A. Coordination Drawings, General: Prepare coordination drawings according to the requirements of individual Sections. Additionally, prepare coordination drawings as required scope of installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one trade.

1. Information shall be project specific and drawn accurately to a scale large enough to resolve conflicts. Do not base coordination drawings on standard dimensional data.
2. Prepare floorplans, sections, elevations, and details as needed to adequately describe relationship of various systems and components.
3. Clearly indicate functional and spatial relationships of components of all systems specified in the Contract Documents, including but not limited to: architectural, structural, civil, mechanical, electrical, fire protection, and specialty systems.
4. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
5. Show location and size of access doors required for access to concealed equipment, fittings, controls, terminations, and cabling.
6. Indicate required installation sequence to minimize conflicts between entities.
7. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Contract Administrator indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

8. The details of the coordination are the responsibility of the Contractor and, where indicated on the Drawings, minor adjustments in raceway routing, device placement, device type, or equipment arrangement are not to be considered changes to the Contract.

B. Equipment Room Coordination Drawings: In accordance with the submittal procedures outlined within these Specifications, provide dimensioned layouts of electrical equipment locations within electrical rooms/closets, mechanical rooms, generator rooms, and fire pump rooms with equipment drawn to scale and identified therein.

1. Clearly identify all required working clearances and access provisions required for installation and maintenance.

2. Equipment layouts should be arranged accounting for considerations for required door openings and the clearances required by the equipment manufacturer.

3. Indicate path to allow for the future removal of each large piece of equipment (up to and including generators and unit sub-station transformers) without removal of non-related equipment or architectural elements.

4. Include work provided by others routed through the equipment rooms.

C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:

1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.

2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.

a) Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Contract Administrator.

3. Where the Engineer's digital data files are provided to the Contractor for use in preparing coordination digital data files, the Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to the Drawings or Specifications.

4. Submit coordination drawings in accordance with the submittal procedures outlined within these Specifications.

1.08 SUBMITTALS

A. Refer to Division 01 and General Conditions for submittal requirements in addition to requirements specified herein.

B. Refer to Division 01 for acceptance of electronic submittals. If not specified by Division 01, provide electronic submittals. If Division 01 requires paper

submittals, provide the quantity of submittals required, but no fewer than seven (7) sets.

C. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Contract Administrator and Engineer that the submittals have been posted. If electronic submittal procedures are not defined in Division 01, Contractor shall include the website, user name and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Contract Administrator's and Engineer's designated representatives. Contractor shall allow for the Engineer Review Time as specified . Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.

D. Engineer Review Time: Transmit submittals as early as required to support the project schedule. Allow two weeks for Engineer review time or time specified in Engineer's Agreement with the Client, plus to/from mailing time via the Contract Administrator, plus a duplication of this time for resubmittal if required. Transmit submittals as soon as possible after Notice to Proceed and before Mechanical construction starts.

E. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Engineer. They shall not be copies of the work product of the Engineer. If the Contractor desires to use elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.

F. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division as noted in each individual Section. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.

G. Separate submittals according to individual specification sections. Only resubmit those sections requested for resubmittal.

H. Provide submittals in sufficient detail so as to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.

I. Refer to individual Sections for additional submittal requirements.

J. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.

K. Submittals shall contain the following information:

1. The project name.
2. The applicable specification section and paragraph.
3. Equipment identification acronym as used on the drawings.
4. The submittal date.
5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.
6. Submittals not so identified will be returned to the Contractor without action.

L. The checking and subsequent acceptance by the Engineer and/or Contract Administrator of submittals shall not relieve responsibility from the Contractor for (1) deviations from Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent work. Contractor shall request and secure written acceptance from the Engineer and Contract Administrator prior to implementing any deviation.

M. BIM Incorporation: Develop and incorporate Shop Drawing files into BIM established for Project.

1.09 SUBSTITUTIONS

A. Refer to Division 01 and General Conditions for substitutions in addition to requirements specified herein.

B. Materials, products, equipment, and systems described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.

C. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications.

D. Request for Substitution:

1. Complete and send the Substitution Request Form attached at the end of this section for each material, product, equipment, or system that is proposed to be substituted.
2. The burden of proof of the merit of the proposed substitution is upon the proposer.
3. Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Contract Administrator, and Owner the following:
    a) Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.

b) Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.

c) Proposed substitution has received necessary approvals of the Authorities Having Jurisdiction.

d) Same warranty will be furnished for proposed substitution as for specified Work.

e) If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.

f) Coordination, installation and changes in the Work as necessary for accepted substitution will be complete in all respects.

E. Substitution Consideration:

1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.

2. Prior to receipt of Bids: No substitutions will be considered prior to receipt of bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of bids.

a) If the proposed substitution is approved prior to receipt of bids, such approval will be stated in an addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.

