stone: Stack excess stone where directed by Owner for Owner's use.
B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including unusable stone, waste mortar, and excess or soil-contaminated sand, by crushing and mixing with fill material as fill is placed.
C. Masonry Waste: Remove clean masonry waste that cannot be used as fill, as described above, and other masonry waste and legally dispose of off Owner's property.

SECTION 05 31 00 – STEEL DECKING

SECTION 05 12 00 – STRUCTURAL STEEL FRAMING

SECTION 05 40 00 – COLD-FORMED METAL FRAMING

SECTION 05 50 00 – METAL FABRICATIONS

SECTION 05 70 00 – DECORATIVE METAL

SECTION 05 73 00 – DECORATIVE METAL RAILINGS

SECTION 05 12 00 – STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

(1) Structural steel.
(2) Prefabricated building columns.
(3) Grout.

B. Related Sections:

(1) Section 01 40 00 "Quality Requirements" for independent testing agency procedures and administrative requirements.
(2) Section 05 12 13 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
(3) Section 05 31 00 "Steel Decking" for field installation of shear connectors through deck.
(4) Section 05 50 00 "Metal Fabrications" for miscellaneous steel fabrications including steel lintels and shelf angles not attached to structural-steel frame and other metal items not defined as structural steel.
(5) Section 05 51 00 "Metal Stairs."
(6) Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting" and Section 09 96 00 "High-Performance Coatings" for surface-preparation and priming requirements.
(7) Section 13 34 19 "Metal Building Systems" for structural steel.

1.03 DEFINITIONS

A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."
B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.
C. Heavy Sections: Rolled and built-up sections as follows:

(1) Shapes included in ASTM A 6/A 6M with flanges thicker than 2 inches.
(2) Welded built-up members with plates thicker than 2 inches.
(3) Shapes included in ASTM A 6/A 6M with flanges thicker than 1-1/2 inches included in the Seismic-Load-Resisting System.
(4) Connection plates and column base plates thicker than 2 inches included in the Seismic-Load-Resisting System.

D. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.
E. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.04 PERFORMANCE REQUIREMENTS

A. Connections:

(1) Provide connections as shown or noted on Drawings. Design of connections not shown or noted shall be provided by Structural Engineer-of-Record upon request.
(2) Alternate connections designed by the Contractor's registered design professional may be substituted by the Contractor, subject to Structural Engineer-of-Record approval. Proposed changes to connections shall be submitted as a substitution request in advance of the submittal of shop drawings for conceptual approval of Structural Engineer-of-Record. Connections shall be designed for loads indicated on Drawings or provided by Structural Engineer-of-Record. Loads indicated are developed using Load and Resistance Factor Design (LRFD) load combinations unless noted otherwise. One set of calculations for all alternate connections signed and sealed by a qualified engineer shall be submitted with or in advance of applicable shop drawings. Contractor shall submit alternate connections to the AHJ in accordance with IBC section [A]107.3.4.1 Deferred Submittal and [A]107.4 Amended Construction Documents.

B. Moment Connections: Type PR (partially), and FR (fully) restrained.
C. Construction: Refer to the Drawings for description of lateral load resisting system.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
B. Shop and Erection Drawings: Show location, fabrication, and assembly of structural-steel components.

(1) Location of each piece or detail within the structure.
(2) Include details of cuts, connections, splices, camber, holes, and other pertinent data.
(3) Include embedment piece and setting drawings.

(4) Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
(5) Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
(6) Identify members and connections of the seismic-load-resisting system.
(7) Indicate locations and dimensions of protected zones.
(8) Identify demand critical welds.
(9) Provide material quantity summary (Bill of Materials) for each erection sheet including the total weight of material of all pieces documented on the page being considered.
    (a) Material quantity summary to include breakdown of total weight by steel material types shown in the construction documents.
(10) For structural-steel connections indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
(11) Drawings submitted in multiple packages shall contain individual submittals complete with all applicable erection drawings, details, and piece drawings.
(12) Reproduction of Contract Documents is not permitted.
(13) Provide schedule for submittal of shop and erection drawings.

C. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:
    (1) Power source (constant current or constant voltage).
    (2) Electrode manufacturer and trade name, for demand critical welds.
D. Charpy V-Notch testing results for heavy sections and weld metal when required.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer and fabricator.
B. Welding certificates.
C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
D. Mill test reports for structural steel, including chemical and physical properties and steel mill of origin.
    (1) For structural steel products that are manufactured in a different facility than where the raw material is produced, the mill test report or separate letter included with the report shall clearly indicate the location of both facilities.
    (2) If structural steel elements are sourced from multiple facilities, mill test reports shall be provided for each facility with a statement outlining the applicability of each report submitted.
E. Product Test Reports: For the following if present on project:
    (1) Bolts, nuts, and washers including mechanical properties and chemical analysis.
    (2) Direct-tension indicators.
    (3) Tension-control, high-strength bolt-nut-washer assemblies.
    (4) Shear stud connectors.
    (5) Shop primers.
    (6) Nonshrink grout.
F. Source quality-control reports.
G. Fabricator qualifications: Provide written documentation from the fabricator summarizing their commitment to sustainable practices as outlined in Part 2 - Products.
H. Environmental Product Declaration (EPD) Disclosure: For each type of structural steel element used on the project provide a current, product specific, third party verified, type III EPD conforming to ISO 14025 and the North American product category rule (PCR) for Steel Construction Products.
    (1) If structural steel elements are sourced from multiple facilities, EPD data shall be provided for each facility with a statement outlining the applicability of each EPD submitted.
    (2) Submitted EPDs shall demonstrate conformance to the global warming potential limits indicated in the construction documents.

1.07 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.
B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.
C. Shop-Painting Applicators: Qualified according to AISC 420 "Certification Standard for Shop Application of Complex Protective Systems" Paint Endorsement Enclosed (CCE-1), Covered (CCE-2) or Exposed (CCE-3).
D. Field Painting Applicators: Qualified according to SSPC-QP1, "Standard Procedure for Evaluating Qualifications of Painting Contractors 'Field Application to Complex Structures'."
E. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

(1) Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

F. Comply with applicable provisions of the following specifications and documents:

(1) AISC 303-2022 as amended below:

(a) Section 3.3: Replace entire section with the following: "Requirements for structural steel including quantities, sizes, locations, arrangement, and details shall be shown or noted in the overall Contract Drawing package. Fabricator is responsible for incorporating all such information from structural, architectural, mechanical, and electrical drawings, as well as those of other disciplines."

(b) Section 3.6: Remove all text after first sentence.

(c) Section 3.2.2: Replace entire section with the following: "When alternative delivery methods are implemented, release of structural drawings shall constitute release for construction only if specifically noted as such on the drawing. Drawings indicated 'preliminary' or 'not for construction' shall not be used for detailing or construction except where the risk of any cost or delay associated with subsequent revisions to Contract Documents is accepted by the Owner, Contractor or Fabricator."

(d) Section 4.4: Revise second sentence to read the following: "The shop and erection drawings shall be returned in accordance with the schedule defined in Division 1 of the project Specification. In the absence of such schedule, the Owner's Designated Representative for Design shall return submittals within 14 calendar days of receipt from the Owner's Designated Representative for Construction."

(2) AISC 341 and AISC 341s1.

(3) AISC 360.

(4) RCSC's "Specification for Structural Joints Using High-Strength Bolts."

G. Preinstallation Conference: Conduct conference at Project site.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

(1) Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

(1) Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.

(2) Clean and relubricate bolts and nuts that become dry or rusty before use.

(3) Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

1.09 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.01 STRUCTURAL-STEEL MATERIALS

A. Supply structural steel materials produced and manufactured in the United States of America or Canada for all elements.

B. Shapes: As indicated on Drawings.

C. Welding Electrodes: Comply with AWS requirements, 70 Series.

(1) Conform to Charpy V-Notch test requirements of AISC 360.

(2) Conform to Charpy V-Notch test requirements of AISC 341 for components included in the Seismic-Load-Resisting System.

D. Heavy Sections:

(1) Conform to Charpy V-Notch test requirements of AISC 360.

(2) Conform to Charpy V-Notch test requirements of AISC 341 for components included in the Seismic-Load-Resisting System.

2.02 BOLTS, CONNECTORS, AND ANCHORS

A. Use Tension-Control, High-Strength Bolt-Nut-Washer Assemblies whenever possible unless indicated otherwise.

B. High-Strength Bolts, Nuts, and Washers: ASTM F 3125, Group 120, Type 1 A325 or F1852. Heavy-hex steel structural bolts; ASTM A 563, Type 1 Grade C, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers; or Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: round head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers all with plain finish.

(1) Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with plain finish.

C. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, round head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.
   (1) Finish: Plain.
D. Steel Headed Stud Anchors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.
E. Unheaded Anchor Rods: ASTM F 1554, Grade 55, weldable.
   (1) Configuration: Straight.
   (2) Nuts: ASTM A 563 heavy-hex carbon steel.
   (3) Plate Washers: ASTM A 36/A 36M carbon steel.
   (4) Washers: ASTM F 436, Type 1, hardened carbon steel.
   (5) Finish: Plain.
F. Headed Anchor Rods: ASTM F 1554, Grade 55, weldable, straight.
   (1) Nuts: ASTM A 563 heavy-hex carbon steel.
   (2) Plate Washers: ASTM A 36/A 36M carbon steel.
   (3) Washers: ASTM F 436, Type 1, hardened carbon steel.
   (4) Finish: Plain.
G. Threaded Rods: ASTM A 36/A 36M.
   (1) Nuts: ASTM A 563 heavy-hex carbon steel.
   (2) Washers: ASTM A 36/A 36M carbon steel.
   (3) Finish: Plain.
H. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1035.
I. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1030.
J. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.
K. Deformed Anchor Studs (DAS) / Deformed Bar Anchors (DBA): Made from ASTM A 108 low carbon steel, cold worked and deformed per ASTM A 1064. Minimum yield stress = 60 ksi (415 MPa); minimum tensile strength = 80 ksi (550 MPa).
L. Rebar: Rebar used for welding shall meet the requirements of ASTM A-706. Minimum bend diameters per ACI 318.
M. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.
   (1) Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Amscot Structural Products Corp.
      (b) Fluorocarbon Company Limited.
      (c) R.J. Watson Bridge & Structural Engineered Systems.
      (d) Seismic Energy Products, L.P.
      (e) Con-Serv, Inc.
      (f) Fluorocarbon Company.
      (g) COSMEC, Inc.
      (h) Tobi Engineering.
   (2) Mating Surfaces: PTFE and mirror-finished stainless steel.
   (3) Coefficient of Friction: Not more than 0.06.
   (4) Design Load: Not less than 2,000 psi.
   (5) Total Movement Capability: 2 inches.
   (6) Applicable Temperature Range: 0 deg F to 100 deg F.
N. Expansion Anchors, Screw Anchors, and Adhesive Anchors: Size and Manufacturer as indicated on Drawings. Complete assemblies with required rods, nuts, washers, and adhesive system as applicable. Installed in accordance with Manufacturer's installation instructions. Current ICC approval and published ICC Research Report required.
   (1) Finish for use in conditioned environments free from potential moisture (interior): Plain or in accordance with Manufacturer's standard.
   (2) Finish for use in exposed or potentially wet environments and for attachment of exterior cladding materials: Galvanized in conformance with ASTM A 153 or stainless steel, Series 316.
   (3) Finish for use exposed to ocean or waterfront environments: Type 316 stainless steel.

2.03 PRIMER

A. Primer: Where steel is to be field painted, provide fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
B. Galvanizing Repair Paint: MPI#18, MPI#19, or SSPC-Paint 20.

2.04 GROUT

A. Metallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time. Minimum compressive strength = 6000 psi.
B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time. Minimum compressive strength = 6000 psi. Required where grout is exposed to view or weathering.

2.05 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.
   (1) Camber structural-steel members where indicated.
   (2) Fabricate beams with rolling camber up.
   (3) Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
   (4) Mark and match-mark materials for field assembly.
   (5) Complete structural-steel assemblies, including welding of units, before starting shop-priming operations, if applicable.

B. Sustainable Fabrication: Fabricate structural steel products in a facility that has demonstrated a commitment to sustainable practices in accordance with one of the following:
   (1) An internal sustainability plan or policy with consideration of energy consumption, waste output, and education of employees on sustainability of steel.
   (2) Commitment to the American Institute of Steel Construction (AISC) sustainability partner program.

C. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.
   (1) Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

D. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces. Do not enlarge bolt holes by burning.

E. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

F. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 2, "Hand Tool Cleaning" or SSPC-SP 3, "Power Tool Cleaning."

G. Steel Headed Stud Anchors and Deformed Anchor Studs / Deformed Bar Anchors: Prepare steel surfaces as recommended by manufacturer of anchors. Use automatic end welding of anchors according to AWS D1.1/D1.1M and manufacturer's written instructions.

H. Steel Wall-Opening Framing: Select true and straight members for fabricating steel wall-opening framing to be attached to structural steel. Straighten as required to provide uniform, square, and true members in completed wall framing.

I. Welded Door Frames: Build up welded door frames attached to structural steel. Weld exposed joints continuously and grind smooth. Plug-weld fixed steel bar stops to frames. Secure removable stops to frames with countersunk machine screws, uniformly spaced not more than 10 inches o.c. unless otherwise indicated.

J. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel framing members.
   (1) Cut, drill, thermal cut, or punch holes perpendicular to steel surfaces.
   (2) Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
   (3) Weld threaded nuts to framing and other specialty items indicated to receive other work.

K. Splices: Splicing of members to obtain required lengths is not permitted without prior approval of Structural Engineer-of-Record unless indicated on the Drawings.

L. Substitutions: Where exact sizes and weights indicated on Drawings are not readily available, secure approval of alternate sizes from Structural Engineer-of-Record in time to prevent project delay.

2.06 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
   (1) Joint Type: As indicated on Drawings.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
   (1) Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.07 SHOP PRIMING

A. Shop prime steel surfaces except the following:
   (1) Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
   (2) Surfaces to be field welded, including top flange of beams to receive steel headed stud anchors.
   (3) Surfaces to be high-strength bolted with slip-critical connections.
   (4) Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
   (5) Galvanized surfaces.
   (6) Surfaces not otherwise indicated to be painted that are not exposed to view or weather in the final condition.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to either of the following specifications and standards:
   (1) SSPC-SP 2, "Hand Tool Cleaning."
   (2) SSPC-SP 3, "Power Tool Cleaning."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
   (1) Stripe paint corners, crevices, bolts, welds, and sharp edges.
   (2) Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection.

D. Painting: Prepare steel and apply a one-coat, nonasphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than 1.5 mils.

2.08 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.
   (1) Fill vent and drain holes in closed sections (HSS or Pipe) that will be exposed in the finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.
   (2) Galvanize lintels and shelf angles located in exterior walls.

2.09 SOURCE QUALITY CONTROL

A. Testing and Inspection: As indicated on Drawings.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify, with steel Erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
   (1) Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
   (1) Coordinate installation of non-structural steel items that load the temporarily supported steel frame such that temporary supports are adequate to resist all imposed loads.
   (2) Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.
   (3) Do not apply permanent loading other than the weight of supported concrete slab-on-deck assemblies to composite beams and girders until concrete has achieved 75 percent of its design strength without prior approval of Structural Engineer-of-Record.

3.03 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
B. Base Bearing and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
   (1) Set plates for structural members on wedges, shims, or setting nuts as required.
   (2) Weld plate washers to top of baseplate where indicated on Drawings.
   (3) Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
   (4) Clean and moisten surfaces to receive grout. Immediately remove any remaining free water. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
C. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."
D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
   (1) Level and plumb individual members of structure.
   (2) Make allowances for difference between temperature at time of erection and mean temperature of 70 deg F when structure is completed and in service.
E. Splice members only where indicated.
   (1) Fasten splices in compression after bearing surfaces have been brought into contact. Close all gaps greater than 1/16 inch by driving non-tapered mild steel shims full depth of bearing surface along full length of gap.
F. Do not use thermal cutting during erection unless approved by Structural Engineer-of-Record. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.
G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Steel Headed Stud Anchors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.04 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
   (1) Joint Type: As indicated on Drawings.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
   (1) Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
   (2) Remove backing bars or runoff tabs where indicated on Drawings, back gouge, and grind steel smooth.
   (3) Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.05 FIELD QUALITY CONTROL

A. Testing and Inspection: As indicated on Drawings.

3.06 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
   (1) Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

END OF SECTION 05 12 00

SECTION 05 31 00 – STEEL DECKING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

(1) Roof deck.
(2) Composite floor deck.
(3) Noncomposite form deck.

B. Related Requirements:

(1) Section 033000 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
(2) Section 035216 "Lightweight Insulating Concrete" for lightweight insulating concrete fill over steel deck.
(3) Section 051200 "Structural Steel Framing" for shop- and field-welded shear connectors.
(4) Section 055000 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
(5) Section 099113 "Exterior Painting" for repair painting of primed deck and finish painting of deck.
(6) Section 099123 "Interior Painting" for repair painting of primed deck and finish painting of deck.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.
B. LEED Submittals:

(1) Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
(2) Laboratory Test Reports for Credit EQ 4: For primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Drawings:

(1) Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.04 INFORMATIONAL SUBMITTALS

A. Welding certificates.
B. Product Certificates: For each type of steel deck.
C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

(1) Power-actuated mechanical fasteners.
(2) Acoustical roof deck.

D. Evaluation Reports: For steel deck.
E. Field quality-control reports.
F. Sustainability Submittals:

(1) Submit product data or other published information verifying that this product has a Type III environmental product declaration. Submit in accordance with Section 018113 ARCH
(2) Product Sourcing:

(a) Submit product data or other published information indicating total weight of product to be provided for the Project, percent of post-consumer recycled material by weight and percent post-industrial recycled material by weight.

(3) Maximum embodied carbon and recycled content of steel products. Reference drawings for embodied carbon and recycled content goals.
(4) General Contractor's Sustainability Statement Letter: In the event that a sustainability goal or submittal requirement will not be met, contractor shall state in a letter the reasons why the goal or submittal requirement is not being met. Letter shall state whether alternative sustainability measures are viable for the project. If there are viable alternates, letter shall include details of proposed alternatives and associated project costs and schedule impacts (if any) for the Owner's consideration.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."
C. Electrical Raceway Units: Provide UL-labeled cellular floor-deck units complying with UL 209 and listed in UL's "Electrical Construction Equipment Directory" for use with standard header ducts and outlets for electrical distribution systems.

D. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.
   (1) Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."
B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   (1) Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
C. Recycled Content of Steel Products: Provide products with an average recycled content of steel products not less than as indicated on the structural drawings.
D. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.02 ROOF DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   (1) ASC Profiles, Inc.; a Blue Scope Steel company.
   (2) Canam United States; Canam Group Inc.
   (3) CMC Joist & Deck.
   (4) Consolidated Systems, Inc.; Metal Dek Group.
   (5) Cordeck.
   (6) DACS, Inc.
   (7) Epic Metals Corporation.
   (8) Marlyn Steel Decks, Inc.
   (9) New Millennium Building Systems, LLC.
   (10) Nucor Corp.; Vulcraft Group.
   (11) Roof Deck, Inc.
   (12) Valley Joist; Subsidiary of EBSCO Industries, Inc.
   (13) Verco Manufacturing Co.
   (14) Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.
B. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Deck," and with the following:
   (1) Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), grade, thickness and profile as indicated on the structural drawings. G60 zinc coating, shop primed with manufacturer's standard baked-on, rust-inhibitive primer. Use at interior locations.
      (a) Color: [as selected by Architect]
   (2) Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), grade, thickness and profile as indicated on the structural drawings, G90 zinc coating. Use at exterior locations not indicated to be painted and exposed to view.
   (3) Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), grade, thickness and profile as indicated on the structural drawings, G90 zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer. Use at exterior locations indicated to be painted and exposed to view.
      (a) Color: [as selected by Architect]
   (4) Deck Profile: As indicated on the structural drawings.
   (5) Span Condition: As indicated on the structural drawings.
   (6) Side Laps: Overlapped.

2.03 COMPOSITE FLOOR DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   (1) ASC Profiles, Inc.; a Blue Scope Steel company.
   (2) Canam United States; Canam Group Inc.
   (3) CMC Joist & Deck.
   (4) Consolidated Systems, Inc.; Metal Dek Group.
   (5) Cordeck.

(6) DACS, Inc.
(7) Epic Metals Corporation.
(8) Marlyn Steel Decks, Inc.
(9) New Millennium Building Systems, LLC.
(10) Nucor Corp.; Vulcraft Group.
(11) Roof Deck, Inc.
(12) Verco Manufacturing Co.
(13) Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Steel Deck," with the minimum section properties indicated, and with the following:

(1) Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), grade, thickness and profile as indicated on the structural drawings, with top surface phosphatized and unpainted and underside surface shop primed with manufacturers' standard baked-on, rust-inhibitive primer. May be used at interior locations.
(2) Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), grade, thickness and profile as indicated on the structural drawings, G60 zinc coating. May be used at interior or exterior locations not indicated to be painted and exposed to view.
(3) Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), G60 zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard baked-on, rust-inhibitive primer. Use at exterior locations indicated to be painted and exposed to view.
(4) Profile Depth: As indicated on the structural drawings.
(5) Span Condition: As indicated on the structural drawings.

2.04 NONCOMPOSITE FORM DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(1) ASC Profiles, Inc.; a Blue Scope Steel company.
(2) Canam United States; Canam Group Inc.
(3) CMC Joist & Deck.
(4) Consolidated Systems, Inc.; Metal Dek Group.
(5) Cordeck.
(6) DACS, Inc.
(7) Marlyn Steel Decks, Inc.
(8) New Millennium Building Systems, LLC.
(9) Nucor Corp.; Vulcraft Group.
(10) Roof Deck, Inc.
(11) Valley Joist; Subsidiary of EBSCO Industries, Inc.
(12) Verco Manufacturing Co.
(13) Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Noncomposite Form Deck: Fabricate ribbed-steel sheet noncomposite form-deck panels to comply with "SDI Specifications and Commentary for Steel Deck," with the minimum section properties indicated, and with the following:

(1) Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), grade, thickness, and profile as indicated on the structural drawings. G60 zinc coating, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
    (a) Color: [as selected by Architect]
(2) Profile Depth: As indicated on the structural drawings.
(3) Span Condition: As indicated on the structural drawings.
(4) Side Laps: Overlapped.

2.05 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile indicated but not less than recommended by SDI for overhang and slab depth.
G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.
H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.
I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0747 inch thick, with factory-punched hole of 3/8-inch minimum diameter.

J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.
K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch-wide flanges and level or sloped recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field.
L. Galvanizing Repair Paint: ASTM A 780.
M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Proceed with installation only after unsatisfactory conditions have been corrected.
C. When steel headed stud anchors are to be welded through metal deck and/or corrugated metal forming, the top flange of beams to receive such anchors shall be unpainted and free of debris prior to installation of the deck and/or forming.

3.02 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI, manufacturer's written instructions, and requirements in this Section.
B. Install temporary shoring before placing deck panels if required to meet deflection limitations. Obtain prior written approval from Structural Engineer-of-Record before installing shoring.
C. Locate deck bundles to prevent overloading of supporting members.
D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
   (1) Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.
E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.
   (1) Refer to Drawings for opening sizes requiring reinforcement and typical reinforcement options.
   (2) Miscellaneous openings not shown on the Drawings such as those required for vents, risers, conduits, etc. shall be cut and reinforced if necessary, by the trade requiring the opening.
H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
I. Mechanical fasteners may be used in lieu of welding to fasten deck with prior written approval of Structural Engineer-of-Record. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.03 ROOF-DECK INSTALLATION

A. Fasten roof-deck panels as indicated on the structural drawings. Provide weld washer at each location where uncoated deck of thickness 0.028 inches or less is being fastened to supporting members by welding.
B. End Bearing: Install deck ends over supporting frame with a minimum end bearing length as indicated on the structural drawings, with end joints as follows:
   (1) End Joints: Lapped as indicated on the structural drawings.
C. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld or mechanically fasten flanges to top of deck. Space welds or mechanical fasteners not more than 12 inches apart with at least one weld or fastener at each corner.
   (1) Install reinforcing channels or zees in ribs to span between supports and weld or mechanically fasten.
D. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.
   (1) Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.
E. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

3.04 FLOOR-DECK INSTALLATION

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
   (1) Weld Diameter: As indicated on the structural drawings, nominal.
   (2) Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of 12 inches apart, but not more than 18 inches apart. Steel headed stud anchors may be substituted for welds one for one in meeting spacing requirements.
   (3) Weld Washers: Install weld washers at each weld location when the minimum uncoated steel thickness is less than 0.028 inches.
B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of half of the span or 36 inches, and as follows unless otherwise indicated:

(1) Mechanically fasten with self-drilling, No. 10 diameter (or larger) carbon-steel screws.
(2) Mechanically clinch or button punch.
(3) Fasten with a minimum of 1-1/2-inch-long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing as indicated on the structural drawings, with end joints as follows:

(1) End Joints: As indicated on the structural drawings.

D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

F. Install piercing hanger tabs at minimum spacing indicated in both directions, within 9 inches of walls at ends, and not more than 12 inches from walls at sides unless otherwise indicated.

G. Fastening Corrugated Metal Forming: Secure to supporting member with 1/2 inch minimum diameter fusion welds made through 0.0747 inch welding washers. Minimum weld requirements as follows:

(1) End Laps: In valley of side laps and at center of sheet.
(2) Intermediate Supports: In valley of side lap on every other support and in valley of center corrugation on the remaining supports (to form an X pattern).
(3) Exterior Edges: 12 inches on center.
(4) Minimum Number of Welds Per 100 square foot of Deck Area:

(a) 0.0164 inches (0.4 mm) thick and thinner – 25.
(b) Thicker than 0.0164 inches (0.4 mm) – 15.

H. Steel headed stud anchors shall be field welded to the structural members only after all steel framing, deck and/or forms are in place and shored when required. Deck and/or forming shall be installed such that the bottom rib plate is in continuous contact with the surface to receive anchors.

I. Steel Headed Stud Anchor Capacity: Number of steel headed stud anchors indicated on Drawings is based on the allowable capacity for anchors in normal weight or light weight concrete as listed in AISC 360 for the composite deck specified. If additional anchors are required due to decreases in anchor capacity for the type of deck and stud placement supplied, such additional anchors shall be provided at no additional cost to the Owner.

J. Steel Headed Stud Anchor Installation:

(1) Install anchors in accordance with Manufacturer's instructions. Use only personnel and equipment authorized by the Manufacturer.
(2) Use through-deck anchor welding where deck material thickness permits proper weld fusion to develop required anchor capacity. Provide adequate test results to verify feasibility of through-deck welding for the particular anchor sizes and deck thicknesses involved.
(3) If through-deck anchor welding is not feasible, install anchors through pre-punched holes in deck. Provide pre-punched holes only where required for anchor installation and keep hole oversize to minimum required to develop a proper weld.

K. At the beginning of each shift of work, and after each time welding equipment has been moved, two test anchors shall be installed and bent to 45 degrees by the Contractor. If failure occurs, adjust equipment and repeat test. Two consecutive test studs shall be welded and found satisfactory before production for that shift begins or is resumed.

3.05 FIELD QUALITY CONTROL

A. Testing and Inspection: As indicated on the structural drawings.

3.06 PROTECTION

A. Galvanizing Repairs: Where deck is exposed to weather or moisture, prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

C. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

(1) Do not use deck units for storage or as a working platform until permanently secured in position.
(2) Contractor shall assure that completed deck is not damaged by use as a runaway, storage of materials or subsequent work.
(3) Contractor shall assure that construction loads are not allowed which exceed the safe carrying capacity of the deck.

END OF SECTION 05 31 00

SECTION 05 40 00 – COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

(1) Exterior load-bearing wall framing.
(2) Interior load-bearing wall framing.
(3) Exterior non-load-bearing and soffit wall framing.
(4) Floor joist framing.
(5) Roof trusses.
(6) Roof rafter framing.
(7) Ceiling joist framing.

B. Related Sections include the following:

(1) Division 05 Section “Metal Fabrications” for masonry shelf angles and connections.
(2) Division 09 Section “Non-Structural Metal Framing” for interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies.
(3) Division 09 Section “Gypsum Board Shaft Wall Assemblies” for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies.

1.03 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated.

(1) Deflection Limits: Design framing systems to withstand design loads without deflections greater than indicated on the drawings.
(2) Design framing systems to provide for movement of framing members without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
(3) Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate deflection of primary building structure as indicated on the drawings.

B. Cold-Formed Steel Framing, General: Design according to AISI's “Standard for Cold-Formed Steel Framing - General Provisions.”

(1) Headers: Design according to AISI's “Standard for Cold-Formed Steel Framing - Header Design.”
(2) Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
(3) Roof Trusses: Design according to AISI's “Standard for Cold-Formed Steel Framing - Truss Design.”

1.04 SUBMITTALS

A. Product Data: For each type of cold-formed metal framing product and accessory indicated.
B. Shop Drawings: Provide ¼” = 1'-0” scale elevations of all walls and plans of all soffits comprised of cold-formed metal framing. Show layout, spacings, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

(1) For cold-formed metal framing indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 INFORMATIONAL SUBMITTALS

A. Sustainability Submittals:

(1) Submit product data or other published information verifying that this product has a Type III environmental product declaration. [ARCH] Submit in accordance with Section 018113 ARCH.
(2) Product Sourcing:

(a) Submit product data or other published information indicating total weight of product to be provided for the Project, percent of post-consumer recycled material by weight and percent post-industrial recycled material by weight.

(3) Maximum embodied carbon and recycled content of steel products. Reference drawings for embodied carbon and recycled content goals.
(4) General Contractor's Sustainability Statement Letter: In the event that a sustainability goal or submittal requirement will not be met, contractor shall state in a letter the reasons why the goal or submittal requirement is not being met. Letter shall state whether alternative sustainability measures are viable for the project. If there are viable alternates, letter shall include details of proposed alternatives and associated project costs and schedule impacts (if any) for the Owner's consideration.

B. Welding certificates.
C. Product Test Reports: From a qualified testing agency, unless otherwise stated, indicating that each of the following complies with requirements, based on evaluation of comprehensive tests for current products:
   (1) Vertical deflection clips.
   (2) Horizontal drift deflection clips.
   (3) Miscellaneous structural clips and accessories.

1.06 QUALITY ASSURANCE

A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.
C. Special Inspections and Testing: Special inspections and tests indicated on the construction documents and indicated within this specification are minimum requirements. The cold-formed metal framing construction documents shall include the minimum testing and inspection requirements as indicated on the construction documents and shall include additional testing and inspections that the engineer of the cold-formed metal framing engineer requires. All special inspections and tests (minimum design requirements on construction documents and those specified by cold-formed metal framing engineer) shall be paid for by the Owner.
D. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E 329 to conduct the testing indicated.
E. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
F. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, “Structural Welding Code--Steel,” and AWS D1.3, “Structural Welding Code--Sheet Steel.”
G. Fire-Test-Response Characteristics: Where indicated, provide cold-formed metal framing identical to that of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
H. AISI Specifications and Standards: Comply with AISI's “North American Specification for the Design of Cold-Formed Steel Structural Members” and its “Standard for Cold-Formed Steel Framing - General Provisions.”
   (1) Comply with AISI's “Standard for Cold-Formed Steel Framing - Truss Design.”
   (2) Comply with AISI's “Standard for Cold-Formed Steel Framing - Header Design.”
I. Comply with AISI's “Standard for Cold-Formed Steel Framing - Prescriptive Method for One and Two Family Dwellings.”
J. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section “Project Management and Coordination.”

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.
B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering cold-formed metal framing that may be incorporated into the Work include, but are not limited to, the following:
   (1) Allied Studco.
   (2) AllSteel Products, Inc.
   (3) California Expanded Metal Products Company.
   (4) Clark Steel Framing.
   (5) Consolidated Fabricators Corp.; Building Products Division.
   (6) Craco Metals Manufacturing, LLC.
   (7) Custom Stud, Inc.
   (8) Dale/Incor.
   (9) Design Shapes in Steel.
   (10) Dietrich Metal Framing; a Worthington Industries Company.
   (11) Formetal Co. Inc. (The).
   (12) Innovative Steel Systems.
   (13) MarinoWare; a division of Ware Industries.
   (14) Quail Run Building Materials, Inc.
   (15) SCAFCO Corporation.
   (16) Southeastern Stud & Components, Inc.
   (17) Steel Construction Systems.
   (18) Steeler, Inc.
   (19) Super Stud Building Products, Inc.
   (20) United Metal Products, Inc.

2.02 MATERIALS

A. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
   (1) Grade: As required by structural performance.
   (2) Coating: G60.

B. Steel Sheet for Clips: ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:
   (1) Grade: As required by structural performance.
   (2) Coating: G90.
   (3) Gauge: 14 gauge minimum.

2.03 LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
   (1) Minimum Base-Metal Thickness: 0.0428 inch and as indicated.
   (2) Minimum Flange Width: 1-5/8 inches and as indicated.
   (3) Section Properties: As indicated.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges, and as follows:
   (1) Minimum Base-Metal Thickness: Matching steel studs.
   (2) Minimum Flange Width: 1-1/4 inches and as indicated.

C. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths indicated, punched, with stiffened flanges, and as follows:
   (1) Minimum Base-Metal Thickness: 0.0538 inch and as required.
   (2) Flange Width: 1-5/8 inches and as required.
   (3) Section Properties: As indicated.

2.04 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
   (1) Minimum Base-Metal Thickness: 0.0329 inch and as indicated.
   (2) Minimum Flange Width: 1-5/8 inches and as indicated.
   (3) Section Properties: As indicated.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
   (1) Minimum Base-Metal Thickness: Matching steel studs.
   (2) Minimum Flange Width: 1-1/4 inches.

C. Vertical Deflection Clips: Manufacturer's standard bypass and head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
   (1) Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      (a) Dietrich Metal Framing; a Worthington Industries Company.
      (b) MarinoWare, a division of Ware Industries.
      (c) SCAFCO Corporation.
      (d) The Steel Network, Inc.

D. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure.

E. Stiff Clips: Clip capable of supporting design loads indicated through positive mechanical attachment to the stud web. Maximum deflection of the clip/stud assembly under design loads shall be the smaller of 1/8” or the elastic limit load.

2.05 CEILING AND EXTERIOR SOFFIT JOIST FRAMING

A. Steel Ceiling and Soffit Joists: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:
   (1) Minimum Base-Metal Thickness: 0.0329 inch.
   (2) Minimum Flange Width: 1-5/8 inches.
   (3) Section Properties: As indicated.

2.06 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   (1) Supplementary framing.
   (2) Bracing, bridging, and solid blocking.
   (3) Web stiffeners.
   (4) Anchor clips.

(5) End clips.
(6) Foundation clips.
(7) Gusset plates.
(8) Stud kickers, knee braces, and girts.
(9) Joist hangers and end closures.
(10) Hole reinforcing plates.
(11) Backer plates.

2.07 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.
B. Anchor Bolts: ASTM F 1554, Grade 55, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.
C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
D. Powder-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 1190 conducted by a qualified independent testing agency.
E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.
(1) Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.
F. Welding Electrodes: Comply with AWS standards.

2.08 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: SSPC-Paint 20 or DOD-P-21035.
B. Cement Grout: Portland cement, ASTM C 150, Type I; and clean, natural sand, ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
C. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C 1107, with fluid consistency and 30-minute working time.
D. Shims: Load bearing, high-density multimonomer plastic, nonleaching.
E. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

2.09 FABRICATION

A. Fabricate cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
(1) Fabricate framing assemblies using jigs or templates.
(2) Cut framing members by sawing or shearing; do not torch cut.
(3) Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
(a) Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
(b) Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by not less than three exposed screw threads.
(4) Fasten other materials to cold-formed metal framing by welding, bolting, or screw fastening, according to Shop Drawings.
B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.
C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
(1) Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
(2) Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
(1) Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

C. Install load bearing shims or grout between the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations to ensure a uniform bearing surface on supporting concrete or masonry construction.
D. Install sealer gaskets to isolate the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations.

3.03 INSTALLATION, GENERAL

A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.
B. Install cold-formed metal framing according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions" and to manufacturer's written instructions unless more stringent requirements are indicated.
C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
   (1) Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.
D. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened.
   (1) Cut framing members by sawing or shearing; do not torch cut.
   (2) Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
      (a) Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
      (b) Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.
E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
G. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.
H. Install insulation, specified in Division 07 Section "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
I. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.
J. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
   (1) Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.04 LOAD-BEARING WALL INSTALLATION

A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacings as follows:
   (1) Anchor Spacing: To match stud spacing and as shown on Shop Drawings.
B. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs as follows:
   (1) Stud Spacing: As indicated.
C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.
D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
E. Align floor and roof framing over studs. Where framing cannot be aligned, continuously reinforce track to transfer loads.
F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.
G. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
   (1) Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.
   (2) Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
H. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
   (1) If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.
I. Install horizontal bridging in stud system, spaced as indicated on Shop Drawings. Fasten at each stud intersection.
   (1) Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of 2 screws into each flange of the clip angle for framing members up to 6 inches deep.

(2) Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
(3) Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

J. Install steel sheet diagonal bracing straps to both stud flanges, terminate at and fasten to reinforced top and bottom tracks. Fasten clip-angle connectors to multiple studs at ends of bracing and anchor to structure.
K. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.05 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.
B. Fasten both flanges of studs to top and bottom track, unless otherwise indicated. Space studs as follows:
(1) Maximum Stud Spacing: 16 inches and as indicated.
C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
(1) Connect vertical deflection clips to bypassing and infill studs and anchor to building structure.
(2) Connect drift clips to cold formed metal framing and anchor to building structure.
E. Install horizontal bridging in wall studs, spaced in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.
F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, fasteners, and stud girts, to provide a complete and stable wall-framing system.

3.06 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Field and shop welds will be subject to testing and inspecting.
C. Testing agency will report test results promptly and in writing to Contractor and Architect.
D. Remove and replace work where test results indicate that it does not comply with specified requirements.
E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.07 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed metal framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 40 00

SECTION 05 50 00 – METAL FABRICATIONS

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide miscellaneous metal fabrications where indicated on the Drawings, as specified herein, and as necessary for complete installation. The Work of this Section Includes, but is not limied to:

A. Steel framing and supports for overhead doors and trash enclosure doors
B. Steel framing and supports for mechanical and electrical equipment.
C. Steel framing and supports for applications where framing and supports are not specified in other Sections.
D. Shelf angles.
E. Metal bollards.

1.02 RELATED SECTIONS

1. Section 018113 Certification Requirements.

1.03 PRODUCTS FURNISHED, but not installed, under this Section include the following:

A. Loose steel lintels.
B. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
C. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

1.04 SUBMITTALS

A. SHOP DRAWINGS - TYPICAL: Detail fabrication and erection of each metal fabrication indicated. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items. Provide templates for anchors and bolts specified for installation under other Sections.
B. SUBMIT STRUCTURAL ANALYSIS DATA indicating compliance with design loads and provide shop drawings signed and sealed by the qualified Professional Engineer responsible for their preparation.
C. LEED DOCUMENTATION REQUIREMENTS

1. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
2. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
3. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material. (if applicable)

1.05 QUALITY ASSURANCE

A. FABRICATOR QUALIFICATIONS: A firm experienced in producing metal fabrications similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
B. PROFESSIONAL ENGINEER QUALIFICATIONS: Legally qualified to practice in jurisdiction where Project is located, experienced in providing engineering services of the kind indicated, with Professional Liability Insurance as required in Supplementary Conditions.
C. QUALIFY WELDING PROCEDURES AND PERSONNEL according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.3, "Structural Welding Code--Sheet Steel."
3. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

1.06 PERFORMANCE REQUIREMENTS

A. LEED PERFORMANCE REQUIREMENTS

1. Recycled Content: Provide materials with at least 25% recycled or reused content
2. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material must be within 100 miles of project site for credit. (if applicable)

B. STRUCTURAL PERFORMANCE OF METAL STAIRS: Provide metal stairs capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each component of metal stairs.

1. Treads and Platforms of Metal Stairs: Capable of withstanding a uniform load of 100 lbf/sq. ft. or a concentrated load of 300 lbf on an area of 4 sq. in., whichever produces the greater stress.
2. Stair Framing: Capable of withstanding stresses resulting from loads specified above in addition to stresses resulting from railing system loads.
3. Limit deflection of treads, platforms, and framing members to L/360 or 1/4 inch, whichever is less.

1.07 PROJECT CONDITIONS

A. FIELD MEASUREMENTS: Where metal fabrications are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
B. ESTABLISHED DIMENSIONS: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements. Coordinate construction to
C. ENSURE that actual dimensions correspond to established dimensions. Allow for trimming and fitting.

D. COORDINATE INSTALLATION OF ANCHORAGES for metal fabrications. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.01 EXPOSED METAL SURFACES: For metal fabrications exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

2.02 RECYCLED CONTENT OF STEEL PRODUCTS: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

2.03 FERROUS METAL MATERIALS:

A. Steel Plates, Shapes, and Bars: ASTM A 36.
B. Steel Tubing: Cold-formed steel tubing complying with ASTM A 500.
C. Steel Pipe: ASTM A 53, standard weight (Schedule 40), unless another weight is indicated or required by structural loads.
D. Rolled-Steel floor Plate: ASTM A 786, rolled from plate complying with ASTM A 36 or ASTM A 283, Grade C or D.
E. Steel Bars for Gratings: ASTM A 36.
F. Wire Rod for Grating Crossbars: ASTM A 510.
G. Uncoated, Cold-Rolled Steel Sheet: Commercial quality, complying with ASTM A 366; or structural quality, complying with ASTM A 611, Grade A, unless another grade is required by design loads.
H. Uncoated, Hot-Rolled Steel Sheet: Commercial quality, complying with ASTM A 569; or structural quality, complying with ASTM A 570, Grade 30, unless another grade is required by design loads.
I. Galvanized Steel Sheet: ASTM A 653, G90 coating, either commercial quality or structural quality, Grade 33, unless another grade is required for design loads.

2.04 WELDING RODS AND BARE ELECTRODES: Select according to AWS specifications for metal alloy welded.

2.05 ROUGH HARDWARE: Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel and iron shapes as required for framing, supporting or anchoring.

2.06 FASTENERS: zinc-coated fasteners for interior use, or galvanized for exterior use or when built into exterior walls:

A. Bolts and Nuts: Regular hexagon head type, ASTM A-307, Grade A.
B. Lag Bolts: Square Heat type, FS FF-B-561.
C. Machine Screws: Cadmium plated steel, FS FF-S-92.
D. Plain Washers: Round Carbon Steel FS FF-W-92.
E. Toggle Bolts: Tumble wing type, FS FF-B-588, Type, class and style as required.
F. Lock Washers: Helical spring type carbon Steel, FS FF--W-84.

2.07 CAST-IN-PLACE (CIP) ANCHORS: Anchors capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency. Provide threaded or wedge type; galvanized ferrous castings, of either ASTM A 47 malleable iron or ASTM A 27 cast steel, with bolts, washers, and shims as needed, hot-dip galvanized per ASTM A 153.

2.08 EXPANSION ANCHORS: Drilled-in anchor bolt and sleeve assembly complying with FS FF-S-325, Group VIII (anchors, expansion, nondrilling), Type I (internally threaded tubular expansion anchor); and machine bolts complying with FS FF-B-575, Grade 5) with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

A. INTERIOR LOCATIONS: Carbon-steel components zinc-plated to comply with ASTM B 633, Class Fe/Zn 5.
B. AT LOCATIONS EXPOSED TO WEATHER: Alloy Group 1 or 2 stainless-steel bolts complying with ASTM F 593 and nuts complying with ASTM F 594 at locations exposed to weather.

2.09 MANUFACTURERED METAL PRODUCTS:

A. DOWNSPOUT BOOT: “Zurn” # Z199-DC (Downspout Cover) stainless steel unit with inlet,and outlet sized to fit drain pipe as specified in plumbing drawings. Depth to be ordered so face of drain is minimum 1 inch proud of surrounding finished material.
B. CONCEALED COUNTERTOP SUPPORTS: 2.5 inch wide by 1/2 inch thick units fabricated from ASTM A36 hot rolled steel with four (4) pre-drilled mounting holes, in length as required to securely anchor to support framing and to extend to within one (1) inch of edge of countertop overhang, with 35 degree “safe edge” on front of bracket, in black electrostatic powder-coat finish:
    1. BASIS-OF-DESIGN: “CenterlineBrackets Floating Countertop Support Bracket” Series FWM as manufacturered by Centerline Steel LLC., P: 888-960-3854, www.countertopbracket.com
C. CONCEALED SHELF SUPPORTS: 2.5 inch wide by 1/2 inch thick steel unit fabricated from ASTM A36 hot rolled steel with six (6) pre-drilled mounting holes to anchor to support framing and to extend to within one (1) inch of edge of countertop, with 35 degree “safe edge” on front of bracket (for silicone mounting on flat surface), in black electrostatic powder-coat finish:
    1. BASIS-OF-DESIGN: “Wall Mount Shelf Supports” (No. 283.33.941) w/ “Extrusion Rail” (No. 833.74.894) by Hafele America Co., P: 800.423.3531, www.hafele.com/us
D. ABRASIVE METAL NOSINGS (provide typically at stair treads and at exterior formed site steps unless otherwise indicated on the Drawings): Provide extruded aluminum units with solid abrasive-type filler (without ribs) consisting

of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions, and as follows:

1. At exterior site steps, fabricate in length three (3) inches less than full width of tread when abutting adjacent formed surfaces, centered in tread surface.
    a. Embedded Nosing Units: 3/4 to one (1) inch wide, with lip designed to fit at formed edge of steel pan.
    b. Epoxy Filler Color: As selected by Architect from manufacturer's full range of available options.
2. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
3. Apply clear lacquer to concealed surfaces of extruded units set into concrete before installation
4. BASIS OF DESIGN PRODUCT / MANUFACTURER: Spectra Type WP1A; Wooster Products, Inc.
    a. www.wooster-products.com
5. Approved Manufacturers: Subject to compliance with requirements, provide equal products by one of the following:
    a. ACL Industries, Inc.
    b. American Safety Tread Co., Inc.
    c. Amstep Products.
    d. Armstrong Products, Inc.
    e. Balco Inc.
    f. Granite State Casting Co.
    g. Wooster Products Inc.

E. WIRE SECURITY MESH (only in partitions above 10' AFF): ASTM A-185 welded steel wire mesh sheet (not rolled) - 6 x 6 - W2.9 x 2.9 (#8 gage wire) minimum.
F. EXPANDED-STEEL SECURITY MESH: Flattened expanded steel mesh fabricated from .042 inch (18 gage) steel with 1/2" spacing of perforated openings: "Ametco" flattened 1/2" x # 18 (.039 inch thick after flattening) or approved equal.
G. MAXIMUM SECURITY MESH: .070 inch thick (14 gage) flattened, expanded steel mesh, 1.40 lbs/SF minimum with 1/2" spacing of perforated openings of .265 x 1.0 inch maximum: "Amico" flattened ASM-.50-13F with "Amico" Secura Clips at all fasteners to be spaced at 8" vertical x 16" horizontal (at stud framing) or approved equal.
H. CHANNEL-SUSPENSION SYSTEM: Pre-engineered assemblies of 0.093 inch thick (12 gage) minimum pre-punched channels and shapes, with accessory hanger-rods (1/2 inch diameter min), beam-clamps, washers, nuts, inserts, fittings and other components in electro- or hot-dipped-galvanized finish typically.
    1. APPROVED MANUFACTURERS / SYSTEMS: Cooper B-Line, Kindorf by Thomas & Betts, Hohmann & Barnard, Unistrut, Versabar or equivalent system in compliance with requirements herein.
    2. CAST-IN-PLACE (CIP) SUSPENSION CHANNEL INSERTS: Galvanized, slotted-type "U" shaped galvanized steel channel inserts or continuous channels (as indicated on the Drawings) for minimum 3,400 pound per LF uniform load per foot, with maximum height of 1-3/16 inch
        a. Basis-of-Design: Unistrut # P3760 series heavy-duty concrete inserts
    3. HANGER RODS: Mild low carbon steel, fully threaded or threaded each end, with nuts as required to position and lock rod in place, in manufacturer's standard electro- or hot-dipped galvanized finish.
    4. INTERIOR, DRY AREA FINISH: Any manufacturer's standard phosephate and baked enamel/epoxy, electro-galvanized, or 15 mil minimum thickness polyvinyl chloride (PVC) finish
    5. EXTERIOR OR DAMP AREA FINISH: Hot-dipped galvanized (other finishes not permitted)

2.10 FABRICATION OF MISCELLANEOUS METALWORK - GENERAL

A. SHOP ASSEMBLY: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
B. SHEAR AND PUNCH METALS cleanly and accurately. Remove burrs.
C. EASE EXPOSED EDGES to a radius of approximately 1/32 inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
D. WELD CORNERS AND SEAMS CONTINUOUSLY to comply with the following:
    1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
    2. Obtain fusion without undercut or overlap.
    3. Remove welding flux immediately.
    4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
E. PROVIDE FOR ANCHORAGE of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
F. CUT, REINFORCE, DRILL, AND TAP METAL FABRICATIONS to receive finish hardware, screws, and similar items.
G. FABRICATE JOINTS that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.
H. ALLOW FOR THERMAL MOVEMENT resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening up of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

I. FORM EXPOSED WORK TRUE TO LINE AND LEVEL with accurate angles and surfaces and straight sharp edges.
J. REMOVE SHARP OR ROUGH AREAS on exposed traffic surfaces.
K. FORM EXPOSED CONNECTIONS WITH HAIRLINE JOINTS, flush and smooth, using concealed fasteners where possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.

2.11 MISCELLANEOUS STEEL FRAMING AND SUPPORTS: Provide steel framing and supports that are not a part of structural-steel framing as necessary to complete the Work. Fabricate from structural-steel shapes, plates, and bars of welded construction, unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction retained by framing and supports. Cut, drill, and tap units to receive hardware, hangers, and similar items.

A. GALVANIZE exterior miscellaneous framing and supports and when installed in exterior walls, and where indicated.
B. CAST-IN-PLACE (CIP) UNITS: When units will be cast into concrete or built into masonry, fabricate with integrally welded steel strap anchors 1-1/4 inches wide by 1/4 inch thick by 8 inches long at 24 inches o.c., unless otherwise indicated. Furnish inserts if units must be installed after concrete is placed.
C. LOOSE BEARING AND LEVELING PLATES: Provide at steel items bearing on masonry or concrete Work. Drill plates to receive anchor bolts and for to facilitate grouting. Galvanize after fabrication.
D. LOOSE STEEL MASONRY LINTELS: Fabricate from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Weld adjoining members together to form a single unit where indicated. Size loose lintels to provide bearing length at each side of openings equal to one-twelfth of clear span, but not less than 8 inches, unless otherwise indicated.
E. SHELF ANGLES: Fabricate from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete. Align expansion joints in angles with indicated control and expansion joints in cavity-wall exterior wythe. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.
F. ROOFTOP UNIT SUPPORT-FRAMES: Provide continuous steel-angle frame supports under all rooftop HVAC units, roof scuttles, roof smoke vents, skylights, exhaust fans and similar rooftop mounted equipment.
   1. Minimum angle size shall be 4" x 4" x 3/8" unless otherwise indicated.
   2. Field weld angle frames to the adjacent bar joists with horizontal leg flush with top of joists.
G. ANGLE-FRAME AT ROOFTOP OPENINGS: Provide continuous, four (4) sided steel-angle frame at all openings in the roof deck larger than 9" round or square, field welded to the adjacent bar joists.
   1. Provide 3" x 3" x 3/8" minimum angle size unless otherwise indicated.
H. BURGLAR BARS: Provide 5/8" diameter smooth bars at 6" OC each way for installation at all angle framed roof openings including mechanical equipment and ductwork penetrations. Weld bars at intersections and to the perimeter of the angle frame.
I. STEEL OVERHEAD-DOOR FRAMES: Fabricate frames from minimum 3/8” thick steel plate and/or shapes, fully welded. Plug-weld built-up members and continuously weld all exposed joints. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than 10 inches o.c. Reinforce frames and drill and tap as necessary to accept finish hardware. Provide integrally welded steel strap anchors for securing door frames into adjoining concrete or masonry. Extend bottom of frames to floor with steel angle clips welded to frames for anchoring frame to floor with expansion shields and bolts. Galvanize exterior steel frames.
J. STEEL SUPPORTS FOR OVERHEAD DOORS & GRILLES: Fabricate from steel pipe, tube or channel sections as indicated on the Drawings or as recommended by manufacturer of door/grille unit.
K. EMBEDDED PIT-ANGLES /CHANNEL FRAMES: Provide galvanized perimeter steel angles and channel assemblies with welded studs for concrete embedment at dock leveler pits, edge of docks, and similar elements. Galvanize after fabrication at both interior and exterior conditions.

2.12 MISCELLANEOUS STEEL FABRICATIONS & TRIM: Unless otherwise indicated, fabricate units from structural-steel shapes, plates, and bars with continuously welded joints, and smooth exposed edges. Miter corners and use concealed field splices where possible. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work. Provide anchors, welded to trim, for embedding in concrete or masonry construction, spaced not more than 6 inches from each end, 6 inches from corners, and 24 inches OC, unless otherwise indicated. Galvanize exterior miscellaneous steel trim and in exterior walls, and where indicated.

A. PIPE BOLLARDS: Fabricate from Schedule 80 steel pipe. Anchor bollards in place with concrete footings. Support and brace bollards in position in footing excavations until concrete has been placed and cured
B. PIPE GUARDS: Fabricate from 3/8-inch-thick by 12-inch-wide steel plate, bent to fit flat against the wall or column at both ends and to fit around pipe with 2-inch clearance between pipe and pipe guard unit minimum. Drill each end for two 3/4-inch anchor bolts.

2.13 STEEL LADDERS: Fabricate for locations shown, with dimensions, fabrication details and anchorages as follows:

A. COMPLY WITH ANSI A14.3, unless otherwise indicated.
B. SIDERAILS:
   1. Flat Bar Design: Continuous, 1/4 x 3 - inch steel flat bars, with eased edges, spaced 18 inches apart
   2. Steel Pipe Design: Continuous steel pipe with maximum clear 16” spacing
      a. Sizing to be delegated to ladder fabricator and must meet all specification requirements.

C. SAFETY POST EXTENSION: provide on one side of ladder to extend not less than 42 inches above roof edges.
D. ABRASIVE BAR RUNGS: 3/4 inch diameter round abrasive surfaced rungs spaced 12 inches OC. Fit rungs in centerline of side rails; plug-weld and grind smooth on outer rail faces. Abrasive surface may be provided by coating rung with aluminum-oxide granules set in epoxy-resin adhesive, or by using a manufactured rung filled with aluminum-oxide grout, at fabricators option.
E. SUPPORT EACH LADDER at top and bottom and not more than 60 inches OC with welded or bolted bent-steel or hot-formed angle steel brackets of minimum 1/4" thickness x 3” H x 3” wide (at support) x 5” high, providing a minimum 3” clearance between rungs and supporting substrate. Size brackets to support design loads specified in ANSI A14.3.

2.14 LADDER SAFETY CAGES: Provide safety cage around ladder whenever the top of the ladder is eighteen (18) feet or more above finish floor (AFF), and when so provided, start ladder cage at 12 feet AFF continuously to the roof. Fabricate as follows:

A. HOOPS: 1/4-by-4-inch flat bar hoops at four (4) feet centers maximum, creating a round shaped cage not less than 27 inches or more than 30 inches from the centerline of the rungs, and not less than 27 inches wide overall. Attach hoops to back side of ladder so that continuous three (3) inch hand grip clearance at ladder siderails is maintained.
B. VERTICAL BARS: 3/16-by-1-1/2-inch flat bars secured to each hoop, centered 9.5 inch maximum around hoop perimeter.

2.15 METAL SHIPS' LADDERS: Provide where indicate, fabricated of open-type construction with steel channel or plate stringers, pipe and tube railings, and bar grating treads, unless otherwise indicated. Provide brackets and fittings for installation. Comply with applicable requirements of Division-05 Section "Decorative Metal Railings” for railings.

2.16 STEEL STAIRS (INTERIOR AND EXTERIOR):

A. PROVIDE COMPLETE STAIR ASSEMBLIES, including metal framing, hangers, struts, handrails, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure. Join components by welding, unless otherwise indicated. Use connections that maintain structural value of joined pieces. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.
B. PREASSEMBLE STAIRS IN SHOP to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
C. STAIR FRAMING: Fabricate stringers of structural-steel channels, plates, or a combination of both, as indicated. Provide closures for exposed ends of stringers. Construct platforms of structural-steel channel headers and miscellaneous framing members as indicated. Bolt or weld headers to stringers; bolt or weld framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
D. INTERIOR CONCRETE-FILLED METAL-PAN STAIR TREADS AND PLATFORMS: Form risers, sub-tread pans, and sub-platforms from uncoated cold-rolled steel sheet of thickness needed to comply with performance requirements - but not less than 0.067 inch (14 gage). Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers. Shape metal pans to include nosing integral with riser, unless nosings are indicated otherwise. Attach abrasive nosings to risers, when indicated.

2.17 EXTERIOR METAL BAR-GRATING STAIR & PLATFORMS:

A. PRODUCE metal bar gratings per NAAMM marking system that comply with the Metal Bar Grating Standard "Standard Specifications for Metal Bar Grating and Metal Bar Grating Treads" published in ANSI/NAAMM A202.1 "Metal Bar Grating Manual."
B. WELDED STEEL GRATINGS: Mark/Size: W 15 4 (welded with bearing bars at 15/16 inch OC and cross bars at 4 inch OC) of 1-1/2 inch deep bars min as required by indicated loads, with serrated traffic surface. Hot dip galvanize finish with coating weight of not less than 1.8 oz. PSF of coated surface.
C. FABRICATE REMOVABLE GRATING SECTIONS with banding bars attached by welding to entire perimeter of each section. Include anchors and fasteners which are tamper proof, for attachment to supports. Furnish threaded bolts with nuts and washers for each clip required. Furnish self-drilling fasteners with washers for each clip required.
D. ATTACH TOE PLATES to grating by welding, unless otherwise indicated. Provide toe plate height of 4 inches, unless a greater height is indicated.
E. FABRICATE CUTOUTS in grating sections for penetrations indicated. Arrange layout of cutouts to permit grating removal without disturbing items penetrating gratings. Edge band openings in grating that interrupt 4 or more bearing bars with bars of same size and material as bearing bars. Connect and fully weld to adjacent bearing bars so that structural capacity is not affected.
F. DO NOT NOTCH BEARING BARS at supports to maintain elevation.
G. AVAILABLE MANUFACTURERS: Subject to compliance with requirements, manufacturers offering metal bar gratings that may be incorporated in the Work include, but are not limited to, Alabama Metal Industries Corp.; Barnett/Bates Corp.; Blaw Knox Grating Div., Blaw Knox Corp.; IKG Industries; Klemp Corp.; McNichols Co., Ohio Gratings, Inc., Reliance Steel Products, Inc.; and Trueweld, Inc.

2.18 FINISHES:

A. COMPLY WITH NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Finish metal fabrications after assembly.
B. PREPARATION FOR SHOP PRIMING: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed metal fabrications:

1. Exteriors (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Interiors (SSPC Zone 1A): SSPC-SP 3, "Power Tool Cleaning."

C. APPLY SHOP PRIMER to uncoated surfaces of metal fabrications, except those that are shop finished, units with galvanized finishes, at units intended to be embedded in concrete or masonry, or covered with sprayed-on fireproofing, unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1," for shop painting. Stripe paint corners, crevices, bolts, welds, and sharp edges.

D. HOT-DIP GALVANIZED FINISH: Apply zinc coating by the hot-dip process to comply with ASTM A 123, for steel and iron products, or ASTM A 153 for steel and iron hardware. Fill vent holes and grind smooth after galvanizing.

1. Galvanize all exterior steel assemblies, including associated attachments and brackets.

PART 3 - EXECUTION:

3.01 FASTENING TO IN-PLACE CONSTRUCTION: Provide anchorage devices and fasteners where necessary for securing metal fabrications to in-place construction. Include threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors.

3.02 CUTTING, FITTING, AND PLACEMENT: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.03 FIT EXPOSED CONNECTIONS accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

3.04 FIELD WELDING: Comply with the following requirements:

A. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
B. Obtain fusion without undercut or overlap.
C. Remove welding flux immediately.
D. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

3.05 SETTING BEARING AND LEVELING PLATES: Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surface of plates. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout. Use non-shrink, non-metallic grout unless otherwise indicated. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.06 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings, if any. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns. Where grout space under bearing plates is indicated at girders supported on concrete or masonry, install as specified above for setting and grouting bearing and leveling plates.

3.07 INSTALL PIPE COLUMNS on concrete footings with grouted baseplates. Position and grout column baseplates as specified above for setting and grouting bearing and leveling plates. Do not grout baseplates of columns supporting steel girders until girders are installed and leveled.

3.08 FILL BOLLARDS solidly with concrete, mounding top surface and finishing smooth.

3.09 INSTALLATION OF DOWNSPOUT BOOT: Mount to substrate securely through dual mounting straps. Install with top set 18" above grade unless indicated otherwise. Connect bottom to storm-drainage system piping. Apply sealant in color to match boot finish, all around gap between downspout and boot, sloping top surface away from downspout for water-tight seal.

3.10 INSTALL METAL STAIRS by welding stair framing to steel structure or to weld plates cast into concrete, unless otherwise indicated.

3.11 FIELD WELDING: Comply with applicable AWS specification for procedures of manual shielded metal arc welding, for appearance and quality of welds, and for methods used in correcting welding work. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Grind exposed welded joints smooth and restore finish to match finish of adjacent surfaces.

3.12 CLEANING & PROTECTION:

A. TOUCHUP PAINTING: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
B. GALVANIZED SURFACES: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
C. PROTECT finishes of metalwork during construction period by use of temporary protective coverings. Remove protective covering at time of Substantial Completion. Restore finishes damaged during installation and construction period so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

3.13 ADJUSTING AND CLEANING

A. TOUCHUP PAINTING: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting (but with low VOC in field) to

comply with SSPC-PA 1 for touching up shop-painted surfaces. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. GALVANIZED SURFACES: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780, using low VOC galvanizing repair finish material.

END OF SECTION 05 50 00

SECTION 05 70 00 – DECORATIVE METAL

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide ornamental, exposed decorative metal, where indicated on the Drawings, as specified herein, and as necessary for complete installation. Types of applications include but are not limited to the following:

A. Exterior Metal Canopies
B. Interior decorative metal with blackened finish

1.02 DESIGN/BUILD: provide Professional Engineering Design Services for the following:

A. Design of exterior Metal Canopies

1.03 RELATED SECTIONS: The following include requirements for the Work of this Section:

A. Refer to Division-05 “Metal Fabrications” Section for other requirements of steel work, including submittals, field measurement, shop priming and general installation requirements.

1.04 REFERENCED STANDARDS: American Institute of Steel Construction (AISC)’s “Code of Standard Practice”, as follows:

A. AISC Section 10.2.1: Tolerances – one-half of standard
B. AISC Section 10.2.3: Weld show through minimized
C. AISC Section 10.2.4: Joint Gap Tolerances Minimized
D. AISC Section 10.2.5: Welds Ground Smooth
E. AISC Section 10.2.6: Piece Marks Hidden
F. AISC Section 10.2.7: Mill Marks Removed
G. AISC Section 10.2.8: Surface Defects Minimized
H. AISC Section 10.4.1: Special Care in Processing AESS
I. AISC Section 10.4.2: Tolerances – one-half of standard

1.05 STRUCTURAL PERFORMANCE OF DECORATIVE METAL FABRICATIONS: Provide units capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each component:

A. Deflection Limits: Design awning framing systems to withstand design loads without deflections greater than 1/180 of the span with the following applied loads.
B. Gravity loads: Unit self-weight plus local code-required loads as indicated on the structural drawings.
C. Wind / Seismic loads: Per requirements of applicable local building code.

1.06 SUBMITTALS

A. PRODUCT DATA: For each type of product indicated, including finishing materials.
B. SHOP DRAWINGS: Include plans, elevations, component details, and attachments to other work of decorative metal. Indicate materials and profiles of each decorative metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items. Clearly indicate which components are decorative metalwork members, and include details addressing special requirements for fabrication and erection required.
   (1) Indicate oversized weld size, length and type – and identify special grinding, finish and profile of welds required.
   (2) Indicate to which direction bolt heads will be oriented.
   (3) Clearly indicate which surfaces or edges are exposed and what class of surface preparation will be used.
   (4) Indicate special tolerances and erection requirements for decorative metalwork.
C. PROVIDE TEMPLATES for anchors and bolts specified for installation under other Sections.

1.07 QUALITY ASSURANCE

A. FABRICATOR QUALIFICATIONS: A firm experienced in producing decorative metal fabrications similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
B. PROFESSIONAL ENGINEER QUALIFICATIONS: Legally qualified to practice in jurisdiction where Project is located, experienced in providing engineering services of the kind indicated, with Professional Liability Insurance as required in Supplementary Conditions.
   (1) WELDING: Qualify procedures and personnel according to the following:
      (a) AWS D1.1, "Structural Welding Code--Steel."
      (b) AWS D1.2, "Structural Welding Code--Aluminum."
C. CONSTRUCT MOCKUPS to demonstrate aesthetic effects and qualities of materials and execution not less than four (4) weeks before fabrication of decorative metalwork. Build mockups to comply with the following, using materials indicated for the final Work required.
   (1) Locate on-site or in the fabricator’s shop as directed by the Architect. Mockups must be full-size pieces unless the Architect approves smaller, representative units to be provided.
   (2) Notify the Architect one (1) week in advance of the dates and times when mockups will be available for review.
   (3) Demonstrate the proposed range of aesthetic effects regarding each element.
   (4) Provide complete, finished surfaces, including surface preparation and finishing systems indicated.
   (5) Obtain Architect’s approval of mockups before starting fabrication of Work.
   (6) Maintain mockups during construction undisturbed as a standard for judging completed Work. Approved mockups in undisturbed condition at time of Substantial Completion may become part of the completed Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. STORE DECORATIVE METAL INSIDE a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.
B. DELIVER AND STORE CAST-METAL PRODUCTS in wooden crates surrounded by sufficient packing material to ensure that products will not be cracked or otherwise damaged.

1.09 PROJECT CONDITIONS

A. FIELD MEASUREMENTS: Verify actual locations of walls and other construction contiguous with decorative metal by field measurements before fabrication and indicate measurements on Shop Drawings.
B. ESTABLISHED DIMENSIONS: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating railings without field measurements. Coordinate wall and other contiguous construction to ensure that actual dimensions correspond to established dimensions. If practical, provide allowance for trimming and fitting at site.

1.10 COORDINATION - COORDINATE INSTALLATION OF ANCHORAGES for decorative metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.11 PRE-INSTALLATION CONFERENCE: Schedule and conduct a conference at the project site per requirements of Division-01 requirements. Include representatives of the Contractor, fabricator, erector, and the finish applicator. Review and coordinate requirements for shipping, special handling, attachment of safety cables and temporary erection bracing, touch-up finishing and other requirements of decorative metalwork.

PART 2 - PRODUCTS

2.01 PROVIDE MATERIALS with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

2.02 ALUMINUM

A. Provide aluminum materials of alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.
B. Extruded Bars and Shapes: ASTM B 221, Alloy 6063-T5/T52.
C. Drawn Seamless Tubing: ASTM B 210 or ASTM B 483, Alloy 6063-T832.
D. Plate and Sheet: ASTM B 209 Alloy 5005-H32.
E. Die and Hand Forgings: ASTM B 247, Alloy 6061-T6.
F. Castings: ASTM B 26, Alloy A356.0-T6.

2.03 STEEL AND IRON

A. Castings: Either gray or malleable iron, unless otherwise indicated.
B. Gray Iron: ASTM A 48, Class 30, unless another class is indicated or required by structural loads.
C. Malleable Iron: ASTM A 47.
D. Weathering Steel: US Steel's "CorTen" corrosion retarding steel, meeting ASTM A 588 (Cor-Ten B") with a yield strength of at least 50 KSI, and thin-steel sheet meeting ASTM A 606.

2.04 STAINLESS STEEL:

A. Stainless-Steel Sheet, Strip, Plate, and flat Bars: ASTM A 666, Type 304 unless noted otherwise
B. Stainless-Steel Bars and Shapes: ASTM A 276, Type 304 unless noted otherwise

2.05 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:
B. Aluminum Items: Type 304 stainless-steel fasteners.
C. Uncoated Steel Items: Plated steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed, Type 304 stainless-steel fasteners where exposed.
D. Dissimilar Metals: Type 304 stainless-steel fasteners.
E. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.
F. Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work, unless otherwise indicated.
G. Anchors: Provide anchors, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed.

2.06 FABRICATION OF DECORATIVE METAL – GENERAL:

A. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
B. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces:
C. Form decorative metalwork elements to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces.
D. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
E. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

F. Form simple and compound curves in bars and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.
G. Cut, drill, and punch metals cleanly and accurately.
H. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
I. Mill joints to a tight, hairline fit. Cope or miter corner joints.
J. Fabricate connections that will be exposed to weather in a manner to exclude water.
K. Provide weep holes where water may accumulate.
L. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items, unless otherwise indicated.
M. Comply with AWS for recommended practices in shop welding. Weld behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded joints of flux, and dress exposed and contact surfaces.
N. Galvanize all exterior decorative fabrications, including associated brackets and fasteners.

2.07 SPECIAL FABRICATION REQUIREMENTS FOR DECORATIVE METAL: Locate field joints at concealed locations or as approved by the Architect. Detail decorative metal assemblies to minimize field handling and to expedite erection. Fabricate decorative metal with exposed surfaces smooth, square and of surface quality consistent with the approved mock up(s). Use special care in handling and shipping decorative metal both before and after shop finishing. In addition to special care used to handle and fabricate decorative metal, employ the following special fabrication techniques, as applicable:

A. Reduce fabrication tolerance to half of the normal tolerance required in the Code of Standard Practice Section 10.
B. Grind all exposed welds smooth. At groove welds, make welds flush with the surfaces on each side and within +1/16 to -0 inch of the plate thickness.
C. Oversize exposed fillet welds and ground-contour or blend to provide a smooth transition and to match the profile on approved mock-up(s).
D. Provide continuous welds typically of uniform size and profile, where welding is indicated
E. Minimize weld “show-through” on the far side of an exposed connection by grinding distortions and markings to a smooth profile with the adjacent material.
F. Maintain a uniform gap of 1/8 inch (+/- 1/32 inch) at all copings, blocking and joint gaps.
G. Fabricate to hide piece marks in the final structure, or make with media to permit full removal after erection.
H. Deliver decorative metal without mill marks (stenciled, stamped raised etc) in exposed locations. Mill marks may be omitted by cutting of mill material to appropriate lengths where possible. Where not possible, fill and/or grind to a surface finish consistent with the approved mock up.
I. Grind all exposed edges of sheared, punched or flame-cut steel to match approved mockup.
J. Weld-seal open ends of round and rectangular hollow structural sections with 3/8 inch thick closure plates. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where AESS is exposed to weather.

2.08 DECORATIVE METAL CANOPY FABRICATION:

A. FABRICATE UNITS in conformance to general design indicated on the Drawings, from extruded shapes and tubes. Miter frame members at exposed corners and connect with concealed splice plates, as applicable. Provide weep-holes on bottom sides of exterior members at regular spacing.
B. WELDING: Interconnect members with full-length, full-penetration welds, unless otherwise indicated. Use welding method appropriate for metal and finish indicated and that develops full strength of members joined. Finish exposed welds and surfaces smooth, flush, and blended to match adjoining surfaces.
C. BRACKETS, FITTINGS, AND ANCHORS: Provide wall brackets, fittings, and anchors to connect units to other work, unless otherwise indicated. Furnish inserts and other anchorage devices to connect units to substrate. Coordinate anchorage devices with supporting structure.

2.09 SHOP CONNECTIONS: Provide bolt type, finish, and alignment of bolt heads as indicated on the approved Shop Drawings. Appearance and quality of welds must be consistent with the approved mockup. Assemble and weld built-up sections by methods that will maintain alignment of members without warp exceeding the tolerance indicated.

2.10 SPECIAL DECORATIVE METAL FINISHES

A. ALUMINUM FINISHES: Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
B. Class II, Anodic Finish: AA-M12C22A31 clear anodized coating or AA-M12C22A32/A34 colored anodized coating (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Architectural Class II, clear or integrally colored or electrolytically deposited color coating 0.010 mm or thicker) complying with AAMA 611.
C. Color: As indicated on the Drawings, or if not indicated, as selected by Architect from full-range of available colors.

2.11 SHOP-FINISHED STEEL:

A. NATURAL STEEL (CLEAR) FINISH: Where indicated in the Drawings as “NATURAL FINISHED” or “CLEAR STEEL FINISH”, provide the following shop-applied finish on steel sheet or shapes to match the Architect’s finish sample, including surface sheen and texture.
   (1) MATERIALS:
      (a) ABRASIVE PADS: general purpose pad equal to Scotch-Brite # 7447 - “Maroon” colored
   (2) CLEAR POWDER-COAT: Cross-linked baked-enamel of TGIC polyester powder intended for application by electrostatic or tribo-charged spraying.

(3) SURFACE PREPARATION: After cutting, forming, welding and other fabrication is complete, and welds have been ground smooth, degrease residual mill oil or grease, cutting compounds and other soluble contaminates with denatured alcohol per SSPC-SP1 “solvent cleaning” requirements. After degreasing, hand sand with abrasive pad to remove loose mill scale, loose rust, paint and other detrimental foreign material per SSPC-SP2 “Hand Tool Cleaning” requirements. Repeat until residual rust is completely removed.
(4) TORCH SURFACES after cleaning to remove all residual moisture from the surface.
(5) APPLY POWDER COAT FINISH until a consistent clear, natural steel finish is achieved. Do not apply in thickness that will appear milky or hazy when dry.

2.12 COLORED POWDER-COAT FINISH: Provide minimum 1.5 mil thick continuous, cross-linked baked-enamel powder-coat finish, consisting of TGIC polyester power applied by electrostatic or tribo-charged spraying, then baked in a curing oven to fuse the deposited powder to the metal substrate, in full compliance with coating manufacturer’s written instructions for pretreatment, application, minimum dry-mil thickness (if thicker) and baking procedures.

2.13 BLACKENED FINISH (POWDER-COAT): Where indicated in the Drawings as “blackened” or blackened steel finish, provide the following shop-applied powder-coat finish on steel sheet or steel shapes to match the Architect’s blackened steel finish sample, including color, surface sheen and texture.

A. POWDER-COAT MATERIAL: TGIC polyester powder coating of the “Super Durable TGIC” class, with a blended colored and/ or finish application necessary to simulate the appearance of black-oxide on steel. The power coated finish must meet or exceed the following:

(1) ASTM D3359, Measuring Adhesion by Tape Test, Method B, coating retention of not less than 95%.
(2) ASTM D2794, Impact Resistance, minimum resistance to impact not less than 120 in. /lb.
(3) ASTM D3363, Film Hardness by Pencil Test, minimum hardness: 2H.
(4) THICKNESS: Minimum finish film thickness of 2-3 mils as measured by manufacturer’s standard powder coat measurement and inspection procedures.

B. PRETREATMENT: Prepare metal surfaces with a pre-treatment cleaning system to remove foreign material and to properly prepare the surface to achieve the coating system requirements specified above.
C. CURING: Heat cure in accordance with powder-coat finish manufacturer’s prescribed curing schedule to permanently bond the finish to the metal substrate.

PART 3 - EXECUTION

3.01 EXAMINATION

A. EXAMINE SUBSTRATES AND CONDITIONS, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative metal.
B. PROCEED WITH INSTALLATION only after unsatisfactory conditions have been corrected.
C. EXAMINATION OF MATERIALS: Check decorative metal members upon delivery for twist, kinks, gouges or other imperfections which might result in rejection of the appearance of the member. Coordinate remedial actions with fabricator prior to erection.

3.02 PREPARATON: Provide connections for temporary shoring, bracing and supports only where noted on the approved Erection Drawings. Temporary connections not shown must be made at locations not exposed to view in the final structure or as approved by the Architect.

A. HANDLE, LIFT AND ALIGN PIECES using padded slings and/or other protection required to maintain the appearance of the decorative metal through the process of erection.

3.03 ERECTION: Set decorative metalwork accurately in locations and to elevations indicated, and according to AISC specifications referenced herein. In addition to the special care used to handle and erect decorative metalwork, employ the following erection techniques:

A. Erection Tolerances must meet the requirements of Chapter 10 of the AISC Code of Standard Practice.

3.04 INSTALLATION, GENERAL

A. PROVIDE ANCHORAGE DEVICES and fasteners where needed to secure decorative metal to in-place construction.
B. PERFORM CUTTING, DRILLING, AND FITTING REQUIRED to install decorative metal. Set products accurately in location, alignment, and elevation; measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.
C. FIT EXPOSED CONNECTIONS ACCURATELY TOGETHER to form tight, hairline joints or, where indicated, with uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of decorative metal, restore finishes to eliminate evidence of such corrective work.
D. DO NOT CUT OR ABRADE FINISHES that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.

(1) Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.

E. RESTORE PROTECTIVE COVERINGS that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.
F. CORROSION PROTECTION: Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
G. GRIND FIELD WELDS SMOOTH in the connections of decorative metal members. Comply with requirements for “fabrication of AESS” above for field connections, and as follows:

(1) Bolt Head Orientation: all bolt heads in a connection must be oriented to one side
(2) Remove run-out tabs, erection bolts, and other steel members added to connections for alignment, fit-up, or welding in the field must be fully removed.

(3) Install field groove welds to eliminate the need for backing bars and to permit their removal after welding.
(4) Remove welds at run-out tabs to match adjacent surfaces and grind smooth.
(5) Plug weld holes for erection bolts and grind smooth.
(6) Field-fill all welding access holes cut into the web at intersections with flanges or W shapes and at structural tees for field welding of the flanges. Perform filling with proper procedures to minimize restraint and address thermal stresses in Group 4 and 5 shapes. Weld profile, quality and finish mist be consistent with mockup(s).

3.05 INSTALLING ORNAMENTAL AWNINGS: Mount units at heights and in positions indicated. Secure to framing and blocking with specified fasteners.

3.06 CLEANING

A. CLEAN METALS BY WASHING THOROUGHLY with clean water and soap, rinsing with clean water, and drying with soft cloths, unless otherwise recommended by the fabricator or metal finish manufacturer.
B. TOUCHUP PAINTING: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material.
C. GALVANIZED SURFACES: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.07 AESTHETIC ACCEPTANCE: The Architect will observe installed decorative metalwork to determine acceptability, based on conformance with the Approved mockup(s).

3.08 ADJUSTING AND CLEANING: Clean and touchup paint or finish field welds, bolted connections, and abraded areas of shop paint to blend with adjacent surfaces of decorative metalwork. Clean field welds, bolted connections and abraded areas of galvanized surfaces to comply with ASTM A780. Perform touch-up work in accordance with applicable Division-09 requirements

3.09 PROTECTION

A. PROTECT FINISHES OF ORNAMENTAL METAL from damage during construction period with temporary protective coverings approved by ornamental metal fabricator. Remove protective covering at time of Substantial Completion.

3.10 RESTORE FINISHES DAMAGED DURING INSTALLATION and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 70 00

SECTION 05 73 00 – DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide metal handrails, guards, and integrated railings systems, where indicated on the Drawings, as specified herein, and as necessary for complete installation.

1.02 RELATED SECTIONS: The following include requirements for the Work of this Section:

A. Section 018113 Certification Requirements.
B. Refer to Division-05 “Metal Fabrications” Section for general metal materials and installation requirements
C. Refer to Division-09 “Glazing” Section for glass materials and installation requirements

1.03 DESIGN/BUILD: provide Professional Engineering Design Services for design of metal railings.

1.04 PERFORMANCE REQUIREMENTS

A. LEED PERFORMANCE REQUIREMENTS

1. Recycled Content: Provide materials with at least 25% recycled or reused content
2. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material must be within 100 miles of project site for credit. (if applicable)
3. VOC Emissions Evaluation:Site applied paints and primers must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
4. VOC content requirements for wet-applied products: For site applied paints and primers, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Paints and Coatings Applications, as per the California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings or South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints and coatings.

B. STRUCTURAL PERFORMANCE OF GUARD RAILINGS & HANDRAILS: Provide guards and handrails complying with requirements in ASTM E 985 for structural performance, based on testing performed according to ASTM E 894 and ASTM E 935, and capable of withstanding the following structural loads without exceeding the allowable design working stress of materials involved:

1. Top Rail of Guards: Concentrated load of 300 pounds applied at any point and in any direction, and a uniform load of 50 lbs/ft. applied horizontally and concurrently with uniform load of 100 lbs/ft. applied vertically downward. Concentrated and uniform loads need not be assumed to act concurrently.
2. Handrails Not Serving as Top Rails: Concentrated load of 200 pounds applied at any point and in any direction, and a uniform load of 50 LBS/FT. applied in any direction. Concentrated and uniform loads need not be assumed to act concurrently.
3. Infill Area of Guards: Horizontal concentrated point load of 200 pounds applied to 1 sq. ft at any point in system, including panels, intermediate rails, balusters, or other elements composing infill area. Load on infill area need not be assumed to act concurrently with loads on top rails.

C. THERMAL MOVEMENTS: Provide units that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects of temperature. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 140 deg F, ambient; 180 deg F, on material surfaces.

D. CONTROL OF CORROSION: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.05 QUALITY ASSURANCE

A. FABRICATOR QUALIFICATIONS: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
B. INSTALLER QUALIFICATIONS: Entity with no less than three (3) years of successful experience in installation of Work similar to the requirements for this project, acceptable to the manufacturer of the primary products specified, as verifiable by a current written statement from the manufacturer.
C. QUALIFY WELDING PROCEDURES AND PERSONNEL according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.3, "Structural Welding Code--Sheet Steel."
3. CERTIFY that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

D. SOURCE LIMITATIONS: Obtain each type of railing system component through one source from a single manufacturer.
E. PRODUCT OPTIONS: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Do not

modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

F. GUARDRAIL MOCKUP: Build mockup of guardrail to verify selections made under sample submittals and to demonstrate aesthetic effects and to set quality standards for fabrication and installation. Build mockup for each form and finish of guard railing consisting of not less than two posts or glazed panel supports (as applicable), the top rail (if exists), infill area, handrail, and anchorage system components that are full height and are not less than 72 inches in overall width. Approved guardrail mockup may remain as part of the Work if acceptable to Architect.

1.06 SUBMITTALS

A. LEED SUBMITTAL REQUIREMENTS

1. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
2. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
3. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material. (if applicable)
4. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
5. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealants.

B. SUBMIT PRODUCT DATA of pre-engineered railing systems to include assembly details, connection, and anchorage to adjacent supporting construction as appropriate. Include installation instructions for each type and size of systems to be provided. Include manufacturer's maintenance data.

C. SUBMIT SHOP DRAWINGS to include plans, elevations, sections, details, and attachments to other work. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. SUBMIT MATERIAL SAMPLES for initial selection of products involving color or texture, including mechanical finishes, submit samples of the following:

1. Custom wood picket with metal support picket (at Atrium areas)
2. All other railings as indicated in Drawings
3. Mounting fittings, brackets and accessories.

E. SUBMIT ASSEMBLED MOCKUP SECTION of railing system after approval of materials above, made from full-size components, Show method of finishing members at intersections.

F. QUALITY ASSURANCE REQUIREMENTS

1. Comply with applicable provisions of AWS D1.1 “Structural Welding Code – Aluminum”, AWS D1.3 “Structural Welding Code – Steel”, and AWS 1.6 “Structural Welding Code – Stainless Steel”
2. Welder qualifications: AWS certified for type of welding required.
3. Weld and braze joints in accordance with National Ornamental & Miscellaneous Metals Association (NOMMA) “Voluntary Joint Finish Standards”:

    a. Finish 1: No evidence of a welded joint.

1.07 DELIVERY STORAGE AND HANDLING

A. DELIVER MATERIALS in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

B. STORE MATERIALS inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack materials flat to prevent sagging.

1.08 PROJECT CONDITIONS

A. FIELD MEASUREMENTS: Where railings are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

B. ESTABLISHED DIMENSIONS: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions. Allow for trimming and fitting.

1.09 COORDINATION

A. COORDINATE FABRICATION SCHEDULE with construction progress to avoid delaying the Work.

B. COORDINATE INSTALLATION OF ANCHORAGES for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
C. SCHEDULE INSTALLATION so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

PART 2 - PRODUCTS

2.01 STEEL HANDRAILS AND GUARDRAILS AT EGRESS STAIRS: Fabricate from steel shapes or tube typically (not pipe) to comply with design, dimensions, profiles and details as indicated on the Drawings – and if not indicated, per the following requirements - but not less than that required to withstand the required performance loads. At guardrails, fabricate with not more than four (4) inch clearance at all internal openings and to adjacent floor or wall surfaces:

A. GUARDRAIL FRAMEWORK SUPPORTS: Fabricate from 2 x ¾" inch rectangular tube or solid square steel plate supports at four (4) feet maximum spacing unless otherwise indicated
B. TOP RAIL OF GUARDRAIL: 2 inch wide x 3/4 inch high rectangular tube or solid steel with eased edges. Fabricate with top of rail not less than 42 inches above finished floor (AFF) unless otherwise indicated.
C. BOTTOM RAIL OF GUARDRAILS: 2inch wide x 3/4 inch high tube or solid steel with eased edges, matching depth of guardrail support posts, with minimum two (2) inch clearance to floor unless otherwise indicated
D. BOTTOM RAIL OF GUARDRAILS: Match size and profile of top railing unless otherwise indicated, with minimum two (2) inch clearance to floor unless otherwise indicated
E. GUARDRAIL PICKETS: 2 x ¾" inch solid steel plate between top and bottom rails of guardrails.
F. GUARDRAIL PICKETS: 1/2 inch square tubes between top and bottom rails of guardrails unless otherwise indicated
G. INFILL PANELS: Three (3) inch square welded mesh of 0.25 inch diameter steel wire, with perimeter edge U-channel trim welded to mesh and with welded steel tabs for attachment to railing supports as needed and where called for in Drawings
H. HANDRAILS: Locate top of handrails at 36 inches above nosing line of stairs, placed on both sides of stairs (unless otherwise indicated at "private" stair with less than 10 occupant load) - extending not less than 12 inches beyond top and bottom stair risers.
    1. Support from brackets mounted to guardrail supports or from wall brackets to provide minimum 2-1/4 inch clearance from railing per NFPA Life-Safety Code requirement, and with 1-1/2 inch clear minimum below railing to support members.
    2. Fabricate handrails with wall returns at ends of wall-mounted handrails typically, and interconnect handrailings on inside of stairs to be continuous throughout. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.
    3. Handrail Material: 1-1/2 x ¾" inch square tubing with supports at five (5) feet maximum
I. FABRICATE GUARDRAILS AND HANDRAILS by inter-connecting members using butt-welding or welding with internal connectors, at fabricator's option, unless otherwise indicated. At tee and cross intersections, cope ends of intersecting members to fit contour of tube to which end is joined, and weld all around. Form changes in direction of handrails and rails as follows:
    1. By inserting prefabricated concealed sleeves or fittings, and mitering railings members flush.
    2. Close exposed ends of handrail and railing members with prefabricated end fittings.
    3. Grind interconnected surfaces to be flush, and ease all fabricated edges typically.
J. PROVIDE MISCELLANEOUS FITTINGS, brackets, end closures, flanges, and anchors for interconnecting railings and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work. Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.
K. CONNECT RAILING POSTS to stair framing by direct welding, unless otherwise indicated in Drawings.
L. TYPICAL FINISH of handrails, guard railings, and fittings:
    1. Galvanize and prime paint handrails and guardrails when located at exterior conditions
    2. Prime paint units only at interior locations, for field finishing per Division-09 Painting Section.
    3. Provide handrails and guards of stainless-steel materials throughout

2.02 FASTENERS: Provide the following:

A. Aluminum Components: Type 304 stainless-steel fasteners.
B. Stainless-Steel Components: Type 304 stainless-steel fasteners.
C. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless-steel fasteners where exposed.
D. Dissimilar Metals: Type 304 stainless-steel fasteners.
E. Provide tamper-resistant flat-head machine screws for exposed fasteners, unless otherwise indicated.

2.03 ANCHORS: Provide cast-in-place or torque-controlled expansion anchors, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

2.04 HARDWOOD AND STEEL RAILING

A. As Indicated in Drawings and Schedules.

2.05 FABRICATION

A. FABRICATE RAILINGS TO COMPLY WITH REQUIREMENTS indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
B. ASSEMBLE units to minimize splicing and assembly. Use connections that maintain structural value of joined pieces.
C. CUT, DRILL, AND PUNCH METALS cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
D. FORM WORK TRUE TO LINE and level with accurate angles and surfaces. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

2.06 FINISHES

A. APPEARANCE OF FINISHED WORK: Variations in appearance of abutting or adjacent pieces are acceptable if they are within less than the range indicated with the approved mockup. Noticeable variations in same plane are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINE adjacent Work for verification of installation tolerances and for compliance with other requirements and conditions affecting installation. Verify critical dimensions, and examine supporting structure and other conditions under which the Work of this Section is to be installed. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALL units where indicated on the Drawings, using mounting methods and fasteners appropriate to substrate as recommended by system manufacturer, in compliance with the manufacturer's instructions, and in compliance with the sealed engineered shop drawings. Install units plumb and level, firmly anchored in locations and at position indicated.

3.03 FASTENING TO IN-PLACE CONSTRUCTION: Provide anchorages and fasteners where necessary for securing the Work of this Section to in-place construction. Provide threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors as appropriate.

3.04 CUTTING, FITTING, AND PLACEMENT: Perform cutting, drilling, and fitting required for installing the work of this Section. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting. Set units accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.05 ADJUST HANDRAILS AND RAILING SYSTEMS before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and railing ends to building construction as follows:

A. Anchor posts to steel by welding directly to steel supporting members.
B. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with post installed anchors and bolts.

3.06 ATTACH HANDRAILS TO WALL with wall brackets. Provide bracket with 2-1/4 inch clearance minimum (per NFPA's "Life Safety Code") from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads. Secure wall brackets to building construction as follows:

A. Use type of bracket with predrilled hole for exposed bolt anchorage.
B. For steel-framed gypsum board assemblies, use hanger or lag bolts set into wood backing/blocking between studs. Coordinate with stud installation to locate backing/blocking members.

3.07 INSTALLATION TOLERANCE:

3.08 ADJUST RAILINGS BEFORE ANCHORING to ensure matching alignment at abutting joints.

3.09 CLEANING & PROTECTION

A. CLEAN ALL EXPOSED SURFACES according to manufacturer's recommendations after removing temporary labels and protective coatings. Clean aluminum by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.
B. PROTECT RAILINGS FROM DAMAGE during construction period with temporary protective coverings approved by guardrail manufacturer. Remove protective coverings at time of Substantial Completion.

3.10 RESTORE FINISHES DAMAGED during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in field to shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 73 00

End of Division 05

DIVISION 06 – WOOD, PLASTICS & COMPOSITES

SECTION 06 10 00 – SHEATHING

SECTION 06 40 00 – ARCHITECTURAL WOODWORK

SECTION 06 41 00 – ARCHITECTURAL CASEWORK

SECTION 06 41 16 – PLASTIC LAMINATE-CLAD ARCHITECTURAL CABINETS

SECTION 06 64 13 – FIBERGLASS REINFORCED PLASTIC (FRP) PANELING

SECTION 06 10 00 – ROUGH CARPENTRY

PART 1 - GENERAL

1.01 PROVIDE nailers, blocking, backing, and plywood which is generally not exposed to view, as required for completion of the Work, where noted on the Drawings, and as specified herein.

A. All rough carpentry inside the existing building must be fire-retardant treated (FRT)

1.02 LUMBER STANDARD: American. Softwood Lumber Std. PS 20 (U.S. Dept. Comm.), S4S, 19% moisture at time of dressing, except as otherwise indicated.

PART 2 - PRODUCTS

2.01 WOOD BLOCKING for support or attachment of other construction, including rooftop equipment bases and support curbs, blocking, cants, nailers, furring and grounds: provide dimension lumber of Construction, Stud, or No. 2 grade with 19 percent maximum moisture content and of any of the following species:

A. Mixed southern pine; SPIB.
B. Hem-fir or Hem-fir (north); NLGA, WCLIB, or WWPA.
C. Spruce-pine-fir (south) or Spruce-pine-fir; NELMA, NLGA, WCLIB, or WWPA.
D. Eastern softwoods; NELMA.
E. Northern species; NLGA.
F. Western woods; WCLIB or WWPA.

2.02 WOOD FURRING: Provide strips for installing plywood or paneling, select boards with no knots capable of producing bent-over nails and damage to panels.

2.03 ENGINEERED WOOD PRODUCTS

A. WOOD BLOCKING OR BACKING PANELS: For concealed wall backing in drywall partitions (including but not limited to application at grab-bars, wall-mounted cabinets, and wall-mounted door stops), provide APA C-D PLUGGED INT plywood with fire-retardant treatment, 3/4" thick minimum, or 2 x 6 fire-retardant treated lumber.
B. ELECTRICAL / PHONE PANELS: DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4 inch thick.

2.04 WOOD-PRESERVATIVE-TREATED MATERIALS

A. PRESERVATIVE TREATMENT BY PRESSURE PROCESS: Comply with AWPA U1, and as follows:

(1) For interior construction not in contact with the ground: Use Category UC2
(2) For exterior construction not in contact with the ground: Use Category UC3b
(3) For items in contact with the ground: Use Category UC4a
(4) For items in contact with the ground in sever climates: Use Category UC4b
(5) For items in contact with the ground in climates with high potential for deterioration: Use Category UC4c
(6) For items in continuous contact with water: Use Category UC5 Marine

B. PRESERVATIVE CHEMICALS: Provide materials acceptable to authorities having jurisdiction and containing no arsenic or chromium.
C. FOR EXPOSED ITEMS PRESERVATIVE ITEMS that are noted to receive a stained or natural finish, use chemical formulations that do not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
D. TREAT ITEMS INDICATED on Drawings, and the following:

(1) Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
(2) Wood sills, sleepers, blocking, furring, and similar concealed members in contact with masonry or concrete.
(3) Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
(4) Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
(5) Wood floor plates that are installed over concrete slabs-on-grade.

2.05 FIRE RETARDANT TREATED (FRT) WOOD MATERIALS (typical interior wood blocking except where preservative treated): Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

A. FIRE-RETARDANT-TREATED LUMBER AND PLYWOOD BY PRESSURE PROCESS: Products with a flame spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test. Use treatment that does not promote corrosion of metal fasteners.

(1) Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.

B. IDENTIFY FIRE-RETARDANT TREATED WOOD with appropriate classification marking of qualified testing agency.

2.06 KILN-DRY WOOD MATERIALS AFTER TREATMENT to a maximum moisture content of 19 percent for lumber and 15 percent for plywood. Do not use material that is warped or does not comply with requirements for untreated material. Mark

each treated item with the treatment quality mark of an inspection agency approved by the American Lumber Standards Committee Board of Review.

2.07 PROVIDE FASTENERS of size and type indicated and that comply with requirements for material and manufacture.

A. Nails, Brads, and Staples: ASTM F 1667.
B. Power-Driven Fasteners: CABO NER-272.
C. Wood Screws: ASME B18.6.1.
D. Screws for Fastening to Cold-Formed Metal Framing: ASTM C 954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
E. Material: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.
F. Where rough carpentry is exposed to weather, in ground contact, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A 153.

PART 3 - EXECUTION

3.01 WOOD SLEEPER, BLOCKING, AND NAILER INSTALLATION:

A. INSTALL WHERE INDICATED and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
B. ATTACH ITEMS TO SUBSTRATES to support applied loading. Recess bolts and nuts flush with surfaces, unless otherwise indicated. Build anchor bolts into masonry during installation of masonry work. Where possible, secure anchor bolts to formwork before concrete placement.
C. PROVIDE PERMANENT GROUNDS of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.02 INSTALL PLYWOOD BACKING PANELS by fastening to studs. Coordinate locations with utilities requiring backing panels. Install fire-retardant treated plywood backing panels with classification marking of testing agency exposed to view.