3. After receipt of Bids: No substitutions will be considered after receipt of Bids and before award of the Contract.

4. After award of Contract: No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

1.10 ELECTRONIC DRAWING FILES

A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of $200 for a drawing set up to 12 sheets and $15 per sheet for each additional sheet.

B. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form.

C. Contact the Contract Administrator for written authorization.

D. The following must be received before electronic drawing files will be sent:

1. Contract Administrator's written authorization
2. Engineer’s release agreement form
3. Payment

1.11 QUALITY ASSURANCE

A. Execute all work under this Division in a thorough and professional manner by competent and experienced workmen duly trained to perform the work specified.

B. Install all work in strict conformance with all manufacturers' requirements and recommendations, unless these Documents exceed those requirements. Install all equipment and materials in a neat and professional manner, aligned, leveled, and adjusted for satisfactory operation, in accordance with NECA guidelines.

C. Unless indicated otherwise on the Drawings, provide all material and equipment new, of the best quality and design, free from defects and imperfections and with markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Provide all material and equipment of the same type from the same manufacturer whenever practicable.

D. Unless specified otherwise, manufactured items of the same types specified within this Division shall have been installed and used, without modification, renovation, or repair for not less than one year prior to date of bidding for this Project.

1.12 OPERATION AND MAINTENANCE MANUALS

A. Refer to Division 01 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.

B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.

C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures, and maintenance of the equipment and components of the systems installed under this Division.

D. Prior to Substantial Completion of the project, furnish the Operation and Maintenance Manuals to the Contract Administrator, for Engineer’s review, and for the Owner’s use.

1. Refer to Division 01 for acceptance of electronic manuals for this project. If not specified in Division 1, provide manuals in the form of a multiple file composite electronic PDF file for each manual type required. Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size. Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and

equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

a) Contractor shall notify the Contract Administrator and Engineer that the manuals have been posted. If electronic manual procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Contract Administrator's and Engineer's designated representatives.

2. If Division 01 requires paper manuals, provide four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers and plastic insert folders for Record Drawings.

3. Each manual shall contain equipment data, approved submittals, shop drawings, diagrams, capacities, spare part numbers, manufacturer service and maintenance data, warranties and guarantees.

1.13 SPARE PARTS

A. Provide to the Owner the spare parts specified in the individual sections of this Division

1.14 RECORD DRAWINGS

A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.

B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During the course of construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension from column lines.

C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Contract Administrator.

1.15 DELIVERY, STORAGE AND HANDLING

A. Refer to Division 01 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.

B. Deliver equipment and material to the job site in their original containers with labels intact, fully identified with manufacturer's name, make, model, model number, type, size, capacity and Underwriter's Laboratories, Inc. labels and other pertinent information necessary to identify the item.

C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and at all times, take every precaution to properly protect equipment and material from damage, including the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which becomes rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Contract Administrator.

D. Be responsible for the safe storage of tools, material and equipment.

1.16 WARRANTIES

A. Refer to Division 01 and General Conditions for Warranties in addition to requirements specified herein.

B. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.

C. Warrant each system and each element thereof against all defects due to faulty workmanship, design or material for a period of 12 months from date of Substantial Completion, unless specific items are noted to carry a longer warranty in these Construction Documents or manufacturer’s standard warranty exceeds 12 months. Remedy all defects, occurring within the warranty period(s), as stated in the General Conditions and Division 01.

D. Also warrant the following additional items:

1. All raceways are free from obstructions, holes, crushing, or breaks of any nature.
2. All raceway seals are effective.
3. The entire electrical system is free from all short circuits and unwanted open circuits and grounds.

E. The above warranties shall include labor and material. Make repairs or replacements without any additional costs to the Owner.

F. Perform the remedial work promptly, upon written notice from the Contract Administrator or Owner.

G. At the time of Substantial Completion, deliver to the Owner all warranties, in writing and properly executed, including term limits for warranties extending

beyond the one year period, each warranty instrument being addressed to the Owner and stating the commencement date and term.

1.17 TEMPORARY FACILITIES

A. Refer to Division 01 and General Conditions for Temporary Facilities requirements in addition to requirements specified herein.

B. Temporary Utilities: The types of services required include, but are not limited to, electricity, telephone, and internet. When connecting to existing franchised utilities for required services, comply with service companies' recommendations on materials and methods, or engage service companies to install services. Locate and relocate services (as necessary) to minimize interference with construction operations.

C. Construction Facilities: Provide facilities reasonably required to perform construction operations properly and adequately.

1. Enclosures: When temporary enclosures are required to ensure adequate workmanship, weather protection and ambient conditions required for the work, provide fire-retardant treated lumber and plywood; provide tarpaulins with UL label and flame spread of 15 or less; provide translucent type (nylon reinforced polyethylene) where daylighting of enclosed space would be beneficial for workmanship, and reduce use of temporary lighting.