3.03 INSTALLATION OF WOOD BLOCKING AT ROOF AREAS: Typically, provide not less than 2 x 6 inch nominal preservative treated wood blocking members at roof and roof edges – spaced when necessary with solid shims or plywood, as appropriate. Connect blocking members in accordance with FM Global's Property Loss Prevention Data Sheet # 1-49 – "Perimeter flashing", and as follows:

A. BLOCKING TO CMU'S: Provide 12 inch long x 3/8 inch diameter (minimum – or as otherwise noted) galvanized steel anchor bolts spaced at 32 inch centers typically, and at 16 inch centers when within eight (8) feet (or 10% of total wall length - whichever is greater) of intersection with other walls. Embed bolt with a galvanized steel nut and washer at bottom into solid-filled cores of the CMU. Stagger bolts to either side of blocking members wider than 6 inches.
B. BLOCKING TO ROOF DECKING: Provide two (2) rows staggered of minimum # 10 galvanized sheet metal screws, with spacing in each row not to exceed 24 inches typically, and at 12 inch centers when within eight (8) feet (or 10% of total wall length – whichever is greater) of intersection with other walls. Penetrate screws into decking with not less than 3 full screw-threads clear, and provide a 5/8 inch diameter galvanized steel washer at top of blocking penetration.
C. BLOCKING TO OTHER BLOCKING: Provide galvanized wood screws with minimum 100 pound withdrawal resistance or lag screws of equivalent strength, in length to penetrate into secured member not less than 1-1/4 inch. Install fasteners in two (2) rows staggered, with spacing in each row not to exceed 24 inches typically, and at 12 inch centers when within eight (8) feet (or 10% of total wall length - whichever is greater) of intersection with other walls.

3.04 PROTECTION

A. PROTECT WOOD THAT HAS BEEN TREATED with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
B. PROTECT ROUGH CARPENTRY from weather. If, despite protection, rough carpentry becomes sufficiently wet that moisture content exceeds that specified, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 06 10 00

SECTION 06 16 00 – SHEATHING (DENSELEMENT SYSTEM)

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Work of this section includes coated fiberglass-mat gypsum sheathing board system with integral weather-resistant barrier (WRB) and air barrier (AB) features, and all accessory materials required for covering sheathing joints, fasteners, penetrations, rough openings, and material transitions, for use under exterior wall claddings.
B. Fluid-applied membrane air barrier

1.02 RELATED SECTIONS

A. Section 014000 Quality Requirements; Section 014500 Code-Required Special Inspections and Procedures; coordination with owners' independent testing and inspection agency
B. Section 054000 Cold-Formed Metal Framing
C. Section 061000 Rough Carpentry
D. Section 079200 Joint Sealants; sealant materials and installation techniques
E. Section 092116 Gypsum Board Assemblies
F. Exterior wall claddings

1.03 DEFINITIONS

A. Air Barrier (AB): Air tight barrier made of material that is relatively air impermeable but moisture vapor permeable, with sealed joints and penetrations, and with terminations sealed to adjacent surfaces.
B. Weather-Resistant Barrier (WRB): Water-shedding barrier made of material that is moisture-resistant, installed to shed water, with sealed joints and penetrations, and with terminations sealed to adjacent surfaces.
C. Rough Openings: Openings in the wall to accommodate windows and doors.
D. Material Transitions: Areas where the WRB / AB coated fiberglass-mat gypsum sheathing connects to beams, columns, slabs, parapets, foundation walls, roofing systems, and at the interface of dissimilar materials.

1.04 REFERENCE STANDARDS

A. ASTM C473 Standard Test Method for Physical Testing of Gypsum Panel Products.
B. ASTM C1177 Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing.
C. ASTM C1280 Standard Specification for Application of Gypsum Sheathing.
D. ASTM D3273 Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber.
E. ASTM E72 Standard Test Methods of Conducting Strength Tests of Panels for Building Construction.
F. ASTM E96 Standard Test Methods for Water Vapor Transmission of Materials.
G. ASTM E119 Standard Test Method for Fire Tests of Building Construction and Materials.
H. ASTM E136 Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 C.
I. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.
J. ASTM E2178 Standard Test Method for Air Permeance of Building Materials.
K. ASTM E2357 Standard Test Method for Determining Air Leakage of Air Barrier Assemblies.
L. ICC ES AC212 Acceptance Criteria for Water-Resistive Coatings Used as Water-Resistive Barriers over Exterior Sheathing.
M. AAMA 714 Voluntary Specification for Liquid Applied Flashing Used to Create a Water Resistive Seal Around Exterior Wall Openings in Buildings.

1.05 SUBMITTALS

A. Submittals: Submit in accordance with Division 1 requirements.
B. Product Data and Installation Instructions: Submit manufacturer's product data including sheathing and accessory material types, composition, descriptions and properties, installation instructions and substrate preparation recommendations.
C. Shop Drawings: Submit shop drawings indicating locations and extent of WRB / AB system, including details of typical conditions, special joint conditions, intersections with other building envelope systems and materials; counter flashings and details showing bridging of envelope at substrate changes, details of sealing penetrations, and detailed flashing around windows and doors
D. Test Reports: Submit test reports indicating compliance with specified performance characteristics and requirements
E. Sample warranty: Submit a sample warranty identifying the terms and conditions of the warranty as herein specified.
F. Evaluation reports: Accredited laboratory testing for materials

1.06 WARRANTY

A. Provide manufacturer's standard warranty against in-place exposure damage (delamination, deterioration) for 12 (twelve) months of exposure to normal weather conditions beginning with the date of installation of the product.
B. Provide manufacturer's standard warranty for sheathing to be free of manufacturing defects that make it unsuitable for its intended use. Warranty period shall be Ten (10) years from the date of purchase of the product.
C. Provide manufacturer's standard warranty for use as a drainage plane when the cladding systems are properly designed and installed, with a warranty period of 10 years from the date of purchase of the product or, when used as a substrate in architecturally specified drainage EIFS, 12 years from the date of purchase of the product.
D. Material Warranty: Provide material manufacturer's standard product warranty, for a minimum three (3) years from date of Substantial Completion.

1.07 QUALITY ASSURANCE- MOCK UP

A. Install WRB / AB sheathing with sealed joints and penetrations in mock-up as specified in Section 014339 Mock-Ups.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store WRB / AB coated fiberglass mat gypsum sheathing under cover and keep dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack sheathing flat and supported on risers on a flat platform to prevent sagging.
B. Protect fluid applied material, primers and accessory materials from damage, weather, excessive temperatures and construction traffic.
C. Store fluid applied material and primers at temperatures of 40 degrees F or above.
D. Apply fluid applied material to clean surfaces free of contaminants. Chemical residues, surface coatings or films may adversely affect adhesion. Pressure-treated wood and other contaminated surfaces should be cleaned with a solvent wipe before application.

1.09 FIELD CONDITIONS

A. Application standards where applicable are in accordance with Gypsum Association Publication GA-253 for gypsum sheathing and ASTM C1280.
B. Do not install sheathing that is moisture damaged. Indications that panels are moisture damaged include, but not limited to, discoloration, sagging, or irregular shape.
C. Allow installed sheathing to be dry to the touch before sealing joints, penetrations, rough openings, and material transitions.
D. Do not attempt to seal joints, corners, penetrations, rough openings, and material transitions when installed sheathing surface is frozen or has frost on the surface.
E. Do not apply sealing materials to sheathing when air or surface temperature is below 25F for fluid applied materials.
F. Sequencing. Do not install air barrier material before the roof assembly has been sufficiently installed to prevent a buildup of water in the interior of the building.
G. Compatibility. Do not allow air barrier materials to come in contact with chemically incompatible materials.
H. Ultra-violet exposure. Do not expose air barrier materials to sunlight longer than as recommended by the material manufacturer.

PART 2 - PRODUCTS

2.01 WEATHER BARRIER ASSEMBLIES

A. Acceptable products: DensElement Barrier System as manufactured by Georgia-Pacific Gypsum LLC.
   (1) Sheathing: DensElement Sheathing.
   (2) Fluid-applied flashing materials: Fluid-applied flashing as approved by Georgia-Pacific Gypsum LLC.
   (3) Primers, backer rods and accessory materials: As approved by Georgia-Pacific Gypsum LLC.
B. System Description: Weather-Resistant Barrier and Air Barrier assembly installed at exterior stud walls under exterior cladding, consisting of the following components as herein specified:
   (1) Sheathing: WRB / AB coated fiberglass mat gypsum sheathing.
   (2) Fluid-applied flashing to seal sheathing joints, inside and outside corners, penetrations, rough openings, and material transitions.
   (3) Backer rods and accessory materials.

2.02 WEATHER-RESISTANT BARRIER (WRB) AND AIR BARRIER (AB) GYPSUM SHEATHING

A. Description: Coated fiberglass mat gypsum sheathing with integral weather-resistant barrier (WRB) and air barrier (AB) complying with applicable requirements of ICC-ES AC212, ASTM E2178, ASTM E2357.
B. Vapor Permeability: When tested as system in accordance with ASTM E96
   (1) (water method) the WRB and AB system has a minimum vapor permeance of 20 perms with sealed joints and fasteners.
C. The WRB and Air Barrier Gypsum Sheathing has a moisture absorption rate < 6%
D. Air Barrier performance requirements:
   (1) Air permeance of sheathing: Sheathing with an air permeability not greater than 0.001 cfm/ft2 (0.02L/s/m2) when tested in accordance with ASTM E2178.
   (2) Air permeance of assembly: Assembly of sheathing and sealing components with an average air leakage not greater than 0.04 cfm/ft2 (0.2L/s/m2) when tested in accordance with ASTM E2357.

2.03 FLUID-APPLIED FLASHING AND ACCESSORY MATERIALS FOR JOINTS, INSIDE AND OUTSIDE CORNERS, FASTENERS, ROUGH OPENINGS, AND MATERIAL TRANSITIONS

A. Substrate requirements:
   (1) Sheathing panels should be trimmed to obtain neat fitting joints.
   (2) Gaps that are more than 1/4” and less than 1” shall be filled with a backer rod to support the fluid applied flashing at the transition joint.
   (3) For gaps larger than 1" use transition membrane flashing as approved by Georgia-Pacific Gypsum LLC.
B. Fluid applied flashing for panel joints, inside and outside corners, and penetrations
   (1) Description: STP-based fluid applied flashing.
   (2) Properties:
      (a) Acceptable substrate: Georgia-Pacific Gypsum LLC DensElement Sheathing.
      (b) Adhesion to fiberglass mat faced sheathing: No delamination from face of sheathing.
      (c) Applied wet film thickness: 16 mils.

(d) Air permeance: meets 0.004 cubic feet per minute per square foot (0.02L/s/sq m), maximum, when tested in accordance with ASTM E2178.
(e) Water vapor permeance: >10 perms (287 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M.
(f) Ultraviolet and weathering resistance: Approved for 12 months weather exposure.
(g) Comply with applicable requirements of AAMA 714

(3) Primer: Provide primer in accordance with air barrier manufacturer's written instructions for exposed gypsum core edges.

C. Fluid applied flashing for sealing fasteners:

(1) Description: STP-based fluid applied flashing.
(2) Properties:

(a) Acceptable substrate: Georgia-Pacific Gypsum LLC DensElement Sheathing.
(b) Adhesion to fiberglass mat faced sheathing: No delamination from face of sheathing.
(c) Applied wet film thickness: 16 mils.
(d) Air permeance: meets 0.004 cubic feet per minute per square foot (0.02 L/s/sq m), maximum, when tested in accordance with ASTM E2178.
(e) Water vapor permeance: >10 perms (287 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M.
(f) Ultraviolet and weathering resistance: Approved for 12 months weather exposure.
(g) Comply with applicable requirements of AAMA 714.

D. Fluid applied flashing for sealing rough openings

(1) Fluid applied flashing: STP-based fluid applied flashing.
(2) Primer: Liquid primer in accordance with air barrier manufacturer's written instructions for exposed gypsum core edges. Apply primer to raw gypsum board edges by brushing on a thin, uniform coat.
(3) Properties:

(a) Acceptable substrate: Georgia-Pacific Gypsum LLC DensElement Sheathing.
(b) Flashing adhesion to fiberglass mat faced sheathing: No delamination from face of sheathing.
(c) Applied wet film thickness: 16 mils.
(d) Flashing air permeance: meets 0.004 cubic feet per minute per square foot (0.02 L/s/sq m), maximum, when tested in accordance with ASTM E2178.
(e) Flashing water vapor permeance: >10 perms (287 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M.
(f) Ultraviolet and weathering resistance: Approved for 12 months weather exposure.
(g) Flashing comply with applicable requirements of AAMA 714.

E. Material transitions using fluid applied flashing:

(1) Refer to substrate requirements for treatment of gaps as specified herein. Gaps that are more than 1/4” and less than 1” shall be filled with a backer rod to support the fluid applied flashing at the transition joint. For gaps larger than 1" use transition membrane flashing as approved by Georgia-Pacific Gypsum LLC
(2) Fluid applied flashing for material transitions:
(3) Properties:

(a) Acceptable substrate: Georgia-Pacific Gypsum LLC DensElement Sheathing.
(b) Adhesion to fiberglass mat faced sheathing: No delamination from face of sheathing.
(c) Applied wet film thickness: 16 mils
(d) Air permeance: 0.004 cubic feet per minute per square foot (0.02L/s/sq m), maximum, when tested in accordance with ASTM E2178
(e) Water vapor permeance: >10 perms (287 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M
(f) Ultraviolet and weathering resistance: Approved for 12 months weather exposure
(g) Comply with applicable requirements of AAMA 714

PART 3 - EXECUTION

3.01 PREPARATION

A. Remove projections, protruding fasteners, loose or damaged sheathing material at edges of panel that might interfere with proper installation to seal joints, corners, fasteners, penetrations, openings, or material transitions.
B. Wipe down the sheathing surface to receive sealing materials with a clean cloth.
C. Ensure field conditions are met as outlined in Part 1 – General Requirements.

3.02 INSTALLATION OF WEATHER-RESISTANT BARRIER (WRB) AND AIR BARRIER (AB) SHEATHING

A. WRB / AB Coated fiberglass mat sheathing:

(1) Install and fasten DensElement Sheathing according to manufacturer’s detailed installation instructions
(2) Fastener and penetration treatment: Treat all sheathing fasteners with specified fluid applied flashing used for sealing joints.

3.03 FLUID APPLIED FLASHING FOR SEALING SHEATHING JOINTS, INSIDE AND OUTSIDE CORNERS, FASTENERS, ROUGH OPENINGS, AND MATERIAL TRANSITIONS

A. Sealing DensElement Sheathing Joints using specified Fluid Applied Flashing

(1) Apply fluid applied flashing over the joint in a zigzag or ribbon pattern. Cover a minimum of 1” on both sides of the joint.
(2) With a straight edge tool, spread evenly over the sheathing joint.
(3) Apply at a rate to achieve a minimum wet mil thickness of 16 mils over the entire joint area.

B. Sealing DensElement Sheathing Vertical Corners using specified Fluid Applied Flashing

(1) Apply fluid applied flashing over the inside and/or outside corner in a zigzag or ribbon pattern. Cover a minimum of 2” on both sides of the corner.
(2) With a straight edge tool, spread evenly over the sheathing corner.
(3) Apply at a rate to achieve a minimum wet mil thickness of 16 mils over the corner area.

C. Sealing DensElement Sheathing Fasteners using specified Fluid Applied Flashing: Apply the fluid applied flashing material to fasteners and wipe down with a straight edge tool; provide a minimum 16 mil thick coating over the fastener.

D. Sealing DensElement Sheathing Rough Openings using specified Fluid Applied Flashing

(1) Apply a bead of DensDefy™ Liquid Flashing into all inside corners of the opening.
(2) Apply DensDefy™ Liquid Flashing in the opening sill, jamb and header in a zig-zag or ribbon pattern.
(3) Apply DensDefy™ Liquid Flashing over the DensElement Sheathing adjacent to the opening sill, jamb and header in a zig-zag or ribbon pattern.
(4) Use a straight edge tool to spread the DensDefy™ Liquid Flashing to a pinhole void free application achieving a minimum 16 wet mils
(5) Spread the DensDefy™ Liquid Flashing a minimum of 2” into the rough opening and a minimum 1” past the interior air seal of the window unit. Refer to the project details and specifications to determine window placement and minimum requirement for rough opening treatment.
(6) Ensure a minimum 2” of DensDefy™ Liquid Flashing is applied onto the sheathing surface adjacent to the opening.

E. Sealing DensElement sheathing material transitions using specified Fluid Applied Flashing

(1) Sheathing joint and transition gaps to receive fluid-applied flashing shall be less than 1/4" (6.4 mm).
(2) For gaps larger than 1/4" use shall be sealed with fluid-applied flashing as approved by Georgia-Pacific Gypsum, LLC
(3) Gaps that are more than 1/4” and less than 1” shall be filled with a backer rod to support the fluid applied flashing at the transition joint.
(4) If necessary, prime the adjacent material with primer per the material manufacturer’s recommendations.
(5) Apply fluid applied flashing over the sheathing and adjacent material in a zigzag or ribbon pattern. Ensure the flashing is a minimum of 2” on each substrate material surface.
(6) With a straight edge tool, spread fluid applied flashing over material transition joint.
(7) Apply at a rate to achieve a minimum wet mil thickness of 16 mils.

3.04 SEALING EXTERIOR WALL PENETRATIONS

A. Exterior wall penetration shall be sealed to prevent air and water infiltration. Penetrations may be sealed with fluid applied flashing.
B. For round or square pipe/duct penetrations use specified fluid applied flashing, refer to DensElement Barrier System Technical Guide for instructions for proper sealing.

3.05 FIELD QUALITY CONTROL

A. Do not cover installed WRB / AB assembly until required inspections have been completed and installation has been accepted.
B. Where applicable, allow for owner’s inspection and air barrier testing and reporting.

3.06 PROTECTION

A. Protect WRB / AB assembly from damage during installation and during the construction period.

END OF SECTION 06 16 00

SECTION 06 40 00 – ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide Architectural woodwork requiring quality, expert craftsmanship and joinery skills, where indicated on the Drawings, as specified herein, and as necessary for complete installation. This Section includes:

A. Exterior Architectural Woodwork and finish carpentry
B. Interior Architectural Woodwork and finish carpentry, including:
   1. Interior trim, including non-fire-rated interior door frames.
   2. Interior wood door frames.
   3. Shelving and clothes rods.
   4. Interior stairs and railings.

1.02 PRIMING & FINISHING: Note that all interior and exterior woodwork must be sealed on all surfaces before installation - including the back-or mounting side, the joining edges, and at all field-cut ends, without exception. Refer to Division-09 “Painting” Section for materials and application of shop and/or field applied finishes.

1.03 RELATED SECTIONS:

A. Section 018113 – Product Reporting Form
B. Division-06 “Rough Carpentry” for furring, blocking, backing panels and other carpentry work not exposed to view and for framing exposed to view.
C. Division-09 “Painting” Section for priming and back priming of Architectural Woodwork.

1.04 DEFINITIONS

A. MDF: Medium-density fiberboard.
B. MDO: Plywood with a medium-density overlay on the face.

1.05 LEED PERFORMANCE REQURIEMENTS

A. Provide products that meets meet one of the following requirements: EPA TSCA Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins, California Air Resources Board (CARB) ATCM for formaldehyde requirements for ultra-low emitting formaldehyde (ULEF) resins, EPA TSCA Title VI formaldehyde requirements for no added formaldehyde resins (NAF), or CARB ATCM formaldehyde requirements for no added formaldehyde resin (NAF).
B. Provide documentation for all wood showing that it is SFI, FSC, ATES, CSA, or PERC Certified. For FSC Certified wood: Lumber and plywood shall be certified as "FSC Pure" or "FSC Mixed Credit" according to Standard for Chain of Custody Certification.
C. VOC Emissions Evaluation: For adhesives and sealants, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers’ or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the VOC limits, as per the applicable SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

1.06 STRUCTURAL PERFORMANCE OF WOOD GUARD RAILINGS & HANDRAILS: Provide guards and handrails capable of withstanding the following loads without exceeding the allowable design working stress of materials involved:

A. Top Rail of Guards: Concentrated load of 200 lbf applied at any point and in any direction, and a uniform load of 50 lbf/ft. applied horizontally and concurrently with uniform load of 100 lbf/ft. applied vertically downward. Concentrated and uniform loads need not be assumed to act concurrently.
B. Handrails Not Serving as Top Rails: Concentrated load of 200 lbf applied at any point and in any direction, and a uniform load of 50 LBS/FT. applied in any direction. Concentrated and uniform loads need not be assumed to act concurrently.
C. Infill Area of Guards: Horizontal concentrated load of 200 lbf applied to 1 sq. ft at any point in system, including panels, intermediate rails, balusters, or other elements composing infill area. Load on infill area need not be assumed to act concurrently with loads on top rails.

1.07 SUBMITTALS

A. LEED SUBMITTAL REQURIEMENTS:
   1. COMPLETE PROVIDED PRODUCT DATA REPORTING FORM IN SPEC SECTION 01 81 13 AND PROVIDE THE FOLLOWING:
   2. PROVIDE THIRD-PARTY CERTIFICATE CONFIRMING PRODUCTS MEET ONE OF THE FOLLOWING REQUIREMENTS: EPA TSCA TITLE VI FOR FORMALDEHYDE REQUIREMENTS FOR ULTRA-LOW-EMITTING FORMALDEHYDE (ULEF) RESINS, CALIFORNIA AIR RESOURCES BOARD (CARB) ATCM FOR FORMALDEHYDE REQUIREMENTS FOR ULTRA-LOW EMITTING FORMALDEHYDE (ULEF) RESINS, EPA TSCA TITLE VI FORMALDEHYDE REQUIREMENTS FOR NO ADDED FORMALDEHYDE RESINS (NAF), OR CARB ATCM FORMALDEHYDE REQUIREMENTS FOR NO ADDED FORMALDEHYDE RESIN (NAF). NOTE

MANUFACTURER'S CLAIMS FOR MEETING ABOVE-MENTIONED REQUIREMENTS DO NOT MEET LEED STANDARDS.

3. PROVIDE DOCUMENTATION FOR ALL WOOD SHOWING THAT IT IS SFI, FSC, ATES, CSA, OR PERC CERTIFIED. FOR FSC CERTIFIED WOOD: LUMBER AND PLYWOOD SHALL BE CERTIFIED AS "FSC PURE" OR "FSC MIXED CREDIT" ACCORDING TO FSC STD-01-001 , "FSC PRINCIPLES AND CRITERIA FOR FOREST STEWARDSHEIP," AND TO FSC STD-40-004, "FSC STANDARD FOR CHAIN OF CUSTODY CERTIFICATION."
4. VOC EMISSIONS EVALUATION: PROVIDE DOCUMENTATION THAT PRODUCT COMPLIES WITH ONE OF THE FOLLOWING: SCS INDOOR ADVANTAGE GOLD, FLOORSCORE, MAS CERTIFIED GREEN, UL GREENGUARD GOLD OR CRI GREEN LABEL PLUS. THE THIRD-PARTY CERTIFICATION MUST STATE THE EXPOSURE SCENARIO USED TO DETERMINE COMPLIANCE. CLAIMS OF COMPLIANCE FOR WET-APPLIED PRODUCTS MUST STATE THE AMOUNT APPLIED IN MASS PER SURFACE AREA. THE CLAIMS OF COMPLIANCE MUST ALSO STATE THE RANGE OF TOTAL VOCS AFTER 14 DAYS, MEASURED AS SPECIFIED IN CDPH STANDARD METHOD V1.1 OR CDPH STANDARD METHOD V1.2-2017.
5. VOC CONTENT REQUIREMENTS FOR WET-APPLIED PRODUCTS: PROVIDE MSDS OR MANUFACTURERS CUTSHEET SHOWING VOC REQUIREMENTS TESTING AND COMPLIANT ACCORDING TO SCAQMD RULE 1168, OCTOBER 6, 2017, OR CANADIAN VOC CONCENTRATION LIMITS FOR ARCHITECTURAL COATINGS (SOR/2009-264) OR THE CARB 2007 SCM FOR ARCHITECTURAL COATINGS, SCAQMD RULE 1113, FEBRUARY 5, 2016, OR EUROPEAN DECOPAINT DIRECTIVE (2004/42/EC). IF A PRODUCT CANNOT BE REASONABLY BE TESTED AS SPECIFIED ABOVE, TESTING OF VOC CONTENT MUST COMPLY WITH ASTM D2369-10; ISO 11890, PART 1; ASTM D6886-03; OR ISO 11890-2. METHYLENE CHLORIDE AND PERCHLOROETHYLENE MAY NOT BE INTENTIONALLY ADDED IN PAINTS, COATINGS, ADHESIVES, OR SEALANT

B. PRODUCT DATA: For each type of product and process specified and incorporated into items of Architectural woodwork during fabrication, finishing, and installation.
   1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
   2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.

C. SHOP DRAWINGS: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components. Show details full size. Show locations and sizes of blocking and nailers, including concealed blocking and reinforcement specified in other Sections.

D. LIST OF MOCKUP MATERIALS: List generic product names together with manufacturers, manufacturers' product names, model numbers, and other information as required to identify materials used. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents, unless such deviations are specifically brought to the attention of the Architect and approved in writing.

E. SAMPLES FOR VERIFICATION: Submit full-size units or Samples of sizes indicated, prepared from the same material to be used for the Work, with shop-applied transparent finish, that show full range of color and texture variations expected for the following:
   1. (WD-__) Hardwood with Transparent Finish. Submit set of at least three units exhibiting approximate limits of variations in color, pattern, texture, or other characteristics inherent in material or product. Apply finish to all faces and edges.
      a. Solid Hardwood with 3" wide by 12" long
      b. Hardwood Veneer: 12" by 12", representative of and selected from actual flitches to be usd for Project.
   2. (WD FAB-__) Hardwood Veneered Paneling with Transparent Finish: 24 inches by 24 inches with veneers representative of and selected from actual flitches to be used for Project. Include at least one face-veneer seam and finish as specified.
   3. (WDB) Wood Wall Bases: 3 inch long segments for each base type.
   4. Other Wood and Surfacing Samples: Submit 4 by 4 inch sample for each type, color and finish, with one edge treatment or profile as specified.
      a. (WD-5) Woodwork with Opaque Finish
      b. (PLAM) Plastic Laminates
      c. (SSF) Solid Surfacing

F. PRODUCT CERTIFICATES: Signed by manufacturers of woodwork certifying that products furnished comply with requirements.

1.08 QUALITY STANDARD COMPLIANCE CERTIFICATES: AWI Quality Certification Program certificates

A. QUALIFICATION DATA: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.09 QUALITY ASSURANCE

A. SOURCE LIMITATIONS FOR FABRICATION AND INSTALLATION: Engage a qualified woodworking firm to assume undivided responsibility for fabricating and installing woodwork specified in this Section.

B. QUALITY STANDARD: Comply with AWI's "Architectural Woodwork Quality Standards" for grades of architectural woodwork, construction, finishes, and other requirements as applicable to the Work.

C. MOCKUP: Provide materials for construction of a field mockup of each different woodwork material and color indicated, showing the full range of exposed textures, and dimensions to be expected in the completed construction.

1. BEFORE INSTALLING ARCHITECTURAL WOODWORK, build mockup to verify selections made under sample Submittals and to demonstrate aesthetic effects. Refer to Division-01 for general requirements of Mockup.

1.10 DELIVERY, STORAGE, AND HANDLING: Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation. Protect materials from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings. Deliver interior finish carpentry materials only when environmental conditions meet requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions meet requirements specified for installation areas.

1.11 PROJECT CONDITIONS

A. DO NOT INSTALL ARCHITECTURAL WOODWORK MATERIALS THAT ARE WET, MOISTURE DAMAGED, OR MOLD DAMAGED. INDICATIONS THAT MATERIALS ARE WET OR MOISTURE DAMAGED INCLUDE, BUT ARE NOT LIMITED TO, DISCOLORATION, SAGGING, OR IRREGULAR SHAPE. INDICATIONS THAT MATERIALS ARE MOLD DAMAGED INCLUDE, BUT ARE NOT LIMITED TO, FUZZY OR SPLOTCHY SURFACE CONTAMINATION AND DISCOLORATION.

B. WEATHER LIMITATIONS: Proceed with installation of exterior woodwork only when existing and forecasted weather conditions permit work to be performed and at least one coat of specified finish to be applied without exposure to rain, snow, or dampness.

C. ENVIRONMENTAL LIMITATIONS: Do not deliver or install interior woodwork materials until building is enclosed and weatherproof, wet work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

D. FIELD MEASUREMENTS: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed and indicate measurements on Shop Drawings.

1. Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

E. COORDINATE sizes and locations of framing, blocking, reinforcements, and other related units of Work specified in other Sections to ensure that exterior architectural woodwork can be supported and installed as indicated.

PART 2 - PRODUCTS

2.01 LUMBER: FACTORY MARK EACH PIECE OF LUMBER WITH GRADE STAMP OF APPLICABLE INSPECTION AGENCY INDICATING GRADE, SPECIES, MOISTURE CONTENT AT TIME OF SURFACING, AND MILL. FOR EXPOSED LUMBER, MARK GRADE STAMP ON END OR BACK OF EACH PIECE OR OMIT GRADE STAMP AND PROVIDE CERTIFICATES OF GRADE COMPLIANCE ISSUED BY INSPECTION AGENCY. Comply with DOC PS 20 typically, and the following grading rules:

A. NeLMA: Northeastern Lumber Manufacturers' Association, "Standard Grading Rules for Northeastern Lumber."
B. NHLA: National Hardwood Lumber Association, "Rules for the Measurement and Inspection of Hardwood & Cypress."
C. NLGA: National Lumber Grades Authority, "Standard Grading Rules for Canadian Lumber."
D. SPIB: The Southern Pine Inspection Bureau, "Standard Grading Rules for Southern Pine Lumber."
E. WCLIB: West Coast Lumber Inspection Bureau, Standard No. 17, "Grading Rules for West CoastLumber."
F. WWPA: Western Wood Products Association, "Western Lumber Grading Rules."

2.02 WOOD GRADING & APPEARANCE REQUIREMENTS: Natural characteristics are acceptable, but face knots and knot holes, chipped edge knots, short end splits, stains, and planer burns are not acceptable, even if permitted by referenced standards.

2.03 FABRICATED WOODWORK MATERIALS: Provide units that comply with requirements of the referenced AWI quality standard for each type of woodwork/quality grade indicated and with requirements of the following referenced standards:

A. SOFTWOOD PLYWOOD: DOC PS 1.
B. HARDBOARD: AHA A135.4.
C. MDF: ANSI A208.2, Grade 130 made with binder containing no urea-formaldehyde resin.
D. PARTICLEBOARD (PBD): ANSI A208.1, Grade M-2, made with binder containing no urea-formaldehyde resin.
E. PREFINISHED (MELAMINE-FACED) PARTICLEBOARD: Particleboard complying with ANSI A208.1, Grade M-2, finished on both faces with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10. Provide in color indicated on the Drawings, or if not indicated: White.
F. HARDWOOD PLYWOOD AND FACE VENEERS: HPVA HP-1.
G. EXTERIOR APPLICATIONS:

1. EXTERIOR SOFTWOOD PLYWOOD: DOC PS 1, - Marine grade - Exterior type.
2. EXTERIOR MDO PLYWOOD: Exterior softwood plywood with MDO surface both sides

3. EXTERIOR MDF PANEL: “Extira” (www.extira.com) moisture, rot and termite resistant wood panel with phenolic resins and zinc borate, and with 5-year warranty, in size and thickness as indicated on the Drawings, for field-painted opaque finish.

2.04 EXTERIOR TRIM FOR OPAQUE FINISH: Provide engineered exterior trim units in width(s) as indicated in the Drawings, in maximum lengths available to minimize field joints and splices, and as manufactured by one of the following:

A. Thickness: 3/4 inch (4/4) or 1.0 inch (5/4) inch thick trim boards in size indicated on the Drawings
B. Finish Surface Texture: Smooth
C. CEMENT FIBER TRIM: Acceptable Manufacturers:
   1. “HardieTrim”, www.jameshardie.com
   2. Color: Primed for field-painting
   3. Color: As selected by Architect from manufacturer’s full range of available pre-finished color options
D. CELLULAR PVC for field-finishing - Acceptable Manufacturers:
   1. “Azek Trimboards”, www.azek.com
   2. “Fypon Cellular PVC Trim”, www.fypon.com
   3. “Kleer” by Kleer Products, www.kleerlumber.com
   4. “Koma Trim” by Kommerling USA, www.komatrimboards.com
   5. “Versatex Trimboards” by Wolfpac Technologies, www.versatex.com

2.05 WOOD SPECIES AND CUT FOR NATURAL (TRANSPARENT) FINISHED WOODWORK: Refer to the Drawings – provide smooth surfaced finish typically on all sides unless otherwise noted to be “rough” or “textured” on the exposed face surface.

2.06 WOOD SPECIES AND CUT FOR NATURAL (TRANSPARENT) FINISH (except as otherwise indicated):

A. REFER TO FINISH SCHEDULE.

2.07 PRESERVATIVE TREATED WOOD: Pressure treat per AWPA U1; Use Category UC2. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 18 percent respectively. Use preservative chemicals acceptable to AHJ representatives and that contain no arsenic or chromium. For exposed, exterior items to receive transparent finish, do not use chemical formulations that contain colorants or that bleed through or otherwise adversely affect finishes. Mark lumber or plywood with treatment-quality mark of an inspection agency acceptable to the AHJ and approved by the American Lumber Standard Committee's Board of Review. For exposed lumber indicated to receive a stained or natural finish, mark end or back of each piece. For exposed plywood indicated to receive a stained or natural finish, mark back of each piece.

A. Application: Exterior Architectural woodwork without inherent insect or weather decay resistance

2.08 FIRE-RETARDANT-TREATED LUMBER AND PLYWOOD: Pressure process to provide a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent respectively. Do not use material that does not comply with requirements for untreated material or is warped or discolored. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to AHJ representatives. For exposed lumber or plywood indicated to receive a stained or natural finish, mark end or back of each piece.

A. Application: Concealed wood within non-combustible buildings – not required for exposed woodwork finishes, or in combustible building construction type (Interior of Construciton Type III, or Type V Buildings).

2.09 STANDING AND RUNNING TRIM:

A. NATURAL-FINISHED WOOD TRIM: Comply with AWI Section 300, Custom grade. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work. Assemble casings in plant except where shipping limitations require field assembly.

2.10 EXTERIOR HORIZONTAL WOOD SCREENING for natural, transparent finish:

A. WOOD SPECIES & GRADE: Western Red Cedar - Select grade per NLGA 204a or WCLIB 111-e, kiln-dried
B. PATTERN: Spaced, rectangular 2 x 6 nominal (1-1/2 x 5-1/2 inch) boards with eased edges, maximum length feasible
C. SURFACE FINISH: smooth, sawn exposed face all sides (S4S)

2.11 PAINTED (OPAQUE) FINISHED INTERIOR WOOD TRIM:

A. SPECIES: Yellow Poplar, or other closed-grain hardwood, including alder, aspen, basswood, cottonwood, gum, magnolia, soft maple, sycamore, or tupelo.
B. Grade: NHLA
C. MAXIMUM MOISTURE CONTENT: 15 percent
D. Finger Jointing: Not allowed.
E. Face Surface: Surfaced (smooth)

2.12 PAINTED (OPAQUE) FINISHED INTERIOR WOODWORK MOLDINGS: Provide units of hardwood as indicated above for wood trim, but with maximum moisture content of 9 percent, and in profile / pattern as indicated on the Drawings, typically in compliance with WMMPA WM 12 standard profiles, and as follows:

A. (WD-5) Wood Base: **REFER TO FINISH SCHEDULE**

2.13 HIGH-GLOSS PAINTED (AUTOMOTIVE-LIKE) INTERIOR WOODWORK FINISH: Water-proof MDF equal to “Medex” by Roseburg

2.14 SHELVING AND CLOSET WOODWORK & COMPONENTS:

A. EXPOSED OR CLOSET SHELVING: fabricate from one of the following – in 3/4 inch minimum thickness:

1. Closet shelf: 3/4 inch thick prefinished white Melamine-faced particleboard (both sides) with applied PVC edges
2. Particleboard with solid-hardwood front edge (particleboard to be painted both sides).
3. MDF or MDO softwood plywood with solid-wood front edge (MDF or MDO to be painted both sides).
4. Wood boards complying with painted finished interior wood trim requirements above.

B. WOOD SHELF CLEATS: 3/4-by-3-1/2-inch boards as indicated above for shelving hardwood lumber trim for opaque finish to match adjacent wall color.

C. SHELF BRACKETS WITHOUT ROD SUPPORTS: BHMA A156.16, B04041; powder-coat-finished formed steel.

D. STANDARDS FOR ADJUSTABLE SHELF BRACKETS: BHMA A156.9, B04102; powder-coat-finished steel.

E. ADJUSTABLE SHELF BRACKETS: BHMA A156.9, B04112; powder-coat-finished steel.

F. STANDARDS FOR ADJUSTABLE SHELF SUPPORTS: BHMA A156.9, B04071; powder-coat-finished steel.

G. ADJUSTABLE SHELF SUPPORTS: BHMA A156.9, B04081 or B04091; powder-coat-finished steel.

H. CLOTHES RODS: 1-5/16-inch diameter, chrome-plated-steel tubes.

I. ROD FLANGES: Chrome-plated steel.

2.15 WOOD STAIRS:

A. CLT Stringer, Treads and Riser supports Designed by Structural Engineer. Refer to Structural Drawings.

B. HARDWOOD TREADS: As indicated on Drawings with WD-1 Finish.

C. RISERS: As indicated on drawings with WD-1 Finish.

D. HARDWOOD RAILINGS: Provide units in pattern or profile indicated on the Drawings, in clear, kiln-dried hardwood with steel spine shapes.

2.16 MISCELLANEOUS WOODWORK MATERIALS

A. EXTERIOR NAILS OR SCREWS: Type 304 stainless steel

1. At metal framing supports, provide self-drilling screws as recommended by metal-framing manufacturer.

B. ANCHORS: Select material, type, size, and finish required for each substrate for secure anchorage, penetrating a minimum of 1-1/4 inch into wood substrate materials. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors. Power nailing systems are permitted using fasteners with equal or greater performance characteristics (including but not limited to withdrawal and bending strength and corrosion resistance) of typical nails.

C. FLUSH Z-CLIP OR CONCEALED PANEL MOUNTS: 1.875 inch high metal units each with minimum two (2) each compatible fasteners, designed to engage matching reversed units when concealed behind panels. Select units and fasteners per substrate and materials to be connected, with minimum two (2) clips per panel, with a holding capability of not less than five (5) times calculated loads:

1. Basis-of-Design Manufacturer: Monarch Metal Fabrication, or equal:
2. Interior 3/16 inch deep Aluminum: Monarch # MF-625 w/ 5/8 inch lift-off – min. clip size of 1.5 inch wide
3. Interior 1/4 inch deep Aluminum: Monarch # MF-375 w/ 3/8 inch lift-off – min. clip size of 2.0 inch wide
4. Exterior 1/4 inch deep stainless-steel: Monarch # MFSS w/ 3/4 inch lift-off – min. clip size of 1.5 inch wide

D. FASTENERS FOR EXTERIOR WOOD DECKING: Type 305 stainless-steel deck screws with painted head color to match installed, finish color of decking.

E. FASTENERS FOR INTERIOR FINISH CARPENTRY: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.

F. GLUE: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use. Wood glue shall have a VOC content of 30 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

G. PANELING ADHESIVE: Comply with paneling manufacturer's written recommendations for adhesives. Adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

H. MULTIPURPOSE CONSTRUCTION ADHESIVE: Formulation complying with ASTM D 3498 that is recommended for indicated use by adhesive manufacturer. Adhesive shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.17 FABRICATION, GENERAL: Provide and maintain units with 7 to 12 percent moisture content typically. Comply with AWI Section 300, Custom grade except as otherwise indicated, or other AWI requirements as applicable:

A. Fabricate woodwork to dimensions, profiles, and details indicated.

B. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except at ends exposed in finished work.

C. At exterior trim members, provide a minimum 10 degree positive slope (100 degree from vertical) on horizontal surfaces to provide positive drainage and to prevent moisture accumulation on trim members.

D. At transparent finished frames or jambs wider than available lumber, use veneered construction - do not glue units for required width.

E. Ease edges of lumber less than 1 inch in nominal thickness to 1/16-inch radius and edges of lumber 1 inch or more in nominal thickness to 1/8-inch radius.

F. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation.

G. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

2.18 FABRICATION OF NATURAL-FINISHED WOOD PANELING & WAINSCOTS: Comply with AWI Section 500- Custom Grade requirements, with solid-wood lumber trimmed edges:

A. Matching of Adjacent Veneer Leaves: Book match.
B. Vertical Matching of Adjacent Veneer Leaves: End match.
C. Veneer Matching within Panel Face: Center match.
D. Panel-Matching Method: Match panels within each separate area using pre-manufactured sets used full width

2.19 HARDWOOD SHELVES: 3/4 inch thick hardwood veneered plywood (both sides), with an exposed, 1-1/2 inch high hardwood edge trim on the exposed face.

2.20 PLAM / HDWD EDGED SHELVES: 3/4 inch thick thermoset decorative panel exposed to bottom surface with NEMA LD-3 grade high-pressure plastic laminate (PLAM) finish on top surface, and with 3/4 x 1-1/2 inch high hardwood face trim.

2.21 PLAM SHELVES: 3/4 inch thick thermoset decorative panel exposed to bottom surface with NEMA LD-3 grade high-pressure plastic laminate (PLAM) finish on top surface – self-edged with 3-mil PVC tape matching PLAM.

2.22 SHOP PRIMING

A. WOODWORK FOR TRANSPARENT FINISH: Shop seal woodwork for transparent finish with stain (if required), other required pretreatments, and first coat of finish as specified in Division-09 Section "Painting."
B. PREPARATIONS FOR FINISHING: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.
C. BACKPRIMING: Apply one coat of sealer or primer, compatible with finish coats, to all concealed surfaces of woodwork.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION: Condition woodwork to average prevailing humidity conditions in installation areas before installation. Deliver concrete inserts and similar anchoring devices to be built into substrates well in advance of time substrates are to be built. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.03 INSTALL WOODWORK TRUE AND STRAIGHT with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.

3.04 DISCARD units of material which are unsound, warped, bowed, twisted, improperly treated, not adequately seasoned or too small to fabricate work with minimum of joints or optimum jointing arrangements, or which are of defective manufacturer with respect to surfaces, sizes or patterns.

3.05 CONDITION INTERIOR WOODWORK to average prevailing humidity conditions in installation areas before installation.

3.06 INSTALL STANDING AND RUNNING TRIM with minimum number of joints possible, using full- length pieces to the greatest extent possible. Do not use pieces less than 24 inches long, except where necessary. Cut into the exposed face of the trim-board material. Do not route-out over 5/16 inch of trim material unless otherwise indicated. Locate all joints over a solid framing member, and double-nail each side of joint. Stagger joints in adjacent and related members. Cope at returns, miter at corners, and use scarf joints for end to end joints, to provide tight fitting joints with full surface contact throughout length of joint. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.

A. Install trim after gypsum-board joint finishing operations are completed.
B. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting.
C. Fasten to prevent movement or warping. Countersink fastener heads on exposed carpentry work and fill holes.

3.07 DO NOT APPLY EXTERIOR WOOD TRIM over wet sheathing, or closer than 6 inches from finished grade, unless material is preservative treated. Do not apply wood directly over concrete or masonry – separate with a 28 gage metal flashing or 15-mil polyethylene film.

3.08 ANCHOR WOODWORK TO ANCHORS OR BLOCKING built in or directly attached to substrates. Do not use staples, or T-nails. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing. Use fine finishing nails for exposed nailing, countersunk and filled flush with woodwork. Double nail all trim at 16 inches maximum on-center, with an additional nail on boards over 12 inch nominal thickness. Do not nail into a cut edge of trim material. Anchor between 1/2 min. to 2 inches maximum from the edge - penetrating 1-1/4 inch minimum into wood substrate, or not less than three (3) screw-threads through metal framing. Anchor trim from one end to the other – do not nail towards the ends from the center.

3.09 SEAL ALL EXTERIOR TRIM members to prevent water intrusion. Do not allow water to stand or to leak behind trim units. Seal all butt-joints and where trim abuts siding, window frames, door frames or similar conditions.

3.10 SHELVING AND CLOTHES ROD INSTALLATION

A. Cut shelf cleats at ends of shelves about 1/2 inch less than width of shelves and sand exposed ends smooth.
B. Install shelf cleats by fastening to framing or backing with finish nails or trim screws, set below face and filled. Space fasteners not more than 16 inches OC. Apply a bead of multipurpose construction adhesive to back of shelf cleats before installing. Remove adhesive that is squeezed out after fastening shelf cleats in place.
C. Install shelf brackets according to manufacturer's written instructions, spaced not more than 32 inches OC. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.

D. Install standards for adjustable shelf supports according to manufacturer's written instructions. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Space fasteners not more than 12 inches OC.
E. Install standards for adjustable shelf brackets according to manufacturer's written instructions, spaced not more than 36 inches o.c. and within 6 inches of end of shelves. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.
F. Cut shelves to neatly fit openings with only enough gap to allow shelves to be removed and reinstalled. Install shelves, fully seated on cleats, brackets, and supports. Fasten shelves to cleats with finish nails or trim screws, set flush. Fasten shelves to brackets to comply with bracket manufacturer's written instructions.
G. Install rod flanges for rods as indicated. Fasten to shelf cleats, framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Install rods in rod flanges.

3.11 STAIR AND RAILING INSTALLATION: Secure treads and risers as indicated in Drawings.

3.12 COMPLETE FINISHING WORK specified in this Section to the extent not completed at shop or before installation of woodwork.

A. At both interior and exterior applications, verify that all edges and backs of members are sealed, and if not, field-apply sealer before installation.
B. Field-apply sealer to all field-cut wood surfaces before installation, so that all edges of wood members will be protected from moisture infiltration and damage.
C. Where exposed, fill nail and screw holes with filler that will finish in color similar to adjacent woodwork.
D. Refer to Division-09 Section for final finishing of installed Woodwork.

3.13 REPAIR DAMAGED AND DEFECTIVE WOODWORK, where possible, to eliminate functional and visual defects. When not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

3.14 CLEAN WOODWORK on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 40 00

SECTION 06 41 00 – ARCHITECTURAL WOOD CASEWORK

PART 1 - GENERAL

1.01 PROVIDE CUSTOM-FABRICATED ARCHITECTURAL WOOD CASEWORK requiring quality craftsmanship and joinery, where indicated in the Drawings and as specified herein.

1.02 QUALITY ASSURANCE: Except as otherwise indicated by the Drawings or these Specifications, provide Architectural Woodwork in compliance with The Architectural Woodwork Institute's "Quality Standards" Section 400 – Custom Grade.

1.03 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of product indicated. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.

B. SUBMIT SHOP DRAWINGS showing location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections. Show locations and sizes of holes and cutouts installed in architectural woodwork.

C. SUBMIT SAMPLES FOR INITIAL SELECTION, to include Manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available for each type of material indicated.

(1) Shop-applied transparent finishes.
(2) Plastic laminates.
(3) Countertop materials

1.04 DO NOT DELIVER WOODWORK until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.05 PROJECT CONDITIONS

A. ENVIRONMENTAL LIMITATIONS: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. FIELD MEASUREMENTS: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed and indicate measurements on Shop Drawings.

(1) Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements.
(2) Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.01 GENERAL

A. PROVIDE MATERIALS THAT COMPLY with requirements of the AWI quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

B. TYPICAL SUBSTRATE MATERIAL: 3/4 inch thick minimum medium-density fiberboard (MDF) material complying with ANSI A208.1 Grade M-2 (except for density) with no added urea formaldehyde (NAUF).

C. WATERPROOF MDF: For countertop substrate and at door, drawer end and other exposed components of opaque painted cabinets, provide water-proof formaldehyde-free medium density fiberboard (MDF) as follows:

(1) APPROVED MANUFACTURER: “Medex” by Roseburg, P: 800-245-1115, www.roseburg.com

D. CONFIGURATION:

(1) Refer to drawings for all cabinet sizes, door sizes, and configuration.
(2) Provide frameless “European” box construction unless otherwise indicated on drawings.
(3) Provide full overlay doors unless otherwise indicated on drawings.

2.02 THERMOSET DECORATIVE OVERLAY PANELS (typical finish of cabinet interiors): Particleboard complying with ANSI A208.1, Grade M-2, or medium-density fiberboard complying with ANSI A208.2, Grade MD, with surface of thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1. Provide material with no added urea formaldehyde (NAUF).

A. Provide material / color as indicated on the Drawings – if not indicated - provide color as selected by Architect from Manufacturer’s full range of available color options.

2.03 PLASTIC LAMINATE (PLAM): High-pressure, decorative laminate meeting NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.

A. APPROVED MANUFACTURER: Provide Manufacturer and color/series (solid-color core) and finish as indicated on the Drawings. Other manufacturers must be submitted as a substitution for approval by the Architect per Division-01 Requirements.

2.04 DECORATIVE PRE-FINISHED PANELS: high-density particleboard panels with dimensional textured thermofused finish in 3/4 inch thickness typically. Provide manufacturer’s matching 1.0 mm thick ABS edge-banding at all exposed edges, Refer to Drawings for manufacturer, style, and color required, as selected by the Architect.

2.05 HARDWOOD Species and Cut for Transparent Finish:

A. Oak, American White (Quercus alba) USA – to match veneer, Refer to Finish Legend

2.06 HARDWOOD VENEER PLYWOOD: Minimum 3/4 inch thick hardwood veneer plywood, with minimum 1/4" matching hardwood edging typically – in species and cut matching typical hardwood species / cut indicated above unless otherwise indicated.

2.07 NATURAL-WOOD VENEER LAMINATE: Provide “natural-finished wood” composite veneered laminate material manufactured with real wood:

A. Basis-of-Design Product / Manufacturer: Unless noted otherwise in the Drawings, provide White-oak straight grain # 60204 by Treefrog Veneer (www.treefrogveneer.com) or approved equal

2.08 WOOD SPECIES FOR OPAQUE FINISH: Poplar, or any other equivalent closed-grain hardwood

2.09 THERMOSET DECORATIVE OVERLAY PANELS: Particleboard complying with ANSI A208.1, Grade M-2, or medium-density fiberboard complying with ANSI A208.2, Grade MD, with surface of thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1. Provide material with no added urea formaldehyde (NAUF). Provide panels prefinished in color, size and overlay indicated on the Drawings – if not indicated, provide color as selected by Architect from Manufacturer’s full range of available color options. Provide full overlay if not indicated.

2.10 WOOD COUNTERTOP MATERIALS:

A. BUTCHER-BLOCK COUNTERTOP: Manufacturer pre-finished units in maximum length feasible to minimize countertop joints, prefinished in either varnish or oil finish, as selected by the Architect, and as follows:

(1) EDGE & UNIT THICKNESS: 1-1/2 inch

B. WOOD SPECIES: American Hard Maple (Acer saccharum), American Cherry (Prunus serotina), Appalachian Red Oak, American Black Walnut (Juglans nigra)
C. GRAIN PATTERN: Blended - running block pattern, edge-grain strips, end-grain blocks
D. APPROVED MANUFACTURER: John Boos & Company – other manufacturers must be submitted as a substitution per requirements of Division-01 for the Architect’s approval

2.11 WOOD COMPOSITE COUNTERTOP: Flat sheet of 1/2 inch thickness base material, with exposed edges laminated to required countertop thickness as indicated on the Drawings, or minimum 1-1/2” thick at countertop edges if not indicated. Cracked, chipped, broken, stained, or defective material will not be acceptable. Minimize color differences across joints. Provide matching joint adhesive approved for use by manufacturer. Fabrication must be in strict compliance with manufacturer's instructions. Check color match before proceeding with fabrication. Route and shape exposed edges for a homogeneous integral surfaced appearance. All surfaces must be of uniform gloss, with edges eased and polished smooth Provide the following:

A. APPROVED PRODUCTS / MANUFACTURERS: “Richlite - Black Diamond” – Northwest Series, (www.richlite.com), or “EcoTop – Jet Black” by Klip BioTechnologies, Inc (www.KLIPTECH.com)

2.12 MISCELLANEOUS WOOD MATERIALS:

A. Hardboard: AHA A135.4.
B. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade MD.
C. Particleboard (PBD): ANSI A208.1, Grade M-2
D. Softwood Plywood: DOC PS 1, Medium Density Overlay.
E. Hardwood Plywood And Face Veneers: HPVA HP-1.

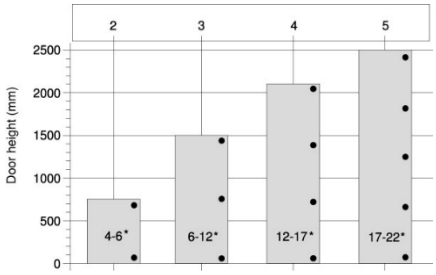
2.13 ADHESIVE

A. for Bonding Plastic Laminate: contact cement.
B. for Bonding Edges: Hot-melt adhesive.

2.14 INSTALLATION MATERIALS

A. FURRING, BLOCKING, SHIMS, AND HANGING STRIPS: Softwood or hardwood lumber, kiln-dried to less than 15 percent moisture content.
B. ANCHORS: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.15 MISCELLANEOUS WOOD PRODUCTS:



A. Hardboard AHA A135.4.
B. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade MD.
C. Particleboard (PBD): ANSI A208.1, Grade M-2
D. Softwood Plywood: DOC PS 1, Medium Density Overlay.
E. Hardwood Plywood And Face Veneers: HPVA HP-1.

2.16 CABINET HARDWARE AND ACCESSORIES

A. HARDWARE STANDARD: Comply with BHMA A156.9 for items indicated by referencing BHMA numbers or items referenced to this standard.
B. PROVIDE CABINET HARDWARE AND ACCESSORY MATERIALS associated with architectural cabinets as indicated in the Drawings, except for items specified in Division-08 "Door Hardware" Section:

(1) Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 170 degrees (minimum) of opening, soft-closing. BLUM -73B3590 110deg+ Clip Top Blumotion / soft close

(a) Provide appropriate Blumotion specifications for thick doors, blind corner, metal frame, angled or wide angle applications.
(b) Follow manufacturer guidelines on number of hinges per weight, or as follows
(i) 2 hinges for doors weight 4-6kg, 3 hinges for door weights of 6-12 kg, 4 hinges for weights of 12-17 kg, and 5 hinges for 17-22 kg.

(2) Back-Mounted Pulls: Provide typical cabinet pull units and in finish as indicated on the Drawings – if not indicated, provide # 8071 as manufactured by Richelieu – in brushed nickel finish or equivalent as selected by Architect.
(3) Adjustable Shelf Standards and Clip-type supports (for mounting at ends of shelves): BHMA A156.9, B04071; with shelf rests, B04081
(4) Adjustable Shelf Standards and brackets (for mounting at rear of shelves): BHMA A156.9, B04102; with shelf brackets, B04112.
(5) Shelf Rests for drilled holes: BHMA A156.9, B04013.
(6) Soft-closing Drawer Slides: Side-mounted, full-extension – soft-closing units extending under bottom edge of drawer, epoxy-coated steel with polymer rollers and rated for the following loads: Blum Tandem Undermounts – 563H – w/ Blumotion soft close
(a) For drawers not more than 3 inches high or 24 inches wide: Grade 2
(b) For drawers more than 3 inches high but not more than 6 inches high and not more than 24 inches wide, provide Grade 1HD-100.
(c) For drawers more than 6 inches high or more than 24 inches wide, provide Grade 1HD-200.
(d) For computer keyboard shelves, provide Grade 1HD-100.
(e) For trash bins not more than 20 inches high and 16 inches wide, provide Grade 1HD-200.
(7) Waste Container system – soft-close bottom mount waste container unit. Include two waste containers. Hailo US Cargo FL Series w/ soft close by Hafele
(8) Door and Drawer Silencers: BHMA A156.16, L03011
(9) Hidden Countertop Supports: 24 inch long units fabricated from hot rolled steel, in 1-1/2 inch width x 1/4 inch high flat solid bar extending under countertop projection, with a four (4) inch long cold-formed L-angled mounting flange with extended oval holes for up to 1/4 inch diameter fasteners to mount into vertical cabinet frame components, in black electrostatic powder-coat finish:
(a) Basis-of-Design: Outwater Plastic's "Harmony Floating Hidden countertop Support"
(10) Hidden Countertop Supports: 2.5 inch wide by 1/2 inch thick units fabricated from ASTM A36 hot rolled steel with four (4) pre-drilled mounting holes, in length as required to securely anchor to support framing and to extend to within one (1) inch of edge of countertop overhang, with 35 degree "safe edge" on front of bracket, in black electrostatic powder-coat finish:
(a) BASIS-OF-DESIGN: "CenterlineBrackets Standard Granite Bracket" Series CSP as manufactured by Centerline Steel LLC., P: 888-960-3854, www.countertopbracket.com
(11) Concealed Hardware Finish: Provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

C. Exposed Hardware Finishes: Provide finish that complies with BHMA A156.18 for BHMA finish number indicated:
(1) Typical unless otherwise indicated: Bright Chromium Plated - BHMA 625 for brass or bronze base; BHMA 651 for steel base.

D. DOOR & DRAWER LOCKS Disk tumbler cylinder cam locks for doors and drawers with lipped/overlay construction (straignt cam) or flush construction (formed cam) as required. Provide units with cam size and type as required by cabinet construction:
(1) BASIS-OF-DESIGN: "CompX National" # C8053-19 series (black finished unless indicated otherwise)
(2) Keying: 2 keys/door – all units keyed alike unless otherwise indicated.

2.17 FABRICATION:

A. TYPICAL FABRICATION OF WOOD CABINETS FOR TRANSPARENT FINISH
(1) Quality Standard: Comply with AWI Section 400, Custom Grade, and as follows:
(2) AWI Type of Cabinet Construction: Frameless Style, flush overlay or as otherwise indicated.
(3) Grain Matching: Run and match grain vertically for drawer fronts, doors, and fixed panels or as otherwise indicated.
(a) Matching of Veneer Leaves: Random match.

(b) Vertical Matching of Veneer Leaves: End match.

B. TYPICAL FABRICATION OF WOOD CABINETS FOR OPAQUE FINISH

(1) Quality Standard: Comply with AWI Section 400, Custom Grade requirements for wood cabinets, and as follows:

(a) AWI Type of Cabinet Construction: Frameless (face frame) with flush overlay or as otherwise indicated.
(b) WOOD PANELS for doors, drawers, cabinet sides and other exposed surfaces: Waterproof MDF

C. PLASTIC-LAMINATE CABINETS

(1) Quality Standard: Comply with AWI Section 400 – Custom Grade requirements for laminate cabinets.
(2) AWI Type of Cabinet Construction: frameless with flush overlay
(3) Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following:

(a) Horizontal Surfaces Other Than Tops: HGL.
(b) Post formed Surfaces: HGP.
(c) Vertical Surfaces: VGS.
(d) Edges: Self-edged with PVC tape, 0.018-inch minimum thickness, matching laminate in color, pattern, and finish.

(4) Materials for Semi-exposed Surfaces: Provide surface materials indicated below:

(a) Surfaces Other Than Drawer Bodies: Thermoset decorative overlay.
(b) Drawer Sides and Backs: Thermoset decorative overlay.
(c) Drawer Bottoms: Hardwood plywood – or decorative pre-finished panels .

(5) Colors, Patterns, and Finishes: Provide materials and products as indicated on the Drawings. Other manufacturers must be submitted as a substitution per of Division-01 requirements. If color is not indicated, provide from Architect approved plastic laminate manufacturer, in manufacturer's full range of colors and finishes in the both solid colors, and solid colors with the core the same color as the surface.

D. PLASTIC-LAMINATE (PLAM) COUNTERTOPS

(1) Quality Standard: Comply with AWI Section 400 – Custom Grade
(2) Core material: MDF, or waterproof MDF at countertops with sinks.
(3) High-Pressure Decorative Laminate Grade: HGS (HGP at post-formed countertops).
(4) Colors, Patterns, and Finishes: Provide materials and products as indicated on the Drawings. Other manufacturers must be submitted as a substitution per of Division-01 requirements. If color is not indicated, provide from Architect approved plastic laminate manufacturer, in manufacturer's full range of colors and finishes in both solid colors, and in solid colors with the core the same color as the surface.
(5) Edge Treatment: Self-edged in same material as horizontal laminate cladding

E. PLASTIC-LAMINATE (PLAM) WINDOW STOOLS

(1) Quality Standard: Comply with AWI Section 400 – Custom Grade
(2) Profile / assembly: 3/4 inch thick waterproof MDF top with 1-1/2 inch high edge trim. Provide 1/2 inch thick marine plywood or waterproof MDF sub-base screwed to substrate wall material, and anchor stool with adhesive to sub-base.
(3) High-Pressure Decorative Laminate Grade: HGS.
(4) Colors, Patterns, and Finishes: Provide materials and products as indicated on the Drawings. Other manufacturers must be submitted as a substitution per of Division-01 requirements. If color is not indicated, provide from Architect approved plastic laminate manufacturer, in manufacturer's full range of colors and finishes in both solid colors, and in solid colors with the core the same color as the surface.
(5) Edge Treatment: Self-edged in same material as horizontal laminate cladding

2.18 FABRICATION, GENERAL

A. WOOD MOISTURE CONTENT: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
B. FABRICATE WOODWORK to dimensions, profiles, and details indicated. Ease edges to 1/16 inch radius at corners of cabinets and edges of solid-wood (lumber) members and rails.
C. COMPLETE FABRICATION, including assembly, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
D. SHOP CUT OPENINGS, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs. Seal edges of openings in countertops with a coat of varnish.
E. SHOP FABRICATE casework to dimensions, profiles, and details indicated on Shop Drawings. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting. Complete fabrication, finishing, hardware application and other Work before shipment to project site to maximum extent possible.
F. SHOP ASSEMBLY OF CASEWORK: Completely assemble casework in shop prior to shipment to project site. Mark individual items in sequence with removable materials to facilitate field assembly. Shop fit glass in casework, remove and package to protect from breakage, clearly marked to facilitate field installation.
G. COUNTERTOP CUTOUTS: To the greatest extent possible, make countertop cutouts in the factory, with all exposed edges completely sealed against potential water penetration between finish surface and substrate, and substrate and web frame, as applicable.

PART 3 - INSTALLATION:

3.01 DELIVER inserts and other anchoring devices to be built into substrates, well in advance of time substrates are to be built. Condition wood materials to average prevailing humidity conditions in installation areas prior to installation.

3.02 DISCARD units of material which are unsound, warped, bowed, twisted, improperly treated, not adequately seasoned or too small to fabricate work with minimum of joints or optimum jointing arrangements, or which are of defective manufacturer with respect to surfaces, sizes or patterns.

3.03 INSTALL the Work plumb, level, true and straight with no distortions. Shim as required using concealed shims. Install to a tolerance of 1/8 inch in 8'-0" for plumb and level, and with 1/16" maximum offset in flush adjoining surfaces and 1/8" maximum offsets in revealed adjoining surfaces.

3.04 SCRIBE AND CUT to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.

3.05 ANCHOR to anchors or blocking built-in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation. Except where prefinished matching fastener heads are required, use fine finishing nails for exposed nailing, countersunk and filled flush with woodwork, and matching final finish where transparent finish is indicated.

3.06 INSTALL CABINETS without distortion so that cabinet doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors in openings and to provide free operation. Complete installation of hardware and accessory items indicated.

3.07 COUNTERTOPS: Anchor securely to base units and other support systems.

3.08 REPAIR DAMAGED and defective casework to eliminate defects functionally and visually, or where not possible, replace casework. Adjust joinery for uniform appearance. Clean, lubricate and adjust hardware for smooth operation. Rehang or replace doors which do not swing or operate freely, as directed by Owner. Clean casework on exposed and semi-exposed surfaces. Touch-up shop applied finishes to restore damaged or soiled areas.

3.09 TOUCH-UP FINISHING as required by installation. Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing of concealed surfaces and similar items.

3.10 PROTECTION: Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures architectural woodwork being without damage or deterioration at time of substantial completion.

END OF SECTION 06 41 00

SECTION 06 41 16 – PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:

(1) Plastic-laminate-clad architectural cabinets.
(2) Cabinet hardware and accessories.
(3) Miscellaneous materials.

B. Related Requirements:

(1) Section 06 10 00 “Rough Carpentry” for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.
(2) Section 12 36 61 “Solid Surface Countertops”.

1.02 COORDINATION:

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.

1.03 ACTION SUBMITTALS:

A. Product Data:

(1) Plastic-laminate-clad architectural cabinets.
(2) Cabinet hardware and accessories.
(3) Miscellaneous materials.

B. Product Data Submittals: For each product.
C. Shop Drawings:

(1) Include plans, elevations, sections, and attachment details.
(2) Show large-scale details.
(3) Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
(4) Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.

D. Samples for Initial Selection: For each type of exposed finish.
E. Samples for Verification: For the following:

(1) Plastic Laminates: 4 by 4 inches, for each type, color, pattern, and surface finish required.

(a) Provide one sample applied to core material with specified edge material applied to one edge.
(b) Provide edge banding on one edge.

(2) Corner Pieces:

(a) Cabinet-front frame joints between stiles and rails and at exposed end pieces, 18 inches high by 18 inches wide by 6 inches deep.
(b) Miter joints for standing trim.

(3) Exposed Cabinet Hardware and accessories: One full-size for each type and finish.

1.04 INFORMATIONAL SUBMITTALS:

A. Qualification Data: For Installer.
B. Product Certificates: For each type of product.

1.05 QUALITY ASSURANCE:

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
B. Installer Qualifications: Fabricator of products.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.07 FIELD CONDITIONS:

A. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.
B. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

(1) Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction and indicate measurements on Shop Drawings.

C. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.01 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS:

A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of cabinets indicated for construction, finishes, installation, and other requirements.

(1) Provide inspections of fabrication and installation together with labels and certificates from AWI certification program indicating that woodwork and installation complies with requirements of grades specified.
(2) The Contract Documents contain requirements that are more stringent than the referenced quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.

B. Architectural Woodworks Standards Grade: Custom.
C. Type of Construction: Frameless.
D. Door and Drawer-Front Style: Frameless with Flush overlay.
E. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by quality standard.
F. Exposed Surfaces:

(1) Horizonal Surfaces: Grade HGS.
(2) Postformed Surfaces: Grade HGP.
(3) Vertical Surfaces: VGS.
(4) Edges: Grade VGS.
(5) Pattern Direction: Vertically for drawer fronts, doors, and fixed panels.

G. Semi Exposed Surfaces:

(1) Surfaces Other Than Drawer Bodies: Thermally fused laminate panels.

(a) Edges of Plastic-Laminate Shelves: PVS edge banding, 3.0 mm thick, matching laminate in color, pattern, and finish.
(b) Edges of Thermally Fused Laminate Panel Shelves: PVC and polyester edge banding.
(c) For semi exposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, NEMA LD3, Grade CLS.

(2) Drawer Sides and Backs: Solid-hardwood lumber.
(3) Drawer Bottoms: Hardwood plywood.

H. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, ISO 4583-3, grade to match exposed surface.
I. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior body.

(1) Join subfronts, back, and sides with glued rabbeted joints supplemented by mechanical fasteners.

J. Colors, Patterns, and Finishes: Refer to Finish Legend on Drawings. Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

(1) To be selected by Architect from laminate manufacturer's full range in the following categories:

(a) Solid colors, matte finish.
(b) Wood grains, matte finish.
(c) Patterns, matte finish.

2.02 WOOD MATERIALS:

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

(1) Wood Moisture Content: 5 to 10 percent.

B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.

(1) Medium-Density Fiberboard (MDF): ANSI A208.2, Grade 130.
(2) Particleboard (Medium Density): ANSI A208.1, Grade M-2.
(3) Softwood Plywood: DOC PS 1, medium-density overlay.
(4) Thermally Fused Laminate (TFL) Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for Test Methods 3.3, 3.4, 3.6, 3.8, and 3.10.

2.03 CABINET HARDWARE AND ACCESSORIES:

A. General: Subject to compliance with listed requirements, provide products by one of the following manufacturers:

(1) Accuride International.
(2) Blum, Julius & Co., Inc.
(3) Grass America, Inc.
(4) Knape & Vogt Manufacturing Company.

B. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, 135 degrees of opening and soft close feature.

C. Back-Mounted Pulls: ANSI/BHMA A156.9, B02011.
D. Wire Pulls: Back mounted, solid metal, 4 inches long, 5/16 inch in diameter.
E. Catches: Push-in magnetic catches, ANSI/BHMA A156.9, B03131.
F. Adjustable Shelf Standards and Supports: ANSI/BHMA A156.9, B04071; with shelf rests, B04081.
G. Shelf Rests: Metal.
H. Drawer Slides: ANSI/BHMA A156.9.
   (1) Standard Duty (Grade 1 and Grade 2):
      (a) Type: extension.
      (b) Material: Zinc-plated steel with polymer rollers.
   (2) Grad 1HD-100 and Grad 1HD-200: Side mounted; full-extension type; zin c-plated-steel ball-bearing slides.
   (3) For drawers not more than 3 inches(75 mm) high and not more than 24 inches(600 mm) wide, provide Grade 1.
   (4) For drawers more than 3 inches high, but not more than 6 inches high and not more than 24 inches wide, provide Grade 1HD-100.
   (5) For drawers more than 6 inches high or more than 24 inches wide, provide Grade 1HD-100.
I. Door Locks: ANSI/BHMA A156.11, E07121.
J. Drawer Locks: ANSI/BHMA A156.11, E07041.
K. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.
L. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
   (1) Refer to Finish Legend on Drawings.
M. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.04 MISCELLANEOUS MATERIALS:

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln-dried to less than 15 percent moisture content.
B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
C. Adhesive for Bonding Plastic Laminate: Type II water-resistant type as selected by fabricator to comply with requirements.
   (1) Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

2.05 FABRICATION:

A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.
B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
   (1) Notify Architect seven days in advance of the dates and times architectural cabinet fabrication will be complete.
   (2) Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
   (3) Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.02 INSTALLATION:

A. Grade: Install cabinets to comply with quality standard grade of item to be installed.
B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.
C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.
D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches using concealed shims.
   (1) Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
   (2) Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
   (3) Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches o.c. with No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish or toggle bolts through metal backing or metal framing behind wall finish.

3.03 ADJUSTING:

A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets, Adjust joinery for uniform appearance.

3.04 CLEANING:

A. Clean, lubricate, and adjust hardware.
B. Clean cabinets on exposed and semi exposed surfaces.

END OF SECTION 06 41 16

SECTION 06 64 13 – FIBERGLASS REINFORCED PLASTIC (FRP) PANELING

PART 1 - GENERAL

1.01 WORK INCLUDES surface preparation of wall surfaces and installation of Fiberglass Reinforced Plastic (FRP) paneling, as specified herein and as needed for a complete and proper installation.

1.02 PROVIDE FRP paneling on all wall surfaces adjacent to or within two (2) feet of a service (mop) sink, up to 48 inches above finished floor (FFE), unless another wall finish is indicated to be provided on the Drawings.

PART 2 - PRODUCTS

2.01 (STANDARD) FRP PANELS: .090 inch thick x 4 feet wide 4 x 8, 10 or 12 ft high USDA accepted panels of semi-rigid fiberglass reinforced plastic panels, with color-matched one-piece trim and panel moldings at all joints between panels, and at top and bottom edges of panels:

A. Basis-of-Design Product / Manufacturer: “Marlite FRP", # S-100/2/S White - Class III/C per ASTM E-84, smooth surfaced units, or equal

PART 3 - INSTALLATION

3.01 EXAMINE AREAS and conditions in which FRP will be installed. Complete all finishing operations, including prime coat of paint, before beginning installation of wall surface protection materials.

3.02 PREPARATION: Acclimate panels in temperature and humidity conditions approximating those at the project site for not less than 24 hours before application. Lay panels flat. Do not stack on fresh conc. floors or other surfaces that emit moisture. Walls must be dry and free from dirt, dust and grease. Remove switchplates, wall plates, and surface- mounted fixtures in areas where panels are to be applied.

3.03 PANEL FITTING: Position panels with 1/4" gap at ceiling and floor, and 1/8' gap between each panel and division bar of moldings to allow for normal expansion and contraction. Allow not less than 1/8" gap around pipes, electrical fittings, and other projections. Use carbide-tipped power saws to cut panels. Prefit each panel before installing.

3.04 INSTALL PANELS by using manufacturer’s recommended adhesive applied to back of panels for 100% coverage, with a notched trowel. Before adhesive skins over, set panels in position and press against wall. Pull entire panel back away from wall 8" to 10" to flash off any solvents, if applicable. Press back in place. Apply adequate pressure to make full contact between panel and wall.

3.05 PANEL MOLDINGS: Install one-piece matching trim and panel moldings at all joints between panels, and at top and bottom edges of panels. Install moldings with continuous bead of silicone sealant during installation of panels. Seal joints between moldings and between molding and adjacent finish material. Remove excess sealant immediately.

3.06 CLEAN-UP: Remove excess adhesive and sealant while it is still wet. Replace removed plates and fixtures. Remove surplus materials and debris resulting from panel installation upon completion of Work, and leave areas of installation in clean condition.

SECTION 07 92 00 – JOINT SEALANTS

SECTION 07 08 00 – BUILDING ENCLOSURE COMMISSIONING

PART 1 - GENERAL

A. DESCRIPTION

1. The requirements of this Section apply to all sections of Division 07 and Division 08.

B. RELATED WORK

1. Section 01 75 00 – Operation and Maintenance Data Integration
2. Section 01 79 00 – Commissioning Demonstration and Training
3. Section 01 81 13 – LEED Certification Requirements
4. Section 01 81 19 – Indoor Air Quality Management
5. Section 07 27 00 – Air Barrier Requirements

C. SUMMARY

1. This Section includes requirements for commissioning the Facility exterior closure, related subsystems and related equipment. This Section supplements the general requirements specified in Section 01 91 13 General Commissioning Requirements.
2. The commissioning activities have been developed to support the Owner requirements and to meet the enclosure commissioning requirements of the LEED (Leadership in Energy and Environmental Design) Rating System.

D. DEFINITIONS

The following terms as they apply to this section:

1. Refer to Section 01 91 13 General Commissioning Requirements for definitions.
2. Air Barrier Accessory - Products designated to maintain air tightness between air barrier materials, air barrier assemblies and air barrier components, to fasten them to the structure of the building, or both (e.g., sealants, tapes, backer rods, transition membranes, fasteners, strapping, primers).
3. Air Barrier Assembly - The combination of air barrier materials and air barrier accessories that are designated and designed within the environmental separator to act as a continuous barrier to the movement of air through the environmental separator.
4. Air Barrier Component - Pre-manufactured elements such as windows, doors, dampers and service elements that are installed in the environmental separator.
5. Air Barrier Envelope - The combination of air barrier assemblies and air barrier components, connected by air barrier accessories that are designed to provide a continuous barrier to the movement of air through an environmental separator. There may be more than one air barrier envelope in a single building. Also known as Air Barrier System.
6. Air Barrier Material - A building material that is designed and constructed to provide the primary resistance to airflow through an air barrier assembly.
7. Air Barrier System - Same as AIR BARRIER ENVELOPE.
8. Air Leakage Rate - The rate of airflow (CFM) driven through a unit surface area (sq.ft.) of an assembly or system by a unit static pressure difference (Pa) across the assembly. (example: 0.25 CFM/sq.ft. @ 75 Pa)
9. Air Leakage - The total airflow (CFM) driven through the air barrier system by a unit static pressure difference (Pa) across the air barrier envelope. (example:6500 CFM @ 75 Pa)
10. Air Permeance - The rate of airflow (CFM) through a unit area (sq.ft.) of a material driven by unit static pressure difference (Pa) across the material (example: 0.004CFM/sq.ft. @ 75 Pa).
11. Environmental Separator - The parts of a building that separate the controlled interior environment from the uncontrolled exterior environment, or that separate spaces within a building that have dissimilar environments. Also known as the Control Layer.

E. COMMISSIONED SYSTEMS

1. Commissioning of a system or systems specified in Division 07 and Division 08 is part of the construction process. Documentation and testing of these systems, as well as training of the Owner's Operation and Maintenance personnel, is required in cooperation with the Owner and the BECxA.
2. The following Facility exterior closure systems will be commissioned:
    a. Roofs (Asphalt shingles, slate shingles, wood shingles, clay roof tiles, built-up bituminous, modified bituminous, EPDM, PVC, fluid-applied, sprayed polyurethane, flashing & sheet metal, metal roofing, roof specialties, and roof accessories)
    b. Exterior Insulation and Finish Systems (EIFS)
    c. Curtain Wall Systems (Mullions, glazing, and sealing)
    d. Exterior Doors (Revolving, glass leaf, emergency exit, and service)
    e. Exterior Windows (Aluminum, steel, glazing, storm)
    f. Louvers and Vents
    g. Sealants (Caulking, mechanical seals, and wind and vapor barriers)

F. QUALIFICATIONS

1. The Building Enclosure Commissioning Agent (BECxA) shall be contracted with the University of Arkansas directly through the Commissioning Agent (CxA). All building testing associated with the building enclosure, underfloor plenum, water resistance of exterior assemblies, etc., are the responsibility of the contractor unless otherwise noted in the contract documents. The BECxA performs building envelope commissioning in

accordance with the most current University of Arkansas' Commissioning Standards. Design Review, oversees quality control testing specified in these specifications, performs quality control air barrier inspection as specified, interfaces with the designer and product manufacturer's representatives to assure all installation requirements are met, and coordinates efforts between all workers installing or penetrating the air barrier materials.

PART 2 - PRODUCTS – NOT USED

PART 3 - EXECUTION

A. DESIGN REVIEW

1. The BECxA shall review the Contract Plans and Specifications and advise the Design Team and General Contractor of any deficiencies that would prevent the construction of an effective air barrier system. The BECxA shall provide a Design Review Report individually listing each deficiency and the corresponding proposed corrective action necessary for a proper air barrier system.

B. SUBMITTAL REVIEW

1. The commissioning process requires review of selected Submittals. The BECxA will provide a list of submittals that will be reviewed by the Commissioning Agent. This list will forwarded to the Contractor.
2. The commissioning process requires Submittal review simultaneously with architect review. Specific submittal requirements related to the commissioning process are specified in Section 01 91 13 General Commissioning Requirements.

C. PRE-CONSTRUCTION COORDINATION

1. The Commissioning Agent shall coordinate and schedule a building enclosure pre-construction meeting. The enclosure architectural details, enclosure components, sequencing of trades, and testing requirements will be covered in the meeting. Any potential changes to the construction details or materials will be identified in this meeting. The meeting should be scheduled before installation of any of the building enclosure components and after the construction of the mock-up.

D. CONTRACTORS TESTS

1. Contractor tests as required by other sections of Division 07 (07 27 00) or Division 08 shall be scheduled and documented in accordance with Section 01 00 00 General Requirements. The BECxA will have the option to witness selected Contractor tests.

E. QUALITIY CONTROL INSPECTION

1. The BECxA shall conduct the following inspections as applicable during installation of the air barrier system, and submit quality control reports as indicated below:
    a. Inspect to assure continuity of the air barrier system throughout the building enclosure and that all gaps are covered, the covering is structurally sound, and all penetrations are sealed allowing for no infiltration or exfiltration through the air barrier system.
    b. Inspect to assure structural support of the air barrier system to withstand design air pressures.
    c. Inspect to assure masonry surfaces receiving air barrier materials are smooth, clean, and free of cavities, protrusions and mortar droppings, with mortor joints struck flush or as
    d. Inspect and test to assure site conditions for application temperature, and dryness of substrates are within guidelines.
    e. Inspect to assure substrate surfaces are properly primed if applicable and in accordance with manufacturer's instructions. Priming must extend at least 2 inches beyond the air barrier material to make it obvious that the primer was applied to the substrate before the air barrier material.
    f. Inspect to assure laps in materials are at least a 2-inch minimum, shingled in the correct direction or mastic applied in accordance with manufacturer's recommendations, and with no fishmouths.
    g. Inspect to assure that a roller has been used to enhance adhesion. Identify any defects such as fishmouths, wrinkles, areas of lost adhesion, and improper curing. Note the intended remedy for the deficiencies.
    h. Inspect to assure that the correct materials are installed for compatibility.
    i. Inspect to assure proper transitions for change in direction and structural support at gaps.
    j. Inspect to assure proper connection between assemblies (membranes and sealants) for cleaning, preparation and priming of surfaces, structural support, integrity and continuity of seal.

END OF SECTION 07 08 00

SECTION 07 11 00 – DAMPROOFING AND WATERPROOFING

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide bituminous dampproofing, in accordance with requirements contained herein, applied to the following surfaces:

A. Exterior concrete “slab-edge” surfaces, extending to footing below
B. Foundation walls at basements and crawlspaces.

1.02 RELATED SECTIONS

A. Division 03: Concrete
B. Division 07: Insulation

1.03 DAMPPROOFING: Provide cold-applied, emulsified-asphalt meeting one of the following:

A. ASTM D 1227, Type II, Class 1, for troweled coats: or
B. ASTM D 1227 Type II, Class 1 for fibered brush and spray coats, or
C. ASTM D 1227, Type III, Class 1for brush and spray coats.

1.04 WATERPROOFING: Provide self-adhering waterproofing membrane meeting the following:

A. Flexible, bituminous, roll-type waterproofing membrane.
B. Composed of a nominally 56 mil thick layer of polymeric waterproofing membrane on a heavy duty, four-mil thick, cross-laminated polyethylene carrier film.

1.05 SUBMITTALS

A. Product Data

1.06 QUALITY CONTROL

A. Obtain all products from one manufacturer as a “system”.
B. Store and install according to manufacturer’s specifications.

PART 2 - PRODUCTS

2.01 DAMPPROOFING: Installed ONLY at below grade conditions that are NOT crawlspace or basement.

A. EMULSIFIED-ASPHALT PRIMER: ASTM D 1227, Type III, Class 1, except diluted with water as recommended by manufacturer.
B. ASPHALT-COATED GLASS FABRIC: ASTM D 1668, Type I.

2.02 WATERPROOFING MEMBRANE: Installed at ALL crawlspace and basement conditions.

A. Basis of Design: W.R. Meadows; Mel-Rol.
B. Testing Criteria
   (1) ASTM D412:
      (a) Tensile Strength Film: 5900 psi min
      (b) Tensile Strength Membrane: 460 psi min
      (c) Elongation: 971.3% min
   (2) ASTM C836: Low Temp Crack Bridging 100 Cycle @ -25dF: Pass
   (3) ASTM D903: Peel Adhesion: 11.8 lb/in min
   (4) ASTM D1876: Lap Adhesion: 8.62 lbf/in. min
   (5) ASTM E-96,B: Water Vapor Permeability: 0.1 Perms max
   (6) ASTM D 570: Water Absorption: 0.1%, 72 hrs. max
   (7) ASTM D5385: Hydrostatic Resistance: Equiv. to 200 ft of water. Min.
   (8) ASTM E 154: Puncture Resistance: 50 lbf min
   (9) ASTM D1970: Flexibility @ -20dF: Pass
C. Accessories: Install above membrane as part of a system with associated:
   (1) Primer adhesive
   (2) Detail Strips
   (3) Termination bar
   (4) Mastic beads
   (5) Catalytic Bonding Asphalt
   (6) Protection Course
   (7) Drainage Board. System shall include dimpled drainage mat over waterproofing system if backfill is native soil. Drainage board may be excluded only if backfill is clean gravel with silt barrier between backfill and soil.
      (a) Basis of Design: W.R. Meadows; Mel-Drain.

PART 3 - EXECUTION

3.01 DAMPPROOFING:

A. MASK OR OTHERWISE PROTECT ADJOINING EXPOSED SURFACES from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.
B. CLEAN SUBSTRATES OF PROJECTIONS and substances detrimental to work; fill voids, seal joints, and apply bond breakers if any, as recommended by prime material manufacturer.

C. COMPLY WITH MANUFACTURER'S WRITTEN RECOMMENDATIONS unless more stringent requirements are indicated or required by Project conditions to ensure satisfactory performance of dampproofing. Apply additional coats if recommended by manufacturer or required to achieve coverages indicated. Allow each coat of dampproofing to cure 24 hours before applying subsequent coats.
D. AT INTERNAL AND EXTERNAL CORNERS, changes in plane, construction joints, and cracks, install embed an 8-inch-wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat required for embedding fabric is in addition to other coats required.
E. APPLY TWO (2) BRUSH OR SPRAY COATS at a rate of 1.5 to 2.5 gal./100 sq. ft per coat depending on substrate texture, to produce a uniform, dry-film thickness of not less than 15 mils. Apply in two (2) coats to obtain required thickness, allowing time for complete drying between coats.
F. REMOVE DAMPPROOFING MATERIALS from surfaces not intended to receive dampproofing.

3.02 WATERPROOFING MEMBRANE:

A. Temperature … Apply in dry, fair weather when the air and surface temperatures are above 40° F (4° C). Do not apply to frozen concrete.
B. MEL-ROL LOW TEMP can be used when air and surface temperatures are between 20° F (-7° C) and 60° F (16° C).
C. Surface Conditioning … Apply MEL-PRIME adhesive to surfaces that will be covered within one working day. If left exposed overnight, additional adhesive must be applied. Follow all instructions and precautions on containers.
D. REMOVE release paper from MEL-ROL from the top edge of the roll and firmly press exposed area to the wall. Remove the release paper from the rolls in a downward direction, pressing MEL-ROL into place on the wall.
E. Footing Details … Use DETAIL STRIP for impaction sheet coverage. First, fold strips lengthwise and then cut at the fold. Material is then ready to install as 4 ½" (114.3 mm) strips on either side of the rebar. Any excess can be turned down on the face of the footing. Next, fill the voids around rebars in the keyway with CATALYTIC BONDING ASPHALT. Pour the walls. Install DETAIL STRIP horizontally along the wall where it meets the footing, placing half the material up the wall and the other half onto the footing. Extend the material 4 ½" (114.3 mm) beyond outside corners. Slit extended portion of DETAIL STRIP lengthwise. Place the horizontal flap out onto the footing and bend the vertical flap around the wall. Repeat this procedure in the opposite direction.
F. MEL-ROL can be applied to concrete, masonry surfaces, wood, insulated wall systems, and metal. All substrates must be clean, dry, and free of all surface irregularities.
G. Horizontal Application … Remove release paper on edge, then position the MEL-ROL membrane. Pull balance of release paper off, running the roll from low to high points so that all laps will shed water. Stagger end laps and overlap all seams at least 2 ½" (63.5 mm). Apply a double-thickness of the MEL-ROL membrane over construction, control, and all expansion joints and cracks greater than 1/16″ (1.59 mm) wide.
H. Vertical Wall Application … Masonry walls may require the application of a cementitious parge-coat. Allow the parge-coat to dry before priming and applying MEL-ROL. When applied, the parge-coat will produce a smooth, uniform, and well-bonded surface. Remove release paper, then apply vertically in lengths approximately 8′ (2.44 m) long over the top of the horizontal DETAIL STRIP at the footing. Overlap seams at least 2 ½" (63.5 mm). Tightly butt edges of membrane and apply POINTING MASTIC in corner applications.
I. To the top terminations, apply POINTING MASTIC at least 1/8″ (3.18 mm) thick and 1″ (25.4 mm) wide. As an option, TERMINATION BAR may be used to fasten the membrane mechanically.
J. Hand-Rub and Roll Press … Once positioned, immediately hand-rub the MEL-ROL membrane firmly to the surface, removing any bubbles or wrinkles, then pressure roll the complete surface to assure positive adhesion.
K. Inside Corners … Before MEL-ROL is applied, place a vertical DETAIL STRIP on inside corners extending the material 4 ½" (114.3 mm) beyond each side of the corner. Terminate at the footing and finish the corner with POINTING MASTIC.
L. Outside Corners … Bend DETAIL STRIP vertically over the outside corner and extend 4 ½" (114.3 mm) beyond each side of the corner. Terminate the material at the footing. Finish the corner with POINTING MASTIC. (See Diagram C.)
M. Drains and Protrusions … All protrusions should be sealed with two layers of membrane applied at least 6″ (152.4 mm) in all directions. Seal all terminations with POINTING MASTIC. Around drains, apply two layers of MEL-ROL and put a bead of POINTING MASTIC between the membrane and clamping rings and at all terminations, drains, and protrusions. See ASTM D 5898
N. Inspect and Repair … A thorough inspection should be made before covering and all necessary repairs made immediately. Tears and inadequate overlaps should be covered with MEL-ROL … slit fish mouths and patch. Seal edges of all patches with POINTING MASTIC. Where applicable, horizontal applications can be flood-tested for 24 hours. All leaks should be marked and repaired when membrane dries.
O. Protect the Membrane … on all vertical and horizontal installations with the immediate application of PROTECTION COURSE if no drainage system is used, or MEL-DRAIN. To secure PROTECTION COURSE, use POINTING MASTIC as an adhesive, and/or physically attach at the top edge using TERMINATION BAR. Backfilling should be done immediately, using care and caution to avoid damaging the waterproofing application.
P. PRECAUTIONS: Avoid the use of products that contain tars, solvents, pitches, polysulfide polymers, or PVC materials that may come into contact with MEL-ROL. The use of MEL-ROL does not negate the need for relief of hydrostatic heads. A complete drain tile system should be placed around the exterior of footing and under slabs, as required.
Q. Dispose of all debris off site. Do NOT leave debris to be covered by backfill.

END OF SECTION 07 11 00

SECTION 07 13 00 – FOUNDATION WATERPROOFING SYSTEM

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide waterproofing membrane with protection course in accordance with requirements contained herein. Waterproofing include all sheet materials applied with sealed joints and flashings as needed to form the concealed waterproofing membrane. Waterproofing includes but is not limited to the following:

A. Provide waterproof membrane and waterstops on concrete and in concrete joints below-grade at all conditions where the exterior finished grade is above the interior finished floor elevation of occupied spaces, basements and crawl spaces.

1.02 INTENT: It is the intent of this Section that the building structure be absolutely watertight from below grade moisture.

1.03 INSTALLER QUALIFICATIONS: An entity with not less than five (5) years of successful experience in installation of waterproofing sheets similar to requirements for this project and which is acceptable to and licensed by the manufacturer of primary waterproofing materials.

1.04 PRODUCT DATA SUBMITTALS: Submit specifications, installation instructions, and general recommendations from the waterproofing materials manufacturer.

1.05 JOB CONDITIONS:

A. SUBSTRATE: Proceed with work of this section only after substrate construction, openings, and penetrating work have been completed.
B. WEATHER: Proceed with waterproofing and associated work only when existing and forecasted weather conditions will permit work to be performed in accordance with manufacturers' recommendations and warranty requirements.

1.06 SPECIAL INSTALLER'S WARRANTY: Provide installation warranty, signed by Installer, covering Work of this Section, including removal and reinstalling protection board, drainage panels, insulation, pedestals, and pavers on plaza decks, as applicable.

A. Warranty Period: Two (2) years from date of Substantial Completion

PART 2 - MATERIALS

2.01 MANUFACTURER: Obtain primary waterproofing materials from a single manufacturer, to the greatest extent possible. Provide secondary materials only as recommended by the manufacturer of the primary materials.

2.02 WATERPROOFING SYSTEM: At existing and new foundation walls with basement or crawlspace behind. Provide a system from a single manufacturer that includes membrane, drainage and insulation. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

A. TUF-N-DRI + WARM-N-DRI WATERPROOFING SYSTEM by Tremco.

(1) Tuf-N-Dri elastic membrane (rubber-like) with 2,000% elongation and min. 15 year warranty at ALL below grade walls.
(2) Warm-N-Dri Rigid Fiberglass Insulation Drainage Board: 2-3/8 inch thick, R-10 at ALL basement and crawlspace walls.

2.03 PROTECTION / DRAINAGE PANEL (at below-grade walls without space or perimeter insulation): Panels consisting of a nonwoven, needle-punched geotextile facing laminated to one side with a polymeric film bonded to the other side of a nonbiodegradable, molded-composite plastic-drainage core. Acceptable products include but are not limited to the following:

A. Tremco's DrainStar Wall Drain 90 – 0.25 inch thick
B. Carlisle's "CCW MiraDRAIN 6200" and "CCW MiraDRAIN 6200XL" – 0.040 inch thick
C. Grace's "Hydroduct 220" (vertical) or "Hydroduct 660" (horizontal) – 0.44 inch thick,

2.04 PROTECTION BOARD: Premolded, semirigid asphalt/fiber composition board, 1/4 inch thick, formed under heat and pressure, of standard sizes.

2.05 CONCRETE WATERSTOPS: "Volclay" Waterstop # RX 101, 1" wide by .75" high, self-adhering elastomeric/bentonite material as manufactured by the American Colloid Company (phone: 708-392-4600). Provide manufacturer's special adhesive and 2" concrete cut nails at all joints.

2.06 WATERPROOFING & FLASHING ACCESSORIES: Provide sealants, pourable sealers, cone and vent flashings, inside and outside corner flashings, termination reglets, and other accessories recommended by waterproofing manufacturer for intended use, and as follows:

A. PRIMERS: Provide concrete primer recommended by the manufacturer of sheet waterproofing material for applications required.
B. ADHESIVES: Adhesive compounds and tapes recommended by waterproofing sheet manufacturer, for waterproof sealing of seams in membrane, and for waterproof sealing of joints between membrane and flashings, adjoining surfaces and projections through membrane.
C. TERMINATION BARS: Manufacturer's standard aluminum or formed polymer bars, approximately 1 inch wide, prepunched for anchors, with non-corrosive stainless-steel anchors.

PART 3 - EXECUTION

3.01 ALLOW TIME for walls to properly cure before applying waterproofing membrane.

3.02 REMOVE all concrete fins, projections, burrs, concrete splatter, general surface dirt and other foreign materials so as to leave wall and flat surfaces in clean condition suitable for application of membrane. Clean surface with high pressure air to remove dust, loose stones and debris.

3.03 PATCH ALL VOIDS, cracks, spalled areas and areas where coarse aggregate is visible. Patching must be done with Portland Cement, grout or concrete.

3.04 INSTALL all components and Waterproofing System according to manufacturer's specifications.

3.05 INSTALL PROTECTION COURSE over completed membrane, complying with manufacturer's recommendations for both waterproofing sheet and protection course materials.

END OF SECTION 07 13 00

SECTION 07 21 00 – THERMAL INSULATION

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide insulation work, as shown on the drawings, as specified herein, and as needed to meet the requirements of the construction shown in the Contract Documents. Applications of insulation specified in this section include the following: blanket-type building insulation and rigid-type building insulation at wall furring

1.02 RELATED SECTIONS:

A. Section 018113 Certification Requirements.

1.03 THERMAL CONDUCTIVITY: Thicknesses indicated are for thermal conductivity (k-value at 75 degrees F or 24 degrees C) specified for each material. Provide adjusted thicknesses as directed for equivalent use of material having a different thermal conductivity. Where insulation is identified by "R" value, provide thickness required to achieve indicated value.

1.04 FIRE AND INSURANCE RATINGS: Comply with fire-resistance, flammability and insurance ratings indicated, and comply with regulations as interpreted by governing authorities.

1.05 SUBMITTALS

A. SUBMIT PRODUCT DATA including manufacturer's product specifications and installation instructions for each type of insulation and moisture protection material required.

1.06 LEED PERFORANCE REQUIREMENTS

A. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
B. VOC Emissions Evaluation: For Thermal Insulation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope.
D. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.07 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
C. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope.
E. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable

1.08 QUALITY ASSURANCE

A. FIRE-TEST-RESPONSE CHARACTERISTICS: Provide insulation and related materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to AHJ representatives. Identify materials with appropriate markings of applicable testing and inspecting agency.
    1. Surface-Burning Characteristics: ASTM E 84.
    2. Fire-Resistance Ratings: ASTM E 119.
    3. Combustion Characteristics: ASTM E 136.

1.09 DELIVERY, STORAGE, AND HANDLING

A. PROTECT INSULATION MATERIALS from physical damage and from deterioration by moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
B. PROTECT PLASTIC INSULATION as follows:
    1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
    2. Protect against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
    3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.01 PROVIDE PREFORMED UNITS, sized to fit applications indicated; selected from manufacturer's standard thicknesses, widths, and lengths, as appropriate for conditions of use indicated.

2.02 HIGH-DENSITY ROCK-WOOL INSULATION BOARD: Typical at exterior continuous insulation. Formaldehyde free, unfaced, rock-wool-fiber boards of 6.0 PCF minimum, with R-value of 4.2 per inch thickness, meeting ASTM C 665, Type I (blankets without membrane facing); consisting of mineral fibers with a maximum flame-spread and smoke-developed indexes of 0 and 0 respectively; and rated as non-combustible per ASTM E 136 / NFPA Standard 220. Approved Products / Manufacturers include:

A. Owens Corning / Thermafiber RainBarrier HD
B. Roxul CavityROCK DD

2.03 EXTRUDED POLYSTYRENE (XPS) INSULATION:

A. EXTRUDED-POLYSTYRENE (XPS) INSULATION: ASTM C 578 – Type IV (1.60 PCF – compressive strength of 25 PSI) with insulation value of R-5 per inch, maximum flame-spread and smoke-developed indexes of 75 and 450, respectively. Acceptable Manufacturers include: DiversiFoam Products, Dow Chemical Company, Owens Corning, or Pactiv Building Products Division.

1. Provide drainage type insulation under all permeable finish materials including Cement Plaster “Stucco”: Foamular Insul-Drain XPS by Owens Corning, or equal.

2.04 EXPANDED POLYSTYRENE (EPS) INSULATION:

A. EXPANDED POLYSTYRENE (EPS) INSULATION: Rigid, cellular polystyrene thermal insulation formed by expansion of polystyrene resin beads or granules in a closed mold to comply with ASTM C 578 for Type I, (0.9 PCF), 10 PSI compressive strength, and with maximum flame-spread and smoke-developed indices of 75 and 450, respectively.
B. UNDER-SLAB EXPANDED POLYSTYRENE (EPS) INSULATION FILL: Rigid, cellular polystyrene thermal insulation formed by expansion of polystyrene resin beads or granules in a closed mold to comply with ASTM C 578 for Type IX, (2.0 PCF), 25 PSI compressive strength, and with maximum flame-spread and smoke-developed indices of 75 and 450, respectively.

2.05 UN-FACED BATT or BLANKET INSULATION: Provide formaldehyde free, un-faced batts or blankets (without kraft-paper facings) consisting of fiberglass, or rock-wool meeting ASTM C 665, Type I (blankets without membrane facing) with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics. Subject to compliance with requirements, available manufacturers include but are not limited to:

A. GLASS-FIBER INSULATION:

1. CertainTeed Corporation.
2. Guardian Building Products, Inc.
3. Johns Manville Corporation.
4. Knauf Fiber Glass.
5. Owens Corning.

B. ROCK-WOOL FIBER INSULATION:

1. Owens Corning / Thermafiber.
2. Roxul.

2.06 SILL SEALER (install below all bottom track or sill plates on concrete substrate): Glass fiber insulation in strip form, 1/4" nominal thickness compressible to 1/32"; selected from standard widths to suit width of sill members indicated.

2.07 PROTECTION BOARD: Premolded, semirigid asphalt/fiber composition board, 1/4 inch thick, formed under heat and pressure, of standard sizes.

2.08 AUXILIARY INSULATING MATERIALS

A. ADHESIVE FOR BONDING INSULATION: Product with demonstrated capability to bond insulation securely to substrates indicated without damaging insulation and substrates.
B. MISCELLANEOUS INSULATION ANCHORS: Provide adhesively attached, spindle-type anchors (angle-shaped when required), insulation-retaining washers and insulation standoffs with suitable anchor adhesive with demonstrated capability to bond insulation anchors securely to substrates indicated where insulation is required in areas where metal framing or other insulation retention system is not indicated.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES AND CONDITIONS, with Installer present, for compliance with requirements for Sections in which substrates and related work are specified and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. CLEAN SUBSTRATES OF SUBSTANCES harmful to insulations or vapor retarders, including removing projections capable of puncturing vapor retarders or of interfering with insulation attachment.
B. COMPLY WITH INSULATION MANUFACTURER'S WRITTEN INSTRUCTIONS applicable to products and application indicated. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed at any time to ice and snow.
C. EXTEND INSULATION IN THICKNESS INDICATED to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
D. WATER-PIPING COORDINATION: If water piping is located on inside of insulated exterior walls, coordinate location of piping to ensure that it is placed on warm side of insulation and insulation encapsulates piping.

E. APPLY SINGLE LAYER OF INSULATION to produce thickness indicated, unless multiple layers are otherwise shown or required to make up total thickness.

3.03 INSTALLATION OF PERIMETER AND UNDER-SLAB INSULATION

A. ON VERTICAL SURFACES, set units in adhesive applied according to manufacturer's written instructions. Use adhesive recommended by insulation manufacturer. If not indicated, extend insulation a minimum of 36 inches below exterior grade line.
B. PROTECT BELOW-GRADE INSULATION on vertical surfaces from damage during backfilling by applying protection board. Set in adhesive according to insulation manufacturer's written instructions.
C. PROTECT TOP SURFACE OF HORIZONTAL INSULATION from damage during concrete work by applying protection board.

3.04 INSTALLATION OF GENERAL BUILDING INSULATION

A. APPLY INSULATION UNITS TO SUBSTRATES by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
B. SEAL JOINTS BETWEEN CLOSED-CELL (NONBREATHING) INSULATION units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.
C. INSTALL MINERAL-FIBER BLANKETS IN CAVITIES formed by framing members according to the following requirements:
    1. Use blanket widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.
    2. Place blankets in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
    3. For metal-framed wall cavities where cavity heights exceed 96 inches (2438 mm), support unfaced blankets mechanically and support faced blankets by taping stapling flanges to flanges of metal studs.

3.05 INSTALL BOARD INSULATION ON CONCRETE OR CMU SUBSTRATES by adhesively attached, spindle-type insulation anchors as follows:

A. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.
B. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.
C. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.
D. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

3.06 PLACE LOOSE-FILL INSULATION into spaces indicated, either by pouring or by machine blowing, to comply with ASTM C 1015. Level horizontal applications to uniform thickness as indicated, lightly settle to uniform density, but do not compact excessively

3.07 PROTECT INSTALLED INSULATION FROM DAMAGE due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07 21 00

SECTION 07 21 19 – FOAMED-IN-PLACE INSULATION

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide concealed, foamed-in-place insulation where indicated on the Drawings, as specified herein, and as necessary for complete installation. Apply in thickness(es) required to provide thermal resistance (R-values) as indicated on the Drawings. Provide a thermal barrier between foamed-in-place insulation and occupied spaces, per requirements of the building code as a part of the Work of this Section, unless a separate thermal barrier material is indicated on the Drawings.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.
B. Section 072100 Thermal Insulation

B. INTERNATIONAL CODE COUNCIL (ICC)'s INTERNATIONAL BUILDING CODE (IBC):
   1. Applicable Sections of the most recent locally adopted version, for the following:
      a. Alternate Materials, design and methods of construction
      b. Foam Plastic Insulation.
      c. Unvented Attic Assemblies.

1.04 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For Thermal Insulation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
B. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
C. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.05 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope.If applicable, provide a a compliant embodied carbon optimization report or action plan.
D. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable.

1.06 SUBMIT PRODUCT DATA consisting of manufacturer's data sheets on each product to be used, including:

A. Preparation instructions and recommendations.
B. Storage and handling requirements and recommendations.
C. Installation methods

1.07 AHJ SUBMITTALS: Submit technical data sheets and samples as required by the local AHJ's upon their request. Include the technical data sheet from the manufacturer showing the test results from the ASTM E84 (Surface Burning Characteristics) and Appendix X, if applicable.

1.08 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by material manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements. A manufacturer's willingness to sell its sprayed fire-resistive materials to an entity does not in itself confer qualification on the installer.
B. Source Limitations: Obtain materials through one source from a single manufacturer. Components must be a matched set (system) as supplied by the manufacturer.
C. MOCK-UP: Provide a mock-up of the Work of this Section for evaluation of surface preparation techniques and application workmanship. Finish areas as designated by Architect. Do not proceed with remaining work until installation is approved by Architect. Rework mock-up area as required to produce acceptable work.
D. DELIVERY, STORAGE, AND HANDLING: Deliver in manufacturer's original containers clearly labeled with manufacturer's name, product identification, safety information, net weight of contents and expiration date. Store in a safe manner and where the temperatures are within the limits specified by the material manufacturer. Remove empty containers must be removed from site on a daily basis. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local AHJ.
    1. Use components as supplied with no site alterations or additions.
E. PROJECT CONDITIONS: Maintain environmental conditions (including temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits. Ventilate area to receive insulation to maintain safe working conditions. Protect workers as recommended by standards and manufacturer's recommendations. Protect adjacent surfaces, windows, equipment and site areas from damage of overspray.
F. PROTECT FOAM MATERIALS as follows:
    1. Component A and B: store between 60 and 90 degrees F.
    2. Component B can be frozen but must be protected from overheating over 120 degree F, and prolonged storage over 100 degree F.

1.09 WARRANTY

A. MANUFACTURER'S LIFETIME LIMITED WARRANTY: That materials when installed by manufacturer certified contractors using factory-trained applicators and applied in accordance with the Manufacturer's requirements will perform as stated in the Manufacturer's Technical Product Data sheet. This warranty will be effective from the date of substantial completion, throughout the life of the building with no additional action by the Owner (installer to prepare registration paperwork for execution by Owner and submittal by Installer). Manufacturer's responsibility under this limited materials warranty will be to repair or replace any defective material only, and will not be responsible for labor or other costs in connection with the removal or installation of either the original or replacement product.

PART 2 - PRODUCTS

2.01 SPRAY-FOAM INSULATION:

A. PROVIDE SPRAY-APPLIED FOAM INSULATION equal to or greater than the manufacturer's tested products and meeting or exceeding the indicated requirements herein for material composition and physical properties, as substantiated with independent 3rd party testing of materials equal to those intended to be provided. Materials must expand to insulate and seal cracks, gaps and joints with a single application, and cannot contain any CFCs, HCFC, or ozone-depleting chemicals.

2.02 PERFORMANCE CHARACTERISTICS

A. Air Leakage Rate: Maximum material air leakage rate of less than 0.004 CFM per SF under a pressure differential of 0.02 L/m2 at 75 Pa per ASTM E 2178 or E 282.
B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency, and as follows.
C. Flame-Spread Index: 25 or less.
D. Smoke-Development Index: 450 or less.
E. Sustainability Requirements: Provide spray polyurethane foam insulation meeting the following:
F. Low Emitting: Insulation tested according to CA/DPH/EHLB/v1.1-2010.
G. Resistant to fungal growth per ASTM C1338.
H. Containing no PBDE.

2.03 CLOSED-CELL FOAM INSULATION (requires a thermal barrier when exposed): Vapor impermeable 2-component polyurethane based spray-applied foam using water as a blowing agent, in minimum density of 2.1 PCF, and with a minimum aged R-value at 1-inch thickness of R-4.9 at 75 deg F. Acceptable products include the following: (submit other products as a substitution request for approval by Architect):

A. HeatLok XT, by Demilec (USA) P: 877-336-4532 – www.demilecusa.com
B. ProSeal Eco # MD-R-210, by Icynene Inc., P: 1-800-758-7325, www.icynene.com
C. ThermalGuard CC2 by Rhino Linings Corp. – P: 800-422-2603 www.rhinolinings.com
D. Quik-Shield # 112 or # 112 XC by SWD Urethane (R-6.6), P: 800-828-1394, www.swdurethane.com
E. Equivalent products of BASF Corporation or Dow Chemical Company are also acceptable.

2.04 CLOSED-CELL BIO-BASED FOAM INSULATION (requires a thermal barrier when exposed): Vapor impermeable 2-component polyurethane based spray-applied foam using water as a blowing agent, in minimum density of 2.1 PCF, and with a minimum 14% bio-based and 13.5 renewable material content, with a minimum aged R-value at 1-inch thickness of R-7.4 at 75 deg F. Acceptable products include the following: (submit other products as a substitution request for approval by Architect):

A. HeatLok Soy 200, by Demilec (USA) P: 877-336-4532 – www.demilecusa.com

2.05 THERMAL BARRIER COATING: Fire-tested, water-based fire-protective intumescent coating compatible with the spray foam material to completely encapsulate the foamed-in-place insulation after installation. Pending insulation material manufacturer's approval for use, acceptable products include but are not limited to:

A. Blazelock TBX – 11 dry mils minimum thickness, by Demilec (USA) – www.demilecusa.com
B. Paint-to-Protect # DC315 – 12 to 15 dry mils minimum thickness, by SWD Urethane, www.swdurethane.com.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of work. A substrate is in satisfactory condition if it complies with the following:

A. Substrates are free of oil, grease, incompatible primers, dirt, or other foreign substances capable of impairing bond of materials with the substrates
B. Objects penetrating foamed-in-place material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
C. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying material.

3.02 PROCEED WITH INSTALLATION ONLY AFTER unsatisfactory conditions have been corrected.

3.03 PREPARATION: Cover other work subject to damage from overspray of materials during application. Clean substrates of substances that could impair bond, including dirt, oil, grease, release agents, and incompatible primers, paints, or other coatings.

3.04 COMPLY WITH MANUFACTURER'S WRITTEN INSTRUCTIONS for mixing materials, application procedures, and types of equipment used to mix, convey, and spray on material, as applicable to the particular conditions of installation and as required to achieve the insulation thicknesses as indicated on the Drawings. Use components within their labeled shelf-life. Mix components thoroughly prior to use.

3.05 EXTEND MATERIAL IN FULL THICKNESS over the entire area of each substrate. Unless otherwise recommended in writing by material manufacturer, install body of insulation in a single course.

A. Do not spray into rising foam.
B. At water pipes within the insulated exterior walls, coordinate location of piping to ensure that it is placed on the warm side of the insulation, and that the insulation will encapsulate the piping completely.
C. Do not apply insulation within three (3) inches of heat emitting devices, or where the temperature is in excess of 200 degrees F, as per ASTM C411 or in accordance with applicable codes.
D. Install into cavities formed by framing embers to achieve the thickness or thermal-resistance value as indicated on the Drawings.

3.06 REMOVE AND REPLACE APPLICATIONS of insulation material that does not comply with the manufacturer's installation requirements.

3.07 APPLY ADDITIONAL MATERIALS per manufacturer's written instructions where application thickness does not comply with specified requirements.

3.08 APPLICATION OF THERMAL BARRIER: Except when manufacturer's testing indicates that the spray-foam material passes ASTM E-84 "Appendix X" requirements, apply a sprayed, thermal barrier coating over the installed spray-foam insulation when the insulation is exposed to the atmosphere of occupied spaces - including areas above suspended ceilings, and within attics or crawl spaces not ventilated to the exterior. If insulation will be separated from occupied spaces by not less than 1/2 inch thick gypsum board or an equivalent approved thermal barrier (as typical at exterior, finished walls), application of a sprayed thermal barrier is not required.

3.09 CLEANING: Immediately after completing installation operations in each containable area of the Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

3.10 PROTECT installed spray foam insulation from damage due to harmful weather exposures, physical abuse, and other causes detrimental to the installed material.

END OF SECTION 07 21 19

SECTION 07 25 00 – FLUID-APPLIED WATER RESISTIVE BARRIER (WRB)

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide a fluid-applied, vapor-permeable, air, moisture and weather-resistive barrier (WRB) system where indicated on the Drawings, as specified herein, and as necessary for a complete installation. The Work of this Section includes the primary membrane, through-wall flashing membranes, related accessories and joint treatments to bridge and seal the following air leakage pathways and gaps throughout the Project:

A. Joints and gaps in substrate material(s), and between dissimilar building envelope materials
B. Connections of the walls to the roof air barrier.
C. Connections of the walls to the foundations.
D. Seismic, expansion and control joints in the substrate material
E. Openings and penetrations at window and door frames, store front and curtain wall
F. Piping, conduit, duct and similar penetrations through the substrate
G. Ties, screws, bolts, anchorages and similar penetrations for subsequent insulation and finishes
H. Other air-leakage pathways into the building envelope.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.03 LEED REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and sealants, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the VOC limits, as per the applicable SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
    1. 1. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
    2. 2. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.05 BARRIER PERFORMANCE REQUIREMENTS: Provide a system capable of performing as a continuous vapor-permeable weather barrier, and as a liquid-water drainage plane flashed to discharge to the exterior any incidental condensation or water penetration. The system must be capable of accommodating substrate movement and sealing substrate expansion and control joints, construction material changes, and transitions at perimeter conditions without deterioration or leakage, and as follows:

A. AIR PERMEABILITY: 0.0016 CFM/SF at 1.6 PSF per ASTM E2178 and ASTM E283 with no increased air leakage when subjected to a sustained wind load of 10.5 PSF for 1 hour and gust wind load pressure of 62.8 PSF for 10 seconds when tested at 1.6 PSF per ASTM E331
B. WATER VAPOR PERMEANCE: 11.6 perms per ASTM E96 Method B when tested at 58 mils dry film thickness.
C. NO FUNGAL GROWTH when tested per ASTM D 5590
D. SURFACE BURNING: NFPA Class A, UBC Class 1, flame Spread 25, Smoke Developed 85 per ASTM E84
E. UV RESISTANCE: Passes 73 Cycles to ASTM D4799 Cycle B (Q-UV)
F. LOW TEMPERATURE FLEXIBILITY and crack bridging: Pass -4 degrees F per ASTM C836
G. LONG TERM FLEXIBILITY: Pass to CGSB 71-GP-24M
H. PASSING WATERTIGHTNESS test CGSB 37-GP-56M

1.06 REFERENCES

A. ASTM E2357: Standard Test Method for Determining Air Leakage of Air Barrier Assemblies.

E. ASTM E330: Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference.
F. ASTM E331: Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
G. ASTM E96: Water Vapor Transmission of Materials.
H. CGSB 37-GP-56M: Membrane, Modified, Bituminous, Prefabricated, and Reinforced.
I. AMMA 2400: Standard Practice for Installation of Windows with a Mounting flange in Stud Frame Construction.
J. ASTM E 2112: Standard Practice for Installation of Exterior Windows, Doors and Skylights.
K. ASTM D 5590: Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay

1.07 SUBMITTALS

A. SUBMIT PRODUCT DATA for each component of the barrier system.
B. LABORATORY TEST DATA from an approved independent testing laboratory certifying the air leakage and vapor permeance rates of the air barrier membranes, including primary membrane and transition sheets, exceed the requirements of the Massachusetts Energy Code and in accordance with ASTM E2178. Include test reports on porous substrate and include sustained wind load and gust load air leakage results.
C. SUBMIT INSTALLER QUALIFICATIONS indicating training, qualifications, competencies and written approval by the primary system manufacturer for execution of the Work of this Section.

1.08 QUALITY ASSURANCES:

A. PERFORM WORK in accordance with manufacturer's written instructions and this specification. Maintain one copy of manufacturer's written instructions on site. Allow access to Work site by the air barrier membrane manufacturer's representative. Ensure continuity of the weather barrier throughout the Project.
B. PROVIDE MATERIALS from a single manufacturer regularly engaged in the manufacturing of such weather resistant membrane systems, including sheet membrane, air barrier sealants, primers, mastics, and adhesives.
C. COMPLY with all federal, state and local regulations controlling the use of volatile organic compounds (VOCs).
D. MOCK-UP: Construct mock approximately 6 foot high x 6 foot wide, incorporating typical substrate(s) with attachment of subsequent materials to demonstrate barrier membrane application details that will be used. Allow seven (7) calendar days for inspection and approval of mock up by Owner and/or Architect before proceeding with air barrier work. Pending approval, the mock-up may remain as part of the Work.
E. PRE-INSTALLATION CONFERENCE: Organize and administer not less than one (1) week prior to commencement of the Work of this Section, in accordance with requirements of Division-01 Sections. Ensure that all entities responsible for creating and maintaining a continuous plane of weather tightness are present at the conference.

1.09 DELIVERY, STORAGE, AND HANDLING

A. DELIVER MATERIALS in original, unopened packages with manufacturers' labels intact and clearly identifying products.
B. STORE MATERIALS inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes. Complete installation as rapidly as possible in each area of construction.
C. WASTE MANAGEMENT AND DISPOSAL: Separate and recycle waste materials in accordance with requirements of Division-01 Sections and per the Construction Manager's Waste Reduction Work Plan. Verify compliance with VOC regulations and requirements herein for all products, and document to the Construction Manager.

1.10 PROJECT CONDITIONS - WEATHER LIMITATIONS: Maintain ambient temperatures above 40 deg F for a minimum of 24 hours before, during, and after coatings are applied. Do not apply air-moisture barrier coating during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air and substrate temperatures permit materials to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.11 COORDINATE INSTALLATION of barrier components with other trades to provide a continuous air-tight membrane.

PART 2 - PRODUCTS

2.01 FLUID-APPLIED WEATHER RESISTANT BARRIER (WRB):

A. BASIS-OF-DESIGN PRODUCT / MANUFACTURER:
Grace Construction Products (GCP): Perm-A-Barrier VPL single component acrylic membrane – or equal

2.02 PROVIDE AUXILIARY MATERIALS recommended by the prime barrier manufacturer for the intended use and compatible with the barrier membrane. Liquid-type auxiliary materials shall comply with VOC limits of AHJ representatives.

2.03 PRIMER: Liquid waterborne or solvent-borne primer recommended for substrate by manufacturer of barrier material.

2.04 WRB MEMBRANE FLASHING: For use at perimeter of window or storefront framing (head jamb or sills), transitions and joint treatments in substrates, inside or outside substrate corners, and at anchorage locations for subsequent framing or cladding materials, provide a self-adhering UV-resistant SBS modified-bitumen sheet membrane with a metallic aluminum film with the following physical properties:

A. Peel Adhesion to Primed Steel 15.0 per ASTM D 1000

B. Vapor permeance: less than 0.05 perms per ASTM E 96
C. Membrane Thickness: 0.0443 inch (40 mils)
D. Low temperature flexibility: -15 degrees F per ASTM D146 min
E. Elongation: 40% per ASTM D412-modifed min
F. Basis-of-Design Product / Manufacturer:
Perm-A-Barrier Aluminum Flashing by GCP – or equal

2.05 ADHESIVE WITH LOW VOC CONTENT: For self-adhering membranes at all temperatures, provide a synthetic rubber based adhesive, quick setting, having the following physical properties:

A. VOC: less than 240 g per L,
B. Solids by weight: 40%,
C. Drying time (initial set): 30 minutes.
D. Basis-of-Design Product / Manufacturer:
Perm-A-Barrier Adhesive Primer by GCP -- equal

2.06 PENETRATION & TERMINATION SEALANT: moisture cured, medium modulus polymer modified sealing compound having the following physical properties:

A. Compatible with sheet air barrier, roofing and waterproofing membranes and substrate,
B. Complies with Fed. Spec. TT-S-00230C, Type II, Class A
C. Complies with ASTM C 920, Type S, Grade NS, Class 25
D. Elongation: 450 – 550%
E. Remains flexible with aging and seals construction joints up to 1 inch wide
F. Basis-of-Design Product / Manufacturer:
Perm-A-Barrier Universay Sealant by GCP

PART 3 - EXECUTION:

3.01 EXAMINE SUBSTRATES and conditions under which the Work of this Section is to be performed, and notify the Construction Manager in writing of unsatisfactory conditions. All surfaces must be sound, dry, clean and free of oil, grease, dirt, excess mortar or other contaminants. Fill voids, gaps and spalled areas in substrate to provide an even plane. Strike masonry joints flush.

3.02 EXAMINE ROOF EDGES, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where materials will be installed.

3.03 VERIFY that concrete or masonry has cured and aged for minimum time period recommended by the barrier manufacturer. Verify that concrete or masonry surfaces are visibly dry and free of moisture.

3.04 VERIFY that masonry joints are flush and completely filled with mortar.

3.05 PROCEED WITH INSTALLATION only after unsatisfactory conditions have been corrected.

3.06 PROTECT CONTIGUOUS WORK from moisture deterioration and soiling caused by application of air-moisture barrier. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.

3.07 PROTECT SUBSTRATES AND WALL CONSTRUCTION behind them from inclement weather during installation. Prevent penetration of moisture behind sheathing and deterioration of substrates.

3.08 INSTALLTION OF BARRIER SYSTEM

A. JOINT TREATMENT

1. SEAL JOINTS 1/4 inch and less between panels of sheathing boards with joint treatment sealant. Fill joints with approved joint treatment sealant ensuring contact with all edges of substrate material. Strike flush any excess sealant over joint layer to form a continuous layer over the joint.
2. SEAL GAPS AND VOIDS or irregular joints greater than 1/4 inch between sheathing panels, and cracks over 1/16 inch in masonry or concrete with a strip of membrane flashing lapped a minimum of 1-1/2 inch on both sides of the joint. Prime surfaces per manufacturers' instructions and allow to dry. Align and position the flashing material, remove protective film and press firmly into place. Ensure minimum 2 inches overlap at all end and side laps of the flashing membrane joints. Roll all laps and membrane with a counter top roller to ensure a weather-tight seal.
3. SEAL INSIDE AND OUTSIDE CORNERS of substrate materials or sheathing boards with a strip of membrane flashing extending a minimum of three (3) inches on either side of the corner. Prime surfaces per manufacturers' instructions and allow to dry. Align and position membrane flashing, remove protective film and press firmly into place. Ensure minimum 2 inches overlap at all end and side laps of membrane flashing. Roll all laps and membrane with a counter top roller to ensure a weather-tight seal.
4. TRANSITON AREAS: At tie-in's to structural beams, columns, floor slabs and intermittent floors, parapet curbs, foundation walls, roofing systems and at the interface of dissimilar materials, provide the seal method as indicated above for corners.

3.09 ATTACHMENTS OF SUBSEQUENT BUILIDING MATERIALS: Provide membrane flashing material extending a minimum of three (3) inches on all sides of planned anchor locations of subsequent building systems or finishes (including rain-screen assemblies and siding). Coordinate with installer(s) of subsequent systems for accurate anchorage locations. Prime surfaces per manufacturers' instructions and allow to dry. Align and position membrane flashing, remove protective film and press firmly into place. Ensure minimum 2 inches overlap at all end and side laps of membrane flashing. Roll all laps and membrane with a counter top roller to ensure a weather-tight seal.

3.10 WINDOWS AND ROUGH OPENINGS: Wrap head and jamb of rough openings with membrane flashing. Place membrane flashing across sheet-metal flashings and end dam terminations. Prime surfaces as per manufacturers' instructions and allow to dry. Align and position membrane flashing, remove protective film and press firmly into place. Ensure minimum 2 inch overlap at all end and side laps of flashing membrane, and roll all laps and he membrane with a counter top roller to ensure a weather-tight seal. Extend barrier to connect to the vapor retarder barrier, if exists.

3.11 APPLICATION OF PRIMARY WEATHER BARRIER: Apply by spray or flat trowel a complete and continuous unbroken film of liquid barrier membrane. For temperatures above 40 degrees F and rising, apply one component water based elastomeric emulsion air barrier membrane at a rate of 16.7 SF / gallon to a uniform wet film thickness of 100 mils to achieve an average dry film thickness of 58 mils. Spray apply or trowel around all projections and penetrations ensuring a complete and continuous barrier membrane. Lap liquid applied membrane 1 inch over self-adhering membranes to seal their leading edges. Allow barrier membrane to dry per manufacturers recommendations prior to placement of exterior wall finish materials.

3.12 APPLICATION OF TERMINATION SEALANT: Seal membrane terminations, heads of mechanical fasteners, masonry tie fasteners, around penetrations, duct work, electrical and other apparatus extending through the primary water resistive air barrier membrane and around the perimeter edge of membrane terminations at window and door frames with penetration and termination sealant.

3.13 FIELD QUALITY CONTROL: Make notification to manufacturer's representative and Construction Manager when sections of Work are complete, to allow review prior to covering the barrier system.

3.14 PROTECTION: Damp substrates must not be inhibited from drying out. Do not expose the backside of the substrate to moisture or rain. Cap and protect exposed back-up walls against wet weather conditions during and after application of membrane. Drying time varies depending on temperature and relative humidity. Protect air barrier Work against wet weather conditions for a minimum of 24 hours.

END OF SECTION 07 25 00

SECTION 07 27 00 – AIR BARRIER REQUIREMENTS AND TESTING

PART 1 - GENERAL

A. CONTRACTOR RESPONSIBILITY: The Contractor is responsible for the construction of an air/vapor barrier system that is contiguous and connected across the six surfaces of the building envelope meeting the performance requirements as outlined in this specification.

1. A third party testing technician (not hired by the air barrier installer, waterproofer, etc.) shall be contracted to perform a building air tightness test and thermography test to demonstrate that the building envelope is properly sealed and insulated. The testing shall be performed in accordance with the procedures outlined in this specification.

B. ENVIRONMENTAL CONSIDERATIONS: This project is designed and constructed with practices and procedures to meet the project's environmental considerations and goals. These considerations and goals are to establish a facility which is environmentally responsible, profitable, and a healthy place to live and work. To guide this process, this project is pursuing LEED Silver level certification per the 2009 Green Building Design and Construction Reference Guide for New Construction. Compliance with all credits and prerequisites shown in the checklist attached to section 01 35 13 is required. All team members will be required to perform some amount of associated documentation. Refer to Sections listed below for environmental considerations and goals, and applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these considerations and goals, as defined in the Contract Documents, are implemented to the fullest extent.

C. REFERENCES: The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

1. ASTM INTERNATIONAL (ASTM)

ASTM C 1060	(90; R 2003) Standard Practice for Thermographic Inspection of Insulation Installations in Envelope Cavities of Frame Buildings
ASTM E 779	(2003) Standard Test Method for Determining Air Leakage Rate by Fan Pressurization
ASTM E 1677	(2005) Standard Specification for an Air Barrier (AB) Material or System for Low-Rise Framed Building Walls
ASTM E 1827	(96; R 2002) Standard Test Methods for Determining Airtightness of Buildings Using an Orifice Blower Door
ASTM E 2178	(2003) Standard Test Method for Air Permeance of Building Materials
ASTM D 4541	(2002) Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers

D. SUBMITTALS

1. Building Air Tightness Test Procedures;
   a. The third party testing technician shall submit detailed test procedures indicating the test apparatus, the test methods and procedures, and the analysis methods to be employed for the Building Air Tightness Test to the Owner's Building Enclosure Commissioning Agent (BECxA). The Building Air Tightness Test Procedures shall be submitted not later than 60 days after Notice to Proceed.
   b. The third party testing technician shall submit detailed test procedures indicating the test apparatus, the test methods and procedures, and the analysis methods to be employed for the Thermography Test.
2. Test Reports;
   a. The inspection and testing agency will submit a certified written report, in duplicate, of each inspection, test, or similar service to the Contractor with duplicate copies to the Commissioning Agent no later than 15 days after each test.
   b. Report Data: Written reports of each inspection, test, or similar service include, but are not limited to, the following
   c. Date of Issue
   d. Project title and number
   e. Name, address, and telephone number of testing agency
   f. Dates and locations of samples and tests or inspections
   g. Names of individuals making the inspection or test
   h. Identification of product and specification section
   i. Complete inspection or test data
   j. Test results and an interpretation of test results

k. Ambient conditions at the time of sample taking and testing
l. Comments or professional opinion on whether inspected orstested work complies with Contract Document requirements
m. Name and signature of inspector
n. Recommendations on retesting

3. Building Air Tightness Test Reports;
   a. The Building Air Tightness Test analysis and report shall be submitted not later than 15 days after the test.
4. Thermography Test Reports;
   a. The Thermography Test analysis and report shall be submitted not later than 15 days after the test.

E. ADMINISTRATIVE AND PROCEDURAL REQUIREMENTS
1. This section includes administrative and procedural requirements for accomplishing an airtight building enclosure that controls infiltration or exfiltration of air.
   a. The airtight components of the building enclosure and the joints, junctures and transitions between materials, products, and assemblies forming the airtightness of the building enclosure are called "the air barrier system".
   b. The Contractor is responsible for the coordination between the trades, the proper scheduling and sequencing of the work, preconstruction meetings, inspections, tests, and related actions including reports by independent inspection and testing agencies.
   c. The Contractor shall ensure that the intent of constructing the building enclosure with a continuous air barrier system to control air leakage into or out of the conditioned space is achieved. The air barrier system shall have the following characteristics:
   d. It must be continuous with all joints sealed.
   e. It must be structurally supported to withstand positive and negative air pressures applied to the building enclosure.
   f. Connection shall be made between:
   g. Foundation and walls
   h. Walls and windows
   i. Walls and doors
   j. Different wall systems
   k. Walls and roof
   l. Walls and roof over unconditioned space
   m. Walls, floors, and roofs across construction, control, and expansion joints.
   n. Walls, floors, and roofs to utility, pipe and duct penetrations.
   o. It is the Contractor's responsibility to ensure that all penetrations through the air/vapor barrier system, and all paths of air infiltration or exfiltration, are sealed airtight.
   p. Inspection and testing services are required to verify compliance with requirements specified or indicated.
   q. The Contractor is required to coordinate between subcontractors required to provide an airtight building enclosure, customized fabrication and installation procedures and the following:
   r. Continuity of the air/vapor barrier materials and products with joints to provide assemblies. Continuity of all the enclosure assemblies with joints and transition materials to provide a whole building air barrier system.
   s. Specific quality control requirements for individual construction activities are specified in the sections of the specifications. Requirements in those sections may also cover production of standard products. It is the Contractor's responsibility to ensure that each subcontractor is adequately and satisfactorily performing the quality assurance documentation, tests, and procedures required by each section.
   t. Specified inspections, tests, and related actions do not limit the Contractor's quality control procedures that facilitate compliance with Contract Document requirements.

F. THIRD PARTY BUILDING AIR TIGHTNESS TEST TECHNICIAN
1. Responsibilities
   a. Describe the test procedures, test apparatus, and analysis method.
   b. Perform the Building Air Tightness Test.
   c. Perform the Thermography Test.
   d. Participate in identifying deficiencies in the building construction utilizing smoke testing.
   e. Submit a report of each air tightness test whether successful or not.
   f. Submit a report of each thermography test identifying problem areas.

G. QUALITY CONTROL
1. On-Site Quality Control: The Installers are required to undertake quality control measures on a daily basis. They shall have completed air barrier training and shall utilize equipment to inspect and test the quality of their work.
2. Documentation and Reporting: Installers shall document the entire installation process on daily job site reports. These reports include information on the Installer, substrates, substrate preparation, products used, ambient and substrate temperature, the location of the air barrier installation, the results of the quality control procedures, and testing results. Every job site report is data based and reviewed by the Contractors Quality Assurance Manager.

H. CONTRACTOR RESPONSIBILITIES
1. Coordination of Sub-Contractor(s): The Contractor shall provide coordination between the Sub-Contractors involved in the construction of the air barrier system, coordinate the sequence of construction to ensure

continuity of the air barrier system joints, junctures, and transitions between materials and assemblies of materials and products from substructure to walls to roof. The Contractor shall provide quality assurance procedures, testing and verification as specified herein. The Contractor shall facilitate inspections, tests, and other quality control services specified elsewhere in the Contract Documents and required by the Architect. These coordination efforts are critical to avoid costly removal and replacement of construction materials to accommodate inspections and tests. The cost of all tear out and rework shall be at the Contractors expense.

2. Pre-Construction Conferences: The Contractor shall organize pre-construction conferences between the sub-contractors involved in the construction of the air/vapor/water control systems to discuss where each sub-contractor begins and ends, the sequence of installation, and each sub-contractor's responsibility to ensure airtight joints, junctures, and transitions between materials, products, and assemblies of products specified in the different sections to be installed by the different sub-contractors.
3. Construction Mock-Up: The Contractor shall build a construction mock-up of every joint, juncture, and transition between materials, products, and assemblies of products specified in the different sections to be installed. Work will not begin until the mock-up is satisfactory to the Architect.
4. Pre-Test Preparation: The General Contractor shall prepare the building and all of its components for proper air barrier testing which include, but is not limited to:
    a. All “intentional” holes in the building enclosure must be sealed or otherwise effectively isolate. This includes air intake or exhaust louvers, make-up air intakes, pressure relief dampers or louvers, dryer and exhaust vent dampers and any other intentional hole that is not included in the air barrier design or construction.
    b. Plumbing traps must be filled with water or capped off.
    c. The HVAC system must be shut down or disabled.
    d. All interior doors that access the building enclosure (roof, walls and fenestrations, floor) will be held open during the test to create a single uniform zone.
    e. Buildings with a dropped ceiling plenum will need to have tiles removed at a rate of one per every 500 sq ft. Additional tiles may be removed at the discretion of the testing agent so a uniform pressure distribution in the plenum space is achieved.
    f. Combustion equipment must be disabled or be in the “pilot” position.
    g. Door closers or other equipment that crosses the door threshold must be removed to allow for a tight seal between the door panels and the door frame.
    h. If the test zone is within a larger building enclosure that is not subject to the testing, the areas outside of the test zone must be at ambient (outdoor) conditions. This can be achieved by open man-doors or overhead coiling doors in the open position.
    i. Power must be supplied with-in 50 feet of all locations of testing equipment and each piece of equipment shall be on different circuits.
    j. Construct temporary walls where needed in order to section the building into smaller test zones.
    k. All door openings utilized for testing equipment shall be no larger than 48” wide by 84” high and no smaller than 32” wide and 77” high. If door openings are not within these size requirements, the contractor shall construct a temporary acceptable air barrier to meet the size requirements.

I. AIR/VAPOR BARRIER SYSTEM PERFORMANCE REQUIREMENTS

1. The air barrier system performance requirements shall comply with this section as follows:
    a. Materials: materials used for the air barrier system in the opaque envelope shall have an air permeance not to exceed 0.004 cfm/sqft under a pressure differential of 0.3-inches water gage (1.57psf) (0.02L/s.m2@75Pa) when tested in accordance with ASTM E 2178.
    b. Assemblies: assemblies of materials and components shall have an air permeance not to exceed 0.03 cfm/sqft under a pressure differential of 0.3-inches water gage (1.57psf)(0.15L/s.m2@75Pa) when tested in accordance with ASTM E 1677.

PART 2 - PRODUCTS

A. AIR/VAPOR BARRIER MEMBRANE SYSTEM

1. Membrane
   Liquid applied, 40 mil thick, 100 percent rubber copolymer membrane.
2. Transition Strip
   Self-adhering SBS smooth surfaced 40 mil modified bitumen membrane with primer as recommended by the manufacturer.
3. Substrate Filler and Mastic
   As recommended by membrane manufacturer.

PART 3 - EXECUTION

A. REPAIR AND PROTECTION

1. Repair and protection is the Contractor's responsibility, regardless of the assignment of responsibility for inspection, testing, or sample taking and similar services. Upon completion of inspection, testing, or sample taking and similar services, the Contractor shall repair damaged construction and restore substrates and finishes, protect construction exposed by or for quality control service activities, and protect repaired construction.

B. TESTING AND INSPECTION

1. The following qualitative and quantitative tests and inspections shall be conducted by the Contractor during installation of the air/vapor barrier system.

a. Qualitative Testing and Inspection:
   (1) Ensure continuity of the air/vapor barrier system throughout the building enclosure and that all gaps are covered, the covering is structurally sound, and all penetrations are sealed allowing for no infiltration or exfiltration through the air barrier system.
   (2) Ensure structural support of the air/vapor barrier system to withstand design air pressures.
   (3) Ensure masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions and mortar droppings, with mortar joints struck flush or as required by the manufacturer of the air barrier material.
   (4) Ensure site conditions for application temperature, and dryness of substrates are within guidelines.
   (5) Ensure substrate surfaces are properly primed.
   (6) Ensure laps in materials are at least a 2-inch minimum, shingled in the correct direction or mastic applied on exposed edges with no fishmouths.
   (7) Ensure that mastic is applied on cut edges.
   (8) Ensure that a roller has been used to enhance adhesion.
   (9) Measure application thickness of liquid applied materials to manufacturer's specifications for the specific substrate.
   (10) Ensure that the correct materials are installed for compatibility.
   (11) Ensure proper transitions for change in direction and structural support at gaps.
   (12) Ensure proper connection between assemblies (membrane and sealants) for cleaning, preparation and priming of surfaces, structural support, integrity and continuity of seal.

b. Quantitative Tests:
   (1) Provide written test reports of all tests performed with a copy to the Commissioning Agent and Architect.

C. THIRD PARTY BUILDING AIR TIGHTNESS TEST

1. Test the building for air tightness. This test is intended to demonstrate that the building construction has produced an effective air barrier so that air infiltration and exfiltration are minimized. An adequate air barrier demands close attention to construction and installation of the building envelope components. For example, close attention must be paid to all seals, to caulking around window, door, and louver frames, to sealing of joints between panels, to sealing the wall-to-floor interface and especially to sealing the wall-to-roof interface.
   a. The test shall be performed when the building envelope is enclosed and prior to the installation of the finished ceilings.
   b. The contractor shall notify the Architect and BECxA at least 48 hours prior to the Building Air Tightness Test. A representative of the architect may witness the test and record test readings.
   c. Prior to the test, the third party testing technician shall submit evidence that the test equipment has been calibrated within the past two years.
   d. The measuring instruments used in the tests shall be digital meters, not analog gages. Tests shall be performed when the wind speed is less than 10 mph, and no rain unless biases can be accounted for in the software and test procedures.
   e. The fans used in the testing procedure shall have a minimum of 6,500 CFM capacity at 75 Pa pressure.
   f. The following conditions and Building Air Tightness Test Procedures will be provided by the contractor before the testing:
      (1) All exterior doors and windows shall be closed with the exception of the mechanical room door to the outside which shall be open;
      (2) All interior doorways including stairway doors shall be open with the exception of any mechanical room doors to the inside which shall be closed;
      (3) All HVAC systems shall be de-energized;
      (4) All appliances shall be de-energized;
      (5) All plumbing traps shall be full;
      (6) The contractor shall follow the Recommended Test Envelope Conditions in ASTM E 1827, Table 1, for the Closed Envelope condition.
   g. The third party testing technician shall first test the building by pressurizing the building positively relative to outdoors at multiple pressures up to at least 0.30 in.w.g. (inches water gauge). From the positive pressure test, the building leakage rate shall be measured in accordance with ASTM E 1827 or ASTM E 779.
   h. The third party testing technician shall then perform a negative pressure test at multiple pressures up to at least 0.30 in.w.g. and compare the results to the positive test. Where differences of 10% exist between the tests, the contractor shall investigate the causes and resolve the reasons for the differences. The contractor shall retest the building.
   i. The acceptable leakage in cubic feet per minute maximum at a differential pressure of 0.3 in. w.g. is as follows:

(1) Main building excluding loading docks and maintenance areas: 0.25 cfm per s.f. of Building.

j. Use techniques described in ASTM E 1186 to locate the leak sources, then correct the significant deficiencies in the building construction, then retest. Fog/smoke agents used to identify leaks shall be the non-toxic type. Smoke generators shall have a minimum output capacity of 11,000 cubic feet per minute to reduce testing time.

k. For each test, the third party testing technician shall take a minimum of 5 readings at various pressures and air flows within the range of the calibrated equipment. In the test report, test points shall be shown in graphical form on a log-log scale with pressure in inches water column displayed on the horizontal axis and flow in cfm displayed on the vertical axis.

l. A report shall be submitted for each leak test whether successful or not.

m. If the pressure test fails to meet the established criteria, it is the General Contractor's responsibility to provide permanent sealing measures to reduce or eliminate leak sources. The General Contractor shall be responsible for each retest (perform another pressure test) after sealing has been completed up to a maximum of 3 retests. Repeat this sequence of documenting test results in the test report, performing diagnostic tests, documenting recommendations for additional sealing measures in the test report, sealing leak locations per recommendations, and re-testing as necessary until the building envelope passes the pressure test and is in compliance with the performance requirements, or up to a maximum of 3 retests. If the pressure test fails to meet the established criteria after 3 retests, the General Contractor, Owner, and Commissioning Agent shall meet to determine the best course of action.

D. THERMOGRAPHY TEST

1. The building envelope shall be tested using Infrared Thermography technology. The thermography testing shall be completed in accordance with the requirements of ASTM C 1060. The Commissioning Agent and Building Envelope Commissioning Agent shall be notified two days in advance of the testing. The third party testing technician shall note any areas of compromise in the building envelope, and shall note all actions taken to correct those areas. The thermography shall be used to demonstrate the problem areas have been corrected.

E. TEST REPORTS

1. Submit all Building Air Tightness Test Reports and Thermography Test Reports to the Commissioning Agent and Building Envelope Commissioning Agent to be distributed to the Project Team.

END OF SECTION 07 27

SECTION 07 50 00 – MEMBRANE ROOFING SYSTEM

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide an integrated, membrane roofing system to include roof insulation and a single-ply roofing membrane, where indicated on the Drawings, as specified herein, and as necessary for complete installation. Provide installed roofing membrane and base flashings that remain watertight; do not permit the passage of water; and resist uplift pressures, thermally induced movement, and exposure to weather without failure. The membrane roofing system includes the following:

A. Air-barrier sheet over roofing substrate
B. Double-layered insulation board to achieve the indicated thermal value
C. Tapered insulation to achieve positive slope to roof drains, scuppers or gutters, as applicable
D. Mechanically attached roof deck board
E. Fully-adhered thermoplastic roof membrane,
F. TPO coated sheet metal as part of integral roof gutter system.
G. Installation of roofing system terminations and penetrations in accordance with manufacturer's recommendations
H. Roof protection pads around HVAC equipment, and at roof-mounted piping supports.

1.02 REFERENCED STANDARDS: In addition to compliance with Manufacturer's standards and recommended installation details, comply with the following unless more stringent details are indicated in the Drawings:

A. National Roofing Contractors Association (NRCA) Roofing Manual: Membrane Roof Systems – most recent edition.

1.03 RELATED SECTIONS

A. Section 018113 Certification Requirements.
B. 07 72 00 – Roof Accessories

1.04 PERFORMANCE REQUIREMENTS

A. PROVIDE INSTALLED ROOFING MEMBRANE AND BASE FLASHINGS that remain watertight; do not permit the passage of water; and resist specified uplift pressures, thermally induced movement, and exposure to weather without failure.
B. MATERIAL COMPATIBILITY: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by roofing membrane manufacturer based on testing and field experience.

1.05 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material must be within 100 miles of project site for credit.
B. Recycled Content: Provide materials with recycled or reused content.
C. Provide documentation for the initial SRI rating value complying with 82 for low-sloped roof.

1.06 FM/GLOBAL LISTING: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings, and as follows:

A. Fire/Windstorm Classification: Class 1A-90
B. Hail Resistance: SH (Sever Hazard).

1.07 ENERGY PERFORMANCE REQUIREMENTS:

A. SOLAR REFLECTIVITY: Provide roofing system with initial Solar Reflectance Index not less than 78 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency. Provide roofing system that is listed on the DOE's Energy Star "Roof Products Qualified Product List" for low-slope roof products. Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.
B. LONG-TERM THERMAL RESISTANCE (LTTR): Comply with ASTM C 1289-11A for "aged" thermal-resistane values of roof insulation, equivalent to a time-weighted thermal design R-value for not less than 15 years.

1.08 INSTALLER QUALIFICATIONS: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's warranty.

1.09 EXTERIOR FIRE-TEST CHARACTERISTICS: "Class B" per ASTM E-108 by testing identical products to the approval of AHJ representatives.

1.10 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of product indicated.
B. SHOP DRAWINGS: For roofing system. Include plans, elevations, sections, details, and attachments to other Work:
   1. Base flashings and membrane terminations.
   2. Tapered insulation, including slopes.
   3. Insulation fastening patterns.
   4. Membrane seaming plan (indicating additional perimeter and corner attachments)
C. INSTALLER CERTIFICATES: Signed by roofing system manufacturer certifying that Installer is approved, authorized, or licensed by manufacturer to install roofing system.

D. MANUFACTURER CERTIFICATES: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article. Submit evidence of meeting performance requirements.
E. QUALIFICATION DATA: For Installer and manufacturer.
F. MAINTENANCE DATA: For roofing system to include in maintenance manuals.
G. WARRANTIES: Special warranties specified in this Section.
H. INSPECTION REPORT: Copy of roofing system manufacturer's inspection report of completed roofing installation.

1.11 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material. Include distance to Project and cost for each regional material.
C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
D. Provide manufacturer's documentation / test report for the initial SRI rating value complying with 82 for low-sloped roof

1.12 QUALITY ASSURANCE

A. INSTALLER QUALIFICATIONS: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's warranty.
B. MANUFACTURER QUALIFICATIONS: A qualified manufacturer that has FMG approval for membrane roofing system identical to that used for this Project.
C. SOURCE LIMITATIONS: Obtain components for membrane roofing system either from or approved by the roofing membrane manufacturer.
D. FIRE-TEST-RESPONSE CHARACTERISTICS: Provide membrane roofing materials with the fire-test-response characteristics indicated as determined by testing identical products per test method below by UL, FMG, or another testing and inspecting agency acceptable to AHJ representatives. Materials must be identified with appropriate markings of applicable testing and inspecting agency.
E. EXTERIOR FIRE-TEST EXPOSURE: Class B; ASTM E 108, for application and roof slopes indicated.
F. SURFACE-BURNING CHARACTERISTICS OF FOAM PLASTIC INSULATION: Provide materials that meet requirements of FM/Global 4450 or UL 1256 (provide written confirmation to AHJ representatives upon request).

1.13 PRE-INSTALLATION CONFERENCE: Conduct at the Project site. Comply with requirements in Division-01. Review methods and procedures related to roofing system including, but not limited to, the following:

A. Meet with Architect, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing including installers of roof accessories and roof-mounted equipment.
B. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
C. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
D. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
E. Review structural loading limitations of roof deck during and after roofing.
F. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
G. Review governing regulations and requirements for insurance and certificates if applicable.
H. Review temporary protection requirements for roofing system during and after installation.
I. Review roof observation and repair procedures after roofing installation.

1.14 DELIVERY, STORAGE, AND HANDLING

A. DELIVER ROOFING MATERIALS to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
B. STORE LIQUID MATERIALS in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
C. PROTECT ROOF INSULATION MATERIALS from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
D. HANDLE AND STORE ROOFING MATERIALS and place equipment in a manner to avoid permanent deflection of deck.

1.15 WARRANTY

A. SPECIAL ROOF SYSTEM AND FLASHING WARRANTY: Manufacturer's warranty to include labor and material payment without monetary limitation (NDL), in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period. Failure includes roof leaks. Special warranty includes roofing membrane, base flashings, roofing membrane accessories, roof insulation, fasteners, metal edge and associated sheet metal flashings, and other components of the membrane roofing system, and as follows:

1. Non-prorated, and fully transferable (not limited to original Owner)
2. Warranty limit up to 100 MPH wind speed (calculated at ground level)
3. No Owner’s signature required for execution of warranty, and
4. Dispute settlement to be held in the state where the project is located

B. WARRANTY PERIOD: TWENTY (20) years from date of Substantial Completion.

PART 2 - PRODUCTS:

2.01 FLEECEBACK TPO ROOF MEMBRANE: Uniform, flexible sheet formed from a thermoplastic polyolefin, internally fabric or scrim reinforced, with a bottom surface application of fleece:

A. Manufacturer: Basis of Design: GAF

1. Equivalent products Firestone, John Manville, Carlisle, or Sarnafil are acceptable.
2. Other manufacturers may be approved by Substitution Request.

B. System: FleeceBACK TPO Adhered Roofing System
C. Nominal roof sheet thickness: 60 mils minimum
D. Total roof sheet thickness: 115 mils
E. Roof Membrane surface color:

1. LOW ROOF: White
2. HIGH ROOF: Solar Gray

F. Roof Membrane parapet wall flashing color:

1. LOW ROOF: White
2. HIGH ROOF: Solar Gray

2.02 PROVIDE AUXILIARY MEMBRANE MATERIALS recommended by roofing system manufacturer for intended use and compatible with membrane roofing. Liquid-type auxiliary materials must meet VOC limits of AHJ representatives.

2.03 TYPICAL SHEET FLASHING: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as primary roofing sheet membrane.

2.04 TPO COATED SHEET FLASHING: Manufacturer's standard TPO coated sheet flashing of same material, type, reinforcement, thickness, and color as primary roofing sheet membrane.

2.05 BONDING ADHESIVE: Manufacturer's standard solvent-based bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.

2.06 METAL TERMINATION BARS: Manufacturer's standard predrilled stainless-steel, aluminum or polymer bars, approximately 1 by 1/8 inch thick; with anchors.

2.07 FASTENERS: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

2.08 MISCELLANEOUS ACCESSORIES: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, termination reglets, cover strips, and other accessories as recommended by the Manufacturer.

2.09 ROOF INSULATION:

A. PROVIDE PREFORMED ROOF INSULATION BOARDS that comply with primary roofing membrane manufacturer's requirements and referenced standards, selected from manufacturer's standard sizes.
B. REQUIRED MINIMUM INSULATION THICKNESS (roof insulation only – not including roof deck board, air-surfaces or other roofing or deck materials): Except for a 1 inch deep evenly tapered recess within two (2) feet of drains or scuppers, provide the following minimum thickness of insulation throughout the roof system. When the roof structure does not provide the minimum slope, increase the insulation thickness with tapered insulation, preformed saddles, valley crickets, tapered edge strips, and other insulation shapes to provide the required slope:
C. MINIMUM ROOF SLOPE (of field-areas): 1/4 inch per foot per AHJ requirements (with positive slope at valleys)
D. TWO-LAYER POLYISO ROOF INSULATION: Provide minimum of two (2) separate layers (not a composite system) of staggered, rigid, closed cell polyisocyanurate-board insulation meeting ASTM C 1289, Type II, with felt or glass-fiber mat facer on both surfaces, in overall thickness required to meet minimum insulation value indicated above:

1. TYPICAL MINIMUM THICKNESS: R-30 = 5-1/4 inch overall at R-5.7/inch – subject to insulation mfgr's verification

2.10 AIR BARRIER: Provide self adhering rubberized asphalt laminated to woven polypropylene film with release liner from same manufacturer as roofing membrane.

A. Basis of Design: GAF SA Vapor Retarder XL
B. Provide all accessories required by manufacturer for fully warrantied installation including but not limited to:

1. Adhesive(s) / Primers
2. Lap Sealants

C. Performance Requirements

1.

Physical Property	Test Method	Requirement
Thickness	ASTM D1970	40 mils
Tensile Strength	ASTM D412	250 psi
Elongation	ASTM D412	250%
Peel Adhesion	ASTM D90	35 lbs/in
Puncture Resistance	ASTM E154	60 lbs
Permeability	ASTM D1970*	0.015 perms
Air Permeance	ASTM E2178	0.000 L*m2 @ 75 Pa

*D1970 is tested to E96 standards for permeability

2.11 ROOF DECK COVER BOARD: Provide minimum 5/8 inch thick “Dens-Deck StormX” roof board above all insulation boards as a membrane substrate, installed per manufacturer’s recommendations with joints staggered, above the double-layers of insulation, and secure to substrate decking.

A. FM Very Severe Hail (VSH) Classification
B. Type X
C. ANSI/UL 790 and ULC-CAN S114 Classification – Class A (unlimited slope)
D. UL 1256 Classification
E. FM Class 1
F. When used as part of a UL 1256 or FM 4450 classified system, no additional thermal barrier is required per IBC

2.12 AGGREGATE BALLAST: **AT LOW ROOF**

A. Where indicated on drawings, provide smooth, washed, riverbed gravel or other applicable smooth-faced stone materials without broken pieces that will adequately withstand weather exposure without significant deterioration and that will not contribute to membrane degradation.

1. Size Range: 16 mm to 32 mm

2.13 INSULATION ACCESSORIES

A. PROVIDE ACCESSORIES recommended by insulation manufacturer for intended use and compatible with membrane roofing.
B. MECHANICAL FASTENERS: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.
C. COLD FLUID-APPLIED ADHESIVE: Manufacturer's standard cold fluid-applied adhesive formulated to adhere roof insulation to substrate.

PART 3 - EXECUTION

3.01 EXAMINATION

A. EXAMINE SUBSTRATES, AREAS, AND CONDITIONS, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
B. VERIFY THAT ROOF OPENINGS AND PENETRATIONS are in place and set and braced and that roof drains are securely clamped in place.
C. VERIFY THAT WOOD BLOCKING, CURBS, AND NAILERS are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
D. VERIFY THAT SURFACE PLANE FLATNESS and fastening of steel roof deck comply with requirements in Division 5 Section "Steel Deck."

3.02 PREPARATION

A. CLEAN SUBSTRATE of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
B. PREVENT MATERIALS FROM ENTERING AND CLOGGING roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
C. COMPLETE TERMINATIONS AND BASE FLASHINGS and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

3.03 INSULATION INSTALLATION

A. COORDINATE INSTALLING MEMBRANE ROOFING system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
B. COMPLY WITH membrane roofing system manufacturer's written instructions for installing roof insulation.
C. INSTALL MULTIPLE LAYERS OF INSULATION under area of roofing to achieve required thickness, with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
D. TRIM SURFACE OF INSULATION where necessary at roof drains so completed surface is flush and does not restrict flow of water.
E. INSTALL INSULATION WITH LONG JOINTS of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
F. FASTEN INSULATION PER FMG's "Approval Guide" for specified Windstorm Resistance Classification, including additional anchors at perimeters and building corners.

3.04 AIR BARRIER INSTALLATION: Loosely lay in a single layer, with sides and ends lapping a minimum of 6 inches.

3.05 FULLY-ADHERED ROOFING MEMBRANE INSTALLATION

A. LAYOUT MEMBRANE SHEETS with primary seams perpendicular to ribs of metal decking, with side laps and seams shingled with slope of roof deck when possible.
B. INSTALL ROOFING MEMBRANE over area to receive roofing according to roofing system manufacturer's written instructions. Unroll roofing membrane and allow to relax before installing. Accurately align roofing membranes and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
C. APPLY BONDING-ADHESIVE TO SUBSTRATE and underside of membrane roofing at rate required by manufacturer and allow to partially dry before installing membrane roofing. Do not apply to splice area of membrane roofing.

D. SEAMS: Clean entire seam area, overlap roofing membrane, and hot-air weld side and end laps of roofing membrane according to manufacturer's written instructions to ensure a watertight seam installation. Probe all seams after welds have cooled to verify seam weld continuity. Apply lap sealant to seal cut edges of roofing membrane. Verify field strength of seams a minimum of twice daily and repair seam sample areas. Repair tears, voids, and lapped seams in roofing membrane that does not meet requirements.
E. APPLY ADHESIVE AND MECHANICALLY FASTEN roofing membrane securely at terminations, penetrations, and perimeter of roofing, and seal all edges. Space fasteners for “Grade-C” metal deck unless otherwise indicated. Spread sealant or mastic bed over drain-flanges at deck-drains and securely seal membrane in place with clamping ring.

3.06 BASE FLASHING INSTALLATION

A. INSTALL SHEET FLASHINGS AND PREFORMED FLASHING ACCESSORIES and adhere to substrates according to membrane roofing system manufacturer's written instructions.
B. APPLY SOLVENT-BASED BONDING ADHESIVE to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply bonding adhesive to seam area of flashing.
C. FLASH PENETRATIONS and field-formed inside and outside corners with sheet flashing.
D. CLEAN SEAM AREAS AND OVERLAP and firmly roll sheet flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation.
E. TERMINATE AND SEAL TOP OF SHEET FLASHINGS and mechanically anchor to substrate through termination bars.

3.07 INSTALL PROTECTION PADS by cleaning roofing of dirt and debris prior to installation. Apply pads securely to surface of roofing membrane, by heat welding to substrate or adhere with roofing system Manufacturer’s approved compatible adhesive per their written instructions:

A. WALKWAY PADS: Provide at all traffic concentration points and where indicated on the Drawings. Place individual units with 6” minimum space between each pad. Install at the following locations:
    1. Around all sides of HVAC equipment mounted on roof
    2. Around all sides of skylights, roof hatches or access doors.
    3. Provide path from roof hatch / access ladder to all HVAC equipment requiring periodic service.
B. PIPING SUPPORTS: Install below piping support units provided by others for rooftop mounted electrical conduits, gas piping, or for condensate piping, if provided. Coordinate with other trades for locations required.

3.08 FIELD QUALITY CONTROL

A. ROOF SYSTEM TESTING: Engage a qualified testing agency to inspect the substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to the Architect. The testing agency must survey the entire roof area for potential leaks using electric field vector mapping (EFVM).
B. OWNER’S TESTING: Owner reserves the right to engage a separate, qualified independent testing and roof inspecting entity to review test reports and to perform separate, roof tests and inspections.
C. TESTING AGENCY: Owner reserves the right to engage a qualified independent testing and roof inspecting entity to perform roof tests and inspections and to prepare test reports.
D. MANUFACTURER’S FINAL ROOF INSPECTION: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to Architect.
E. REPAIR OR REMOVE AND REPLACE components of membrane roofing system that do not comply with specified requirements. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
F. PROTECT MEMBRANE ROOFING SYSTEM from damage and wear during remainder of construction period. Repair substrates, and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

3.09 PROTECTING AND CLEANING

A. PROTECT MEMBRANE ROOFING SYSTEM from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
B. CORRECT DEFICIENCIES in or remove membrane roofing system that does not comply with requirements, repair substrates, and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

END OF SECTION 07 50 00

SECTION 07 54 00 – ROOFING INSTALLER'S WARRANTY

ROOFING INSTALLER'S WARRANTY
WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

Owner:	University of Arkansas
Address:	10 McDonnell Way
Building Name/Type:	Track Operations High Performance Center
Address:	10 McDonnell Way
Area of Work:	TPO Roof is _____s.f.
Acceptance Date:	_____.
Warranty Period:	20 years
Expiration Date:	_____.

AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

This Warranty is made subject to the following terms and conditions:
Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by: lightning;peak gust wind speed exceeding 100 MPH; fire; failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;vapor condensation on bottom of roofing; and activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.

During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.

Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.

This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

IN WITNESS THEREOF,

this instrument has been duly executed this _____ day of _____, _____.

Authorized Signature: _____.

Title: _____.

END OF SECTION 07 54 23

SECTION 07 62 00 – SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.01 PROVIDE SHEET METAL FLASHING and sheet metal trim, where indicated on the Drawings, as specified herein, and as required for the prevention of water penetration into the building.

A. This Section includes requirements for sheet metal work associated with roofing and siding Work of other Sections.

1.02 RELATED SECTIONS include the following:

A. Section 018113 Certification Requirements.
B. Division-06 Section "Rough Carpentry" for wood nailers, curbs, and blocking.
C. Applicable Division-07 Sections for roofing Work
D. Division-07 Section "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
E. Division-07 Section "Joint Sealants" for field-applied sealants to sheet metal flashing and trims.

1.03 PERFORMANCE REQUIREMENTS

A. INSTALL SHEET METAL FLASHING AND TRIM TO WITHSTAND wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, and fastener disengagement.
B. FABRICATE AND INSTALL ROOF EDGE FLASHING and copings capable of resisting forces according to recommendations in FMG Loss Prevention Data Sheet 1-49, for the following windstorm classification. Identify materials with nameof fabricator and design approved by FM Approvals.
   1. Windstorm Classification: Class 1-90
C. THERMAL MOVEMENTS: Provide sheet metal flashing and trim that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of sheet metal and trim thermal movements. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
   2. Water Infiltration: Provide sheet metal flashing and trim that do not allow water infiltration to building interior.

1.04 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material shall be within 100 miles of project site for credit if possible.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.

1.05 SUBMITTALS

A. SUBMIT PRODUCT DATA including manufacturer's installation instructions and general recommendations for each specified sheet material and fabricated product.
B. SUBMIT SHOP DRAWINGS showing layout, joining, profiles, and anchorages of fabricated work, including major counter-flashings, trim/fascia units, expansion joint systems, etc., with plan & elevation layout at 1/4" scale, details at 3" scale. Show 3-dimensional details in shop drawings where different joint conditions connect so that tradespersons can clearly understand the intent and relationship of different materials and conditions.
C. SAMPLES FOR VERIFICATION: For each type of exposed finish required, prepare Samples of size indicated below:
   1. Sheet Metal Flashing: 12 inches long for each color used.
   2. Metal Roofing: 12 x 12 inch panel of each panel and finish

1.06 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material. (if applicable)
C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.

1.07 QUALITY ASSURANCES:

A. REFERENCED QUALITY STANDARD: Comply with SMACNA's "Architectural Sheet Metal Manual." Conform to dimensions and profiles shown unless more stringent requirements are indicated.

1.08 MOCKUP:

A. PROVIDE MATERIALS for construction of a field mockup of each different color/finish and exposed application of sheet metal Work indicated, showing the full range of exposed color and finish textures to be expected in the completed construction.
B. BEFORE INSTALLING THE WORK OF THIS SECTION, build mockup to verify selections made under sample Submittals and to demonstrate aesthetic effects. Refer to Division-01 Section Quality Requirements for general requirements of Mockup.

1.09 DELIVERY, STORAGE, AND HANDLING

A. DELIVER SHEET METAL FLASHING MATERIALS and fabrications undamaged. Protect sheet metal flashing and trim materials and fabrications during transportation and handling. Unload, store, and install sheet metal flashing materials and fabrications in a manner to prevent bending, warping, twisting, and surface damage.
B. STACK MATERIALS on platforms or pallets, covered with suitable weathertight and ventilated covering. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.

1.10 COORDINATE INSTALLATION of sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.

PART 2 - PRODUCTS

2.01 TYPICAL PRE-FINISHED ALUMINUM SHEET: ASTM B 209, Alloy 3003, 3004, 3105, or 5005, Temper suitable for forming and structural performance required, but not less than H14, finished as follows:

A. Fluoropolymer 2-Coat System: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
B. Color: as selected by the Architect from the manufacturer’s full range

2.02 ZINC SHEET:

A. Color: To match Zinc Wall Panels. Refer to Drawings and Section 07 42 13 Metal Wall Panels.

2.03 UNDERLAYMENT MATERIALS

A. SYNTHETIC UNDERLAYMENT: Laminated or reinforced, woven polyethylene or polypropylene, synthetic roofing underlayment; bitumen free; slip resistant; suitable for high temperatures over 220 deg F; and complying with physical requirements of ASTM D 226 for Type I and Type II felts. Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1. Atlas Roofing Corporation; Summit.
2. Engineered Coated Products; Nova-Seal II.
3. SDP Advanced Polymer Products Inc; Palisade.

B. SELF-ADHERING, HIGH-TEMPERATURE SHEET: Minimum 30 mils thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer. Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1. Carlisle Residential, a division of Carlisle Construction Materials; WIP 300HT.
2. Grace Construction Products, a unit of W. R. Grace & Co.-Conn.; Grace Ice and Water Shield HT
3. Metal-Fab Manufacturing, LLC; MetShield.
4. Owens Corning; WeatherLock Specialty Tile & Metal Underlayment.
5. Polyguard Products, Inc.; Deck Guard HT.
6. SDP Advanced Polymer Products Inc; Palisade SA-HT.
7. SLIP SHEET: Rosin-sized paper, minimum 3 lb/100 sq. ft.

2.04 MISCELLANEOUS MATERIALS

A. PROVIDE MATERIALS AND TYPES OF FASTENERS, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation.
B. FASTENERS: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads. At exposed fasteners, provide heads matching color of sheet metal by means of plastic caps or factory-applied coating. At flashing and trim, provide blind fasteners of high-strength aluminum or stainless-steel, or self-drilling screws, gasketed, with hex washer head.
C. SEALING TAPE: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.
D. ELASTOMERIC SEALANT: ASTM C 920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
E. BUTYL SEALANT: ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, heavy bodied for hooked-type expansion joints with limited movement.
F. BITUMINOUS COATING: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
G. REGLETS: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated.

1. Material: Stainless steel, 0.019 inch thick – mill finished
2. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
3. Stucco Type: Provide with upturned fastening flange and extension leg of length to match thickness of applied finish materials.
4. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
5. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.

6. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
7. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.
8. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. Cheney Flashing Company.
    b. Fry Reglet Corporation.
    c. National Sheet Metal Systems, Inc.
    d. Sandell Manufacturing.

2.05 GENERAL FABRICATION

A. CUSTOM FABRICATE SHEET METAL flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated. Shop fabricate items where practicable. Obtain field measurements for accurate fit before shop fabrication.
B. FABRICATE SHEET METAL flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal. Fabricate sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
C. TYPICAL SEALED JOINTS: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA recommendations.
D. EXPANSION PROVISIONS: Where lapped or bayonet-type expansion provisions in the Work cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with elastomeric sealant concealed within joints.
E. CONCEAL FASTENERS AND EXPANSION PROVISIONS where possible on exposed-to-view sheet metal flashing and trim, unless otherwise indicated.
F. FABRICATE CLEATS AND ATTACHMENT DEVICES from same material as accessory being anchored or from compatible, noncorrosive metal. Fabricate in thickness as recommended by SMACNA's "Architectural Sheet Metal Manual" and FMG Loss Prevention Data Sheet 1-49 for application but not less than thickness of metal being secured.
G. PROTECT MECHANICAL AND PAINTED FINISHES on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.06 FABRICATED ITEMS:

A. THROUGH-WALL SHEET METAL (SM) FLASHINGS: Fabricate in sections not exceeding 12-foot- long (minimum 8-feet long at continuous units) at shelf angles in masonry construction, at head and sill openings in either masonry or frame construction, and at all locations where indicated on the Drawings. Fabricate discontinuous lintel, sill, and similar flashings to extend a minimum of four (4) inches beyond each side of wall openings. Form with 2-inch-high end dams where flashing is discontinuous. Fabricate with drip edge, by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees. Fabricate with preformed corners, end dams, other special shapes, and seaming materials at splices as applicable. Fabricate through-wall flashings from one of the following materials:
    1. Stainless Steel: 0.016 inch thick.
    2. Zinc-Tin Alloy-Coated Stainless Steel: 0.015 inch thick.
B. WALL-PANEL FLASHINGS: Provide "Z"-shaped units at exterior horizontal panel joints and other wall panel trims where indicated on the Drawings to match color of wall panels to greatest extent feasible:
    1. Metal: 0.032 inch thick minimum “typical prefinished” aluminum
C. SHEET METAL FASCIA: Provide flush faced finish of typical prefinished 0.040 inch thick sheet metal in lengths not to exceed ten (10) feet maximum.
    1. Joints shall be constructed with flush, hemmed edges butted with 3/8 inch wide joint over six (6) inch wide back plate of same material.
        a. Align joints with building column lines and metal panel wall and/or soffit joints.
    2. Install with continuous cleats for concealed anchorages as applicable.
D. BRAKE-METAL WINDOW & DOOR OPENING TRIMS: At window and door openings, provide anodized finished, flush fabricated metal brake-metal formed trims as indicated on the Drawings and as required herein:
    1. Fabricate in one-piece units up to ten (10) feet maximum, with flush sealed, butted joints of 3/8 inch space over 6 inch wide joint plates of equal thickness, when required.
    2. Provide continuous metal cleats of 0.040 inch thick aluminum sheet, attached through WRB typically @ 12 inch centers, and anchor to masonry when necessary at outside edges.
    3. At sills, break-form outside edge to fit over continuous cleat and extend down to cover top edge of masonry or wall panel minimum of one (1) inch high. Fold-up (end dam) both sides to extend up behind wall trim not less than four (4) inches. Anchor and seal sill unit to substrate – lapping wall unit over end dam to drain
    4. Install so that sealant between units will be concealed behind exposed opening trims to the greatest extent feasible.
    5. At head and jamb trims, align outside edge to be flush with exterior wall finish typically.
    6. At head trims, fold-down sides behind jamb trims not less than two (2) inches.

7. Apply jamb trims after installation of head and sill trims, over end dams of sills and turned-down edges of head trims.

E. THROUGH-WALL SHEET METAL (SM) FLASHINGS (typical at openings in masonry or frame construction): Fabricate in sections not exceeding 12-foot- long (minimum 8-feet long at continuous units) at shelf angles in masonry construction, at head and sill openings in either masonry or frame construction, and at all locations where indicated on the Drawings. Fabricate discontinuous lintel, sill, and similar flashings to extend a minimum of four (4) inches beyond each side of wall openings. Form with 2-inch-high end dams where flashing is discontinuous. Fabricate with drip edge, by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees. Fabricate with preformed corners, end dams, other special shapes, and seaming materials at splices as applicable. Fabricate from 0.016 inch thick (25 gage) minimum stainless-steel sheet meeting ASTM A 240 or ASTM A 666, Type 304, dead soft, fully annealed, in 2D (dull, cold-rolled) finish, unless otherwise noted.

F. CAST-IN-PLACE (CIP) SHEET METAL (SM) REGLETS: Fabricate from not less than 0.0187 inch thick (26 gage) stainless-steel sheet meeting ASTM A 240 or ASTM A 666, Type 304, dead soft, fully annealed, in 2D (dull, cold-rolled) finish, unless otherwise noted. Temporarily fill or cover face opening of reglet unit to prevent intrusion of concrete or debris.

G. FABRICATE SCUPPERS of dimensions indicated with a closure flange trim at exterior side extending one (1) beyond face of wall, and with a fully welded (not seamed) wall flange returning on the roof side of the wall four (4) inches minimum, and a base flange on the interior extending 4 inches onto the field of the roof inside the exterior wall. Fabricate scupper from 0.024 inch thick (24 gage) stainless steel or TPO coated sheet metal. Fabricate exterior-side scupper trim-ring of minimum 2-1/2 inch width of pre-finished metal to match building standard material.

H. FABRICATE CONDUCTOR HEADS with flanged back and stiffened top edge of dimensions and in conformance with shape or profile as indicated on the Drawings. Provide angled bottom shape to prevent damage from freezing water typically, complete with outlet tube, exterior flange trim, downspout strainer, and built-in overflows of double the area of the downspout (except at open-topped conductor head not exceeding the primary drainage level). Fabricate conductor heads from 0.032 inch minimum thickness (20 gage) prefinished steel metal, unless otherwise indicated.

I. FABRICATE ROOF-EDGE to comply with requirements of SPRI/FM 4435 ES-1 Wind Design Standard, and provide verification of compliance by wind-testing to that standard with the shop-drawing submittal. Fabricate in eight (8) foot minimum to ten (10) foot maximum length units, with 1/2 inch wide joints between sections. Fabricate joint plates of same thickness as metal roof edge. Provide continuous cleat fastening bottom edge of external leg and drill elongated holes for fasteners on interior leg. Miter corners, seal, and solder or weld to be watertight.

1. Fascia Height: Four (4) inch minimum exposed face – or greater if indicated on the Drawings or as otherwise required to comply with referenced wind design standard.
2. Fascia Metal: Typical prefinished sheet metal of 0.024 inch thick (24 gage) galvanized steel sheet in color indicated on the Drawings or as selected by Architect from Manufacturer's full range of available options, including metallic finishes
3. Continuous Cleats: 0.0312 inch thick (20 gage) galvanized steel sheet
4. Fascia Metal: Typical prefinished "Kynar 500" aluminum sheet metal, in minimum 0.040 inch thicknes in color indicated on the Drawings or as selected by Architect from Manufacturer's full range of available options, including metallic finishes.
5. Continuous Cleats: 0.050 aluminum sheet metal
6. Joint Style: Butt, with 6-inch- wide cover plates

J. PRE-ENGINEERED ROOF-EDGE FASCIA: Provide a two-piece, pre-engineered roof-edge and fascia system meeting SPRI/FM 4435 ES-1 Wind Design Standard, consisting of a snap-on pre-finished sheet metal fascia cover in section lengths not exceeding 10 feet, and a continuous metal anchor bar with integral drip edge cleat to engage fascia cover. Provide matching mitered and welded/sealed corner units as applicable:

1. Fascia Height: Four (4) inch minimum exposed face – or greater if indicated on the Drawings or as otherwise required to comply with referenced wind design standard.
2. Fascia Metal: Typical prefinished aluminum, 24 gage sheet in color indicated on the Drawings or as selected by Architect from Manufacturer's full range of available options, including metallic finishes
3. Continuous Cleats: 0.0312 inch thick (20 gage) galvanized steel sheet or as otherwise required by system design
4. Fascia Metal: Typical prefinished "Kynar 500" aluminum sheet metal, in minimum 0.040 inch thickness in color indicated on the Drawings or as selected by Architect from Manufacturer's full range of available options, including metallic finishes.
5. Continuous Cleats: 0.050 aluminum sheet metal or as otherwise required by system design
6. Fascia Joint Style: Butt type with six (6) inch wide concealed splice plates
7. APPROVED SYSTEMS / MANUFACTURERS:
    a. "TerminEdge" by A. W. P. Hickman Company (Ph: 800-892-9173 - website: www.wph.com)
    b. "Anchor-Tite Coping" by Metal-Era, Inc., (Ph: 262-549-6900 - website: www.metalera.com)

K. MANUFACTURED COPINGS: Provide pre-engineered coping system meeting SPRI/FM 4435 ES-1 Wind Design Standard, consisting of a continuous metal anchor system with an integrated drip edge cleat on both sides of the parapet wall to engage the coping, in section lengths not exceeding 10 feet. Provide matching mitered and welded corner units, and as follows:

1. Fascia Height: Four (4) inch minimum exposed faces – or greater if indicated on the Drawings or as otherwise required to comply with referenced wind design standard.
2. Fascia Joints: butt type with concealed splice plates.

3. Fascia Metal: Typical prefinished “Kynar 500” sheet metal, in minimum 0.050 sheet aluminum thickness, in color indicated on the Drawings or as selected by Architect from Manufacturer’s full range of available options, including metallic finishes.
4. APPROVED SYSTEMS / MANUFACTURERS:
   a. “PermaSnap 2” by A. W. P. Hickman Company (P: 800-892-9173 - web: www.wph.com)
   b. “Perma-Tite Gold Coping” by Metal-Era, Inc., (P: 262-549-6900 - web: www.metalera.com)
   c. Other manufacturers pre-approved by Architect

L. BASE FLASHINGS, COUNTER-FLASHINGS, & FLASHING RECEIVERS: Fabricate from pre-finished aluminum: 0.040 inch thick.
M. FABRICATE GUTTER UNITS from pre-finished .032 aluminum, to cross-section indicated on the Drawings, complete with end pieces, outlet tubes, and other accessories as required.
1. Stiffen outer edges with hemmed return.
2. Fabricate in minimum 96-inch- long sections, but no more than 50 feet long.
3. Fabricate with all internal joints at ‘facets’ welded.
4. Fabricate expansion joints, expansion-joint covers, gutter bead reinforcing bars, and gutter accessories from same metal as gutters.
5. Provide all gutters with screen of 1/4" aluminum hardware cloth in aluminum frame.

N. DOWNSPOUTS: Internal drains. RE: Plumbing.
O. ROOF DRAIN LEADER / DOWNSPOUT NOZZLE: Round fabricated stainless steel frame with fabricated secured perforated stainless steel hinged strainer to discharge roof drain leader, with extending not less than 2 inches beyond wall surface, in nominal unit size to match pipe leader.
1. Basis-of-Design: # Z199 Downspout Cove by Zurn., https://www.zurn.com/products/building-drainage/roof-drains/downspouts/z199-dc , or equal

2.07 MISCELLANEOUS SHEET METAL FABRICATIONS:

A. ROOF FLASHING TRANSITIONS: At roof and roof-to-wall transitions, roof-to-roof-edge flashings and fascia-cap transitions, shop-fabricate interior and exterior corners from 0.034 inch thick (20 gage) minimum galvanized steel sheet
B. AT ROOF BASE FLASHINGS, shop fabricate interior and exterior corners from 0.028 inch thick (22 gage) minimum galvanized steel sheet
C. AT COUNTERFLASHINGS, shop fabricate interior and exterior corners from 0.022 inch thick (24 gage) minimum galvanized steel sheet
D. FLASHING RECEIVERS: shop fabricate from 0.022 inch thick (24 gage) minimum galvanized steel sheet
E. ROOF-PENETRATION FLASHING: Fabricate from 0.019 inch thick (26 gage) stainless steel sheet minimum
F. METAL SPLASH PANS: Fabricate from 0.019 inch thick (26 gage) stainless steel sheet minimum
G. EQUIPMENT SUPPORT FLASHING: Fabricate from 0.028 inch thick (22 gage) minimum galvanized steel sheet
H. OVERHEAD-PIPING SAFETY PANS: Fabricate from 0.040 inch thick (18 gage) minimum galvanized steel sheet

PART 3 - EXECUTION

3.01 ANCHOR SHEET METAL FLASHING AND TRIM and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system. Torch cutting of sheet metal flashing and trim is not permitted.

3.02 METAL PROTECTION: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricator or manufacturers of dissimilar metals. Coat side of sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.

3.03 UNDERLAYMENT: Install all sheet metal flashing over a course of underlayment, and cover with a slip sheet. Install underlayment wrinkle free in accordance with its manufacturer’s instructions, typically using adhesive to minimize mechanical fasteners under the sheet metal flashing and trim. Prime substrate when recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment material. Apply underlayment in a shingle fashion to shed water, with end laps not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Cover underlayment within fourteen (14) days. Apply slip sheet, wrinkle free, over underlayment before installing sheet metal flashing and trims.

3.04 INSTALL EXPOSED SHEET METAL FLASHING AND TRIM without excessive oil canning, buckling, and tool marks. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of sealant. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

3.05 INSTALL CONTINUOUS CLEATS anchored at 12” inch centers minimum at face.

3.06 EXPANSION PROVISIONS: Provide for thermal expansion of exposed flashing and trim, by spacing joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with elastomeric sealant concealed within joints.

3.07 FASTENERS: Use fasteners of sizes that will penetrate substrate not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws. With aluminum sheet metal, use aluminum or stainless-steel fasteners.

3.08 SEAL JOINTS WITH ELASTOMERIC SEALANT as required for watertight construction. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant.

When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants." Rivet or weld joints in uncoated aluminum where necessary for strength.

3.09 ROOF FLASHING INSTALLATION

A. INSTALL SHEET METAL ROOF FLASHING AND TRIM to produce a complete roof drainage system, and to comply with SMACNA's "Architectural Sheet Metal Manual" as applicable. Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight. Coordinate installation of roof perimeter flashing with installation of roof drainage system items.

B. metal ROOF EDGE FLashing: Anchor to resist uplift and outward forces according to recommendations in FMG Loss Prevention Data Sheet 1-49 for specified wind zone and as indicated. When face of roof edge exceeds 4 inches in height, interlock exterior bottom edge of with a continuous cleats anchored to substrate at 6-inch centers. Anchor interior leg of coping with screw fasteners and washers at 3-inch OC in staggered rows (6 inch OC each row) or as otherwise required by Manufacturer's tested unit.

C. COPINGS: Anchor to resist uplift and outward forces according to recommendations in FMG Loss Prevention Data Sheet 1-49 for specified wind zone and as indicated. Interlock exterior bottom edge of coping with continuous cleats anchored to substrate at 16-inch centers. Anchor interior leg of coping with screw fasteners and washers at 24-inch centers.

D. ROOF-PENETRATION FLASHING: Seal units with elastomeric sealant and clamp flashing to pipes penetrating roof except for lead flashing on vent piping.

E. PIPE OR POST COUNTERFLASHING: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending a minimum of 4 inches over base flashing. Install stainless-steel draw band and tighten.

F. COUNTERFLASHING: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with elastomeric sealant.

3.10 HANGING GUTTERS: Join sections with riveted and soldered joints or with lapped joints sealed with elastomeric sealant. Provide for thermal expansion. Attach gutters at eave or fascia to firmly anchored gutter brackets straps spaced not more than 36 inches apart. Provide end closures and seal watertight with sealant. Slope to downspouts. Fasten gutter spacers to front and back of gutter. Loosely lock straps to front gutter bead and anchor to roof deck. Anchor and loosely lock back edge of gutter to continuous cleat, eave or apron flashing. Anchor back of gutter that extends onto roof deck with cleats spaced not more than 24 inches apart. Anchor gutter with spikes and ferrules spaced not more than 24 inches apart. Install gutter with expansion joints at locations indicated but not exceeding 50 feet apart. Install expansion joint caps.

A. Install continuous gutter screens on gutters with noncorrosive fasteners, removable for cleaning gutters.

3.11 INSTALL PARAPET SCUPPERS by continuously supporint unit, set to correct elevation for rainwater flow, and seal flanges to interior wall face, over tapered edge strips, and under roofing membrane. Anchor scupper closure trim flange to exterior wall and seal with elastomeric sealant to scupper. Loosely lock front edge of scupper with conductor head.

3.12 INSTALLATION OF DOWNSPOUTS: Telescope upper sections into lower section 1-1/2" minimum, rivet and seal. Elbow downspouts away from building at building offsets and toward building immediately below gutter connection. Attach to wall strap anchors at downspout top, bottom, horizontal joints and at 10 feet maximum centers. Secure straps to wall at masonry where downspouts are open ended, and extend 3" minimum into storm drain boot or underground drainage system, when indicated.

3.13 INSTALL SPLASH PANS where downspouts discharge on low-slope roofs, even if not so indicated in the Drawings. Set in elastomeric sealant compatible with the roofing substrate.

3.14 WALL FLASHING INSTALLATION

A. INSTALL SHEET METAL WALL FLASHING to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. WINDOW AND STOREFRONT OPENINGS: Install sill flashings with end-dams in framed wall systems. Install through-wall flashings to extend 4 inches beyond wall openings in masonry construction.

C. INSTALL EXPANSION JOINT COVERS at locations and of configuration indicated. Lap joints a minimum of four (4) inches in direction of water flow.

3.15 OVERHEAD-PIPING SAFETY PANS: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.16 INSTALLATION TOLERANCES: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.17 CLEANING AND PROTECTION

A. CLEAN EXPOSED METAL SURFACES of substances that interfere with uniform oxidation and weathering.

B. REMOVE TEMPORARY PROTECTIVE COVERINGS and strippable films as sheet metal flashing and trim are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.

C. REPLACE SHEET METAL FLASHING AND TRIM that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 62 00

SECTION 07 72 00 – ROOF ACCESSORIES

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide roof specialties and accessories as shown on the drawings, as specified herein, and as needed to meet the requirements of the construction shown in the Contract Documents.

1.02 SUBMIT PRODUCT DATA including manufacturer's technical product data, rough-in diagrams, details, installation instructions and general product recommendations.

1.03 SUBMIT SHOP DRAWINGS indicating plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and fieldassembled work.

1.04 QUALITY STANDARDS: Comply with SMACNA "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap- flashing to coordinate with type of roofing indicated. Comply with "NRCA Roofing and Waterproofing Manual" details for installation of units. Provide manufacturers' standard units, modified as necessary to comply with requirements. Shop fabricate each unit to greatest extent possible.

PART 2 - PRODUCTS

2.01 ROOF CURBS: Provide internally reinforced roof-curb units with integral spring-type vibration isolators and capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed corner joints, integral metal cant and integrally formed deck-mounting flange at perimeter bottom. Coordinate curb dimensions with roughing-in information or Shop Drawings of equipment to be supported. Coordinate loading requirements with applicable subcontractor / supplier of equipment to be supported.

A. MINIMUM HEIGHT: sixteen (16) inches unless otherwise indicated
B. MATERIAL: Zinc-coated (galvanized) steel sheet, 0.079 inch thick (14 gage) minimum, in mill phosphatized finish.
C. INSULATION: Factory insulated with 1-1/2-inch thick cellulosic or glass-fiber board insulation, with factory-installed treated wood nailer at top of curb, continuous around unit perimeter.
D. BASE FLANGE: Three (3) inch minimum of same material as curb unit, with roof slope accommodated by sloping the deck-mounting flange. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
E. LINER: Same material as curb, of manufacturer's standard thickness and finish.
F. TOP SURFACE: Level around perimeter
G. AVAILABLE MANUFACTURERS: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(1) AES Industries, Inc.
(2) Curbs Plus, Inc.
(3) Custom Solution Roof and Metal Products.
(4) Greenheck Fan Corporation.
(5) LM Curbs.
(6) Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.
(7) Roof Products, Inc.
(8) Thybar Corporation.
(9) Vent Products Co., Inc.

2.02 EQUIPMENT SUPPORTS: Provide internally reinforced metal equipment supports capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed corner joints, integral metal cant, and integrally formed deckmounting flange at perimeter bottom. Coordinate curb dimensions with roughing-in information or Shop Drawings of equipment to be supported. Coordinate loading requirements with applicable subcontractor / supplier of equipment to be supported.

A. MINIMUM HEIGHT: sixteen (16) inches unless otherwise indicated
B. MATERIAL: Zinc-coated (galvanized) steel sheet, 0.079 inch thick (14 gage) minimum, in mill phosphatized finish.
C. INSULATION: Factory insulated with 1-1/2-inch thick cellulosic or glass-fiber board insulation, with factory-installed 3-1/2 inch wide continuous treated wood nailer at top of equipment support.
D. BASE FLANGE: Three (3) inch minimum of same material as curb unit, with roof slope accommodated by sloping the deck-mounting flange. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
E. AVAILABLE MANUFACTURERS: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(1) AES Industries, Inc.
(2) Curbs Plus, Inc.
(3) Custom Solution Roof and Metal Products.
(4) Greenheck Fan Corporation.
(5) LM Curbs.
(6) Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.
(7) Pate Company (The).
(8) Roof Products, Inc.
(9) Thybar Corporation.
(10) Vent Products Co., Inc.

2.03 ROOF HATCHES: Provide metal roof-hatch units with lids and insulated double-walled curbs, with welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter

gasketing, and integrally formed deck-mounting flange at perimeter bottom. Reinforce frame at corners for mounting safety railing.

A. FOR SHIP'S LADDER - UNIT SIZE & TYPE: Double-leaf lid, in 30 by 96 inch nominal size, unless otherwise indicated
B. FOR LADDER – UNIT SIZE & TYPE: Single-leaf lid, in 30 by 36 inch nominal, unless otherwise indicated
C. MINIMUM HEIGHT: fourteen (14) inches unless otherwise indicated
D. MATERIAL: Zinc-coated (galvanized) steel sheet, 0.079 inch thick (14 gage) minimum, in mill phosphatized finish.
E. LOADS: Minimum 40-lbf/sq. ft external live load and 20-lbf/sq. ft. internal uplift load.
F. HATCH LID MATERIAL: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
G. LID HARDWARE: Galvanized or Stainless-steel spring latch with turn handles inside and outside, butt- or pintle-type hinge system, and padlock hasps inside and outside. Provide two-point latch on lids larger than 84 inches.
H. INSULATION: Factory insulated with 1-1/2-inch thick cellulosic or glass-fiber board insulation, with factory-installed treated wood nailer at top of curb, continuous around unit perimeter.
I. BASE FLANGE: Three (3) inch minimum of same material as curb unit, with roof slope accommodated by sloping the deck-mounting flange. On ribbed or fluted metal roofs, form deck-mounting flange at perimeter bottom to conform to roof profile.
J. LINER: Same material as curb, of manufacturer's standard thickness and finish.
K. TOP SURFACE: Level around perimeter
L. AVAILABLE MANUFACTURERS: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(1) ThermalMAX #BRHTA, by Babcock-Davis

2.04 ROOF-HATCH SAFETY RAILING SYSTEM: Provide integrated system at roof hatch opening sides adjacent to roof edge, including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to the roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction, and as follows:

A. HEIGHT: 42 inches minimum above finished roof deck.
B. POSTS AND RAILS: Galvanized-steel pipe, 1-1/4 inches in diameter or galvanized-steel tube, 1-5/8 inches in diameter.
C. MAXIMUM OPENING SIZE: System constructed to prevent passage of a sphere 21 inchesin diameter.
D. POST AND RAIL TOPS AND ENDS: Weather resistant, closed or plugged with prefabricated end fittings. Provide weep holes or another means to drain entrapped water in hollow sections of handrail or railing members. Fabricate joints exposed to weather to be watertight.
E. FASTENERS: Manufacturer's standard, finished to match railing system.
F. FINISH: Manufacturer's standard two-coat polymer, in color as selected by Architect from full range of available options

2.05 LADDER SAFETY-ASSIST POST (at vertical ladder only – not for ships-ladder): Safety railing system Manufacturer's standard ladder safety post that will lock in place on full extension, with release mechanism to return post to closed position: Height: 42 inches minimum above finished roof deck.

A. Material and Finish: 1-5/8" minimum diameter galvanized steel tube or mill finished aluminum.

2.06 PIPE SUPPORTS: Provide adjustable-height, extruded-aluminum tube type units in Manufacturer's standard finish, filled with urethane insulation; 2 inches in diameter; with aluminum baseplate, EPDM base seal, manufacturer's recommended hardware for mounting to structure or structural roof deck as indicated, and extruded-aluminum carrier assemblies; suitable for quantity of pipe runs and sizes.

A. PIPE SUPPORT HEIGHT: As indicated on the Drawings.
B. ROLLER ASSEMBLY: With stainless-steel roller, sized for supported pipes.
C. PIPE SUPPORT FLASHING: Manufacturer's standard insulated sleeve flashing with integral base flange; of 0.062 inch thick mill finished aluminum sheet
D. MANUFACTURERS: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(1) Thaler Metal USA Inc.

2.07 PREFORMED EXHAUST VENT FLASHING SLEEVES: Provide double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, 12 inches high, with removable metal hood and slotted metal collar.

A. METAL: 0.063 inch thick aluminum sheet, in mill finish
B. SIZE / diameter: As required for vent size indicated on the Drawings.
C. MANUFACTURERS: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

(1) Custom Solution Roof and Metal Products.
(2) Thaler Metal USA Inc.

2.08 ROOF VENTS

A. Provide vents as shown on the drawings and required by code.

2.09 CONDENSER PADS

A. Unless otherwise indicated or specified in the Drawings, provide the following condenser pads:

(1) Thermoplastic

(2) 2-inch thick, unless 3-inch thick is required by local code.
(3) Size to fit condenser.
(4) Acceptable manufacturers:
  (a) Diversitech
  (b) Bramec
  (c) OR equal.

2.10 FASTENERS: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by manufacturer. Match finish of exposed fasteners with finish of material being fastened. Where removal of exterior exposed fasteners affords access to building, provide nonremovable fastener heads.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored. Verify dimensions of roof openings for roof accessories. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION: Comply with manufacturer's instructions and recommendations. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks. Coordinate with installation of roof deck and other substrates to receive accessory units, and vapor barriers, roof insulation, roofing and flashing; as required to ensure that each element of the work performs properly, and that combined elements are waterproof and weathertight.

A. Install roof curbs and hatches so that top surface is level
B. Install equipment supports so that top surfaces are level with each other.
C. Install pipe supports so top surfaces are in contact with and provide equally distributed support along length of supported items.
D. Attach safety railing system to roof-hatch curb and attach ladder-assist post according to manufacturer’s instructions.

3.03 ANCHOR UNITS SECURELY to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

3.04 INSTALL ROOF ACCESSORY ITEMS in accordance with construction details of "NRCA Roofing and Waterproofing Manual", and in accordance with requirements of the manufacturer of the prime roofing materials.

3.05 ISOLATION: Where metal surfaces of units are to be installed in contact with noncompatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation.

3.06 OPERATIONAL UNITS: Test operate units with operable components. Clean and lubricate joints and hardware. Adjust for proper operation.

3.07 CLEAN exposed metal surfaces in accordance with manufacturer's instructions. Touch up damaged metal coatings. Clean exposed surfaces according to manufacturer's written instructions. Clean off excess sealants.

3.08 REMOVE AND REPLACE ROOF ACCESSORIES that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 07 72 00

SECTION 07 81 00 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes sprayed fire-resistive materials.
B. Related Requirements:
   (1) Section 078123 "Intumescent Fireproofing" for mastic and intumescent fire-resistive coatings.
   (2) Section 099646 "Intumescent Painting" for intumescent paints that are fire retarding but not fire resistive.

1.03 DEFINITIONS

A. SFRM: Sprayed fire-resistive materials.

1.04 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**] <**Insert location**>.
B. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, and other performance requirements.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Sustainable Design Submittals:
   (1)
C. Shop Drawings: Framing plans or schedules, or both, indicating the following:
   (1) Extent of fireproofing for each construction and fire-resistance rating.
   (2) Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
   (3) Minimum fireproofing thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
   (4) Treatment of fireproofing after application.
D. Samples: For each exposed product and for each color and texture specified, [**in manufacturer's standard dimensions**] [**4 inches (102 mm) square**] <**Insert dimensions**> in size.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**] [**and**] [**testing agency**].
B. Product Certificates: For each type of fireproofing.
C. Evaluation Reports: For fireproofing, from ICC-ES.
D. Preconstruction Test Reports: For fireproofing.
E. Field quality-control reports.