2. Heating: Provide heat, as necessary, to protect work, materials and equipment from damage due to dampness and cold. In areas where building is occupied, maintain a temperature not less than 65 degrees F. Use steam, hot water, or gas from piped distribution system where available. Where steam, hot water or piped gas are not available, heat with self-contained LP gas or fuel oil heaters, bearing UL, FM or other approval labels appropriate for application. Use electric-resistance space heaters only where no other, more energy-efficient, type of heater is available and allowable.

a) Vent and exhaust fuel-burning heaters per SMACNA Guidelines for Source Control and equip units with individual-space thermostatic controls.

b) If permanent HVAC systems are used during construction, provide HVAC Protection and replace all filtration prior to occupancy in accordance with SMACNA Guidelines.

PART 2 - PRODUCTS

(NOT USED)

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Install in accordance with manufacturer's instructions.

3.02 PERMITS

A. Secure and pay for all permits required in connection with the installation of the Electrical Work. Arrange with the various utility companies for the installation and connection of all required utilities for this facility and pay all charges associated therewith including connection charges and inspection fees, except where these services or fees are designated to be provided by others.

3.03 TEMPORARY ELECTRICAL SERVICE AND WIRING

A. Provide 208Y/120 volt, three-phase, four-wire, temporary electrical service and temporary lighting system to facilitate construction.

B. In existing facilities, with Owner's approval, Contractor may utilize the existing electrical system as the source of temporary power. Coordinate the point of connection and method of connection to the existing system with the Owner's Representative.

C. Pay all charges made by the Electric Utility, with respect to installation and energy charges for temporary services.

D. Work for the temporary power shall consist of all labor and materials, including, but not limited to conduit, wiring, panelboards, fuse blocks, fused disconnecting switches, fuses, pigtails, receptacles, wood panel switch supports, and other miscellaneous materials required to complete the power system.

E. Install all temporary wiring in accordance with applicable codes, and maintain in an OSHA-approved manner.

F. Provide an adequate number of GFCI type power distribution centers, rated 208Y/120V, four-wire, and not less than 60A, with sufficient fuse blocks or breakers for lighting and hand tool circuits, 60A four-wire feeders, all mounted within pre-fabricated enclosures UL listed for this application or on suitable wood panels bolted to columns or upright wood supports as required.

G. Install circuits to points on each level of each building so that service outlets can be reached by a 50-foot extension cord for 120V power and a 100-foot extension cord for 208V power (or as required by OSHA or local authorities).

H. Provide one lighting outlet per 30 linear feet of corridor and at least one light in each room and for every 800 square feet of floor area. Temporary lighting shall comply with OSHA requirements.

I. If additional service is required for cranes, electrical welders or for electric motors over 1/2 HP per unit, such additional service shall become the responsibility of the trade involved.

J. When the permanent wiring for lighting and power is installed, with approval of the Contract Administrator and Owner, the permanent system may be used, provided the Contractor assumes full responsibility for all electrical material, equipment, and devices contained in the systems and provided that roof drainage system and roofing are complete.

K. When directed by the Contract Administrator, remove all temporary services, lighting, wiring and devices from the property.

3.04 ACCESS TO EQUIPMENT

A. Locate all pull boxes, junction boxes and controls to provide easy access for operation, service inspection and maintenance. Provide an access door where equipment or devices are located above inaccessible ceilings. Refer to Division 26 Section "Common Work Results for Electrical".

B. Maintain all code required clearances, equipment access widths, and clearances required by manufacturers.

3.05 PENETRATIONS

A. Unless otherwise noted as being provided under other divisions, provide sleeves, box frames, or both, for openings in floors, walls, partitions and ceilings for all electrical work that passes through construction. Refer to Division 26 Section "Common Work Results for Electrical".

B. Provide sleeves, box frames, or both, for all conduit, cable, and busways that pass through masonry, concrete or block walls.

C. The cutting of new and/or existing construction will not be permitted except by written approval of the Contract Administrator.

3.06 EXCAVATION AND BACKFILLING

A. Refer to Division 01, Division 02 and General Conditions for Excavation and Backfilling in addition to the requirements specified herein.

B. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the work under this division. Excavation shall be in conformance with applicable Divisions and sections of the Specifications.

C. Restore roads, alleys, streets and sidewalks damaged during this work to the satisfaction of Authorities Having Jurisdiction.

D. Do not excavate trenches close to walks or columns without prior consultation with the Contract Administrator.

E. Erect barricades around excavations, for safety, and place an adequate number of amber lights on or near the work and keep those burning from dusk to dawn. Be

responsible for all damage that any parties may sustain in consequence of neglecting the necessary precautions in prosecuting the work.