1.07 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by fireproofing manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements.
B. Mockups:
   (1) Build mockups [to verify selections made under Sample submittals and to demonstrate aesthetic effects] [to set quality standards for materials and execution] [and] [for preconstruction testing].
   (2) Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
C. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: **Owner will engage** a qualified testing agency to perform preconstruction testing on **field mockups of** fireproofing.
B. Field Mockup: Size and location to be determined in field during construction.
   (1) Provide test specimens and assemblies representative of proposed materials and construction.
   (2) Preconstruction Adhesion and Compatibility Testing: Test for compliance with requirements for specified performance and test methods.
   (3) Bond Strength: Test for cohesive and adhesive strength according to ASTM E736. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
   (4) Density: Test for density according to ASTM E605. Provide density indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
C. Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with fireproofing.

D. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
E. For materials failing tests, obtain applied-fireproofing manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

1.09 FIELD CONDITIONS

A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is 44 deg F (7 deg C) or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.
B. Source Limitations: Obtain fireproofing for each fire-resistance design from single source.
C. Fire-Resistance Design: Indicated on Drawings, tested according to ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings from an applicable testing agency.
D. Steel members are to be considered unrestrained unless specifically noted otherwise.
E. Asbestos: Provide products containing no detectable asbestos.

2.02 SPRAYED FIRE-RESISTIVE MATERIALS

A. Materials and finishes vary with manufacturer and product and are based on approved fire-resistance designs that comply with the fire-resistance ratings of building elements as required by code. Coordinate the approved fire-resistance design with the material composition and other salient characteristics retained.
B. Sprayed Fire-Resistive Material: Manufacturer's standard, factory-mixed, lightweight, dry formulation, complying with indicated fire-resistance design, and mixed with water at Project site to form a slurry or mortar before conveyance and application or conveyed in a dry state and mixed with atomized water at place of application.
C. Application: Designated for both interior and exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
D. Bond Strength: Minimum **430-lbf/sq. ft. (20.59-kPa)** cohesive and adhesive strength based on field testing according to ASTM E736.
E. Density: Not less than density specified in the approved fire-resistance design, according to ASTM E605.
F. Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch (9 mm).
G. Combustion Characteristics: ASTM E136.
H. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
I. Flame-Spread Index: **10** or less.
J. Smoke-Developed Index: **10** or less.
K. Compressive Strength: Minimum **100 lbf/sq. in. (689 kPa)** according to ASTM E761.
L. Corrosion Resistance: No evidence of corrosion according to ASTM E937.
M. Deflection: No cracking, spalling, or delamination according to ASTM E759.
N. Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E760.
O. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. (0.270 g/sq. m) in 24 hours according to ASTM E859.
P. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in **no growth on specimens per ASTM G21**.
Q. Sound Absorption: **NRC** of**0.65 to 0.75** according to ASTM C423 for Type A mounting according to ASTM E795.
R. Finish: As selected by Architect from manufacturer's standard finishes; Apply separate, colored topcoat after finishing.
S. Color: As selected by Architect from manufacturer's full range

2.03 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that are compatible with fireproofing and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
B. Substrate Primers: Primers approved by fireproofing manufacturer and complying with one or both of the following requirements:
C. Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
D. Primer's bond strength in required fire-resistance design complies with specified bond strength for fireproofing and with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests according to ASTM E736.
E. Bonding Agent: Product approved by fireproofing manufacturer and complying with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.
F. Metal Lath (as required by UL assembly specified): Expanded metal lath fabricated from material of weight, configuration, and finish required, according to fire-resistance designs indicated and fireproofing manufacturer's

written instructions. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive fireproofing.

G. Reinforcing Fabric (as required by UL assembly specified):: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by fireproofing manufacturer.

H. Reinforcing Mesh (as required by UL assembly specified):: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by fireproofing manufacturer. Include pins and attachment.

I. Sealer: Transparent-drying, water-dispersible, tinted protective coating recommended in writing by fireproofing manufacturer for each fire-resistance design.

J. Topcoat: Suitable for application over applied fireproofing; of type recommended in writing by fireproofing manufacturer for each fire-resistance design.

(1) Cement-Based Topcoat: Factory-mixed, cementitious hard-coat formulation for trowel or spray application over SFRM.

(2) Water-Based Permeable Topcoat: Factory-mixed formulation for brush, roller, or spray application over applied SFRM. Provide application at a rate of **60 sq. ft./gal.** **(1.5 sq. m/L)**

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and according to each fire-resistance design.

B. Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fireproofing with substrates under conditions of normal use or fire exposure.

C. Verify that objects penetrating fireproofing, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.

D. Verify that substrates receiving fireproofing are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fireproofing application.

E. Verify that concrete work on steel deck is complete before beginning fireproofing work.

F. Verify that roof construction, installation of rooftop HVAC equipment, and other related work are complete before beginning fireproofing work.

G. Conduct tests according to fireproofing manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.

H. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

I. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Cover other work subject to damage from fallout or overspray of fireproofing materials during application.

B. Clean substrates of substances that could impair bond of fireproofing.

C. Prime substrates where included in fire-resistance design and where recommended in writing by fireproofing manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fireproofing.

D. For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fireproofing. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.03 APPLICATION

A. Construct fireproofing assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, finishing, and other materials and procedures affecting fireproofing work.

B. Comply with fireproofing manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fireproofing; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

C. Coordinate application of fireproofing with other construction to minimize need to cut or remove fireproofing.

D. Do not begin applying fireproofing until clips, hangers, supports, sleeves, and other items penetrating fireproofing are in place.

E. Defer installing ducts, piping, and other items that would interfere with applying fireproofing until application of fireproofing is completed.

F. Metal Decks:

(1) Do not apply fireproofing to underside of metal deck substrates until concrete topping, if any, is completed.

(2) Do not apply fireproofing to underside of metal roof deck until roofing is completed; prohibit roof traffic during application and drying of fireproofing.

G. Install auxiliary materials as required, as detailed, and according to fire-resistance design and fireproofing manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by fireproofing manufacturer.

H. Spray apply fireproofing to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by fireproofing manufacturer.

I. Extend fireproofing in full thickness over entire area of each substrate to be protected.

J. Install body of fireproofing in a single course unless otherwise recommended in writing by fireproofing manufacturer.

K. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply fireproofing that differs in color from that of encapsulant over which it is applied.

L. Where sealers are used, apply products that are tinted to differentiate them from fireproofing over which they are applied.
M. Provide a uniform finish complying with description indicated for each type of fireproofing material and matching finish approved for required mockups.
N. Cure fireproofing according to fireproofing manufacturer's written instructions.
O. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, and tested and corrections have been made to deficient applications.
P. Finishes: Where indicated, apply fireproofing to produce the following finishes:
   (1) Spray-Textured Finish: Finish left as spray applied with no further treatment.
   (2) Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.

3.04 FIELD QUALITY CONTROL

A. Special Inspections: **Owner will engage** a qualified special inspector to perform the following special inspections:
B. Test and inspect as required by the IBC, Subsection 1705, "Sprayed Fire-Resistant Materials."
C. Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fireproofing for the next area until test results for previously completed applications of fireproofing show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
D. See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
E. Fireproofing will be considered defective if it does not pass tests and inspections.
F. Remove and replace fireproofing that does not pass tests and inspections, and retest.
G. Apply additional fireproofing, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.
H. Prepare test and inspection reports.

3.05 CLEANING, PROTECTING, AND REPAIRING

A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
B. Protect fireproofing, according to advice of manufacturer and Installer, from damage resulting from construction operations or other causes, so fireproofing is without damage or deterioration at time of Substantial Completion.
C. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to work of other trades.
D. Repair fireproofing damaged by other work before concealing it with other construction.
E. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

END OF SECTION 07 81 00

SECTION 07 84 00 – FIRESTOPPING

PART 1 - GENERAL

1.01 THIS SECTION INCLUDES firestop systems for system terminations and penetrations through the fire-resistance-rated assemblies, including both empty openings and openings containing penetrating items.

1.02 PERFORMANCE REQUIREMENTS

A. PROVIDE FIRESTOP SYSTEMS that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly penetrated.
B. F-RATED SYSTEMS: Provide through-penetration firestop systems with F-ratings indicated, as determined per ASTM E 814, but not less than that equaling or exceeding fire-resistance rating of constructions penetrated.
C. FOR PIPING PENETRATIONS for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

1.03 SUBMITTALS

A. PRODUCT DATA: For each type of through-penetration firestop system product indicated.
B. SHOP DRAWINGS: For each through-penetration firestop system, show each kind of construction condition penetrated, relationships to adjoining construction, and kind of penetrating item. Include firestop design designation of testing and inspecting agency acceptable to AHJ representatives that evidences compliance with requirements for each condition indicated.

1.04 QUALITY ASSURANCE

A. INSTALLER QUALIFICATIONS: An experienced installer who has completed through-penetration firestop systems similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
B. SOURCE LIMITATIONS: Obtain through-penetration firestop systems, for each kind of penetration and construction condition indicated, from a single manufacturer.
C. FIRE-TEST-RESPONSE CHARACTERISTICS: Provide through-penetration firestop systems that comply with the following requirements and those specified in "Performance Requirements" paragraph above:
    (1) Firestopping tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL or another agency performing testing and follow-up inspection services for firestop systems acceptable to AHJ representatives.
    (2) Through-penetration firestop systems are identical to those tested per ASTM E 814. Provide rated systems complying with the following requirements.
    (3) Through-penetration firestop system products bear classification marking of qualified testing and inspecting agency.
    (4) Through-penetration firestop systems correspond to those indicated by reference to through-penetration firestop system designations listed by the following:
    (5) Underwriters Laboratory (UL)’s "Fire Resistance Directory."

1.05 DELIVERY, STORAGE, AND HANDLING

A. DELIVER PRODUCTS to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; lot number; shelf life, if applicable; qualified testing and inspecting agency's classification marking applicable to Project; curing time; and mixing instructions for multicomponent materials.
B. STORE AND HANDLE MATERIALS for through-penetration firestop systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.06 PROJECT CONDITIONS

A. ENVIRONMENTAL LIMITATIONS: Do not install through-penetration firestop systems when ambient or substrate temperatures are outside limits permitted by through-penetration firestop system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
B. VENTILATE through-penetration firestop systems per manufacturer's written instructions by natural means or, where this is inadequate, forced-air circulation.

1.07 COORDINATION

A. COORDINATE CONSTRUCTION of openings and penetrating items to ensure that through-penetration firestop systems are installed according to specified requirements.
B. COORDINATE SIZING of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.

1.08 PRODUCTS

A. MANUFACTURERS: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    (1) A/D Fire Protection Systems Inc.
    (2) Grace Construction Products.
    (3) Hilti, Inc.
    (4) Johns Manville.

(5) Nelson Firestop Products.
(6) NUCO Inc.
(7) Passive Fire Protection Partners.
(8) RectorSeal Corporation.
(9) Specified Technologies Inc.
(10) 3M Fire Protection Products.
(11) Tremco, Inc.; Tremco Fire Protection Systems Group.
(12) USG Corporation.DAP Inc.

1.09 COMPATIBILITY: Provide through-penetration firestop systems that are compatible with one another, with the substrates forming openings, and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.

1.10 ACCESSORIES: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by the qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:

1.11 Permanent forming/damming/backing materials, including the following:

A. Slag-/rock-wool-fiber insulation.
B. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
C. Fire-rated form board.
D. Fillers for sealants.
E. Temporary forming materials.
F. Substrate primers.
G. Collars.
H. Steel sleeves.

1.12 FIRESTOPPING MATERIALS

A. GENERAL: Provide through-penetration firestop systems containing the types of fill materials indicated by reference to the types of materials described in this Article. Fill materials are those referred to in directories of the referenced testing and inspecting agencies as fill, void, or cavity materials.
B. LATEX SEALANTS: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.
C. FIRESTOP DEVICES: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
D. INTUMESCENT PUTTIES: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
E. INTUMESCENT WRAP STRIPS: Single-component intumescent elastomeric sheets with aluminum foil on one side.
F. MORTARS: Prepackaged, dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
G. SILICONE FOAMS: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
H. SILICONE SEALANTS: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
   (1) Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.
I. CAST-IN-PLACE FIRESTOP DEVICES: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
J. PILLOWS/BAGS: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

1.13 MIXING: For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 2 - EXECUTION

2.01 EXAMINATION: Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

2.02 PREPARATION

A. SURFACE CLEANING: Clean out openings immediately before installing through-penetration firestop systems to comply with written recommendations of firestop system manufacturer and the following requirements:
   (1) Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of through-penetration firestop systems.

(2) Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with through-penetration firestop systems. Remove loose particles remaining from cleaning operation.

B. PRIMING: Prime substrates where recommended in writing by through-penetration firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. USE MASKING TAPE to prevent through-penetration firestop systems from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestop system materials. Remove tape as soon as possible without disturbing firestop system's seal with substrates.

2.03 THROUGH-PENETRATION FIRESTOP SYSTEM INSTALLATION

A. INSTALL FIRESTOP SYSTEMS to comply with "Performance Requirements" Article and firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.

B. INSTALL FORMING/DAMMING/BACKING MATERIALS and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

C. INSTALL FILL MATERIALS for firestop systems by proven techniques to produce the following results:

D. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.

(1) Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
(2) For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

E. IDENTIFY THROUGH-PENETRATION FIRESTOP SYSTEMS with pressure-sensitive, self-adhesive, preprinted vinyl labels. Attach labels permanently to surfaces of penetrated construction on both sides of each firestop system installation where labels will be visible to anyone seeking to remove penetrating items or firestop systems. Include the following information on labels:

(1) The words: "Warning--Through-Penetration Firestop System--Do Not Disturb. Notify Building Management of Any Damage."
(2) Contractor's name, address, and phone number.
(3) Through-penetration firestop system designation of applicable testing and inspecting agency.
(4) Date of installation.
(5) Through-penetration firestop system manufacturer's name.
(6) Installer's name.

2.04 CLEANING AND PROTECTION

A. CLEAN OFF EXCESS FILL MATERIALS adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop system manufacturers and that do not damage materials in which openings occur.

B. PROVIDE FINAL PROTECTION AND MAINTAIN CONDITIONS during and after installation that ensure through-penetration firestop systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated through-penetration firestop systems immediately and install new materials to produce through-penetration firestop systems complying with specified requirements.

2.05 FIRESTOPPING SCHEDULE

Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.
For all systems below, the type of fill material must be as required to achieve the rating required, per manufacturer’s testing and recommendations.

A. FIRESTOPPING WITH NO PENETRATING ITEMS: UL-Classified Systems C-AJ-.Submit number of systems compatible with fire rating of system being penetrated.

B. FIRESTOPPING FOR METALLIC PIPES, CONDUIT, OR TUBING: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated.

C. FIRESTOPPING FOR NONMETALLIC PIPE, CONDUIT, OR TUBING: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated

D. FIRESTOPPING FOR ELECTRICAL CABLES: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated.

E. FIRESTOPPING FOR CABLE TRAYS WITH ELECTRIC CABLES: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated.

F. FIRESTOPPING FOR INSULATED PIPES: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated.

G. FIRESTOPPING FOR MISCELLANEOUS ELECTRICAL PENETRANTS UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated

H. FIRESTOPPING FOR MISCELLANEOUS MECHANICAL PENETRANTS: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated.

I. FIRESTOPPING FOR GROUPINGS OF PENETRANTS: UL-Classified Systems: C-AJ-.Submit number of systems compatible with fire rating of system being penetrated

J. TOP OF WALL SEAL AT SHAFTWALL: UL # HW-D-0119 using sealant or approved equivalent.

END OF SECTION 07 84 00

SECTION 07 92 00 – JOINT SEALANTS

PART 1 - GENERAL

1.01 PROVIDE sealants complying with requirements included herein, in order to establish and maintain airtight, vermin proof, and waterproof continuous seals on a permanent basis. Failures of installed sealants to comply with this requirement will recognized as failures of materials and workmanship. Types of applications include but are not limited to the following:

1.02 EXTERIOR JOINTS in the following vertical or horizontal surfaces:

A. Pavement joints
B. Construction joints in cast-in-place concrete.
C. Control and expansion joints in unit masonry.
D. Joints in stone cladding and cast stone.
E. Joints in exterior insulation and finish systems.
F. Perimeter joints between exterior cladding materials and frames of doors, windows, and louvers.
G. Control and expansion joints in soffits and other overhead surfaces.

1.03 INTERIOR JOINTS in the following vertical surfaces and horizontal nontraffic surfaces:

A. Control and expansion joints on exposed interior surfaces of exterior walls.
B. Perimeter joints of exterior openings where indicated.
C. Vertical joints on exposed surfaces of interior unit masonry concrete walls and partitions.
D. Perimeter joints between interior wall surfaces and frames of interior doors windows.
E. Joints at Tile Work
F. Joints between plumbing fixtures and adjoining walls, floors, and counters.

1.04 SUBMITTALS

A. PRODUCT DATA: For each joint-sealant product indicated.
B. SAMPLES: For each kind and color of joint sealant required, provide samples with joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to the joint sealants.
C. LIST OF MOCKUP MATERIALS: List manufacturer’s product/color names, finishes, and other information as required to identify materials used. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents, unless such deviations are specifically brought to the attention of the Architect and approved in writing.

1.05 QUALITY ASSURANCE

A. INSTALLER QUALIFICATIONS: Manufacturer's authorized Installer who is approved or licensed for installation of elastomeric sealants required for this Project.
B. SOURCE LIMITATIONS: Obtain each type of joint sealant through one source from a single manufacturer.
C. MOCKUP: Provide materials for construction of a field mockup of each different color and finish of sealant Work indicated, showing the full range of exposed color and finish textures to be expected in the completed construction. Before installing the work of this section, build mockup to verify selections made under sample Submittals and to demonstrate aesthetic effects. Refer to Division-1 Section Quality Requirements for general requirements of Mockup.

1.06 PROJECT CONDITIONS

A. DO NOT PROCEED WITH INSTALLATION of joint sealants under the following conditions:
   (1) When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
   (2) When joint substrates are wet.
   (3) Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
   (4) Contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.07 WARRANTY

A. SPECIAL INSTALLER'S WARRANTY: Installer's standard form in which Installer agrees to repair or replace elastomeric joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   (1) Warranty Period: Two years from date of Substantial Completion.
B. SPECIAL MANUFACTURER'S WARRANTY: Manufacturer's standard form in which elastomeric sealant manufacturer agrees to furnish elastomeric joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
   (1) Warranty Period: Two years from date of Substantial Completion.
C. SPECIAL WARRANTIES specified in this Article exclude deterioration or failure of elastomeric joint sealants from the following:
   (1) Movement of the structure resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression caused by structural settlement or errors attributable to design or construction.
   (2) Disintegration of joint substrates from natural causes exceeding design specifications.
   (3) Mechanical damage caused by individuals, tools, or other outside agents.
   (4) Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.01 AVAILABLE MANUFACTURERS / PRODUCTS: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, products listed in other Part 2 articles.

2.02 COMPATIBILITY: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer, based on testing and field experience.

2.03 SEALANT COLORS: Match adjacent material color typically, as approved by the Architect.

A. The quantity of sealant colors is limited only by the number and color of adjacent materials indicated in the Drawings
B. Provide custom colors to match adjacent materials at no additional cost if manufacturer's "standard" colors do not match adjacent materials, in the professional opinion of the Architect
C. Provide multiple-colors of sealant as required by field-conditions when adjacent materials and their colors change throughout the height or width of a sealant joint

2.04 VOC CONTENT OF INTERIOR SEALANTS: Sealants and sealant primers used inside the weatherproofing system must comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

A. Architectural Sealants: 250 g/L.
B. Sealant Primers for Nonporous Substrates: 250 g/L.
C. Sealant Primers for Porous Substrates: 775 g/L.

2.05 LOW-EMITTING INTERIOR SEALANTS: Sealants and sealant primers used inside the weatherproofing system must comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.06 ELASTOMERIC JOINT SEALANTS

A. ELASTOMERIC SEALANTS: Comply with ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
B. STAIN-TEST-RESPONSE CHARACTERISTICS: Where elastomeric sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.

2.07 URETHANE TRAFFIC-JOINT SEALANT: Comply with ASTM C 920 Type S (single component), grade P (pourable), class 25, use T (traffic). Available Products include but are not limited to the following:

A. BASF Building Systems; Sonolastic NP1.
B. May National Associates, Inc.; Bondaflex PUR 40 FC.
C. Pacific Polymers International, Inc.; Elasto-Thane 230 Type II.
D. Sika Corporation, Construction Products Division; Sikaflex - 1a.
E. Tremco Incorporated; Vulkem 116.

2.08 EXTERIOR SILICONE SEALANT: Comply with ASTM C 920 Type S (single component), grade NS (nonsag), class 100/50, Use NT (nontraffic) and use related to joint substrates of M, G, A, and, as applicable to joint substrates indicated, O. Available Products:

A. Dow Corning Corporation; 790.
B. GE Silicones; SilPruf LM SCS2700.
C. Pecora Corporation; 890FTS.
D. Sika Corporation, Construction Products Division; SikaSil-C990.
E. Tremco Incorporated; Spectrem 1.

2.09 BUTYL-RUBBER SEALANT: Comply with ASTM C 1085. Available Products:

A. Bostik Findley; Bostik 300.
B. Fuller, H. B. Company; SC-0296.
C. Fuller, H. B. Company; SC-0288.
D. Pecora Corporation; BC-158.
E. Polymeric Systems Inc.; PSI-301
F. Sonneborn, Division of ChemRex Inc.; Sonneborn Multi-Purpose Sealant.
G. Tremco; Tremco Butyl Sealant.

2.10 LATEX INTERIOR JOINT SEALANTS: Comply with ASTM C 834, Type P, Grade NF. Available Products:

A. BASF Building Systems; Sonolac.
B. Bostik, Inc.; Chem-Calk 600.
C. Pecora Corporation; AC-20+.
D. Schnee-Morehead, Inc.; SM 8200.
E. Tremco Incorporated; Tremflex 834.

2.11 SANITARY SILICONE SEALANT: Comply with ASTM C 920 Type S (single-component) and Grade NS (nonsag), Class 25, white colored (unless otherwise indicated) mildew-resistant, acid-curing silicone sealant. Available Products include:

A. Dow Corning Corporation; 786 Mildew Resistant
B. GE Silicones; Sanitary SCS1700
C. Pecora Corporation; 898 Sanitary Silicone.
D. Tremco; Tremsil 200

2.12 FSE SANITARY SILICONE SEALANT: (Food-Service-Equipment / food preparation type sealant without mold-mildew resistance): Comply with ASTM C 920 Type S (single-component) and Grade NS (nonsag) Class 25, white colored (unless otherwise indicated) acid-curing. Products include:

A. Dow Corning Corporation; 999-A.
B. GE Silicones; Sanitary SCS1700.
C. Pecora Corporation; 860 Silicone
D. Tremco; Tremsil 200.

2.13 PREFORMED FOAM JOINT SEALANT: Preformed, pre-compressed, open-cell foam sealant manufactured from urethane foam with minimum density of 10 lb/cu. ft. and impregnated with a nondrying, water-repellent agent, factory produced in pre-compressed sizes in roll or stick form to fit joint widths indicated; coated on one side with a pressure-sensitive adhesive and covered with protective wrapping.

A. ACCEPTABLE PRODUCTS: Subject to compliance with above requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(1) Dayton Superior Specialty Chemicals; Polytite Standard.
(2) EMSEAL Joint Systems, Ltd.; Emseal 25V.
(3) Sandell Manufacturing Co., Inc.; Polyseal.
(4) Schul International, Inc.; Sealtite or Sealtite 50N, as appropriate.
(5) Willseal USA, LLC; Willseal 150 or Willseal 250, as appropriate.

2.14 ACOUSTICAL JOINT SEALANT: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

A. ACCEPTABLE PRODUCTS: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

(1) Pecora Corporation; AC-20 FTR OR AIS-919.
(2) USG Corporation; SHEETROCK Acoustical Sealant.

2.15 JOINT-SEALANT BACKING

A. PROVIDE SEALANT BACKINGS of material and type that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
B. CYLINDRICAL SEALANT BACKINGS: ASTM C 1330, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance:
C. ELASTOMERIC TUBING SEALANT BACKINGS: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, nonabsorbent to water and gas, and capable of remaining resilient at temperatures down to minus 26 deg F. Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and to otherwise contribute to optimum sealant performance.
D. BOND-BREAKER TAPE: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.16 MISCELLANEOUS MATERIALS

A. PRIMER: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
B. CLEANERS FOR NONPOROUS SURFACES: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
C. MASKING TAPE: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.
D. WEEPS: Absorbent, UV-resistant synthetic fiber rope, 3/8 inch minimum diameter, in length required to produce an initial 2-inch exposure on the exterior face extending through sealant backing into the internal drainage plane.

PART 3 - EXECUTION

3.01 EXAMINE JOINTS indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE CLEANING OF JOINTS: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

A. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
B. Clean porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include concrete and masonry.
C. Remove laitance and form-release agents from concrete.
D. Clean nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include metal and glass.

3.03 JOINT PRIMING: Prime joint substrates, where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.04 MASKING TAPE: Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.05 INSTALLATION OF JOINT SEALANTS

A. COMPLY WITH JOINT-SEALANT MANUFACTURER'S WRITTEN INSTALLATION INSTRUCTIONS for products and applications indicated, unless more stringent requirements apply.
B. SEALANT INSTALLATION STANDARD: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
C. INSTALL SEALANT BACKINGS of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

(1) Do not leave gaps between ends of sealant backings.
(2) Do not stretch, twist, puncture, or tear sealant backings.
(3) Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

3.06 INSTALL WEEPS IN SEALANT JOINTS above head and sill flashings, at spacing not to exceed twenty-four (24) inch centers. Install with weeps two (2) inches outside of sealant joint face, and extend through the sealant backing into the internal drainage plane. After sealant is cured, cut off weeps flush with face of sealant joint.

3.07 INSTALL BOND-BREAKER TAPE behind sealants where sealant backings are not used between sealants and backs of joints.

3.08 INSTALL SEALANTS using proven techniques that comply with the following and at the same time backings are installed:

A. Place sealants so they directly contact and fully wet joint substrates.
B. Completely fill recesses in each joint configuration.
C. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

3.09 INSTALLATION OF PREFORMED FOAM SEALANTS: Install each length of sealant immediately after removing protective wrapping. Do not pull or stretch material. Produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures, apply heat to sealant in compliance with sealant manufacturer's written instructions.

3.10 ACOUSTICAL SEALANT INSTALLATION: At sound-rated assemblies and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations.

3.11 TOOLING OF NONSAG SEALANTS: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

A. Remove excess sealant from surfaces adjacent to joints.
B. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
C. Provide concave joint configuration per Figure 5A in ASTM C 1193, unless otherwise indicated.
D. Provide flush joint configuration where indicated per Figure 5B in ASTM C 1193.
E. Provide recessed joint configuration of recess depth and at locations indicated per Figure 5C in ASTM C 1193. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.12 FIELD QUALITY CONTROL

A. FIELD-ADHESION TESTING: Field test joint-sealant adhesion to joint substrates as follows:

(1) Extent of Testing: Test completed and cured sealant joints as follows:
(2) Perform 10 tests for the first 1000 feet Insert dimension of joint length for each kind of sealant and joint substrate.
(3) Perform 1 test for each 1000 feet of joint length thereafter or 1 test per each floor per elevation.
(4) Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
(5) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
(6) Inspect tested joints and report on the following:
(7) Whether sealants filled joint cavities and are free of voids.
(8) Whether sealant dimensions and configurations comply with specified requirements.
(9) Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.

(10) Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.

(11) Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. EVALUATION OF FIELD-ADHESION TEST RESULTS: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.13 CLEAN OFF EXCESS SEALANT OR SEALANT SMEARS adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.14 PROTECT JOINT SEALANTS during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.15 JOINT / SEALANTS SCHEDULE:

EXTERIOR PAVEMENT JOINTS: at perimeter of building at pavement (including sidewalks and curbs), and at pavement expansion Joints:..... **Urethane**

TYPICAL EXTERIOR VERTICAL BUILDING JOINTS, at perimeters of doors, windows, storefront frames (both sides) exterior wall penetrations, exterior building joints including metal siding, metal wall panels, wood siding, masonry or stone as applicable, and at material control joints in masonry and EIFS system: ..... **Exterior Silicone**

EXTERIOR DOOR THRESHOLDS:..... **Butyl Rubber**

ACOUSTICALLY (SOUND) RATED DRYWALL PARTITIONS, ON BOTH SIDES OF STUDS BETWEEN GYPSUM BOARD AND ADJACENT MATERIALS AT BOTH BASE AND TOP OF PARTITION, AND WHERE INDICATED ON THE DRAWINGS: ..... **Acoustic Sealant**

TYPICAL INTERIOR JOINTS including but not limited to drywall joints: ..... **Latex**

TILE JOINTS and joints between countertops and walls: ..... **Sanitary Silicone**

PLUMBING FIXTURES to walls:..... **Sanitary Silicone**

TYPICAL INTERIOR JOINTS IN KITCHEN / FOOD SERVICE AREAS:..... **FSE Sanitary-Silicone**

END OF SECTION 07 92 00

END OF DIVISION 07

DIVISION 08 – OPENINGS

SECTION 08 11 00 – METAL DOORS AND FRAMES

SECTION 08 11 73 – ACCORDION FIRE & SMOKE DOORS WITH EGRESS

SECTION 08 14 00 – FLUSH WOOD DOORS

SECTION 08 17 13 – INTEGRATED METAL DOOR OPENING ASSEMBLIES

SECTION 08 31 00 – ACCESS DOORS

SECTION 08 33 23 – OVERHEAD COILING DOORS

SECTION 08 41 13 – ALUMINUM ENTRANCE, CURTAIN WALLS AND STOREFRONT

SECTION 08 71 00 – DOOR HARDWARE

SECTION 08 80 00 – GLASS, GLAZING AND MIRRORS

SECTION 08 87 00 – GLAZING SURFACE FILMS

SECTION 08 90 00 – LOUVERS AND VENTS

SECTION 08 11 00 – METAL DOORS AND FRAMES

PART 1 - GENERAL

1.01 PROVIDE metal door frames and hollow metal doors, where noted on the Drawings and as specified herein. The Work of this Section includes:

A. Steel Doors & Frames - exterior locations: insulated and galvanized, including transom panels, when indicated
B. Steel Doors & Frames - interior locations: nonrated, honeycomb core units typically except as otherwise indicated.
C. Fire rated, mineral core door units, when indicated in the Door Schedule.
D. Acoustically rated doors and frames, where indicated.
E. Glass and glazing associated with metal doors and frames.
F. Door louvers, when indicated, and
G. Shop priming and field finishing.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.03 COMPLY WITH applicable requirements of the Steel Door Institute's ANSI/SDI 100 "Recommended Specifications for Standard Steel Doors and Frames" and as indicated herein.

1.04 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of door and frame specified, including details of construction, materials, dimensions, hardware preparation, core, label compliance, sound ratings, profiles, and finishes.
B. SUBMIT DOOR SCHEDULE indicating doors and frames with the same reference numbers for details and openings as those on Contract Drawings. Indicate coordination of glazing frames and stops with glass and glazing requirements.

1.05 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material shall be within 100 miles of project site for credit if possible.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
D. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification. ..

1.06 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material. (if applicable)
C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
E. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable

1.07 DELIVER DOORS AND FRAMES cardboard-wrapped or crated to provide protection during transit and job storage. Provide additional protection to prevent damage to finish of factory-finished doors and frames.

1.08 INSPECT DOORS AND FRAMES on delivery for damage. Minor damages may be repaired provided refinished items match new work and are acceptable to Architect; otherwise, remove and replace damaged items as directed.

1.09 STORE DOORS AND FRAMES at building site under cover. Place units on minimum 4-inch- (100-mm-) high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If cardboard wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch (6-mm) spaces between stacked doors to promote air circulation.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

A. Amweld International, LLC.
B. Ceco Door Products; an Assa Abloy Group company.
C. Commercial Door & Hardware Inc.
D. Curries Company; an Assa Abloy Group company.
E. Custom Metal Products.
F. Deansteel.
G. Door Components, Inc.
H. Hollow Metal Inc.

I. Hollow Metal Xpress.
J. Karpen Steel Custom Doors & Frames.
K. MPI Group, LLC (The).
L. National Custom Hollow Metal.
M. North American Door Corp.
N. Republic Doors and Frames.
O. Steelcraft; an Ingersoll-Rand company.
P. Steward Steel; Door Division.

2.02 FIRE-RATED ASSEMBLIES: Comply with NFPA 80 and provide units listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings and temperature-rise limits indicated, based on testing at positive pressure according to NFPA 252 or UL 10C. Provide smoke- and draft-control assemblies with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

2.03 MATERIALS

A. Hot-Rolled Steel Sheets and Strip: Commercial-quality carbon steel, pickled and oiled, complying with ASTM A 569.
B. Cold-Rolled Steel Sheets: Carbon steel complying with ASTM A 366, commercial quality, or ASTM A 620, drawing quality, special killed.
C. Galvanized Steel Sheets: Zinc-coated carbon steel complying with ASTM A 526, commercial quality, or ASTM A 642, drawing quality, hot-dip galvanized according to ASTM A 525, with A 60 or G 60 coating designation, mill phosphatized.
D. Supports and Anchors: Fabricated from not less than 0.0478-inch- thick steel sheet; 0.0516-inch- thick galvanized steel where used with galvanized steel frames.
E. Inserts, Bolts, and Fasteners: Manufacturer's standard units. Where items are to be built into exterior walls, hot-dip galvanize complying with ASTM A 153, Class C or D as applicable.

2.04 DOORS

A. STANDARD STEEL DOORS: Provide 1-3/4-inch- thick doors of materials and ANSI/SDI 100 grades and models specified below, or as indicated on Drawings or schedules:
B. INTERIOR DOORS: Provide doors complying with requirements indicated below by referencing ANSI 250.8 for level and model and ANSI A250.4 for physical-endurance level:
    1. Level 2 and Physical Performance Level B (Heavy Duty) with 0.042-inch (18 GA) steel faces both sides, Model 2 (seamless seams).
C. EXTERIOR DOORS: Provide doors complying with requirements indicated below by referencing ANSI A250.8 for level and model and ANSI A250.4 for physical-endurance level:
    1. Level 3 and Physical Performance Level A (Extra Heavy Duty) with 0.053-inch (16 GA) steel faces both sides, Model 2 (seamless seams), galvanized.

2.05 HARDWARE REINFORCEMENT: Fabricate reinforcement plates from same material as door face sheets to comply with the following minimum sizes:

A. Hinges: Minimum 0.123 inch thick (10 gage) by 1-1/2 inches wide by 6 inches longer than hinge, secured by not less than 6 spot welds.
B. Pivots: Minimum 0.167 inch thick (7 gage) by 1-1/2 inches wide by 6 inches longer than hinge, secured by not less than 6 spot welds.
C. Lock Face, flush Bolts, Closers, and Concealed Holders: Minimum 0.067 inch thick (14 gage).
D. All Other Surface-Mounted Hardware: Minimum 0.067 inch thick (14 gage).

2.06 FRAMES

A. PROVIDE STEEL FRAMES for doors, transoms, sidelights, borrowed lights, and other openings that comply with ANSI A250.8 and with details indicated for type and profile. Conceal fastenings, unless otherwise indicated.
B. FABRICATE frames with mitered corners and continuously welded construction, and as follows:
    1. Interior frames for Level 2 interior doors: 0.042-inch (18 gage) thick steel sheet
    2. Exterior frames for Level 3 Exterior Doors: 0.053-inch (16 gage) thick galvanized steel sheet.
C. HARDWARE REINFORCEMENT: Fabricate reinforcement plates from same material as frames to comply with the following minimum sizes:
    1. Hinges: Minimum 0.123 inch (10 gage) thick by 1-1/2 inches wide by 6 inches longer than hinge, secured by not less than 6 spot welds.
    2. Pivots: Minimum 0.167 inch (7 gage) thick by 1-1/2 inches wide by 6 inches longer than hinge, secured by not less than 6 spot welds.
    3. Lock Face, flush Bolts, Closers, and Concealed Holders: Minimum 0.067 inch (14 gage) thick.
    4. All Other Surface-Mounted Hardware: Minimum 0.067 inch (14 gage) thick.
    5. Supports and Anchors: Fabricated from electrolytic zinc-coated or metallic-coated steel sheet.
D. JAMB ANCHORS:
    1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.042 inch (18 gage) thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.
    2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch (18 gage) thick.

3. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch- diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
4. Floor Anchors: Formed from same material as frames, not less than 0.042 inch (18 gage) thick, and as follows:
5. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
6. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.07 DOOR SILENCERS: Except on weatherstripped frames, drill stops to receive 3 silencers on strike jambs of single-door frames and 2 silencers on heads of double-door frames.

2.08 MORTAR GUARD ENCLOSURES: When electrified hinges, strikes or power transfers are indicated to be provided in the Division-08 Hardware Section, provide frames fabricated with minimum 0.016-inch- (24 gage) thick steel enclosures on the back side of the hardware preparation(s) so that mortar or other materials will not obstruct hardware operation and to close off interior of the openings.

2.09 FIXED FRAME MOLDINGS: Formed integral with standard steel frames, minimum 5/8 inch high, unless otherwise indicated.

2.10 GENERAL FABRICATION: Fabricate steel door and frame units to be rigid, neat in appearance and free from defects, warp or buckle. Where possible, fit and assemble units in manufacturer's plant. Shop prime all hollow metal doors and frames.

2.11 INTERNAL CONSTRUCTION: One of the following manufacturer's standard core materials according to SDI standards:

A. Rigid polystyrene conforming to ASTM C 578.
B. Rigid mineral fiber with internal sound deadener on inside of face sheets.

2.12 CLEARANCES: Not more than 1/8 inch at jambs and heads, except not more than 1/4 inch (6.4 mm) between non-fire-rated pairs of doors. Not more than 3/4 inch at bottom.

2.13 FABRICATE EXPOSED FACES of doors and panels, including stiles and rails of nonflush units, from only cold-rolled steel sheet.

2.14 TOLERANCES: Comply with SDI 117 "Manufacturing Tolerances Standard Steel Doors and Frames."

2.15 FABRICATE CONCEALED STIFFENERS, reinforcement, edge channels, louvers, and moldings from either cold- or hot-rolled steel sheet.

2.16 EXPOSED FASTENERS: Unless otherwise indicated, provide countersunk flat or oval heads for exposed screws and bolts.

2.17 THERMAL-RATED (INSULATING) ASSEMBLIES: At exterior locations and elsewhere as shown or scheduled, provide doors fabricated as thermal-insulating door and frame assemblies and tested according to ASTM C 236 or ASTM C 976 on fully operable door assemblies. Unless otherwise indicated, provide thermal-rated assemblies with U-value rating as follows:

A. 0.41 Btu/sq. ft. x h x deg F or better.

2.18 HARDWARE PREPARATION: Prepare doors and frames to receive mortised and concealed hardware according to final door hardware schedule and templates provided by hardware supplier. Comply with applicable requirements of SDI 107 and ANSI A115 Series specifications for door and frame preparation for hardware. Reinforce doors and frames to receive surface-applied hardware. Drilling and tapping for surface-applied hardware may be done at Project site.

2.19 LOCATE HARDWARE as indicated on Drawings or, if not indicated, according to the Door and Hardware Institute's (DHI) "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."

2.20 PREFIT DOORS at factory with clearance of 1/8" at vertical edges and at top, 1/8" in 2" bevel at lock edge, bottom clearance : 3/8" without threshold, 3/4" with threshold.

2.21 SHOP FINISHING:

A. SURFACE PREPARATION: Solvent-clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel to comply with SSPC-SP 5 (White Metal Blast Cleaning) or SSPC-SP 8 (Pickling).
B. PRETREATMENT: Immediately after surface preparation, apply a conversion coating of type suited to organic coating applied over it.
C. AT GALVANIZED STEEL SHEET FINISHES, apply zinc-dust, zinc-oxide primer paint complying with performance requirements of FS TT-P-641, Type II for field painting.
D. FACTORY PRIMING FOR FIELD-PAINTED FINISH: Apply shop primer that complies with ANSI A224.1 acceptance criteria, is compatible with finish paint systems indicated, and has capability to provide a sound foundation for field-applied topcoats. Apply primer immediately after surface preparation and pretreatment.

PART 3 - EXECUTION

3.01 INSTALL STEEL DOORS, FRAMES, AND ACCESSORIES according to Shop Drawings, manufacturer's data, and as specified.

3.02 PLACING FRAMES: Comply with provisions of SDI 105, unless otherwise indicated. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is completed, remove temporary braces and spreaders, leaving surfaces smooth and undamaged.

A. Except for frames located in existing concrete, masonry, or gypsum board assembly construction, place frames before constructing enclosing walls and ceilings.

B. In masonry construction, install at least 3 wall anchors per jamb adjacent to hinge location on hinge jamb and at corresponding heights on strike jamb. Acceptable anchors include masonry wire anchors and masonry T-shaped anchors.
C. At concrete or masonry construction, install at least 3 completed opening anchors per jamb adjacent to hinge location on hinge jamb and at corresponding heights on strike jamb. Set frames and secure to adjacent construction with bolts and masonry anchorage devices.
D. In framed metal or wood partitions, install at least 3 wall anchors per jamb at hinge and strike levels. In steel-stud partitions, attach wall anchors to studs with screws.
E. In in-place gypsum board partitions, install knock-down, slip-on, drywall frames.

3.03 DOOR INSTALLATION: Fit hollow-metal doors accurately in frames, within clearances specified in ANSI/SDI 100.

3.04 ADJUSTING AND CLEANING

A. PRIME COAT TOUCHUP: Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.
B. PROTECTION REMOVAL: Immediately before final inspection, remove protective wrappings from doors and frames.

END OF SECTION 08 11 00

SECTION 08 11 73 – ACCORDION FIRE & SMOKE RATED DOORS WITH EGRESS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

(1) Accordion-type, fire- and smoke-rated horizontal sliding door with egress, complete with electric operator and automatic closing system.

B. Related Sections:

(1) Section 05 50 00 – Metal Fabrications.
(2) Section 06 10 00 – Rough Carpentry.
(3) Section 08 31 00 – Access Doors and Panels.
(4) Section 09 91 00 – Painting.
(5) Division 26 – Electrical.

1.02 SUBMITTALS

A. Procedures: Furnish submittals in accordance with the General Requirements specified.
B. Shop Drawings: Furnish shop drawings for architect's approval. Include elevations, sections, and details indicating dimensions, materials, finishes, and conditions for anchorage and support of each door.
C. Certifications:

(1) Submit manufacturer's Underwriters Laboratories, Intertek, or Factory Mutual laboratory testing listing report verifying product compliance with the required fire and smoke ratings.
(2) Submit manufacturer's Code Compliance Research Report, published by an independent third-party testing agency certified by the International Accreditation Service, confirming compliance of the fire door assembly with the International Building Code.
(3) Provide assemblies tested, certified, and labeled for a minimum 3-hour fire rating.

D. Product Data: Submit manufacturer's technical literature describing the product to be used under this section.
E. Maintenance and Operating Manuals: Furnish complete manuals describing the materials, devices, and procedures to be followed in operating and maintaining all doors under this section, including manufacturer's brochures and parts lists describing the actual materials used in the product.

1.03 QUALITY ASSURANCE

A. Fire and Smoke Rated Assemblies: Provide doors with fire and smoke resistance ratings required to comply with governing regulations, inspected, tested, listed, and labeled by Underwriters Laboratories, Intertek, or Factory Mutual, and complying with NFPA 80 for the class of opening. Provide units tested in accordance with UL 10B, UL 1784, NFPA 252, and ASTM E152. Provide testing laboratory label permanently fastened to each fire and smoke door assembly.
B. Regulatory Requirements:

(1) Comply with applicable requirements of the laws, codes, ordinances, and regulations of federal, state, and municipal authorities having jurisdiction.
(2) Listed under a certified Code Compliance Research Report in accordance with the applicable sections of the International Building Code.

C. Manufacturer Qualifications: Door manufacturer shall have a minimum of five (5) years' experience manufacturing the type of product covered under this section, with a credible service record. Provide a list of at least ten (10) completed projects that include the products covered under this section.

1.04 DELIVERY, STORAGE, AND HANDLING

A. General: Deliver and store materials in manufacturer's original packaging, labeled to show name, brand, and type. Store materials in a protected, dry location off the ground in accordance with manufacturer's instructions.

1.05 WARRANTY

A. Door Warranty: Provide a two (2) year warranty, effective as of the date of shipment, signed by the manufacturer and installer, agreeing to repair or replace work that has failed as a result of defects in materials or workmanship. Upon notification within the warranty period, such defects shall be repaired at no cost to the owner.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: Accordion fire- and smoke-rated door with egress shall be the Safescape Compact Pocket, Model AC8814-G, as manufactured by McKeon Door Company.

(1) Approved Manufacturer Substitutions:

(a) Won-Door FireGuard with Egress, by Won-Door Coorporation

2.02 MATERIALS

A. General: Each unit shall consist of an interlocking single folding panel curtain system suspended from a steel head track assembly, designed to be stored in a reduced-size compact pocket. Curtain shall travel in a horizontal plane, smoothly and without binding, and shall be driven to the open and close position by a positive-action sprocket and integral endless drive chain system.

B. Curtain Panels: Fabricated of 18 gauge, G90 galvanized steel interlocking panels with an approximate cross section not greater than 14 inches wide.
C. Leading Edge: Curtain shall be furnished with a structural steel member of tubular design to provide stiffness, limit deflection, and provide a tight-fitting closure.
D. Receiving Edge: Fabricated of a steel member with sufficient depth, designed to accept the leading edge and form a tight-fitting closure when the door is in the fully closed position.
E. Head Track: Not less than 1/8 inch thick formed steel shape with removable pans that conceal and protect the integral positive-action endless drive chain system. Overall track width shall not be greater than 15-1/2 inches.
F. Perimeter Smoke Seals: Provide perimeter smoke seals and sweeps as required to maintain smoke and draft rating in accordance with UL 1784. Sweeps shall be located at both the top and bottom ends of each curtain panel.
G. Electric Motor Operator: Fire door shall be provided with a compact AC-powered unit mounted above the head track assembly for ease of accessibility and service. Operator shall be equipped with an adjustable, remotely programmable limit switch to break the circuit at termination of travel. Operator shall be housed in a NEMA Type 1 enclosure.
    (1) Motor: Intermediate duty, thermally protected, ball bearing type with Class A or better insulation. Motor horsepower shall be 1/3 hp minimum.
    (2) Starter: Size "0" magnetic reversing starter, across-the-line type, with mechanical and electrical interlocks, 10 amp continuous rating, and 24 volt control circuit.
    (3) Reducer: Planetary gear type, 80% efficiency minimum.
    (4) Brake: Magnetically activated, integral within the operator housing.
    (5) Remote Control Station: Provide flush-mount key switch control station marked open, close, and stop, field wired to the operator's control panel and mounted at a location indicated on the contract drawings.
H. Primary and Secondary Power Supplies: The fire door assembly shall be powered by the building's AC power source and shall not be dependent on a battery source as the primary means of operation during normal or fire emergency conditions. Only if the fire door loses primary AC power shall the internal secondary battery back-up power support source operate the fire door.
I. Automatic Closing System: Listed in accordance with UL 864 and designed to interface with the fire alarm control panel and/or other fire alarm initiating devices. When activated by smoke detection or fire alarm, the door shall be power-driven to the fully closed position, with the ability to open for egress by any building occupant, pause, and re-close until the fire alarm system has been deactivated. The automatic closing system shall consist of the following:
    (1) Microprocessor-based electronic control center capable of the following:
        (a) Monitor dual power sources, including battery low or failure, charging circuit failure, fuse failures, input power, and AC failure.
        (b) Monitor inputs, including brake, clutch, overload, close limit contact, motor running, MCU failure, alarm power output, sensing device, key switch (optional), and 3-button control station (optional).
        (c) Function and timer display, egress touch pad(s), and sound warning alarms.
J. Egress Exit Device: Egress paddle devices shall be located on both sides of the fire door assembly. Activation of either egress paddle device shall cause the fire door to power open to a pre-determined programmable distance, momentarily stop, and then automatically return to the fully closed position.
K. Master Control Station: Provide a single master control station capable of simultaneously activating all fire-rated doors in the facility, or in a designated zone, to the open or close position. The master control station shall remain operable as long as there is no main power failure to the fire doors' motor operators.
L. Selectable Security Access Control Mode: The operating system shall allow the fire door to also function as a security door. When switched to security access control mode, the fire door's fire exit devices shall become inactive and the door shall be operable for authorized use only via the local key switch control station or the remote master control station. In the event of a fire emergency while the door is set in security access control mode, a notification or signal from the facility's fire alarm or smoke detection system shall automatically override the security access control mode and all fire exit devices shall immediately become active.
M. Obstruction Sensing Device: The obstruction-sensing safety edge shall be programmable to either stop or reverse when coming in contact with an obstruction during the fire door's closing cycle. During normal operation, the obstruction-sensing safety edge shall remain active and operable as long as there is power supply to the motor operator. During an alarm condition, the obstruction-sensing safety edge shall stop or reverse a maximum of three times. If programmed to reverse, on the fourth attempt to close, if an obstruction still remains in the fire door's path, the fire door shall come to rest on the obstruction until it has been removed, then continue to the fully closed position.
N. Finish: After completion of fabrication, clean all metal surfaces to remove dirt and chemically treat to provide for paint adhesion. Panels shall receive a prime coat of 0.2 mils epoxy primer and 0.8 mils polyester paint in McKeon Sterling Gray finish. [Confirm finish selection with Architect.]

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine surfaces and field conditions to which this work is to be applied. Notify Architect if conditions exist that are detrimental to proper installation and timely completion of work.
B. Verify all dimensions taken at the job site affecting the work. Notify the Architect of any instance where dimensions vary.
C. Coordinate and schedule work under this section with work of other sections so as not to delay job progress.

3.02 INSTALLATION

A. Perform installation using only factory-approved and certified representatives of the door manufacturer.
B. Install door assemblies at locations shown, in perfect alignment and elevation, plumb, level, straight, and true.

C. Adjust door installation to provide uniform clearances and smooth, non-binding operation.
D. Install wiring in accordance with applicable local codes and the National Electrical Code. Materials shall be UL listed.
E. Test door closing sequence when activated by the building's fire alarm system. Reset door after successful test.

3.03 PROTECTION AND CLEANING

A. Protect installed work using adequate and suitable means during and after installation until accepted by Owner.
B. Remove, repair, or replace materials that have been damaged in any way.
C. Clean surfaces of grime and dirt using acceptable and recommended means and methods.

END OF SECTION 08 34 29

Draft section adapted from McKeon Safescape Compact Pocket (Model AC8814-G) manufacturer literature for coordination/pricing. Confirm basis-of-design vs. substitution language, finish selection, fire-rating and code requirements for the specific project jurisdiction, and related-section cross-references before issuing for construction.

SECTION 08 14 00 – FLUSH WOOD DOORS

PART 1 - GENERAL

1.01 PROVIDE wood doors, where noted on the Drawings, as specified herein and in compliance with applicable requirements of AWI "Architectural Woodwork Quality Standards".

1.02 The Work of this Section includes:

A. Flush Wood Doors
B. Acoustic Wood Doors

1.03 RELATED SECTIONS:

A. Section 018113 Certification Requirements.
B. DIVISION-06 Section: “Rough Carpentry” for wood blocking at door frames in metal framed partitions
C. DIVISION-06 Section "Architectural Woodwork” for quality and fabrication requirements of wood frames
D. DIVISION-08 Section “Glazing” for glazing in wood doors

1.04 SUBMITTALS:

A. SUBMIT PRODUCT DATA including manufacturer's technical data for each type of door, including details of core and edge construction, trim for openings and louvers, indicating compliance with these specifications.
B. SUBMIT SHOP DRAWINGS indicating location and size of each door, elevation of each kind of door, details of construction, location and extent of hardware blocking, fire ratings, requirements for factory finishing and other pertinent data.
C. SUBMIT FACTORY FINISH SAMPLES applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of three samples showing typical range of color and grain to be expected in the finished Work.

1.05 LEED PERFORMANCE REQUIREMENTS

A. Provide products that meets meet one of the following requirements: EPA TSCA Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins, California Air Resources Board (CARB) ATCM for formaldehyde requirements for ultra-low emitting formaldehyde (ULEF) resins, EPA TSCA Title VI formaldehyde requirements for no added formaldehyde resins (NAF), or CARB ATCM formaldehyde requirements for no added formaldehyde resin (NAF).
B. Provide products that are SFI, FSC, ATES, CSA, or PEFC Certified.
C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan. .

1.06 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Provide third-party certificate confirming products meet one of the following requirements: EPA TSCA Title VI for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins, California Air Resources Board (CARB) ATCM for formaldehyde requirements for ultra-low emitting formaldehyde (ULEF) resins, EPA TSCA Title VI formaldehyde requirements for no added formaldehyde resins (NAF), or CARB ATCM formaldehyde requirements for no added formaldehyde resin (NAF). Note manufacturer’s claims for meeting above-mentioned requirements do not meet LEED standards.
C. Provide documentation for all wood showing that it is SFI, FSC, ATES, CSA, or PERC Certified. For FSC Certified wood: Lumber and plywood shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001 , "FSC Principles and Criteria for Forest Stewardsheip," and to FSC STD-40-004, "FSC Standard for Chain of Custody Certification
D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan. s.

1.07 QUALITY STANDARDS:

A. NWWDA QUALITY STANDARD: I.S.1 "Industry Standard for Wood Flush Doors", of National Wood Window and Door Association (NWWDA).
B. AWI QUALITY STANDARD: "Architectural Woodwork Quality Standards"; including Section 1300 "Architectural Flush Doors", of Architectural Woodwork Institute (AWI) for grade of door, core construction, finish and other requirements exceeding those of NWWDA quality standard.
C. FIRE-RATED WOOD DOORS: Provide wood doors which are identical in materials and construction to units tested in door and frame assemblies per ASTM E 152 and which are labeled and listed for ratings indicated by UL, Warnock Hersey or other testing and inspection agency acceptable to AHJ representatives.
D. MANUFACTURER: Obtain doors from a single manufacturer. Provide products of acceptable manufacturers which have been in satisfactory use in similar service for three years. Use experienced installers.
E. STORAGE AND PROTECTION:
    1. PROTECT DOORS & FRAMES DURING TRANSIT, storage and handling to prevent damage, soiling and deterioration. Comply with requirements of referenced standards and recommendations of NWWDA pamphlet "How to Store, Handle, Finish, Install, and Maintain Wood Doors", as well as with manufacturer's instructions.
    2. IDENTIFY EACH DOOR with individual opening numbers which correlate with designation system used on shop drawings for door, frames, and hardware, using temporary, removable or concealed markings.

3. CONDITIONING: Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized and will be maintained in storage and installation areas during remainder of construction period to comply with AWI quality standard including Section 100-S-3 "Moisture Content".

F. WARRANTY:

1. GENERAL WARRANTY: Door manufacturer's warranty specified in this Article must not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
2. DOOR MANUFACTURER'S WARRANTY: Submit written agreement on door manufacturer's standard form signed by manufacturer, Installer, and Contractor, agreeing to repair or replace defective doors that have warped (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section or that show telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span, or do not conform to tolerance limitations of referenced quality standards. Warranty must be in effect during the following period of time after date of Substantial Completion:
3. Solid Core Interior Doors: Life of installation.
4. Hollow Core Interior Doors: Two (2) years

PART 2 - PRODUCTS

2.01 MANUFACTURERS: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

A. Algoma Hardwoods, Inc.
B. Ambico
C. Ampco.
D. Chappell Door Co.
E. Eggers Industries.
F. General Veneer Manufacturing Co.
G. Graham Wood Doors; an Assa Abloy Group company.
H. Haley Brothers, Inc.
I. Lambton Doors.
J. Marshfield Door Systems, Inc.
K. Mohawk Doors; a Masonite Co.
L. Vancouver Door Company.
M. VT Industries, Inc.

2.02 FLUSH WOOD DOORS

A. QUALITY STANDARD: In addition to requirements specified, comply with WDMA‘s "Architectural Wood Flush Doors.":
B. WDMA I.S.1-A Performance Grade: Heavy Duty.

2.03 FIRE-RATED WOOD DOORS: Comply with NFPA 80, listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

A. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
B. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
C. Cores: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
D. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
E. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.

2.04 ACOUSTIC WOOD DOORS:

A. Refer to Section 08 34 76 Sound Retardant Swinging Doors

2.05 SMOKE- AND DRAFT-CONTROL ASSEMBLIES: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

2.06 PARTICLEBOARD-CORE DOORS (typical core if not fire-rated):

A. Particleboard: ANSI A208.1, Grade LD-2, made with binder containing no urea-formaldehyde.
B. Particleboard: Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
C. Provide doors with glued-wood-stave or structural-composite-lumber cores instead of particleboard cores for doors indicated to receive exit devices.

2.07 MINERAL-CORE DOORS:

A. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
B. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding
C. capability and split resistance. Comply with specified requirements for exposed edges.
D. Screw-Holding Capability: 475 lbf per WDMA T.M.-10.

2.08 SOLID-CORE FLUSH WOOD DOORS (for natural wood finish): 1-3/4-inch-thick WDMA Premium grade, extra heavy duty per WDMA/AWS, hardwood face veneer, solid core units, and as follows:

A. Wood Species of Face Veneers: As indicated on the Drawings, or if not indicated, as selected by Architect from Manufacturer's full range of available wood species / cut and finish options
B. Veneer leaf application: Book matched
C. Provide 45 minute, or 90-minute fire-rated assemblies where indicated
D. Basis of Design Product / Manufacturer: "GPD-PC-5 ply by Graham or equal
E. Acceptable Manufacturers: Subject to compliance with requirements indicated, other manufacturers include:
    1. Algoma Hardwoods, Inc.
    2. Eggers Industries, Architectural Door Division.
    3. V-T Industries Inc.
    4. Marshfield Door Systems, Inc. (Formerly Weyerhauser)
        a. Wood beads for light openings: Provide same species as door faces.

2.09 STILE & RAIL WOOD DOORS (for natural – transparent wood finish): 1-3/4-inch-thick units meeting NWWDA Grade "Select" for transparent finish, fabricated from hardwood-veneered, structural composite lumber, or hardwood veneered, edge-glued, finger-jointed clear lumber, with hardwood veneers selected for similarity of grain and color, and arranged for optimum match between adjacent pieces.

A. Panel Design and stile/rail layout: as indicated on the Drawings – or if not indicated, provide units with intermediate lock-height rail and with two (2) glazed panels typically – with side, intermediate and top rails of 5-1/2" nominal width minimum.
    1. Bottom Rail Height: 10" minimum per ADA/ANSI Standards``
    2. Wood Species / cut: White Oak – rift sawn
    3. Factory Finish: Sealer coat only on all sides – for field finishing
    4. Acceptable Manufacturers: Subject to compliance with requirements indicated, other manufacturers include:
        a. Eggers Industries, Architectural Door Division
        b. Marshfield Door Systems, Inc. (formerly Weyerhauser)
        c. Simpson Door Company
        d. TruStile Doors

2.10 SOLID-CORE PREFINISHED FLUSH WOOD DOORS: WDMA Premium grade, extra heavy duty per WDMA/AWS, hardwood face veneer solid core units:

A. Wood Species of Face Veneers: FSC certified rift-cut white oak
B. Veneer leaf application: Book matched
C. Provide 45 minute, or 90 minute fire-rated assemblies where indicated
D. Basis of Design Product / Manufacturer: "GPD-PC-5 ply by Graham or equal

2.11 WOOD BEADS FOR LIGHT OPENINGS: Provide same species as door faces. Square profile.

2.12 WOOD DOOR FRAMES: Except as otherwise indicated, provide wood door frames fabricated of hardwood per AWI "Custom" Quality Standard, to match species of door panels, surfaced 4 sides (S4S) typically with exposed edges eased. Assemble frames and casings in shop to the greatest extent feasible except where shipping limitations require field assembly.

A. Construction: 1-1/2 inch wide solid hardwood "T" stop typical, double rabbeted in jamb
B. Provide fire-rated labeled frames where indicated on the Drawings
C. Provide three (3) or (4) each butt hinges as required for door height / weight for each door/frame unit, matching similar butt-hinge hardware as specified in other Division-08 Sections

2.13 FABRICATION:

A. FACTORY FIT DOORS to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting. Comply with requirements of NFPA 80 for fire-resistance-rated doors.
B. FACTORY MACHINE DOORS & FRAMES FOR HARDWARE that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Pre-drill pilot holes for all hardware. Comply with final hardware schedules, door frame shop drawings, DHI A115-W series standards, and hardware templates. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before proceeding with factory machining.
C. OPENINGS: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of doors required. Trim openings with moldings of material and profile to match color and finish of door finish.
D. FACTORY FINISHING – GENERAL: Finish doors at factory. Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing. Finish faces, all four edges, edges of cutouts, and mortises. Use only paints and coatings that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
E. NATURAL / TRANSPARENT FINISH: AWI System TR-2 Catalyzed Polyurethane:
    1. Grade: AWI "Custom" grade.
    2. Finish: Manufacturer's standard finish with performance comparable to AWI System TR-6
    3. Staining: As selected by Architect from manufacturer's full range.
    4. Effect: Open-grain finish.
    5. Sheen: Satin.

F. NATURAL / TRANSPARENT STAINED FINISH:
   1. Grade: Custom.
   2. Finish: AWI's, AWMAC's, and WI's "Architectural Woodwork Standards" System 10, UV curable, water based.
   3. Staining: As selected by Architect from manufacturer's full range.
   4. Sheen: Semigloss.

G. OPAQUE FINISH:
   1. Grade: Custom.
   2. Finish: AWI's, AWMAC's, and WI's "Architectural Woodwork Standards" System 10, UV curable, water based.
   3. Color: As selected by Architect from manufacturer's full range.
   4. Sheen: Semigloss.

PART 3 - EXECUTION

3.01 EXAMINATION: Examine installed door frames prior to hanging door. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with plumb jambs and level heads. Reject doors with defects. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. HARDWARE: For installation, see Section 087100 "Door Hardware".
B. INSTALLATION INSTRUCTIONS: Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated. Install fire-rated doors according to NFPA 80. Install smoke- and draft-control doors according to NFPA 105.
C. JOB-FITTED DOORS: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
D. CLEARANCES: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated. Comply with NFPA 80 for fire-rated doors.
   1. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
   2. Bevel fire-rated doors 1/8 inch in 2 inches at lock edge; trim stiles and rails only to extent permitted by labeling agency.
E. FACTORY-FITTED DOORS: Align in frames for uniform clearance at each edge.
F. FACTORY-FINISHED DOORS: Restore finish before installation if fitting or machining is required at Project site.
G. ADJUSTING AND PROTECTION: Rehang or replace doors which do not swing or operate freely. Refinish or replace doors damaged during installation. Protect doors as recommended by door manufacturer to ensure that wood doors will be without damage or deterioration at time of Substantial Completion.

END OF SECTION 08 14 00

SECTION 08 17 13 – INTEGRATED METAL DOOR OPENING ASSEMBLIES

PART 1 - GENERAL

1.01 GENERAL NOTE

A. The General Conditions, Supplementary General Conditions, and Division 1 - General Requirements are hereby made a part of this Section as fully as if repeated herein

1.02 SUMMARY

A. Section Includes
B. Integrated metal door opening assemblies with doors, operating hardware, accessories, and installation for a complete assembly.

1.03 RELATED SECTIONS

A. Section 01 33 00, Submittal Procedures.
B. Section 01 25 13, Product Substitution Procedures.

1.04 LEED REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material shall be within 100 miles of project site for credit if possible.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
D. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.05 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material. (if applicable)
C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
E. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable

1.07 SYSTEM DESCRIPTION

A. Performance Requirements
    1. Certified to BHMA – A156.32, Integrated Door Opening Assemblies, 2015.

1.08 SUBMITTALS

A. Shop Drawings
    1. In accordance with Section 01 33 00.
    2. Indicate each door and frame condition; frame type, profile and installation detail; items of finish hardware, finishes and electrical rough-in requirements.
B. Samples
    1. In accordance with Section 01 33 00.
C. Environmental
    1. Submit UL certification for Environmental Product Declaration (EPD).

D. Performance
   1. Submit certification for ANSI/BHMA 156.32

1.09 QUALITY ASSURANCE

A. Qualifications
   1. Manufacturer: Firm with not less than 5 years successful experience in fabrication of integrated metal door opening assemblies with full-height latch/lock and full-height hinge.
   2. Supplier: Authorized distributor of manufacturer.
   3. Installer: Manufacturer certified.

B. Regulatory Requirements
   1. Rated door assemblies shall have been tested to meet conditions of NFPA 252 as required by NFPA 101 section 6-2.3.3.

1.10 DELIVERY, STORAGE AND HANDLING

A. Packaging: Polyvinyl wrapped, palette by floor, and clearly marked for each opening.
B. Delivery: Deliver to site in original unopened containers and pallets bearing system manufacturers name, and brand.
C. Store: Horizontally on level surface, not less than 2 inches off floor in a clean, dry well-ventilated area protected from sunlight, extreme heat, dryness and moisture.
D. Receiving, off-loading, and site distribution should be handled by an authorized Total Door Distributor unless otherwise stipulated by contract. If the G.C. or other entity handles all or any portion of the receiving, off-loading, and site distribution, they are held responsible for any and all damages that may result from potential miss handling of the product.

1.11 PROJECT CONDITIONS

A. Do not bring door systems to site until building temperature and humidity ranges are compatible with recommended values for preservation of wood moisture content as listed by AWI AWQS. Building shall be stabilized at 30 to 60 percent humidity.

1.12 WARRANTY

A. Integrated metal door opening assembly: Manufacturer's standard 5 year warranty against defects in material and workmanship. Refer to Manufacturer's published warranty.
B. Store doors in a clear, dry ventilated space having controlled temperature and a relative humidity range between 30 and 60 percent. Stack doors flat and off the floor to prevent warpage.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Integrated metal door systems
   1. Total Door: www.totaldoor.com.
   2. Substitutions: Refer to Section 01 25 00

B. Hardware
   1. Total Door: www.totaldoor.com and as called for in Section 08 71 00 Door Hardware
   2. Substitutions: Refer to Section 01 25 00

2.02 MATERIALS

A. Frames
   1. To be supplied by others.
   2. In accordance with ANSI/SDI A250.8, SDI 111A, and SDI 112.
   3. Construction: KD or All-welded units.
   4. Material: Steel, cold rolled, ASTM A1008, 16 gauge.
   5. Fire Resistance Rating: Where indicated in Contract Documents for doors.
   6. Spreader Bar: Removable, at sill (For all welded type).

B. Frame Anchorage Devices
   1. To securely fasten to wall construction without distortion or stress.
   2. In accordance with fire resistance rating indicated in Contract Documents.

C. Integrated Door Assembly
   1. Integrated Door Assembly
   2. Stiles: Steel, galvannealed, 16-gauge, spot welded.
   3. Top and Bottom Rails: 5-1/2 inch 18-gauge steel rails.
   4. Cores:
      a. Solid polystyrene continuously bonded to faces.
      b. Temperature Rise.
   5. Thickness: 1-3/4 inches.
   6. Faces: Steel, stretcher leveled, without seams or spot welds, galvannealed 20 gauge.
   7. Weld pattern: In accordance with manufactures standard details.
   8. Gasketing
      a. Door System: Factory applied to locking channel
      b. Frame: Factory supplied, field apply to head of frame.

c. Floor: Factory supplied Surface Smoke Seal to be field applied. (must be ordered with elevator shaft & lobby applications)

2.03 FINISHES

A. Hinge and Locking Channel
   1. Finish: Factory Pre-Finished.
      a. Color to be selected by Architect.

B. Door Faces, Interior
   1. Finish: To be selected by Architect, refer to door schedule.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Field Conditions
   1. Prior to commencing installation, examine parts of building structure, which are to receive door systems and component parts.
   2. Report, in writing, conditions which would prevent proper execution or endanger permanency of the work to the Architect.

B. Field Dimensions
   1. Where possible, verify frame tolerances before fabrication of door systems.
   2. Notify Architect of variances with reviewed shop drawings.

C. Corrective measures, when necessary, shall be determined and approved prior to commencing fabrication.

D. Coordinate door opening assembly details with adjacent work to assure proper attachments, clean junctions, etc.

3.02 INSTALLATION

A. Install work in accordance with Contract Documents and reviewed shop drawings.
   1. Install door systems and hardware in accordance with manufacturer's recommendations.
   2. Installer: Manufacturer certified.

B. Frames: Installed by others
   1. Set plumb and square in accordance with DHI standards.
      a. Out-of-square at frame head: Not to exceed 1/16 inch.
      b. Out-of-plumb for each frame jamb: Not to exceed 1/16 inch.
      c. Out-of-alignment for each side in plan: Not to exceed 1/16 inch.
      d. Twist dimension: Not to exceed 1/16 inch.
   2. Brace until adjacent wall is constructed.
   3. Securely anchor to adjacent wall.
   4. Furnish and install clips, fastenings, and anchorages and conceal unless otherwise noted.

C. Integrated Door Assembly
   1. Hang to maintain manufacturer's installation tolerances.
   2. Adjust to freely swing without binding, sticking, or sagging, and to eliminate excessive clearances.

D. Hardware: When installation is otherwise complete, confirm proper operation and function.

PART 4 - Integrated Door Assembly Schedule

4.01 Door manufacturer to provide the following Door Hardware:

A. TBD.

END OF SECTION 08 17 13

SECTION 08 31 00 – ACCESS DOORS

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide access doors as specified herein, and as necessary for complete installation. Provide units for both wall access, and for ceiling access at the following locations, and at locations indicated on the Drawings:

A. Access to concealed spaces
B. Access to valves, controls, panels and other concealed items requiring maintenance.
C. Provide fire-rated units when located within fire-rated partitions

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.03 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material shall be within 100 miles of project site for credit if possible.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material. (if applicable)
C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.

1.05 SUBMIT PRODUCT DATA for each type of door and frame indicated. Include construction details relative to materials, individual components and profiles, finishes, and fire ratings (if required) for access doors and frames.

1.06 QUALITY ASSURANCE – FIRE RATED UNITS: Provide door and frame assemblies complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

A. NFPA 252 or UL 10B for vertical access doors and frames.

PART 2 - PRODUCTS

2.01 BASIS OF DESIGN PRODUCT / MANUFACTURER:

A. WILLIAMS BROTHER COPRORATION OF AMERICA:
   1. Non-Rated Walls: WB-DWAL 412 Series drywall finish, frameless, mud-in, touch latch access panel with detachable door.
   2. Non-Rated Ceilings: WB GY 3000 Series Glass-Fiber-Reinforced Gypsum (GFRG) Ceiling Access Panel
   3. Rated Walls: WB FR-RDW 860 Series Recessed Drywall Fire Rated Access Door for Walls
   4. Rated Ceilings: WB FR-RDW 870 Series Recessed Drywall Fire Rated Access Door for Ceilings
B. Substitutions must be approved by Architect through submittal process.

2.02 AVAILABLE MANUFACTURERS: Subject to compliance with requirements and aestetics, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

A. Acudor Products, Inc.
B. Babcock-Davis; A Cierra Products Co.
C. Bar-Co, Inc. Div.; Alfab, Inc.
D. Cendrex, Inc.
E. Cesco Products.
F. Elmdor/Stoneman; Div. of Acorn Engineering
G. Jensen Industries.
H. J. L. Industries, Inc.
I. Karp Associates, Inc.
J. Larsen's Manufacturing Company.
K. MIFAB Manufacturing, Inc.
L. Milcor Limited Partnership.
M. Nystrom Building Products Co.
N. Precision Plumbing Products, Inc.
O. Williams Bros. Corporation of America (The).

2.03 MATERIALS

A. Non-Rated Wall Access Panels:
   1. Door: Fully detachable, corrosion resistant, welded aluminum frame with or without inlayed 1/2" or 5/8" drywall
   2. Frame & Trim: 1 5/8" wide with outer and inner frame assembly consisting of high grade aluminum bonded with a special welding process
   3. Reveal: Reveal of 1/16” of an inch is visible between the outer frame and door hatch
   4. Finish: Mill finish

5. Latches: Concealed snap locks (two per door) open the access panel when pressure is applied to the spring loaded latch side
6. Hinge: Open pin hinge top and bottom, 12” x 12” and up access panels are equipped with a safety-system to prevent accidental opening - must be reattached after each opening
7. Application: Walls

B. Non-Rated Ceiling Access Panels

1. Door: Fully detachable, corrosion resistant, welded aluminum frame with or without inlayed 1/2" or 5/8" drywall
2. Frame & Trim: 1 5/8" wide with outer and inner frame assembly consisting of high grade aluminum bonded with a special welding process
3. Reveal: Reveal of 1/16” of an inch is visible between the outer frame and door hatch
4. Finish: Mill finish
5. Latches: Concealed snap locks (two per door) open the access panel when pressure is applied to the spring loaded latch side
6. Hinge: Open pin hinge top and bottom, 12” x 12” and up access panels are equipped with a safety-system to prevent accidental opening - must be reattached after each opening
7. Application: Ceilings

C. Rated Wall Access Panels:

1. Recess: Door is fitted with 5/8" fire rated drywall pre-installed
2. Hinge: Concealed Hinge
3. Door 22 Gauge Steel
4. Fire Rating: Meets 1-1/2 hour (90 minute) fire rating UL 10 (b)
5. Latch: Self-latching bolt, operated by flush key
6. Finish: Satin coat steel
7. Frame: Preforated to accept finish once installed for concealed flanges

D. Rated Ceiling Access Panels

1. Recess: Door is fitted with 5/8" fire rated drywall pre-installed
2. Hinge: Concealed Hinge
3. Door 22 GaugeSteel
4. Fire Rating: Meets 1-1/2 hour (90 minute) fire rating in accordance to CAN ULC S101-14, ASTM E119-16 and NFPA 251
5. Latch: Self-latching bolt, operated by flush key
6. Finish: Satin coat steel
7. Frame: Preforated to accept finish once installed for concealed flanges

2.04 FABRICATION:

A. PROVIDE ACCESS DOOR ASSEMBLIES manufactured as integral units ready for installation. For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness. Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels.

2.05 TYPICAL SIZE

A. FOR WALL ACCESS: 36 x 36 inch minimum, unless otherwise indicated.
B. FOR SOFFIT / CEILING ACCESS: 24 x 24 inch minimum, unless otherwise indicated.
C. Smaller sizes may be used for limited access to valves, junctions, etc. that are within arms reach of access door.

2.06 FINISHES

A. APPLY SHOP PRIMER to uncoated surfaces of metal fabrications. Comply with SSPC-PA 1, "Paint Application Specification No. 1," for shop painting.
B. Sheetrock panel finished flush and painted to match adjacent surface.
C. GFRG panel finished flush and painted to match adjacent surface.

PART 3 - EXECUTION

3.01 PREPARATION: Advise installers of other work about specific requirements relating to access door and floor door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.

3.02 INSTALLATION: Comply with manufacturer's written instructions for installing access doors and frames. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces. Install access doors with trimless frames flush with adjacent finish surfaces or recessed to receive finish material.

3.03 ADJUSTING AND CLEANING: Adjust doors and hardware after installation for proper operation. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08 31 00

SECTION 08 33 23 – OVERHEAD COILING DOORS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Upward coiling service doors.

1.02 RELATED REQUIREMENTS

A. Section 079200 - Joint Sealants: Sealing joints between frames and adjacent construction.
B. Section 087100 - Door Hardware: Cylinder cores and keys.
C. Section 260583 - Wiring Connections: Power to disconnect.

1.03 REFERENCE STANDARDS

A. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.
C. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2023.
D. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014 (Reapproved 2021).
E. FBC TAS 201 - Impact Test Procedures; Testing Application Standard; 1994.
F. FBC TAS 202 - Criteria for Testing Impact and Non-Impact Resistant Building Envelope Components Using Uniform Static Air Pressure; Testing Application Standard; 1994.
G. ICC (IECC)-2018 - International Energy Conservation Code; 2018.
H. UL (DIR) - Online Certifications Directory; Current Edition.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's standard literature showing materials and details of construction and finish. Include data on electrical operation
B. Shop Drawings: Indicate rough and actual opening dimensions, anchorage methods, hardware locations, and installation details.
C. Manufacturer's Instructions: Indicate installation sequence and installation, adjustment, and alignment procedures.
D. Installer's qualification statement.
E. Operation and Maintenance Data: Indicate modes of operation, lubrication requirements and frequency, and periodic adjustments required.
F. Specimen warranty.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in performing work of this section with minimum of 5 years
B. Installer Qualifications: Company specializing in performing work of this section with minimum of 3 years
C. Products Requiring Electrical Connection: Listed and classified by UL (DIR); TUV

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.
B. Protect materials from exposure to moisture.
C. Store materials in dry, warm, ventilated, weathertight location.

1.07 WARRANTY

A. Manufacturer Door and Operator Warranty: Provide manufacturer's limited warranty for door and operator system free from material and workmanship defects for duration and cycles indicated under individual doors; counterbalance spring and finish not covered by warranty.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Overhead Door Corporation; www.overheaddoor.com; 1 (800) 929-3667.
B. Substitutions: Not permitted.

2.02 UPWARD COILING SERVICE DOORS

A. Overhead DoorTM Brand; Model 610S EverServe.
    (1) Slats: Interlocking, roll-formed, metal slats.
    (2) Width: Refer to Door Schedule
    (3) Height: Refer to Door Schedule
    (4) Mounting: Surface mounted on side indicated on drawings.
    (5) Opening Speed: Door to operate at variable speed of 8 to 12 inches (203 to 305 mm) per second.
    (6) Closing Speed: Door to operate at variable speed of 8 to 12 inches (203 to 305 mm) per second.
    (7) Operation Cycles: Capable of operating for minimum 500,000 cycles. One operation cycle is complete when door is opened from closed position to fully open position and returned to closed position.
    (8) Available Warranty:
        (a) Limited Warranty: For 3 years or 500,000 cycles, whichever comes first.
    (9) Wind Load: Design door assembly to withstand ultimate static pressure load of

(a) Wind Load: Not Required.

(10) Impact Rating: Available with certification for large missile impact resistance

(a) None - N/A

(11) Curtain Material:

(a) Galvanized Steel: 18 gauge, 0.0516 inch (1.31 mm)
(b) Slat Profile: F-265.

Fenestrated Slats: Perforated holes with minimum opening size of 2.14sqft.

(c) Galvanized Steel Finish:

(i) PowderGuard Premium powder coat

1. Color: Dark Bronze

(12) Bottom Bar: Galvanized steel

(a) Profile: Double angle.
(b) Finish: PowderGuard Premium powder coat.
(c) Color: Match curtain.

(13) Weatherstripping and Seals:

(a) Bottom Seal Astragal: Included.
(b) Interior Guide Seal: Not required.
(c) Exterior Guide Seal: Not required.
(d) Lintel Brush Seal: Not required.

(14) Side Guides, Channels: Constructed of steel with members fully bolted together.

(a) Finish: PowderGuard Premium powder coat

(i) Color: Match curtain.

(15) Brackets: Steel to support counterbalance and curtain.

(a) Finish: PowderGuard Premium powder coat

(i) Color: Match curtain.

(16) Door Roll: Directly driven, springless roll constructed of steel tube with integral shafts, keyed on drive end and supported by self-aligning, greasable, sealed bearings. Counterbalance device not required.

(17) Hood: 24 gauge, 0.0278 inch (0.63 mm) galvanized steel;

(a) Finish: Match curtain;

(18) Motor Operation: Direct drive, integrated gear motor and brake assembly; size as recommended by manufacturer to move door in either direction at minimum 8 inches (203 mm), maximum 1 foot (305 mm) per second. Operator and drive assembly is factory preassembled and provided with wiring harnesses needed direct from factory.

(a) Manual Override: Hoist.
(b) Timer to Close: Time-delay self-close timer and non-resettable cycle counter.
(c) Operation Supply Voltage: 208V 3-phase 60Hz;
(d) Signaling Device: Horn and strobe combination;.
(e) Actuation Device: Provide push button; key switch; treadle switch; and radio control.
(f) Motor Mounting: Shaft mount.
(g) Obstruction Safety Detection:

(i) Primary, Monitored:

1. Photo Eyes: Thru-beam photo-eyes; .
2. Safety Edge: 2-wire reversing safety edge.

(ii) Secondary, Non-Monitored:

1. Photo Eyes: Reflective photo-eyes; .
2. Safety Edge: 2-wire reversing safety edge

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify existing conditions; and meet manufacturer's requirements before starting work.
B. Verify opening sizes, tolerances and conditions are acceptable.

3.02 INSTALLATION

A. Install in accordance with manufacturer's written instructions.
B. Use anchorage devices to securely fasten assembly to wall construction and building structure without distortion or stress.
C. Secure guides to structural members only
D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.
E. Coordinate installation of electrical service; see Section 260583.
F. Install enclosure and perimeter trim.

3.03 TOLERANCES

A. Maintain dimensional tolerances and alignment with adjacent work.

B. Maximum Variation from Plumb: 1/16 inch (1.6 mm)
C. Maximum Variation from Level: 1/16 inch (1.6 mm)
D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 feet (3.2 mm per 3 m)

3.04 ADJUSTING

A. Adjust operating assemblies for smooth and noiseless operation.

3.05 CLEANING

A. See Section 017000 - Execution and Closeout Requirements for additional requirements.
B. Clean installed components.
C. Remove labels and visible markings.

3.06 PROTECTION

A. Protect finishes until completion of project.
B. Touch up damaged finishes after Substantial Completion.

END OF SECTION 08 33 23

SECTION 08 41 13 – ALUMINUM ENTRANCE CURTAIN WALLS AND STOREFRONT

PART 1 - GENERAL

1.01 PROVIDE ALUMINUM-FRAMED entrance doors, curtain walls and storefront framing as shown on Drawings, as required herein, and as needed to meet the requirements of the construction shown in the Contract Documents.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.03 ACCESSIBLE ENTRANCES: Provide entrances in compliance with both the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG).", and ICC/ANSI A117.1.

1.04 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, hardware, finishes, and installation instructions for each type of aluminum-framed storefront system indicated.
   1. Recycled Content:
      a. Provide documentation that aluminum has a minimum of 50% mixed pre- and post-consumer recycled content with a sample document illustrating project specific information that will be provided after product shipment.
      b. Once product has shipped, provide project specific recycled content information, including:
         (1) Indicate recycled content; indicate percentage of pre- and post-consumer recycled content per unit of product.
         (2) Indicate relative dollar value of recycled content product to total dollar value of product included in project.
         (3) Indicate location recovery of recycled content.
         (4) Indicate location of manufacturing facility.
   2. Environmental Product Declaration (EPD).
      a. Include a Type III Product-Specific EPD created from a Product Category Rule.

B. Shop Drawings: Include plans, elevations, sections, details, hardware, and attachments to other work, operational clearances and installation details.

C. Samples for Initial Selection: For units with factory-applied color finishes including samples of hardware and accessories involving color selection.

D. Samples for Verification: For aluminum-framed storefront system and components required.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency for each type, of aluminum-framed storefront.

F. Fabrication Sample: Of each vertical-to-horizontal intersection of aluminum-framed systems, made from 12" (304.8 mm) lengths of full-size components and showing details of the following:
   1. Joinery, including concealed welds.
   2. Anchorage.
   3. Expansion provisions.
   4. Glazing.
   5. Flashing and drainage.

G. Other Action Submittals:
   1. Entrance Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.05 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material shall be within 100 miles of project site for credit if possible.

B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.

C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.

D. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.06 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material. Include distance to Project and cost for each regional material.

C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.

D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.

E. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable.

1.07 QUALITY ASSURANCE:

A. Installer Qualifications: An installer which has had successful experience with installation of the same or similar units required for the project and other projects of similar size and scope.
B. Manufacturer Qualifications: A manufacturer capable of providing aluminum-framed storefront system that meet or exceed performance requirements indicated and of documenting this performance by inclusion of test reports, and calculations.
C. Source Limitations: Obtain aluminum-framed storefront system through one source from a single manufacturer.
D. Product Options: Drawings indicate size, profiles, and dimensional requirements of aluminum-framed storefront system and are based on the specific system indicated. Refer to Division 01 Section “Product Requirements”. Do not modify size and dimensional requirements.
    1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
    1. Build mockup for type(s) of storefront elevation(s) indicated, in location(s) shown on Drawings.
F. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section “Project Management and Coordination”.

1.08 Project Conditions

A. Field Measurements: Verify actual dimensions of aluminum-framed storefront openings by field measurements before fabrication and indicate field measurements on Shop Drawings.

1.09 Warranty

A. Manufacturer’s Warranty: Submit, for Owner’s acceptance, manufacturer’s standard warranty.
    1. Warranty Period: Two (2) years from Date of Substantial Completion of the project.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design aluminum-framed entrances and storefronts.
B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
    1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
    2. Failure also includes the following:
        a. Thermal stresses transferring to building structure.
        b. Glass breakage.
        c. Noise or vibration created by wind and thermal and structural movements.
        d. Loosening or weakening of fasteners, attachments, and other components.
        e. Failure of operating units.
C. Structural Loads:
    1. Wind Loads: As indicated on Drawings.
    2. Other Design Loads: As indicated on Drawings
D. Deflection of Framing Members: At design wind pressure, as follows:
    1. Deflection Normal to Wall Plane: Limited to [edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite] [1/175 of clear span for spans of up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 13 feet 6 inches (4.1 m)] <Insert deflection limit> or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19.1 mm), whichever is less.
    2. Deflection Parallel to Glazing Plane: Limited to [1/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller] [amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm).
        a. Operable Units: Provide a minimum 1/16-inch (1.6-mm) clearance between framing members and operable units.
    3. Cantilever Deflection: Where framing members overhang an anchor point, as follows:
        a. Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4 inch (6.35 mm) for spans greater than 11 feet 8-1/4 inches (3.6 m) or 1/175 times span, for spans of less than 11 feet 8-1/4 inches (3.6 m).
E. Structural: Test according to ASTM E330/E330M as follows:

1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.
2. When tested at [150] <Insert number> percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding [0.2] <Insert number> percent of span.
3. Test Durations: As required by design wind velocity, but not less than [10] <Insert number> seconds.

F. Air Infiltration: Test according to ASTM E283 for infiltration as follows:
1. Fixed Framing and Glass Area:
a. Maximum air leakage of [0.06 cfm/sq. ft. (0.30 L/s per sq. m)] <Insert value> at a static-air-pressure differential of [1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)] <Insert value>.
2. Entrance Doors:
a. Single Doors: Maximum air leakage of [0.5 cfm/sq. ft. (2.54 L/s per sq. m)] <Insert value> at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).

G. Water Penetration under Static Pressure: Test according to ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than [6.24 lbf/sq. ft. (300 Pa)] [10 lbf/sq. ft. (480 Pa)] [15 lbf/sq. ft. (720 Pa)] <Insert value>.

H. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than [6.24 lbf/sq. ft. (300 Pa)] [10 lbf/sq. ft. (480 Pa)] [15 lbf/sq. ft. (720 Pa)] <Insert value>.
2. Maximum Water Leakage: [According to AAMA 501.1] [No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation]. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

I. Seismic Performance: Aluminum-framed entrances and storefronts shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>.
1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.6 at design displacement[and 1.5 times the design displacement].

J. Energy Performance: Certify and label energy performance according to NFRC as follows:
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas as a system shall have U-factor of not more than [0.41 Btu/sq. ft. x h x deg F (2.33 W/sq. m x K)] [0.45 Btu/sq. ft. x h x deg F (2.55 W/sq. m x K)] [0.57 Btu/sq. ft. x h x deg F (3.23 W/sq. m x K)] [0.69 Btu/sq. ft. x h x deg F (3.92 W/sq. m x K)] <Insert value> as determined according to NFRC 100.
2. Solar Heat Gain Coefficient (SHGC): Fixed glazing and framing areas as a system shall have SHGC of no greater than [0.26] [0.35] [0.40] [0.45] <Insert value> as determined according to NFRC 200.
3. Condensation Resistance: Fixed glazing and framing areas as a system shall have an NFRC-certified condensation resistance rating of no less than [15] [25] [35] [45] [55] [65] [75] <Insert value> as determined according to NFRC 500.

K. Noise Reduction: Test according to ASTM E90, with ratings determined by ASTM E1332, as follows.
1. Outdoor-Indoor Transmission Class: Minimum [26] [30] [34] <Insert number>.

L. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of [180 deg F (82 deg C)] <Insert temperature>.
b. Low Exterior Ambient-Air Temperature: [0 deg F (minus 18 deg C)] <Insert temperature>.
c. Interior Ambient-Air Temperature: [75 deg F (24 deg C)] <Insert temperature>.

M. Structural-Sealant Joints:
1. Designed to carry gravity loads of glazing.
2. Structural Sealant: ASTM C1184 and ASTM C1401 (SSG). Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed, aluminum-framed entrances and storefronts without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
a. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
b. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate, because sealant-to-substrate bond strength exceeds sealant's internal strength.

2.02 MATERIALS

A. Aluminum Extrusions: Alloy and temper recommended by aluminum storefront manufacturer for strength, corrosion resistance, and application of required finish and not less than 0.070" (1.8 mm) wall thickness at any location for the main frame and complying with ASTM B 221: 6063-T6 alloy and temper.

1. Recycled Content: Shall have a minimum of 50% mixed pre- and post-consumer recycled content.

a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.
b. Indicate relative dollar value of recycled content product to total dollar value of product included in project.
c. Indicate location recovery of recycled content.
d. Indicate location of manufacturing facility.

B. Fasteners: Aluminum, nonmagnetic stainless steel or other materials to be non-corrosive and compatible with aluminum framing members, trim hardware, anchors, and other components.

C. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions or other suitable zinc coating; provide sufficient strength to withstand design pressure indicated.

D. Reinforcing Members: Aluminum, nonmagnetic stainless steel, or nickel/chrome-plated steel complying with ASTM B 456 for Type SC 3 severe service conditions, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions or other suitable zinc coating; provide sufficient strength to withstand design pressure indicated.

E. Sealant: For sealants required within fabricated storefront system, provide permanently elastic, non-shrinking, and non-migrating type recommended by sealant manufacturer for joint size and movement and that comply with structural sealant glazing (SSG) ASTM C1401 standards.

F. Tolerances: Reference to tolerances for wall thickness and other cross-sectional dimensions of storefront members are nominal and in compliance with AA Aluminum Standards and Data.

2.03 ACCEPTABLE MANUFACTURERS: Subject to compliance with unit size of products indicated and other requirements specified herein, products of one of the following alternative manufacturers are also acceptable:

A. Arch Amarlite – Arch Aluminum and Glass Inc. (www.archamarlite.com)
B. EFCO Corporation (www.efcocorp.com)
C. BASIS OF DESIGN: Kawneer Company, Inc. (**www.kawneer.com**)
D. Tubelite Architectural Systems (www.tubeliteinc.com)
E. Vistawall Architectural Products (www.vistawall.com)
F. YKK AP America Inc. (www.ykkap.com)
G. Manko (www.mankowindows.com)

2.04 EXTERIOR INSULATED CURTAIN WALL, DOOR & WINDOW AND SHADOW BOX FRAMING: Fabricated system from minimum 1/8 inch thickness ASTM B 221 aluminum extrusions and ASTM B 209 sheet, with steel reinforcement as required to comply with wind-load and deflection limits indicated above:

A. Typical member size: 2” wide/high x (both) 6” and 7 ½” inch deep (refer to Drawings)
B. Finish: Dark Bronze
C. Glazing: Solarban 60 with a ½” spacing Argon cavity
D. BASIS OF DESIGN: Kawneer 1620UT SSG Curtain Wall System
E. System will have SSG horizontals and a custom mullion cap profile for the outer caps.
F. Shadow Box Design: Refer to details in Drawings and note the following:

1. The shadow box within the curtain wall frame must be full sealed to prevent condensation within the shadow box. The curtain wall design must ensure that all finishes, sealants, and other materials in or adjacent to the shadow box cavity are stable at high temperature. The curtain wall designer must determine the highest anticipated temperature inside the cavity and verity the ability of the glass and back pan to withstand the resultant high temperature.

2.05 EXTERIOR STOREFRONT, DOOR & WINDOW FRAMING: Fabricated system from minimum 1/8 inch thickness ASTM B 221 aluminum extrusions and ASTM B 209 sheet, with steel reinforcement as required to comply with wind-load and deflection limits indicated above:

A. Typical member size:

1. Kawneer 451T: 2” wide/high x (both) 4 ½” inch deep
2. Kawneer 601T 2” wide/high x (both) 6” inch deep

B. Finish: Dark Bronze
C. Glazing: Solarban 60 with a ½” spacing Argon cavity; Front Plane Glass
D. BASIS OF DESIGN: Kawneer 451T Framing System

2.06 EXTERIOR INSULATED ALUMINUM ENTRANCE DOORS: Thermally broken and insulated stile and rail type door, two (2) inch thick, with ten (10) inch high minimum bottom rail for accessibility compliance, of minimum 1/8” thick tubular aluminum frame members mechanically fastened and with reinforced joints, for insulated glazing:

A. BASIS OF DESIGN: Kawneer # 350T Insulpour Thermal Entrance Door (2-1/4-inch thick)
B. Glazing: Solarban 60 with a ½” spacing Argon cavity
C. Finish: Dark Bronze

2.07 INTERIOR STOREFRONT, DOOR & WINDOW FRAMING: Fabricated system of ASTM B 221 - 6063 T5 alloy extruded aluminum, in rectangular profile to accept 6 mm (1/4 inch) glass panels, with 1-3/4-inch-wide snap-on outside trims to cover and engage drywall partitions – with an overall “face” profile width of 1-3/4 inch. Provide “throat opening” to match drywall partition thickness. Pre-machine jambs and prepare for door hardware, with concealed reinforcement plates,

drilled and tapped as required, and fastened to the frames. Provide corner reinforcements to allow secure installation without exposed fasteners. Pre-cut in factory, and ship to project site knocked-down for field assembly.

A. Typical member size: 1-3/4" wide/high x 4-1/2-inch deep
B. Glazing location: "centered"
C. Finish: Dark Bronze
D. BASIS-OF-DESIGN: Kawneer- Trifab 450 Framing system

2.08 INTERIOR (NON-THERMAL) ALUMINUM ENTRANCE DOORS: Stile and rail type door, 1-3/4 inch thick, with "wide" profile vertical and top stiles and six (6) inch high minimum bottom rail, of minimum 1/8" thick tubular aluminum frame members mechanically fastened and with reinforced joints, for single-pane glazing:

A. Finish: Dark Bronze
B. BASIS OF DESIGN: Kawneer 350 Medium Stile Standard Entrance

2.09 ALUMINUM ENTRANCE DOOR HARDWARE:

A. Refer to other Division-08 "Door Hardware" Section for other hardware required for storefront doors

2.10 BRAKE-METAL ALUMINUM TRIM: Fabricate flat aluminum sheet in profiles indicated on Drawings or as required to provide closure at adjacent construction elements.

2.11 STEEL REINFORCEMENT complete with manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment, select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard:

A. Structural Shapes, Plates, and Bars: ASTM A 36
B. Cold-Rolled Sheet and Strip: ASTM A 1008
C. Hot-Rolled Sheet and Strip: ASTM A 1011

2.12 FASTENERS: Aluminum, non-magnetic stainless steel, or other materials warranted by manufacturer to be noncorrosive and compatible with aluminum components. Exposed fasteners must match finish of members and hardware being fastened.

2.13 CONCEALED FLASHING: Dead-soft stainless steel, 26 gage minimum, or extruded aluminum, 0.062" minimum, as selected by manufacturer for compatibility with other components.

2.14 CONCRETE/MASONRY INSERTS: Cast-iron, malleable iron, or hot-dipped galvanized steel complying with ASTM A-386.

2.15 BITUMINOUS COATINGS: Cold-applied asphalt mastic complying with SSPC-PS 12, compounded for 30-mil thickness per coat.

2.16 COMPRESSION WEATHERSTRIPPING: Manufacturer's standard replaceable stripping of either molded neoprene gaskets complying with ASTM D 2000 or molded PVC gaskets complying with ASTM D 2287.

2.17 GLAZING SYSTEM: Provide manufacturer's standard compression type molded or extruded glazing gaskets that maintain uniform pressure and watertight seal, inside-outside matched, with provisions for glass replacement. Provide elastomeric type spacers and setting blocks.

2.18 MAINTENANCE TOOLS AND INSTRUCTIONS: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.

2.19 PREFABRICATION: Complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site. Disassemble components only as necessary for shipment and installation. Comply with AWS recommendations to avoid discoloration; grind exposed welds smooth and restore mechanical finish. Install reinforcing if required for performance requirements; separate dissimilar metals with bituminous paint or other separator which will prevent corrosion. Maintain accurate relation of planes and angles, with hairline fit of contacting members. Conceal fasteners wherever possible.

2.20 DOOR FABRICATION: Provide tubular frame members, fabricated with mechanical joints using heavy inserted reinforcing plates and concealed tie-rods or j-bolts, or fabricate with structurally welded joints, at manufacturer's option.

2.21 ALUMINUM TRIM: Fabricate flat aluminum sheet in profiles indicated on Drawings or as required to provide closure at adjacent construction elements.

2.22 ANODIZED ALUMINUM FINISH: Provide Class 1 "colored" anodized finish per AA-M12C22A42/A44.

A. COLOR: Dark Bronze, or as otherwise indicated in the Drawings

2.23 TAKE FIELD MEASUREMENTS prior to fabrication, to ensure proper fitting of Work.

PART 3 - EXECUTION

3.01 EXAMINE AREAS with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. COMPLY with manufacturer's instructions and recommendations for installation of aluminum entrances and storefronts.
B. SET UNITS PLUMB, level, and true to line, without warp or rack of framing members, doors, or panels. Anchor securely in place, separating aluminum and other corrodible metal surfaces from sources of corrosion of electrolytic action at points of contact with other materials.
C. DRILL AND TAP frames and doors and apply surface-mounted hardware items, complying with hardware manufacturer's instructions and template requirements. Use concealed fasteners wherever possible.

D. SET SILL MEMBERS in bed of sealant as indicated, or with joint fillers or gaskets as indicated to provide weathertight construction. Comply with requirements of Division 7 for sealants, fillers, and gaskets. Install glazing as required by Division-08 “Glazing” Section.
E. ADJUST OPERATING HARDWARE to function properly, without binding, and to prevent tight fit at contact points and weather-stripping.
F. ERECTION TOLERANCES: Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
    1. PLUMB: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
    2. LEVEL: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
    3. ALIGNMENT: Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
    4. LOCATION: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.03 FIELD QUALITY CONTROL – WATER-SPRAY TESTING: Before installation of interior finishes has begun, test representative areas as designated by the Architect according to AAMA 501.2, in the presence of the Architect and the Owner’s representative. Tested areas must not show any evidence of water penetration. Perform a minimum of two tests in areas as directed by Architect.

3.04 CLEAN COMPLETED SYSTEM, inside and out, promptly after erection and installation of glass and sealants. Remove excess glazing and joint sealants, dirt, and other substances from aluminum surfaces.

3.05 INSTITUTE PROTECTIVE MEASURES and precautions required to assure that aluminum entrances and storefronts will be without damage or deterioration, other than normal weathering, at time of acceptance.

3.06 MAINTENANCE SERVICE FOR ENTRANCE DOOR HARDWARE: Beginning at Substantial Completion, provide maintenance service by skilled employees of the entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

3.07 INITIAL MAINTENANCE SERVICE PERIOD: twelve months after Substantial Completion

END OF SECTION 08 41 13

SECTION 08 71 00 – DOOR HARDWARE AND SCHEDULE

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide door hardware where indicated on the Drawings, as specified herein, and as necessary for complete installation. This Section includes items known commercially as finish or door hardware that are required for swing and sliding doors, and other doors to the extent indicated. Hardware for special types of unique hardware is specified in the same Sections as the doors and door frames on which they are installed. The Work of this Section includes:

A. Mechanical door hardware for swinging and sliding doors
B. Electromechanical door hardware
C. Cylinders specified for doors that are specified in other Sections.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.
B. ACCESS CONTROL SYSTEM are specified in a Division-28 Section of the Specifications

1.03 CODES & REFERENCE STANDARDS: In addition to compliance with the applicable building code, comply with the following referenced standards:

A. ANSI/BHMA Certified Product Standards: A156 Series
B. Underwriters Laboratory: L10C – Positive Pressure Fire Tests of Door Assemblies
C. National Fire Protection Association (NFPA)
    1. NFPA 70 - National Electrical Code.
    2. NFPA 80 - Fire Doors and Windows.
    3. NFPA 101 - Life Safety Code.
    4. NFPA 105 - Installation of Smoke Door Assemblies.

1.04 ACCESSIBILITY STANDARDS: COMPLY WITH ICC/ANSI A117.1 “Accessible and Usable Buildings and Facilities” (most recent edition) and with requirements of the federally required Americans with Disabilities Act (ADA) – 2010 Edition, including but not limited to the following:

A. Provide an accessible clear-floor space at all accessible, operational door hardware
B. Accessible hardware to be operable with one (1) hand in a single motion,
C. Accessible hardware to be operable without tight grasping, pinching, or twisting of the wrist.
D. Maximum operational force for accessible hardware: five (5.0) pounds (except at exterior doors)
E. Allowable height limits for accessible, operational door hardware:
    1. lowest height above grade or floor: 1’-3” (15”)
    2. highest height above grade or floor: 4’-0” (48”)

1.05 FIRE-RATED DOOR ASSEMBLIES: Provide door hardware for assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to AHJ representatives, for fire ratings indicated, based on testing according to NFPA 252 (neutral pressure at 40" above sill) or UL-10C, for positive pressure labeling.

1.06 LEED PERFORMANCE REQUIREMENTS

A. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
B. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
C. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.07 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
C. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
D. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable

1.08 SUBMITTALS

A. PRODUCT DATA including manufacturers' technical product data for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.
B. DOOR HARDWARE SCHEDULE: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
    1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:
4. Type, style, function, size, label, hand, and finish of each door hardware item.
5. Manufacturer of each item.
6. Fastenings and other pertinent information.
7. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
8. Explanation of abbreviations, symbols, and codes contained in schedule.
9. Mounting locations for door hardware.
10. Door and frame sizes and materials.
11. Warranty information for each product.

C. SUBMITTAL SEQUENCE: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

D. SHOP DRAWINGS: Details of electrified access control hardware indicating the following:

E. WIRING DIAGRAMS: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

1. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
2. Complete (risers, point-to-point) access control system block wiring diagrams.
3. Wiring instructions for each electronic component scheduled herein.
4. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

F. KEYING SCHEDULE: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

G. OPERATING AND MAINTENANCE MANUALS: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals.

1.09 QUALITY ASSURANCE

A. PROVIDE CONSULTING SERVICES of a experienced Architectural Hardware Consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Project, for consultation (in addition to the meetings at site as indicated below).

B. SINGLE SOURCE RESPONSIBILITY: Obtain each type of hardware (latch and lock sets, hinges, closers, etc.) from a single manufacturer. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted. Provide integrated access control door hardware from the same manufacturer as standard mechanical door hardware, unless otherwise indicated.

C. SUPPLIER QUALIFICATIONS: A recognized architectural door hardware supplier, with warehousing facilities in the Project's vicinity, that has a record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this Project and that employs an experienced architectural hardware consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Work, for consultation.

1.10 HARDWARE & KEYING COORDINATION MEETING: Coordinate and manage a meeting between the Owner’s representative and the hardware supplier’s AHC certified consultant to confirm requirements of specified hardware items indicated herein before ordering, and to determine or confirm the final keying requirements. Confirm decisions made in writing, and submit to Architect for record within three (3) days of meeting.

A. Allow for a minimum of two (2) meetings, each to take not less than FOUR (4) hours each
B. Conduct meetings at the project site or offices of the Owner (unless otherwise agreed to by Owner’s representative).
C. Include the Owner’s separate Security Contractor in the coordination meetings, if applicable

1.11 INSTALLER QUALIFICATIONS: Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

1.12 PRE-SUBMITTAL CONFERENCE: Conduct coordination conference in compliance with requirements of Division-01 with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

A. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.

B. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades, and the following:
C. Review sequence of operation narratives for each unique access controlled opening.
D. Review and finalize construction schedule and verify availability of materials.
E. Review the required inspecting, testing, commissioning, and demonstration procedures

1.13 INSTALLATION COMPLIANCE VERIFICATION: At completion of installation, provide written documentation to the Owner that door hardware components were installed in accordance with their manufacturer's instructions and recommendations and according to the approved Hardware Schedule.

1.14 PRODUCT HANDLING

A. TAG EACH ITEM OR PACKAGE SEPARATELY with identification related to final hardware schedule, and include basic installation instructions with each item or package. Packaging of door hardware is responsibility of supplier. As material is received by hardware supplier from various manufacturers, sort and repackage in containers clearly marked with appropriate hardware set number to match set numbers of approved hardware schedule. Two or more identical sets may be packed in same container.
B. INVENTORY DOOR HARDWARE jointly with representatives of hardware supplier and hardware installer until each is satisfied that count is correct.
C. DELIVER INDIVIDUALLY PACKAGED DOOR HARDWARE ITEMS promptly to place of installation (shop or Project site).
D. PROVIDE SECURE LOCK-UP for door hardware delivered to the Project, but not yet installed. Control handling and installation of hardware items that are not immediately replaceable so that completion of the Work will not be delayed by hardware losses both before and after installation.

1.15 SPECIAL PRODUCT WARRANTY

A. PROVIDE WRITTEN WARRANTY, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fail in materials or workmanship within the indicated warranty period after Substantial Completion of the Work. Failures include, but are not limited to, the following:
   1. Structural failures including excessive deflection, cracking, or breakage.
   2. Faulty operation of the hardware.
   3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   4. Electrical component defects and failures within the systems operation.
B. SPECIAL WARRANTY PERIODS (in addition to other contractual and/or implied warranties):
   1. Ten (10) years for mortise locks and latches.
   2. Seven (7) years for heavy duty cylindrical (bored) locks and latches.
   3. Five (5) years for exit hardware.
   4. Twenty five (25) years for manual surface door closer bodies.
   5. Ten (10) years for heavy duty floor closers.
   6. Two (2) years for shallow depth floor closers.
   7. Two (2) years for electromechanical door hardware.

1.16 MAINTENANCE SERVICE

A. MAINTENANCE TOOLS AND INSTRUCTIONS: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.
B. KEY CONTROL SYSTEM: Utilize Owner’s existing system
C. CONTINUING SERVICE: Beginning at Substantial Completion, provide continuous (6) months full maintenance including repair and replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door opening operation. Provide parts and supplies as used in the manufacture and installation of original products.

PART 2 - PRODUCTS

2.01 MANUFACTURER'S NAME PLATE: Do not use manufacturers' products that have manufacturer's name or trade name displayed in a visible location (omit removable nameplates) except in conjunction with required fire-rated labels and as otherwise acceptable to Architect. Manufacturer's identification will be permitted on rim of lock cylinders only.

2.02 BASE METALS: Produce hardware units of basic metal and forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness, but in no case of lesser (commercially recognized) quality than specified for applicable hardware units by applicable ANSI/BHMA A156 series standards for each type of hardware item and with ANSI/BHMA A156.18 for finish designations indicated. Do not furnish "optional" materials or forming methods for those indicated, except as otherwise specified.

2.03 FASTENERS: Provide hardware manufactured to conform to published templates, generally prepared for machine screw installation. Do not provide hardware that has been prepared for self-tapping sheet metal screws, except as specifically indicated.

2.04 FURNISH SCREWS FOR INSTALLATION with each hardware item. Provide Phillips flat-head screws except as otherwise indicated. Finish exposed (exposed under any condition) screws to match hardware finish or, if exposed in surfaces of other work, to match finish of this other work as closely as possible including "prepared for paint" surfaces to receive painted finish.

2.05 PROVIDE CONCEALED FASTENERS for hardware units that are exposed when door is closed except to the extent no standard units of type specified are available with concealed fasteners. Do not use thru-bolts for installation where bolt head or nut on opposite face is exposed in other work unless their use is the only means of reinforcing the work

adequately to fasten the hardware securely. Where thru-bolts are used as a means of reinforcing the work, provide sleeves for each thru-bolt or use sex screw fasteners.

2.06 DOOR HANGING DEVICES: Except for hinges and pivots to be installed entirely (both leaves) into wood doors and frames, provide only template-produced units.

2.07 HINGES: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles as specified in the Door Hardware, and as follows:

A. For metal doors and frames install machine screws into drilled and tapped holes.
B. Finish screw heads to match surface of hinges or pivots.
C. Hinge Size: Provide size scheduled or as follows, whichever is stronger per applicable door size:
    1. Width up to 3'-0": 4-1/2 inch, 3'-1' to 4'-0": 5 inch wide units minimum
D. Hinge Weight:
    1. Exterior Doors: Heavy weight, non-ferrous, ball bearing hinges unless Set indicates standard weight.
    2. Interior Doors: Standard weight, steel, ball bearing hinges unless Sets indicate heavy weight.
E. Hinge Pins: Non-removable (NRP) on out-swinging exterior doors, with flat button tips and matching plug, finished to match leaves.
F. Number of Butt Hinges: Provide number of hinges indicated (not less than 3) per door leaf and as follows:
    1. For 91 to 120 inch height: four (4) hinges
    2. Over 121 inches high: Provide four (4) hinges and ADD one (1) hinge per each 30 inches added height
G. Acceptable Manufacturers for Butt Hinges:
    1. Bommer Industries (BO)
    2. Hager (HA)
    3. McKinney (MK)
    4. PBB
    5. Stanley (ST)

2.08 CONTINUOUS GEARED HINGES: ANSI/BHMA A156.26 certified continuous geared hinge with minimum 0.120-inch thick extruded 6060 T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Units are non-handed, reversible and fabricated to template screw locations. Provide concealed flush mount (with or without inset), in heavy duty models, as specified in the Hardware Sets. Concealed continuous hinges to be U.L. listed for use on up to and including 90 minute rated door installations. Factory cut hinges for door size and provide with removable service power transfer panel where indicated at electrified openings.

A. Acceptable Manufacturers: Bommer Industries (BO), McKinney (MK) Pemko (PE), Select, or Stanley (ST)

2.09 FLOOR CLOSERS: ANSI/BHMA A156.4 certified floor closers. Provide independent and adjustable valves for closing speed, latch speed, and backcheck with built-in dead stop and hold open features as specified. Provide finished cover plates or thresholds as indicated in door Hardware Sets.

A. Acceptable Manufacturers: Rixson Door Controls (RF).

2.10 PIVOTS: ANSI/BHMA A156.4, Grade 1, certified. Space intermediate pivots equally not less than 25 inches on center apart or not more than 35 inches on center for doors over 121 inches high. Pivot hinges to have oil impregnated bronze bearing in the top pivot and a radial roller and thrust bearing in the bottom pivot with the bottom pivot designed to carry the full weight of the door.

A. Acceptable Manufacturers: ABH Manufacturing (AB), Rixson Door Controls (RF).

2.11 POWER TRANSFER DEVICES

A. CONCEALED QUICK CONNECT ELECTRIC POWER TRANSFERS: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
    1. Acceptable Manufacturers: Architectural Builders Hardware (AH) PT1000-EZ Series, Securitron (SU) - EL-CEPT Series.
B. ELECTRIC DOOR WIRE HARNESSES: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
    1. Acceptable Product/Manufacturer: McKinney Products (MK) – QC-C Series.
    2. Provide one (1) each of the following tools as part of the Work of this Section:
    3. McKinney Products (MK) - Electrical Connecting Kit: QC-R001.
    4. McKinney Products (MK) - Connector Hand Tool: QC-R003.

2.12 DOOR OPERATING TRIM

2.13 FLUSH BOLTS AND SURFACE BOLTS: ANSI/BHMA A156.3 and A156.16, Grade 1, certified automatic, self-latching, and manual flush bolts and surface bolts. Manual flush bolts to be furnished with top rod of sufficient length to allow bolt

location approximately six feet from the floor. Furnish dust proof strikes for bottom bolts. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.

A. Acceptable Manufacturers: Burns Manufacturing (BU), Door Controls International (DC), Rockwood (RO), Trimco (TC)

2.14 DOOR PUSH PLATES AND PULLS:

A. ANS/BHMA A156.6 certified door pushes and pulls of type and design specified below or in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates, and as follows. Provide manufacturer's designated fastener type as indicated in Hardware Sets.
B. PUSH/PULL PLATES: Minimum .050 inch thick, 4-inches wide by 16-inches high, with square corners and beveled edges, secured with exposed screws unless otherwise indicated.
C. STRAIGHT PULL DESIGN: Minimum 1-inch round diameter stainless steel bar or tube stock pulls with 2 1/2-inch projection from face of door unless otherwise indicated.
D. OFFSET PULL DESIGN: Minimum 1-inch round diameter stainless steel bar or tube stock pulls with 2 1/2-inch projection and offset of 90 degrees unless otherwise indicated.
E. PUSH BARS: Minimum 1-inch round diameter horizontal push bars with minimum clearance of 2 1/2-inch projection from face of door unless otherwise indicated.
    1. Acceptable Manufacturers:
        a. Burns Manufacturing (BU)
        b. Rockwood Manufacturing (RO)
        c. Trimco (TC),

2.15 LOCKING LADDER PULL SYSTEM: Post-mount style door pulls with integrated deadbolt locking system in type and design as specified in the Hardware Sets. Pulls available in multiple head, floor, or combination locking options, with outside keyed rim cylinder operation and inside turn piece activation. Mounting applications for aluminum, glass, steel and wood doors, with customized sizing and configuration options. Pull finishes include brass, bronze, and stainless steel.

A. Acceptable Manufacturers: Blumcraft (BL) – Locking Ladder Series, or Rockwood Manufacturing (RO) – LP Series.

2.16 CYLINDERS AND KEYING: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated. Provide original manufacturer cylinders complying with the following:

A. Mortise Type: Threaded cylinders with rings and straight- or clover-type cam.
B. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
C. Bored-Lock Type: Cylinders with tailpieces to suit locks.
D. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
E. Keyway: Match existing facility standard
F. Security Cylinders: ANSI/BHMA A156.5, Grade 1, patented security cylinders and keys able to be used together under the same facility master or grandmaster key system. Cylinders are to be factory keyed.
G. Acceptable Manufacturers:
    1. Corbin Russwin (RU) - Pyramid PS Series.
    2. Sargent Manufacturing (SA) - Signature Series.
    3. Schlage Lock (SC) - Primus Series.

2.17 EXISTING FACILITY KEYING SYSTEM: Each type of lock and cylinders to be factory keyed. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.

A. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
B. Existing System: Key locks to Owner's existing system.

2.18 KEYING SYSTEM: Each type of lock and cylinders to be factory keyed. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner. Incorporate decisions made in keying conference, and as follows:

A. Master Key System: Cylinders are operated by a change key and a master key.
B. Grand Master Key System: Cylinders are operated by a change key, a master key, and a grand master key.
C. Key Quantity: Provide the following minimum number of keys:
D. Top Master Key: One (1)
E. Change Keys per Cylinder: Two (2)
F. Master Keys (per Master Key Group): Five (5) Two (2)
G. Grand Master Keys (per Grand Master Key Group): Two (2)
H. Construction Control Keys (where required): Ten (10 Two (2)
I. Permanent Control Keys (where required): Two (2)

2.19 CONSTRUCTION KEYING: Provide construction master keyed cylinders or temporary keyed construction cores where specified. Provide construction master keys in quantity as required by project Contractor. Replace construction cores with permanent cores. Furnish permanent cores for installation as directed under specified "Keying Conference".

2.20 KEY REGISTRATION LIST (Bitting List): Provide keying transcript list to Owner's representative in the proper format for importing into key control software. Provide transcript listing in writing or electronic file as directed by the Owner.

2.21 KEY CONTROL SOFTWARE: Provide one network version of "Key Wizard" branded key management software package that includes one year of technical support and upgrades to software at no charge. Provide factory key system formatted for importing into “Key Wizard” software.

2.22 MECHANICAL LOCKS AND LATCHING DEVICES

A. MORTISE LOCKSETS, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 certified mortise locksets furnished in the functions as specified in the Hardware Sets. Locksets to be manufactured with a corrosion resistant, stamped 12 gauge minimum formed steel case and be field-reversible for handing without disassembly of the lock body. Lockset trim (including knobs, levers, escutcheons, roses) to be the product of a single manufacturer. Furnish with standard 2 3/4" backset, 3/4" throw anti-friction stainless steel latchbolt, and a full 1" throw stainless steel bolt for deadbolt functions. Provide mortise lock bodies functionally compatible with a roseless lever trim option. Acceptable Manufacturers:

1. Corbin Russwin Hardware (RU) – ML2000 Series.
2. Sargent Manufacturing (SA) – 8200 Series.
3. Schlage Lock (SC) – L9000 Series
4. Yale Locks and Hardware (YA) – 8800FL Series.

B. CYLINDRICAL LOCKSETS, Grade 1 (Heavy Duty): ANSI/BHMA A156.2, Series 4000, Grade 1 certified cylindrical (bored) locksets furnished in the functions as specified in the Hardware Sets. Lock chassis fabricated of heavy gauge steel, zinc dichromate plated, with through-bolted application. Furnish with solid cast levers, standard 2 3/4” backset, and 1/2" (3/4" at rated paired openings) throw brass or stainless steel latchbolt. Locks are to be non-handed and fully field reversible. Provide lock trim design as indicated in the Hardware Sets. Acceptable Manufacturers:

1. Corbin Russwin Hardware (RU) – CL3300 Series.
2. Sargent Manufacturing (SA) – 10 Line.
3. Yale Locks and Hardware (YA) 5400LN Series.

C. TUBULAR LOCKSETS: Standard tubular locksets designed to fit ANSI standard 161 door prep without additional through-bolt preps. Locksets to be non-handed with bi-directional lever operation and be available with 2 3/4" standard and 2 3/8" optional backsets. Lever designs must be available to match other locksets and exit devices. Roseless tubular is available for lockset functions only and requires special custom door preparation. Acceptable Manufacturers:

1. Corbin Russwin Hardware (RU) - TL3700 Series.
2. Sargent Manufacturing (SA) – DL Series.
3. Lock Trim Design: As specified in Hardware Sets.

D. AUXILIARY LOCKS - CYLINDRICAL DEADLOCKS: ANSI/BHMA A156.5, Grade 1, cylindrical type deadlocks to fit standard ANSI 161 preparation and 1 3/8" to 1 3/4" thickness doors. Provide tapered collars to resist vandalism and 1" throw solid steel bolt with hardened steel roller pins. Deadlocks to be products of the same source manufacturer and keyway as other locksets. Acceptable Manufacturers:

1. Corbin Russwin Hardware (RU) - DL3000 Series.
2. Sargent Manufacturing (SA) - 480 Series.

E. LOCK AND LATCH STRIKES: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Standards: Comply with the following:
5. Strikes for Mortise Locks and Latches: BHMA A156.13.
6. Strikes for Bored Locks and Latches: BHMA A156.2.
7. Strikes for Auxiliary Deadlocks: BHMA A156.5.
8. Dustproof Strikes: BHMA A156.16.

2.23 ELECTROMECHANICAL LOCKING DEVICES

A. ELECTROMECHANICAL MORTISE LOCKSETS, Grade 1 (Heavy Duty): Subject to same compliance standards and requirements as mechanical mortise locksets, electrified locksets to be of type and design as specified below. Typically provide electrified lock options including: outside door lock/unlock trim control, latchbolt and lock/unlock status monitoring, and request-to-exit signaling. Unless otherwise indicated, provide electrified locksets standard as fail secure. Acceptable Manufacturers:

1. Corbin Russwin Hardware (RU) - ML20900 Series.
2. Sargent Manufacturing (SA) - 8200 Series.
3. Yale Locks and Hardware (YA) - 8890 Series.

B. ELECTROMAGNETIC LOCKING DEVICES: Surface Electromagnetic Locks (Heavy Duty): Electromagnetic locks to be surface mounted type conforming to ANSI A156.23, Grade 1 with minimum holding force strength of 1,200 pounds. Locks to be capable of either 12 or 24 voltage and be UL listed for use on fire rated door assemblies. Electronics are to be fully sealed against tampering and allow exterior weatherproof applications. As indicated in Hardware Sets, provide specified mounting brackets and housings. Power supply to be by the same manufacturer as the lock with combined products having a lifetime replacement warranty. Acceptable Manufacturers:

1. Securitron (SU) – M62 Series.

2. Securitron (SU) – M68 Series.

2.24 EXIT DEVICES:

A. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
B. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.
C. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
D. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is not acceptable except in any case where the door light extends behind the device as in a full glass configuration.
E. Flush End Caps: Provide heavy weight impact resistant flush end caps made of architectural metal in the same finish as the devices as in the Hardware Sets. Plastic end caps will not be acceptable.
F. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with four threaded studs for thru-bolts.
G. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets. Provided free-wheeling type trim where indicated.
H. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.
I. Vertical Rod Exit Devices: Provide and install interior surface and concealed vertical rod exit devices as Less Bottom Rod (LBR) unless otherwise indicated.
J. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
K. Rail Sizing: Provide exit device rails factory sized for proper door width application.
L. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

2.25 CONVENTIONAL PUSH RAIL EXIT DEVICES (HEAVY DUTY): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Mounting rails to be formed from smooth stainless steel, brass or bronze architectural materials no less than 0.072" thick, with push rails a minimum of 0.062" thickness. Painted or aluminum metal rails are not acceptable. Exit device latch to be investment cast stainless steel, pullman type, with deadlock feature. Acceptable Manufacturers:

A. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.
B. Sargent Manufacturing (SA) - 80 Series.
C. Yale Locks and Hardware (YA) - 7000 Series.

2.26 ELECTROMECHANICAL CONVENTIONAL EXIT DEVICES - Electrified Conventional Push Rail Devices (Heavy Duty): Subject to same compliance standards and requirements as mechanical exit devices, electrified devices to be of type and design as specified below. Include any specific controllers when conventional power supplies are not sufficient to provide the proper inrush current. As indicated in hardware sets, provide electrified exit device options including: electric latch retraction , electric dogging, outside door trim control, exit alarm, latchbolt monitoring, lock/unlock status monitoring, touchbar monitoring and request-to-exit signaling. Unless otherwise indicated, provide electrified exit devices standard as fail secure. Acceptable Manufacturers:

A. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.
B. Sargent Manufacturing (SA) - 80 Series.
C. Yale Locks and Hardware (YA) - 7000 Series.

2.27 DOOR CLOSERS

A. General: Door closers must be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.
B. Standards: Closers to comply with UL-10C and UBC 7-2 for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
C. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.
D. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.
E. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
F. Where closers are indicated to have mechanical dead-stop, provide heavy duty arms and brackets with an integral positive stop.
G. Where closers are indicated to have mechanical hold open, provide heavy duty units with an additional built-in mechanical holder assembly designed to hold open against normal wind and traffic conditions. Holder to be manually selectable to on-off position.
H. Where closers are indicated to have a cushion-type stop, provide heavy duty arms and brackets with spring stop mechanism to cushion door when opened to maximum degree.
I. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics. Provide drop plates or other accessories as required for proper mounting.
J. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates, and through-bolt or security type fasteners as specified in the door Hardware Sets.

2.28 DOOR CLOSERS, SURFACE MOUNTED (HEAVY DUTY): ANSI/BHMA A156.4, Grade 1 surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units and high impact, non-corrosive plastic covers standard. Acceptable Manufacturers:

A. Corbin Russwin Hardware (RU) - DC8000 Series.
B. Sargent Manufacturing (SA) - 351 Series.
C. Norton Door Controls (NO) - 7500 Series.
D. Yale Locks and Hardware (YA) - 4400 Series.

2.29 DOOR CLOSERS, SURFACE MOUNTED (UNITROL): ANSI/BHMA 156.4, Grade 1 certified surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Unitrol arms to have door stop mechanism to absorb dead stop shock on arm and top hinge. Hold-open arms to have a spring loaded mechanism in addition to shock absorber assembly. Arms to be provided with rigid steel main arm and secondary arm lengths proportional to the door width. Provide high impact, non-corrosive plastic covers standard. Acceptable Manufacturers:

A. Corbin Russwin Hardware (RU) - Unitrol DC8000 Series.
B. Norton Door Controls (NO) - Unitrol 7500 Series.
C. Yale Locks and Hardware (YA) - Unitrol 4400 Series.

2.30 DOOR CLOSERS, SURFACE MOUNTED (COMMERCIAL DUTY): ANSI/BHMA 156.4, Grade 1 certified surface mounted, institutional grade door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck, closing sweep, and latch speed control valves. Provide non-handed units with high impact, non-corrosive plastic covers standard. Acceptable Manufacturers:

A. Corbin Russwin Hardware (RU) - DC6000 Series.
B. Norton Door Controls (NO) - 8500 Series.
C. Sargent Manufacturing (SA) - 1431 Series.
D. Yale Locks and Hardware (YA) - 3500 Series.

2.31 MAGNETIC DOOR HOLDER - surface mounted, electromagnetic door holders: Certified ANSI A156.15 electromagnetic door holder/releases with a minimum 20 to 40 pounds holding power and single coil construction able to accommodate.12VDC, 24VAC, 24VDC and 120VAC. Coils to be independently wound, employing an integral fuse and armatures to include a positive release button. Acceptable Manufacturers:

A. Rixson (RF) - 980/990 Series, Sargent Manufacturing (SA) - 1560 Series.

2.32 ARCHITECTURAL TRIM

A. DOOR PROTECTIVE TRIM: Units to be of type and design as specified below or in the Hardware Sets. Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets. Provide manufacturer's designated fastener type as specified in the Hardware Sets.
B. METAL PROTECTION PLATES: ANSI/BHMA A156.6 certified metal protection plates (kick, armor, or mop), beveled on four edges (B4E), fabricated from Stainless Steel - 050-inch thick, with countersunk screw holes (CSK).
C. METAL DOOR EDGING: Door protection edging fabricated from a minimum .050-inch thick metal sheet, formed into an angle or "U" cap shapes, surface or mortised mounted onto edge of door. Provide appropriate leg overlap to account for protection plates as required. Height to be as specified in the Hardware Sets.
    1. Acceptable Manufacturers: Burns Manufacturing (BU) Rockwood (RO), Trimco (TC)
D. DOOR STOPS AND BUMPERS: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
    1. Acceptable Manufacturers: Rockwood (RO), Trimco (TC), Hiawatha (HI).
E. OVERHEAD DOOR STOPS AND HOLDERS: ANSI/BHMA A156.6, Grade 1 certified overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
    1. Acceptable Manufacturers: Rixson Door Controls (RF), Sargent Manufacturing (SA)
F. ARCHITECTURAL SEALS: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated. Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.
G. SMOKE LABELED GASKETING: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to AHJ representatives, for smoke control ratings indicated, based on testing according to UL 1784. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
H. FIRE LABELED GASKETING: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to AHJ representatives, for fire ratings indicated, based on testing according to UL-10C. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and UBC 7-2, Fire Tests of Door Assemblies.

1. Acceptable Manufacturers: National Guard Products (NG), Pemko (PE), Reese (RS), Zero (ZE).

2.33 ELECTRONIC ACCESSORIES

A. KEY SWITCHES: Key switches furnished standard with stainless steel single gang face plate with a 12/24VDC bi-color LED indicator. Integral backing bracket permits integration with any 1 1/4" or 1 1/2" mortise type cylinder. Key switches available as momentary or maintained action and in narrow face plate options.

1. Acceptable Manufacturers: Securitron (SU) - MK Series.

B. PUSH-BUTTON SWITCHES: Industrial grade momentary or alternate contact, back-lighted push buttons with stainless-steel switch enclosures. 12/24 VDC bi-color illumination suitable for either flush or surface mounting.

1. Acceptable Manufacturers: Securitron (SU) - PB Series.

C. REQUEST-TO-EXIT MOTION SENSOR: Request-to-Exit Sensors motion detectors specifically designed for detecting exiting through a door from the secure area to a non-secure area. Include built-in timers (up to 60 second adjustable timing), door monitor with sounder alert, internal vertical pointability coverage, 12VDC or 24VDC power and selectable relay trigger with fail safe/fail secure modes.

1. Acceptable Manufacturers: Securitron (SU) - XMS Series.

D. DOOR POSITION SWITCHES: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.

1. Acceptable Manufacturers: Securitron (SU) - DPS Series.

E. POWER SUPPLIES: Provide Nationally Recognized Testing Laboratory Listed 12VDC or 24VDC (field selectable) filtered and regulated power supplies. Include battery backup option with integral battery charging capability in addition to operating the DC load in event of line voltage failure. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.

1. Acceptable Manufacturers:
   a. Corbin Russwin Hardware (RU) – 782,
   b. Securitron (SU) - BPS Series.
   c. Yale Locks and Hardware (YA) 782.

2.34 FASTENERS: Provide door hardware fasteners manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.35 FINISHES:

A. DESIGNATIONS USED in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
B. PROVIDE QUALITY OF FINISH, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware.
C. PROTECT MECHANICAL FINISHES on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
D. TYPICAL EXPOSED SURFACE FINISHES (Unless Noted Otherwise)

1. 626 Satin Chrome / brass (painted plastic on closers)
2. 630 Satin Stainless Steel (push/pulls & plates)

PART 3 - EXECUTION

3.01 EXAMINE scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance. Notify Architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved.

3.02 PREPARE doors and frames as follows for installation of hardware items:

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.03 INSTALL EACH ITEM of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

3.04 MOUNT HARDWARE UNITS at heights indicated in following applicable publications, except as specifically indicated or required to comply with governing regulations including the ADA and the Building Code, or as otherwise directed by Architect.

A. "Recommended Locations for Builders Hardware for Standard Steel Doors and Frames" by DHI.
B. DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood flush Doors."
C. Comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."

3.05 WOOD BLOCKING IN DRYWALL PARTITIONS: Arrange with the Work of Division-06 Sections to provide solid wood blocking within drywall partitions where wall stops or other wall mounted hardware will be located, for secure mounting.

3.06 INSTALL EACH HARDWARE ITEM in compliance with the manufacturer's instructions and recommendations. Where cutting and fitting is required to install hardware onto or into surfaces that are later to be painted or finished in another

way, coordinate removal, storage, and reinstallation or application of surface protection with finishing work specified in the Division-09 Sections. Do not install surface-mounted items until finishes have been completed on the substrates involved. Set units level, plumb, and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

3.07 DRILL AND COUNTERSINK UNITS that are not factory prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

3.08 RETROFITTING: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division-09 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

3.09 SET THRESHOLDS FOR EXTERIOR DOORS in full bed of butyl-rubber mastic sealant complying with requirements specified in Division-07 Section "Joint Sealers."

3.10 WEATHERSTRIPPING AND SEALS: Comply with manufacturer's instructions and recommendations to the extent installation requirements are not otherwise indicated.

3.11 ADJUSTING, CLEANING, AND DEMONSTRATING

A. ADJUST AND CHECK each operating item of hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate freely and smoothly or as intended for the application made. Where door hardware is installed more than one month prior to acceptance or occupancy of a space or area, return to the installation during the week prior to acceptance or occupancy and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.
B. CLEAN ADJACENT SURFACES soiled by hardware installation.
C. HARDWARE SUPPLIER'S SITE-OBSERVATION & REPORT: Supplier will perform a final observation of installed door hardware and prepare a written report stating whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.
D. INSTRUCT OWNER'S PERSONNEL in the proper adjustment and maintenance of door hardware and hardware finishes.

3.12 PROVIDE HARDWARE FOR EACH DOOR in the Project, to comply with requirements below.

3.13 DOOR STOPS: If a wall stop is indicated but is not possible or feasible to install, provide an “Ives” # 438 floor stop or equal.

3.14 FRAME SILENCERS: Provide frame-mounted resilient bumpers at all door frames where weatherstripping or other door seals is not provided: 3 ea at single doors, 2 ea door pairs

3.15 PROVIDE ALL ACCESSORY COMPONENTS AND RELATED ITEMS required for operation even if not specifically required in the following schedule. Notify the Architect if discrepancies, conflicting hardware or missing items are discovered. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

3.16 THE FOLLOWING HARDWARE SETS represent the design intent of the Architect and the directions of the Owner, to the best of the Architect’s knowledge, ability and belief. However, these Hardware Sets” sets are a guideline only, and are not to be considered as a final, detailed hardware schedule for this Project, which will be prepared as a part of the Work of this Section.

3.17 TYPICAL EXPOSED SURFACE FINISHES (Unless Noted Otherwise)

A. 626 Satin Chrome / brass (painted plastic on closers)
B. 630 Satin Stainless Steel (push/pulls & plates)

PART 4 - HARDWARE SCHEDULE

TBD

END OF SECTION 08 71 00

SECTION 08 80 00 – GLASS, GLAZING AND MIRRORS

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide glass and glazing at windows, doors, sidelights, interior borrowed lites, storefronts and curtainwalls as indicated on the Drawings, as specified herein, and as needed to meet the requirements of the construction. This Section includes glazing sealants and accessories and applies to both field-applied glazing as well as factory-glazed units, as applicable.

A. Interior glass
B. Exterior glass
C. Mirrors
D. Decorative Glass: Back Painted

1.02 RELATED SECTIONS

A. Section 05500 Metal Fabrications
B. Section 018113 Certification Requirements.
C. Section 084213 Aluminum Entrance Curtain Wall and Storefront
D. Section 084226 All-Glass Entrances

1.03 DEFINITIONS

A. GLASS MANUFACTURER: Firm that produces primary glass, fabricated glass, or both, as defined in referenced glazing publications.
B. GLASS THICKNESS: Indicated by thickness designations in millimeters per ASTM C 1036
C. INTERSPACE: Space between lites of an insulating glass unit.

1.04 COORINATION: Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.05 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and sealants used to install, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

1.06 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. VOC Emissions Evaluation: For adhesives and sealants used to install, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.07 SUBMITTALS:

A. SUBMIT PRODUCT DATA for each type of product.
B. SUBMIT SAMPLES for each type of glass product other than clear monolithic vision glass, including tinted, coated, or insulating glass units.
C. SUBMIT GLAZING SCHEDULE listing glass types and thicknesses for each size opening and location. Use same designations as indicated in the Drawings.
D. SUBMIT PRODUCT TEST REPORTS for tinted, coated, or insulating glass units for tests performed by a qualified testing agency.

1.08 QUALITY ASSURANCE

A. MANUFACTURER QUALIFICATIONS FOR INSULATING GLASS WITH LOW-E SPUTTER-COATING: Utilize a qualified insulating-glass manufacturer who is approved by the coated-glass manufacturer.
B. INSTALLER QUALIFICATIONS: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for the Project and whose work has resulted in construction with a record of successful in-service performance over a three (3) year period.
C. DELIVERY, STORAGE, AND HANDLING: Protect glazing materials according to manufacturer's written instructions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.
D. FIELD CONDITIONS
    1. ENVIRONMENTAL LIMITATIONS: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
    2. DO NOT INSTALL LIQUID GLAZING SEALANTS when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 deg F (4.4 deg C).
E. WARRANTIES:
    1. SPECIAL WARRANTY FOR COATED-GLASS: Manufacturer agrees to replace coated-glass units that deteriorate within the specified Warranty period. Deterioration is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indicates of deterioration in coating.
        a. WARRANTY PERIOD: Ten (10) years from date of Substantial Completion
    2. SPECIAL WARRANTY FOR LAMINATED GLASS: Manufacturer agrees to replace laminated-glass units that deteriorate within the specified warranty period. Deterioration is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standards.
        a. WARRANTY PERIOD: Ten (10) years from date of Substantial Completion
    3. SPECIAL WARRANTY FOR INSULATED GLASS: Manufacturer agrees to replace insulated glass units that deteriorate within the specified Warranty period. Deterioration is defined as failure of hermetic seal under normal use not attributed to glass breakage or to maintaining and cleaning insulated glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture or film on interior-surfaces of glass.
        a. WARRANTY PERIOD: Ten (10) years from date of Substantial Completion
    4. WARRANTY FOR DECORATIVE GLASS
        a. WARRANTY PERIOD: Ten (10) years from date of Substantial Completion

PART 2 - PRODUCTS

2.01 MANUFACTURERS / SOURCE LIMITATIONS: For each glass type and glazing accessory, obtain from a single manufacturer. Approved manufacturers of glass include the following:

A. AGC
B. Cardinal
C. Guardian (Basis of Design)
D. Vitro (formerly PPG)
E. Viracon

2.02 PERFORMANCE REQUIREMENTS

A. PROVIDE GLASS LITES for various size openings in thickness and strengths (heat treated or tempered) required to meet or exceed the following performance criteria. Glass thickness indicated either on the Drawings or within this Specification are minimum requirements and must be verified by analyzing Project loads and in-service conditions.
    1. Minimum nominal glass lite thickness: 1/4 inch (6 mm)

2.03 GENERAL PERFORMANCE REQUIREMENTS: Installed glazing must withstand normal thermal movement, wind and impact loads (for operating sash and doors) without failure, including:

A. loss or glass breakage attributable to defective manufacturer, fabrication, or installation,
B. failure of sealants or gaskets to remain watertight and airtight,
C. deterioration of glazing materials, and
D. other defects in construction.

2.04 STRUCTURAL PERFORMANCE: Glazing must witstand the following design loads within limits and under conditions indicated per the IBC and per ASTM E 1300. Determine wind pressure per ASCE/SEI 7, based on heights above grade as indicated on the Drawings, and as follows:

A. Basic Wind Speed: 90 mph
B. Importance Factor: 1.0
C. Exposure Category: "C" unless higher category is indicated on the Structural Drawings
D. Minimum uniform wind pressure loading: 25 PSF inward and 25 psf outward.
E. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for units set vertically or not more than 15 degrees off vertical and under wind action, with 60 second load duration.

F. Snow loading (for sloped glazing): 30 PSF minimum or greater if indicated on the Structural Drawings, with a probability of breakage for glass surfaces sloped more than 15 degrees from vertical of not greater than 0.001.
G. Maximum Lateral Deflection: For glass supported on all four (4) edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or one (1) inch, whichever is less.

2.05 DIFFERENTIAL SHADING: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

2.06 THERMAL MOVEMENTS: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

A. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.07 THERMAL AND OPTICAL PERFORMANCE PROPERTIES: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

A. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
B. For laminated-glass lites, properties are based on products of construction indicated.
C. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
D. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
E. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
F. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.08 SAFETY GLAZING: Where safety glass is indicated or otherwise required by the building code or AHJ representatives, provide products which comply with ANSI Z97.1 and testing requirements of 16 CFR Part 1201 for category II materials.

A. PERMANENTLY MARK safety glass with certification label of Safety Glazing Certification Council or another certification agency acceptable to AHJ representatives.

2.09 GLASS PRODUCTS

A. COMPLY WITH published recommendations of glass product manufacturers and organizations indicated below unless more stringent requirements are indicated. Refer to the following for glazing terms not otherwise defined in this Section or in referenced standards:
    1. AMERICAN ARCHITECTURAL MANUFACTURERS ASSOCIATION (AAMA)
        a. AAMA GDSG-1: “Glass Design for Sloped Glazing”
        b. AAMA TIR A7: “Sloped Glazing Guidelines”
    2. INSULATED GLASS MANUFACTURERS ASSOCIATION (IGMA):
        a. IGMA SIGMA TM-3000: “North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use
        b. IGMA TB-3001: “Guidelines for Sloped Glazing”
    3. GLASS ASSOCIATION OF NORTH AMERICA (GANA):
        a. GANA "Glazing Manual"
        b. GANA "Laminated Glass Design Guide."
B. ANNEALED CLEAR FLOAT GLASS: ASTM C 1036, Type I, Class I (clear), Quality-Q3, unless otherwise indicated,
C. HEAT-STRENGTHENED FLOAT GLASS: ASTM C 1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class I (clear) or Class 2 (tinted) as indicated, Quality Q3. Fabricate by horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
D. TEMPERED GLASS: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class I (clear) or Class 2 (tinted) as indicated, Quality-Q3. Fabricate by horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated. Provide tempered glass permanently marked with certification label of Safety Glazing Certification Council or another certification agency acceptable to AHJ representatives.
    1. Minimum Thickness: 6 mm.
E. GLASS WITH SURFACE FILM:
    1. Glass type (FLM-1): Clear float glass with surface film
    2. Minimum Thickness: 6 mm.
    3. Annealed, heat-strengthened and fully-tempered units are required.
    4. Surface Film: laminated dyed color polyester films
        a. BASIS OF DESIGN:
            (1) Manufacturer: As indicated in drawings.
            (2) Type: As indicated in drawings.
F. LAMINATED GLASS: ASTM C 1172, using materials with a proven record of no tendancy to bubble, discolor, or to lose physical or mechanical properties after fabrication and installation. Fabricate with polyvinyl butyral interlayer (unless otherwise indicated) to comply with interlayer manufacturer’s written instructions, with interlayer in material thickness not less than that needed to comply with requirements, and in clear color unless otherwise indicated. Fabricate laminated glass to produce glass free of foreign substances or air pockets. Laminate lites with polyvinyl

butyral interlayer in an autoclave with both heat and pressure**. Refer to Finish Schedule for Laminated Glass Schedule.**

G. INSULATED-GLASS (IG) UNITS: Factory-assembled, hermetically sealed assembly consisting typically of two (2) each 1/4 inch thick (6 mm) glass sheets with a 1/2 inch thick desicant-filled tubular aluminum perimeter spacer bar frame all around, dual-edge sealed and bonded to both sheets of glass and the spacer bar with manufacturer's standard polysulfide, silicone or hot-melt butyl elastomeric sealant (fabricators option):

1. COLOR OF SPACER BARS & SEALANT: Provide clear anodized spacer bar and clear sealant at adjacent clear anodized aluminum framing and provide black colored spacer bar with black sealant at all other colors of adjacent framing.
2. INTERMEDIATE SPACERS: Provide additional, intermediate spacers to align with surface applied, decorative vertical or horizontal mullions intended to be field-applied to the insulated glass unit.

H. TYPICAL INSULATED GLASS (IG) UNITS: high-performance, clear (non tinted) insulated glass units with the following minimum performance characteristics:

1. BASIS-OF-DESIGN: Exterior Basis of Design for performance insulating glass unit as follows:
   a. Double Glazed Insulate:
      (1) Solarban® 60 Solar Control Low-E Glass as manufactured by VITRO ARCHITECTURAL GLASS .
      (2) Shading Coefficient: 0.44
      (3) Solar Heat Gain Coefficient: 0.37.
      (4) Visible light transmission: 69%
      (5) Outdoor visible light reflectance: 12%
      (6) Winter U-value: 0.29
      (7) Summer U-value: 0.29
   b. Edge Seals:
      (1) ASTM E 2188, with aluminum spacers, dual-sealed with a primary seal of polyisobutylene and a secondary seal of silicone sealant for glass-to-spacer seals.
   c. Sealant:
      (1) Approved by glass manufacturers.
      (2) Refer to Section 08 41 13 for additional sealant requirements not listed here

I. MIRROR GLASS & ACCESSORIES: 1/4 inch (6 mm) thick Quality q2 clear float glass with full silvered, copper and organic coating and finished with "pencil edge" on all sides. Secure to wall substrate with "Palmers" Mirror-Mastic or equal to wall backing and provide satin-finish aluminum "L" bar equal to CRL # L902A Type L-Bar" support at base of mirror typically. **Refer to Finish Schedule.**

J. GLASS FOR FRAMELESS GLASS ENCLOSURES and DOORS: Provide fully tempered, ultraclear (low-iron) glass, tested for surface and edge compression per ASTM C 1048 and **as called for in Drawings and Specification Sections 08 42 13 and 08 44 00.**

2.10 GLAZING SEALANTS:

A. GENERAL: PROVIDE GLAZING SEALANTS that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience. Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.

1. Sealants used inside the weatherproofing system, must have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Exposed Glazing Sealant Colors: As selected by Architect from manufacturer's full range.

B. GLAZING SEALANT: Elastomeric, neutral-curing silicone sealant complying with ASTM C 920, Type S (single component), Grade NS (nonsag), Class 25, Use NT (non-traffic); specially compounded and tested to show a minimum of 20 years resistance to deterioration in normal glazing applications. Provide at exterior glazing. Subject to compliance with requirements, approved products include the following:

1. Dow Corning Corporation; 790.
2. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
3. Pecora Corporation; 890.
4. Sika Corporation, Construction Products Division; SikaSil-C990.
5. Tremco Incorporated; Spectrem 1.

2.11 GLAZING TAPE: Preformed, back-bedding butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

A. AAMA 804.3 tape, where indicated.
B. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
C. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

2.12 MISCELLANEOUS GLAZING MATERIALS: Provide cleaners, primers and sealers, setting blocks, spacers and edge blocks of size and shape complying with referenced glazing standards, and with requirements of glass manufacturer for application indicated.

2.13 FABRICATION:

A. FABRICATE GLASS AND OTHER GLAZING PRODUCTS in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing standard, to comply with system performance requirements.

PART 3 - EXECUTION

3.01 EXAMINE FRAMING, glazing channels, and stops, with Installer present, for compliance with the following:

A. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
B. Presence and functioning of weep systems.
C. Minimum required face and edge clearances.
D. Effective sealing between joints of glass-framing members.
E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. WATERTIGHT AND AIRTIGHT INSTALLATION of each glass product is required, except as otherwise shown. Each installation must withstand normal temperature changes, wind loading, impact loading (for operating sash and doors), without failure including loss or breakage of glass, failure of sealants or gaskets to remain watertight and airtight, deterioration of glazing materials and other defects in the work.
B. COMPLY with FGMA "Glazing Manual" and manufacturer’s instructions and recommendations. Use manufacturer's recommended spacers, blocks, primers, sealers, gaskets and accessories.
C. PROVIDE FULLY TEMPERED “SAFETY” GLASS where indicated on the Drawings, in all door units, and within sixty (60) inches horizontally of a door in any position (open or closed), and when a glass lite is within eighteen (18) inches from the finished floor – even if not specifically indicated on the drawings.
D. CLEAN GLAZING CHANNEL and other framing members to receive glass, immediately before glazing. Remove coatings which are not firmly bonded to substrate. Remove lacquer from metal surfaces where elastomeric sealants are used.
E. INSTALL glass with uniformity of pattern, draw, bow and roller marks. Install sealants to provide complete wetting and bond and to create a substantial wash away from glass. Install pressurized tapes and gaskets to protrude slightly out of channel, so as to eliminate dirt and moisture pockets.
F. INSTALL INSULATING GLASS UNITS to comply with recommendations by Sealed Insulating Glass Manufacturers Association, except as otherwise specifically indicated or recommended by glass and sealant manufacturers
G. TAPE GLAZING: Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped.
    1. Seal joints in tapes with compatible sealant approved by tape manufacturer.
    2. Do not remove release paper from tape until right before each glazing unit is installed.
    3. Apply heel bead of elastomeric sealant. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops.
    4. Start gasket applications at corners and work toward centers of openings.
    5. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.03 PROTECT EXTERIOR GLASS FROM BREAKAGE immediately upon installation, by use of crossed streamers attached to framing and held away from glass. Do not apply markers to surfaces of glass. Remove nonpermanent labels and clean surfaces. Cure sealants for high early strength and durability.

3.04 REMOVE and replace damaged glass and glazing. Wash and polish glass on both faces not more than 4 days prior to date scheduled for inspections intended to establish date of substantial completion. Comply with glass product manufacturer's recommendations for final cleaning.

END OF SECTION 08 80 00

SECTION 08 90 00 – LOUVERS AND VENTS

PART 1 - WORK INCLUDED: Provide architectural louvers and vents where indicated on the Drawings, as specified herein, and as necessary for complete installation.

1.01 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.02 STRUCTURAL PERFORMANCE OF LOUVERS: Provide louvers capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures must be considered to act on vertical projection of louvers.

A. Wind Loads: Determine loads based on a uniform pressure of 30 lbf/sq. ft. acting inward or outward.

1.03 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and sealants used to install, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. VOC Emissions Evaluation: For adhesives and sealants used to install, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant.

1.05 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of product indicated.

B. SUBMIT SHOP DRAWINGS for louvers and accessories, including plans, elevations, sections, details, and attachments to other Work. Show blade profiles, angles, and spacing.

1.06 COMPLY WITH SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

PART 2 - PRODUCTS

2.01 GENERAL: A vertically oriented louver with a 5" deep blade design, is AMCA-550 and 540 compliant, while maintaining 54% free area. Designed to fully integrate with curtain wall systems, with a glazing frame option.

2.02 BASIS OF DESIGN:

A. Louver Manufacturer: Construction Specialties, Inc.

B. Product: Architectural Louvers

C. Model(s): RSV-5700

2.03 Manufacturers

A. The louvers and related materials herein specified and indicated on the drawings shall be as manufactured by:
Construction Specialties, Inc.
49 Meeker Avenue
Cranford, New Jersey 07016
Telephone: 800-631-7379

B. Products equal to the CS materials may be offered providing that the manufacturer and materials are submitted and pre-approved by the Architect at least 10 working days before the bid date.

2.04 Materials

A. Aluminum Extrusions: ASTM B211, Alloy 6063-T5, 6063-T6 or 6061-T6.
B. Aluminum Sheet: ASTM B3209, Alloy 1100, 3003 or 5005.

2.05 Fabrication, General

A. Provide CS louver models, bird screens, insulated blank-off panels, structural supports and accessories as specified and/or shown on the drawings. Materials, sizes, depths, arrangements and material thickness to be as indicated or as required for optimal performance with respect to strength; durability; and uniform appearance.
B. Louvers to be mechanically assembled using stainless steel or aluminum fasteners.
C. Include supports, anchorage, and accessories required for complete assembly.

2.06 Louver Performance

A. Material: Heads, sills, jambs and mullions to be one piece structural members of 6063-T6 alloy with integral caulking slot and retaining beads. Blades to be one piece extrusions with reinforcing bosses. All fasteners to be aluminum or stainless steel. All louvers to be furnished with 5/8" (15.87 mm) flattened expanded mesh, aluminum bird screen with a 0.055" (1.40 mm) thick extruded aluminum frame. Screens and screen frames to be standard mill finish.
B. AMCA Performance:
    1. For a 4 Foot by 4 Foot Unit. Tested with mill finish and no screen
    2. Free area = 8.67 ft2 (0.810 m2)
    3. Percent free area = 54.0%
    4. Free area velocity at the point of beginning water penetration (@0.01oz. / ft2 of free area based on a 15 minute interval test) = 1,250 FPM (6.35 m/s)
    5. Maximum recommended air intake velocity = 1,050 FPM (5.3 m/s)
    6. Air volume @ 1,050 FPM free area velocity = 9,104 CFM (4.3 m3/s)
    7. Pressure drop @ 1,050 FPM intake velocity = 0.217 in. H2O (53.9 Pa)
    8. Maximum recommended air exhaust velocity = 1,615 FPM (8.2 m/s)
    9. Air Volume @ 1,615 FPM free area velocity = 14,002 CFM (6.6 m3/s)
    10. Pressure drop @ 1,615 FPM free area velocity = 0.50 in. H2O (124.2 Pa)

2.07 Finishes

A. All louvers shall be finished with C/S Powder Coat, a coating to be 1.5 to 3 mil. Thick full strength 100% resin Flouropolymer coating. Finish to allow zero VOCs to be omitted into facility of application. Finish to adhere to a 4H Hardness rating. All finishing procedures shall be one continuous operation in the plant of the manufacturer. The coating shall meet or exceed all requirements of AAMA specification 2605 "Voluntary Specification for High Performance Organic Coatings on Architectural Extrusions and Panels."
B. The louver manufacturer shall supply an industry standard 20-year limited warranty against failure or excessive fading of the Flouropolymer Powder Coat finish. This limited warranty shall begin on the date of material shipment.

2.08 Bird Screens

A. Unless otherwise indicated, all louvers to be furnished with mill finish bird screens.
B. Screens to be 5/8" (15.9mm) mesh, 0.050" (1.27mm) thick expanded and flattened aluminum bird screen secured within 0.055" (1.40mm) thick extruded aluminum frames. Frames to have mitered corners and corner locks.

2.09 Blank Offs and Insulated Blank Offs

A. Furnish where indicated on the drawings blank–off panels fabricated by the louver manufacturer.
B. Blank-off panels to be 2" (50.8mm) thick and to be faced on both sides with 0.032" (0.81 mm) thick aluminum sheet. Panels to be fabricated with a mineral wool core (#6 density) having an R-value of 8 (0F*ft2*h/Btu). Panel perimeter frame to be 0.050" (1.27mm) thick-formed aluminum channels. Panel frame to be mitered at the corners. Panels to be finished black.
C. Complies Fire Performance:
    1. ASTM E136: Non-Combustible
    2. ASTM E84 (UL 723): Flame Spread 0 Smoke Developed 0
    3. Thermal Resistance:
        a. ASTM C518 (C177): R-value/inch @ 75dF: 4.2 hr.ft.F/Btu

2.10 ASSEMBLE UNITS IN FACTORY to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates, without interrupting blade-spacing pattern, where height of louver units exceeds fabrication and handling limitations. Provide horizontal mullions at joints. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

2.11 FABRICATE FRAMES including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints. Provide interior flange, unless otherwise indicated. Include supports, anchorages, and accessories required for complete assembly. Provide subsills made of same material as louvers or extended sills for recessed louvers.

2.12 JOIN FRAME MEMBERS to each other and to fixed louver blades with fillet welds, threaded fasteners, or both, as standard with louver manufacturer, concealed from view, unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.13 PROVIDE FULLY-RECESSED VERTICAL MULLIONS behind louver blades of type and at spacings recommended by manufacturer, or 72 inches o.c., whichever is less. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES AND OPENINGS, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 COORDINATE setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.03 LOCATE AND PLACE LOUVERS AND VENTS level, plumb, and at indicated alignment with adjacent work. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection. Form closely fitted joints with exposed connections accurately located and secured. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

3.04 REPAIR FINISHES damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

3.05 PROTECT GALVANIZED AND NONFERROUS-METAL SURFACES from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.

3.06 INSTALL CONCEALED GASKETS, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 7 Section "Joint Sealants" for sealants applied during louver installation.

3.07 CLEAN EXPOSED SURFACES of louvers and vents that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate until final cleaning. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.

3.08 RESTORE LOUVERS AND VENTS DAMAGED during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

PART 1 - GENERAL

1.01 PROVIDE a water based vapor mitigation and alkaline resistant floor treatment under new floor finishes (except sealed concrete) when indicated to be installed over concrete substrates, as indicated herein.

1.02 QUALITY ASSURANCE:

A. VERIFY COMPATIBILITY of materials including surface sealers, if any, with indicated vapor mitigation floor treatment and with the finish flooring products, including adhesives.
B. INSTALLER must be trained, certified or otherwise specifically approved as an applicator by the product Manufacturer in writing.

1.03 SUBMITTALS

A. Product Data: Manufacturer's technical product data including manufacturer's installation instructions.
B. Special Manufacturer Warranty: Copy of specified warranty

1.04 QUALITY ASSURANCE

A. Preinstallation Meeting: Conduct preinstallation meeting prior to commencing work to verify project requirements, substrate conditions and coordination with other building products, and to review manufacturer's installation instructions and manufacturer's warranty requirements.

(1) Representatives of the owner, architect, contractor, flooring installer, and any other parties who are involved in the scope of this installation shall attend the meeting.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use.
B. Store materials on elevated platforms, under cover, and in a dry location.

1.06 PROJECT CONDITIONS:

A. Environmental Limitations: Do not install materials until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.07 WARRANTY A. Special Manufacturer Warranties: Furnish manufacturer's standard warranty executed by authorized company official.

A. System Installation Warranty: Materials will be free from manufacturing defects from the time of purchase and conform to manufacturer's written specifications under normal usage for a period of [five] [ten] [twenty-five] years when applied according to manufacturer's written installation instructions and industry standard guidelines. If the nature of the defects of the products specified by this Section warrants, the warranty will include materials and labor for the replacement of the installation. Refer to manufacturer's warranty for specific details.
B. Membrane Only Warranty: Materials will be free from manufacturing defects from the time of purchase and conform to manufacturer's written specification under normal usage for a period of one year when applied according to manufacturer's written installation instructions and industry standard guidelines. If the nature of the defects of the products specified by this Section warrants, the warranty will include materials and labor for the replacement of the installation. Refer to manufacturer's warranty for specific details.

PART 2 - PRODUCT:

2.01 BASIS OF DESIGN MANUFACTURER

A. Manufacturer: Bostik, Inc., 11320 West Watertown Plank Road, Wauwatosa, WI 53226, Telephone : 800.726.7845, Fax: 414.774.8775, Inquiry: inquiry@bostik-us.com, Website: www.bostik.com/us.
B. Other comparably performing manufacturer products will be reviewed by submittal.

2.02 HIGH-PERFORMANCE MOISTURE-VAPOR-MEMBRANE AND PRIMER

A. Product: Roll-Cote™. 1. Description: Water based, one component moisture-vapor-membrane.
B. Physical Properties: nonflammable, low odor formulation.
C. VOC Content: <15g/L as calculated by SCAQMD Rule 1113.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions where materials will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Comply with manufacturer's written instructions, including product technical bulletins and product package instructions.

3.03 INSTALLATION

A. Comply with manufacturer's written instructions, including product technical bulletins and product package instructions.
B. Install materials according to substrate and RH square footage requirement.
C. Mixing: Mix with water only according to manufacturer's written instructions.

D. Procedure:

(1) Ensure substrate is clean of any dust and debris
(2) Grid surface area to ensure proper coverage per coats desired and in following guidelines
(3) Apply materials to achieve thickness recommended by manufacturer.

3.04 PROTECTION

A. Limit foot traffic over installation according to manufacturer's written instructions.

END OF SECTION 09 05 61

SECTION 09 21 16 – GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.01 SECTION includes ALL framing not in Division 05: “Cold-Formed Metal Framing”.

1.02 PROVIDE screw-type gypsum drywall with metal framing system(s), or wood as applicable, where indicated on the drawings, as specified herein, and as needed to meet the requirements of the construction shown in the Contract Documents.

1.03 PROVIDE SUPPLEMENTARY FRAMING, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

1.04 RELATED SECTIONS include the following:

A. Section 018113 Certification Requirements.
B. Division-05 Section "Cold-Formed Metal Framing" as specified in that section.
C. Division-06 Section "Rough Carpentry" for blocking installed within gypsum board assemblies.
D. Division-07 Section "Building Insulation" for insulation installed in gypsum board assemblies.

1.05 REFERENCED STANDARDS:

A. American Society of Testing Materials International (ASTM):
   1. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board.
   2. ASTM C919 - Standard Practice for Use of Sealants in Acoustical Applications.
   3. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.
   4. ASTM C1047 - Standard Specification for Accessories for Gypsum Wallboard . .
   5. ASTM C1396 - Standard Specification for Gypsum Board.
   6. ASTM C1629 - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels

B. Gypsum Association (GA): www.gypsum.org:
   1. GA-201 - Gypsum Board for Walls and Ceilings.
   2. GA-214 - Recommended Levels of Levels of Gypsum Board Finish.
   3. GA-216 - Specifications for the Application and Finishing of Gypsum Board.
   4. GA-226 - Application of Gypsum Board to Curved Surfaces.
   5. GA-235 - Gypsum Board Typical Mechanical and Physical Properties.
   6. GA-600 - Fire Resistance Design Manual.
   7. GA-801 - Handling and Storage of Gypsum Panel Products: A Guide for Distributors, Retailers, and Contractors

C. Wall and Ceiling Bureau (WCB) - wallandceilingbureau.org: TB-52010 - Control Joints for Gypsum Board
D. UL Fire Resistance Directory (UL): Fire Resistance Volume 1 – with Hourly Ratings for Beams, Floors, Roofs, Columns, Walls and Partitions.
E. United States Gypsum's "Gypsum Construction Handbook."

1.06 DEFINITIONS - GYPSUM BOARD TERMINOLOGY: Refer to ASTM C 1396 for definitions of terms for gypsum board assemblies not defined in this Section or in other referenced standards.

1.07 SUBMIT

A. PRODUCT DATA of each type of accessory product required, except for typical gypsum board panels, metal stud framing, and panel fasteners meeting requirements herein.
B. ENGINEERING: Due to height, lateral load requirements and roof deflection of long spans; Contractor shall provide engineered drawings for all walls not engineered by the Structural engineer in the Construction Documents.
   1. This includes, but not limited to
      a. All interior non-loadbearing walls.
      b. Box beam headers

1.08 LEED PERFORMANCE REQUIREMENTS

A. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
B. VOC Emissions Evaluation: For gypsum board assemblies and any adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers’ or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

D. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
E. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.09 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor. .
C. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant
E. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
F. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable

1.10 QUALITY ASSURANCE

A. FIRE-TEST-RESPONSE CHARACTERISTICS: For gypsum board assemblies with fire-resistance ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
B. FIRE-RESISTANCE-RATED ASSEMBLIES: Indicated by design designations from UL's "Fire Resistance Directory."
C. DELIVERY, STORAGE, AND HANDLING
    1. DELIVER MATERIALS in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.
    2. STORE MATERIALS inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack gypsum panels flat to prevent sagging.
    3. ENVIRONMENTAL LIMITATIONS: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

A. STEEL FRAMING & FURRING:
    1. ClarkDietrich Building Systems.
    2. Consolidated Fabricators Corp
    3. Marino\Ware; Division of Ware Ind.
    4. National Gypsum Company.
    5. Scafco Corporation.
    6. Telling Industries
B. GYPSUM BOARD AND RELATED PRODUCTS:
    1. American Gypsum Co.
    2. CertainTeed Corp
    3. Georgia-Pacific Gypsum (GP - Basis-of-Design Manufacturer)
    4. National Gypsum Company.
    5. PABCO Gypsum
    6. United States Gypsum Co.

2.02 NON-STRUCTURAL METAL FRAMING: Provide ASTM C 645 metal studs of 0.015 minimum base-steel thickness (25 gage) 50 KSI units or “Equivalent Gage (EQ) thickness units with third-party testing verifying compliance with ICC ES AC86, in 1-1/4 inch wide flanges and in 3-5/8 inch depth typical unless otherwise noted or required to meet structural requirements. Provide runners matching studs, of type recommended by stud manufacturer for floor and ceiling support of studs, and for vertical abutment of drywall work at other work. Provide studs in unit size as indicated on the Drawings, and in compliance with the Steel Stud Manufacturer’s Association (SSMA)’s limiting heights table for L/360 deflection at 5 PSF load.

2.03 DRYWALL FURRING CHANNELS: 7/8 inch minimum deep ASTM C-645 hat-shaped rigid units of 0.0312 inch (20 gage) minimum commercial steel sheet with manufacturer's standard corrosion-resistant zinc coating. Provide stud manufacturer's standard clips, shoes, ties, reinforcements, fasteners and other accessories as needed for a complete stud system.

2.04 RESILIENT FURRING CHANNELS: 1/2-inch-deep x 2-5/8 inch wide 22 mil steel sheet members with extra-wide 1-1/2 inch screw flange, designed to reduce sound transmission, in asymmetrical configuration face attached to single flange by a slotted leg (web).

2.05 Z-FURRING CHANNELS: Rigid Z-shaped units of 0.018 inch (25 gage) minimum commercial steel sheet per ASTM C 645 with manufacturer's standard corrosion-resistant zinc coating, with 3/4 inch wide mounting leg, 1-1/4 inch wide flange for screw attachment of gypsum board, and in unit depth as indicated on the Drawings Provide manufacturer's standard clips, shoes, ties, fasteners and other accessories as needed for a complete furring system installation.

2.06 TOP-OF-WALL DEFLECTION TRACK: Provide at all interior non-load bearing partitions to prevent compression of stud framing or cracking of gypsum board resulting from deflection of the structure above. Provide ASTM C 645 steel-sheet top-runner units in base metal thickness of next thicker available metal thickness than metal thickness indicated for the partition's stud framing members.

A. TYPICAL NON-FIRE RATED SLOTTED DEFLECTION TRACK: NOTE: Due to long roof span, track / clips must provide not less than 3.5 inches vertical movement of the structural framing system.

2.07 SUSPENDED CEILING/SOFFIT FRAMING: Comply with ASTM C 754 for conditions indicated, using steel members noted above, and as follows:

A. EXPANSION ANCHOR HANGER ANCHORS TO CONCRETE: Post-installed expansion-anchor type units fabricated from corrosion-resistant materials with holes or loops for attaching hanger wires and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by a qualified independent testing agency.

B. POWDER-ACTUATED HANGER ANCHORS TO CONCRETE: Suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E 1190 by a qualified independent testing agency.

C. SUSPENSION WIRE (typical between hangers or structural steel framing units above to CRC's noted below): ASTM A 641/A soft-tempered carbon steel wire with Class 1 galvanized zinc coating, pre-stretched, with yield-stress load of at least four (4) times load of suspended materials, but not less than 0.1620 inch-diameter (# 8 ASWG) wire minimum (for up to 210 lbs material load per wire) – space not more than four (4) feet centers to CRC's below.

D. SPLAY-WIRE BRACES: ASTM A 641/A soft-tempered carbon steel wire with Class 1 galvanized zinc coating, pre-stretched, not less than # 12 ASWG) wire minimum at not more than 45 degree angles from compression stud braces.

E. COMPRESSION STRUTS: Provide at exterior suspension framing typically and at interior seismic braces, when indicated. Assemble from minimum 3-5/8 inch x 0.0312 inch (20 gage) drywall stud minimum parallel with # 8 suspension wire, and with four (4) each spay wires anchored to structure above, to resist uplift wind or seismic pressures

F. COLD ROLLED CHANNELS (CRC's): 0.0538-inch bare steel thickness (16 gage), with minimum 1/2-inch- wide flange, 1-1/2 inch deep or greater if indicated, suspended from above at four (4) feet centers unless otherwise noted.

G. TIE WIRE: ASTM A 641/A (to connect CRC's to furring units), Class 1 zinc coating, soft temper, 0.0625-inch-diameter (# 16 ASWG) wire minimum, or double strand of 0.0475-inch- diameter (# 18 ASWG) wire minimum.

H. ACOUSTIC TIE WIRE ISOLATOR: Provide tie wire isolation as called for and in locations shown in Drawings.

1. Basis-of-Design: "AF Fiberglass Pad Wire-Tie Hanger" by Kinetics Noise Control Inc., or approved equal.
2. Refer to Drawings for all locations that require tire wire to be isolated.

I. FURRING CHANNELS (hat-shaped typically) at 16 inch centers maximum, except where otherwise indicated, or where indicated to be resilient furring channels at acoustical ceiling assemblies.

J. STUD WALL/PARTITION ISOLATOR: Provide stud wall isolation as called for and in locations shown in Drawings.

1. Basis-of Design: "Wallmat Stud Wall Isolator" by Kinetics Noise Control Inc., or approved equal.

2.08 ACOUSTICAL INSULATION: ASTM C 665, Type I sound attenuation blankets (without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag or rock wool.

A. Provide 3-1/2 inch thick units except as otherwise indicated on the Drawings.

2.09 GYPSUM WALLBOARD (GWB) MATERIALS:

A. TYPICAL GYPSUM BOARD: All gypsum board shall be Impact resistant, ASTM C1629/C1629M, 5/8'', ''Type X'' or "Type LWX" unless noted otherwise. Panels with tapered long edges, 4 feet wide x 5/8 inch thick typical except as otherwise indicated on the Drawings, in maximum length available which will minimize end joints.

1. Provide 5/8 inch thickness at drywall ceilings, unless otherwise indicated on the Drawings.
2. Curved walls should use Typical gypsum board specified here unless curve can not be achieved with satisfactory results.

B. FLEXIBLE GYPSUM BOARD: 1/4 inch thick gypsum board panels, specifically manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness:

1. Basis-of-Design: "ToughRock FlexRoc" by GP, or equal

C. GLASS-MAT GYPSUM BOARD (GM-GWB – where indicated): ASTM C 1658 compliant inorganic gypsum board panels with embedded fiberglass mat laminated to both sides, mold resistant per ASTM D 3273 with score of 10 per ASTM D 3274:
   1. Basis-of-Design: “DensArmor Plus Panel” by GP, “Gold Bond eXP Interior Extreme” by National Gypsum, “Sheetrock Glass-Mat Mold Tough Firecode X” panels by USG, or equal

D. GLASS-MAT-REINFORCED, MOLD AND MOISTURE AND IMPACT-RESISTANT BACKING BOARD: ASTM C1278/C1278M, with manufacturer’s standard edges
   1. Basis-of-Design: “Fiberock Aqua-Tough” by USG
      a. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274
      b. Soft-Body Impact: Exceeds BCA Specification C1.8
      c. Edges: Square
      d. Core Thickness:
         (1) 1/2” Typical
         (2) 5/8” Type-X (where required)

E. WATER RESISTANT GYPSUM BOARD: Provide high impact, water-resistant gypsum board at all areas subject to moist conditions that are NOT tiled.(restrooms and Hydro).
   1. Basis of Design: “Gold Bond Hi-Impact XP Gypsum Board” by National Gypsum or equal.
   2. Joint Treatment: Use only ASTM C 1047 plastic trims, set trims and mud joints with 2 inch wide 10x10 fiberglass mesh tape embedded with setting-type waterproof joint compound.

F. TILE-BACKER CEMENT BOARD (Provide behind all wall tile and up 12 inches minimum at tile or resinous floor base):
   1. ASTM C1325 compliant water and mold resistant cement board panels with a fiberglass reinforced core:
   2. Basis-of-Design: “PermaBase” by National Gypsum or equal
   3. Thickness: 5/8-inch
   4. Anchors: Type S-12 bugle head self-tapping, rust-resistant fine-thread panel anchors
   5. Joint Treatment: Use only ASTM C 1047 plastic trims, set with 2 inch wide 10x10 fiberglass mesh tape embedded with setting-type waterproof joint compound. At joints between surfaces, provide silicone joint sealer equal to “Dow Corning 795”, “Pecora 895”, “GE Silpruf” or “Tremco Dymonic” or equal.

G. ACOUSTICAL PLASTER: Provide seamless acoustic plaster ceiling system at locations specified on drawings.
   1. Reference Section 09 54 00: Integrated Ceiling Assemblies.

2.10 TRIM ACCESSORIES:

A. PROVIDE MANUFACTURER'S STANDARD TRIM ACCESSORIES of types indicated for drywall work, formed of galvanized steel unless otherwise indicated, with either knurled and perforated or expanded flanges for nailing and beaded for concealment of flanges in joint compound. Provide corner beads, L-type edge trim-beads, U-type edge trim-beads, special L-kerf-type edge trim-beads. Stapling of trim accessories will not be permitted.

B. TEAR-AWAY EDGE TRIM: Where indicated, provide rigid plastic edge trim with a 5/16 inch high tear-off leg that acts as a guide and a protective mask for taping and mudding, consisting of dent-resistant PVC meeting ASTM D 3678, D 1784, C 1047 with a Class A flame-spread rating:
   1. Basis-of-Design Manufacturer: Trim-Tex, Inc., Lincolnwood IL, P: 800-874-2333, www.trim-tex.com
   2. TEAR-AWAY L-TRIM BEAD: Trim-Tex # 9110 with 5/8 inch leg
   3. TEAR-AWAY FLAT BEAD: Trim-Tex # 9000 Flat Tear Away Bead (no leg)

C. TYPICAL CONTROL JOINT TRIM: Manufacturer’s standard trim unit with 1/8 inch or less exposed joint, or provide two (2) each standard L-type edge trim beads – butted 1/8 inch apart, in lieu of manufacturer's standard one-piece control joint beads.

D. EXTRUDED EDGE TRIM: Whenever a “reveal” profile” is indicated on the Drawings, at locations such as intersections of partitions, at base or top of walls, at door or window frames, and at other locations where indicated, provide trim members of extruded aluminum ally 6063 T5, with a chemical conversion finish coating, and as follows:
   1. Finish Color: clear anodized except as otherwise indicated on the Drawings.
   2. Approved Manufacturer: Fry Reglet Corporation, p: 800-237-9773, website: www.fryreglet.com, or approved equivalent manufacturer:
      a. L-TRIM: Series # DRML, in exposed flange width as indicated on Drawings or to coordinate with the construction indicated
      b. Z-REVEAL TRIM: Series # DRMZ in depth and width of reveal as indicated on the Drawings
      c. F-REVEAL TRIM: Series # DRMF in depth and width of reveal as indicated on the Drawings
      d. PARTITION END-CLOSURE TRIM (to terminate exposed drywall edge): # DMEC-4875 (4-7/8 inch wide) for typical interior drywall partitions with 3-5/8 inch wide metal studs, or # DMEC-7250 (7-1/4 inch wide) for drywall partitions with six (6) inch metal studs.
      e. CEILING EDGE TRIM: for in-plane transition between drywall and acoustical ceilings without a joint: DMPT-75

E. ALUMINUM REVEAL TRIM: Provide flat, 0.032 inch thick prefinished aluminum sheet metal trim mounted behind drywall edge trim, for reveal-joint of width and at locations indicated on the Drawings. Extend metal reveal trim behind gypsum board not less than 1 inch to be secured with drywall edge trim anchorage.

F. COLOR: As indicated on the Drawings, or if not indicated, as selected by Architect from sheet-metal Manufacturer’s full range of both baked-on solid and satin-anodized finishes , including black and metalics.

2.11 WALL AT STOREFRONT TERMINATION: Where a framed wall terminates perpendicular to storefront mullion. In addition to “Partition End Closure Trim” above provide and install Gordon Mullion Mate: Series 40 Plus.

2.12 JOINT TREATMENT: Comply with ASTM C 475, using multi-purpose grade, ready-mixed vinyl-type joint compound, with perforated-type paper joint tape typically.

A. At glass-mat faced gypsum board panels, use fiberglass mesh tape.
B. At water-resistant gypsum board, use fiberglass mesh tape embedded in a waterproof joint compound.

2.13 ACOUSTICAL JOINT SEALANT: ASTM C 834 compliant product with VOC content of 250 or less, that effectively reduces airborne sound transmission through perimeter joints and openings as demonstrated by testing according to ASTM E 90. Subject to compliance with requirements, available products include: “BOSS 824 Acoustical Sound Sealant” by Accumetric LLC; “Acoustical Sealant GSC” by Grabber; “AC-20 FTR” by Pecora; “Smoke N Sound Acoustical Sealant by Specified Technologies Inc.; and “Sheetrock Acoustical Sealant” by USG.

2.14 CEILING ISOLATION HANGERS: “AF Ceiling Isolation Hangers” by Kinetics Noise Control, Inc., www.kineticsnoise.com

2.15 GYPSUM BOARD FASTENERS: Steel Drill Screws meeting ASTM C 1002 unless otherwise indicated.

2.16 MISCELLANEOUS MATERIALS: Provide auxiliary materials for gypsum drywall work of the type and grade recommended by the manufacturer gypsum boards.

PART 3 - EXECUTION

3.01 EXAMINE AREAS AND SUBSTRATES, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SUSPENDED DRYWALL CEILINGS:

A. Coordinate installation of ceiling suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive ceiling hangers at spacing required to support ceilings and that hangers will develop their full strength.
B. Furnish concrete inserts and other devises indicated to other trades for installation in advance of time needed for coordination and construction.
C. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
D. INSTALLATION

1. PREPARATION FOR METAL SUPPORT SYSTEMS: Coordinate work with structural ceiling work to ensure that inserts and other structural anchorage provisions have been installed to receive ceiling hangers. Furnish steel deck hanger clips and similar devices to other trades for installation well in advance of time needed for coordination with other work.
2. INSTALLATION OF WALL/PARTITION SUPPORT SYSTEMS: Install supplementary framing, blocking and bracing to support fixtures, equipment, services, heavy trim, furnishings and similar work which cannot be adequately supported on gypsum board alone.
3. ISOLATE STUD SYSTEM from transfer of structural loading to system, both horizontally and vertically. Provide slip or cushioned type joints to attain lateral support and avoid axial loading. Install runner tracks at floors, ceilings and structural walls and columns where gypsum drywall stud system abuts other work, except as otherwise indicated. Terminate partition stud system at ceilings, except where indicated to be extended to structural support or substrate above.
4. SPACE STUDS 16" O.C., except as otherwise indicated. Provide runner tracks of same material thickness as jamb studs. Space jack studs same as partition studs.
5. DOUBLE STUDS AT DOOR OPENINGS, frame with 2 each 0.032 inch (20 gage) studs extending to or otherwise braced to lateral support above at both jambs, securely attached by screws either directly to door frames or to jamb anchor clips on door frame. Install runner track sections (for jack studs) at head and secure to jamb studs.
6. DOUBLE STUDS AT WALL BACKING where secure attachment of wall mounted items is required to drywall partitions, including but not limited to wall-mounted cabinets, flat-screen monitor units, grab-bars, and wall-stops at doors. Provide back-to-back doubled 0.032 inch (20 gage) studs extending to or otherwise braced to lateral support above, and securely attached by screws together and to the wall backing material.
7. FRAME OPENINGS OTHER THAN DOOR OPENINGS in same manner as required for door openings; and install framing below sills of openings to match framing required above door heads.
8. INSTALL SUPPLEMENTARY FRAMING, runners, furring, blocking and bracing at opening and terminations in the work, and at locations required to support fixtures, equipment, services, heavy trim, furnishings and similar work which cannot be adequately supported directly on gypsum board alone.

3.03 GENERAL GYPSUM BOARD INSTALLATION REQUIREMENTS:

A. INSTALL insulation where indicated, prior to gypsum board unless readily installed after board has been installed. Locate exposed end-butt joints as far from center of walls and ceilings as possible, and stagger not less than 1'-0" in alternate courses of board. Install ceiling boards in the direction and manner which will minimize the number of end-butt joints, and which will avoid end joints in the central area of each ceiling. Stagger end joints at least 1'-0".
B. INSTALL WALL/PARTITION BOARDS vertically to avoid end-butt joints wherever possible. At stairwells and similar high walls, install boards horizontally with end joints staggered over studs.
C. INSTALL EXPOSED GYPSUM BOARD with face side out. Do not install imperfect, damaged or damp boards. Butt boards together for a light contact at edges and ends with not more than 1/16" open space between boards. Do not force into place.

D. LOCATE either edge or end joints over supports, except in horizontal applications or where intermediate supports or gypsum board black-blocking is provided behind end joints. Position boards so that both tapered edge joints abut, and mill-cut or field-cut end joints abut. Do not place tapered edges against cut edges or ends. Stagger vertical joints over different studs on opposite sides of partitions.
E. ATTACH gypsum board to framing and blocking as required for additional support at openings and cutouts. Form control joints and expansion joints with space between edges of boards, prepared to receive trim accessories. Cover both faces of steel stud partition framing with gypsum board in concealed spaces (above ceilings, etc.), except in chase walls which are properly braced internally.
F. ISOLATE perimeter of non-load-bearing drywall partitions at structural abutments. Provide 1/4" to ½" space and trim edge with J-type semi-finishing edge trim. Seal joints with acoustical sealant. Do not fasten drywall directly to stud system runner tracks.
G. STC-RATED ASSEMBLIES: Seal construction at perimeters, behind control and expansion joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.
H. SPACE FASTENERS in gypsum boards in accordance with referenced standards and manufacturer's recommendations. On partitions/walls apply gypsum board vertically (parallel), unless otherwise indicated, and provide sheet lengths which will minimize end joints. Fasten gypsum board supports with screws.
I. DIRECT-BONDING TO SUBSTRATE: Where necessary to install gypsum board adhered directly to a substrate (other than studs, joints, furring members or base layer of gypsum board), comply with gypsum board manufacturers recommendations, and temporarily brace or fasten gypsum board until fastening adhesive has set.

3.04 INSTALLATION OF DRYWALL TRIM ACCESSORIES: Where feasible, use the same fasteners to anchor trim accessory flanges as required to fasten gypsum board to the supports. Otherwise, fasten flanges by nailing in accordance with manufacturer's instructions and recommendations. Install metal corner beads at external corners of drywall work.

A. INSTALL METAL EDGE TRIM whenever edge of gypsum board would otherwise be exposed or semi-exposed. Provide type with face flange to receive joint compound. Install L-type trim where work is tightly abutted to other work and install special kerf-type where other work is kerfed to receive long leg of L- type trim. Install U-type where edge is exposed, revealed, gasketed, or sealant-filled (including expansion joints).
B. INSTALL METAL CONTROL JOINTS above both sides of all door frames, and as otherwise required not to exceed a 30'-0" maximum uninterrupted surface.

3.05 INSTALLATION OF DRYWALL FINISHING: Apply treatment at gypsum board joints (both directions), flanges of trim accessories, penetrations, fasteners heads, surface defects and elsewhere as required to prepare work for decoration. Prefill open joints and rounded or beveled edges, using type of compound recommended by manufacturer. Apply joint tape at joints between gypsum boards, except where a trim accessory is indicated. Apply joint compound in three (3) coats (not including prefill of openings in base), and sand between last two (2) coats and after last coat. At water-resistant gypsum board base for ceramic tile, tape and finish joints with two (2) coats water-resistant joint material.

A. PARTIAL FINISHING: Omit third coat (if specified) and sanding on concealed drywall work which is indicated for drywall finishing or which requires finishing to achieve fire resistance rating, sound rating or to act as air or smoke barrier. Refer to sections on painting, coating and wall-coverings in Division 9 for decorative finishes to be applied to drywall work.
B. FINISH GYPSUM BOARD to levels indicated below, according to ASTM C 840, for locations indicated:
C. LEVEL 1 FINISH (typical at concealed areas): Embed tape at joints in ceiling plenum or other concealed areas
D. LEVEL 4: (TYPICAL EXPOSED GYPSUM-BOARD FINISH): Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges at panel surfaces that will be exposed to view, unless otherwise indicated.
E. LEVEL 5 FINISH where indicated, REQUIRED AT ALL WALLS TO RECEIVE WALL GRAPHICS AND DARK PAINT COLORS. Embed tape in joint compound and apply first, fill (second), and finish (third) coats of joint compound over joints, angles, fastener heads, and accessories; and apply two (2) each thin, uniform skim coats of joint compound over entire surface. For skim coats, use joint compound specified for third coat, or a product specially formulated for this purpose and acceptable to gypsum board manufacturer. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects, tool marks, and ridges and ready for decoration.
    1. Alternative Level 5 spray product will be considered by Architect after mockup including finish paint is reviewed and approved.

3.06 PROTECTION OF WORK: Installer must advise Contractor of required procedures for protecting gypsum drywall work from damage and deterioration during remainder of construction period.

END OF SECTION 09 21 17

SECTION 09 21 17 – GYPSUM BOARD SHAFT-WALL ASSEMBLIES

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide gypsum shaft-wall assemblies where indicated on the Drawings, as specified herein, and as necessary for complete installation.

1.02 SUBMITTALS

A. Product Data: For each gypsum board shaft-wall assembly indicated.
B. Fire-Test-Response Reports: From a qualified independent testing and inspecting agency substantiating each gypsum board shaft-wall assembly's required fire-resistance rating. Include data substantiating that elevator entrances and other items that penetrate each gypsum board shaft-wall assembly do not negate fire-resistance rating.

1.03 FIRE-RESISTANCE-RATED ASSEMBLIES: Provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

1.04 DELIVER MATERIALS in original packages, containers, and bundles bearing brand name and identification of manufacturer or supplier.

1.05 STORE MATERIALS inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack gypsum panels flat on leveled supports off the ground to prevent sagging.

1.06 PROJECT CONDITIONS: Comply with requirements for environmental conditions, room temperatures, and ventilation specified in Division 9 Section “Gypsum Board Assemblies”.

PART 2 - PRODUCTS

2.01 AVAILABLE MANUFACTURERS: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, G-P Gypsum Corp., National Gypsum Company, and United States Gypsum Co.

2.02 ASSEMBLY MATERIALS

A. PROVIDE MATERIALS AND COMPONENTS complying with requirements of fire-resistance-rated assemblies indicated. Provide panels in maximum lengths available to eliminate or minimize end-to-end butt joints. Provide auxiliary materials complying with gypsum board shaft-wall assembly manufacturer's written recommendations.
B. Steel Framing: ASTM C 645.
C. Protective Coating: manufacturer's standard corrosion-resistant zinc coating.
D. Gypsum Liner Panels: Manufacturer's proprietary liner panels in 1-inch thickness and with moisture-resistant paper faces.
E. Gypsum Wallboard: ASTM C 36, core type as required by fire-resistance-rated assembly indicated.
F. Edges: Tapered and featured (rounded or beveled) for prefilling.
G. Water-Resistant, Gypsum Backing Board: ASTM C 630, core type as required by fire-resistance-rated assembly indicated.
H. Accessories: Cornerbead, edge trim, and control joints of material and shapes specified in Division 9 Section "Gypsum Board Assemblies" that comply with gypsum board shaft-wall assembly manufacturer's written recommendations for application indicated.
I. Gypsum Wallboard Joint-Treatment Materials: ASTM C 475 and as specified in Division 9 Section "Gypsum Board Assemblies."
J. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.
K. Track (Runner) Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft-wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
L. Powder-Actuated Fasteners: Provide powder-actuated fasteners with capability to sustain, without failure, a load equal to 10 times that imposed by shaft-wall assemblies, as determined by testing conducted by a qualified independent testing agency according to ASTM E 1190.
M. Acoustical Sealant: As recommended by gypsum board shaft-wall assembly manufacturer for application indicated.
N. Sound Attenuation Blankets: ASTM C 665 for Type I, unfaced mineral-fiber-blanket insulation produced by combining thermosetting resins with mineral fibers manufactured from slag or rock wool.

2.03 GYPSUM BOARD SHAFT WALL

A. Studs: Manufacturer's standard profile for repetitive members and corner and end members and for fire-resistance-rated assembly indicated.
B. Depth: As indicated
C. Track (Runner): Manufacturer's standard J-profile track with long-leg length as standard with manufacturer, but at least 2 inches, in depth matching studs.
D. Jamb Struts: Manufacturer's standard J-profile strut with long-leg length of 3 inches, in depth matching studs, and not less than 0.0329 thick.
E. Cavity Insulation: Sound attenuation blankets.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES to which gypsum board shaft-wall assemblies attach or abut, with Installer present, including hollow-metal frames, elevator hoistway door frames, cast-in anchors, and structural framing. Examine for compliance with

requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. SPRAYED FIRE-RESISTIVE MATERIALS: Coordinate with gypsum shaft-wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft-wall assemblies to comply with requirements specified in Division 7 Section "Sprayed Fire-Resistive Materials."

B. BEFORE SPRAYED FIRE-RESISTIVE MATERIALS ARE APPLIED, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.

C. AFTER SPRAYED FIRE-RESISTIVE MATERIALS ARE APPLIED, remove them only to extent necessary for installation of gypsum board assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.03 INSTALLATION

A. INSTALL GYPSUM BOARD SHAFT-WALL ASSEMBLIES to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, and the following:

(1) ASTM C 754 for installing steel framing.
(2) Division 9 Section "Gypsum Board Assemblies" for applying and finishing panels.
(3) Do not bridge building expansion joints with shaft-wall assemblies; frame both sides of joints with furring and other support.
(4) Install supplementary framing in gypsum board shaft-wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, and similar items that cannot be supported directly by shaft-wall assembly framing.
(5) At elevator hoistway door frames, provide jamb struts on each side of door frame.
(6) At penetrations in shaft wall, maintain fire-resistance rating of shaft-wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.
(7) Isolate gypsum finish panels from building structure to prevent cracking of finish panels while maintaining continuity of fire-rated construction.
(8) Install control joints to maintain fire-resistance rating of assemblies.
(9) Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly. Install acoustical sealant to withstand dislocation by air-pressure differential between shaft and external spaces; maintain an airtight and smoke-tight seal; and comply with manufacturer's written instructions or ASTM C 919, whichever is more stringent.
(10) In elevator shafts where gypsum board shaft-wall assemblies cannot be positioned within 2 inches of the shaft face of structural beams, floor edges, and similar projections into shaft, install 5/8-inch- thick, gypsum board cants covering tops of projections.
(11) Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft-wall framing.
(12) Where steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to the shaft-wall framing.

B. PREPARE all walls for finishes as specified in drawings.

END OF SECTION 09 21 17

SECTION 09 22 26 - DRYWALL GRID SYSTEM

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Metal suspension system for the support of gypsum drywall in ceiling, a soffit installation for interior and exterior finishes.

1.04 SUBMITTALS

A. Product Data:
   (1) Submit manufacturer's technical data for each type of Metal Framing system required.
B. Samples:
   (1) Metal Framing System, including main runner and 4 foot cross tees.
C. Shop Drawings:
   (1) Layout and details of Metal Framing System. Show locations of items which are to be coordinated with or supported by the metal suspension system.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
B. Pre-installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, and manufacturer's installation instructions.
C. Fire Resistance Characteristics: For fire-resistance-rated assemblies that incorporate Metal framing systems provide materials and construction identical to those tested in fire resistance assembly as indicated in the construction documents and or architectural plans in accordance with ASTM E119.

1.06 SUSTAINABLE MATERIALS

A. Transparency: Manufacturers will be given preference when they provide documentation to support sustainable requirements for the following: Material ingredient transparency, Removal of Red List Ingredients per LBCV3, Life Cycle impact information, Low-Emitting Materials, and Clean Air performance.
   (1) Health Product Declaration. The end use product has a published, complete Health Product Declaration with disclosure at a minimum of 1000ppm of known hazards in compliance with the Health Product Declaration open Standard.
   (2) Declare Label. The end use product has a published Declare label by the International Living Future Institute with disclosure of 100 ppm with a designation of Red List Free or Compliant (less than 1% proprietary ingredients).
   (3) Low Emitting products with VOC emissions data. Preference will also be given to manufacturers that can provide emissions data showing their products meet CDHP Standard Method v1.1 (Section 01350).
   (4) Life cycle analysis. Products that have communicated lifecycle data through Environmental Product Declarations (EPDs) will be preferred.
   (5) End of Life Programs/Recycling: Where applicable, manufacturers that provide the option for recycling of their products into new products at end-of-life through take-back programs will be preferred.
   (6) Products meeting LEED V4 requirements including:
      (a) Storage & Collection of Recyclables
      (b) Construction and Demolition Waste Management Planning
      (c) Building Life-Cycle Impact Reduction
      (d) Building Product Disclosure and Optimization Environmental Product Declarations
      (e) Building Product Disclosure and Optimization Sourcing of Raw Materials
      (f) Building Product Disclosure and Optimization Material Ingredients
      (g) Construction and Demolition Waste Management

1.07 DELIVERY, STORAGE AND HANDLING

A. Protect and store products in manufacturer's unopened packaging until ready for installation.

1.08 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.09 WARRANTY

A. Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period. Failures include, but are not limited to the following:
   (1) Acoustical Panels: Sagging and warping
   (2) Grid System: Rusting and manufacturer's defects

B. Warranty Period:
   (1) Grid: One (1) year from date of substantial completion

C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Suspension Systems:
   (1) Armstrong World Industries, Inc.

B. Aluminum Custom Perimeter Trim Extruded:
   (1) Armstrong World Industries, Inc.

C. Perimeter Systems:
   (1) Armstrong World Industries, Inc.

2.02 DRYWALL SUSPENSION SYSTEMS

A. Armstrong Drywall Suspension Systems all main beams and cross tees shall be commercial quality hot-dipped galvanized steel

B. Tee: manufactured main beam- 1-1/2" knurled face with ScrewStop™ reverse hem by 1-11/16 inches high. Drywall Main Beams are factory punched with crosstee routs and hanger wire holes and SuperLock™ main beam clip for a strong secure connection and fast accurate alignment. Both ShortSpan and Drywall Main Beams are Heavy-duty performance per ASTM C635
   (1) HD8906 - 12ft HD Drywall Main Beam 1-1/2 in

C. Cross Tees: manufactured main beam- 1-1/2" knurled face with ScrewStop™ reverse hem by 1-1/2 inches high with factory punched cross tee routs and hanger wire holes and XL stake on clip for a strong secure connection.
   (1) XL8945P - 4ft Drywall Cross Tee

D. Wall Molding:
   (1) 7857 - 12ft Reverse Angle Molding

E. Hanger wire: a Class 1 zinc coating, soft temper, pre-stretched, with a yield stress load of at least time three times the design load, but not less than 12-gauge.
F. Accessories:
   (1) DW90C - 90 Degree Drywall Angle Clip
   (2) Material Ingredient Transparency: Health Product Declaration (HPD); Declare Label
   (3) Life Cycle Assessment: Third Party Certified Environmental Product Declaration (EPD)

PART 3 - EXECUTION

3.01 EXAMINATION

A. Prior to installation, inspect previous work of all other trades. Verify that all work is complete and accurate to the point where this installation may properly proceed in strict accordance with framing shop drawings.
B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
C. Installation: In accordance with all approved plans, details, and manufacturer's installation guidelines located in the Armstrong Drywall Grid Systems and ShortSpan Installation Guides.
   (1) Install seismic components if required by the building code. Seismic components to be specified on the architectural plans by the project engineer or design team.