F. Slope sides of excavations to comply with local, state, and federal codes and ordinances. Shore and brace as required for stability of excavation.

G. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state, and federal codes and authorities. Maintain shoring and bracing in excavations regardless of time period excavations will be open.

1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inches below finished grade elevation.

H. Install sediment and erosion control measures in accordance with local codes and ordinances.

I. Dewatering: Prevent surface water and subsurface or ground water from flowing into excavations and from flooding project site and surrounding area.

1. Do not allow water to accumulate in excavations. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations.

2. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey surface water to collecting or run-off areas. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.

J. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.

1. Locate and retain soil materials away from edge of excavations. Do not store within drip-line of trees indicated to remain.

2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.

K. Excavation for Underground Tanks and Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 foot; plus a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.

1. Excavate, by hand, areas within drip-line of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of one inch in diameter and larger with emulsified asphalt tree paint.

2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.

L. Trenching: Excavate trenches for electrical installations as follows:

1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of six to nine inches clearance on both sides of raceway and cables.

2. Excavate trenches to depth indicated or required for raceway and cables to establish slope, away from buildings and indicated elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.

3. Limit the length of open trench to that in which raceway and cables can be installed, tested, and the trench backfilled within the same day.

4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of raceway and cables. Provide a minimum of six inches of stone or gravel cushion between rock bearing surface and raceway and cables.

5. Excavate trenches for raceway, cables, and equipment with bottoms of trench to accurate elevations for support of raceway and cables on undisturbed soil.

M. Cold Weather Protection: Protect excavation bottoms against freezing when atmospheric temperature is less than 35 degrees F.

N. Backfilling and Filling: Place soil materials in layers to required subgrade elevations for each area classification listed below, using materials specified in Part 2 of this Section.

1. Under walks and pavements, use a combination of subbase materials and excavated or borrowed materials.

2. Under building slabs, use drainage fill materials.

3. Under raceway and cables, use subbase materials where required over rock bearing surface and for correction of unauthorized excavation.

4. For raceway and cables less than 30 inches below surface of roadways, provide 4-inch-thick concrete base slab support. After installation and testing of raceway and cables, provide a 4-inch thick concrete encasement (sides and top) prior to backfilling and placement of roadway subbase.

5. Other areas use excavated or borrowed materials.

O. Backfill excavations as promptly as work permits, but not until completion of the following:

1. Inspection, testing, approval, and locations of underground utilities have been recorded.

2. Removal of concrete formwork.

3. Removal of shoring and bracing, and backfilling of voids.

4. Removal of trash and debris.

P. Placement and Compaction: Place backfill and fill materials in layers of not more than 8 inches in loose depth for material compacted by heavy equipment, and not

more than 4 inches in loose depth for material compacted by hand-operated tampers.

1. For vertical and diagonal raceway installations, thoroughly support raceways from permanent structures or undisturbed earth at no less that 10-foot intervals, while placing backfill materials, so that raceways are not deflected, crushed, broken, or otherwise damaged by the backfill placement.

Q. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.

R. Place backfill and fill materials evenly adjacent to structures, piping, and equipment to required elevations. Prevent displacement of raceways and equipment by carrying material uniformly around them to approximately same elevation in each lift.

S. Compaction: Control soil compaction during construction, providing minimum percentage of density specified for each area classification indicated below:

1. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum density for soils which exhibit a well-defined moisture-density relationship (cohesive soils), determined in accordance with ASTM D 1557 and not less than the following percentages of relative density, determined in accordance with ASTM D 2049, for soils which will not exhibit a well-defined moisture-density relationship (cohesionless soils).

   a) Areas Under Structures, Building Slabs and Steps, Pavements: Compact top 12 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.

   b) Areas Under Walkways: Compact top 6 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.

   c) Other Areas: Compact top 6 inches of subgrade and each layer of backfill or fill material to 85 percent maximum density for cohesive soils, and 90 percent relative density for cohesionless soils.

2. Moisture Control: Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water. Apply water in minimum quantity necessary to achieve required moisture content and to prevent water appearing on surface during, or subsequent to, compaction operations.

T. Subsidence: Where subsidence occurs at mechanical installation excavations during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

3.07 CUTTING AND PATCHING

A. Cut walls, floors, ceilings, and other portions of the facility as required to install work under this Division.

B. Obtain permission from the Architect prior to cutting. Do not cut or disturb structural members without prior approval from the Architect and Structural Engineer.

C. For post-tension slabs, x-ray slab and closely coordinate all core drill locations with Architect and Structural Engineer prior to performing any work. Obtain approval from Architect and Structural Engineer for all core drills and penetrations at least four days prior to performing work.

D. Penetrations shall be made as small as possible while maintaining required clearances between the building element penetrated and the system component.

E. Patch around openings to match adjacent construction, including fire ratings, if applicable.

F. Repair and refinish areas disturbed by work to the condition of adjoining surfaces in a manner satisfactory to the Architect.

3.08 PAINTING

A. Refer to Division 09 Section “Painting” for painting requirements.

B. Paint exposed ferrous surfaces, including, but not limited to, hangers, equipment stands and supports using materials and methods as specified under individual sections and Division 09 of the Specifications; colors shall be as selected by the Contract Administrator.

C. Re-finish all field-threaded ends of galvanized conduits and field-cut ends of galvanized supports with a cold-galvanizing compound approved for use on conductive surfaces. Follow closely manufacturer’s instructions for pre-cleaning surfaces and application.

D. Factory finishes and shop priming and special finishes are specified in the individual equipment Specification sections.

E. Where factory finishes are provided and no additional field painting is specified, touch up or refinish, as required by, and to the acceptance of, the Contract Administrator, marred or damaged surfaces so as to leave a smooth, uniform finish. If, in the opinion of the Contract Administrator, the finish is too badly

damaged to be properly re-finished, replace the damaged equipment or materials at no additional costs to the Owner.

3.09 CLEANING

A. Refer to Division 01 for Sustainability Requirements for cleaning procedures in accordance with LEED, in addition to requirements specified herein.

B. Remove dirt and refuse, resulting from the performance of the Work, from the premises as required to prevent accumulation. Cooperate in maintaining reasonably clean premises at all times.

C. Immediately prior to the final inspection, the Electrical Contractor shall clean material and equipment installed under the Electrical Contract. Dirt, dust, plaster, stains, and foreign matter shall be removed from surfaces including components internal to equipment.

D. Damaged finishes shall be touched-up and restored to their original condition

3.10 ADJUSTING, ALIGNING AND TESTING

A. Adjust, align and test all electrical equipment furnished and/or installed under this Division.

B. Check motors for alignment with drive and proper rotation, and adjust as required.

C. Check and test protective devices for specified and required application, and adjust as required.

D. Check, test and adjust adjustable parts of all light fixtures and electrical equipment as required to produce the intended performance.

E. Verify that completed wiring system is free from short circuits, unintentional grounds, low insulation impedances, and unintentional open circuits.

F. After completion, perform tests for continuity, unwanted grounds, and insulation resistance in accordance with the requirements of NFPA 70 and NETA.

G. Be responsible for the operation, service and maintenance of all new electrical equipment during construction and prior to acceptance by the Owner of the complete project under this Contract. Maintain all electrical equipment in the best operating condition including proper lubrication.

H. Notify the Contract Administrator immediately of all operational failures caused by defective material, labor or both.

I. Maintain service and equipment for all testing of electrical equipment and systems until all work is approved and accepted by the Owner.

J. Keep a calibrated voltmeter and ammeter (true RMS type) available at all times. Provide service for test readings when and as required.

K. Refer to individual sections for additional and specific requirements.

3.11 START-UP OF SYSTEMS

A. Prior to start-up of electrical systems, check all components and devices, lubricate items appropriately, and tighten all screwed and bolted connections to manufacturers' recommended torque values using appropriate torque tools.

B. Each power, lighting and control circuit shall be energized, tested and proved free of breaks, short-circuits and unwanted grounds.

C. Adjust taps on each transformer for rated secondary voltages.

D. Balance all single phase loads at each panelboard, redistributing branch circuit connections until balance is achieved to plus or minus 10 percent between all phases, with all designed loads in operation.

E. Replace all burned-out lamps. Replace the lamps of all light fixtures that use incandescent, halogen or quartz lamp sources that are installed as part of the finished building, but are used by the Contractor during construction, with new lamps of appropriate type and wattage prior to turning the facility over to the Owner.

F. After all systems have been inspected and adjusted, confirm all operating features required by the Drawings and Specifications and make final adjustments as necessary.

G. Demonstrate that all equipment and systems perform properly as designed per Drawings and Specifications.

H. At the time of final review and tests of the power and lighting systems, all equipment and system components shall be in place and all connections at panelboards, switches, circuit breakers, and the like, shall be complete. All fuses shall be in place, and all circuits shall be continuous from point of service connections to all switches, receptacles, outlets, and the like.

3.12 TEST REPORTS

A. Perform tests as required by these Specifications and submit the results to the Contract Administrator, for Engineer's review. Record the results, date and time of each test and the conditions under which the test was conducted. Include a copy of the finalized test results, with corrections made, in the Operations and Maintenance Manuals. The tests shall establish the adequacy, quality, safety, and reliability for each electrical system installed. Notify the Contract Administrator and Engineer two working days prior to each test.