END OF SECTION 09 22 26

SECTION 09 30 00 – TILING

PART 1 - GENERAL

1.01 PROVIDE TILE WORK where indicated on the Drawings, as specified herein, and as needed to meet the requirements of the construction shown in the Contract Documents.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.03 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For tiling and any adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.

1.05 SUBMITTALS

A. PRODUCT DATA: Submit manufacturer's technical information and installation instructions for materials required. Include certifications and other data to show compliance with these specifications.

B. SHOP DRAWINGS: Provide to scale shop drawings with dimensions showing tile cuts around all drains, floor tile layouts, noted critical alignments. Shop drawings to include all associated clearly labeled trims to be used for tile installation.

C. SAMPLES FOR SELECTION: For each type of tile and grout indicated. Include Samples of accessories involving color selection.

1.06 QUALITY ASSURANCE: Provide materials obtained from one source for each type and color of unit, grout, and setting materials.

A. DRY-LAID MOCKUPS: Lay out tiles in dry-laid mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Lay out mockup of each type of ceramic tile installation, utilizing products, materials, including installation accessories (spacers) and techniques, intended for completed Work.
2. Maintain dry-laid mockups in an undisturbed condition until equivalent areas of the completed Work are approved to serve as a quality standard for completed Work.

B. JOB CONDITIONS:

1. PRODUCT HANDLING: Deliver materials in original unopened containers with labels intact and legible at time of use. Store under conditions recommended by the manufacturer. Do not retain at the project site any material which has exceeded the shelf life recommended by its manufacturer.

2. MAINTAIN ENVIRONMENTAL CONDITIONS and protect work during and after installation in accordance with referenced standards and manufacturer's printed recommendations. Provide weatherproof, heated enclosure of the work area when temperatures are lower than that required for installation.
3. SEQUENCE OF FLOOR TILE INSTALLATION: Where integral tile-cove base is indicated, install tile work after installation of gypsum board, base cabinets, or other base substrate as applicable.

C. EXTRA MATERIALS

1. EXTRA STOCK: Upon completion of the work of this Section, deliver to the Owner an extra stock equal to 10 square feet of each color or pattern of material used.

PART 2 - PRODUCTS

2.01 TILE MATERIALS & GROUT COLORS: Refer to the Drawings for tile materials and grout colors.

2.02 TILE TRIM UNITS:

A. Provide units matching characteristics of adjoining flat tile and coordinated with sizes and coursing of adjoining flat tile where applicable. Provide manufacturer's standard shapes, including but not limited to coved base units, wainscot caps, external corner units and other trim units as applicable.
B. Cove base is required at all tile wall to tile floor conditions.

2.03 WATERPROOFING & CRACK-SUPPRESSION MEMBRANE (fluid applied): Fluid-Applied Waterproofing and Crack Isolation Membrane System: Provide continuous and seamless waterproofing and crack isolation system, including premixed or single-component self-curing liquid-latex rubber or elastomeric-polymer membrane; complying with ANSI A118.10 for waterproofing and ANSI A118.12 for crack isolation; ASTM C627 Extra Heavy Service Rating; IAPMO-Approved as shower pan line, and recommended by the manufacturer for the application indicated.

A. Basis-of-Design: “RedGard Waterproofing and Crack Prevention Membrane” as manufactured by Custom Building Products, or equal.
B. Alternate Manufacture:

1. “Hydro Ban” by Laticrete Internation, Inc.
2. “Mapelastic Aqua Defense’ by Mapei Corporation

C. Pre-treat control joints and cracks in accordance with membrane manufacturer’s instructions.
D. Provide reinforcement and accessories as recommended by manufacturer for complete system.

2.04 WATERPROOFING SHEET MEMBRANE (for use on potentially “wet” elevated floors): Non-plasticized, chlorinated polyethylene sheet (CPE) faced on both sides with high-strength, nonwoven polyester fabric, meeting ANSI A118.10 and manufactured specifically for adhering to latex-Portland cement mortar; 60 inches wide by 0.030-inch nominal thickness.

A. Basis-of-Design: “NobleSeal TS” as manufactured by The Noble Company, or equal.

2.05 SHOWER-PAN WATERPROOFING LINER SHEET (for use at thick-set shower pans): Non-plasticized, high-grade chlorinated polyethylene sheet (CPE) faced on both sides with high-strength, nonwoven polyester fabric, meeting ANSI A118.10 and manufactured specifically for adhering to latex-Portland cement mortar; in up to 72 inch width by 0.040-inch nominal thickness. Where applicable, comply with manufacturer’s recommendations for spanning shower pans over structural joints in concrete structure.

A. Basis-of-Design: “Chloraloy” as manufactured by The Noble Company, or equal.

2.06 WALL WATERPROOFING SHEET MEMBRANE (for wet-walls including showers and tub-surrounds): PVC sheet with polyester fabric laminated to both sides and manufactured specifically for adhering to latex-Portland cement mortar at interior locations; 72 inch wide by 0.025-inch nominal thickness.

A. Basis-of-Design: “Wall Seal” as manufactured by The Noble Company, or equal.

2.07 TILE-EDGE TRIM AT CONCRETE FLOORING: Satin anodized aluminum trim in height required to match tile thickness and with minimum 0.75 inch transition leg. Provide typically at edge of tile abutting exposed concrete or resilient flooring.

A. Basis-of-Design: “Reno-V – AEVT/B” as manufactured by Schluter, or equal.

2.08 TILE TRANSITION TRIM - AT CARPET or WOOD FLOORING (provide typically where tile edge transitions to adjacent carpeting or wood flooring): Brushed stainless steel unit in height required to match tile thickness:

A. Basis-of-Design: “Schiene-EB” as manufactured by Schluter, or equal.

2.09 TILE TRANSITION TRIM - AT CONCRETE OR RESIL / RESINOUS FLOORING: Schluter “Reno-Ramp” series (brushed anodized aluminum), ADA compliant sloping “ramp” profile – in height required to match tile thickness. Provide typically where tile edge transitions to adjacent exposed concrete or thin-flooring finishes.

A. Basis-of-Design: “Reno-Ramp” as manufactured by Schluter, or equal.

2.10 CEMENT BOARD UNDERLAYMENT: 0.42 inch thick ASTM C 1288 and ANSI A 118.9 compliant board with 6,500 PSI compressive strength, consisting of 90% Portland Cement and sand with selected additives, without asbestos, formaldehyde, gypsum, paper facing, or abrasive aggregates:

A. Basis-of-Design: “HardieBacker 500 Cement Board” by James Hardie (1-800-9-HARDIE) or approved equal.
B. Fasteners: minimum 1-3/4 inch long No. 8 x 0.375-inch HD self-drilling corrosion-resistant ribbed waferhead screws.
C. Mortar: ANSI A 118.1 dry-set mortar (between subfloor and cement board)
D. Joint Tape: Manufacturer’s standard 2-inch minimum width high-strength alkali-resistant glass fiber tape.

2.11 WATERPROOFING INSTALLATION:

A. Waterproofing Installation: Install waterproofing membrane to comply with ANSI A108.13, ANSI A108.17 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.
   1. Do not install tile or setting materials over waterproofing membrane until membrane has cured and been tested to determine that it is watertight.
   2. Pre-treat control joints and cracks in accordance with membrane manufacturer's instructions.
      a. Apply extra fabric-reinforcing at control joints and cracks.
   3. Apply liquid waterproofing membrane full height of shower walls.

B. At showers: Apply two separate layers. Apply first layer to cover base floor substrate below mortar bed continuous from drain and covering entire wall surface to ceiling on each wall. Second layer is applied over the mortar bed and in continuous overlapping into drain and extending 2-feet above water line onto vertical wall surface.

2.12 ACCEPTABLE MANUFACTURERS FOR TILE SETTING MATERIALS: Subject to compliance with requirements, provide tile-setting products as manufactured by one of the following:

A. Custom Building Products (Basis-of-Design Manufacturer): P: 800-272-8786, www.custombuildingproducts.com
B. Laticrete International Inc.
C. Mapei Corporation.
D. H. B. Fuller Construction Products Inc. / TEC

2.13 TYPICAL THIN-SET MORTAR: ANSI A118.4 latex modified, Portland cement mortar consisting of prepackaged dry-mortar mix combined with acrylic resin liquid-latex additive. For wall applications, provide nonsagging mortar that complies with Paragraph F-4.6.1 in addition to the other requirements in ANSI A118.4:

A. Basis-of-Design: "Porcelain Tile Fortified Thin-Set Mortar", "VersaBond Flex Fortified Thin-Set Mortar", or "VersaBond-LFT (as applicable), by Custom Building Products, or equal.

2.14 CRACK-PREVENTION THIN-SET MORTAR (for use over plywood / wood substrate): ANSI A118.4, Premium quality polymer-modified mortar with exceptional flexibility and bond strength for use over difficult surfaces, including plywood or wood substrates:

A. Basis-of-Design: "FlexBond" by Custom Building Products, or equal

2.15 STAIN-RESISTANT GROUT (for typical floor or wall surfaces): ANSI A118.7, single component stain resistant preixed grout. Provide sanded grout for joints over 1/8 inch – unsanded grout for joints 1/8 inch and less:

A. Basis-of-Design: "Fusion Pro" by Custom Building Products, or equal

2.16 EPOXY GROUT (at Kitchen and Showers): ANSI A118.3 two-part epoxy for extra heavy commercial use and stain resistance:

A. Basis-of-Design: "CEG-IG 100% Solids Industrial Grade Epoxy Grout" by Custom Building Products, or equal.

2.17 LATEX-PORTLAND CEMENT MORTAR (THIN SET): ANSI A118.4, consisting of prepackaged dry-mortar mix combined with acrylic resin liquid-latex additive. For wall applications, provide nonsagging mortar that complies with Paragraph F-4.6.1 in addition to the other requirements in ANSI A118.4.

A. Basis-of-Design: TEC "Super Flex Ultra-Premium Thin Set Mortar"

2.18 TYPICAL THIN-SET LATEX-MODIFIED GROUT: ANSI A118.7, either ethylene vinyl acetate, in dry, redispersible form, prepackaged with other dry ingredients, or acrylic resin or styrene-butadiene rubber in liquid-latex form for addition to prepackaged dry-grout mix:

A. Basis-of-Design: TEC "Power Grout" # 550

2.19 TILE GROUT SEALER: "Auqa-Mix Sealer's Choice 15 Gold" penetrating sealer or approved equal.

PART 3 - EXECUTION

3.01 EXAMINATION & INSPECTION: Examine areas and conditions under which the Work of this Section will be performed. Do not proceed if conditions exist that are detrimental to proper and timely completion. Commencement of this Work will be construed as acceptance of existing conditions or prior work by others, and assumption of responsibility for satisfactory installation.

A. Verify that substrates for setting tile are firm and dry, and within flatness tolerances required by referenced ANSI A108 Series of tile installation standards for installations indicated.
B. Deflection of substrate: not to exceed 1/360th of the span (1/2 inch in 15 feet) in accordance with ANSI A108.01-2.3. Allow for live and impact load as well as dead load weight of tile and setting bed.
C. Verify that installation of electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.
D. Verify that joints in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 COMPLY WITH MANUFACTURER'S instructions for mixing and installation of materials. Protect existing adjacent surfaces before beginning tile installation Work.

3.03 EXTEND tile work into recesses and under or behind equipment and fixtures, to form a complete covering without interruptions, except as otherwise shown. Terminate work neatly at obstructions, edges and corners without disrupting pattern or joint alignments.

3.04 PREPARATION

A. REMOVE COATINGS, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.
B. BLENDING: For tile exhibiting color variations within ranges selected during Sample submittals, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.05 TILE INSTALLATION

A. ANSI STANDARDS: Comply with applicable requirements of ANSI's "Standard Specifications for the installation of Ceramic Tile" except as otherwise indicated.
B. TCA INSTALLATION GUIDELINES: TCA's "Handbook for Ceramic Tile Installation." Comply with TCA installation methods indicated in ceramic tile installation schedules.
C. TERMINATE WORK NEATLY at obstructions, edges, and corners without disrupting pattern or joint alignments.
D. ACCURATELY FORM intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
E. JOINTING PATTERN: Lay tile in grid pattern, unless otherwise indicated. Align joints when adjoining tiles on floor, base, walls, and trim are same size. Lay out tile work and center tile fields in both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths as follows, unless otherwise indicated. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
F. CONTROL JOINTS: Provide a joint in tile where tile overlays a control joint in concrete slab, typ. Joint should be finished with color match sealant to match grout. Cut joint in a straight line directly over concrete control joint. Tile joint width should match tile spacing if on pattern, or width of tile saw blade.
G. WHERE STAGGERED (brick) joints are indicated for tile over 12" in size, provide joints at 33.3% of the tile, per TCNA. E.G. "1/3rd overlap"
H. INSTALL TYPES OF TILE designated for wall installations to comply with requirements in the Wall Tile Installation Schedule, including those referencing TCA installation methods and ANSI setting-bed standards.
I. GROUT TILE TO COMPLY WITH requirements of ANSI A108.10.
J. GROUT SEALER: Apply grout sealer to cementitious grout joints according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer that has gotten on tile faces by wiping with soft cloth.

3.06 CLEANING AND PROTECTING

A. CLEANING: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
B. REMOVE LATEX-PORTLAND CEMENT GROUT RESIDUE from tile as soon as possible.
C. CLEAN GROUT SMEARS AND HAZE FROM TILE according to tile and grout manufacturer's written instructions, but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. flush surfaces with clean water before and after cleaning.
D. APPLY COAT OF NEUTRAL PROTECTIVE CLEANER to completed tile work, if recommended by tile manufacturer.
E. FINISHED TILE WORK: Leave finished installation clean and free of cracked, chipped, broken un-bonded, or otherwise defective tile work.
F. PROTECTION: When recommended by tile manufacturer, apply a protective coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with Kraft paper or other heavy covering during construction period to prevent damage and wear. Prohibit foot and wheel traffic from using tiled floors for at least three (3) days after grouting is completed.
G. BEFORE FINAL INSPECTION remove protective coverings and rinse neutral cleaner from tile surfaces.

PART 4 - TILE INSTALLATION SCHEDULE

4.01 TYPICAL INTERIOR WALL TILE (limited-wet areas, including toilets):

A. Installation Standard: Comply with TCA Method # W242 and as follows:
B. Wall Tile grouted with typical polymer modified Portland cement grout, on
C. Thin-set Portland cement mortar, over
D. Water Resistant Gypsum Tile Backer Board on metal studs.

4.02 TYPICAL INTERIOR FLOOR TILE (not on elevated floor slabs):

A. Installation Standard: Comply with TCA Method # F113 and as follows:
B. Floor tile grouted with latex modified Portland Cement grout, on
C. Latex-Portland cement mortar bond coat, on
D. Well-cured, clean concrete slab, without curing compounds (wet-cured)

4.03 WET-AREA WALL TILE (at showers)

A. Installation Standard: Comply with TCA Method # W245 and as follows:
B. Wall tile grouted with latex modified Portland cement grout, on
C. Latex-modified Portland cement mortar bond coat, on
D. Wall-type Waterproof membrane set in latex Portland cement mortar bond-coat, lapping over membrane at floor base of showers by minimum 4 inches, over cement backer board substrate (as specified in other Division-09 Sections)

4.04 WET AREA FLOOR TILE ON CONCRETE (at shower areas on slab or on elevated floors):

A. Installation Standard: Comply with TCA Method # F122, and as follows:
B. Floor tile with latex modified grout, set in latex-modified Portland cement mortar, over
C. Shower-Pan type waterproof membrane set in latex Portland cement mortar bond-coat – extend membrane up minimum of six (6) inches behind tile base at all walls, partitions and penetrations, as applicable, over
D. Well-cured, clean concrete substrate

END OF SECTION 09 30 00

SECTION 09 51 00 – SUSPENDED ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide acoustical ceilings as shown on the drawings, as specified herein, and as needed to meet the requirements of the construction shown in the Contract Documents.

1.02 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.03 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material must be within 100 miles of project site for credit.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
C. VOC Emissions Evaluation: For acoustical and metal ceilings, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
E. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.04 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material.
C. Recycled Content: Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide material costs excluding labor itemized.
D. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
E. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
F. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable

1.05 QUALITY ASSURANCE

A. INSTALLER: Firm with no less than three (3) years of successful experience in installation of acoustical ceilings similar to requirements for this project and which is acceptable to manufacturer of acoustical units, as shown by current written statement from manufacturer.

1.06 SUBMITTALS:

A. PRODUCT DATA: Manufacturer's product specifications and installation instructions for each acoustical ceiling material required, and for each suspension system, including certified laboratory test reports and other data as required to show compliance with these specifications.
B. INCLUDE manufacturer's recommendations for cleaning and refinishing acoustical units, including precautions against materials and methods which may be detrimental to finishes and acoustical performance.
C. DELIVER MATERIALS in original unopened containers and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination or other causes.

1.07 JOB CONDITIONS:

A. SPACE ENCLOSURE: Do not install interior acoustical ceilings until space enclosed and weatherproof, and until wet-work in space is completed and nominally dry, and until work above ceilings is completed, and until ambient conditions of temperature and humidity will be continuously maintained at values near those indicated for final occupancy.
B. MAINTENANCE STOCK: At time of completing installation, deliver stock of maintenance material to Owner. Furnish full size units matching units installed, packaged with protective covering for storage, and identified with appropriate labels. Furnish amount equal to 2.0% of each type of the total acoustical panels installed.

PART 2 - PRODUCTS:

2.01 REFER TO DRAWINGS for ceiling panel materials and suspension grids, and as follows:

A. CEILING SYSTEMS:

1. Refer to drawings; Finish Schedule
2. All materials to be HRC for LEED points.

B. CEILING SUSPENSION MATERIALS: Comply with ASTM C 635, as applicable to type of suspension system required for type of ceiling units indicated. Coordinate with other work supported by or penetrating through ceilings, including light fixtures, HVAC equipment, and partition system (if any).

C. ATTACHMENT DEVICES: Size for five (5) times design load indicated in ASTM C 635, Table 1, Direct Hung.

D. HANGER WIRES: Galvanized carbon steel, ASTM A 641, soft temper, pre-stretched, yield-stress load of at least three (3) times design load, but not less than 12 gage (0.106").

E. EDGE MOLDINGS: Manufacturer's recessed channel molding for edges and penetrations of ceiling, with single flange of molding exposed, baked enamel finish to match balance of grid.

F. METAL TRIM: Provide extruded metal edge trim at locations called for in Drawings.

1. Basis-of-Design: “Axiom Classic Trim” and “AX2CUR” by Armstrong Ceiling and Wall Solutions.

G. EXPOSED SUSPENSION SYSTEM: Manufacturer's standard exposed runners, cross-runners and accessories, of types and profiles indicated, with exposed cross-runners coped to lay flush with main runners. Provide uniform factory-applied finish on exposed surfaces of ceiling suspension system, including moldings, trim, and accessories, in manufacturer's baked enamel finish, to match type of ceiling.

PART 3 - INSTALLATION:

3.01 MEASURE EACH CEILING AREA and establish layout of acoustical units to balance border widths at opposite edges of each ceiling, except as otherwise indicated on the Drawings. Avoid use of less-than-half width units at borders, and comply with reflected ceiling plans wherever possible.

3.02 COMPLY with manufacturer's printed instructions, and with governing regulations, fire-resistance rating requirements and with industry standards applicable to the Work.

3.03 ARRANGE acoustical units and orient directionally-patterned units in the manner shown by reflected ceiling plans, with pattern running in one direction.

3.04 INSTALL SUSPENSION SYSTEM to comply with ASTM C 636, with hangers supported only from building structural members. Locate hangers not less than 6" from each end and space 4'-0"; along each carrying channel or direct-hung runner. Secure wire hangers by looping and wire tying, either directly to structures or to inserts, eye-screws, or other devices which are secure and appropriate for substrate.

3.05 INSTALL EDGE MOLDINGS at perimeter of acoustical ceiling area and at locations where necessary to conceal edges of acoustical units. Screw-attach moldings to substrate at levels not over 16" o.c. and not more than 3" from ends, leveling with ceiling suspension system to tolerance of 1/8" to 12'-0". Miter corners accurately and connect securely.

3.06 INSTALL ACOUSTICAL PANELS with undamaged edges throughout and fitted accurately into suspension system runners and edge moldings, with unfinished edges fully concealed by support of suspension members. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

3.07 AT CUT EDGES of reveal-edged panels exposed after installation, trim cut edges to match profile of un-cut edges, and paint exposed surfaces using coating recommended for this purpose by acoustical panel manufacturer.

3.08 INSTALL PANEL HOLD-DOWN CLIPS where indicated or as required for fire-resistance ratings, and in all vestibules with acoustical ceilings, and within a twenty (20) foot radius of any exterior door.

3.09 ADJUST AND CLEAN EXPOSED SURFACES of acoustical ceilings, including trim, edge moldings, and suspension members; comply with manufacturer's instructions for cleaning and touch-up of minor finish damage. Remove and replace work which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 51 00

SECTION 09 54 00 – INTEGRATED CEILING ASSEMBLIES

PART 1 - General

1.01 1.1 RELATED DOCUMENTS

A. Drawings and general conditions of Contract, including General and Supplementary Conditions and Divisions-1 Specification sections apply to work of this section.

1.02 1.2 SUMMARY

A. Section Includes

1. Acoustical ceiling panel
2. Wire hangers, fasteners, main runners, cross tees, and wall angle moldings
3. Perimeter Trim

B. Related Sections

1. Section 09 51 00 - Acoustical Ceiling Suspension Assemblies
2. Section 09 20 00 - Plaster and Gypsum Board
3. Section 01 81 13 - Sustainable Design Requirements
4. Section 01 81 19 - Indoor Air Quality Requirements
5. Section 02 42 00 - Removal and Salvage of Construction Materials
6. Divisions 23 - HVAC Air Distribution
7. Division 26 - Electrical

C. Alternates

1. Prior Approval: Unless otherwise provided for in the Contract documents, submit proposed product substitutions no later than FIVE (5) working days prior to the date established for receipt of bids. Acceptability of a proposed substitution is contingent upon the Architect's review and acceptance. Approved products will be set forth by the Addenda. If a substitution is included in a Bid and is not approved by an Addendum, the specified products shall be provided as in place of the substitute without additional compensation.
2. Submittals that do not provide adequate data for the product evaluation will not be considered. The proposed substitution must meet all requirements of this section, including but not necessarily limited to, the following: Single source materials suppliers (if specified in Section 1.5); Underwriters' Laboratories Classified Acoustical performance; Panel design, size, composition, color, and finish; Suspension system component profiles and sizes; Compliance with the referenced standards.

1.04 SYSTEM DESCRIPTION

A. Continuous/Wall-to-Wall or Cloud installation

1.05 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material must be within 100 miles of project site for credit.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
C. VOC Emissions Evaluation: For integrated ceiling assemblies, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
E. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.06 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material.
C. Recycled Content:Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
D. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
E. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
F. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable.

1.07 SUBMITTALS

A. Shop Drawings: Layout and details of ceilings. Show locations of items that are to be coordinated with, or supported by the ceilings.
B. Installation Instructions: Submit manufacturer's installation instructions as referenced in Part three, Installation.
C. Product Data: Submit manufacturer's technical data for each type of ceiling unit and suspension system required.
D. Samples: Minimum 6 x 6 inch samples of specified panel; 8 inch long samples of exposed wall molding and suspension system, including main runner and 4 foot cross tees.
E. Certifications: Manufacturer's certifications that products comply with specified requirements, including laboratory reports showing compliance with specified tests and standards.
F. Non-Conformance: All products not conforming to the requirements of this specification and or the manufacturer's published values are to be disposed. The Contractor performing the work will replace with approved product at their expense.

1.08 SUSTAINABLE MATERIALS

A. Transparency: Manufacturers will be given preference when they provide documentation to support sustainable requirements for the following: Material ingredient transparency, Removal of Red List Ingredients per LBCV3, Life Cycle impact information, Low-Emitting Materials, and Clean Air performance.
    1. Health Product Declaration. The end use product has a published, complete Health Product Declaration with disclosure at a minimum of 1000ppm of known hazards in compliance with the Health Product Declaration open Standard.
    2. Declare Label. The end use product has a published Declare label by the International Living Future Institute with disclosure of 100 ppm with a designation of Red List Free or Compliant (less than 1% proprietary ingredients).
    3. Low Emitting products with VOC emissions data. Preference will also be given to manufacturers that can provide emissions data showing their products meet CDHP Standard Method v1.1 (Section 01350).
    4. Life cycle analysis. Products that have communicated lifecycle data through Environmental Product Declarations (EPDs) will be preferred.
    5. End of Life Programs/Recycling: Where applicable, manufacturers that provide the option for recycling of their products into new products at end-of-life through take-back programs will be preferred.
    6. Products meeting LEED V4 requirements including:
        a. Storage & Collection of Recyclables
        b. Construction and Demolition Waste Management Planning
        c. Building Life-Cycle Impact Reduction

d. Building Product Disclosure and Optimization Environmental Product Declarations
e. Building Product Disclosure and Optimization Sourcing of Raw Materials
f. Building Product Disclosure and Optimization Material Ingredients
g. Construction and Demolition Waste Management

1.09 QUALITY ASSURANCE

A. Single-Source Responsibility: Provide acoustical panel units and grid components by a single manufacturer.
B. Fire Performance Characteristics: Identify acoustical ceiling components with appropriate markings of applicable testing and inspecting organization.
C. Surface Burning Characteristics: As follows, tested per ASTM E 84 and complying with ASTM E 1264 Classification.
D. Acoustical Panels: As with other architectural features located at the ceiling that may obstruct or skew the planned fire sprinkler pattern through possibly delay or accelerate the activation of the sprinkler or fire detection systems by channeling heat from a fire either toward or away from the device. Designers and installers are advised to consult a fire protection engineer, NFPA 13, or their local codes for guidance where automatic fire detection and suppression systems are present.
E. Coordination of Work: Coordinate acoustical ceiling work with installers of related work including, but not limited to building insulation, gypsum board, light fixtures, mechanical systems, electrical systems, and sprinklers. ACOUSTIBuilt Panels are 7/8" thick.
F. Installer Qualification: Subcontractor is an experienced Installer that has reviewed and understands the system installation instructions thoroughly. Subcontractor will follow written installation instructions and utilize approved equipment and procedures for finishing installation.

1.10 DELIVERY, STORAGE AND HANDLING

A. Deliver acoustical ceiling units to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.
B. Before installing acoustical ceiling units, permit them to reach room temperature and a stabilized moisture content. Store all material within temperature limits required by manufacturer.
C. Handle acoustical ceiling units carefully to avoid chipping edges or damaged units in any way.

1.11 PROJECT CONDITIONS

A. Space Enclosure:
1. Building areas to receive ceilings shall be free of construction dust and debris. ACOUSTIBuilt panels should be installed in areas where the building is enclosed, and the HVAC is continuously functioning. This product is not recommended for exterior applications, where standing water is present, or where moisture will come into direct contact with the ceiling.
a. HVAC should be designed, installed, and operated in accordance with ASHRAE Standard 62.1. It is also necessary for the area to be enclosed, for the HVAC systems to be functioning, and in continuous operations for the life of the product. Product is not intended for use where natural ventilation is part of the ventilation strategy and not recommended in areas where a differential plenum pressure exists.

1.12 ALTERNATE CONSTRUCTION WASTE DISPOSAL

A. Reclaimed ceiling material must be kept dry and free from debris.
B. Contact the Armstrong Recycle Center a consultant will verify the condition of the material and that it meets the Armstrong requirements for recycling. The Armstrong consultant with provide assistance to facilitate the recycling of the ceiling.
C. Recycling may qualify for LEED Credits:
1. LEED 2009 - Category 4: Material and Resources (MR)
a. Credit MRc2: Construction Waste Management
D. LEEDv4 - MRp2 - Construction Waste Management Planning Qualifies as a material stream (non-structural) targeted for diversion. Ceilings will be source-separated and diverted through the Armstrong Ceiling Recycling Program.
1. LEEDv4-MRc5 -
a. Option 1: Divert ceilings to qualify for one of the 3 material streams (50%)
b. Option 2: Divert ceilings to qualify for one of the 4 material streams (75%)

1.13 WARRANTY

A. Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period. Failures include, but are not limited to the following:
1. Acoustical Panels: Manufacturer's defects in material
2. Grid System: Rusting and manufacturer's defects
B. Warranty Period:
1. Acoustical panels: Ten (10) years from date of substantial completion
2. Suspension: Ten (10) years from date of substantial completion
C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

1.14 MAINTENANCE

A. Extra Materials: Deliver extra materials to Owner. Furnish extra materials described below that match products installed. Packaged with protective covering for storage and identified with appropriate labels.
   1. Acoustical Ceiling Units: Furnish quality of full-size units equal to 5.0 percent of amount installed.
   2. Exposed Suspension System Components: Furnish quantity of each exposed suspension component equal to 2.0 percent of amount installed.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design ACOUSTIBuilt:
   1. Armstrong World Industries, Inc.
   2. Finish
      a. Joint Compound Finish by Others
      b. Spray Applied Finish by Armstrong World Industries, Inc.
   3. Suspension Systems and Washers
      a. Armstrong World Industries, Inc.
   4. Perimeter Systems
      a. Armstrong World Industries, Inc.

2.02 ACOUSTICAL CEILING UNITS

A. Acoustical Panels
   1. Surface Texture: Fine
   2. Composition: Mineral Fiber
   3. Color: White (Fine Texture Finish for ACOUSTIBuilt panels)
   4. Size: 48 in x 72 in x 7/8 in - Item #2604
   5. Edge Profile: Tapered edges four sides
   6. Noise Reduction Coefficient (NRC): ASTM C 423; Panel 0.80 (UL), System up to 0.70
   7. Ceiling Attenuation Class (CAC): ASTM C 1414; Panel 46 (UL), System up to 48
   8. Sabin: N/A
   9. Articulation Class (AC): ASTM E 1111
   10. Flame Spread: ASTM E 1264; Class A
   11. Light Reflectance (LR) White Panel: ASTM E 1477; 0.87
   12. Dimensional Stability: HumiGuard Plus
   13. Recycle Content: Post-Consumer and Pre-Consumer – up to 75%
   14. Material Ingredient Transparency: Health Product Declaration (HPD); Declare Label
   15. Life Cycle Assessment: Third Party Certified Environment Product Declaration (EPD)
   16. Acceptable Product: ACOUSTIBuilt panels #2604 No added formaldehyde as manufactured by Armstrong World Industries
   17. Contact your local Armstrong Representative for required installation training at least 4-6 weeks before ordering materials and scheduling installation.

B. Finish
   1. Joint Compound
      a. Setting Compound: Lightweight setting-type drywall joint compound, Ultra lightweight drying-type drywall joint compound
      b. Joint Tape: Self-Adhesive mesh drywall joint tape
   2. Spray Applied Finish – Required Product: #2605WH Fine Texture Finish for ACOUSTIBuilt panels – White as manufactured by Armstrong World Industries.

C. Suspension Systems and Washers
   1. Armstrong Drywall Suspension Systems all main beams and cross tees shall be commercial quality hot-dipped galvanized steel
      a. Main beam: manufactured main beam- 1-1/2" knurled face with ScrewStop™ reverse hem by 1-11/16 inches high. Drywall Main Beams are factory punched with cross tee routs, hanger wire holes, and SuperLock™ main beam clip for a strong secure connection and fast accurate alignment. Both ShortSpan and Drywall Main Beams are Heavy-duty performance per ASTM C635
      b. HD8906 - 12ft HD Drywall Main Beam 1-1/2 in
   2. Cross Tees: manufactured cross tee- 1-1/2" knurled face with ScrewStop™ reverse hem by 1-1/2 inches high with factory punched cross tee routs and hanger wire holes and XL stake on clip for a strong secure connection.
      a. XL8945P - 4ft Drywall Cross Tee
      b. XL8965 – 6ft Drywall Cross Tee
   3. Hanger wire: a Class 1 zinc coating, soft temper, pre-stretched, with a yield stress load of at least time three times the design load, but not less than 12-gauge.
   4. Fasteners (for Panel attachment)
      a. #6 x1-1/4” Fine thread or sharp point self-drilling drywall screws
      b. Grip-Plate Washer for ACOUSTIBuilt panels (1-1/4”diameter) - #2119
   5. Perimeter Systems

a. Commercial quality extruded aluminum alloy 6063 trim channel, factory finished in baked polyester paint. Commercial quality galvanized steel unfinished T-bar connection clips; galvanized steel splice plates.
   (1) Color: White
   (2) Size: 120 in X 4 in (also available in 6")
   (3) Recycle Content: Post-Consumer - 50% Pre-Consumer - 0%
   (4) Acceptable Product: AXIOM One Piece for Drywall, 4in Straight – AX1PC4STR or Curved AX1PC4CUR as manufactured by Armstrong World Industries

b. Axiom Trim Channel:
   (1) AX4STR 4in Axiom Classic Straight
   (2) AX1PC4STR 4IN One –Piece Drywall Trim

c. Axiom Bottom Trim with taping flange
   (1) AXBTASTR – Bottom Trim for ACOUSTIBuilt (also available in curved)

d. Axiom Accessories:
   (1) AXSPLICE - Splice Plate

D. Material Ingredient Transparency: Health Product Declaration (HPD); Declare Label
E. Life Cycle Assessment: Third Party Certified Environmental Product Declaration (EPD)

PART 3 - EXECUTION

3.01 Prior to installation, contact your Armstrong Installation Systems Specialist (ISS). Before installation, inspect previous work of all other trades. Verify that all work is complete and accurate to the point where this installation may properly proceed in strict accordance with framing shop drawings.

3.02 If framing preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.03 The system installation is similar to a conventional drywall installation. However, there are key differences in both material substrate and methods of finishing and installation that make this system unique. Installers should review and follow all written directions of the installation instructions and view the installation video. Click to follow to video access.

3.04 Installation: In accordance with all approved plans, details, and manufacturer's installation guidelines located in the Armstrong ACOUSTIBuilt Assembly and Installation Instructions (BPLA-299099) Click to follow to ACOUSTIBuilt Installation Instructions, and Drywall Grid Systems Hanging and Framing Flat Ceilings Installation Guides (BPCS3539) Click to follow to Hanging and Framing Flat Drywall Instructions.

A. Install seismic components if required by the building code. Seismic components to be specified on the architectural plans by the project engineer or design team.
B. Suspend main beam from overhead construction with hanger wires spaced 4-0 ft. or 6-0 ft. on center along the length of the main runner. Install hanger wires plumb and straight.
C. Cross tees shall be installed 16" on center
D. Install wall moldings/perimeter trim at intersection of suspended ceiling and vertical surfaces
E. Main runners and cross tees shall be attached at perimeter conditions
F. When determining the grid layout, consider the long edges of the boards must run parallel with the cross tees.
G. This system relies on a square grid system to ensure panel edges align at centers of cross tees. If the installation does not meet these squareness requirements, the panel edges may run off the grid system.
H. The system must be square to within 1/8" over a 48" x 48" module.
I. The suspension system must be leveled to within 1/4" in 10'.
J. Floating perimeters must be trimmed with either Axiom® One-Piece Drywall Trim or Axiom® Classic with Bottom Trim for ACOUSTIBuilt™. Refer to the installation instructions for integration with ACOUSTIBuilt installations.

3.05 PREPARATION

A. Do not proceed with installation until all wet work such as concrete, terrazzo, plastering and painting has been completed and thoroughly dried out, unless expressly permitted by manufacturer's printed recommendations.
B. Coordination: Furnish layouts for preset inserts, clips, and other ceiling anchors whose installation is specified in other sections.
C. Furnish concrete inserts and similar devices to other trades for installation well in advance of time needed for coordination of other work.

3.06 INSTALLATION

A. Follow manufacturer installation instructions. Armstrong ACOUSTIBuilt Assembly and Installation Instructions (BPLA-299099)
B. Controls joints are required following the standards used for gypsum board listed in ASTM C840, Section 20
   1. Ceilings with perimeter relief cannot exceed 50 LF and 2500 SF between control joints
   2. Ceilings without perimeter relief cannot exceed 30 LF and 900 SF between control joints
C. Panel joints and fasteners are finished with tape and compound to create a flat surface. While the materials used to finish ACOUSTIBuilt panels are also used to finish drywall, the procedure has unique requirements.
D. Joint compound coverage shall be limited to preserve the acoustical performance of the panels. Compound at panel joints shall not exceed 8 inch widths. Compound applied to field fasteners shall not exceed 4 inch by 4-inch areas. All compound shall be smooth and free of tool marks and ridges. Panels are to be finished with taping knives. Production tools, including boxes, are not permitted.

E. Sanding and inspection: Throughout the sanding process, inspect the surface frequently for flatness. Direct a light across the ceiling to highlight unevenness that requires attention.
F. Fine Texture Finish shall be applied in 4 coat process (additional coat may be used to achieve the desired finish) as called out in the installation instructions. Fine Texture Finish for ACOUSTIBuilt is applied in multiple coats, layered to achieve a uniform appearance and acoustical performance. It is strongly encouraged to practice spraying to ensure proper calibration and technique are achieved. Refer to the installation video.
    1. Must be applied with an air assist spray system (refer to manufacturers installation instructions for required equipment). The Fine texture finish is not intended for use with airless spay or to be manually applied by rolling.
    2. See Manufactures installation instructions for correct pressure settings for spray system, finish preparation, spray calibration and spray procedure and technique.

3.07 ADJUSTING AND CLEANING

A. To remove soot, dirt, and dust use a vacuum operating at low power with a soft brush or use a dry soot cleaning sponge.
B. Clean exposed surfaces of acoustical ceilings, including trim, edge moldings, and suspension members. Comply with manufacturer's instructions for cleaning and touch up of minor finish damage. Remove any ceiling products that cannot be successfully cleaned and or repaired. Replace with attic stock or new product to eliminate evidence of damage.
C. Before disposing of ceilings, contact the Armstrong Recycling Center at 877-276-7876, select option #1 then #8 to review with a consultant the condition and location of building where the ceilings will be removed. The consultant will verify the condition of the material and that it meets the Armstrong requirements for recycling. The Armstrong consultant with provide assistance to facilitate the recycle of the ceiling.

END OF SECTION 09 54 00

SECTION 09 54 26 – SUSPENDED WOOD CEILINGS

PART 1 - GENERAL

1.01 Work Included: Provide suspended panelized wood slat ceilings as shown on drawings, as specified herein, and as needed to meet the requirements of the construction shown in the Contract Documents.

1.02 SECTION INCLUDES

A. Panel Grill Ceiling Panels

1.03 RELATED SECTIONS

A. Section 21 00 00 Fire Suppression
B. Section 26 50 00 Interior Lighting

1.04 REFERENCES

A. ASTM E 84 – TITLE; 2001
B. FSC STD-01-001 – FSC Principals and Criteria for Forest Stewardship
C. FSC STD-40-004 – FSC Standard for Chain of Custody Certification
D. U.S. Green Building Council, LEED Building Design and Construction (BD+C), Version 4.0 Rating System (LEED v4.0)

1.05 DESIGN AND PERFORMANCE REQUIREMENTS

A. Suspension System: Rigidly secure acoustic ceiling system including integral mechanical and electrical components with maximum deflection of 1:360.
B. Wood is a natural product that will undergo changes with variations in the environment. Therefore, all dimensional tolerances are plus or minus 1/8 inch (3 mm).
C. Fire Performance Characteristics: Suspended wood ceilings shall conform to Class 1, or A flame spread rating, tested according to ASTM E 84; Flame Spread: 25 or less. Smoke Developed: 450 or less.
D. Certified Wood: Suspended wood ceilings shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification

1.06 LEED PERFORMANCE REQUIREMENTS

A. Regional Materials: Location of manufacturer and point of extraction, harvest, or recovery for each raw material must be within 100 miles of project site for credit.
B. Recycled Content: Provide materials with a minimum of 10% recycled or reused content.
C. VOC Emissions Evaluation: For integrated ceiling assemblies, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.
E. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.07 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Regional Materials: For regional materials, indicate location of material manufacturer and point of extraction, harvest, or recovery for each material (this includes components of the mix design). Include distance to Project and cost for each regional material.
C. Recycled Content:Provide recycled content information. Highlight post-consumer and pre-consumer quantities. Provide itemized material costs excluding labor.
D. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
E. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
F. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable.

1.08 SUBMITTALS

A. Certified Wood: Suspended wood ceilings shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
C. Shop Drawings: Provide layout of suspended wood ceiling and T-rails coordinated with other trades that will penetrate the wood ceiling or interfere with the installation and recessed or surface mounted devices located within the ceiling panels. Indicate method of suspension where interference exists.
D. LEED Submittals: Provide documentation of how the requirements of Credit will be met:
   1. LEED v4.0: Suspended wood ceilings may contribute as required to the following LEED v4 credits: MR BPD&O - Sourcing of Raw Materials, MR BPD&O - Material Ingredients, EQ Low-Emitting Materials, EQ Minimum Acoustic Performance.
E. Selection Samples: For each finish product specified, two complete sets of color brochures representing the manufacturer's full range of available colors and patterns.
F. Verification Samples: For each finish product specified, two samples, minimum size 12 inches (305 mm) square, representing actual product, color, and patterns.
G. Manufacturer's Certificates: Certify products meet or exceed specified requirements.
H. Closeout Submittals: Provide manufacturer's maintenance instructions that include recommendations for periodic checking and adjustment and periodic cleaning and maintenance of all components.

1.09 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.
B. Installer Qualifications: Minimum 2 years documented experience installing projects of similar size and complexity.
C. Provide seismic design of suspended ceiling under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location as requried.
D. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
   1. Finish areas designated by Architect.
   2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
   3. Refinish mock-up area as required to produce acceptable work.
   4. Accepted mock-ups shall be comparison standard for remaining Work
E. Pre-Installation Conference: Convene minimum two weeks prior to starting work of this section. Agenda shall include project conditions, coordination with work of other trades, and layout of items that penetrate ceilings.

1.10 DELIVERY, STOARGE, AND HANDLING

A. Deliver material in the manufacturer's original, unopened, undamaged containers with identification labels intact.
B. Store products off the floor in manufacturer's unopened packaging protected from exposure to harmful environmental conditions and at temperature and humidity conditions as recommended by the manufacturer.
C. A minimum of 72 hours prior to ceiling installation, suspended wood ceilings shall be stored in the room in which they will be installed. Temperature and humidity of the room during this period shall closely approximate those conditions that will exist when the building is occupied.
D. Handle materials to avoid damage.

1.11 SEQUENCING

A. Ensure that locating templates and other information required for installation of products of this section are furnished to affected trades in time to prevent interruption of construction progress.
B. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

1.12 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.
B. Plenums have proper ventilation, especially in high moisture areas with no excessive buildup of heat in the ceiling areas.
C. Space shall be fully enclosed with all exterior windows and doors in place, glazed, and weather-stripped. Roof is to be watertight, and all wet trades' work is to be completed, and thoroughly dry.
D. Mechanical, electrical, and other utility services above the ceiling plane shall be completed. No materials should rest against, or wrap around, the ceiling suspension components or connecting hangers.
E. Install only when the temperature and humidity closely approximate the interior conditions that will exist when the building is occupied. Heating and cooling systems shall be operating before, during, and after installation, with the humidity of the interior spaces maintained between 25 and 55 percent, and a temperature between 60 to 90 degrees F.

1.13 COORDINATION

A. Coordinate layout and installation of the wood slats ceiling systems with other work penetrating the ceiling including light fixtures, HVAC equipment, and fire suppression system components.

1.14 EXTRA MATERIALS

A. See Section 01 60 00 - Product Requirements.
B. Deliver materials for Owner's use in maintenance.

1. Provide 2% percent of each type actually installed including suspension system components for use by owner in building maintenance and repair.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Panel Grille as manufactured by Rulon International or an approved equal systems by one of the following manufacturers:

1. Architectural Ceiling Group (ACGI)
2. Armstrong
3. 9wood
    a. Requests for substitutions will be considered in accordance with provisions of Section 01 25 00.

2.02 MATERIALS – GENERAL

A. Wood is a natural product that will undergo changes with variations in the environment. Therefore, all dimensional tolerances are plus or minus 1/8 inch (3 mm).

2.03 PANEL GRILL CEILING PANELS

A. General: Standard Panel Grilles are 1 foot (305 mm) wide and in nominal lengths of 2 feet (610 mm) to 10 feet (3048 mm) in 1 inch (305 mm) increments. Actual lengths are 1 inch (25 mm) shorter to allow for a reveal between panels. Wood strips are fabricated without finger-joints, and fastened together with black dowels or woodbackers, depending on panel design. Dowels or woodbackers are positioned 5-1/2 inches (140 mm) from the ends and 12 inches (305 mm) on center, with interconnecting male-to-female dowel attachment or with overlapping woodbackers, depending on panel design for support of the system.

1. Profiles: Panel Size: As indicated on the Drawings
    a. Size:
        (1) Number of Blades per foot: _2___
        (2) Blade Thickness: __1 5/16”__
        (3) Depth of the Blades: _5 ¼”___
2. Doweled and wood-backed Panel Grilles
    a. Grilles consist of individual wood strips assembled in 12 inch widths in lengths up to 10 feet. Wood strips are drilled 12 inches on center, beginning 5-1/2 inch from each end. Woodbackers are attached to the back of grilles 12 inches on center, beginning 5-1/2 inch from each end. Dowels and woodbackers are positioned perpendicular to the wood strips. Panel Grilles are 1 inch under an even foot length. Dowels and woodbackers are generally furnished black to be hidden from view. Woodbacker clips are used to snap the Panel Grilles into place.
3. Blade Design: Standard Square Cut
4. Wood Species:
    a. WD GRL-1
        (1) Refer to Finish Schedule
    b. WD GRL-2
        (1) Refer to Finish Schedule
5. Finish:
    a. WD-GRL-1
        (1) Baffle: Refer to Finish Schedule
    b. WD GRL-2
        (1) Baffle: Refer to Finish Schedule

2.04 ACCESSORIES

A. Woodbacker Clips: Clips are spring-steel with phosphate pre-treatment and corrosion-resistant coating and are attached by fitting around the woodbacker and attaching to the grid system.
B. Sound Attenuation: Provide a flexible fiberglass wrapped duct liner with reinforced coating system as shown in Drawings as part of this system
    1. Basis-of-Design: “Linacoustic RC insulation, by Johns Mansville or equal

2.05 SUSPENSION SYSTEMS

A. Main Tees: Standard heavy duty 15/16 inch (24 mm) T-rail specified in Section 09 51 00 – Suspended Acoustical Ceilings.
B. Hangers; shall Suspend ceiling panels from T-rail using torsion springs, C-hangers, or direct screw attachment, as recommended by the manufacturer.

2.06 FABRICATION

A. Edges, borders, and perimeter trims shall be indicated on the Drawings in accordance with the manufacturer's standard design details. All suspended wood ceiling products specified shall be supplied by the wood slat ceiling manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.
B. Verify that T-rail carriers specified in Section 09 22 26 - Suspension Systems are in place, suspended and leveled in a direction perpendicular to the wooden strip direction of the wood panels.
C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.
B. Work shall not begin until the space is fully enclosed and glazed and all wet work is completed and dried out to the satisfaction manufacturer.
C. Temperature shall be at least 65 degrees Fahrenheit during the installation and thereafter.
D. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions and in proper relationship with adjacent construction, including the following:
    1. Comply with ASTM C 636 and seismic design requirements indicated.
    2. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
    3. Additional Hanger Wires: Wrapped tightly 3 full turns to structure and component at locations where imposed loads could cause deflection exceeding 1/360 span or tolerances specified below.
B. Use a laser leveling device to lay out and install the perimeter trim as specified.
C. Suspend panels from the T-rail carrier system as indicated.
D. Make final adjustments to level or contours as required.

3.04 ADJUSTMENTS AND CLEANING

A. Clean exposed surfaces of ceiling panel in accordance with manufacturer's instructions.
B. Remove and replace panels and tiles, which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.05 PROTECTION

A. Protect installed products until completion of project.
B. Touch-up, repair or replace damaged products before Substantial Completion.

3.06 SCHEDULES

A. WD-GRL-1:
    1. Species: Refer to Finish Schedule
    2. Finish: Refer to Finish Schedule
    3. Wood Backing, Dowels and Wood Backer Clips: Refer to Finish Schedule
B. WD-GRL-2:
    1. Species: Refer to Finish Schedule
    2. Finish: Refer to Finish Schedule
    3. Wood Backing, Dowels and Wood Backer Clips: Refer to Finish Schedule

END OF SECTION 09 54 26

SECTION 09 65 13 – RESILIENT BASE AND ACCESSORIES

PART 1 - PROVIDE resilient base, where noted on the drawings and as specified herein.

1.01 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.02 LEED PERFORMANCE REQUIREMENTS

A. All hard flooring components must be FloorScore Certified.
B. VOC Emissions Evaluation: For adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.
D. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan
E. Purchase product that has a Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, meets ANSI ANSI/BIFMA e3 Furniture Sustainability Standard, declared Manufacturer Inventory (MI), or Product Lens Certification.

1.03 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Provide Floorscore Certificates for all flooring components.
C. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant
E. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.
F. Provide manufacturers Health Product Declaration (HPD), Cradle to Cradle certificate, Declare label, ANSI ANSI/BIFMA e3 Furniture Sustainability Standard documentation, Manufacturer Inventory (MI) documentation, or Product Lens Certification, as applicable.

1. FIRE PERFORMANCE CHARACTERISTICS: Provide resilient flooring materials meeting the following requirements as tested by UL or other testing agency acceptable to AHJ representatives, in accordance with the following ASTM requirements:
2. CRITICAL RADIANT FLUX: 0.45 watts per square CM or more per ASTM E 648.
3. SMOKE DENSITY: less than 450 per ASTM E 662.

1.04 PRODUCT DATA SUBMITTAL: Submit sample, specifications, installation instructions, and general recommendations from the manufacturer.

PART 2 - PRODUCTS

2.01 RESILIENT BASE:

A. 4" high rubber meeting ASTM F-1861, Group 1 –Type TP (thermoplastic rubber) with color uniform throughout the entire thickness of the material, flat, topset, type as required for compatibility with flooring material
B. Base color as selected by Architect from manufacturer's full range of color options and as called for in the Finish Schedule, and as manufactured by **ALL** the following manufacturers:

1. Basis of Design:

a. Johnsonite Monument Rubber Wall Base, by Johnson Rubber Co, Inc.
b. VPI Rubber Wall Base, by VPI Flooring Corp.

c. Burkebase Premium TS Molded Wall Base, by Mannington Commercial
d. Approved Manufacturer and Product substitution requests will be as called for in Section 01 25 00 and must include color matched samples for selected colors as called for in the Finish Schedule and to include any other specifications criteria called for in this Section.

2. All resilient base styles shall be Straight with no cove and as indicated in the Finish Schedule.

2.02 RESILIENT STAIR ACCESSORIES:

A. Rubber Stair Treads shall be homogeneous in construction of first quality materials, properly vulcanized, and shall be smooth and free of imperfections which detract from its appearance and contain no asbestos fiber. The Rubber Stair Tread shall conform fully to all the requirements of Standard Specification ASTM F-2169, Type TS.
B. Base color as noted on Finish Legend or as selected by the Architect from manufacturer's full range of color options:
1. Basis of Design:
a. Roppe Corporation, USA
b. Nosing Type: #15 double flange carpet stair nosing with smooth surface and 3/8" bugging gauge

2.03 ADHESIVES (Cements): Latex water-resistant type or as recommended by recommended by base manufacturer to suit resilient base products and substrate conditions indicated.

PART 3 - EXECUTION

3.01 EXAMINE AREAS where installation of resilient base will occur, with Installer present, to verify that substrates and conditions are satisfactory for resilient base installation and comply with tile manufacturer's requirements and those specified in this Section. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARE SUBSTRATES according to Manufacturer's instructions to ensure proper adhesion of resilient wall base.

3.03 FILL CRACKS, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

3.04 MOVE RESILIENT PRODUCTS AND INSTALLATION MATERIALS into spaces where they will be installed at least 48-hours in advance of installation.

A. Vacuum clean substrates to be covered by resilient products immediately before installation.

3.05 INSTALLATION OF BASE: Apply wall base to walls, columns, pilasters, casework and other permanent fixtures in rooms or areas where base is required as shown on Drawings and as follows:

A. Install base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.
B. Do not stretch resilient base during installation.
C. Inside and Outside Corners:
1. Manufactured or Pre-formed Corners:
a. Install manufactured or pre-formed corners before installing straight pieces if available.
2. Job-Formed corners:
a. Outside Corners: Form by bending without producing discoloration (whitening) at bends.
b. Inside Corners: Butt one piece to corner and then carefully scribe the next piece to fit without any gaps.
D. Tightly bond base to substrate throughout length of each piece.

3.06 INITIAL CLEANING: Immediately after completing tile installation remove visible adhesive and other surface blemishes using cleaner recommended by manufacturers. Remove any excess adhesive or other surface blemishes, using appropriate cleaner recommended by manufacturer.

END OF SECTION 09 65 13

SECTION 09 66 23 – THIN SET EPOXY TERRAZZO FLOORING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

1. Thin-set epoxy terrazzo flooring including preparation of substrates.
2. Thin-set precast epoxy terrazzo tread or tread & riser units.
3. Thin-set precast epoxy terrazzo wall base units.
4. Related accessories.

B. Related Sections:

1. Section 03300, Cast In Place Concrete.
2. Section 04200, Unit Masonry.
3. Section 05510, Metal Stairs.
4. Section 07260, Under-slab Vapor Retarder/Barrier.
5. Section 07900, Joint Sealants.
6. Section 09900, Painting.
7. PREINSTALLATION MEETINGS

1.03 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: Resinous Flooring products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For resinous flooring products, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Paints and Coatings Applications, as per the California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings or South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints and coatings.

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 -2010 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealants.

1.05 SUBMITTALS, SHOP DRAWINGS , AND SAMPLES

A. Product Data: For each type of product.

B. Include terrazzo installation requirements. Include plans, elevations, sections, component details and attachments to other work. Show layout of the following:

1. Divider strips.
2. Control and expansion joint strips.
3. Base and border strips.
4. Abrasive strips.
5. Stair treads, risers and landings.
6. Pre-cast terrazzo jointing and edge configurations including anchorage details.
7. Terrazzo patterns.

C. Samples for initial selection from Terrazzo & Marble Supply color plates, or approved equal, showing the full range of colors and patterns available for each terrazzo type indicated.

D. Samples for Verification: Match architect's samples for each type, material, color and pattern of terrazzo and accessory required showing the full range of color, texture and pattern variations expected. Label each terrazzo sample to identify Terroxy Resin System's, or approved equal, matrix color and aggregate types, sizes and

proportions. Prepare samples of same thickness and from same material to be used for the work in size indicated below:

1. Epoxy terrazzo: minimum 6” x 6” (152.4 mm x 152.4 mm) sample of each color and type of terrazzo.
2. Precast epoxy terrazzo: minimum 6” x 6” (152.4 mm x 152.4 mm) sample of each color and type of terrazzo.
3. Accessories: 6” length (152.4 mm) of each kind of divider strip, stop strip and control joint strip required.
4. Stair Treads: 12” length (304.8 mm) wide sample combination tread/riser with cast-in nosing.

E. MANUFACTURER EXPERIENCE

1. Submit proof of associate membership to NTMA.
2. Furnish a list of at least five (5) epoxy terrazzo projects using material being submitted for this project installed during the last five (5) years of the same scope, complexity and at least 50 percent of the square footage.
3. Engage an epoxy manufacturer with at least ten (10) years experience.

F. QUALIFICATION DATA FOR QUALIFIED INSTALLER

1. Submit proof of contractor membership in NTMA.
2. Furnish a list of at least five (5) epoxy terrazzo projects using material being submitted for this project installed during the last five (5) years of the same scope, complexity and at least 50 percent of the square footage.

G. MATERIAL TEST REPORTS

1. Provide test results for moisture and/or relative humidity of substrate prior to installation.

H. MAINTANENCE DATA

1. Submit 10 copies of NTMA maintenance recommendations and copies of manufacturer’s instructions.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who is acceptable to architect and epoxy terrazzo manufacturer to install manufacturer’s products.

a. Engage a terrazzo contractor with at least five (5) years of satisfactory experience in installation of epoxy terrazzo. Terrazzo contractor shall demonstrate experience during last five (5) years of at least five (5) projects of comparable scope and complexity of at least 50 percent of the total square footage of this project
b. Engage an installer who is a contractor member of NTMA.

B. Source Limitations:

a. Obtain primary Epoxy Terrazzo Flooring System materials including moisture treatment, membranes, primers, resins and hardening agents from a single manufacturer with proof of NTMA associate membership.
b. Obtain aggregates, divider strips, sealers and cleaners from source recommended by primary materials manufacturer.
c. Engage an epoxy manufacturer with at least ten (10) years experience as a NTMA associate member.

C. Pre-installation Conference: Conduct conference at project site to comply with requirements in Section 01200

1. – Project Meetings. Review methods and procedures related to terrazzo including, but not limited to, the following:

a. Inspect and discuss installation procedures, joint details, job site conditions, substrate specification, vapor barrier details and coordination with other trades.
b. Review and finalize construction schedule and verify availability of materials, installer’s personnel, equipment and facilities needed to make progress and avoid delays.
c. Review special terrazzo designs and patterns.
d. Review plans for concrete curing and site drying to enable timely achievement of suitable slab moisture conditions.

D. NTMA Standards: Comply with NTMA’s “Terrazzo Specifications and Design Guide” and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

E. Mock-ups: Build mock-ups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mock-ups for terrazzo including accessories.

(1) Size: Minimum 100ft^2 (9.3m^2) of typical poured-in-place flooring and base condition for each color and pattern in locations directed by architect.

2. Approved mockups may become part of the completed work if undisturbed at time of substantial completion.

1.07 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to project site in supplier’s original wrappings and containers labeled with source’s or manufacturer’s name, material or product brand name and lot number if any.

B. Store materials in their original, undamaged packages and containers inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures and humidity.

1. Storage temperatures should be between 50ºF to 90ºF (10.0ºC to 32.2ºC).

1.08 PROJECT CONDITIONS

A. Prior to surface preparation, terrazzo contractor shall:

1. Evaluate slab condition, including slab moisture content and extent of repairs required, if any.

2. Maintain the ambient room and floor temperature at 60-90ºF (15.5-32.2ºC)or above for a period extending 72 hours before, during and after floor installation. Concrete to receive epoxy terrazzo shall have cured for at least 28 days and be free of all curing compounds. Test concrete substrate to determine acceptable moisture levels prior to installation. Testing should be conducted according to ASTM F2170 (determining relative humidity in concrete slabs using in situ probes). Proceed with installation only after substrates have a maximum relative humidity measurement reading less than 80%. If relative humidity measurement reading is greater than or equal to 80%, moisture vaport treatment is required. Apply to terrazzo substrates according to Manufacturer Data Sheets. An effective in situ probe for relative humidity testing is the RH BluePeg.

B. Prior to and during each day of installation, the terrazzo contractor shall verify that the dew point is at least 5ºF (-15ºC) less than the slab and air temperature.

C. Acceptable Substrates:

1. Level tolerance: Concrete sub-floor shall be level with a maximum variation from level of 1/4" in 10 feet (6.4 mm in 3.1m). Any irregularity of the surface requiring patching and/or leveling shall be done using manufacturer fills and selected aggregates as recommended by the Manufacturer's system.
2. Concrete floor shall be prepared mechanically by shot blasting in accordance with ICRI Guideline No. 03732. Specifically, surface preparation results should achieve a CSP3-CSP5 profile.
3. A light steel trowel is needed to provide an acceptable surface with minimum laitance.
4. Concrete shall be cured a minimum of 28 days. No curing agents are to be used in areas to receive terrazzo.
5. Concrete slab on grade shall have an efficient moisture vapor barrier (suggested minimum: 15 mils (.4 mm thickness)) directly under the concrete slab. Reference ASTM Methods E1745 Class A and installed in accordance with E1643. Moisture barrier shall NOT be punctured.
6. Saw cutting of control joints must be done between 12 and 24 hours after placement of the structural concrete and at a frequency compatible to ACI recommendations.

D. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.

E. Provide protection from other trades prior to final acceptance by owner.

PART 2 - PRODUCTS

2.01 EPOXY TERRAZZO

A. Products: Systems Overview: The basis of design is Terroxy Resin Systems Epoxy Matrix by Terrazzo & Marble Supply Companies, Wheeling, IL (www.tmsupply.com).

1. Substitutions approved per Section 01 25 00, manufacturer's ability to meet all the requirements herein and ability to provide color matched samples matching basis-of-design samples.

B. Materials:

1. Primer: Terroxy Primer or Terroxy Moisture Vapor Treatment (for slabs on-grade, light weight concrete and green concrete).
   a. Physical properties of moisture mitigating primer shall have a maximum of 0.3 perms with 100% RH.
2. Flexible Reinforcing Membrane: Terroxy Iso-Crack Epoxy Membrane, for substrate crack preparation and reflective crack reduction.
   a. Reinforcement: Terroxy fiberglass scrim (optional).
3. Epoxy Matrix: Terroxy Epoxy Matrix and in color required for mix indicated.
   a. Physical properties without aggregates. All specimens cured for 7 days at 73-77ºF (22.8-25ºC) and 50 percent plus or minus 2 percent RH. This product shall meet the following requirements:

Property	Test Method	NTMA (TTMAC - Canada)	Terroxy Thin-set Epoxy Terrazzo
Hardness	ASTM D-2240 using Shore-D	60-85	75-85
Tensile Strength	ASTM D-638	3,000 a)	4,800 psi min. (33.1 MPa)
Compressive Strength	ASTM D-695 Specimen B cylinde	(68.9 MPa)	12,000 psi min. (82.7 MPa)
Flexural Strength	ASTM D-790	cified	4,500 psi min. (31.7 MPa)
Chemical Resistance	ASTM D-1308 seven room temperat immersion	No deleterious effects: • Distilled Water • Mineral Oil • Isopropanol • Ethanol • 0.025 Detergent Solution • 1% Soap Solution • 10% Sodium Hydroxide • 10% Hydrochloric Acid • 30% Sulfuric Acid • 5% Acetic Acid	No deleterious effects: • Distilled Water • Mineral Oil • Isopropanol • Ethanol • 0.025 Detergent Solution • 1% Soap Solution • 10% Sodium Hydroxide • 10% Hydrochloric Acid • 30% Sulfuric Acid • 5% Acetic Acid

FINAL MATRIX T.B.D.

b. Physical properties with aggregates. For Epoxy Matrix blended with three volumes of Valders marble blended 60% #1 chip and 40% #0 chip, ground and grouted with epoxy resin according to Installation Specifications, finishing to a nominal 3/8" (9.5 mm) thickness. All specimens cured for 7 days at 73-77ºF (22.8-25ºC) and 50 percent RH plus or minus 2 percent RH. This finished Epoxy Matrix shall meet the following requirements:

c.

Property	Test Method	NTMA (TTMAC - Canada) Requirements	Terroxy Thin-set Epoxy Terrazzo Typical Results
Flammability	ASTM D-635	Self extinguishing, extent of burning 0.25" (6.4 mm) max.	Self extinguishing, extent of burning 0.25" (6.4 mm) max
Thermal Coefficient of Linear Expansion	ASTM D-696	25x10-6 inches per inch per deg to 140ºF (11.4x10-7 cm	x10-6 inches per inch per degrees 40ºF (11.4x10-7 cm per cm per ºC to 60ºC
Bond Strength	ACI COMM 403, Bulletin 59-43 (pages 1139 1141)	300 oncrete	300 psi (2.1 MPa) -100% concrete failure
Critical Radiant Flux	ASTM		1.0 watts/cm²
Fire Rating - Test for Surface Burning Characteristics of Flooring	CAN/ULC S102.2-10 Tunnel Test		Smoke Developed Classification (SDC) - 175 Flame Spread Rating (FSR) - 5

FINAL MATRIX T.B.D.

4. Aggregates complying with NTMA gradation standards for mix indicated and containing no deleterious or foreign matter.
   a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
   b. 24-Hour Absorption Rate: Less than 0.74 percent.
   c. Dust Content: Less than 1.0 percent by weight.
   d. Pre-Consumer or Post-Consumer Recycled Content: <Insert Value> percent.
5. Finishing Grout: Terroxy Epoxy Matrix or Terroxy Clear Resin with a broadcast of filler as recommended by Terroxy Resin Systems.

C. Mix: Comply with NTMA's (TTMAC - Canada)"Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and aggregate proportions and mixing.
   1. Color and pattern schedule: Where the following designations are indicated, provide specified terrazzo matrices matching architect's samples:
      a. TRZ-1: Refer to Drawings

2.02 STRIP MATERIALS

A. Thin-set Divider Strips: L-type.
   1. Material selected from Domus Terrazzo full range.
   2. Guide for commonly used L-type divider strips for Thin-set Epoxy Terrazzo Systems:

System Height	Strip Height	Strip Width
3/8" System	3/8"	16 gauge 1/8" 1/4"

System Height	Strip Height	Strip Width
9.5 mm System	9.5 mm	16 gauge 3.2 mm 6.4 mm

2.03 MISCELLAENOUS ACCESSORES

A. Strip Adhesive: 100% solids epoxy resin adhesive recommended by Terroxy Resin Systems.
   1. Use adhesive that has a VOC content of 50g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Construction joints, contraction joints (Saw Cuts), isolation joints and cracks shall be detailed in accordance with NTMA technical bulletin T24

C. Patching and Fill Material: Terroxy Fill and selected aggregates as recommended by Terroxy Resin Systems.

D. Joint Compound: Terroxy Joint Filler Hardener to be used with Terroxy Resin Matrix Part A. Color to be selected by architect to match/compliment terrazzo flooring.

E. Cleaner: A neutral cleaner with pH factor between 7 & 10 specifically designed for terrazzo.
F. Surface Finish System: Level of polish to be specified by architect in accordance with desired appearance and level of reflectivity.
G. Sealer: Slip and stain-resistant sealer that is chemically neutral with a pH factor between 7 and 10, that meets a standard coefficient of friction of 0.5 or higher, as measured by the James Machine (ASTM D-2047 Test Method), does not affect physical properties of terrazzo and complies with NTMA's (TTMAC - Canada)" Terrazzo Specifications and Design Guide."
    1. T-Rx, high performance, high gloss, chemical-resistant urethane sealer.

2.04 PRECAST TERRAZO

A. Precast Terrazzo Units: Precast epoxy terrazzo stair tread units, and other locations as indicated in Drawings.
    1. All precast components to utilize products from single source manufacturer for fabrication to ensure color consistency with the poured in place flooring.
    2. Manufacturers: Subject to compliance with requirements, provided products acceptable to architect.
    3. Basis-of-Design Manufacturer: Terroxy Resin Systems or approved equal.
B. Terrazzo Cove Base:
    1. Terroxy Resin Systems Epoxy Matrix poured-in-place cover base with 3/8" (9.5mm) radius, 3/8", 4" (101.2 mm) high
C. Precast Terrazzo Stair Treads: Thickness indicated with cast-in nosing.
    1. Color and Pattern: Match architect's approved Terroxy Resin Systems Sample

PART 3 - EXECUTION

3.01

A. Examine substrates and areas, with Terrazzo Contractor present, for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Proceed with installation only after unsatisfactory conditions, including level tolerances, have been corrected.

3.02 PREPARATION

A. Clean substrates of substances, including oil, grease and curing compounds, that might impair terrazzo bond. Provide clean, dry and neutral substrate for terrazzo application.

B. Concrete Slabs:
    1. Provide sound concrete surface free of laitance, glaze, efflorescence, curing compounds, form- release agents, dust, dirt, grease, oil and other contaminants incompatible with terrazzo.
        a. Prepare concrete mechanically by shot blasting. Surface preparation results should achieve a CSP3-CSP5 profile according to International Concrete Repair Institute Guideline No. 03732.
        b. Repair or level damaged and deteriorated concrete according to Terroxy Resin Systems Technical Bulletin 008 Substrate Leveling Requirements for Terroxy Thin-set epoxy terrazzo.
        c. Repair cracks and non-expansion joints greater than 1/16" (1.6mm) wide according to NTMA Technical Bulletin T26 Crack Detailing and Joint Treatments for Terroxy Resin Thin-set epoxy terrazzo.
    2. Verify that concrete substrates are visibly dry and free of moisture.
    3. Moisture Testing:
        a. Test for moisture according to ASTM F2170 (determining relative humidity in concrete slabs using in situ probes). An effective in situ probe for relative humidity testing is the Blue Peg available from Terrazzo & Marble Supply.
        b. Proceed with installation only after substrates have a maximum relative humidity measurement reading less than 80%. If relative humidity measurement reading is greater than or equal to 80%, Terroxy Moisture Vapor Treatment is required. Apply to terrazzo substrates according to Terroxy Resin Systems Moisture Vapor Treatment Product Data Sheet.
C. Protect other work from dust generated by grinding operations. Control dust to prevent air pollution and comply with environmental protection regulations.
    1. Erect and maintain temporary enclosures and other suitable methods to limit dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.03 EPOXY TERRAZZO INSTALLATION

A. General:
    1. Comply with NTMA's written recommendations for terrazzo and accessory installation.
    2. Place, rough grind, grout, cure grout, fine grind and finish terrazzo according to Terroxy Resin Systems Epoxy Matrix Product Data Sheet and NTMA's (TTMAC - Canada) "Terrazzo Specifications and Design Guide."
    3. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
    4. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
B. Thickness: [3/8" (9.5 mm)]

C. Flexible Reinforcing Membrane
   1. Membrane application for extensive cracking or crack prevention. Route out all cracks and fill with primer. Apply iso-crack epoxy membrane (spread at 40 mils = 1.0 mm thickness) over prepared substrate to produce full substrate coverage in areas to receive terrazzo.

D. Primer: Apply to terrazzo substrates according to Manufacturer's Product Data Sheet.

E. Strip Materials:
   1. Divider and Accessory Strips:
      a. Install strips in adhesive setting bed without voids below strips.
      b. Construction joints, contraction joints (Saw Cuts), isolation joints and cracks shall be detailed in accordance with NTMA technical bulletin T24.

F. Placing Terrazzo:
   1. Mix epoxy matrix with chips and fillers in ratios directed by Manufacturer.
   2. Trowel apply terrazzo mixture over epoxy primer to provide a dense flat surface to top of divider strips. Allow to cure per Manufacturer's recommendations before rough grinding.

G. Rough Grinding: Grind with 24 grit silicon carbide or 24 grit turbo diamonds until all terrazzo strips and marble chips are uniformly exposed.

H. Grouting:
   1. Cleanse floor with clean water and rinse.
   2. Remove excess rinse water by wet vacuum, dry and fill voids with Terroxy Resin Systems Epoxy Matrix or Clear Resin with a broadcast of filler.
   3. Allow grout to cure. Grout may be left on terrazzo until other trades work is completed.

I. Polishing: Polish with 120 grit T&M Resin Pads or equivalent stones until all grout is removed from surface. Produce surface with a minimum of 70 percent aggregate exposure.

3.04 PRECAST TERRAZZO INSTALLATION

A. Install precast units using method recommended by NTMA (TTMAC - Canada) and manufacturer unless otherwise indicated.

B. Seal joints between units with joint sealants.

3.05 CLEANING AND PROTECTION

A. Cleaning: Remove grinding dust from installation and wash all surfaces with a neutral cleaner with a pH factor between 7-10. .

B. Sealing: Apply TRx sealer that is chemically neutral with a pH factor between 7 and 10, that meets a standard coefficient of friction of 0.5 or higher, as measured by the James Machine (ASTM D-2047 Test Method), does not affect physical properties of terrazzo and complies with NTMA's

C. Protection: Upon completion, the work shall be ready for final inspection and acceptance by the owner or his agent. Provide final protection and maintain conditions, in a manner acceptable to terrazzo contractor, that ensure terrazzo is without damage or deterioration.

END OF SECTION 09 66 23

SECTION 09 68 00 – CARPETING

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide carpeting, and all accessory materials, where indicated in the Drawings, as required herein, and as necessary for a complete and proper installation. The Work includes leveling and patching of concrete floors, procurement and installation of carpeting, providing carpet cushion and adhesive for double-stick glue-down installation, and providing associated carpet accessories.

1.02 REFERENCED STANDARD: "Carpet Specifiers' Handbook" by The Carpet and Rug Institute; complete with recommendations which can be reasonably applied to types of carpeting work required.

1.03 RELATED SECTIONS

A. Section 018113 Certification Requirements.

1.04 LEED PERFORMANCE REQUIREMENTS

A. All flooring components must be CRI Green Label Plus.
B. VOC Emissions Evaluation: For adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.
D. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.

1.05 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. Provide CRI Green Label Plus Certificates for all flooring components.
C. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
D. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant
E. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan..

PART 2 - PRODUCTS

2.01 CARPET MATERIAL: Refer to Drawings for manufacturers, product/series, and colors

A. Substitutions for products and manufacturers called for in Drawings approved only per Section 01 25 00.

2.02 CARPET-TILE MARKING: Mark each carpet tile according to style, color, pattern, pile direction and dye lot. Registration shall be precise so that no pattern mismatch is evident after installation. Definition of pattern shall be sharp with no halo or bleeding of color; match definition quality of accepted samples. Consistency shall be such that any tile shall be interchangeable with any other tile, within a dyelot, with no visual difference in color of base shade or overprint.

2.03 RELATED CARPET ACCESSORIES:

A. RESILIENT CARPET EDGE: Refer to Drawings and Specifications Section 09 65 13 for manufacturers, product/series, and colors.
   1. Substitutions for products and manufacturers called for in Drawings approved only per Section 01 25 00.
B. METAL CARPET EDGE: Refer to Drawings for manufacturers, product/series, and colors.
   1. Substitutions for products and manufacturers called for in Drawings approved only per Section 01 25 00.
C. LEVELING COMPOUND: Latex type as recommended by carpet manufacturer compatible with adhesive and curing/sealing compound on concrete.

D. INSTALLATION ADHESIVE: Water-resistant, non-staining as recommended by carpet manufacturer, which complies with flammability requirements for installed carpet.
E. CARPET CUSHION ADHESIVE: Use adhesives for carpet pads that have a VOC content less than 50 g/L (per 40 CFR 59, Subpart D - EPA Method 24).
   1. Double-stick Carpet Adhesive (except as otherwise required by manufacturer):
      a. “SS-5” ("Safe-Set"), by Chicago Adhesive Products, Co. (800-621-0220)
      b. “Parabond” Dubl-Stik DS-902, by Para-Chem, Inc. (800-763-7272)
      c. “ECO 220”; by Mapei Corp. (800-426-2734)
F. SEAMING CEMENT: Hot-melt seaming adhesive or similar product recommended by carpet manufacturer, for taping seams and butting cut edges at backing to form secure seams and prevent pile loss at seams.
G. MISCELLANEOUS MATERIALS: As recommended by manufacturers of carpet, cushions and other carpeting products; selected by Installer to meet project circumstances and requirements.

PART 3 - INSTALLATION

3.01 PRE-INSTALLATION REQUIREMENTS AND PREPARATORY WORK:

A. MEASURE CAREFULLY AND CHECK DIMENSIONS and other field conditions to insure proper fit in the areas designated. Examine areas and conditions under which the Work of this Section will be performed. Do not proceed if conditions exist that are detrimental to proper and timely completion. Commencement of this Work will be construed as acceptance of existing conditions or prior work by others, and assumption of responsibility for satisfactory installation.
B. EXAMINE CONCRETE SUBFLOORS to verify that concrete slabs comply with ASTM F 710 and the following:
   1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet[cushion] manufacturer.
   2. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
C. EXAMINE WOOD SUBFLOORS to verify that the underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.
D. SURFACE PREPARATION AND PATCHING: All surfaces to receive carpet shall be clean and dry. Cracks 1/16" or more, holes, unevenness and roughness must be filled, leveled and made smooth with a compatible latex floor patching compound. Prior to filling, the floor must be swept clean. Feather a minimum of 4'-0" where filling or leveling is required. After filling allow filler to dry. Damp mop the floor with warm water and allow to dry. Vacuum after mopping.

3.02 GENERAL INSTALLATION: Comply with manufacturer's recommendations for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. Provide cut-outs where required, and bind cut edges properly where not concealed by protective edge guards or overlapping flanges. Extend carpet under open-bottomed obstructions and under removable flanges and furnishings, and into alcoves and closets of each space. Install carpet edge guard where edge of carpet is exposed; and anchor guards to substrate. At doors, center seams under doors; do not place seams in traffic direction at doorways. Do not bridge building expansion joints with continuous carpeting – provide for building movement.

A. VACUUM FLOORS again immediately before installation of carpeting. Check concrete surfaces to insure that no "dusting" through installed carpet will occur.
B. GLUE-DOWN INSTALLATION:
   1. COMPLY WITH CRI 104 and the carpet and carpet cushion manufacturers' written installation instructions for the following:
      a. Direct-Glue-Down Installation: Comply with CRI 104, Section 9, "Direct Glue-Down Installation."
      b. Double-Glue-Down Installation: Comply with CRI 104, Section 10, "Double Glue-Down Installation."
      c. Stretch-in Installation: Comply with CRI 104, Section 12, "Stretch-in Installation."
      d. Stair Installation: Comply with CRI 104, Section 13, "Carpet on Stairs" for direct glue-down installation.
C. SEAM LOCATIONS: Layout cushion seams to be at right angle to carpet seams, or if not practical, shift cushion so that cushion joints are not less than one (1) foot from carpet seams. All cushion joints must be taped. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.
D. APPLY ADHESIVE UNIFORMLY to substrate in accordance with manufacturer's instructions. Butt carpet edges tightly together to form seams without gaps. Roll entire carpet area lightly to eliminate air pockets and ensure uniform bond. Remove any adhesive promptly from face of carpet by method which will not damage carpet face.

3.03 CARPET-TILE INSTALLATION:

A. CUT AND INSTALL CARPET TILE in accordance with the manufacturer's recommendation, using the tools designed for the carpet being installed. Butt edges together with the proper pressure to produce the tightest joint possible without distortion. Align all carpet tiles where they meet and use leveling compound where necessary. Within each continuous carpet area, install tiles from same dye lot. After installation, any carpet tiles within a continuous carpet area exhibiting a difference in appearance due to color or light reflectance variation will be rejected.
B. INSTALL ALL CARPET TILE with pile lay in the same direction – with the arrows in one direction, as applicable.
C. TOLERANCE: The accumulated space gained as a result of loose joints shall not be greater than 1/4 inch measured over eleven (11) tiles.
D. LOCATE central point of the room in both width and length measured from the principle walls. Lay out a grid system parallel to the partitions for control grid anchor lines. Lines of the control grid system shall be at right angles and

shall be checked as specified by the carpet manufacturer's installation requirements. Spacing of the control grid system shall be determined by the carpet manufacturer for the use expected in the carpet area. Carpet tiles shall be installed with adhesive at the control grid anchor lines as recommended by the carpet manufacturer showing recommended control grid anchor areas and carpet starting point (minimum at all column center lines).

E. INSTALL CARPET TILES in the following locations with 100% adhesive coverage:
   1. Perimeters of spaces.
   2. All cut tiles.
F. APPLY ADHESIVE STRIP along each side of feeder duct covers to anchor carpet tiles adjacent to cover plates.
G. SPREAD ADHESIVE using a roller with 1 inch nap or with trowel as applicable.
H. CHECK TIGHTNESS of the joints as work progresses and adjust as necessary. Align and butt joints according to carpet manufacturer's instructions.

3.04 CLEANING AND PROTECTION:

A. ON COMPLETION of the installation in each area, all dirt, carpet scraps, etc., must be removed from the surface of the carpet. Any soiling spots or excessive adhesive on the carpet shall be removed with the proper spot remover.
B. DO NOT walk on or move furniture onto carpet surface until installed area has all carpet tiles anchored at the perimeter and control grid lines.
C. DO NOT allow construction traffic, other than as may be required to fit up specific carpeted areas, to traverse the completed work.
D. REMOVE DEBRIS, sorting pieces to be saved from scraps to be disposed of.
E. VACUUM CARPET using commercial machine with face-beater element. Remove spots and replace carpet where spots cannot be removed.
F. PROTECT CARPETING against damage during construction. Cover with 6-mil thick polyethylene covering with taped joints during the construction period, wherever protection is required, so that carpet will be without any indication of deterioration, wear, or damage at the time of acceptance. Damaged carpeting will be rejected. As the carpet is laid, remove all trimmings, excess pieces of carpet and laying materials from each area as it is completed.
G. PROTECT PATHS used for installation of fixtures and furnishings with tempered hardboard panels.
H. MAINTENANCE MATERIALS: Deliver specified extra stock and usable scraps of carpet to Owner's designated storage space, properly packaged (paper wrapped) and identified. Dispose of smaller pieces as "construction waste".
I. REMOVE debris, and sort pieces to be saved from scraps to be disposed of.
J. IMMEDIATELY PRIOR TO SUBSTANTIAL COMPLETION, vacuum carpet using commercial pile lifter of type recommended by carpet manufacturer. Remove spots and replace carpet where spots cannot be removed. Remove rejected carpeting and replace with new carpeting.

END OF SECTION 09 68 00

SECTION 09 72 00 – WALLCOVERING AND WALL GRAPHICS

PART 1 - GENERAL

1.01 THE WORK INCLUDES preparation of wall surfaces for installation of wallcovering, and installation of wallcovering materials, as specified herein and as needed for a complete and proper installation.

1.02 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants. .

1.03 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.04 SUBMITTALS

A. SUBMIT PRODUCT DATA to include manufacturer's specifications and installation instructions for wallcovering and related items specified.

B. SUBMIT SAMPLES of each type of wallcovering required, in each specified pattern, color and construction.

C. SUBMIT MAINTENANCE INSTRUCTIONS as part of Operations and Maintenance manuals, including information needed for removal of common stains from each type of wallcovering required. Refer to Division-1 Sections for requirements of Operations and Maintenance Manuals.

1.05 DELIVER materials to project site in original packages or containers clearly labeled to identify manufacturer, brand name, quality or grade, and fire hazard classification.

1.06 EXTRA STOCK: Provide not less than 6 linear yards of each type of wallcovering installed. Furnish replacement materials from same production run as materials installed. Deliver extra stock and usable scraps of wallcovering to Owner's designated storage space, properly packaged and identified. Dispose of small pieces as "construction waste".

PART 2 - PRODUCTS

2.01 WALL COVERING MATERIALS: Refer to Drawings for manufacturer, materials and colors to be provided.

2.02 ADHESIVE: Provide manufacturer's recommended adhesive, primer, and/or sealer, produced expressively for use with selected wallcovering on existing substrate. Provide materials which are mildew resistant and non-staining to wallcovering.

PART 3 - EXECUTION

3.01 EXAMINATION & INSPECTION: Examine areas and conditions under which the Work of this Section will be performed. Do not proceed if conditions exist that are detrimental to proper and timely completion. Commencement of this Work will be construed as acceptance of existing conditions or prior work by others, and assumption of responsibility for satisfactory installation.

3.02 PREPARATION: Acclimatize wall covering materials by removing from packaging in area of installation not less than 24 hours before application. Remove switchplates, wall plates, and surface-mounted fixtures in areas where wallcovering is to be applied.

3.03 PRIME AND SEAL substrates in accordance with wall covering manufacturer's recommendations for type of substrate. Apply surface sealer to gypsum drywall which will permit subsequent removal of wall covering without damage to paper facing.

3.04 WALL COVERING INSTALLATION: Place wallcovering panels consecutively in order cut from rolls, including filling of spaces above or below openings. Hang by reversing alternate strips if necessary, except on match patterns. Apply adhesive to back of wallcovering and place in accordance with manufacturer's instructions. Install seams plumb, and at least 6" away from corners. Horizontal seams are not permitted. Overlap seams and double-cut to assure tight closure. Roll, brush, or use broad knife to remove air bubbles, wrinkles, blisters, and other defects. Cut wallcovering evenly to edges of wall penetrations. Trim salvages as required to assure color uniformity and pattern match.

3.05 CLEAN-UP: Remove excess adhesive along finished seams while it is still wet using warm water and clean sponge, and wipe dry. Replace removed plates and fixtures; verify cut edges of wall coverings and completely concealed. Remove surplus materials, rubbish, and debris resulting from wall covering installation upon completion of Work, and leave areas of installation in neat clean condition.

END OF SECTION 09 72 00

SECTION 09 84 00 – ACOUSTICAL WALL TREATMENT

PART 1 - GENERAL

1.01 PROVIDE Acoustical Wall Panels as shown on the drawings, as specified herein, and as needed to meet the requirements of the construction indicated in the Contract Documents.

1.01 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For adhesives and sealants used for installation, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

1.02 LEED DOCUMENTATION REQUIREMENTS

A. Complete the provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.03 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of panel edge, core material, and mounting indicated.

B. SUBMIT SHOP DRAWINGS with dimensioned plans and elevations and large scale details to show the scope and extent of the Work. Indicate mounting details and devices; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Include elevations showing panel sizes and direction of fabric weave and pattern matching. Indicate panel edge and core materials. Show intersections with wall base, door / storefront / window frames, electrical outlets, switches, and other adjacent work

C. SAMPLES FOR VERIFICATION: Prepare 12 x 12 inch assembled sample panels of each color or panel type to be provided, complete with fabric finish(s), core material with edge treatment, and mounting devices to be used.

D. SUBMIT MAINTENANCE DATA to include in maintenance manuals, with fabric manufacturers' written cleaning and stain-removal recommendations.

1.04 QUALITY ASSURANCE

A. MANUFACTURERS QUALIFICATIONS

(1) Materials and systems shall be manufactured by a company continuously and regularly employed in the manufacture of specified materials for a period of at least two (2) consecutive years and which can show evidence of those materials being satisfactorily used on at least three (3) projects of similar size, scope and location. At least three (2) of the projects shall have been successful for use two (2) years or longer.

(2) Manufactured panels must be produced from a minimum of 50% post-industrial recycle content.

(3) Manufacturer must offer a documented reclaim process that will take back, at the manufacturers cost, panels that are at their end-of life cycle.

B. FABRICATOR QUALIFICATIONS: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

C. SOURCE LIMITATIONS: Obtain acoustical wall panels through one source from a single manufacturer.

D. FIRE-TEST-RESPONSE CHARACTERISTICS: Provide acoustical wall panels with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to AHJ representatives:

(1) Flame-Spread Index: 25 or less.

(2) Smoke-Developed Index: 450 or less.

E. MOCKUP: Build mockup of each type or color of acoustical wall panel to be provided, to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials, fabrication, and installation. Install mockup in the location and of the size indicated or, if not indicated, as directed by Architect. Undamaged mockups may be maintained as a part of the Work if approved by Architect.

1.05 DELIVERY, STORAGE, AND HANDLING

A. COMPLY WITH FABRIC AND ACOUSTICAL WALL PANEL MANUFACTURERS' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.

B. DELIVER MATERIALS AND PANELS in unopened bundles and store in a temperature-controlled dry place with adequate air circulation. Protect panel edges from crushing and impact.

(1) Do not deliver Acoustic Finishes, components and accessories to Project site until areas are ready for installation.
(2) Store materials in a flat orientation in a dry place that is not exposed to exterior elements.
(3) Handle materials to prevent damage to finished surfaces. Provide protective coverings to prevent damage or staining following installation for duration of project.

C. ENVIRONMENTAL LIMITATIONS: Do not install acoustical wall panels until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

(1) Before installing Acoustic Finishes, permit them to reach room temperature.

1.06 FIELD MEASUREMENTS: Verify locations of acoustical wall panels by field measurements before fabrication and indicate measurements on Shop Drawings.

1.07 SPECIAL MANUFACTURER'S PRODUCT WARRANTY: Manufacturer's Special Warranty on polymer panel system: Manufacturer's standard form agreeing to repair or replace units that fail in material or workmanship within the specified warranty period.

A. Warranty Period: 1 year after the date of substantial completion.

B. The warranty shall not deprive the owner of other rights or remedies the Owner may have under other provisions of the Contract Documents and is in addition to and runs concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

1.08 FURNISH EXTRA MATERIALS as described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

A. Fabric: For each fabric, color, and pattern installed, provide length equal to10 percent (10%) of amount installed, but no fewer than 5 yards.

B. Acoustical Wall Panel Mounting Devices: Full-size units equal to 5 percent (5%) of amount installed, but no fewer than 25 attachment devices.

PART 2 - PRODUCTS

2.01 ACOUSTICAL WALL PANELS: Custom fabricated sound absorbing felt made from 50% minimum post-consumer recycled PET with textured 3d pattern(s):

A. MANUFACTURERS:

(1) **PET-1**: EZOBORD Acoustic PET Panels (www.ezobord.com)
(2) **PET-2**: AUTEX Industries Limited Acoustic PET Panel with overlay (https://www.autexacoustics.com/)
(3) **PET-3**: ACOUFELT Acoustic PET Panels (https://www.acoufelt.com/)

B. MATERIALS

(1) As indicated in Drawings with minimum performance requirements as follows:

(a) Recycled Rigid PET Felt
(b) Size: Various
(c) Thickness: 3/8"
(d) Substituitions: Products from other manufacturers must be approved by the Architect or Designer prior to bidding in accordance with the Instructions to Bidders and Section 01 60 00 "Product Requirements".

(2) Sheet minimum performance attributes:

(a) Noise Reduction Coefficient (ASTM C423) – 0.35
(b) Dynamic environmental testing (ASTM standards D 5116 and D 6670). Panels must not have detectable VOC off-gassing agents and must be have Greenguard™ Indoor Air Quality certified.
(c) Panels must be produced from a minimum of 50% post-industrial recycle content.

C. MISCELLANEOUS MATERIALS

(1) General: Provide products of material, size, and shape required for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
(2) Cleaner: Type recommended by manufacturer.

2.02 FABRICATE PANELS with pattern as specified in the drawings.

2.03 MOUNT using manufacturer provided installation system.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions where installation of Acoustic Finishes will occur, with Installer present, for compliance with manufacturer's requirements. Verify that substrates and conditions are satisfactory for installation and comply with requirements specified.

3.02 INSTALLATION

A. General: Comply with manufacturer's written instructions for the installation of Acoustic Finishes.
B. Utilize fasteners provided by manufacturer.
C. Install components plumb, level and rigid, scribed to adjacent finishes, in accordance with approved shop drawings and product data.
D. We recommend that installation is completed by a 3form Certified Installer. Contact 3form for more information or to get a quote.

3.03 PROTECTION: Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, to ensure that acoustical wall panels are without damage or deterioration at time of Substantial Completion.

3.04 REPLACE ACOUSTICAL WALL PANELS that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION 09 84 00

SECTION 09 84 33 – SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:

(1) Sound-absorbing wall panels.

1.02 DEFINITIONS:

A. NRC: Noise Reduction Coefficient.
B. SAA: Sound absorption Average.

1.03 PREINSTALLATION MEETINGS:

A. Preinstallation Conference: Conduct conference at Project Site.

1.04 REFERENCES:

A. ASTM E 84 - Title; 2001.
B. FSC STD-01-001 - FSC Principles and Criteria for Forest Stewardship
C. FSC STD-40-004 - FSC Standard for Chain of Custody Certification
D. U.S. Green Building Council, LEED Building Design and Construction (BD+C)Version 4.0 Rating System. (LEED v4.0)

1.05 ACTION SUBMITTALS:

A. Product Data: For each type of specified product.

(1) Include fabric facing, panel edge, core material, and mounting indicated.
(2) Preparation instructions and recommendations.
(3) Storage and handling requirements and recommendations.
(4) Installation methods.

B. Shop Drawings:

(1) For sound-absorbing wall unit assembly and installation.

(a) Include plans, elevations, sections, and mounting devices and details.
(b) Include details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge profile and core materials.
(c) Include details at cutouts and penetrations for other work.
(d) Include direction of fabric weave and pattern matching.

(2) For flat veneer wall panel unit assembly and installation.

(a) Provide layout of wood wall panels, z-clips, and furring strips coordinated with other trades that will penetrate the wood walls or interfere with the installation and recessed or surface mounted devices located within the wall panels. Indicate method of attachments where interference exists.

C. Samples for Verification:

(1) For the following sound-absorbing wall unit products:

(a) Fabric: Full-width by approximately 36-inch long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
(b) Panel Edge: 12-inch- long Sample(s) showing each edge profile, corner, and finish.
(c) Core Material: 12-inch- square Sample at corner.
(d) Mounting Devices: Full-size Samples.
(e) Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

(2) For the following flat veneer panel products:

(a) For each finish product specified, two samples, minimum size 12 inches (305 mm) square, representing actual product, color, and patterns.
(b)

1.06 INFORMATION SUBMITTALS:

A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

(1) Electrical outlets, switches, and thermostats.
(2) Items penetrating or covered by units including the following:

(a) Lighting fixtures.
(b) Air outlets and inlets.
(c) Speakers.
(d) Alarms.
(e) Sprinklers.
(f) Access panels.

(3) Show operation of hinged and sliding components covered by or adjacent to units.

B. Product Certificates: For each type of unit.
C. Manufacturer's Certificates: Certify products meet or exceed specified requirements.
D. Sample Warranty: For specified special warranty.
E. LEED Submittals: Provide documentation of how the requirements of Credit will be met:
   (1) LEED v4.0: Wood wall panels may contribute as required to the following LEED v4 credits: MR BPD&O - Sourcing of Raw Materials, MR BPD&O - Material Ingredients, EQ Low-Emitting Materials.

1.07 CLOSEOUT SUBMITTALS:

A. Maintenance Data:
   (1) For each type of unit to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.
   (2) Provide manufacturer's maintenance instructions that include recommendations for periodic checking and adjustment and periodic cleaning and maintenance of all components.

1.08 MAINTENANCE MATERIAL SUBMITTALS:

A. See Section 01 77 00 “Closeout Procedures” for submission of maintenance material items.
B. For fabric unit products:
   (1) Extra Stock Material: Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
      (a) Fabric: For each fabric, color, and pattern installed, provide length equal to 10 percent of amount installed, but no fewer than 10 sq. yd., full width of bolt.
      (b) Mounting Devices: Full-size units equal to 5 percent of amount installed, but no fewer than 5 devices, including unopened adhesives.
C. For flat veneer panel products:
   (1) Provide 5 percent of each type actually installed for use by owner in building maintenance and repair.

1.09 QUALITY ASSURANCE:

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.
B. Installer Qualifications: Minimum 2 years documented experience installing projects of similar size and complexity.
C. Provide seismic design of suspended wall under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

1.10 DELIVERY, STORAGE, AND HANDLING:

A. For fabric unit products:
B. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
C. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.
D. For wood panel unit products:
   (1) Deliver material in the manufacturer's original, unopened, undamaged containers with identification labels intact.
   (2) Store products off the floor in manufacturer's unopened packaging protected from exposure to harmful environmental conditions and at temperature and humidity conditions as recommended by the manufacturer.
   (3) A minimum of 72 hours prior to wall installation, wood wall panels shall be stored in the room in which they will be installed. Temperature and humidity of the room during this period shall closely approximate those conditions that will exist when the building is occupied.
   (4) Handle materials to avoid damage.

1.11 FIELD CONDITIONS:

A. For sound-absorbing wall unit products:
   (1) Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
   (2) Lighting: Do not install units until a permanent level of lighting is provided on surfaces to receive the units.
   (3) Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
   (4) Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication and indicate them on Shop Drawings.
B. For flat veneer panel products:
   (1) Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.
   (2) Space shall be fully enclosed with all exterior windows and doors in place, glazed, and weather-stripped. Roof is to be watertight, and all wet trades' work is to be completed, and thoroughly dry.
   (3) Mechanical, electrical, and other utility services behind the wall plane shall be completed. No materials should rest against, or wrap around, the wall attachment components or connecting z-clips.
   (4) Install only when the temperature and humidity closely approximate the interior conditions that will exist when the building is occupied. Heating and cooling systems shall be operating before, during, and after installation,

with the humidity of the interior spaces maintained between 25 and 55 percent, and a temperature between 60 to 90 degrees F.