B. For specific testing requirements of special systems, refer to the Specification section that describes that system. The Contractor shall provide the following to facilitate the testing of the electrical systems:

1. Perform tests as described in the individual sections;
2. Engage the services of a 3rd Party testing agency to perform tests as noted below, or;
    a) Agent may be an employee of the contractor but shall be NETA certified to perform electrical testing.

C. Upon completing each test, record the results, date and time of each test and the conditions under which the test was conducted. Submit to the Contract Administrator, for Engineer's review, in duplicate, the test results for the following electrical items:

1. Building service entrance voltage and amperes at each phase.
2. Electrical service grounding conditions and grounding resistance.
3. Proper phasing throughout the entire system.
4. Voltages (phase-to-phase and phase-to-neutral) and amperes at each phase for each panelboard, switchboard, and the like.
5. Phase voltages and amperes at each three-phase motor.
6. Test all wiring devices for electrical continuity and proper polarity of connections.

D. Promptly correct all failures or deficiencies revealed by these tests in accordance with the manufacturer's recommendations and as determined by the Engineer.

3.13 SUBSTANTIAL COMPLETION REVIEW

A. Prior to requesting a site observation for "CERTIFICATION OF SUBSTANTIAL COMPLETION", complete the following items:

1. Submit complete Operation and Maintenance Data.
2. Submit complete Record Drawings.
3. Perform all required training of Owner's personnel.
4. Turn over video recordings of training sessions to the Owner.
5. Turn over all spares and extra materials to the Owner, along with a complete inventory of spares and extra materials being turned over.
6. Perform start-up tests of all systems.
7. Remove all temporary facilities from the site.
8. Comply with all requirements for Substantial Completion in the Division 01 and General Conditions.

B. Request in writing a review for Substantial Completion. Give the Contract Administrator at least seven (7) days notice prior to the review.

C. State in the written request that the Contractor has complied with the requirements for Substantial Completion.

D. Upon receipt of a request for review, the Contract Administrator will either proceed with the review or advise the Contractor of unfilled requirements.

E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above-mentioned items, he shall reimburse the Contract Administrator and Engineer for time and expenses incurred for the visit.

F. Upon completion of the review, the Contract Administrator will prepare a "final list" of outstanding items to be completed or corrected for final acceptance.

G. Omissions on the "final list" shall not relieve the Contractor from the requirements of the Contract Documents.

H. Prior to requesting a final review, submit a copy of the final list of items to be completed or corrected. State in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

ACCESSORIES

Surface mount specialty light with one (1) LED lighting source, 960 delivered lumens, 3000K color engine, 95+ CRI, 360° optic and remote driver. Light should operate on 120 voltage and be supplied with a dali control option. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Light to have white finish. Light to be rated for IP65 or equivalent.

CONTROL

PROTOCOL	DALI
INTENT	

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

LUMINAIRE

- Watt: **15W/m**
- Delivered lumen output: **960 lm/m**
- CCT: **3000K**
- Efficiency: **100%**
- Efficacy: **64lm/W**
- CRI: **95**

Notes

10 wall/ceiling supports included
Weight 1.4 kg/m
Driver included

DESCRIPTION

La Linea is a flexible light tube capable of freely rotating in space, creating indefinite geometries. It seamlessly integrates into both indoor and outdoor spaces thanks to fastening elements that disappear within the cross-section, allowing for countless applications across a wide range of settings. Its unique combination of light quality, IP protection rating, and flexibility makes it a versatile lighting solution. Available in 2.5 and 5-meter lengths.
Backbone is a fully custom aluminum structure that supports La Linea, ensuring stability and a well-defined shape. This solution allows the modules to be suspended, enabling the creation of linear or curved compositions tailored to specific needs.

FEATURES

- Product Code: **T4600510**
- Colour: **White**
- Installation: **Ceiling, Wall**
- Material: **High diffusion optical silicone lamp body. Transparent technopolymer wall mounts. Steel recessed ceiling mounts, steel and aluminum surface-mounted ceiling mounts.**
- Series: **Design Collection, Architectural Outdoor**
- design by: **BIG - Bjarke Ingels Group**

DIMENSIONS

- Length: **5000 mm**
- Diameter: **40 mm**

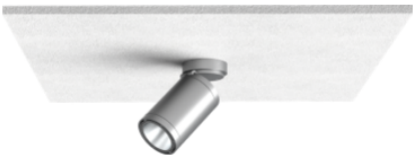
High Center Beam Tilt/Rotate Surface Ceiling Cylinder 2"



OVERVIEW

Feature Set

- Adjustable tilt (90°) and rotation (365°)
- Thirteen optimized distribution patterns allow designers to achieve tailored objectives
- Bounding Ray™ optical design
- 50° Cutoff to source and source image
- Field interchangeable optic
- Surface mounted or recessed mounted driver options
- 70% lumen maintenance at 60,000 hours
- 2.5 SDCM; 85 CRI typical, 90+ CRI optional
- Fixtures are wet location, covered ceiling (WL option) available
- ENERGY STAR® Certified product
- 20 standard colors in textured and gloss finish; custom & RAL colors also available

GCOLORS KIT	Architectural colors chip kit, consisting of powder-coat and plated finishes.
IC020PTC XXD	Additional optics for field installation. Replace "XX" with beam angle.
IC020PTC KIT	Kit including a field interchangeable optic for each of the 13 preset beam distribution patterns
HS234FL	Hole saw for RGH option
SDT 347/120 75VA	347V/120V, 75VA step down transformer. Must be remote mounted.

ORDERING NOTES

1. 5000K CCT not available with 90CRI.
2. Not available with Reflector Finish.
3. Refer to Tech 240 for compatible dimmers.
4. RGH with 2000LM option requires 120 or 277 (non-IC).
5. Field installed. Access required to location of remote mounted device.
6. ER for use with generator supply power. Will require an emergency hot feed and normal hot feed.
7. Requires NLT or NLTER.
8. Not available with SGBCC or JBXCC.
9. For details on RAL and Custom colors please see Architectural colors.

gotham®

SPECIFICATIONS

Optical and Trim Assembly

Fully serviceable and upgradeable lensed LED light engine suitable for field maintenance or service from below the ceiling.

Optical design is a Bounding Ray™ design with 50° cutoff to source and source image. Top down flash characteristic for superior glare control.

Superior 100% Virgin-silicone refractive optic, enables maximum dimensional stability and optical transmission with no discoloration over life. Field inter-changeable optics.

Electrical

The luminaire shall operate from a 50 or 60 Hz ±3 Hz AC line over a voltage ranging from 120 VAC to 277 VAC. Support 347V via remote-mounted stepdown transformer. The fluctuations of line voltage shall have no visible effect on the luminous output.

The luminaire shall have a power factor of 90% or greater at all standard operating voltages and full luminaire output.

Sound Rated A+. Driver shall be >80% efficient at full load across all input voltages. THD @ Full Load is >20%. Inrush current meets NEMA-410 requirments. Surge Protection +/- 1kV DM, +/- 2kV CM.

Controls

Luminaire shall be equipped with interface for nLight wired or nLight AIR networks with integral power supply as per specification.

Dimming

The luminaire shall be capable of continuous dimming without perceivable stroboscopic flicker as measured by flicker index (ANSI/IES RP-16-10) over a range of 100 – 1.0% of rated lumen output with a smooth shut off function to step to 0%.

Driver is inaudible in 24dB environment, and stable when input voltage conditions fluctuate over what is typically experienced in a commercial environment.

Construction

Surface Gear Box (SGB) for direct installation to 4" recessed or surface octagonal (by others).

Recessed Gear Housing (RGH) ships with driver box for recessed or surface installation.

Die cast with flangeless reflector allows flow-through passive thermal management.

Accommodates between 3/8" to 3"-thick ceilings.

Listings

Fixtures are UL Certified to meet US and Canadian Standards: All fixtures manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" to UL, damp location standard; wet location covered ceiling optional (WL).

RGH option is IC rated up to 1500LM

Luminaire configurations are Energy Star certified through testing in EPA–recognized laboratories, with the results reviewed by an independent, accredited certification organization. Visit www.energystar.gov for specific configurations listed

Buy American

This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FARS, DFARS and DOT. Please refer to https://www.acuitybrands.com/resources/buy-american for additional information.

Photometrics

LEDs tested to LM-80 standards. Measured by IESNA Standard LM-79-08 in an accredited lab. Lumen output shall not decrease by more than 30% over the minimum operational life of 60,000 hours.

Color appearance from luminaire to luminaire of the same type and in all configurations, shall be consistent both initially and at 6,000 hours and operate within a tolerance of <2.5 MacAdam ellipse as defined by the center of the quadrangles defined in ANSI C78.377-2015.

Warranty

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:

Actual performance may differ as a result of end user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a shaded background*
- This luminaire is part of an A+ Certified solution for nLight® control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

NLIGHT AIR

nLight® AIR is the ideal solution for retrofit or new construction spaces where adding communication wiring is cost prohibitive. The integrated nLight AIR rPP20 Power Pack is part of each EVO Luminaire ordered with the NLTAIR option. These individually addressable controls offer the ultimate in flexibility during initial setup and for space repurposing.

nLight® AIR Control Accessories

Order as separate catalog number. Visit nLight AIR.