1.12 SEQUENCING:

A. Ensure that locating templates and other information required for installation of products of this section are furnished to affected trades in time to prevent interruption of construction progress.

B. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

1.13 COORDINATION:

A. Coordinate layout and installation of the wood wall panels with other work penetrating the wall including light fixtures, HVAC equipment, and fire suppression system components.

1.14 WARRANTY:

A. Special Warranty: Manufacturer agrees to repair or replace units and components that fail in materials or workmanship within specified warranty period.

(1) Failures include, but are not limited to the following:

(a) Acoustical performance.
(b) Fabric sagging, distorting, or releasing from panel edge.
(c) Warping of core.

B. Warranty Period: Manufacturers standard from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS:

A. Regional Materials: Verify materials were manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

2.02 PERFORMANCE REQUIREMENTS:

A. Fire-Test-Response Characteristics: Units to comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

(1) Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

(a) Flame-Spread Index: 25 or less.
(b) Smoke-Developed Index: 450 or less.

(2) Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested in accordance with NFPA 265 Method B Protocol or NFPA 286.

B. Wood is a natural product that will undergo changes with variations in the environment. Therefore, all dimensional tolerances are plus or minus 1/8 inch (3 mm).

C. Fire Performance Characteristics: Wood wall panels shall conform to Class 1, or A flame spread rating, tested according to ASTM E 84; Flame Spread: 25 or less. Smoke Developed: 450 or less.

D. Certified Wood: Wood wall panels shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification

2.03 SOUND-ABSORBING WALL UNITS:

A. Sound-Absorbing Wall Panels: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core.

B. Sound-Absorbing Wall Unit Type: PET-2.

(1) Basis-of-Design Product: Subject to compliance with requirements, provide Autex Acoustics; Quietspace Panel.

(a) Panel Shape: Flat.
(b) Mounting:
(i) Edge mounted with splines secured to substrate.
1. Finish Color at Exposed Edges: Match color of facing material.
(ii) Back mounted with manufacturer's standard metal clips.
(c) Core: Manufacturer’s standard.
(d) Edge Construction: Manufacturer's standard chemically hardened core with no frame.
(e) Edge Profile: Square.
(f) Corner Detail in Elevation: Square with continuous edge profile indicated.
(g) Reveals between Panels: Recessed.
(h) Fabric Facing: As indicated on Drawings.
(i) Acoustical Performance: Sound absorption NRC of not less than 0.85 in accordance with ASTM C423 for Type A mounting in accordance with ASTM E795.
(j) Nominal Overall Panel Thickness: 1 inch.
(k) Panel Width: As indicated on Drawings.
(l) Panel Height: As indicated on Drawings.

C. Sound-Absorbing Wall Unit Type: PET-3.

(1) Basis-of-Design Product: Subject to compliance with requirements, provided Acoufelt; Panel.

(a) Panel Shape: Facture, Diagonal.
(b) Mounting: Edge mounted with splines secured to substrate.
(c) Core: Manufacturer's standard.
(d) Edge Profile: Square.
(e) Corner Detail in Elevation: Square with continuous edge profile indicated.
(f) Panel Width: As indicated on Drawings.
(g) Panel Height: As indicated on Drawings.

2.04 FLAT VENEER WALL PANELS: WD-3.

A. Manufacturer: Rulon International, which is located at: 2000 Ring Way Rd.; St Augustine, FL 32092; Toll Free Tel: 800-227-8566; Tel: 904-584-1400; Fax: 904-584-1499; Email: request info (info@rulonco.com); Web:rulonco.com
B. Substitutions: Not permitted.
C. Materials, General: Wood is a natural product that will undergo changes with variations in the environment. Therefore, all dimensional tolerances are plus or minus 1/8 inch (3 mm).
D. Flat Veneer Panels are made with a face veneer applied to a 3/4 inch (19 mm) thick core material.

(1) Panel Size: As indicated on Drawings.
(2) Trim and Border Treatment: Provide end caps or junction trims as indicated.
(3) Veneer Species: As indicated in Finish Legend on Drawings.
(4) Finish: As indicated in Finish Legend on Drawings.

E. Accessories:

(1) Z-Clips: Male/female aluminum attachment clips, similar to a French cleat but with a thinner profile, used to hang wood wall panels on furring strips.

F. Attachment Systems:

(1) Furring Strips: Thin strips of fire-treated plywood or other non-combustible or limited combustible material shall be used in conjunction with fire treated or other non-combustible or limited combustible shims to level or raise z-clip attachment points so that, when installed, wood wall panels are flush and plumb.

2.05 FABRIC FACINGS:

A. Fabric from same dye lot; color and pattern as indicated on Drawings.
B. Fabric Facings Type: PET-2.
C. Basis-of-Design Product: Subject to compliance with requirements, provide Autex Acoustics, Vertiface.

(1) Color: As indicated on Drawings.
(2) Fiber Content: 100 percent polyester fibre.
(3) Width: As indicated on Drawings.

D. Fire-Test-Response Characteristics: Units to comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

(1) Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

(a) Flame-Spread Index: 25 or less.
(b) Smoke-Developed Index: 450 or less.

E. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested in accordance with NFPA 265 Method B Protocol or NFPA 286.

2.06 MATERIALS:

A. Verify wall materials comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
B. Recycled Content: per Division 1 LEED requirements.
C. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in CARB 93120, "Airborne Toxic Control Measure (ATCM) for Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.
D. Certified Wood: Verify product is certified as "FSC Pure" in accordance with FSC STD and FSC STD-40-004.
E. Core Materials: Manufacturer's Standard.
F. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:

(1) Metal Clips or Bar Hangers: Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

2.07 FABRICATION:

A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
B. Edge Hardening: For glass-fiber board and mineral-fiber board cores, chemically harden core edges and areas of core where mounting devices are attached.

C. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
   (1) Square Corners: Tailor corners.
   (2) Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.

D. Edges, borders, and perimeter trims shall be indicated on the Drawings in accordance with the manufacturer's standard design details. All wood wall panel products specified shall be supplied by the wood wall panel manufacturer.

E. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
   (1) Thickness.
   (2) Edge straightness.
   (3) Overall length and width.
   (4) Squareness from corner to corner.
   (5) Chords, radii, and diameters.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.
B. Verify that furring strips are in place, attached and shimmed in a direction parallel to the floor.
C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
D. Do not begin installation until substrates have been properly prepared. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION:

A. Clean surfaces thoroughly prior to installation.
B. Work shall not begin until the space is fully enclosed and glazed and all wet work is completed and dried out to the satisfaction manufacturer.
C. Temperature shall be at least 65 degrees Fahrenheit during the installation and thereafter.
D. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION OF SOUND-ABSORBING WALL UNITS:

A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
C. Align fabric pattern and grain as indicated on Drawings.

3.04 INSTALLATION OF FLAT VENEER WALL PANELS:

A. Install in accordance with manufacturer's instructions and in proper relationship with adjacent construction, including the following:
   (1) Comply with ASTM C 636 and seismic design requirements indicated.
B. Install furring strips attached and shimmed in a direction parallel to the floor.
C. Suspend panels from the z-clips as indicated.
D. Make final adjustments to level or contours as required.

3.05 INSTALLATION TOLERANCES:

A. Variation from Plumb and Level: Plus or minus 1/16 inch in 48 inches, noncumulative.
B. Variation of Joint Width: Not more than 1/16-inch in 48 inches, noncumulative.

3.06 FIELD QUALITY CONTROL OF FLAT VENEER WALL PANELS:

A. Technical Service: Manufacturer shall provide a local Technical Service Representative for on-site training and assistance during the installation process.
B. Environmental Monitoring: Manufacturer shall provide a temperature and humidity sensor to actively monitor the room in which the wood wall panels shall be installed for a minimum of one week before and up to two weeks after installation has been completed including all of the weeks in between.
C. Upon completion of wall installation, the owner's representative shall inspect all finished surfaces to ensure that the work has been completed in a manner satisfactory to the owner. Any deficiencies in the install of the wall shall be corrected prior to substantial completion.

3.07 CLEANING, ADJUSTMENTS, AND PROTECTION:

A. Clip loose threads; remove pills and extraneous materials.
B. Clean panels on completion of installation to remove dust and other foreign materials in accordance with manufacturer’s written instructions.
C. Protect installed products until completion of project.

D. Touch-up, repair or replace damaged products before Substantial Completion.
E. Clean exposed surfaces of wall panels in accordance with manufacturer's instructions.
F. Remove and replace panels and tiles, which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 84 33

SECTION 09 84 53 – ACOUSTICAL MULLION TRIM

PART 1 - GENERAL

1.01 PROVIDE sound-barrier mullion trims between drywall and curtainwall or storefront window framing, where indicated on the Drawings, as specified herein, and as needed to meet the requirements of the construction indicated in the Contract Documents. The Work of this Section includes:

A. Aluminum sound-barrier mullion trim caps

1.02 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of unit required.
B. SUBMIT SHOP DRAWINGS showing dimensioned cross-section(s) of required installation locations where drywall partition terminate at the curtainwall or storefront window framing, indicating mounting and other installation details required to maintain the rated sound tested assembly.

1.03 QUALITY ASSURANCE

A. SOURCE LIMITATIONS: Obtain units through one source from a single manufacturer.
B. MANUFACTURER QUALIFICATIONS: An entity producing aluminum extrusions and applying anodized finishes that is ISO-9001 Certified.
C. INSTALLER QUALIFICATIONS: An entity employing installers and supervisors who are trained and approved for use by the system Manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. DO NOT DELIVER units until spaces to receive them are clean, dry, and ready for their installation.
B. STORE UNITS in original undamaged packaging inside A well-ventilated area, protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.05 MANUFACTURER'S SPECIAL PRODUCT WARRANTY: Provide manufacturer's special warranty agreeing to repair or replace units that fail in materials or workmanship within the following time period. This warranty does not cover adjacent products or materials.

A. Warranty Period: Ten years limited warranty from date of Substantial Completion

PART 2 - PRODUCTS

2.01 ACOUSTIC MULLION TRIM: Provide an acoustically tested sound-barrier mullion trim system with capability to accommodate variations in adjacent surfaces, in sufficient additional length to allow for field trimming to required length to match variations in construction tolerances of adjacent systems.

A. Aluminum extrusions: 0.125 inch thick minimum in manufacturer's standard system profile to allow solid attachment and fastening to the partition wall framing.
B. Sound Absorbing Foam: resistant to smoke, flame and microbial growth, meeting ASTM E 84 Class 1 fire rating, and zero (0) rated fungi growth per ASTM G 21 testing.
C. Fasteners: self-tapping or appropriate threaded fasteners, compatible with all materials fasteners so not to cause galvanic corrosion.

2.02 BASIS-OF-DESIGN: "STC 55 Classic Mullion and Wide No-Mullion Trim Cap" – double sided, as manufactured by MULL-it-OVER Products, p: 616-730-2162, website: www.mullitoverproducts.com

A. Tested Acoustical Performance: Minimum tested STC rating of 55 for double-sided installation
B. Provide fire rated trim assembly as required.

2.03 Finish Color: match finish type and finish color of adjacent aluminum storefront or curtainwall framing.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES AND CONDITIONS with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance and installation of sound-absorbing ceiling units. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Measure and cut sound barrier wall end cap to proper lengths.
B. Notch around horizontal mullions, sills, or other obstructions leaving appropriate gap for differential movement between the sound barrier wall end cap and the obstruction.
C. Apply continuous bead of acoustical sealant to the acoustical foam surface that will be in contact with the drywall edge.
D. Place sound barrier wall end cap on the vertical surface of the drywall partition wall and loosely install fasteners in the top and bottom slotted holes of the wall end cap.
E. Plumb the wall end cap leaving recommended gap spacing between the interior glass surface and the wall end cap. Foam gasket to be in contact with glass.
F. Tighten top and bottom fasteners to secure end cap.
G. Install additional fasteners at 12 inches on center, minimum.
H. Install snap cover to conceal fasteners.
I. Apply sealant at all joints of dissimilar materials.

3.03 CLEANING: Clean units upon completion of installation, to remove dust and other foreign materials according to manufacturer's written instructions.

3.04 REPLACE UNITS that cannot be cleaned and repaired, in a manner approved by Architect. Protect units from damage during remaining construction operations, until Substantial Completion.

END OF SECTION 09 84 53

SECTION 09 91 00 – PAINTING

PART 1 - GENERAL

1.01 THE WORK INCLUDES surface preparation and painting or finishing of surfaces exposed to view, throughout the Project and in accordance with requirements herein. Paint or otherwise field-finish all exposed material surfaces throughout the project unless otherwise indicated to have no finish, or when materials are pre-finished or integrally-finished. Finish all exposed surfaces even if not specifically indicated on the Drawings.

A. Where items or surfaces are not specifically mentioned, paint the same as similar adjacent materials or areas.
B. Finish closets, alcoves, aisles, hallway and recessed areas without a room number with the same finishes as in the adjoining rooms or spaces.
C. Paint finish structural elements including columns, beams, joists, braces and decking - including applied fire-protection materials when applicable – except when concealed by ceilings, soffits, chases or other finished construction elements.
D. Paint finish mechanical and plumbing components when exposed to view, including HVAC units, ductwork, devices piping and valves – except when located within a mechanical room.
E. Paint finish exposed electrical & control panel enclosures of mechanical or electrical equipment and exposed conduits when not located within electrical or mechanical rooms.
F. Paint finish exposed concrete housekeeping pads and equipment bases with sealer and min 2-coat semi-gloss enamel paint, unless otherwise indicated.
G. Paint finish exposed metal including doors and frames, metal trim & guards, handrails & railings, bollards, equipment supports and similar items.

1.02 PAINTING NOT REQUIRED: Unless otherwise indicated, painting is not required on plastic laminate, prefinished sheet metal, plumbing fixtures, electrical equipment (excluding exposed distribution cabinet(s) or electrical devices. Painting is not required on surfaces such as walls or ceilings in concealed or inaccessible areas. Metal surfaces of anodized aluminum, stainless steel, chromium plate and similar finished materials will not require finish painting, except as otherwise indicated in the finish hardware schedule. Do not paint over code-required labels or equipment identification labels.

1.03 RELATED SECTIONS

A. Section 01 81 13 Certification Requirements.

1.04 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For paints and coatings, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
B. VOC content requirements for wet-applied products: For paints and coatings, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Paints and Coatings Applications, as per the California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings or South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints and coatings.
C. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.

1.05 LEED DOCUMENTATION REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant
D. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan..

1.06 SUBMITTALS

A. PRODUCT DATA: For each paint system specified. Include block fillers and primers associated with finish products.

B. MATERIAL LIST: Provide an inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
C. MANUFACTURER'S INFORMATION: Provide manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material proposed for use.
D. VOC CERTIFICATION: Certification by the manufacturer that products supplied comply with local regulations and LEED requirements controlling use of volatile organic compounds (VOCs).
E. SAMPLES FOR INITIAL SELECTION: Manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated. After color selection, the Architect will approve contractor provided color chips for surfaces to be coated.
F. SAMPLES FOR VERIFICATION: Of each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.
    1. Provide stepped Samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.
    2. Provide a list of materials and applications for each coat of each sample. Label each sample for location and application.
    3. Submit Samples on the following substrates for the Architect's review of color and texture only:
    4. Ferrous Metal: Provide two 4-inch- square samples of flat metal and two 8-inch- long samples of solid metal for each color and finish.
G. LIST OF MOCKUP MATERIALS: List manufacturer’s product/color names, finishes, and other information as required to identify materials used. Submittal is for information only. Neither receipt of list nor approval of mockup constitutes approval of deviations from the Contract Documents, unless such deviations are specifically brought to the attention of the Architect and approved in writing.
H. QUALIFICATION DATA: For firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.07 QUALITY ASSURANCE

A. PRODUCT STANDARDS: Comply with Master Painters Institute (MPI) standards indicated and provide products as listed in "MPI Approved Products List" available at www.paintinfo.com. Provide best quality grade of various types of coatings indicated as regularly manufactured by listed paint materials manufacturers. Materials not displaying manufacturers identification as a standard, best-grade product will not be acceptable.
    1. Applicator Qualifications: Engage an experienced applicator who has completed painting system applications similar in material and extent to that indicated for this Project with a record of successful in-service performance.
B. SOURCE LIMITATIONS: Obtain block fillers, primers, and undercoat materials for each coating system from the same manufacturer as the finish coats.
C. FINAL APPROVAL of colors will be from job-applied samples.
D. MOCKUP: Provide materials for construction of a field mockup of each different color and finish indicated. Before execution of the Work of this Section, finish the mockup to verify selections made under sample submittals and to demonstrate aesthetic effects. Refer to Division-01 Section Quality Requirements for general requirements of Mockup.
E. PROVIDE PRIMERS and undercoat paints produced by the same manufacturer as the finish coats. Use only thinners approved by paint manufacturer and use only within recommended limits.
F. PREPARE surfaces and apply coatings in strict accordance with the coating manufacturer's recommendations.
G. USE ONLY SKILLED painters for mixing and applying paint. Quality workmanship is required. In the acceptance or rejection of finish painting, no allowance will be made for the painters' lack of skill or in adequate lighting during painting operations.
H. DELIVER MATERIALS to job site in original, new and unopened packages and containers bearing manufacturer's name and label. Store materials not in actual use in tightly covered containers. Maintain containers used in storage of paint in a clean condition, free of foreign materials and residue. Keep storage area neat and orderly. Remove rags and water daily. Take all precautions to ensure that workmen and Work areas are adequately protected from fire hazards and health hazards resulting from handling, mixing and application of paints.
I. JOB CONDITIONS: Apply paints only when temperature of surfaces to be painted and surrounding air temperatures are within recommended range permitted by the paint manufacturer's printed instructions. Do not apply paint when relative humidity exceeds 85%, or to damp or wet surfaces.
J. FURNISH EXTRA PAINT MATERIALS from the same production run as the materials applied in the quantities described below. Package paint materials in unopened, factory-sealed containers for storage and identify with labels describing contents. Deliver extra materials to the Owner.
K. QUANTITY: Furnish the Owner with an additional 5 percent, but not less than 1 gal. or 1 case, as appropriate, of each material and color applied.

PART 2 - PRODUCTS

2.01 PAINT TYPES: Refer to Paint Schedule at end of this Section for material specifications per applications involved and refer to Drawings for paint colors to be provided.

2.02 MATERIAL COMPATIBILITY: Provide block fillers, primers, undercoats, and finish-coat materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

2.03 MATERIAL QUALITY: Provide best quality grade of various types of coatings as regularly manufactured by acceptable paint materials manufacturers. Materials not displaying manufacturers identification as a standard, best-grade product will not be acceptable.

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES, AREAS, AND CONDITIONS, with the Applicator present, under which painting will be performed for compliance with paint application requirements.

3.02 DO NOT BEGIN TO APPLY PAINT until unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry. Start of painting will be construed as the Applicator's acceptance of surfaces and conditions within a particular area.

3.03 COORDINATION OF WORK: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.

3.04 NOTIFY THE ARCHITECT about anticipated problems using the materials specified over substrates primed by others.

3.05 PREPARATION

A. SURFACE PREPARATION: Clean surfaces of dirt, rust, scale, grease, moisture, or other conditions otherwise detrimental to formation of a durable paint film. Perform preparation and cleaning procedures in accordance with paint manufacturer's printed instructions for each particular substrate condition.

B. REMOVE hardware, accessories, plates, lighting fixtures, and similar items in place and not to be finish-painted, or provide surface-applied protection prior to surface preparation and painting operations. Remove, if necessary, for complete painting of items and adjacent surfaces. Following completion of painting of each space or area, reinstall removed items.

C. PROVIDE BARRIER COATS over incompatible primers or remove and reprime.

D. CLEAN WOOD SURFACES of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off. Scrape and clean small, dry, seasoned knots and apply a thin coat of white shellac or other recommended knot sealer before application of primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.

E. PRIME, STAIN, OR SEAL WOOD to be painted immediately upon delivery. Prime edges, ends, faces, undersides, and backsides of wood, including cabinets, counters, cases, and paneling. When transparent finish is required, backprime with spar varnish. Backprime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on backside. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately upon delivery or after installation, if unit is cut in the field.

F. FERROUS METALS: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with the Steel Structures Painting Council's (SSPC) recommendations.

1. Blast steel surfaces clean as recommended by paint manufacturer and according to requirements of SSPC-SP 10.
2. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
3. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with the same primer as the shop coat.

G. GALVANIZED SURFACES: Clean galvanized surfaces with nonpetroleum-based solvents so surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

H. TOUCH UP SHOP-APPLIED PRIME COATS that have been damaged. Wire-brush, clean with solvents recommended by the paint manufacturer, and touch up with the same primer as the shop coat.

3.06 MATERIALS PREPARATION:

A. CAREFULLY MIX AND PREPARE PAINT MATERIALS in accordance with manufacturer's directions. Maintain containers used in mixing and application of paint in a clean condition, free of foreign materials and residue. Stir material before application to produce a mixture of uniform density; stir as required during application. Do not stir surface film into material. Remove film and, if necessary, strain material before using. Use only thinners approved by the paint manufacturer, and only within recommended limits.

B. TINTING: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of the same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.07 APPLICATION:

A. APPLY PAINT according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied. Paint colors, surface treatments, and finishes are indicated in the drawings.

B. DO NOT PAINT OVER dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.

C. PROVIDE FINISH COATS that are compatible with primers used.

D. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, covers for finned-tube radiation, grilles, and similar components are in place. Extend coatings in these areas, as required, to maintain the system integrity and provide desired protection.

E. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before the final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.

F. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.

G. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.
   1. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
   2. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
   3. Sand lightly between each succeeding enamel or varnish coat.
   4. Provide painting at all exterior exposed unsightly pipes, conduits panels, as specified by Owner or Architect.

3.08 SCHEDULING PAINTING: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

3.09 THE NUMBER OF COATS AND THE FILM THICKNESS required are the same regardless of application method. Do not apply succeeding coats until the previous coat has cured as recommended by the manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.

3.10 OMIT PRIMER ON METAL SURFACES that have been shop primed and touchup painted.

3.11 IF UNDERCOATS, STAINS, OR OTHER CONDITIONS SHOW THROUGH final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.

3.12 ALLOW SUFFICIENT TIME BETWEEN SUCCESSIVE COATS to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and where application of another coat of paint does not cause the undercoat to lift or lose adhesion.

3.13 APPLICATION PROCEDURES: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

A. Brushes: Use brushes best suited for the type of material applied. Use brush of appropriate size for the surface or item being painted.
B. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool as recommended by the manufacturer for the material and texture required.
C. Spray Equipment: Use airless spray equipment with orifice size as recommended by the manufacturer for the material and texture required.

3.14 MINIMUM COATING THICKNESS: Apply paint materials no thinner than manufacturer's recommended spreading rate. Provide the total dry film thickness of the entire system as recommended by the manufacturer.

3.15 MECHANICAL AND ELECTRICAL WORK: Painting of mechanical and electrical work is limited to items exposed in equipment rooms and in occupied spaces. Refer to Sections 15 and 16.

3.16 BLOCK FILLERS: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

3.17 PRIME COATS: Before applying finish coats, apply a prime coat of material, as recommended by the manufacturer, to material that is required to be painted or finished and that has not been prime coated by others.

3.18 RECOAT PRIMED AND SEALED SURFACES where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn through or other defects due to insufficient sealing.

3.19 PIGMENTED (OPAQUE) FINISHES: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

3.20 APPLY STAINS in accordance with the stain and substrate manufacturer's recommendations (when applicable) to ensure proper penetration of the stain, and to produce an even, consistent, color that enhances the natural characteristics of the substrate material. Apply with spray and brush applicators using means and techniques best suited for the substrate and the type of stain being applied. Provide a consistent application of stain without color irregularities, brush marks, or other surface irregularities not inherent with the substrate material. Stain edges and ends of boards, and brush out excess stain that collects in surface textures or joints, as applicable. Do not apply stain on surfaces that are not sufficiently dry, or that are in direct sunlight.

3.21 TRANSPARENT (CLEAR) FINISHES: Use multiple coats to produce a glass-smooth surface film of even luster. Lightly sand the surface between each successive coat. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections. Typically, provide satin finish for final coats, unless noted otherwise.

3.22 COMPLETED WORK: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

3.23 FIELD QUALITY CONTROL: The Owner reserves the right to engage the services of an independent testing laboratory to sample the paint material being used. Samples of material delivered to the project may be taken, identified, sealed, and certified in the presence of the Contractor. The testing laboratory will perform appropriate tests as required by the Owner. If test results show material being used does not comply with specified requirements, the Contractor may be directed to stop painting, remove noncomplying paint, pay for testing, repaint surfaces coated with rejected paint, and remove rejected paint from previously painted surfaces if, upon repainting with specified paint, the two coatings are noncompatible.

3.24 CLEAN-UP: During the progress of the Work, remove from site discarded paint materials, rubbish, cans and rags at end of each work day. Upon completion of painting Work, clean window glass and other paint-spattered surfaces. Remove spattered paint or otherwise damage finish surfaces. Touchup and restore all damaged or defaced painted surfaces after completion of Work of other trades.

3.25 PROTECT work of other trades, whether to be painted or not, against damage by painting. Correct damage by cleaning, repairing or replacing, and repainting, as acceptable to Owner. Provide "wet paint" signs to protect newly painted finishes.

Remove temporary protective wrappings provided by others for protection of their work after completion of painting operations. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

PART 4 - PAINT MATERIALS SCHEDULE:

4.01 RE: www.paintinfo.com for MPI's "Approved Product List" – except as indicated below

4.02 EXTERIOR FINISHES:

A. EXTERIOR NATURAL-FINISHED WOOD (AND DECKING): SEMI-TRANSPARENT OIL/ALKYD STAIN FINISH:
   1. Two (2) Finish Coats: "Penofin Verde (low VOC), Natural by Sikkens

B. EXTERIOR PAINTED DRYWALL CEILING AND SOFFITS: FLAT ACRYLIC LATEX:
   1. Primer: MPI # 6 X-Green - Primer, Latex for Exterior Wood
   2. 2 Finish Coats: MPI # 10 - Latex, Exterior flat (MPI Gloss Level 1-2)

C. EXTERIOR MASONRY OR CMU WALLS: SATIN ELASTOMERIC COATING (AT UTILITY CONNECTOR):
   1. Block Filler / Primer: Masonry primer or acrylic block filler
      a. Benjamin Moore:
         (1) Moore's High Build Acrylic Masonry Primer 068 or
         (2) Latex Block Filler M88
      b. Pittsburgh Paints;
         (1) PERMA-CRETE High Build Acrylic Primer, 4-2 or
         (2) PERMA-CRETE LTC Concrete Block/Masonry Surfacer, 4-100
      c. Sherwin Williams;
         (1) PrepRite Masonry Primer or
         (2) PrepRite Block Sealer
   2. Two (2) Finish Coats: Low-Luster water-based elastomeric paint:
      a. Benjamin Moore; Moorlastic Acrylic Elastomeric Waterproof Coating - Low Lustre 055
      b. Pittsburgh Paints; PERMA-CRETE PITT-FLEX Elastomeric Coating
      c. Sherwin Williams; Sherlastic Elastomeric Coating Series A5-100

D. EXTERIOR CMU WALLS: SATIN/EGGSHELL ENAMEL:
   1. Block Filler: MPI # 4 X-Green - Block Filler, Latex, Interior/Exterior
   2. Primer: MPI # 6 X-Green - Primer, Latex for Exterior Wood
   3. 2 Finish Coats: MPI # 15 - Latex, Exterior, Low Sheen (MPI Gloss Level 3-4)

E. EXTERIOR CMU WALLS: SEMI-GLOSS ACRYLIC LATEX ENAMEL:
   1. Block Filler: MPI # 4 X-Green - Block Filler, Latex, Interior/Exterior
   2. Primer: MPI #6 X-Green - Primer, Latex for Exterior Wood
   3. 2 Finish Coats: MPI # 11 - Latex, Exterior Semi-Gloss (MPI Gloss Level 5)

F. EXTERIOR FERROUS METAL: SEMI-GLOSS ALKYD
   1. Primer: MPI # 23 - Primer, Metal, Surface Tolerant (w/ SSPC SP1 + SP 2 or SP3 prep)
      a. Note: Primer not required to be applied in field on pre-primed items – verify compatibility
   2. 2 Finish Coats:
      a. MPI # 94 - Alkyd, Exterior, Semi-Gloss (MPI Gloss Level 5), or
      b. MPI # 81 - Alkyd, Quick Dry, Semi-Gloss

G. EXTERIOR ZINC-COATED (GALVANIZED) METAL: SEMI-GLOSS ALKYD:
   1. Primer: MPI # 134 - Primer, Galvanized, Water Based
   2. 2 Finish Coats:
      a. MPI # 94 - Alkyd, Exterior, Semi-Gloss (MPI Gloss Level 5), or
      b. MPI # 81 - Alkyd, Quick Dry, Semi-Gloss

4.03 INTERIOR FINISHES:

A. INTERIOR DRYWALL: EGGSHELL/SATIN LOW-VOC LATEX
   1. Primer Coat: MPI # 149 X-Green - Primer Sealer, Interior, Institutional Low Odor/VOC
   2. 2 Finish Coats: MPI # 44 X-Green - Latex, Interior, (MPI Gloss Level 2)
   3. Apply finish coats with roller, unless otherwise indicated

B. INTERIOR DRYWALL: WASHABLE (USDA COMPLIANT) WATER-BASED SATIN EPOXY
   1. Primer Coat: "Rust-Oleum" – Zinsser Bulls-Eye Zero VOC water based Primer – 1.0 to 1.5 DFT minimum
   2. 2 Finish Coats: Rust-Oleum" – Sierra # S60/S62 Series "Satin Gloss" Water-Based Epoxy – 2.0 to 3.0 DFT per coat
   3. Apply with brush or roller

C. INTERIOR DRYWALL: WASHABLE, WATER-BASED SEMI-GLOSS EPOXY
   1. Primer Coat: MPI # 45 Primer Sealer, Alkyd, Interior, or as otherwise recommended by finish coat manufacturer
   2. 2 Finish Coats: MPI # 215 –Two component water-based semi-gloss epoxy – 2.5 to 4.0 DFM per coat

3. Basis-of-Design: Sherwin Williams Tile-Clad High Solids – with MR (mildew resistant) hardener
4. Apply finish coats with spray or roller

D. INTERIOR DRYWALL: GLOSS EPOXY

1. Surface Preparation: Clean and Dry
2. Primer Coat: Tnemec Series 201 at 4.0 to 6.0 mils DFT
3. Intermediate Coat: Tnemec Series 280 at 6.0.0 to 8.0 mils DFT
4. Finish Coat: Tnemec Series 297 Ceramic-Modified Waterborne Aliphatic Polyurethane at 3.0 to 4.0 mils DFT
5. Basis-of-Design: Tnemec as indicated.
6. Apply coatings per manufacturers recommendations to achieve proper adhesion and thickness.

E. INTERIOR METAL: **BOTH EXPOSED AND CONCEALED**, SATIN EPOXY

1. Surface Preparation: SSPC-SP10 Commercial Blast Cleaning
2. Primer Coat: Tnemec Series 90-97 Aromatic Urethane, Zinc-Rich at 2.5 to 3.5 mils DFT
3. Intermediate Coat: Tnemec Series N69 Polyamidoamine Epoxy at 3.0 to 4.0 mils DFT
4. Finish Coat: Tnemec Series N69 Polyamidoamine Epoxy at 3.0 to 4.0 mils DFT
5. Basis-of-Design: Tnemec as indicated.
6. Apply coatings per manufacturers recommendations to achieve proper adhesion and thickness.

F. INTERIOR METAL SEMI-GLOSS ALKYD ENAMEL

1. First Coat: MPI # 107 - Primer, Rust-Inhibitive, Water Based
2. Note: Primer not required on pre-primed items but coordinate compatibility requirements of finish coat
3. 2nd & 3rd. Coats: MPI # 54 X-Green - Latex, Interior, Semi-Gloss (MPI Gloss Level 5)
4. Brush apply finish coats unless otherwise indicated

G. INTERIOR LATEX CHALKBOARD PAINT

1. Apply to primer as indicated above for substrate and per manufacturer's requirements
2. Use the following material in lieu of finish costs where indicated to be "chalkboard" painted:
3. 2nd & 3rd Finish Coats: Rust-Oleum Chalkboard Brush-On paint
4. Manufacturer's standard flat green or black color as selected by Architect

H. INTERIOR EXPOSED STRUCTURE: DRY-FALL FLAT LATEX

1. Note: Primer not required to be applied in field on pre-primed items
2. Verify compatibility of finish with existing primer(s) and adjust if necessary
3. 2 Coats: MPI # 118 – Dry Fall Latex flat

I. PAINTED WOOD: EGGSHELL ALKYD ENAMEL

1. Prime Coat: MPI # 45 - Interior Alkyd Primer Sealer
2. 2nd & 3rd Coats: MPI # 51 - Interior Alkyd, Eggshell
3. Brush apply finish coats unless otherwise indicated

J. INTERIOR WOOD TRIM: GLOSS LATEX

1. First Coat: MPI # Prime Coat: MPI # 39 – Interior Latex Primer for Wood
2. Note: Primer not required to be applied in field on pre-primed items
3. 2nd & 3rd. Coats: MPI # 114 Latex Interior Gloss
4. Brush apply finish coats unless otherwise indicated

K. INTERIOR CMU WALLS: SEMI-GLOSS LATEX

1. Block Filler & Primer Coat: MPI # 4 latex block filler
2. Primer Coat: MPI # 149 X-Green - Primer Sealer, Interior, Institutional Low Odor/VOC
3. 2 Finish Coats: MPI # 54 X-Green - Latex, Interior, Semi-Gloss (MPI Gloss Level 5)

L. PAINTED WOOD: EGGSHELL ALKYD ENAMEL

1. Prime Coat: MPI # 45 - Interior Alkyd Primer Sealer
2. 2nd & 3rd Coats: MPI # 51 - Interior Alkyd, Eggshell
3. Brush apply finish coats unless otherwise indicated

M. INTERIOR WOOD TRIM: GLOSS LATEX

1. First Coat: MPI # Prime Coat: MPI # 39 – Interior Latex Primer for Wood
2. Note: Primer not required to be applied in field on pre-primed items
3. 2nd & 3rd. Coats: MPI # 114 Latex Interior Gloss
4. Brush apply finish coats unless otherwise indicated

N. PAINTED WOOD: SEMI-GLOSS ALKYD ENAMEL

1. Prime Coat: MPI # 45 - Interior Alkyd Primer Sealer
2. 2nd & 3rd Coats: MPI # 54 X-Green - Latex, Interior, Semi-Gloss (MPI Gloss Level 5)
3. Brush apply finish coats unless otherwise indicated

O. INTERIOR "NATURAL-FINISHED" STAINED HARDWOOD: EGGSHELL SHEEN (Level 3) WATER-BASED SYSTEM

1. Tinted-paste filler coat: MPI # 91
2. (omit on close-grained woods)
3. Stain coat(s): MPI # 90 color/intensity per sample
4. 1st, 2nd & 3rd Finish Coat: Eggshell (Gloss Level 3) water-based varnish - MPI # 181

P. INTERIOR "NATURAL-FINISHED" STAINED HARDWOOD: SATIN SHEEN - WATER-BASED SYSTEM
   1. Tinted-paste filler coat: MPI # 91
   2. (omit on close-grained woods)
   3. Stain coat(s): MPI # 90 color/intensity per sample
   4. 1st, 2nd & 3rd Finish Coat: Satin water-based varnish - MPI # 128

Q. INTERIOR "NATURAL-FINISHED" STAINED HARDWOOD – CONVERSION VARNISH FINISH:
   1. Apply in fabricator's shop to minimize VOC's on-site
   2. Basis-of-Design approved finish system manufacturer:
      a. AcromaPro (AP) – a division of Sherwin-Williams - www.acromapro.com
   3. Solvent-based stain coat(s): "Aqua Chroma Wiping Stain Base", color/intensity to match Architect's sample
   4. 1st & 2nd Sealer Coat: AP's "Care Seal" HS two-pack solvent born sealer
   5. Sand with 320 grit or finer sandpaper after both sealer coats
   6. 3rd & 4th Finish Coat: AP's "Amerivar 20" (satin sheen) # DM5361, two component clear conversion varnish
   7. Sand with 1500 and then 2000 grit sandpaper successively after finish coat application
   8. Paste Wax all surfaces on site prior to Substantial Completion

R. INTERIOR "SATIN OPAQUE" WOODWORK FINISH – CONVERSION VARNISH FINISH:
   1. Apply only to "Medex" waterproof particleboard substrate
   2. Apply in fabricator's shop to control airborne surface contaminates and VOC's
   3. Basis-of-Design approved finish system manufacturer:
      a. AcromaPro (AP) – a division of Sherwin-Williams - www.acromapro.com
   4. 1st & 2nd Sealer Coats: AP's "Bernyl Unisurfacer", post-catalyzed primer
   5. Sand with 320 grit or finer sandpaper after both sealer coats
   6. 3rd & 4th Finish Coat: AP's "Matador 20" (satin sheen) # DH560001X, post-catalyzed coating – pigmented to match Architect's color sample

S. INTERIOR "GLOSS OPAQUE" (AUTOMOTIVE LIKE) WOODWORK FINISH – OPAQUE CONVERSION VARNISH FINISH:
   1. Apply only to "Medex" waterproof particleboard substrate
   2. Apply in fabricator's shop to control airborne surface contaminates and VOC's
      a. Basis-of-Design approved finish system manufacturer:
   3. AcromaPro (AP) – a division of Sherwin-Williams - www.acromapro.com
   4. 1st & 2nd Sealer Coats: AP's "Bernyl Unisurfacer", post-catalyzed primer
   5. Sand with 320 grit or finer sandpaper after both sealer coats
   6. 3rd, 4th & 5th Finish Coat: AP's "Matador 80" (gloss sheen) # DH560001X, post-catalyzed coating – pigmented to match Architect's color sample
   7. Buff finish with 3M's "Perfect-It" paint finishing system, consisting of successive surface buffing using 3M's "EX Rubbing Compound", then 3M's "Machine Polish", and finally 3M's "Ultrafine Machine Polish" until a smooth, consistent mirror-like gloss luster is achieved.

T. INTERIOR NATURAL-FINISHED STAINED HARDWOOD: ALKYD VARNISH SYSTEM
   1. Tinted-paste filler coat: MPI # 91 (omit on close-grained woods)
   2. Oil/Alkyd-based stain coat(s): MPI # 90 color/intensity per sample
   3. Alkyd-based clear wood sanding sealer: MPI # 102 (lightly sanded)
   4. First Finish Coat: MPI # 75 Alkyd Varnish - gloss (lightly sanded)
   5. Second Finish Coat: MPI # 73 Alkyd Varnish - satin (lightly sanded)
   6. Paste Wax (OPTIONAL)

END OF SECTION 09 91 00

SECTION 09 96 00 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes surface preparation and the application of high-performance coating systems[**.**][**on the following substrates:**]

1. Interior Substrates:

a. Steel.

B. Related Requirements:

1. Section 050300 "Structural Steel Framing" for shop priming of structural steel with primers specified in this Section.
2. Section 099100 "Exterior Painting" for general field painting.
3. Section 09900 "Interior Painting" for general field painting.

1.03 LEED REQUIREMENTS

A. VOC Emissions Evaluation: For paints and coatings, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For paints and coatings, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Paints and Coatings Applications, as per the California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings or South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints and coatings.

C. 3. Purchase product from manufacturer that has an EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, use products that have a compliant embodied carbon optimization report or action plan.

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

1. 1. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
2. 2. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant.
3. 3. Provide manufacturers EPD conforming to ISO 14025 and EN 15804, or ISO 21930 and having at least a cradle to gate scope. If applicable, provide a a compliant embodied carbon optimization report or action plan.

1.05 DEFINITIONS

A. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.
B. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.
C. MPI Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.06 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
2. Indicate VOC content.

B. Sustainable Design Submittals:

1. See Section 09 91 00 Painting

C. Samples for Initial Selection: For each type of topcoat product indicated.
D. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.
   1. Submit Samples on rigid backing, 8 inches (200 mm) square.
   2. Apply coats on Samples in steps to show each coat required for system.
   3. Label each coat of each Sample.
   4. Label each Sample for location and application area.
E. Product List: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.07 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials[**, from the same product run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Coatings: **5** percent, but not less than **1 gal. (3.8 L)** of each material and color applied.

1.08 QUALITY ASSURANCE

A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Architect will select one surface to represent surfaces and conditions for application of each coating system.
      a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
      b. Other Items: Architect will designate items or areas required.
   2. Final approval of color selections will be based on mockups.
      a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.

1.10 FIELD CONDITIONS

A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.
C. Do not apply exterior coatings in snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Tnemec Company, Inc.
B. Peacock Laboratories, Inc.
C. Products: Subject to compliance with requirements, provide products (but are not limited to these products) listed in the Exterior High-Performance Coating Schedule or Interior High-Performance Coating Schedule for the coating category indicated.
   1. Exterior High-Performance Coatings:
      a. Series 94-H20 (Steel Prime Coat), by Tnemec
   2. Interior High-Performance Coatings:
      a. Series 10V, by Tnemec
      b. Series L69, by Tnemec
      c. Permalac NT Matt, by Peacock Laboratories
      d. Series 201, by Tnemec
      e. Series 280, by Tnemec
      f. Series 1081, by Tnemec
   3. Interior Radio Frequency Paints: At locations called for in Drawings
      a. GK5 Primer, by YShield
      b. HSF54 RF Paint, by YShield

2.02 HIGH-PERFORMANCE COATINGS, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Material Compatibility:
   1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
   2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
   3. Products shall be of same manufacturer for each coat in a coating system.

C. Colors: As selected by Architect from manufacturer's full range.

2.03 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:
   1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
   2. Testing agency will perform tests for compliance with product requirements.
   3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
   1. Concrete: 12 percent.
   2. Fiber-Cement Board: 12 percent.
   3. Masonry (Clay and CMUs): 12 percent.
   4. Wood: 15 percent.
   5. Gypsum Board: 12 percent.
   6. Plaster: 12 percent.

C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

D. Plaster Substrates: Verify that plaster is fully cured.

E. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.

F. Proceed with coating application only after unsatisfactory conditions have been corrected.
   1. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
   1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.

D. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer**, but not less than the following:**
   1. SSPC-SP 11.
   2. SSPC-SP 5/NACE No. 1.

E. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

F. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings.

G. Wood Substrates:
   1. Scrape and clean knots. Before applying primer, apply coat of knot sealer that is recommended in writing by topcoat manufacturer for coating system indicated.
   2. Sand surfaces that will be exposed to view and dust off.
   3. Prime edges, ends, faces, undersides, and backsides of wood.

4. After priming, fill holes and imperfections in the finish surfaces with filler that is recommended in writing by topcoat manufacturer for coating system indicated. Sand smooth when dried.

3.03 APPLICATION

A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."

1. Use applicators and techniques suited for coating and substrate indicated.
2. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
3. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.

B. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.

C. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

3.04 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.

1. Contractor shall touch up and restore coated surfaces damaged by testing.
2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

3.05 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.06 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Structural Steel - Exterior:

1. Urethane System:
   a. Prime Coat: Aromatic Urethane, Zinc-Rich.
      (1) Series 94-H20

3.07 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Structural Steel – Interior (Concealed Spaces):

1. Alkyd System:
   a. Prime and Top Coat: Modified Alkyd.
      (1) Series 10V by Tnemec
   b. Top Coat: Modified Alkyd
      (1) Series 10V by Tnemec

B. Structural Steel – Interior (Exposed Spaces Not Receiving Top Coat):

1. Modified Epoxy System
   a. Prime and Top Coat: Polyamidoamine Epoxy
      (1) Series L69 by Tnemec
         1. Color shall be from Tnemec Chromacolor Chart

C. Steel – Interior (Atrium Rails and Stair Components):

   a. Top Coat (Bare Steel): Acrylic Lacquer
      (1) Permalac NT Matte by Peacock Laboratories
         1. Color: Transparent Bronze Matte

D. Glass-Mat Reinforced, Mold and Moisture, and Impact Resistant Gypsum Board Substrates:

1. Epoxy System:
   a. Prime Coat: Modified Polyamine Epoxy, interior.
      (1) Series 201 Epoxoprime by Tnemec: Applied by roller to 150 sqft/galloon.
   b. Intermediate Coat: Modified Polyamine Epoxy.
      (1) Series 280 Tneme-Glaze by Tnemec: Applied at a rate of 125 sqft/gallon.
   c. Topcoa 1t: Aliphatic Acrylic Polyurethane, semi-gloss.

(1) Series 1081 Endura-Shield WB: Applied to achieve 2.0-3.0 mils dry film thickness.

d. Topcoat 2: Aliphatic Acrylic Polyurethane, semi-gloss.

(1) Series 1081 Endura-Shield WB: Applied to achieve 2.0-3.0 mils dry film thickness..

E. RF Shield Paint:

1. Prime Coat: Acrylic Binder
   a. GK5, by YShield: Applied per manufacture's instructions
2. Intermediate Coat: Carbon-based Acrylic
   a. HSF54, by YShield: Applied per manufacture's instructions
3. Top Coat: Water-based Latex
   a. As Scheduled. Refer to Drawings.

END OF SECTION 09 96 00

SECTION 09 24 00 – CEMENT PLASTERING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

(1) Two-coat polymer-modified portland cement plaster system consisting of a trowel-applied base coat, reinforcing mesh, and textured finish coat, installed directly over cement board substrate on exterior wall assemblies (no metal lath).
(2) Cement board substrate serving as the exterior-rated base for the plaster system.
(3) Drainage mat and coordination of the air/water-resistive barrier between vertical wall sheathing and the cement board substrate.
(4) Accessories, including starter track, casing beads, corner beads, control joints, and reinforcing mesh at joints and openings.

B. Related Requirements:

(1) Section 06 16 00 - Sheathing: Exterior-rated wall sheathing (glass-mat gypsum or exterior-grade plywood/OSB) receiving the air/water-resistive barrier.
(2) Section 07 25 00 - Weather Barriers: Air and water-resistive barrier coating or membrane applied over wall sheathing, where not furnished as an integral component of this Section's system.
(3) Section 07 92 00 - Joint Sealants: Sealants at terminations, control/expansion joints, and penetrations through the plaster system.
(4) Section 09 26 00 - Veneer Plastering: Interior gypsum veneer plaster system; not for exterior use.

1.02 REFERENCES

B. International Building Code (IBC): Chapter 14 - Exterior Walls; Chapter 25 - Gypsum Board and Plaster.
C. ICC Evaluation Service (ICC-ES) or applicable regional code approval (e.g., Miami-Dade NOA): Current code-compliance documentation for the proprietary two-coat cement plaster system provided, where required by authorities having jurisdiction.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer's product data for the air/water-resistive barrier, drainage mat, cement board, base coat, reinforcing mesh, primer, finish coat, and accessories, including physical properties, ASTM compliance, and installation instructions.
B. Samples: Submit two 12 by 12 inch samples of finished plaster illustrating each specified texture and color for Architect's selection and approval.
C. Shop Drawings: Submit control joint and expansion joint layout, cement board panel layout, accessory locations, and flashing details at penetrations and terminations, coordinated with wall framing and openings.
D. Manufacturer's Installation Instructions: Submit printed installation instructions for the complete system, including coat thicknesses, cure times, and maximum uncovered exposure time for the drainage mat/air barrier prior to cement board installation.
E. Test and Code Reports: Submit current ICC-ES Evaluation Report or applicable code approval, and structural/wind-load test data (per ASTM E330) for the fastening pattern and system configuration proposed for the Project.
F. Qualification Data: Submit evidence of Installer qualifications specified in Section 1.04.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Firm regularly engaged in exterior cement plaster installation, with minimum 5 years' experience on projects of similar scope and exposure, and certified/trained by the system manufacturer in the specified two-coat cement board stucco system.
B. Mockups: Prior to full installation, apply mockup panel not less than 4 feet by 4 feet on the actual wall assembly (sheathing, air/water-resistive barrier, drainage mat, cement board, base coat, and finish coat) illustrating texture, color, and a representative control joint and termination condition.

(1) Locate mockup where directed by Architect; obtain Architect's approval before proceeding with remaining Work.

(2) Approved mockup may remain as part of completed Work if undisturbed and undamaged at Substantial Completion.

C. Preinstallation Conference: Prior to commencing Work of this Section, conduct conference with Installer, sheathing installer, air/water-resistive barrier installer, and sealant applicator to coordinate sequencing, flashing, and terminations at openings.

D. Wind Load Compliance: Confirm the manufacturer's published fastening schedule and tested system configuration meet or exceed the Project's design wind pressures per ASCE 7 and the structural engineer's requirements. <Verify with structural engineer prior to construction.>

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened packaging, labeled with manufacturer name, brand name, and material type.

B. Store cementitious materials off the ground, under cover, in a dry location protected from moisture until time of use; discard materials that have been exposed to moisture or have exceeded manufacturer's shelf life.

C. Store cement board panels flat and fully supported, protected from moisture and damage.

1.06 FIELD CONDITIONS

A. Environmental Requirements:

(1) Do not apply base coat or finish coat when ambient or surface temperature is below 40 degrees F (4 degrees C); maintain minimum 40 degrees F (4 degrees C) during application and for not less than 24 hours after application of each coat.

(2) Protect plaster from direct sun, wind, and rapid moisture loss during application and curing.

(3) Do not leave drainage mat/air barrier assembly exposed and uncovered by cement board longer than the manufacturer's maximum stated exposure period (typically 30 days).

B. Height and Construction-Type Limitations: The basis-of-design system is limited by the manufacturer to a maximum height above grade on noncombustible construction per its current code listing; verify the specified system's height and construction-type limitations against the Project's building height and construction type before issuing for construction. <Verify.>

C. Do not install below grade, at roofs, or on horizontal surfaces; provide minimum 6 inch clearance above grade, increased as required in freeze-thaw climates.

D. Protect adjacent finish materials, glazing, and dissimilar materials from contact with, and staining by, plaster materials during application.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Product: Drawings and this Section are based on the Sto Corp two-coat cement board stucco system (StoQuik Silver DrainScreen system, or equivalent current Sto system). Subject to compliance with requirements, provide the basis-of-design system indicated, or a comparable two-coat cement plaster system over cement board by one of the following:

(1) Sto Corp.
(2) Parex USA, Inc.
(3) BASF Wall Systems (Master Wall).
(4) Omega Products International.
(5) [Approved equal].

B. Substitutions: Refer to Section 01 25 00 - Substitution Procedures for products by manufacturers not listed above.

C. System Compatibility: Provide air/water-resistive barrier, drainage mat, cement board fasteners, reinforcing mesh, base coat, primer, and finish coat as components of a single manufacturer's tested and warranted system; do not intermix components of different manufacturers' systems.

2.02 AIR AND WATER-RESISTIVE BARRIER (AWRB)

A. AWRB: Fluid-applied or self-adhered air and water-resistive barrier over wall sheathing, compatible with the cement board stucco system, complying with ASTM E2178 (air permeance) and ASTM E2357 (assembly air leakage), and water-vapor permeable per ASTM E96.

(1) Basis of Design: Sto Gold Coat (brush, spray, or roller-applied coating), or Sto RapidGuard / StoShield self-adhered membrane, per manufacturer's system requirements.

(2) Coordinate with Section 07 25 00 where the AWRB is furnished under a separate section; where furnished as an integral component of this system, apply per manufacturer's instructions at minimum wet-film thickness required for the substrate.

2.03 DRAINAGE MAT

A. Drainage Mat: Matrix drainage material providing a capillary break and drainage plane between the AWRB and the cement board substrate on vertical surfaces, complying with ASTM E84 for flame spread and smoke development.

(1) Basis of Design: Sto DrainScreen, nominal 6 mm thickness, or nominal 10 mm thickness where required by authorities having jurisdiction.

2.04 CEMENT BOARD SUBSTRATE

A. Cement Board: Non-asbestos, fiber-mat reinforced cement substrate sheets complying with ASTM C1325, minimum 1/2 inch (13 mm) thick, serving as the exterior-rated sheathing/substrate receiving the plaster base coat.

(1) Basis of Design: PermaBase Brand Cement Board, or comparable cement board acceptable to the plaster system manufacturer.

B. Fasteners: Corrosion-resistant screws per manufacturer's requirements: minimum #9 Type S corrosion-resistant screws with 1 inch minimum penetration at wood framing, or minimum #8 Type S-12 screws with 3/8 inch minimum penetration at steel framing; space fasteners maximum 8 inches on center.

2.05 REINFORCING MESH AND DETAIL COMPONENTS

A. Reinforcing Mesh: Alkali-resistant, symmetrical, interlaced open-weave fiberglass mesh, nominal 4.5 oz. per sq. yd. (153 g/sq. m.), embedded in the base coat over cement board joints, corners, accessory flanges, and wall penetrations.

(1) Basis of Design: StoGuard Mesh, or Sto Mesh.

B. Detail/Conformable Membrane: Flexible membrane for dynamic joints and rough openings prior to base coat application.

(1) Basis of Design: StoGuard Conformable Membrane.

C. Starter Track and Trim Accessories: Manufacturer's standard starter track at wall base, casing beads at openings and terminations, and inside/outside corner beads with integral mesh.

2.06 BASE COAT

A. Base Coat: Polymer-modified, portland cement-based (ASTM C150, Type I) trowel-applied base coat providing minimum tensile adhesion of 15 psi per ASTM C297, formulated as the first of two coats over cement board substrate.

(1) Basis of Design: Sto Primer/Adhesive-B; high-build alternates Sto BTS Plus or Sto BTS Xtra where required by manufacturer for the specified finish or exposure.
(2) Applied Thickness: Approximately 1/8 inch (3 mm), uniform, fully embedding reinforcing mesh.

2.07 PRIMER

A. Primer: Acrylic-based, tinted, sanded primer improving substrate absorption, adhesion, and finish color uniformity, where required by the selected finish coat manufacturer's instructions.

(1) Basis of Design: StoPrime Sand.

2.08 FINISH COAT

A. Finish Coat: Factory-blended, integrally colored, textured finish, trowel- or spray-applied over the primed and cured base coat.

(1) Basis of Design: [Stolit (acrylic)] [Stolit Lotusan (hydrophobic, self-cleaning)] [Sto Powerflex or Powerflex Silco (silicone-enhanced elastomeric)] [StoSignature specialty finish]; Architect to select. <Insert selection.>
(2) Texture: [Fine] [Medium] [as indicated on Drawings]; Architect to select from manufacturer's standard textures. <Insert selection.>
(3) Color: [As selected by Architect from manufacturer's full color range] [Integral color, custom match to sample]; coordinate selected color's Light Reflectance Value (LRV) with control joint spacing requirements in Part 3. <Insert selection.>

2.09 MIXING

A. Mix factory-prepared base coat and finish coat materials with clean water in accordance with manufacturer's written instructions and proportions; do not add cement, sand, or other materials not recommended by manufacturer.
B. Mix only the quantity of material that can be applied and tooled within manufacturer's stated working time; do not retemper material that has begun to set.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify exterior wall sheathing is installed, fastened, and inspected in accordance with Section 06 16 00.
B. Verify the AWRB and drainage mat are installed, with laps and flashing integrated at openings and penetrations, and have been inspected and approved prior to covering; verify the drainage mat has not been left exposed longer than the manufacturer's maximum stated exposure period.
C. Verify cement board substrate is dry, structurally sound, straight and true within 1/4 inch in 10 feet, and free of damage that would impair plaster bond.
D. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Install starter track, casing beads at openings and terminations, and flashing prior to cement board installation, coordinated with the drainage plane to direct moisture to the exterior.
B. Lay out control joints and expansion joints per Shop Drawings and the spacing criteria in Part 3.06 prior to cement board and base coat installation.
C. Protect openings, adjacent finishes, and dissimilar materials from contact with wet plaster materials.

3.03 CEMENT BOARD INSTALLATION

A. Install cement board with bottom edge engaged in starter track; fasten to framing at maximum 8 inches on center with fasteners specified in Part 2.04.
B. Stagger vertical joints of cement board; offset cement board joints minimum 6 inches from wall sheathing joints behind the drainage plane.

C. Provide control and expansion joints in the cement board substrate at locations coordinated with the finish plaster control joints.

3.04 REINFORCEMENT AND ACCESSORY INSTALLATION

A. Embed reinforcing mesh over cement board joints, accessory flanges, and at wall penetrations, with minimum 9 by 12 inch diagonal reinforcement at corners of openings.
B. Install inside and outside corner beads with integral mesh at all external and internal corners.
C. Install conformable membrane at dynamic joints and rough openings prior to base coat application.

3.05 BASE COAT APPLICATION

A. Apply base coat uniformly at approximately 1/8 inch thickness over cement board, working in sections not exceeding 40 inches horizontally or vertically to maintain a wet edge and avoid cold joints.
B. Immediately embed reinforcing mesh into wet base coat; overlap mesh seams minimum 2-1/2 inches.
C. Allow base coat to cure for the minimum time recommended by manufacturer before priming or applying finish coat.

3.06 PRIMER AND FINISH COAT APPLICATION

A. Apply primer evenly by brush or roller where required by the selected finish coat manufacturer's instructions.
B. Apply finish coat by spray or trowel over the cured, primed base coat; work continuously toward the unfinished edge to maintain a wet edge and avoid visible lap marks; do not apply in direct sunlight or over high-pH surfaces.
C. Control Joints: Provide finish coat control joints at maximum 25 feet on center for finish colors with Light Reflectance Value (LRV) greater than 70, and at maximum 16 feet on center for colors with LRV between 30 and 70, or at closer spacing as recommended by manufacturer for darker colors.
D. Provide sealant at terminations, penetrations, and accessory butt joints per Section 07 92 00; install weeps at floor lines and window and door heads.

3.07 FIELD QUALITY CONTROL

A. Confirm installed fastening pattern and system components match the tested assembly configuration corresponding to the Project's design wind pressures; notify Architect of discrepancies before proceeding. <Verify wind load compliance with structural engineer.>
B. Inspect completed plaster for cracking, delamination, bond failure, and uniformity of texture and color; repair or replace defective areas in accordance with manufacturer's recommendations at no additional cost to Owner.

3.08 CLEANING AND PROTECTION

A. Remove excess plaster materials, droppings, and overspray from adjacent surfaces, glazing, and dissimilar materials as work progresses.
B. Protect completed system from damage, moisture, and construction traffic until Substantial Completion; do not expose the completed system to weather during the manufacturer's minimum cure period following finish coat application.

END OF SECTION 09 24 00

END OF DIVISION 09

DIVISION 10 – SPECIALTIES

SECTION 10 11 00 – MARKERBOARDS AND TACKBOARDS

SECTION 10 14 00 – SIGNAGE

SECTION 10 21 13 – STAINLESS STEEL TOILET COMPARTMENTS

SECTION 10 26 00 – WALL PROTECTION

SECTION 10 28 00 – TOILET ACCESSORIES

SECTION 10 44 00 – FIRE PROTECTION SPECIALTIES

SECTION 10 11 00 – MARKERBOARDS

PART 1 - GENERAL

1.01 PROVIDE MARKERBOARDS where indicated on the Drawings, in accordance with requirements specified herein, and as required for a complete and proper installation. Types of markerboards include the following:

A. Custom sized glass surfaced magnetic markerboards with concealed mountings
B. Provide units self-edged (trimless) unless indicated otherwise in the Drawings

1.02 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
B. VOC content requirements for wet-applied products: For adhesives and sealants used for installation, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants.

1.03 LEED DOCUMENTATION REQUIREMENTS

A. Complete the provided Product Data Reporting Form in spec section 01 81 13 and provide the following:
B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.
C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.04 SUBMITTALS

A. SUMMIT PRODUCT DATA for each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
B. SUBMIT SHOP DRAWINGS for visual display surfaces when product data does not indicate unit size, installation details and attachments to other work.
C. SUBMIT SAMPLES FOR VERIFICATION: For each type of visual display surface indicated.
   (1) Markerboard Surface:
      (a) Not less than 8-1/2 by 11 inches.
      (b) Include three (3) sample panels for each type, color, and finish/texture required.
   (2) Accessories: Full-size Sample of each type of accessory.
D. SUBMIT OPERATION AND MAINTENANCE DATA for visual display surfaces to include in maintenance manuals.

1.05 QUALITY ASSURANCE

A. SOURCE LIMITATIONS: Obtain visual display surfaces from single source from single manufacturer.
B. SURFACE-BURNING CHARACTERISTICS: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   (1) Flame-Spread Index: 25 or less.
   (2) Smoke-Developed Index: 50 or less.

1.06 DELIVERY, STORAGE, AND HANDLING

A. DELIVER FACTORY-BUILT MARKERBOARDS completely assembled in one piece without joints, where possible. If dimensions exceed maximum manufactured panel size, provide two or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefit components at the factory, disassemble for delivery, and make final joints at the site.
B. STORE UNITS vertically with packing materials between each unit.

PART 2 - PRODUCTS

2.01 APPROVED PRODUCT / MANUFACTURER: Refer to Drawings for products, unit size and color(s) required. Other products/manufacturers must be submitted as a substitution request per requirements of Division-01.

A. Basis-of-Design: Clarus (https://www.clarus.com/)

2.02 MAGNETIC GLASS-SURFACED MARKERBOARD: Refer to Drawings for products, unit size and color(s) required. Other products/manufacturers must be submitted as a substitution request per requirements of Division-01.

A. Basis-of-Design: Float Frameless Magnetic

PART 3 - EXECUTION

3.01 EXAMINE SUBSTRATES AND CONDITIONS, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work. Examine walls and partitions for proper preparation and backing for visual display surfaces. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALL UNITS in locations and at mounting heights indicated on Drawings, or if not indicated, at heights directed by the Architect. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

3.03 ANCHOR UNITS by attaching manufacturer’s provided mounts to wall surfaces and to visual display boards with fasteners at spacing or locations as recommended by manufacturer. Secure both top and bottom of panels to walls.

3.04 CLEANING AND PROTECTION: Clean visual display surfaces according to manufacturer's written instructions. Attach one cleaning label to visual display surface in each room. Touch up factory-applied finishes to restore damaged or soiled areas. Cover and protect visual display surfaces after installation and cleaning.

END OF SECTION 10 11 16

SECTION 10 14 00 – SIGNAGE

PART 1 - GENERAL

1.01 PROVIDE signage to comply with requirements indicated for manufacturing process, material finishes, style, size and message content, as specified herein, and as required for a complete and proper installation. Types of signage required include to the following:

1.02 Below is a checklist for signage in new buildings as required by the *International Building Code* (IBC) and *International Fire Code* (IFC). The checklist includes the type of sign required, a description of what the sign should say, details about locations of the sign and when it is required, and the code sections that pertain to each sign.

TYPE OF SIGN	DESCRIPTION	DETAILS	CODE SECTIONS
Exits	"EXIT"	Exits are to be marked by an approved exit sign visible from any direction of egress travel. Intervening means of egress doors within exits shall be marked by exit signs. Exit sign placement shall be such that no point in an exit access corridor or exit passageway is more than 100 feet from the nearest visible exit sign.	IBC 1013.1
Emergency Evacuation	Building map of exit routes, pull stations, fire extinguishers, current location	The building is to have an approved fire safety and evacuation plan in compliance with section 404 of the IFC.	IBC 3008.1.3
Emergency Exit Doors	"PUSH UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN ## SECONDS"	Approved delayed egress locks are permitted to be installed in buildings equipped with approved fire protection systems.	IBC 1008.1.9.7
Elevator Emergency Signs	"IN FIRE EMERGENCY, DO NOT USE ELEVATOR. USE STAIRS"	Standardized design of approved picture and text is to be posted next to every elevator call station.	IBC 3002.3
Floor Identification	Floor level, story of exit discharge, roof access from exit enclosure	Signs are to be provided on each floor landing where exit enclosures connect more than 3 floors. The sign is to be located 5 feet above the floor landing.	IBC 1023.9
Stairwell Storage	Signage restricting storage of any kind in the stairwell	Provide signs restricting storage of any kind and bike parking in stairwells.	HUD
Areas of Refuge	"AREA OF REFUGE"	Each door providing access to an area of refuge from the adjacent floor is to be identified by a sign. Where exit sign illumination is required, the sign is to be illuminated.	IBC 1008.1 IBC 1009.9
Two-way Comm. System	Directions for summoning assistance and written identification of the location	To be posted next to any two-way communication systems.	IBC 1009.8.2
Fire Protection Equipment	Signs identifying equipment and location for fire department	Rooms containing controls for air-conditioning systems, sprinkler risers and valves, or other fire detection, suppression or control elements shall be identified for the use of the fire department.	IFC 509.1
Fire Department Connections	"AUTOMATIC SPRINKLERS" or "STANDPIPES" or "TEST CONNECTION	A metal sign with raised letters is to be mounted on all building fire department connections.	IFC 912.4
Fire Extinguishers	"FIRE EXTINGUISHER"	A sign extending out from the wall is to be mounted above fire extinguishers in public areas for ease of locating.	
Fire Cabinets	Fire cabinet equipment identified by approved signage	Sign is to be permanently attached with letters not less than 2 inches high in a color that contrasts with the background color.	IBC 905.7.1
Fire Doors	"FIRE DOOR-DO NOT BLOCK" or "FIRE DOOR-KEEP CLOSED"	Sign is to be permanently displayed on or near each fire door in letters not less than 1 inch high.	IFC 703.2.1
Rated Barriers	"FIRE AND/OR SMOKE BARRIER PROTECT ALL OPENINGS"	Any wall required to have protected openings or penetrations is to be permanently identified with signs or stenciling.	IBC 703.6
Locks on Egress Side of Doors	"THIS DOOR TO REMAIN UNLOCKED WHEN BUILDING IS OCCUPIED"	Sign is to be posted on the egress side on or adjacent to the door and have letters at least 1 inch high.	IBC 1010.1.9.4
Electrical Control	"ELECTRICAL ROOM"	Doors into electrical control panel rooms are to be marked with a plainly visible and legible sign.	IFC 605.3.1

Accessibility Directions	Directional signage indicating route to nearest accessible element	These directional signs are also to include the International Symbol of Accessibility. To be provided at the following locations: •Inaccessible building entrances •Inaccessible public toilets and bathing facilities •Elevators not serving an accessible route •Exits serving required accessible spaces that do not have approved accessible means of egress	IBC 1111.1
Hazard Identification	Hazard identification, numbered and color-coded "fire diamond"	Identifies the risk of hazardous materials, as specified in NFPA 704, through four divisions: •Left (blue): health risk •Upper (red): Flammability •Right (yellow): Reactivity •Lower (white): Special notice	IFC 2397.5
Restrooms	Designated sex of the toilet facility	Standardized design or approved picture and/or text is to be posted on each restroom facility.	IBC 2902.4
No Smoking	"NO SMOKING"	Signs are to be posted in conspicuous locations in each structure or location in which smoking is prohibited. The content, lettering, size, color and location of required "No Smoking" signs is to be approved.	IFC 310.3
Occupant Load	Maximum occupant load of the room	In assembly occupancies the occupant load is to be conspicuously posted by the main exit.	IBC 1004.9
Live Loads	Designed live load of each floor or portion thereof	Where designed to exceed 50 psi, live loads are to be conspicuously posted in all locations that they apply, mainly elevators.	IBC 106.1
Unit Numbers	Apartment Unit numbers	Signs for each apartment unit placed next to each apartment entry door.	IFC and ANSI 117.1
Other Public or Tenant accessible rooms	Common Rooms that are accessible to the public or tenants in an Office or MF building.	Signs identifying the room name placed next to each door entering the room.	ANSI 117.1
Accessible Parking	Parking spaces designated as accessible only	Each parking space designated for accessible parking signed as required.	ANSI 117.1
Building Address	Exterior PSV building address numbers	As required by local AHJ	

1.03 INSTALL INTERIOR WAYFINDING SIGNAGE **TBD**.

A. SEPARATE CONTRACT: The Owner will arrange for the following signage to be provided by others:

(1) Monument (or pole type) development / site sign(s)
(2) Exterior Building signage
(3) Development Directory, Tenant Directory, and Market Directory signage
(4) Site traffic signage
(5) Apartment unit identification signs

B. COORDINATE with the Owner's separate Sign Contractor regarding field dimensions, shop drawings, site access, scheduling, power requirements, and other items necessary for timely installation of signs.

1.04 COMPLY WITH applicable requirements of the Americans with Disabilities Act (ADA), requirements of the Building Code, including but not limited to accessibility requirements of ANSI A117.1 (most recent edition), and local regulations or ordinances. Obtain and pay for all exterior signage permits, which may require a separate permit application to the AHJ.

1.05 COORDINATE with Division-26 Electrical Work to provide electrical power to illuminated signage, where indicated on the Drawings.

1.06 SHOP DRAWINGS: Submit shop drawings of all signage items prior to fabrication and erection. Include plans, elevations and large scale details of fabrication, text, and layout, when applicable. Show details of anchorages to other materials, connector housings, and accessory items.

1.07 PERMITS: Obtain approval of governmental AHJ representatives and obtain approval of the Owner before fabrication of signage. Costs for permits and approval is a part of this Section.

1.08 LABELS: With the exception of required UL labels, do not apply fabricator's identification labels to any exposed surface of signs.

PART 2 - PRODUCTS

2.01 SIGN MATERIALS

A. ALUMINUM SHEET: Alloy and temper recommended by aluminum producer or finisher for type of use and finish indicated, and with not less than the strength and durability properties required in ASTM B 209 for 5005 H15.
B. ALUMINUM EXTRUSIONS: Allow and temper recommended by aluminum producer or finisher for type of use and finish indicated, and with not less than the strength and durability properties required in ASTM B 221 for 6063 T5.
C. PRESSURE SENSITIVE VINYL (PSV): "220 Scotchcal" by 3M or equal 2 mil minimum thickness, opaque, non-reflecting, cast PVC film with pressure sensitive adhesive backing sheet, suitable for exterior applications, in colors as selected by Architect from manufacturer's full range of available options, or as indicated on the Drawings.

2.02 FABRICATED ITEMS:

A. ACCESSIBLE PARKING SIGNS (provide one unit at each accessible parking space): 12 x 18 inch white rectangle with longer dimension vertical, with a green message and a blue and white international barrier-free symbol, and including the text: "Disabled Parking – State Permit Required" and "Violators fined up to $200.00" (verify and coordinate final text with local regulations). Provide with standard mounting post set in a concrete post foundation base, and set bottom of sign five (5) feet above grade.
B. ACCESSIBLE DOOR SIGNAGE (per ANSI A117.1 & ADA): 6 x 8 inch minimum radius cornered Pictorial Symbol Signs, with 1/32" raised pictogram symbols, 1/32" x 5/8" high upper case raised letter text, and with 1/32" Grade II Braille text. Text and pictogram to be white on black colored sign panel with matte finish. Provide double sided 1/32" thick Scotchmount tape for attaching at 60" above floor to center of sign on the wall adjacent to the latch side of a door:
   (1) 1 each sign reading "RESTROOM" at each uni-sex Toilet Room: Cal-Royal # NEWUCHS10 in Black or equal
   (2) 1 each sign reading "MEN" at each public Men's Toilet Room: Cal-Royal # MH68 in Black or equal
   (3) 1 each sign reading "WOMEN" at each public Women's Toilet Room: Cal-Royal # WH68 in Black or equal
   (4) 1 each sign reading "EXIT ROUTE" at each exit door: Cal-Royal # CAEXRT4534 in Black or equal
C. WAYFINDING, DIRECTIONAL & ROOM / DOOR SIGNS: Provide tactile accessible sign units with raised letters, raised symbols (when indicated) and with Grade II Braille text meeting requirements of ANSI A117.1 and the 2010 ADA Standard for Accessible Design for fabrication and for installation requirements.
   (1) COMPOSITION: Multi-layer, ultraviolet resistant, moisture-resistant, non-glare interior photosensitive photopolymer sheet with minimum 1/8 inch thick PETG base, with surface burning characteristics that consist of a flame spread of 75 and a smoke development of 120 when tested in accordance to UL 723 (ASTM E 84). Provide in "letter" color as selected by Architect from Manufacturer's full range of available color options.
   (2) SECOND SURFACE or "background" surface to be painted with non-glare acrylic paint as recommended by Manufacturer, in a contrasting color to the remaining character surface, in colors (potentially different on each floor) as selected by the Architect from the manufacturer's full range of available color options.
   (3) TYPICAL FONT: "Helvetica Neue Light" – upper case typical
   (4) BRAILLE CHARACTERS: Fabricate each sign unit with corresponding Grade II Braille text.
   (5) FABRICATION PROCESS: Camera ready artwork is reproduced onto the photosensitive surface and exposed to light – with the background surface removed where not exposed, producing a integrated solid sign panel. Laminated photopolymers, added-on characters, and engraved characters are not acceptable.

2.03 ACCESSIBILITY REQUIREMENTS: Comply with requirements of the ADA (even if not indicated herein):

A. Character Proportions: Letters and numbers on signs must have a width-to-height ratio between 3:5 and 1:1 and a stroke width-to-height ratio between 1:5 and 1:10.
B. Color Contrast: Characters and symbols must contrast with their background - either light characters on a dark background or dark characters on a light background.
C. Raised Characters or Symbols: Letters and numbers on signs must be raised 1/32 in minimum and be sans serif characters. Raised characters or symbols must be at least 5/8 in high but no higher than 2 inches. Symbols or pictograms on signs must be raised 1/32 in minimum.

2.04 NON-ACCESSIBLE TOILET DOOR SIGNAGE 1-3/4 by 6 inch wide minimum radius cornered sign units with double-stick tape for mounting at 60 inches above floor to center of sign on the wall adjacent to the latch side of a door:

A. 1 each sign reading "MEN" – Cal-Royal # M1346 or equal, OR
B. 1 each sign reading "WOMEN" – Cal-Royal # W1346 or equal, OR
C. 1 each sign reading: "RESTROOM" (at uni-sex toilet rooms) - Cal-Royal # RS1346 or equal, AND
D. Custom fabricated "directional signs" with raised text and braille directing users to the nearest accessible toilet facilities.

2.05 PSV LETTERING: Die-cut copy from PSV mounted to paper backing sheet for field application, and as follows:

A. PSV BUILDING NUMBERS: 8" high white reverse-mount to interior side of glass facing main street
B. PSV FIRE-SPRINKLER ROOM DOOR SIGN: 1-1/2" High "RED" colored PSV letters reading: "FIRE-SPRINKLER VALVE" (verify text with AJH)

2.06 FIRE- OR SMOKE- WALL OR PARTITION SIGNS: Within each room or interior space facing a fire- or smoke-rated wall or partition, and at any other walls or partitions required to have fire- or smoke- protected openings or penetrations, provide permanent, adhesive mounted vinyl signs of not less than 11 inch high by 15 inches wide, as follows:

A. Locate within 15 feet of each end on both sides, at each change of direction of the wall or partition, and at intervals not exceeding thirty (30) feet measured horizontally along the length of the wall or partition.
B. Locate approximately 6 inches above suspended ceilings or below access flooring, as applicable. Center units within attic spaces or other concealed areas, as appropriate
C. Locate within all concealed spaces, including ceilings, attics, or concealed areas under finished floors (access flooring).
D. Lettering: 3 inch minimum height, with 3/8 inch thick strokes typical, in a contrasting color to the background,

E. RECOMMENDED TEXT: "FIRE AND / OR SMOKE BARRIER—PROTECT ALL OPENINGS", or similar wording.
F. BASIS-OF-DESIGN: Fire Wall Signs Inc., P: 910-392-4939, website: www.firewallsigns.com or equal.

2.07 PAINTED METAL LETTERS: Fabricate from aluminum plate, producing characters with smooth, flat faces, sharp corners, precisely formed lines and profiles; and free from pits, scale, holes or other defects. Provide lugs into backs of characters and tap to receive threaded mounting studs. Match style and copy as indicated on the Drawings, and as follows:

A. MINIMUM FACE METAL THICKNESS: 0.25 (1/4) inch thick
B. FABRICATED LETTER DEPTH: Two (2) inch deep
C. PROJECTION FROM SUBSTRATE: One (1) inch
D. FINISH: baked enamel finish meeting NAAMM's "Metal Finishes Manual" specification # AA M4xC12C42R1x using thermosetting enamel consisting of prime coat and TWO (2) finish coats.
E. COLOR: As indicated on Drawings, or if not indicated, in custom color to match Architect's sample.

2.08 STAINLESS-STEEL LETTERS: Fabricate from Type 304 stainless steel plate, producing characters with smooth, flat faces, sharp corners, precisely formed lines and profiles; and free from pits, scale, holes or other defects. Provide lugs into backs of characters and tap to receive threaded mounting studs. Match style and copy as indicated on the Drawings, and as follows:

A. MINIMUM FACE METAL THICKNESS: 0.125 (1/8) inch thick
B. PROJECTION FROM SUBSTRATE: One (1) inch
C. FINISH: # 4 "satin" directionally textured finish

2.09 WOOD LETTERS: Fabricate from solid hardwood, producing characters with smooth, flat faces, sharp corners, precisely formed lines and profiles; and free from surface imperfections, depressions, knot holes or other defects. Provide recessed anchorages into backs to receive threaded mounting studs. Match style and copy as indicated on the Drawings, and as follows:

A. MINIMUM WOOD THICKNESS: 3/4 inch thick
B. HARDWOOD SPECIES / CUT: Match "typical" building standard hardwood species / cut per Division-06 Section
C. PROJECTION FROM SUBSTRATE: One (1) inch
D. FINISH: "Natural wood finish" per Division-09 "Painting" Section – in stain / color as indicated on the Drawings or if not indicated, in custom color to match Architect's sample.

2.10 ILLUMINATED LETTERS:

A. LETTER EDGE MATERIAL: .063" aluminum sheet 5" depth, acrylic paint finish outside color as indicated on Materials / Color schedule listed in the Drawings, white finish inside, unless otherwise noted.
B. LETTER BACKING: .090" thick aluminum sheet
C. LETTER FACES: 1/8" thick acrylic, color as noted in material color schedule included in the Drawings, with 3/4" plastic trim caps gold color unless noted otherwise.
D. LED LIGHTING: Provide LED lighting inside each letter that fully and evenly lights each letter.
E. REMOTE DRIVER: Provide remote driver at power source.
F. FABRICATION: Cut backing and faces to comply with letter style and text copy indicated, and in compliance with approved shop drawings. Locate letter edge joints at bottom of letters for exterior applications. Spot weld letter edge to backing to eliminate all light leak. Drill weep holes at all low points of letters at exterior locations. Adhere letter faces to plastic insert in trim cap molding with acrylic cement. Form neon tubing to be centered within letter enclosure. Attach letter edge and trim cap to letter backing with sheet metal screws, painted to match trim cap.

2.11 MISCELLANEOUS MATERIALS:

A. FASTENERS: Use concealed fasteners, unless otherwise indicated, which are fabricated from metals which are non-corrosive to either sign materials or mounting surface.
B. ANCHORS AND INSERTS: Use nonferrous metal or hot dipped galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion bolt devices for drilled in place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

PART 3 - EXECUTION

3.01 INSTALL signage in accordance with the approved shop drawings, to be level, plumb, and at height indicated, free from distortion or other defects of appearance. Remove and reinstall signage materials that do not comply with these requirements.

3.02 MOUNT accessible room signs directly onto wall surface centered nine (9) inches from the strke-side edge of the door, at 5'-0" AFF to center of sign. Use double sided foam tape to mount to smooth non porous surfaces.

3.03 MOUNT PSV signs on inside of glass, or directly to surface face of solid doors, as applicable.

3.04 CLEAN soiled sign surfaces and protect units from damage until Substantial Completion.

END OF SECTION 10 14 00

SECTION 10 21 13 – STAINLESS STEEL TOILET COMPARTMENTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

(1) Floor-mounted, overhead-braced, stainless steel toilet compartments with Permaseal edge panel-to-pilaster and panel-to-door connections.
(2) Hardware and accessories required for a complete installation, including headrail bracing, pilaster shoes, hinges, latches, brackets, coat hooks, and bumpers.

B. Related Sections:

(1) Section 06 10 00 – Rough Carpentry.
(2) Section 10 28 00 – Toilet, Bath, and Laundry Accessories.
(3) Division 22 – Plumbing Fixtures.

1.02 REFERENCES

A. ICC A117.1 – Accessible and Usable Buildings and Facilities.
B. ADA Standards for Accessible Design (Federal).
C. Applicable state and local building and accessibility codes. Conformity and compliance with local and national codes is the responsibility of the Installer, per manufacturer's requirements.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer's data sheets indicating material composition, gauge, core construction, hardware options, and finish.
B. Shop Drawings: Indicate compartment layout, dimensions, door swings, accessible stall configuration, and mounting/bracing details, coordinated with partition and blocking locations; verify all rough-in dimensions per manufacturer's requirements prior to installation.
C. Samples: Submit manufacturer's satin brushed stainless steel finish sample for Architect's approval.
D. Selections: Submit manufacturer's standard and optional selections for hinges, door hardware, brackets, and corners for Architect's approval.
E. Warranty: Submit manufacturer's warranty documentation.

1.04 QUALITY ASSURANCE

A. Single Source Responsibility: Provide toilet compartments, hardware, and accessories from a single manufacturer.
B. Sustainable Design: Provide compartments certified GREENGUARD Gold for low chemical emissions.
C. Accessible Compartments: Provide accessible toilet compartments complying with ICC A117.1 and the applicable governing accessibility code. Provide 69-inch-high doors and panels at 9 inches above finished floor (AFF) at ADA-compliant accessible stalls, and 72-inch-high doors and panels at 6 inches AFF at all other stalls, at locations and in quantities indicated on the drawings.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver components in manufacturer's original, unopened packaging, labeled with manufacturer's name and product identification.
B. Store in a clean, dry, indoor location, protected from damage, until installation.

1.06 WARRANTY

A. Manufacturer's Warranty: Provide manufacturer's standard warranty against defects in materials and workmanship. [Confirm current warranty term with manufacturer; not stated in referenced product literature.]

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: Series 400, Sentinel, floor-mounted, overhead-braced, stainless steel toilet compartments, as manufactured by Bradley Corporation (a Watts Brand). [Confirm acceptable substitution/equal provisions with Architect prior to bidding.]

2.02 MATERIALS

A. Panel, Door, and Pilaster Construction: Two sheet metal faces insulated with a moisture-resistant honeycomb core, adhered to the inner surface of each face and set under pressure to cure.
B. Face Sheet Material: 300 Series stainless steel with a #4 satin brushed finish.
C. Panels: 1 inch thick, 22-gauge stainless steel; corners welded underneath a clip affixed to all corners, standard. [Optional: welded corners, ground smooth — confirm selection with Architect.]
D. Doors: 1 inch thick, 22-gauge stainless steel; corners welded underneath a clip affixed to all corners. Provide internal 16-gauge and 14-gauge welded reinforcement at top and bottom hinge locations, with a factory-installed concealed true gravity cam; hinge closing position shall be fully adjustable. Provide a pre-punched hole for field installation of the ADA-compliant concealed slide latch.
E. Pilasters: 1-1/4 inches thick, 20-gauge stainless steel. Provide an internally welded 18-gauge bracket at the floor end to accept a 5/16 inch stainless steel hex bolt, connecting to a stainless steel L-bracket secured to the floor with stainless steel fasteners; hex bolts provided in the shoe kit for leveling.
F. Panel-to-Pilaster and Panel-to-Door Edge Condition: Provide manufacturer's Permaseal edge system, with edges formed to interlock and provide a tight, gap-free fit without crown molding.

2.03 COMPARTMENT CONFIGURATION

A. Configuration: Floor-mounted, overhead-braced style, with anti-grip headrail providing lateral bracing between pilasters; suitable for new or existing construction without special floor or ceiling reinforcement.
B. Stall Heights: Provide 72-inch-high doors and panels at 6 inches AFF at standard stalls, and 69-inch-high doors and panels at 9 inches AFF at ADA-compliant accessible stalls, to allow maximum privacy while meeting accessibility clearance requirements. [Extra-height option is available from manufacturer; confirm with Architect if required.]
C. Doors: Width as indicated on the drawings, self-closing. Doors 32 inches wide or less are provided with a combination coat hook/bumper; doors 34 or 36 inches wide are provided with an individual coat hook, door bumper, and door pulls.

2.04 HARDWARE AND ACCESSORIES

A. General: Provide manufacturer's standard heavy-duty grade chromed Zamac hardware, complete with all fasteners required for a complete installation on concrete floors and masonry block walls, unless a stainless steel or continuous hardware upgrade is selected below.
B. Hinges: Chromed Zamac wraparound gravity hinge, thru-bolted to pilasters, standard. [Optional: stainless steel wraparound gravity hinge; continuous aluminum spring-loaded hinge; continuous stainless steel spring-loaded hinge — select in coordination with Architect.]
C. Door Latch: Chromed Zamac concealed slide latch and keeper, standard, with emergency egress feature; latch does not require a twisting motion and complies with Federal ADA guidelines; strike/keeper is wraparound and thru-bolted. [Optional: stainless steel concealed slide latch and keeper; Zamac or stainless steel surface-mounted slide latch and keeper.]
D. Brackets: Chromed Zamac stirrup-type single-ear, double-ear, and U-brackets with Torx-head fasteners, standard. [Optional: stainless steel stirrup brackets; continuous stainless steel brackets; continuous aluminum brackets.]
E. Corners: Clipped corners, standard. [Optional: welded corners, ground smooth.]
F. Headrail: Etched and anodized extruded aluminum, anti-grip profile, clamped over the pilaster and secured at the wall with plastic brackets.
G. Shoes: One-piece, 4 inches high, 304 Series stainless steel with #4 satin brushed finish, secured to the inside face of the pilaster with stainless steel Torx-head fasteners.
H. Fasteners: Torx-head fasteners supplied with all hardware; zinc-plated fasteners for concrete floor and masonry block wall installation.

2.05 FINISH

A. Finish: Satin brushed (#4), standard.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify field conditions, floor flatness, and wall backing/blocking locations are ready to receive compartments; verify all rough-in dimensions per manufacturer's requirements prior to installation.
B. Verify dimensions and door swing clearances comply with accessibility requirements at accessible compartments.

3.02 INSTALLATION

A. Install compartments in accordance with manufacturer's written instructions, plumb, level, and rigid.
B. Set pilasters with shoes tight to floor; secure floor brackets and level using the hex bolts provided in the shoe kit.
C. Secure headrail to each pilaster and to the wall with plastic brackets; verify a rigid, non-deflecting frame.
D. Adjust hinges, latches, and door stops for smooth operation and proper alignment; verify tight, gap-free Permaseal edge conditions at all panel-to-pilaster and panel-to-door joints.
E. Install accessories, including coat hooks, bumpers, and door pulls, at heights indicated on the drawings and as required by the applicable accessibility code.
F. Comply with local and national codes; conformity and compliance with local and national codes is the responsibility of the Installer, per manufacturer's requirements.

3.03 ADJUSTING AND CLEANING

A. Adjust doors and hardware for smooth, quiet operation without binding.
B. Clean exposed stainless steel surfaces in accordance with manufacturer's recommendations, using non-abrasive methods that follow the grain of the finish; remove labels and protective coverings.
C. Protect installed compartments from damage, scratching, and fingerprints until Substantial Completion.

END OF SECTION 10 21 13.16

SECTION 10 22 26 – OPERABLE PARTITIONS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:

(1) Manually operated, individual glass panel partitions.

B. Relate Requirements:

(1) Division 03 Sections for concrete tolerances required.
(2) Division 05 Sections for primary structural support, including pre-punching of support members by structural steel supplier per glass operable partition supplier's template.
(3) Division 06 Sections for wood framing and supports and all blocking at head and jambs as required.
(4) Division 08 Sections for lock cylinders and keying requirements.
(5) Division 09 Sections for wall and ceiling framing at head and jambs.

1.02 QUALITY ASSURANCE:

A. Installer Qualifications: An experienced installer who is certified in writing by the glass operable partition manufacturer, as qualified to install the manufacturer's partition systems for work similar in material, design, and extent to that indicated for this Project.
B. Preparation of the opening shall conform to the criteria set forth per ASTM E557 "Standard Practice for Architectural Application and Installation of Operable Partitions."
C. The movable glass wall must be manufactured by a certified ISO-9001-2015 company or an equivalent quality control system.

1.03 REFERENCE STANDARDS:

A. A. ASTM International.

(1) ASTM E557 Standard Practice for Architectural Application and Installation of Operable Partitions.
(2) ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
(3) ASTM C1036 - Standard Specification for Flat Glass.
(4) ASTM C1048 - Heat-Treated Flat Glass—Kind HS, Kind FT Coated and Uncoated Glass.

B. Health Product Declaration Collaborative.

(1) Health Product Declaration Open Standard v2.1.

C. International Standards Organization.

(1) ISO 14021 - Environmental Labels and Declarations - Self-Declared Environmental Claims (Type II Environmental Labeling).
(2) ISO 14025:2011-10, Environmental Labels and Declarations - Type III Environmental Declarations - Principles and Procedures.
(3) ISO 14040:2009-11, Environmental Management - Life Cycle Assessment - Principles and Framework.
(4) ISO 14044:2006-10, Environmental Management - Life Cycle Assessment - Requirements and Guidelines.
(5) ISO 21930 – Sustainability in Buildings and Civil Engineering Works — Core Rules for Environmental Product Declarations of Construction Products and Services.

D. Other Standards.

(1) ADA – Americans with Disabilities Act.
(2) ANSI Z97.1 - Safety Glazing Materials Used in Buildings.
(3) CPSC 16 CFR 1201 - Safety Standard for Architectural Glazing Materials.

1.04 SUBMITTALS

A. Product Data: Material descriptions, construction details, finishes, installation details, and operating instructions for each type of operable glass panel partition, component, and accessory specified.
B. Shop Drawings: Show location and extent of operable glass panel partitions. Include plans, elevations, sections, details, attachments to other construction, and accessories. Indicate dimensions, weights, conditions at openings and at storage areas, and required installation, storage, and operating clearances. Indicate location and installation requirements for hardware and track including floor tolerances required and direction of travel. Indicate blocking to be provided by others.
C. Setting Drawings: Show imbedded items and cutouts required in other work, including support beam punching template.
D. Samples: Color samples demonstrating full range of finishes available for selection by architect. Verification samples will be available in same thickness and material indicated for the work.
E. Reports: Provide a complete and unedited written sound test report indicating test specimen matches product as submitted.
F. Create spaces that are healthy for occupants.

(1) Furnish products and materials with Health Product Declaration (HPD), Manufacturer Inventory, or other material health disclosure documentation. Products without an HPD or other disclosure documentation are not acceptable.

G. Furnish materials that generate the least amount of pollution.

(1) Furnish products and materials that have third party verified environmental product declarations (EPD's). Consider products and materials that have optimized environmental performance (reduced life cycle impacts). Products without an EPD or other disclosure documentation are not acceptable.

H. Buy American: Glass wall products are to be manufactured in the United States in compliance with applicable U.S. Federal Trade Commission (FTC) and U.S. Customs Service and Border Protections regulations and be labeled "Made in America".

1.05 DELIVERY, STORAGE, AND HANDLING

A. Clearly mark packages and panels with numbering systems used on Shop Drawings. Do not use permanent markings on panels.
B. Protect panel and glazing materials during delivery, storage, and handling to comply with manufacturer's direction and as required to prevent damage to the glass and hardware.

1.06 WARRANTY

A. Manufacturer's Special Project Warranty on Glass Panels: Provide written warranty signed by the manufacturer of glass operable partitions agreeing to replace those panels with manufacturing defects.
(1) Manufacturing defects are defined as any defect materially obstructing vision through the glass, and mechanical failure of hardware which prevents the proper operation of the panels after appropriate installation.
(2) Warranty period: Five (5) years.

PART 2 - PRODUCTS

2.01 MANUFACTURERS, PRODUCTS, AND OPERATION:

A. A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
(1) Modernfold, Inc.
B. Panels to be manufactured in the U.S.A.
C. Products: Subject to compliance with the requirements, provide one of the following products:
(1) Modernfold Glass Wall Model PureView "Frameless" – Paired Panel with 4-1/8-inch (105 mm) square top and bottom rails.

2.02 OPERATION:

A. A. Modernfold Glass Wall Model PureView "Frameless" – Paired Panel: Series of paired glass panels hinged together in pairs, manually operated and top-supported. Panels use two-piece, clamp-on top and bottom rails that fasten together from alternating sides.
B. B. Final closure:
(1) Pivot panel.

2.03 CONSTRUCTION:

A. Provide top reinforcement as required to support panel from suspension components and provide reinforcement for hardware attachment. Fabricate panels with concealed fasteners. Finished in-place partition shall be rigid, level, plumb, aligned with uniform joints and appearance, free of bow, warp, twist, deformation, and surface and finish irregularities.
B. Dimensions: Fabricate operable glass panel partitions with manufacturer's standard panel sizes to form an assembled system of dimensions indicated on Drawings and verified by field measurements.
(1) Maximum panel width: 48 inches (1219 mm).
(2) Standard rail thickness: 1-9/16 inches (40 mm).
C. Top and Bottom Rails: Continuous two-piece assemblies with removable end caps. Rails fasten together from alternate sides of partition allowing for field adjustment to job site conditions. Snap-on covers are furnished to facilitate installation.
D. Horizontal Top and Bottom Seals: Continuous contact vinyl seals without the need for mechanically operated parts.
E. Bottom Rail Locking System: Engage adjacent panels by use of interlocking floor bolts to stabilize panels from movement in all directions.
(1) Equip a minimum of one end panel with a brass, mortised lock allowing for cylinder and/or thumb turn interior operation. Round bolts engage eccentric bushing floor strikes for security.
(2) Pivot panels to have SFIC mortised cylinder keyed exterior, thumb turn interior.
(3) Intermediate panels to have interconnecting floor bolts.
(4) Lead panels to have mortised cylinder with thumb turn interior.
F. Hinges for panels shall be:
(1) Butt hinges attached to top and bottom rail.
G. Acoustical ratings of panels with this construction achieve Sound Transmission Class of minimum STC when tested in accordance with ASTM E90 and classified in accordance with ASTM E413:
(1) 15 STC.

2.04 MATERIALS:

A. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; ASTM B221 (ASTM B221M) for extrusions; manufacturer's standard strengths and thicknesses for type of use.

B. Glass Type: Tempered, ½ inch (13 mm) complying with safety standards specified in ANSI Z97.1 CPSC16, CFR1201, ASTM C1036 and ASTM C1048.
C. Glass Finish:
(1) Clear tempered
D. Panel weight: 7.5 lbs./square foot.

2.05 PANEL FINISHES:

A. Provide top and bottom rails with one of the following finishes:
(1) Dark Bronze anodized aluminum.

2.06 SUSPENSION SYSTEM:

A. G-330 Suspension System “Smart Track”
(1) Suspension Tracks: Extruded aluminum with a minimum wall thickness of 0.235 inches (6 mm). Incorporate cast aluminum or mitered intersections, switches, and curves in stacking area. Provide alignment pins for track, intersections, switches and curves insuring both fit and roller surface integrity.
(a) Exposed track soffit: Factory-finished aluminum with white powder coat.
(2) Carriers: Two stainless steel trolleys with vinyl roller surfaces. Trolley design incorporates eight (8) wheels of varying dimensions. Automatic indexing of panels into stack area is provided by pre-programmed switches and trolleys without electrical, pneumatic, or mechanical activation.
(3) Warranty period: Five (5) years.

2.07 OPTIONS:

A. Door pulls back-to-back – Pivot Panel
(1) Location of pivot panel as indicated on Drawings.
(2) 12-inch (305 mm) tubular pull.
(a) Dark bronze anodized.
(3) TG-138 49-inch (1245 mm) locking “Ladder Pull”.
(a) SFIC Mortise Cylinder Floor Locks.
B. Automatic door closer – Pivot Panel
(1) BTS80 floor closer.
C. Bottom rail cover
(1) 4-1/8-inch (105 mm) cover (matches top rail cover).

PART 3 - EXECUTION

3.01 INSTALLATION:

A. General: Comply with ASTM E557, operable glass partition manufacturer’s written installation instructions, Drawings, and approved Shop Drawings.
B. Install operable glass partitions and accessories after other finishing operations, including painting, have been completed.
C. Match operable glass partitions by installing panels from marked packages in numbered sequence indicated on Shop Drawings.
D. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.

3.02 CLEANING:

A. Clean metal and glass surfaces upon completing installation of operable glass partitions to remove dust, loose fibers, fingerprints, adhesives, and other foreign materials according to manufacturer’s written instructions.

3.03 PROTECTION:

A. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer that ensure operable glass partitions are without damage or deterioration at time of Substantial Completion.

3.04 ADJUSTING:

A. Adjust operable glass partition to operate smoothly, easily, and quietly, free from binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and other moving parts.

3.05 EXAMINATION:

A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable glass partitions. Proceed with installation only after unsatisfactory conditions have been corrected.
(1) Ensure finished floor under operable glass partition is level ± 0.13-inch (3 mm) in ten (10) feet (3048 mm) non-cumulative.

3.06 DEMONSTRATION:

A. Demonstrate proper operation and maintenance procedures to Owner’s representative.
B. Provide Operation and Maintenance Manual to Owner’s representative.

END OF SECTION 10 22 26

SECTION 10 26 00 – WALL PROTECTION

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide wall protection systems, where indicated on the drawings, as specified herein and as needed for a complete and proper installation. Install stainless steel wall paneling, furnished by others.

1.02 RELATED SECTIONS

A. Section 01 81 13 Certification Requirements.

1.03 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants..

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form and provide the following:

B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.05 SUBMITTALS: Submit samples of each product as follows:

A. Corner Guard: 8 inch sample

B. Paneling: 8x8 inch sample

1. Panel Trim, Joint Dividers, Edge Trim, Inside Corners, Outside Corners: 8 inch sample

C. Data Sheets on all adhesives as applicable.

PART 2 - PRODUCTS

2.01 CORNER GUARDS: Provide pre-formed standard powder coated steel units, of 0.059-inch (16 gage) minimum, full-height (unless otherwise indicated on the Drawings):

A. Provide 90 degree turn, unless otherwise indicated, and with formed edges:

B. WGC Types: Refer to Drawings

1. Type 1 (CG-1)

a. Wing Size: As indicated in Drawings
b. Finish: Refer to Drawings

2. Type 2 (EWG-2)

a. Wing Size: As indicated in Drawings
b. Finish: Refer to Drawings

C. Mounting Method: Countersunk screws with holes 8 inches OC

D. Straight Eddge

2.02 STAINLESS STEEL WALL PANELING: Stainless-Steel Plate: Type 304, minimum 0.0625 inch thick, with bright, directional polished No. 4 finish. Remove tool and die marks and stretch lines or blend into finish. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary covering before shipping.

A. PANEL HEIGHT: Provide full-height stainless steel wall paneling extending from top of base to ceiling, except as otherwise indicated on the Drawings

B. PANEL TRIM: Formed stainless steel trims as manufactured by “Flame Gard”: P: 800-536-3694, www.flamegard.com, or Stainless Supply, P: 877-484-0088, www.stainlesssupply.com, or equal.
C. JOINT DIVIDER TRIM: All stainless steel unit, with 7/16 inch deep pockets each side, and minimum 7/8 inch wide stainless steel face.
D. EDGE TRIM: “J-profiled” stainless steel with minimum 5/16 inch exposed edge.
E. INSIDE CORNERS: Field bend wall panel as required.
F. INSIDE CORNER TRIM: 1-3/4 x 1-3/4 inch 90 degree inside corner unit with one 3/4 inch wide pockets both sides and a 1 x 1 inch inside coved finished corner.
G. OUTSIDE CORNER TRIM: use surface mounted, stainless steel corner guards over panel edges.

2.03 FASTENERS: Provide aluminum, nonmagnetic stainless steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with components, hardware, anchors, and other items being fastened. Use theft-proof fasteners where exposed to view. Provide inserts and other anchorage devices for connecting components to concrete or masonry. Fabricate anchoring devices to be capable of withstanding imposed loads. Coordinate anchoring devices with the supporting structure.

2.04 ADHESIVE: Low VOC type as recommended by the manufacturer for use with material on the substrate indicated. Verify compatibility of adhesive material with fire-retardant treated (FRT) plywood substrate, when applicable.

2.05 FABRICATE wall and door protection systems to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thicknesses of components. Preassemble components in the shop to the greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling. Fabricate components with tight seams and joints with exposed edges rolled.

2.06 PROVIDE SURFACES free of evidence of wrinkling, chipping, uneven coloration, dents, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

PART 3 - EXECUTION

3.01 EXAMINE AREAS and conditions in which wall surface protection components and wall protection systems will be installed. Complete all finishing operations, including painting, before beginning installation of wall surface protection system materials.

3.02 PREPARATION: Before installation, acclimate wall protection, trim, and adhesives not less than 24 hours before installation. Store panels and trim on a level surface while acclimating. Verify that building temperature will be maintained between 70 to 80 degrees F from 24 hours before, and 48 hours, after installation with relative humidity below 80%. Do not proceed with installation if such conditions will not be maintained.

3.03 SUBSTRATE material must be dry, well-sealed, and free of dirt, loose paint, wax and grease. Sand or otherwise roughen glossy surfaces to promote adhesion. Remove substrate coatings designed to improve clean-up as these coatings may affect adhesion. Prior to installation, clean substrate to remove dust, debris, and loose particles.

3.04 INSTALL WALL SURFACE PROTECTION UNITS plumb, level, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished work. Install retainers, mounting brackets, and other accessories in strict accordance with the manufacturer's instructions.

3.05 INSTALLATION OF STAINLESS STEEL WALL PANELING:

A. Acclimate stainless steel panels, trim and adhesive to room temperature not less than twenty-four (24) hours before installation.
B. Store panels and trim on a level surface while acclimating.
C. Maintain temperature between 70 to 80 degrees F with relative humidity (RH) no greater than 80% for not less than twenty-four (24) hours before installation, and forty-eight (48) hours after installation of wall paneling.
D. If field cutting is required at electrical receptacles or switch boxes, use a sheet-metal nibbler for cuts, wearing a face shield and other appropriate PPE. Finish cut edges with a metal file, so that cut edges will be free of burs or other projections.
E. Attach panels with full-spread of adhesive applied to back of panels for 100% coverage, with a notched trowel. Before adhesive skins over, set panels in position and press against wall. Pull entire panel back away from wall to flash off solvents, if applicable. Press back in place, and apply adequate pressure to make full contact between panel and substrate.
F. INSTALL MECHANICAL ANCHORS by drilling through the installed panel into partition substrate framing, unless otherwise indicated in the Drawings. Space anchors at not less than twenty-four (24) inches OC vertically at each framing member (not to exceed 24 inch centers), or as otherwise required for not less than one anchor per four (4) square feet.
G. SEAL PANEL JOINTS with FSE type clear, silicone sealant struck flush to the panel face.

3.06 CLEANING: Immediately upon completion of installation, clean surface protection units and accessories using a standard ammonia based household cleaning agent. Clean metal components in accordance with the manufacturer's recommendations. Remove excess adhesive and sealant while it is still wet.

3.07 REMOVE SURPLUS materials, rubbish, and debris resulting from installation upon completion of work and leave areas of installation in neat, clean condition. Replace removed plates and fixtures.

END OF SECTION 10 26 00

SECTION 10 28 00 – TOILET ACCESSORIES

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide toilet, bath and laundry room accessories throughout the project, as specified herein, and as required for a complete and proper installation. Provide units as indicated on the Drawings.

1.02 RELATED SECTIONS

A. Section 018113 Sustainable Construction Requirements.

1.03 SUBMIT PRODUCT DATA for each accessory item specified, including construction details relative to materials, dimensions, gages, profiles, mounting method, specified options, and finishes.

1.04 PROVIDE SETTING DRAWINGS where cutouts are required in other work, including templates, substrate preparation instructions, and directions for preparing cutouts and installing anchorage devices.

1.05 SUBMIT MAINTENANCE INSTRUCTIONS including replaceable parts and service recommendations.

1.06 SINGLE-SOURCE RESPONSIBILITY: Provide products of same manufacturer for each type of accessory unit and for units exposed to view in same areas, unless otherwise acceptable to Architect.

1.07 COORDINATION: Coordinate accessory locations, installation, and sequencing with other work to avoid interference with and ensure proper installation, operation, adjustment, cleaning, and servicing of toilet accessory items.

PART 2 - PRODUCTS

2.01 MATERIALS:

A. STAINLESS STEEL: AISI Type 302/304, with polished No. 4 finish, 0.034-inch (22-gage) minimum thickness.
B. BAKED ENAMEL FINISH: Factory-applied, gloss white, baked acrylic enamel coating.
C. MIRROR GLASS: Nominal 6.0-mm (0.25-inch) thick, conforming to ASTM C 1036, Type I, Class 1, Quality q2, and with silvering, electro-plated copper coating, and protective organic coating.
D. FASTENERS: Screws, bolts, and other devices of same material as accessory unit, or of galvanized steel where concealed.
E. KEYS & CYLINDERS: Provide universal keys, with all cylinders keyed alike, for access to toilet accessory units requiring internal access for servicing, re-supply, etc. Provide minimum of six keys to Owner's representative.

2.02 ACCEPTABLE MANUFACTURERS OF TOILET ACCESSORIES: Provide toilet accessories by the University standards listing in the finish schedule. No substitutions unless noted “or equal”.

2.03 TOILET ACCESSORIES: Refer to Drawings for toilet accessory units required, and as follows:

A. MOP & BROOM UNIT (at each service sink): American Specialties 1308-3 or equal shelf / mop & broom holders, w/ hooks.

PART 3 - EXECUTION

3.01 INSTALL TOILET ACCESSORY units according to manufacturers' instructions, using fasteners appropriate to substrate as recommended by unit manufacturer. Install units plumb and level, firmly anchored in locations and at heights indicated.

3.02 SECURE MIRRORS TO WALLS in concealed, tamperproof manner with special hangers, toggle bolts, or screws. Set units plumb, level, and square at locations indicated, according to manufacturer's instructions for type of substrate involved.

3.03 INSTALL GRAB BARS to withstand a downward load of at least 250 lbf, complying with ASTM F 446.

3.04 ADJUST TOILET ACCESSORIES for proper operation and verify that mechanisms function smoothly. Replace damaged or defective items.

3.05 CLEAN AND POLISH all exposed surfaces strictly according to manufacturer's recommendations after removing temporary labels and protective coatings

PART 4 - BASIS-OF-DESIGN SCHEDULE OF ACCESSORIES (UNIVERSITY STANDARDS):

TISSUE DISPENSERS (ADA Stalls) **OFCI**	Georgia Pacific 56784A compact side-by-side tissue dispenser. Mounting: Surface mounted. No substitution will be permitted. Refer to attached drawing for mounting detail.	one (1) per water closet
TISSUE DISPENSERS (Non-ADA Stalls) **OFCI**	Georgia Pacific 56744B compact quad vertical 4-roll tissue dispenser. Mounting: Surface mounted. No substitutions will be permitted. Refer to UofA standard drawing for mounting detail.	one (1) per water closet
GRAB BARS:	As indicated in Drawings	One (1) 18 inch high vertical unit at side and One (1) 42" wide horizontal unit at side and One (1) 36" wide horizontal unit at back of each handicapped water closet

SANITARY NAPKIN DISPENSER UNITS **OFCI**	Frost 618-3-FREE Push Button w/ Frost 618-RF recessed Frame for ADA Compliance. Stainless Steel finish. No substitutions will be permitted.	one (1) per Women's Restroom
SANITARY NAPKIN DISPOSAL UNITS	Bobrick Contura Series B-270 surface mounted container. No substitutions will be permitted.	one (1) per water closet in Women's Toilets
SOAP DISPENSERS **OFCI**	Soap dispensers will be supplied by Facilities Management Building Services and installed by the contractor. Do not install on mirrors, but leave a 6 inch wide by 12 inch high space over or next to the sink for the soap dispenser. Install one dispenser for every two (2) sinks.	one (1) at each 2 lavatory or sink basins
WASTE RECEPTACLE:	American Specialties 0469-ND recessed open cabinet and waste receptacle. Paper towel dispenser to be mounted in upper portion of cabinet. Provide adequate wall blocking.	1 minimum per RR: Refer to drawings for exact quantity.
PAPER TOWEL DISPENSER **OFCI**	Georgia Pacific SofPull 59489 mechanical hardwound roll towel dispenser. Color: Translucent Smoke. Mounting: Surface mounted. No substitutions will be permitted.	1 minimum per RR: Refer to drawings for exact quantity.
SUPPLEMENTAL WASTE RECEPTACLE:	Peter Pepper 1092 fiberglass receptacle – Architect to select color from manufacturer's standard offering.	1 per restroom.
KEYS	Provide universal keys for internal access to accessories for servicing and resupplying.	Provide minimum of six keys to Owner's representative.
FRAMED MIRROR	Refer to drawings – same as unit mirrors	one (1) unit at each lavatory Hang at code compliant height
COAT / ROBE HOOK	Refer to drawings – same as robe hook at showers.	one (1) per toilet room on back of door Mount at 48 inch max AFF per ADA
BABY CHANGE STATION:	American Specialties, Inc. 9013-9 Roval Baby Changing Station – SS Surface Mounted	One (1) per toilet room where indicated or as directed by Architect on site. Locate prior to gypsum install to ensure correct blocking locations

END OF SECTION 10 28 00

SECTION 10 44 00 – FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide fire –protection specialties throughout the project, as specified herein, and as required for a complete and proper installation.

A. Provide recessed “Knox-Box” for each building, per requirements of local fire-department
B. Provide Fire-extinguishers, and fire-extinguisher cabinets, where indicated on the Drawings

1.02 SUBMIT PRODUCT DATA for each type of product specified. For fire extinguisher cabinets include rough in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type and materials, trim style, door construction, panel style, and materials.

1.03 SUBMIT MAINTENANCE INSTRUCTIONS including service recommendations.

1.04 SINGLE-SOURCE RESPONSIBILITY: Obtain fire extinguishers and cabinets from one source from a single manufacturer.

1.05 COORDINATION: Coordinate accessory locations, installation, and sequencing with other work to avoid interference with and ensure proper installation, operation, adjustment, cleaning, and servicing.

1.06 UL-LISTED PRODUCTS: For fire extinguishers, provide UL-listed units bearing the UL "Listing Mark" for type, rating, and classification of extinguisher.

PART 2 - PRODUCTS

2.01 EMERGENCY KEY-ACCESS BOX: “Knox-Box” 3200 Series with hinged door, with optional recessed mounting kit (#3270) as manufactured by the Knox Company (www.knoxbox.com) Mount at 48 inch above grade or as otherwise required by AHJ representatives, in location indicated on the Drawings. Coordinate keying of key-access box cylinder with local Fire Department officials.

2.02 FIRE EXTINGUISHERS

A. TYPICAL FIRE EXTINGUISHERS (FE): Manufacturer's standard multipurpose dry chemical type unit, 10 lb capacity, UL rated: 4A-80BC equal to JL “Cosmic 10E” # MB846.
B. KITCHEN CLASS-K FIRE EXTINGUISHERS (KFE) at cooking area(s): Manufacturer's standard wet-chemical type, 15 lb, UL rated: for “Class K” (liquid cooking or wet-chemical media fires) equal to JL “Saturn 15” # MB810.

2.03 FIRE EXTINGUISHER CABINETS

A. PREFINISHED STEEL FIRE EXTINGUISHER CABINET (FEC): Provide assembly of formed steel cabinet/tub unit complete with extinguisher and mounting bracket, in tub size as required to fit extinguisher unit.
   (1) BASIS OF DESIGN MANUFACTURE: LARSEN MANUFACTURING: Occult Series – Model 0-2409
   (2) CABINET, TRIM & DOOR MATERIAL:
      (a) Cold-rolled steel with white powder-coat finish for 10 lb extinguisher, typ.
   (3) DOOR STYLE: Flush, solid panel door with surface mounted ADA pull, safety locking “pull to open” hardware.
   (4) FULLY RECESSED WALL CABINET (typical unless otherwise indicated or required for installation indicated; requires 6” deep framed wall): One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge, 1/4 TO 1/2 inch backbend depth and overall not exceeding 5/8 inch projection from wall.
      (a) Larsen Occult Series – Model 0-2409
      (b) Door Style: Solid
      (c) Provide optional Type A Die-cut lettering. Color: Black
   (5) SEMI-RECESSED WALL CABINET (if needed): One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge,4 inch maximum rolled edge for ADA compliance.
      (a) Similar model as fully recessed in appearance and configuration.
   (6) FIRE-RATED CABINET: Similar model as fully recessed but Larsen “FS” steel constructed cabinet with double walls of 0.043 inch thick cold-rolled steel sheet lined with minimum 5/8 inch thick fire-barrier material, with factory-drilled mounting holes.
      (a) Similar model as fully recessed in appearance and configuration but fire-rated.
   (7) SEMI-RECESSED WALL CABINET (typical unless otherwise indicated or required for installation indicated in 3-5/8 inch framed walls): One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge,4 inch maximum rolled edge for ADA compliance.
      (a) Similar model as fully recessed in appearance and configuration.
   (8) SURFACE-MOUNTED CABINET (when indicated or required): Fully exposed cabinet box without additional trim to be fully exposed and mounted directly onto wall.
      (a) Similar model as fully recessed in appearance and configuration.

2.04 ACCEPTABLE MANUFACTURERS: Subject to compliance with requirements, equivalent products of the following manufactures are also acceptable:

A. American Specialties, Inc.; ASI Group.
B. Fire-End & Croker Corporation.
C. Kidde Residential and Commercial Division.
D. Larsens Manufacturing Company.

2.05 MOUNTING BRACKETS: Manufacturer's standard steel unit of plated or baked-enamel finish, provided at each fire-extinguisher unit. Design brackets to secure fire extinguisher of sizes, types and capacities required, to prevent accidental dislodgement of extinguisher unit.

2.06 IDENTIFICATION: Provide wall signage decals and lettering as required by AHJ representatives for letter style, size, spacing, and location. Locate as directed by Architect.

PART 3 - INSTALLATION

3.01 INSTALL UNITS in locations and at mounting heights indicated, or if not indicated, at heights to comply with applicable regulations of AHJ. Where exact location of surface-mounted cabinets and bracket-mounted fire extinguishers is not indicated, locate as directed by Architect, and per approval of the AHJ.

3.02 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.
E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 10 44 00

END OF DIVISION 10

DIVISION 11 – EQUIPMENT

SECTION 11 13 19 – HYDRAULIC SCISSOR LIFTS

SECTION 11 13 19 – HYDRAULIC SCISSOR LIFTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

(1) Hydraulic scissor lift, including platform, tubular steel scissor leg assembly, power unit, controls, and safety devices, complete for manned platform operation and material/pallet handling between the levels indicated.

B. Related Sections:

(1) Section 03 30 00 – Cast-in-Place Concrete (pit/foundation).
(2) Division 26 – Electrical.

1.02 REFERENCES

A. ANSI MH29.1 – Safety Requirements for Industrial Scissors Lifts.
B. NFPA 70 – National Electrical Code.
C. Applicable state and local building and lift/elevator code requirements having jurisdiction.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer's data sheets indicating capacity, platform dimensions, travel height, power requirements, and controls.
B. Shop Drawings: Indicate pit or foundation requirements, anchor bolt locations, platform layout, clearances, and coordination with structure and electrical rough-in.
C. Structural Data: Submit manufacturer's pit and foundation loading requirements for review by the Structural Engineer of Record.
D. Operation and Maintenance Manuals: Submit prior to Substantial Completion.
E. Warranty: Submit manufacturer's warranty documentation.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer shall be ISO 9001:2015 certified, with equipment manufactured in the USA.
B. Regulatory Requirements: Comply with ANSI MH29.1 and applicable state and local codes governing manned lifting platforms. [Confirm with Authority Having Jurisdiction whether this manned platform lift requires classification and permitting under the adopted elevator/lift code.]
C. Electrical Component Listing: Provide Underwriters Laboratories (UL) listed controller assemblies.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle components in accordance with manufacturer's instructions; protect from damage and weather.
B. Coordinate rigging and crane requirements with the manufacturer's shipping weight of approximately 3,085 lb.

1.06 WARRANTY

A. Manufacturer's Warranty: Provide manufacturer's standard warranty of one (1) year parts and labor, and ten (10) years structural. [Confirm warranty commencement date (shipment vs. Substantial Completion) with manufacturer.]

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: Model BFL2-4144 hydraulic scissor lift, "Big Friggin' Lift" (BFL) series, as manufactured by Advance Lifts, Inc. [Confirm acceptable substitution/equal provisions with Architect prior to bidding.]

2.02 PERFORMANCE AND CAPACITY

A. Quantity: 2 or as otherwise indicated in the Drawings.
B. Installation: Pit
C. Rated Capacity: 4,000 lb (1,814 kg) uniform load capacity, with a maximum end load capacity of 2,550 lb and a maximum side load capacity of 1,325 lb.
D. Platform Size: 72 inches by 108 inches (6 feet by 9 feet), nominal. [Model BFL2-4144 accommodates platform sizes from 72" x 108" minimum up to 96" x 132" maximum; confirm final platform size with manufacturer.]
E. Lowered Height: 17-1/2 inches.
F. Raised Height: 161-1/2 inches.
G. Travel: 144 inches (12 feet). [Per manufacturer's published data for this model; confirm required travel against the project's mezzanine or floor elevation and coordinate pit or shaftway depth accordingly.]
H. Speed: 48 seconds for full travel.
I. Operation: Manned platform operation via platform-mounted controls, with remote operation via ground-level controls.

2.03 LIFT MECHANISM AND STRUCTURE

A. Scissor Assembly: Tubular steel leg construction to maximize rigidity while minimizing overall unit weight.
B. Platform Centering Device: Provide manufacturer's patented platform centering device to reduce wear and extend lift life.
C. Platform: Structural steel platform, sized as indicated above.
D. Safety Bar: Provide manufacturer's standard BFL swing arm safety bar at the platform access point.

2.04 POWER UNIT AND HYDRAULIC SYSTEM

A. Motor: 5 HP external electric motor. [Confirm voltage and phase with Division 26.]
B. Cylinders: Machine-grade hydraulic cylinders with clear plastic return lines.
C. Oil Reservoir: Mild steel oil reservoir.
D. Hoses: Double wire braid pressure hoses with JIC fittings.
E. Controller: Power unit with UL-listed controller assembly.

2.05 CONTROLS AND SAFETY DEVICES

A. Platform Controls: Constant-pressure up/down controls mounted at the platform for manned operation.
B. Ground-Level Controls: Constant-pressure up/down controls at ground level to allow remote operation.
C. Safety Devices: Platform centering device and swing arm safety bar as specified above, together with manufacturer's standard safety devices conforming to applicable ANSI codes.
D. Electrical: UL-listed control assemblies; final electrical connection under Division 26.

2.06 FINISH

A. Finish: Manufacturer's standard, fully primed unit with baked enamel finish. [Confirm color selection with Architect.]

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify pit or foundation dimensions, reinforcement, and embedded items comply with manufacturer's requirements prior to installation.
B. Verify structural support and electrical rough-in are complete and coordinated with equipment requirements.

3.02 INSTALLATION

A. Install lift in accordance with manufacturer's written instructions and approved shop drawings.
B. Level and anchor lift base and scissor assembly per manufacturer's requirements.
C. Connect power supply in accordance with Division 26 and the National Electrical Code.
D. Field test lift through full range of travel; verify smooth operation, proper limit switch function, and operation of the platform centering device, swing arm safety bar, and all controls at both platform and ground-level stations.

3.03 ADJUSTING AND CLEANING

A. Adjust controls and safety devices for proper operation per manufacturer's requirements.
B. Clean exposed surfaces; remove protective coverings and labels not required to remain.
C. Provide manufacturer's factory-authorized start-up and demonstrate operation to Owner's representative.

END OF SECTION 11 13 19

END OF DIVISION 11

DIVISION 12 – FURNISHINGS

SECTION 12 24 00 – ROLLER WINDOW SHADES

SECTION 12 36 61 – SIMULATED STONE COUNTERTOPS

SECTION 12 48 13 – ENTRANCE FLOOR MATS AND FRAMES

SECTION 12 52 19 – UPHOLSTERED SEATING

SECTION 12 70 00 – MULTIPLE SEATING SYSTEMS

SECTION 12 24 00 – ROLLER WINDOW SHADES

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Motorized and manually operated, roll-up fabric interior window shades, including mounting and operating hardware.

1.02 RELATED SECTIONS

A. Section 06 10 00 – Rough Carpentry: Blocking for support of window shade hardware.
B. Section 07 90 00 – Joint Sealers: Sealants for perimeter of shade system.
C. Section 09 21 23 – Gypsum Board Assemblies: Suspended gypsum board ceilings to contain recessed window shade pockets.
D. Section 09 51 23 – Acoustical Tile Ceilings: Suspended acoustical panel ceilings to contain recessed window shade pockets.
E. Division 26 – Electrical: Power supply and low-voltage control wiring for motorized shade operators and controls.

1.03 REFERENCES

A. NFPA 701 – Fire Tests for Flame-Resistant Textiles and Films.
B. GREENGUARD Gold – Environmental Institute certification for low chemical emissions.
C. ANSI/WCMA A100.1-2022 – Safety standard for manual window shades with closed-loop bead chains, per Consumer Product Safety Commission requirements.

1.04 SUBMITTALS

A. Submit under provisions of Section 01 33 26 – Submittal Procedures.
B. Product Data: Manufacturer's data sheets on each product specified, including preparation, installation, and maintenance instructions; styles, material descriptions, dimensions, profiles, features, finishes, and operating instructions; storage and handling requirements; and mounting details.
C. Window Treatment Schedule: For all roller shades, using the same room designations indicated on the Drawings, with field-verified window dimensions, quantities, type of shade and operation (manual or motorized), controls, fabric, and color, opening sizes, and key to typical mounting details.
D. Selection Samples: For each finish product specified, one complete set of shade cloth options and aluminum finish color samples representing the manufacturer's full range of available colors and patterns.
E. Verification Samples: For each finish product specified, one complete set of shade components, unassembled, demonstrating compliance with specified requirements; shade fabric sample and aluminum finish sample as selected, representing actual product, color, and pattern, with the interior face marked.
F. Maintenance Data: Methods for maintaining roller shades, precautions regarding cleaning materials and methods, and instructions for operating hardware and controls.
G. Warranty: Manufacturer's standard defect warranty documentation.
H. Manufacturer's Certificates: Certify that products meet or exceed the specified requirements.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Obtain roller shades through one source from a single manufacturer with a minimum of twenty years' experience manufacturing products comparable to those specified in this section.
B. NFPA Flame Test: Shade fabric shall pass NFPA 701. Materials tested shall be identical to the products proposed for use. Provide manufacturer's certification that the fabric sourced for this project complies with the test data provided.
C. Electrical Component Listing: Motor and control components for motorized shades shall be listed by Underwriters Laboratories (UL).

1.06 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver window shades until the building is enclosed and construction within spaces where shades will be installed is substantially complete.
B. Deliver products in manufacturer's original, unopened, undamaged containers with labels intact.
C. Label containers and shades according to the Window Shade Schedule.
D. Store products in manufacturer's unopened packaging until ready for installation.

1.07 PROJECT CONDITIONS

A. Install roller shades after finish work, with ambient temperature, humidity, and ventilation conditions maintained at levels recommended by the manufacturer.

1.08 WARRANTY

A. Hardware and Shade Fabric: Manufacturer's standard twenty-five-year limited warranty.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: FlexShade®, as manufactured by Draper, Inc., 411 S. Pearl Street, P.O. Box 425, Spiceland, IN 47385-0425; (800) 238-7999; www.draperinc.com.
B. Substitutions: Confirm substitution provisions with Architect prior to bidding.

2.02 MANUALLY OPERATED WINDOW SHADES: **RWS-1**

A. General: Manually operated, vertical roll-up, fabric window shade with components necessary for complete installation; Clutch-operated FlexShade®.
B. Operation: Bead chain and clutch operating mechanism allowing the shade to stop when the chain is released; designed to never require adjustment or lubrication. Provide limit stops to prevent the shade from being raised or lowered too far.
C. Clutch Mechanism: Fabricated from high carbon steel and molded fiberglass-reinforced polyester or injection-molded nylon. color as selected by Architect.]
D. Spring-Assist Clutch Mechanism: Adjustment-free system incorporating spring-assist components to reduce the lifting force required to raise the shade. [Recommended where estimated non-spring-assist torque exceeds 6 lb.-in.; required where estimated torque exceeds 15 lb.-in. — confirm requirement with manufacturer based on shade size and weight.]
E. Bead Chain Loop: Stainless steel.
F. Idler Assembly: Molded nylon roller idler assembly with adjustable or spring-loaded idler pin, to facilitate installation and removal of the shade for service.
G. Bead Chain Hold-Down: Spring-loaded tensioner complying with ANSI/WCMA A100.1-2022; when properly installed, the tensioning device shall have 1-1/2 inches of tolerance to minimize adjustments due to chain stretching.

2.03 MOTORIZED WINDOW SHADES: **RWS-2**

A. Type: UL listed, motorized, vertical roll-up, fabric window shade with motor, controls, mounting brackets, and other components necessary for complete installation; Motorized FlexShade® AC.
B. Mounting: [Mounting brackets / endcaps with pocket headbox — select and coordinate location(s) with the Window Treatment Schedule.]
C. Motor: [Standard Motor — 120V AC, single phase, 60 Hz, instantly reversible, lifetime lubricated, equipped with internal thermal overload protector, electric brake, and pre-set accessible limit switches, tubular motor concealed inside the shade roller tube; or Quiet Motor — 120V AC, operating at 38 dB measured 3 feet from the motor, makes no audible clicks when starting or stopping, tubular motor concealed inside the shade roller tube — confirm motor selection with Architect based on application and noise requirements.]
D. Controls: [Individual Control — toggle three-position wall switch, or key-operated three-position wall switch; or Group Control — single motor controller for motorized roller shades, usable standalone or networked via RS-485 with on-board contact closure interface, configurable to respond to wall switches, RF remotes, and third-party system signals, input power 110-230VAC at 50/60Hz, maximum output 6A at input power, ABS plastic construction, 4"x4"x4" enclosure; or Individual and Group Control — Model IGC4N1, individual and group control of up to four motors with up to three intermediate positions per motor — select control system with Architect and coordinate with Division 26.]

2.04 MOUNTING AND HARDWARE

A. Configuration: Single roller.
B. Mounting: [Universal mounting brackets / endcaps, where not recessed / recessed pocket headbox, where indicated on the Drawings — select and coordinate location(s) with the Window Treatment Schedule.]
C. Brackets: Plated, stamped steel; size compatible with roller size. Mounted to [ceiling / window head / jamb] as indicated on the Drawings. Finish: [TBD].
D. Endcaps: Stamped steel, universal design, suitable for mounting to ceiling, wall, or jamb; size compatible with roller size. Idler endcap to have optional leveling adjustment.
E. Roller Tube: Fabricated from extruded aluminum, galvanized steel, or enameled steel; diameter, wall thickness, and material as selected by manufacturer to accommodate shade type and size. Minimum roller diameter 1-1/2 inches; tube diameters less than 1-1/2 inches are not acceptable unless the manufacturer provides a deflection analysis showing deflection limited to width (inches)/700 or less at 1.5 times the design load.
F. Fabric-to-Tube Attachment: Low surface energy (LSE) double-sided adhesive developed to attach coated textiles to metal, eliminating horizontal impressions in the fabric.
G. Shade Slat: [Open pocket elliptical slat — 1 inch aluminum elliptical slat with plastic ends, inside a 1-5/8 inch pocket — confirm selection with manufacturer and Architect.]
H. Recessed Shade Pocket (Type D): [Where indicated on the Drawings, provide manufacturer's Type D rectangular pocket and endcaps, designed for recessed ceiling installation with ceiling tile lip.]
    (1) Material: Extruded aluminum with white finish.
    (2) Size: 5 inches wide by 5-3/8 inches high.
    (3) Closure Panel: 1-1/2 inch closure dimension, recommended for bead chain operation.
    (4) Pocket End Cap Kit: Metal endcaps with 7/8 inch lip for support of acoustical ceiling panel, where applicable.
    (5) Corners: Welded, one-piece aluminum sections connecting to and matching the pockets, to allow a continuous shade recess at ceiling corners, where applicable.

2.05 FABRIC

A. Light-Filtering Fabric, PVC-Coated Fiberglass, Basketweave: Provide the following, as assigned by location in the Window Treatment Schedule.
    (1) SheerWeave Series SW2000 by Phifer: 500 denier fiberglass, vinyl-coated, woven into a 2-by-2 basket weave, 5 percent open, 14.26 oz/sq yd, 0.019 inches thick. Fire rating: NFPA 701 (small and large scale), NFPA 101 Class A, IBC Section 803.1.1 Class A. Bacterial and fungal resistance: ASTM E2180, ASTM G21, ASTM G22, AATCC 30 Part 3, ASTM D3273; includes Microban antimicrobial additive. Environmental certification: UL GREENGUARD and GREENGUARD Gold for low chemical emissions. Complies with US Consumer Product Safety Commission Section 101 and ANSI/WCMA A100.1 for lead content.

(2) SheerWeave Series SW7500 by Phifer: PVC-free polyester with an acrylic coating, opaque, 12.14 oz/sq yd, 0.016 inches thick. Fire rating: NFPA 701 (small scale), NFPA 101 Class A, IBC Section 803.1.1 Class A. Bacterial and fungal resistance: ASTM E2180, ASTM G21. Environmental certification: UL GREENGUARD and GREENGUARD Gold for low chemical emissions. Complies with US Consumer Product Safety Commission Section 101 and ANSI/WCMA A100.1 for lead content.

B. Color and Pattern: Color Schedule in Drawings.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.
B. If substrate preparation is the responsibility of another installer, notify the Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Coordinate requirements for blocking, construction of shade pockets, and structural supports to ensure adequate means for installation of window shades.
B. Coordinate installation of recessed shade pockets with construction of suspended acoustical panel or gypsum board ceilings, where applicable.
C. Coordinate requirements for power supply conduit and wiring required for window shade motors and controls.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.
B. Install roller shades level, plumb, square, and true; allow proper clearances for window operating hardware.
C. Shade Pockets: Install prior to or in conjunction with installation of the suspended ceiling system; attach to supporting structure with screws through the top of the pocket at 24 inches minimum on center. Install corner pieces and pocket ends securely and in alignment with the pockets. After interior construction is essentially complete, install the shade and operating mechanism in the pocket.
D. Install fascias, closure panels, and/or endcaps as required to conceal the roller and operating mechanism, using no exposed fasteners.
E. Install headbox, side channels, and sill channel with sealant specified in Section 07 90 00 – Joint Sealers, to eliminate light leaks at the perimeter of the shade system.
F. Connect motorized shade operators and controls in accordance with Division 26 and manufacturer's instructions.
G. Position shades level, plumb, and at the proper height relative to adjacent construction; secure with fasteners recommended by the manufacturer.

3.04 TESTING AND DEMONSTRATION

A. Test window shades to verify that the operating mechanism and other operating components are functional; correct deficiencies.
B. Test motorized window shades to verify that controls, limit switches, interface to other building systems, and other operating components are functional; correct deficiencies.
C. Demonstrate operation of shades to the Owner's designated representative.

3.05 PROTECTION

A. Protect installed products until completion of the project.
B. Touch-up, repair, or replace damaged products before Substantial Completion.

3.06 SCHEDULES

A. Refer to Drawings and Window Treatment Schedule for shade types, operation, and locations.

END OF SECTION 12 24 00

SECTION 12 36 61 – SIMULATED STONE COUNTERTOPS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:

(1) Solid surface material countertops.
(2) Solid surface material backsplashes.
(3) Solid surface material end splashes.
(4) Solid surface material apron fronts.
(5) Solid surface material sinks.

B. Related Requirements:

(1) Section 224100 "Plumbing Fixtures"

1.03 LEED PERFORMANCE REQUIREMENTS

A. VOC Emissions Evaluation: For adhesives and/or sealants used for installation, products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010 or CDPH Standard Method v1.2-2017, using the applicable exposure scenario. The manufacturers' or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

B. VOC content requirements for wet-applied products: For adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must meet the applicable VOC limits for Adhesive and Sealant Applications, as per the SCAQMD Rule 1168, October 6, 2017, Adhesive and Sealant Applications, as analyzed by the methods specified in Rule 1168. If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may be intentionally added in paints, coatings, adhesives, or sealants. .

1.04 LEED SUBMITTAL REQUIREMENTS

A. Complete provided Product Data Reporting Form in spec section 01 81 13 and provide the following:

B. VOC Emissions Evaluation: Provide documentation that product complies with one of the following: SCS Indoor Advantage Gold, FloorScore, MAS Certified Green, UL Greenguard Gold or CRI Green Label Plus. The third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area. The Claims of compliance must also state the range of total VOCs after 14 days, measured as specified in CDPH Standard Method v1.1 or CDPH Standard Method v1.2-2017.

C. VOC content requirements for wet-applied products: Provide MSDS or manufacturers cutsheet showing VOC requirements testing and compliant according to SCAQMD Rule 1168, October 6, 2017, or Canadian VOC Concentration Limits for Architectural Coatings (SOR/2009-264) or the CARB 2007 SCM for Architectural Coatings, SCAQMD Rule 1113, February 5, 2016, or European Decopaint Directive (2004/42/EC). If a product cannot be reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, Part 1; ASTM D6886-03; or ISO 11890-2. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealant

1.05 ACTION SUBMITTALS

A. Product Data: For countertop materials.

B. Sustainable Design Submittals:

(1) <Double click to insert sustainable design text for certified wood.>
(2) <Double click to insert sustainable design text for adhesives.>
(3) <Double click to insert sustainable design text for composite wood.>

C. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.

(1) Show locations and details of joints.
(2) Show direction of directional pattern, if any.

D. Samples for Initial Selection: For each type of material exposed to view.

E. Samples for Verification: For the following products:

(1) Countertop material, 6 inches (150 mm) square.
(2) Wood trim, 8 inches (200 mm) long.
(3) One full-size solid surface material countertop, with front edge[**and backsplash**], 8 by 10 inches (200 by 250 mm), of construction and in configuration specified.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

1.07 CLOSEOUT SUBMITTALS

A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.08 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.
B. Installer Qualifications: Fabricator of countertops.
C. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
   (1) Build mockup of typical countertop as shown on Drawings.
   (2) Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.09 FIELD CONDITIONS

A. Field Measurements: Verify dimensions of countertops by field measurements[**after base cabinets are installed but**] before countertop fabrication is complete.

1.10 COORDINATION

A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.01 SOLID SURFACE COUNTERTOP MATERIALS

A. Solid Surface Material: Homogeneous-filled plastic resin complying with ICPA SS-1.
   (1) Approved Manufacturers:
      (a) CT-1: Caesarstone (https://www.caesarstone.com/)
      (b) CT-2: Corian (https://www.corian.com/)
      (c) CT-3: Corian (https://www.corian.com/)
   (2) Type: Provide Standard type unless Special Purpose type is indicated.
   (3) Integral Sink Bowls: Comply with CSA B45.5/IAPMO Z124.
   (4) Colors and Patterns: As selected by Architect from manufacturer's full range.
B. Particleboard: ANSI A208.1, **Grade M-2**.
C. Plywood: Exterior softwood plywood complying with DOC PS 1, Grade C-C Plugged, touch sanded.

2.02 COUNTERTOP FABRICATION

A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
   (1) Grade: Economy
B. Configuration:
   (1) Front: [Straight, slightly eased at top] [Beveled] [**3/4-inch (19-mm)** bullnose] [Radius edge with apron, **2 inches (50 mm)** high with **3/8-inch (9.5-mm)** radius] [**1-1/2-inch (38-mm)** laminated bullnose] [**1-inch (25-mm)** laminated bullnose] [Straight, slightly eased at top with separate apron, **6 inches (150 mm)** high, recessed **1/4-inch (6.4-mm)** behind front edge] [Wood-trimmed edge as indicated].
   (2) Backsplash: [Straight, slightly eased at corner] [Beveled] [Radius edge with **3/8-inch (9.5-mm)** radius].
   (3) End Splash: [Matching backsplash] [None].
C. Countertops: [**1/2-inch- (12.7-mm-)**] [**3/4-inch- (19-mm-)**] thick, solid surface material[with wood-trimmed edges] [with front edge built up with same material].
D. Countertops: 1/4-inch- (6.4-mm-) thick, solid surface material laminated to 3/4-inch- (19-mm-) thick particleboard with [wood-trimmed exposed edges] [exposed edges built up with **3/4-inch- (19-mm-)** thick, solid surface material] [exposed edges faced with **1/4-inch- (6.4-mm-)** thick, solid surface material].
E. Backsplashes: [**1/2-inch- (12.7-mm-)**] [**3/4-inch- (19-mm-)**] thick, solid surface material[with wood-trimmed edges].
F. Fabricate tops with shop-applied edges[**and backsplashes**] unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
   (1) Fabricate with loose backsplashes for field assembly.
   (2) Install integral sink bowls in countertops in the shop.
G. Joints: Fabricate countertops without joints.
H. Joints: Fabricate countertops in sections for joining in field[**, with joints at locations indicated**].
   (1) Joint Locations: Not within 18 inches (450 mm) of a sink or cooktop and not where a countertop section less than 36 inches (900 mm) long would result, unless unavoidable.
   (2) Splined Joints: Accurately cut kerfs in edges at joints for insertion of metal splines to maintain alignment of surfaces at joints[**where indicated**]. Make width of cuts slightly more than thickness of splines to provide snug fit.[**Provide at least three splines in each joint.**]
I. Cutouts and Holes:
   (1) Undercounter Plumbing Fixtures: Make cutouts for fixtures[**in shop**] using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.

(a) Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
(b) Provide vertical edges, rounded to 3/8-inch (10-mm) radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch (5 mm) into fixture opening.
(c) Provide 3/4-inch (20-mm) full bullnose edges projecting 3/8 inch (10 mm) into fixture opening.

(2) Counter-Mounted Plumbing Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
(3) Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.
(4) Counter-Mounted Cooktops: Prepare countertops in shop for field cutting openings for cooktops. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.

2.03 INSTALLATION MATERIALS

A. Adhesive: Product recommended by solid surface material manufacturer.
B. Sealant for Countertops: Comply with applicable requirements in Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install countertops level to a tolerance of 1/8 inch in 8 feet (3 mm in 2.4 m), 1/4 inch (6 mm) maximum. Do not exceed 1/64-inch (0.4-mm) difference between planes of adjacent units.
B. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Predrill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
C. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
D. Secure countertops to subtops with adhesive according to solid surface material manufacturer's written instructions. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
E. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.

(1) Install metal splines in kerfs in countertop edges at joints[**where indicated**]. Fill kerfs with adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
(2) Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

F. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
G. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.
H. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

(1) Seal edges of cutouts in particleboard subtops by saturating with varnish.

I. Apply sealant to gaps at walls; comply with Section 079200 "Joint Sealants."

END OF SECTION 12 36 61

SECTION 12 48 13 – ENTRANCE FLOOR MATS AND FRAMES

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide entrance floor mats and recessed frames where indicated on the Drawings, as specified herein, and as necessary for complete installation.

1.02 RELATED SECTIONS: DIVISION-03 sections for concrete Work, including forming, placing, and finishing concrete floor slabs and grouting frames into recess.

1.03 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type of floor mat and frame specified, including manufacturer's specifications and installation instructions, details of construction relative to materials, dimensions of individual components, profiles, and finishes.
B. SUBMIT SHOP DRAWINGS showing layout and types of floor mat and frames, full-scale sections of typical installations, details of patterns or designs, anchors, and accessories.
C. SUBMIT MAINTENANCE DATA in form of manufacturer's printed instructions for cleaning and maintaining floor mats.

1.04 FIELD MEASUREMENTS: Check actual blocked-out openings in floors by accurate field measurements before fabrication of frames and mats; show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of Work.

PART 2 - PRODUCTS

2.01 FLUSH-RECESSED FLOOR MATS & FRAME: Bolt-thru type construction with individual aluminum spacers – note that swedge, welded and key lock fastening of rails is not acceptable.

A. BASIS-OF-DESIGN PRODUCT / MANUFACTURER: “Ultra Track” foot grille by Mats Inc., P: 800-628-7462 - web: www.matsinc.com.

2.02 COMPONENT MATERIALS:

A. Aluminum Alloy type 6061-T6. (soft aluminum alloy such as 6063-T52 is not acceptable)
B. Recycled Content: Aluminum to be 64% pre-consumer and 16% post-consumer recycled content
C. Blades: T-Shaped blades, 3/16” x 1/8” x 1” Size, spacing between blades not to exceed 3/16 inch.
D. Dimension: Grille depth to be 1”, with frame 1-1/8”
E. Panels: Foot Grille to be supplied in panels not to exceed 48” x 42” (one-piece design not acceptable). Provide all grille panels with individual, pre-fabricated, factory-assembled frames
F. Rolling Load Capacity: 3,831 lbs per 2 foot span

2.03 SHALLOW-RECESSED MAT FRAMES: Provide manufacturer's standard extruded aluminum frame, of design, size and style to fit floor mat type and match approved sample for permanent recessed installation in floor, complete with corner pins or reinforcing and installation anchorages. Provide unit height as required by floor mat. Coat surface of frame that will contact cementitious material with zinc chromate paint or manufacturer's standard protective coating. Pre-assemble and weld all joints at factory.

2.04 FLOOR MAT / GRILLE UNIT: Provide invisible section divider integrated and welded within the frame. For sections larger than 6'-0 by 8'-0, provide a mechanical joint.

2.05 UNIT ACCESSORIES: Provide flush stainless steel hinges and keyed-lock downs attached to each grid section.

2.06 EPOXY UNDERLAYMENT: Provide “Ardex” cement underlayment as required to ensure a level base for mat.

2.07 PROVIDE colors, patterns, and profiles of materials, including metals and metal finishes, as indicated on drawings or by this specification or, where not indicated, as selected by Architect from manufacturer's standard colors, patterns, and profiles.

2.08 SHOP FABRICATE units of floor mat work to greatest extent possible in sizes as indicated. Where not otherwise indicated, provide single unit for each mat installation, but do not exceed manufacturer's maximum size recommendation for units intended for removal and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints. Where possible, verify sizes by field measurement before shop fabrication.

PART 3 - EXECUTION

3.01 INSTALL RECESSED FRAMES and mats to comply with manufacturer's instructions, at locations indicated and with top of frames and mats in proper relationship to one another and to adjoining finished flooring. Set mat tops at height recommended by manufacturer for most effective cleaning action; coordinate top of mat surfaces with doors that swing across mats to provide underdoor clearance.

3.02 UPON COMPLETION OF FRAME INSTALLATIONS and concrete work, provide temporary filler of plywood or fiberboard in recesses, and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and project is near time of Substantial Completion.

3.03 DEFER INSTALLATION of floor mats until near time of Substantial Completion for project.

END OF SECTION 12 48 13

SECTION 12 52 19 – UPHOLSTERED SEATING

PART 1 - GENERAL

1.01 WORK INCLUDED: Provide custom fabricated upholstered seating, as indicated on the Drawings, as specified herein, and as necessary for a complete installation at the Project Site. The Work of this Section includes:

A. Upholstered “banquette” wall seating units with upholstered backs and seats – without exposed ends.

1.02 RELATED SECTIONS: Division-06 “Finish Carpentry”, “Interior Architectural Woodwork” or “Casework” Sections, as applicable.

1.03 DEFINITIONS – ILD: Indent Load Deflection

1.04 QUALITY ASSURANCE: Except as otherwise indicated by the Drawings or these Specifications, comply with applicable requirements of Architectural Woodwork Institute (AWI)’s "Quality Standards" Section 400 – Custom Grade.

1.05 SUBMITTALS

A. SUBMIT PRODUCT DATA for each type unit of standard manufacturer, or components of custom fabrication, Including data for fire-retardant treatment from manufacturers.

B. SUBMIT SHOP DRAWINGS showing location of units at the site, dimensioned plans and elevations, large-scale details, attachment devices, and other components, and unit fabrication details for custom-designed units. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement required to be installed as Work of other Sections.

C. SUBMIT SAMPLES FOR INITIAL SELECTION, to include Manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available for each type of material indicated.

(1) Shop-applied transparent or opaque finishes.
(2) Plastic laminates or melamine finished surfaces, if applicable.
(3) Upholstery fabric(s)

D. SUBMIT MAINTENANCE DATA to include upholstery manufacturer’s recommended methods for maintaining fabric, including precautions for cleaning materials and methods that could be detrimental to seating and performance.

1.06 QUALITY ASSURANCE

A. FIRE-TEST RESPONSE CHARACTERISTICS:

(1) Fabric: Class 1 per DOC CS 191 and 16 CFR 1610.61, tested per California Technical Bulletin # 117.
(2) Padding: Comply with California Technical Bulletin # 117
(3) Full-scale Fire Test: Comply with California Technical Bulletin # 122.

1.07 DO NOT DELIVER WORK until painting and similar operations that could damage units have been completed in installation areas. If units must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in the following “Project Conditions" paragraph.

1.08 PROJECT CONDITIONS

A. ENVIRONMENTAL LIMITATIONS: Do not deliver or install units until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. FIELD MEASUREMENTS: Where units are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work. Locate concealed framing, blocking, and reinforcements that support units by field measurements before being enclosed and indicate measurements on Shop Drawings.

(1) Where field measurements cannot be made without delaying the Work, establish and set dimensions and proceed with fabricating units without field measurements, and provide allowance for trimming and fitting at the site. Coordinate construction to ensure that actual dimensions correspond to established dimensions required.

PART 2 - PRODUCTS

2.01 PROVIDE MATERIALS THAT COMPLY with requirements of the referenced AWI quality standard as applicable, and as follows:

2.02 UPHOLSTERY FABRIC: As indicated on the Drawings, and in compliance with requirements herein.

2.03 UPHOLSTERY BACKING / PADDING: Non-woven polyester fiber material equivalent to “Lantuck” by Johnston Industries

2.04 UPHOLSTERY PADDING: Flexible, cellular, molded or slab polyurethane foam, and as follows (if not otherwise indicated on the Drawings):

A. Seat Bases: Minimum four (4) inch thick - 2.7 pound density foam, ILD: 43 minimum
B. Seat Backs: Minimum two (2) inch thick - 2.0 pound density foam, ILD: 24 to 28.

2.05 SEAT SPRINGS: Sinuous type, paper wrapped oil-tempered 9 gage steel wire springs at 3.5 inch centers typically, secured with non-squeak “E” clips, and with fiber-coated wire stabilizer bars running length of seat.

2.06 TYPICAL SUBSTRATE MATERIAL: Minimum 5/4 inch thick solid yellow pine framework (at spring seats typically), or solid panels of 3/4 inch thick softwood plywood meeting DOC PS 1 without urea formaldehyde – manufacturer’s option - except as otherwise indicated.

2.07 HIGH-PRESSURE DECORATIVE LAMINATE: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard. Provide plastic laminate by Manufacturer and color as indicated in the Drawings, or if not indicated, provide materials by one of the following, subject to approval by the Architect:

A. Chemetal
B. Formica Corporation.
C. Laminart
D. Pioneer Plastics Corp.
E. Wilsonart International; Div. of Premark International, Inc.

2.08 HARDWOOD VENEERED PLYWOOD: Provide wood veneer material in species and cut as indicated in the Drawings, in compliance with the Hardwood Plywood and Veneer Association (HPVA)'s grade: HP-1.

2.09 NATURAL-WOOD VENEER LAMINATE: Provide material by manufacturer in color/series as indicated in the Drawings, or if not indicated, use "natural-finished wood" composite veneered laminate material manufactured with real wood, as manufactured by Treefrog Veneer (www.treefrogveneer.com) or equal as approved by the Architect.

2.10 THERMOSET DECORATIVE OVERLAY: Particleboard complying with ANSI A208.1, Grade M-2, or medium-density fiberboard complying with ANSI A208.2, Grade MD, with surface of thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1. Provide material with no added urea formaldehyde (NAUF).

2.11 ADHESIVE

A. for Bonding Plastic Laminate: contact cement.
B. for Bonding Edges: Hot-melt adhesive.

2.12 MISCELLANEOUS WOOD PRODUCTS:

A. Hardboard: AHA A135.4.
B. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade MD.
C. Particleboard (PBD): ANSI A208.1, Grade M-2
D. Softwood Plywood: DOC PS 1, Medium Density Overlay.

2.13 INSTALLATION MATERIALS

A. FURRING, BLOCKING, SHIMS, AND HANGING STRIPS: Softwood or hardwood lumber, kiln-dried to less than 15 percent moisture content.
B. ANCHORS: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.14 FABRICATION, GENERAL

A. SHOP FABRICATE units to dimensions, profiles, and details indicated on shop drawings. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting. Complete fabrication, finishing, hardware application and other Work before shipment to project site to maximum extent possible. Mark individual items in sequence with removable materials to facilitate field assembly. Ease edges of exposed solid wood (lumber) members to 1/16 inch radius.
B. WOOD MOISTURE CONTENT: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

2.15 FABRICATION:

A. UPHOLSTERED SEATING UNIT FABRICATION / COMPONENTS:
   (1) Configuration: recessed, wall seating units without exposed ends or outside back (OSB) units.
   (2) Typical Unit size:
      (a) 25 inch unit deep overall (to front edge of padded seat) with a 19 inch deep, recessed base
      (b) 36 inch high overall (without headrail)
      (c) 18.5 inch high padded seat height at front edge
   (3) Removable, foam padded upholstered top cap
   (4) Back pad: three (3) equal height horizontal foam filled continuous channels or as otherwise indicated on the Drawings
   (5) Crumb Rail: laminated finished
   (6) Seat Units: removable single-depth upholstered pad unit
   (7) Seat Skirt: foam padded and upholstered to match removable seat unit above (except as indicated otherwise)
   (8) Seat support: springs mounted to framework so users will not "bottom out"
      (a) Seat support: solid plywood
   (9) Base: Six (6) inch high (or as otherwise indicated on Drawings) closed unit - plastic laminate finished (black color UNO)
B. Fabricate fabric-covered cushions fitted tightly and evenly, with molded padding beneath fabric and with fabric covering free of welts, creases, stretch lines or wrinkles. For each upholstered component, install pile and pattern run of fabric in a consistent direction.
   (1) Reinforce framework by providing glued corner blocks typically,
C. Wrap foam seats and back cushions fully in 1/2 ounce Dacron meeting fire regulations
D. Glue attach fabric to foam, with clips and screws for removable attachment
   (1) Sew cushions with bullnose finish, unless indicated otherwise.

(2) Fabricate for tight fit between cushions, and adjacent construction, unless otherwise indicated.
(3) Sew loop portions of woven nylon hook and loop (“Velcro”) fasteners to align with hook section mounted to substrate

PART 3 - INSTALLATION:

3.01 DELIVER inserts and other anchoring devices to be built into substrates, well in advance of time substrates are to be built. Condition wood materials to average prevailing humidity conditions in installation areas prior to installation.

3.02 DISCARD units of material which are unsound, warped, bowed, twisted, improperly treated, not adequately seasoned or too small to fabricate work with minimum of joints or optimum jointing arrangements, or which are of defective manufacturer with respect to surfaces, sizes or patterns.

3.03 INSTALL the Work plumb, level, true and straight with no distortions. Shim as required using concealed shims. Install to a tolerance of 1/8 inch in 8'-0" for plumb and level, and with 1/16" maximum offset in flush adjoining surfaces and 1/8" maximum offsets in revealed adjoining surfaces.

3.04 SCRIBE AND CUT to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.

3.05 ANCHOR to anchors or blocking built-in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation without distortion. Except where prefinished matching fastener heads are required, use fine finishing nails for exposed nailing, countersunk and filled flush with woodwork, and matching final finish where transparent finish is indicated.

3.06 REPAIR DAMAGED and defective units to eliminate defects functionally and visually, or where not possible, replace units. Adjust joinery for uniform appearance. Clean units on exposed and semi-exposed surfaces. Touch-up shop applied finishes to restore damaged or soiled areas.

3.07 TOUCH-UP FINISHING as required by installation. Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing of concealed surfaces and similar items.

3.08 PROTECTION: Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures that the seating units will be without damage or deterioration at time of substantial completion.

END OF SECTION 12 52 19

SECTION 12 70 00 – MULTIPLE SEATING SYSTEMS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:

(1) Table systems.
(2) Fixed Table: Symmetra System.
(3) Extent: Systems to be as indicated on Drawings and as specified.

1.02 PRODUCT DESCRIPTION:

A. Seat/Table Requirements:

(1) Pedestal: Provide table and supports providing fixed work surface with open access, supported by pedestals.
(2) Power and Data Distribution System: Modular data and electrical system housed in flexible conduit. All power system components shall be UL approved, including the steel pedestal table leg used for power entry, which shall be certified as a “UL Recognized Component,” and will have appropriate labeling documenting that approval.

1.03 ACTION SUBMITTALS:

A. General: Submit listed submittals in accordance with Contract and standard Submittals Procedures.
B. Product Data: Submit manufacturers’ product data, including product specification sheets, for each product specified.
C. Shop Drawings: For unit assembly and installation.

(1) Submit shop drawings showing seating layout, seat-numbering scheme, chair sizes and aisle widths.

D. Samples for Verification: Submit verification samples of finishes, colors and textures specified for each exposed material.

1.04 INFORMATION SUBMITTALS:

A. Quality Assurance Submittals: Submit the following:

(1) Certificates: Product certificates signed by manufacturer certifying materials comply with specify performance characteristics and criteria and physical requirements.
(2) Installer Qualifications: Submit certification indicating installer is qualified to install manufacturer's seating.

B. Bidder Qualifications: Submit certification, prior to drawing completion, indicating site has been inspected for any conditions that may affect the assembly or installation of products required.

1.05 WARRANTY:

A. Project Warranty: Refer to “Conditions of the Contract” to project warranty provisions.
B. Manufacturer's Warranty: Submit, for Owners acceptance:
C. Manufacturer’s standard warranty documents executed by authorized company official. Manufacturer’s warranty is in addition to, and not a limitation of, other rights Owners may have under Contract Documents.
D. Warranty period; Ten (10) year warranty on understructure and seating shells (when utilized) from defects of manufacture and workmanship, commencing on Date of Substantial Completion.
E. Warranty will be null and void if products are installed on flooring not meeting minimum structural requirements as specified by manufacturer.

PART 2 - PRODUCTS

2.01 TABLE SYSTEM:

A. Manufacturer: Navetta division of Shuttlesystem LLC.
B. Product: Symmetra Fixed Table System.
C. Product Specifications:

(1) Pedestal Support Construction: Pedestals shall be constructed of 11 gauge steel tubing of oval cross-section measuring 3.15 inches x 1.57 inches.
(2) Floor Mount: Pedestal shall be computer-controlled welded to a .25 inch thick steel base plate measuring 8 inches x 4 inches with four slotted holes for mounting pedestal to floor with anchor bolts.
(3) Base Cover: Base plate to be fully covered after mounting with two-piece cover constructed of injection molded toughened nylon, attached with two machine screws.
(4) Table Mount: Top mount bracket shall be constructed of 11 gauge steel with four attaching bolts allowing attachment to pedestal and adjustment for variations in floor surface to provide alignment of adjacent tabletops without shimming tops. Bracket shall provide six mounting holes for attaching table top and designed to accept optional power and/or data electrical system.
(5) Top Shroud: Top mount bracket will be covered by shroud with rounded edges constructed of injection molded ABS, attached with machine screws.
(6) Metal Finish: Metal components shall have powder-coat finish in indicated on Drawings.
(7) Table Configuration: Table tops shall be designed to be assembled into continuous surface in straight, radius, or segmented configuration. Adjacent tops to be joined with two mechanical clamping fasteners. Tops shall have cutouts for tabletop power modules when specified. Manufacturer shall be FSC (Forest Stewardship Council) chain-of-custody Certified.

(8) Table Top Construction: Table tops shall be nominal 1.25 inch thick warp-resistant construction with 1.125 inch particleboard center core sandwiched between .040 inch high pressure laminate top surface and phenolic backing surface. Assembly to be permanently bonded under continuous pressure in hot press.
(9) Table Top Edge Treatment: Edges shall be finished to match table top finish as indicated on Drawings, using 3mm PVC, “T” cross-section vinyl continuous molding, wood surface, or bonded resin edging.
(10) Table Top Attachment: Table tops to attach to pedestal brackets with six #12 lag bolts.
(11) Modesty Panel Construction: Modesty panels shall be constructed of .8 inch thick nominal particle board sandwiched with bonded high-pressure laminate as indicated on Drawings and phenolic backing sheet, pattern and finish as indicated on Drawings.
(12) Modesty Panel Attachment: Modesty panels shall interlock into machined recess in underside of table top surface and attach with supplied rigid metal brackets and hardware. Standard configuration provides .5 inch clearance between adjacent modesty panels, continuous configuration optional.
(13) End Panel Construction: End panels shall be constructed of .8 inch thick nominal particle board sandwiched with bonded high-pressure laminate as indicated on Drawings and phenolic backing sheet, pattern and finish as indicated on Drawings.
(14) End Panel Attachment: End panels shall attach with supplied rigid metal brackets and hardware.

PART 3 - EXECUTION

3.01 MANUFACTURER’S INSTRUCTIONS:

A. Comply with manufacturer's installation instructions, including bulletins, product catalog, installation instructions and product carton instructions for installation.

3.02 EXAMINATION:

A. Site Verification: Prior to installation verify, with installer present, that substrates and conditions comply with the requirements for construction tolerances and materials properties as they affect anchors and fasteners and location of junction boxes.
B. Repair: Do not proceed until unsatisfactory components or facility conditions have been corrected.

3.03 INSTALLATION:

A. Installation: Install following manufacturers printed instructions for installation and using manufacturer recommended hardware and fasteners. Tables in curbed rows shall be installed at smooth radius.
B. Repair: Repair minor abrasions and imperfections in painted surfaces with a coating that matches the factory-applied finish.

3.04 CLEANING:

A. Clean Product in accordance with manufacturer instruction prior to Owner’s acceptance. Remove construction debris, including cartons from project site and legally dispose of debris.

3.05 PROTECTION:

A. Protect installed product and finished surfaces from damage during construction.

END OF SECTION 12 70 00

END OF DIVISION 12

DIVISION 13 – SPECIAL CONSTRUCTION

NOT USED

END OF DIVISION 13

DIVISION 14 – CONVEYING SYSTEMS

SECTION 14 21 00 – ELECTRIC STRACTION ELEVATORS

SECTION 14 21 00 – ELECTRIC TRACTION ELEVATORS

PART 1 - GENERAL

1.01 SUMMARY

A. This section specifies electric traction elevators.
B. Work Required
   (1) The work required under this section consists of all labor, materials and services required for the complete installation (including operational verification) of all the equipment required for the elevator(s) as herein specified.
   (2) All work shall be performed in a first class, safe and workmanlike manner.
   (3) In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as required to make complete installation.

1.02 RELATED SECTIONS

A. The following sections contain requirements that relate to this section and are performed by trades other than the elevator manufacturer/installer.
   (1) Section 01 50 00 – Temporary Facilities and Controls: protection of floor openings and personnel barriers; temporary power and lighting.
   (2) Section 03 30 00 – Cast-In-Place Concrete: elevator pit and elevator machine foundation.
   (3) Section 04 20 00 – Unit Masonry: masonry hoistway enclosure, building-in and grouting hoistway doorframes, and grouting of sills.
   (4) Section 05 50 00 – Metal Fabrications: pit ladder, divider beams, supports for entrances and rails, and hoisting beam at top of elevator hoistway.
   (5) Section 07 16 00 – Cementitious Waterproofing: waterproofing of elevator pit.
   (6) Section 23 50 00 – Heat Generation Equipment: ventilation and temperature control of elevator equipment areas.
   (7) Section 26 05 00 – Common Work Results for Electrical:
      (a) Main disconnects for each elevator.
      (b) Electrical power for elevator installation and testing.
      (c) Disconnecting device to elevator equipment prior to activation of sprinkler system.
      (d) The installation of dedicated GFCI receptacles in the pit and overhead.
      (e) Lighting in controller area, machine area and pit.
   (8) Wiring for telephone service to controller.
   (9) Section 26 30 00 – Emergency (Standby) Power Supply Systems: emergency generator for elevator operation.
   (10) Section 27 30 00 – Voice Communications: ADAAG-required emergency communications equipment.
   (11) Section 28 31 00 – Fire Alarm Systems: fire and smoke detectors at required locations and interconnecting devices; fire alarm signal lines to contacts in the machine area.
   (12) Section 31 10 00 – Site Clearing: excavation for elevator pit.

1.03 REFERENCES

A. Comply with applicable building and elevator codes at the project site, including but not limited to the following:
   (1) ASME A17.1/CSA B44, Safety Code for Elevators and Escalators.
   (2) ASME A17.7/CSA B44, Performance-Based Safety Code for Elevators and Escalators.
   (3) ADAAG, American Disabilities Act Accessibility Guidelines.
   (4) ANSI A117.1, Building and Facilities, Providing Accessibility and Usability for Physically Handicapped People.
   (5) ANSI/NFPA 70, (NEC) National Electrical Code.
   (6) CAN/CSA C22.1, (CEC) Canadian Electrical Code.
   (7) ANSI/UL 10B, Standard for Fire Test of Door Assemblies.
   (8) CAN/ULC-S104-10, Standard Method for Fire Test of Door Assemblies.
   (9) ANSI/NFPA 80, Standard for Fire Doors and Other Opening Protectives.
   (10) Building Codes IBC or NBCC.
   (11) All Local Jurisdictional applicable codes.

1.04 SYSTEM DESCRIPTION

A. Equipment Description: Gen3 Edge™ gearless machine-room less elevator where all components fit inside the hoistway with the controller in the top landing entrance frame.
B. Equipment Control: Otis GCS Controller.
C. Drive: Regenerative
D. Quantity of Elevators: 2
E. Elevator Stop Designations: 1, 2, 3, 4
F. Stops: [4]
G. Openings: Front and Rear
   (1) Refer to Drawings for rear opening indicated.
H. Travel: 52'-0"
I. Rated Capacity: 3500 lb
J. Rated Speed: 200 fpm

K. Platform Size: 6'-6 3/4" W x 6'-8 3/16" D
L. Clear Inside Dimensions: 6'-6 3/4" x 5'-6 1/8"
M. Cab Height: [93"]
N. Clear Cab Height: 7'-4 5/16" (2243 mm)
O. Entrance Type and Width: Single Slide - 3'-6"
P. Entrance Height: [84"]
Q. Main Power Supply: 480 volts ± 5% of normal, three-phase, with a separate equipment grounding conductor.
R. Car Lighting Power Supply: 120 volts, single-phase, 15 amps, 60 Hz.
S. Machine Location: Inside the hoistway at the top of the hoistway.
T. Signal Fixtures: Manufacturer's standard with metal button targets (excluding CA).
U. Controller Location: [indicate location]
V. Performance:

(1) Car Speed: ± 3% of contract speed under any loading condition or direction of travel.
(2) Car Capacity: Safely lower, stop and hold up to 120% of rated load (code required).
(3) Ride Quality:

(a) Vertical Vibration (maximum): 20 milli-g
(b) Horizontal Vibration (maximum): 12 milli-g
(c) Vertical Jerk (maximum): 4.59 ± 1.0 ft./sec³ (1.4 ± 0.3 m/sec³)
(d) Acceleration/Deceleration (maximum): 2.62 ft./sec² (0.8 m/sec²)
(e) In Car Noise: 55 – 60 dB(A)
(f) Stopping Accuracy: ± 0.375 in. (± 10 mm) max, ± 0.25 in. (± 6 mm) Typical
(g) Re-leveling Distance: ± 0.5 in. (± 12 mm)

W. Operation: Duplex Collective Operation: Using a microprocessor-based controller, the operation shall be automatic by means of the car and hall buttons. In the absence of system activity, one car can be made to park at the pre-selected main landing. The other (free) car shall remain at the last landing served. Only one car shall respond to a hall call. If either car is removed from service, the other car shall immediately answer all hall calls, as well as its own car calls.
X. Operation Features – Standard

(1) Full Collective Operation
(2) Anti-nuisance.
(3) Fan and Light Protection.
(4) Load Weighing Bypass.
(5) Independent Service.
(6) Firefighters' Service Phase I and Phase II (USA only); or Special Emergency Service Phase I and II – Emergency Recall and In-Car Emergency Operation (Canada only).
(7) Top of Car Inspection.
(8) Zoned Car Parking.
(9) Relative System Response Dispatching.

Y. Operation Features – Optional

(1) Zoned Access at Bottom Landing.
(2) Zoned Access at Upper Landing.
(3) Express Priority Service with key-switch(es)
(4) Emergency Hospital Service.
(5) Automatic Rescue Operation
(6) Automatic Standby Power Operation with Manual Override.

Z. Door Control Features:

(1) Door control to open doors automatically when car arrives at a landing in response to a normal hall or car call.
(2) Elevator doors shall be provided with a reopening device that will stop and reopen the car door(s) and hoistway door(s) automatically should the door(s) become obstructed by an object or person.
(3) Door protection shall consist of a two-dimensional, multi-beam array projecting across the car door opening.
(4) Door nudging operation to occur if doors are prevented from closing for an adjustable period of time.

AA. Provide equipment for seismic conditions: No

1.05 SUBMITTALS

A. Product Data: Submit manufacturer's product data for each system proposed for use. Include the following:

(1) Signal and operating fixtures, operating panels and indicators.
(2) Cab design, dimensions and layout.
(3) Hoistway-door and frame details.
(4) Electrical characteristics and connection requirements.
(5) Expected heat dissipation of elevator equipment in hoistway (BTU).
(6) Color selection chart for Cab and Entrances.

B. Shop Drawings: Submit approval layout drawings. Include the following:

(1) Car, guide rails, buffers, and other components in hoistway.
(2) Maximum rail bracket spacing.
(3) Maximum loads imposed on guide rails requiring load transfer to building structure.
(4) Clearances and travel of car.

(5) Clear inside hoistway and pit dimensions.
(6) Location and sizes of access doors, hoistway entrances and frames.

C. Operations and Maintenance Manuals: Provide manufacturer's standard operations and maintenance manual.

1.06 QUALITY ASSURANCE

A. Manufacturer: Elevator manufacturer shall be ISO 9001 certified.
B. Manufacturer shall have a minimum of fifteen years of experience in the fabrication, installation and service of elevators.
C. Installer: Elevators shall be installed by the manufacturer.
D. Permits, Inspections and Certificates: The Elevator Contractor shall obtain and pay for necessary Municipal or State Inspection and permit as required by the elevator inspection authority, and make such tests as are called for by the regulations of such authorities. These tests shall be made in the presence of such authorities or their authorized representatives.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Should the building or the site not be prepared to receive the elevator equipment at the agreed upon date, the General Contractor will be responsible to provide a proper and suitable storage area on or off the premises.
B. Should the storage area be off-site, and the equipment not yet delivered, then the elevator contractor, upon notification from the General Contractor, will divert the elevator equipment to the storage area. If the equipment has already been delivered to the site, then the General Contractor shall transport the elevator equipment to the storage area. The cost of elevator equipment taken to storage by either party, storage, and redeliver to the job site shall not be at the expense of the elevator contractor.

1.08 WARRANTY

A. The elevator contractor's acceptance is conditional on the understanding that their warranty covers defective material and workmanship. The warranty period shall not extend longer than one (1) year from the date of completion or acceptance thereof by beneficial use, whichever is earlier, of each elevator. The warranty excludes: ordinary wear and tear, improper use, vandalism, abuse, misuse, or neglect or any other causes beyond the control of the elevator contractor and this express warranty is in lieu of all other warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose.

1.09 MAINTENANCE AND SERVICE

A. Maintenance service consisting of regular examinations and adjustments of the elevator equipment shall be provided by the elevator contractor for a period of 12 Months after the elevator has been turned over for the customer's use. This service shall not be subcontracted but shall be performed by the elevator contractor. All work shall be performed by competent employees during regular working hours of regular working days. This service shall not cover adjustments, repairs, or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the elevator contractor. Only genuine parts and supplies as used in the manufacture and installation of the original equipment shall be provided.
B. The periodic lubrication of elevator components shall not be required, including Sheaves, Rails, Belts, Ropes, Car and CWT guides, etc.
C. The elevator control system must:
(1) Provide in the controller the necessary devices to run the elevator on inspection operation.
(2) Provide on top of the car the necessary devices to run the elevator in inspection operation.
(3) Provide in the controller an emergency stop switch. This emergency stop switch when opened disconnects power from the brake and prevents the motor from running.
(4) Provide in the event of a power outage, means from the controller to electrically lift and control the elevator brake to safely bring the elevator to the nearest available landing.
(5) Provide the means from the controller to reset the governor over speed switch and also trip the governor.
(6) Provide the means from the controller to reset the emergency brake when set because of an unintended car movement or ascending car overspeed.
(7) (Optional) Provide the means from the controller to reset elevator earthquake operation.
D. Provide system capabilities to enable a remote expert to create a live, interactive connection with the elevator system to enable the following functions:
(1) Remotely diagnose elevator issues with a remote team of experts
(2) Remotely return an elevator to service
(3) Provide real-time status updates via email
(4) Remotely make changes to selected elevator functions including:
(a) Control building traffic: Restrict floor access, remove car from group operation, shut down elevator, select up peak/down peak mode and activate independent service.
(b) Conserve energy: Activate cab light energy save mode, activate fan energy save mode, shut down car(s).
(c) Improve passenger experience: Extend door open times, change parking floor, activate auto car full, activate anti-nuisance, advance door opening, door nudging, extend specific floor extended opening time, release trapped passengers.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Manufacturer: Design based upon Otis Elevator's Gen3™ machine room-less elevator system.

2.02 DESIGN AND SPECIFICATIONS

A. Provide machine-roomless Gen3™ traction passenger elevators from Otis Elevator Company. The control system and car design based on materials and systems manufactured by Otis Elevator Company. Specifically, the system shall consist of the following components:

(1) Controller located entirely inside the hoistway.
(2) An AC gearless machine using embedded permanent magnets mounted at the top of the hoistway.
(3) Polyurethane Coated-Steel Belts for elevator hoisting purposes.
(4) Regenerative drive that captures normally wasted energy and feeds clean power back into the building's power grid.
(5) LED lighting standard in ceiling lights and elevator fixtures.
(6) Sleep mode operation for LED ceiling lights and car fan.

B. Approved Installer: Otis Elevator Company

2.03 EQUIPMENT: CONTROLLER COMPONENTS

A. Controller: A microcomputer-based control system shall be provided to perform all of the functions of safe elevator operation. The system shall also perform car and group operational control.

(1) All high voltage (110V or above) contact points inside the controller shall be protected from accidental contact when the controller doors are open.
(2) Controller shall be separated into two distinct halves: Motor Drive side and Control side. High voltage motor power conductors shall be routed so as to be physically segregated from the rest of the controller.
(3) Field conductor terminations points shall be segregated; high voltage (>30 volts DC and 110 VAC,) and low voltage (< 30 volts DC)
(4) Controllers shall be designed and tested for Electromagnetic Interference (EMI) immunity according to the EN 12016 (May 1998): “EMC Product Family Standards for lifts, escalators, and passenger conveyors Part 2 – immunity”
(5) Controller shall be located inside the wall next to the top landing entrance frame. Emergency access shall be provided through an access panel in the entrance frame secured by a key lock.
(6) A separate control room, space or closet is an option.

B. Drive: A Variable Voltage Variable Frequency AC drive system shall be provided. The drive shall be set up for regeneration of AC power back to the building grid.

2.04 EQUIPMENT: HOISTWAY COMPONENTS

A. Machine: AC gearless machine, with a synchronous permanent-magnet motor, dual solenoid service and emergency disc brakes, mounted at the top of the hoistway.
B. Governor: The governor shall be a tension type car-mounted governor.
C. Buffers, Car, and Counterweight: Polyurethane type buffers shall be used for speeds of 150 and 200 feet per minute. Oil buffers shall be used for a speed of 350 feet per minute.
D. Hoistway Operating Devices:

(1) Emergency stop switch in the pit.
(2) Terminal stopping switches.

E. Positioning System: Consists of an encoder, reader box, and door zone vanes.
F. Guide Rails and Attachments: Guide rails shall be Tee-section steel rails with brackets and fasteners. Side counterweight arrangements shall have a dual-purpose bracket that combines both counterweight guide rails, and one of the car guide rails to building fastening.
G. Coated-Steel Belts: Polyurethane coated belts with high-tensile-grade, zinc-plated steel cords and a flat profile on the running surface and the backside of the belt. The belts shall have an FT-1 rating as referenced by NFPA 13. All driving sheaves and deflector sheaves should have a crowned profile to ensure center tracking of the belts. A continuous 24/7 monitoring system using resistance-based technology has to be installed to continuously monitor the integrity of the coated steel belts and provide advanced notice of belt wear.
H. Governor Rope: Shall be steel and shall consist of at least eight strands wound about a sisal core center.
I. Fascia: Galvanized sheet steel shall be provided at the front of the hoistway.
J. Hoistway Entrances:

(1) Frames: Entrance frames shall be of bolted construction for complete one-piece unit assembly. All frames shall be securely fastened to fixing angles mounted in the hoistway and shall be of UL fire rated steel.
(2) Sills shall be extruded: Aluminum
(3) Doors: Entrance doors shall be of metal construction with vertical channel reinforcements.
(4) Fire Rating: Entrance and doors shall be UL fire rated for 1-1/2 hour
(5) Entrance Finish: [Satin Stainless Steel]
(6) Entrance Marking Plates: Entrance jambs shall be marked with 4” x 4” (102 mm x 102 mm) plates having raised floor markings with Braille located adjacent to the floor marking. Marking plates shall be provided on both sides of the entrance.
(7) Sight Guards: Sight guards will be furnished with all doors painted to match with painted doors, painted black for stainless steel doors.

2.05 EQUIPMENT: CAR COMPONENTS

A. Car Frame and Safety: A car frame fabricated from formed or structural steel members shall be provided with adequate bracing to support the platform and car enclosures. The car safety shall be integral to the car frame and shall be Type "B", flexible guide clamp type.
B. Cab: Steel Shell Cab with stainless steel wall panels

C. Car Front Finish: Satin Stainless Steel
D. Car Door Finish: Satin Stainless Steel
E. Ceiling Type: Dropped ceiling with LED lights
F. Ceiling Finish: Brushed Steel Finish
G. Floor Finish: Unless otherwise indicated, refer to Finish Legend and coordinate cab assembly with other trades for installation of:
   (1) Terrazzo Tile as indicated in the Drawings
H. Emergency Car Lighting: An emergency power unit employing a 6-volt sealed rechargeable battery and totally static circuits shall be provided to illuminate the elevator car in the event of building power failure.
I. Fan: A one-speed 120 VAC fan will be mounted to the ceiling to facilitate in-car air circulation, meeting A17.1 code requirements. The fan shall be rubber mounted to prevent the transmission of structural vibration and will include a baffle to diffuse audible noise. A switch shall be provided in the car-operating panel to control the fan.
J. Handrails: Brushed steel finish, 3/8" x 2" flat tubular bar handrails shall be provided on the side walls.
K. Threshold: Aluminum
L. Emergency Exit Contact: An electrical contact shall be provided on the car-top exit.
M. Guides: The car shall have 3" diameter roller guides at top and bottom and the counterweight shall have slide type guides at the top and the bottom. Optional counterweight guides available.
N. Platform: The car platform shall be constructed of metal. Load weighing device shall be mounted on the belts at the top of the hoistway.
O. The LED ceiling lights, and the fan should automatically shut off when the system is not in use and be powered back up after a passenger calls the elevator and pushes a hall button.
P. Certificate frame: Provide a Certificate frame with a satin stainless steel finish.
Q. Otis cab air purifier

2.06 EQUIPMENT: SIGNAL DEVICES AND FIXTURES

A. Car Operating Panel: A luxury swing car operating panel shall be provided which contains all push buttons, key switches, and message indicators for elevator operation. The car operating panel shall have a satin stainless steel finish. (An optional Luxury Swing COP is available. A second COP is available)
   (1) The car operating panel shall contain a bank of round stainless steel, mechanical LED illuminated buttons, flush mounted to the panel and marked to correspond to the landings served. All buttons to have raised numerals and Braille markings with:
   (2) The car operating panel shall be equipped with the following features:
      (a) Raised markings and Braille to the left-hand side of each push-button.
      (b) Car Position Indicator at the top of and integral to the car operating panel.
      (c) Door open and door close buttons.
      (d) Inspection key-switch.
      (e) Elevator Data Plate marked with elevator capacity and car number.
      (f) Help Button: The help button shall initiate two-way communication between the car and a location inside the building, switching over to another location if the call is unanswered, where personnel are available who can take the appropriate action. Visual indicators are provided for call initiation and call acknowledgement.
      (g) Landing Passing Signal: A chime bell shall sound in the car to signal that the car is either stopping at or passing a floor served by the elevator.
      (h) In car stop switch (toggle or key unless local code prohibits use)
      (i) Firefighter's hat (standard USA)
      (j) Firefighter's Phase II Key-switch (standard USA)
      (k) Call Cancel Button (standard USA)

Below are optional.

      (l) Firefighter's Phase II Emergency In-Car Operating Instructions: worded according to A17.1 2000, Article 2.27.7.2.
      (m) Please Exit Symbol: provided with emergency hospital service, or express priority in the hall.
B. Car Position Indicator: A digital, LED car position indicator shall be integral to the car operating panel.
C. Hall Fixtures: Hall fixtures shall be provided with necessary push buttons and key switches for elevator operation.
   (1) Integral Hall fixtures shall feature round stainless steel, mechanical buttons marked to correspond to the landings. Hall fixtures to be located in the wall. Buttons shall be in vertically mounted fixture. Fixture shall be satin stainless steel finish.
   (2) Button: Flat flush mounted, satin stainless steel button with blue or white LED illuminating halo
   (3) Car Lantern and Chime: A directional lantern visible from the corridor shall be provided in the car entrance. When the car stops and the doors are opening, the lantern shall indicate the direction in which the car is to travel, and a chime will sound.
D. Access key-switch at top floor in entrance jamb.
E. Access key-switch at lowest floor in entrance jamb.
F. Card Reader Provision is Optional
G. Emergency (standby) Power key-switch: Manual selection of each elevator in normal operation after automatic return in standby power operation has been initiated.

PART 3 - EXECUTION

3.01 PREPARATION

A. Take field dimensions and examine conditions of substrates, supports, and other conditions under which this work is to be performed. Do not proceed with work until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Installation of all elevator components except as specifically provided for elsewhere by others.

3.03 DEMONSTRATION

A. The elevator contractor shall make a final check of each elevator operation with the Owner or Owner's representative present prior to turning each elevator over for use. The elevator contractor shall determine that control systems and operating devices are functioning properly.

PART 3 - EXECUTION

3.01 NOT APPLICABLE TO THIS SECTION.

END OF SECTION 21 00 00

SECTION 21 13 14 - AUTOMATIC FIRE SPRINKLER SYSTEM

PART 1 - GENERAL

1.01 DESCRIPTION

A. This Section specifies materials, methods, and equipment to be used for automatic sprinkler systems, standpipe systems, and fire pump and related fire protection piping to 5 ft (1.52 m) outside building.

B. Research indicates there is no documentation or indication that microbiologically influenced corrosion (MIC) exists in the area of the project.

C. As shown on drawings, fire protection system(s) shall consist of:

(1) 4 total automatic fire protection system(s) to include:

(a) 4 Wet-Pipe Sprinkler System (s)

D. Engineer of Record:

(1) Contractor shall be Engineer of Record. Contractor shall produce stamped and sealed installation drawings, which are also referred to as shop drawings in this Section, based on design criteria listed in this Section and drawings furnished by Engineer. Contract drawings show zone and main piping layouts of fire protection systems as it relates to architecture, structure, and mechanical/electrical systems.

E. All work shall be installed in conformance with the governing codes, regulations, local ordinances, and requirements of Authorities Having Jurisdiction. It shall be the responsibility of the Fire Protection Contractor to familiarize themselves with all governing codes and requirements and report any noncompliance of the plans or specifications to the Construction Manager/Engineer, prior to entering into the contract. These requirements are minimum criteria and no reductions permitted by Code shall be allowed without written permission of the Engineer.

F. Fire Protection Contractor shall confirm any local requirements for Fire Department Connection type and location with local Authority Having Jurisdiction prior to submittal.

G. Fire Protection Contractor shall confirm any local requirements for Fire Hose Valve type and location with local Authority Having Jurisdiction prior to submittal.

H. No additional compensation shall be granted for work which must be changed as a result of the work not originally complying with codes and standards or not in accordance with the multiple trade coordination design criteria set forth in the contract documents.

I. If code or other requirements exceed provisions indicated in the Contract Documents, the Construction Manager/Engineer shall be notified in writing. Where the work indicated on the Contract Documents exceeds code requirements, the installation shall be done in accordance with the Contract Documents. Any work done contrary to these requirements shall be removed and replaced at the expense of the responsible Contractor.

J. Fire Protection Contractor shall become familiar with all details of the work, verify dimensions in the field, and advise the Construction Manager/Engineer of any discrepancy prior to entering into the contract.

K. Fire Protection Contractor shall file all drawings, pay all fees, and obtain all permits and certificates of inspection related to this work. Fire Protection Contractor shall arrange inspection with proper Authorities Having Jurisdiction and include all costs associated with said inspections in their bid.

1.02 RELATED WORK

A. Section 07 84 00 - Firestopping

B. Section 21 00 00 - General Fire Suppression Requirements

C. Section 22 00 00 - General Plumbing Requirements

D. Section 22 05 13 - Common Motor Requirements for Plumbing Equipment

E. Section 22 05 20 - Plumbing Excavation and Backfill

F. Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment

G. Section 22 05 53 - Identification for Plumbing Piping and Equipment

H. Section 28 46 10 - Addressable Fire Detection And Alarm Systems

1.03 QUALITY ASSURANCE

A. Codes and Standards:

(1) This installation shall conform to the following:

(a) Underwriters Laboratories UL (DIR) Fire Protection Equipment Directory

(b) International Building Code (IBC), 2021 Edition

(c) International Fire Code ICC (IFC), 2021 Edition

(d) NFPA 13, Installation of Sprinkler Systems, 2019 Edition

(e) NFPA 14, Installation of Standpipe and Hose Systems, 2019 Edition
(f) NFPA 20, Installation of Stationary Pumps for Fire Protection, 2019 Edition
(g) NFPA 72, National Fire Alarm and Signaling Code, 2019 Edition
(h) Factory Mutual Research Corporation (FMRC) Approval Guide]
(i) Factory Mutual Global (FMG) Data Sheet 2-0, Installation Guidelines for Automatic Sprinklers
(j) Factory Mutual Global (FMG) Data Sheet 3-0, Hydraulics of Fire Protection Systems
(k) Factory Mutual Global (FMG) Data Sheet 3-7, Fire Protection Pumps
(l) Factory Mutual Global (FMG) Data Sheet 3-26, Fire Protection for Non-storage Occupancies
(m) Factory Mutual Global (FMG) Data Sheet 3-7, Fire Protection Pumps
(n) Factory Mutual Global (FMG) Data Sheet 4-4n, Standpipes and Hose Systems
(o) Factory Mutual Global (FMG) Data Sheet 8-1, Commodity Classification
(p) Factory Mutual Global (FMG) Data Sheet 8-9, Storage of Class 1, 2, 3, 4, and Plastic Commodities

B. Contractor Installation Program:

(1) Provide licensed persons employed by sprinkler Contractor to perform planning, calculations, layout, installation, and testing of fire protection systems. The following are acceptable:
(a) Licensed Professional Engineer
(b) National Institute for Certification of Engineering Technologies (NICET) Level IV
(c) Certified sprinkler designer
(2) Provide journeyman sprinkler fitter(s) for installation and supervision.
(3) Contractor shall be licensed in the State of Arkansas for installation of fire protection systems.
(4) Contractor shall submit pre-qualification evidence of at least 3 projects of comparable size successfully completed with their Bid.
(5) Distortion or misrepresentation of qualification evidence may result in contract cessation.
(6) On-site training for fire protection products:
(a) The grooved coupling manufacturer’s factory trained field representative shall provide on-site training for contractor’s field personnel in the proper use of grooving tools, application of groove, and installation of grooved piping products.
(b) The flexible sprinkler hose fittings manufacturer’s factory trained field representative shall provide on-site training for contractor’s field personnel in the proper install and selection of the flexible fittings in terms of bend radius, connection types, and brackets.
(c) The factory trained representative shall periodically visit the jobsite to ensure best practices in grooved product installation are being followed.
(d) Contractor shall remove and replace any improperly installed products.

C. Electrical Coordination:

(1) All relays, wire, conduit, pushbuttons, pilot lights, and other devices required for power side or the control of electrical equipment shall be furnished by Division 26 and Division 28 Contractor, except as specifically noted elsewhere in this Specification.
(2) Should any change in electrical equipment size, horsepower rating, or means of control be made to any motor or other electrical equipment after contracts are awarded, Division 21 Contractor is to immediately notify Division 26 and Division 28 Contractors of this change and pay any costs due to this change.
(3) Division 26 Contractor shall provide all power wiring and Division 21 Contractor shall be responsible for providing all control wiring and its conduit. Control wiring shall conform to Division 26 and 28 requirements for control wiring.
(4) Furnish wiring diagrams to Division 26 and Division 28 Contractors for equipment and devices furnished by Division 21 Contractor which have been indicated to be wired by Division 26 and Division 28 Contractors.
(5) Division 21 Contractor shall provide exterior waterflow alarm and coordinate installation with Division 26 and Division 28 Contractor.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to the site under provisions of Division 01.
B. Store and protect products under provisions of Division 01.
C. All materials shall be stored in a clean, dry space.
D. Promptly inspect shipments to ensure material is undamaged and complies with Specifications. Storage and protection methods must allow inspection to verify products.

E. Furnish pipe with plastic end-caps/plugs on each end of pipe. Maintain end-caps/plugs through shipping, storage and handling, and installation to prevent pipe-end damage and to eliminate dirt and construction debris from accumulating inside of pipe. Protect fittings and unions by storage inside or by durable, waterproof, aboveground packaging.

F. Cover pipe to prevent corrosion or deterioration while allowing sufficient ventilation to avoid condensation. Do not store materials directly on grade.

G. Offsite storage agreements will not relieve Contractor from using proper storage techniques.

1.05 SUBMITTALS

A. Submittals shall include:

(1) Drawings
(2) Hydraulic Calculations
(3) Product data sheets for the following:
(a) Pipe
(b) Fittings
(c) Hanger Assemblies
(d) Seismic Restraint Components
(e) Valves
(f) Double Check Detector Backflow Preventer
(g) Tamper Switches
(h) Flow Switches
(i) Fire Department Connection (FDC)
(j) Exterior Weatherproof Waterflow Alarm
(k) Sprinklers
(l) Spare Sprinkler Cabinets
(m) Fire Hose Valves (FDV)
(n) Fire Pump and Accessories
(o) Fire Pump Test Connection
(p) Fire Pump Controller with Automatic Transfer Switch
(q) Jockey Pump and Accessories
(r) Jockey Pump Controller
(s) Any additional items required to provide complete installation.

B. Submit fire pump certified shop test curves showing pressure rating and rated horsepower to Engineer.

C. Submit Material Safety Data Sheet (MSDS) for corrosion inhibitive paint.

D. Indicate by red marking or arrow, items that are to be provided, where more than 1 item appears on manufacturer's catalog sheet.

E. Submit stamped and sealed drawings, product datasheets, hydraulic calculations, and a signed copy of the Owner’s certificate to local Fire Department, Engineer, and Owner's insurance representative prior to installation or fabrication of system components.

F. Submit stamped and sealed drawings, product data sheets, and hydraulic calculations to local Fire Department prior to installation or fabrication of system components.

G. Include copy of Fire Department plan review letter in submission to Engineer.

H. Prior to installation or fabrication of system components, submit layout drawings and equipment submittals to Engineer of Record.

I. After review of layout drawings by Engineer of Record, submit drawings and calculations to Local Authority and Owner's Insurance Representative.

J. Review of submittals does not relieve Contractor from coordinating installation of work with other trades, or from compliance with Codes and Standards.

K. At completion of acceptance tests:

(1) Send copy of test log to Engineer
(2) Send copy of Contractor’s Material and Test Certificates and fire pump test results to:
(a) Engineer
(b) Owner
(c) Authority Having Jurisdiction

(3) Provide Owner with following:

(a) Manufacturer's literature and instructions describing operation and maintenance of equipment and devices installed.

(b) Typewritten chart with identification and location of all access panels serving equipment and valves. Incorporate into Operation & Maintenance (O&M) manual.

(c) Typewritten valve schedule indicating valve number, fixture/equipment or areas served by each numbered valve. Incorporate into O&M manual.

(d) For additional O&M manual requirements, refer to Section 23 00 00 - General Mechanical Requirements.

(e) Current copy of NFPA 25 – Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems

PART 2 - PRODUCTS

2.01 MATERIALS

A. Materials and Equipment:

(1) Materials and equipment in system shall be new and current products of manufacturer regularly engaged in production of such materials and equipment.

(2) Where 2 or more pieces of equipment are required to perform interrelated functions, they shall be products of same manufacturer.

(3) Clean and cap pipe after fabrication and prior to placing pipe in building.

(4) Pipe shall be marked with removable tags. No permanent markings are to remain on unpainted pipe located in exposed areas

B. Approval Guides:

(1) Unless otherwise shown, products shall be UL Listed in the latest publication of the UL Fire Protection Equipment Directory and approved in the latest Factory Mutual Research Corporation Approval Guide for service intended.

2.02 SPRINKLERS

A. Manufacturers:

(1) Unless otherwise noted below, sprinklers shall be manufactured by Tyco Fire Products, Viking, Victaulic, Reliable, or equal.

B. Temperature class of sprinklers and cover plates shall vary if installed close to heat sources, under skylights, areas of higher ambient temperatures, or in special hazard areas. Refer to NFPA 13 for requirements.

C. Provide high pressure sprinklers where pressures exceed 175 psi (1205 kPa) working water pressure.

D. Light hazard and Ordinary Hazard FM Hazard Class 1 occupancies shall utilize quick-response type sprinklers.

E. Architect will review deviations from specified styles for approval prior to installation.

F. Unless otherwise noted, provide the following type(s) of sprinklers:

(1) In unfinished areas such as mechanical spaces:

(a) Standard coverage, brass upright or pendent; Tyco Fire Products Model TY-FRB, Viking Microfast, or equal.

(b) Extended coverage, brass upright or pendent; Tyco Fire Products Model EC-11 or EC-14, Viking ECOH-ELO, or equal, designed and installed per its listing.

(c) When exposed to corrosive environments, sprinklers shall be polyester coated with bright white finish.

(2) In unfinished areas where conditions do not permit installation of upright or pendent sprinkler:

(a) Standard coverage, brass sidewall; Tyco Fire Products Model TY-FRB, Viking Microfast horizontal (HSW) or vertical (VSW) sidewall or equal.

(b) Where exposed to corrosive environments, sprinklers shall be polyester coated with bright white finish.

(3) In areas with finished ceilings:

(a) Standard coverage, concealed pendent; Tyco Fire Products Model RFII, Viking Mirage, or equal sprinkler with flat cover plate, mounted flush with ceiling. Cover plate shall be factory-finished (i.e., by manufacturer). Finish to be bright white**.**

(4) In areas with finished ceiling conditions that do not permit installation of pendent sprinkler or finished area where sidewall sprinkler provides better coverage of hazard:

(a) Standard coverage, semi-recessed horizontal sidewall (HSW) or vertical sidewall (VSW) sidewall; Tyco Fire Products Model TY-FRB, Viking Microfast or equal with semi-recessed escutcheon; Tyco Fire Products Style 10, Style 20, or equal. Sprinkler and escutcheon shall be factory-finished (i.e., by manufacturer). Finish to be bright white.

(b) Extended coverage, semi-recessed horizontal sidewall (HSW); Tyco Fire Products Model TY-FRB or equal with semi-recessed escutcheon; Style 10, Style 20, Style 30, Style 40, or equal, designed and installed per its listing and FM approval. Sprinkler and escutcheon shall be factory-finished (i.e., by manufacturer). Finish to be bright white.

(5) In exposed areas with ceilings subject to temperatures at or below 40°F (4°C):

(a) Standard coverage, concealed dry pendent, intermediate temperature class sprinkler with intermediate temperature class cover plate, mounted flush with ceiling. Cover plate color shall match ceiling color and shall be factory-painted (i.e., by manufacturer), Tyco Fire Products Model DS-C or equal.