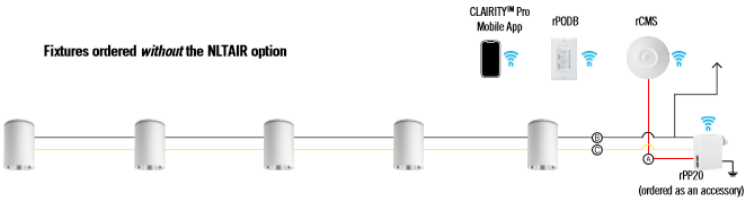
Wall Switches	Model Number
On/Off single pole	rPODB (color) G2
On/Off two pole	rPODB 2P (color) G2
On/Off & raise/lower single pole	rPODB DX (color) G2
On/Off & raise/lower two pole	rPODB 2P DX (color) G2

nLight® AIR Control Accessories *(cont.)*

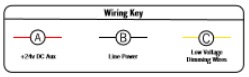
Occupancy Sensors (PIR/dual tech)	Model Number
Small motion 360°, ceiling	rCMS 9 / rCMS PDT 9
Large motion 360°, ceiling	rCMS 10 / rCMS PDT 10

Possibilites for nLight® AIR

Fixtures ordered *without* the NLTAIR option



Fixtures ordered *with* the NLTAIR option



NLIGHT

nLight® Wired The nLight® solution is a digital networked lighting control system that provides both energy savings and increased user configurability by cost effectively integrating time-based, daylight-based, sensor-based and manual lighting control schemes.

nLight® Wired Control Accessories

Order as separate catalog number. Visit nLight.

QUICK SPECIFICATIONS

Feature Set

- Perfect Color™ consistency within 1/2-step MacAdam Ellipse
- 45° visual cut-off angle to source (65° cut-off for L5 length)
- Bounding Ray™ optical design ensures no source image up to cut-off angle, minimizing glare
- Available with 10%, 1%, or 0.1% dim to dark
- Downlight and Wall Wash trims are interchangeable
- 90% lumen maintenance at 55,000 hours
- Clean beams with soft transitions
- Batwing distributions with feathered edges to provide even illumination fixture-to-fixture
- Exceptional color with 80 CRI, 90 CRI, or 95 CRI min
- Field changeable optics available every 5°
- Wet Location optional, covered ceiling

ORDERING NOTES

1. 05LM only available with L5 Cylinder Length and ZT or ELV. 05LM not available with E7W.
2. 90CRI not available with 50K Kelvin Temperature. 95CRI not available with 35K, 40K or 50K Kelvin Temperature.
3. Not available with WW style Function.
4. Not available with L5 Cylinder Length.
5. 347 only available with ZT Control Input. Min10LM-Max 45LM. Not available with nLight, Emergency or SF Options. Not available with L5 Cylinder Length.
6. Refer to Tech-240 for compatible dimmers.
7. ZT not available with DARK.
8. ELV only available with MIN1 and 120 volt.
9. DALI and DMX only available with DARK.
10. DMX not available with L5 Cylinder Length.
11. nLight controls are provided with each fixture and can be remote mounted or mounted to the junction box. Wired NLIGHT and NLIGHTER controls include nPS 80 EZ dimming pack. Wireless NLTAIR2 and NLTAIREM2 controls include rPP20 power pack. Includes EZT driver. See Tables of Use on page 10.
12. L5 available up to 30LM max. Not available with E7W or 347.
13. Not available with 05LM, 25LM or 30LM with EZT or DALI control input for L5 cylinder length. Not available with 05LM with EZT or DALI control input for L9, L14 or L16 cylinder lengths.
14. E7W only available with ZT or ELV. Not available with 347. Available up to 20LM max for L9. Available up to 35LM max for L14 or L16. E7W with WL available up to 15LM max.
15. WL Only available with JBX. Not available with DMX or Emergency Options. Min 05LM-30LM max for ZT or ELV in L5 Cylinder Lengths. Min 07LM-Max 20LM for EZT or DALI in L5 Cylinder Lengths. 30LM max for ZT or ELV in L9, L14 or L16 Cylinder Lengths. 07LM-30LM max for EZT or DALI in L9, L14 or L16 Cylinder Lengths.
16. LW not available with D style Function.
17. Optical finishes are not available with WR, WRAMF WMR and BZR trim colors.
18. Replace with applicable RAL number and finish when ready to order. See RAL BROCHURE for available color options.

- Dimensions in inches [centimeters]
- J-boxes available by others. (see Compatibility Table).

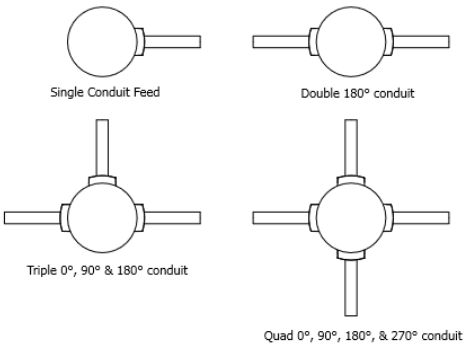
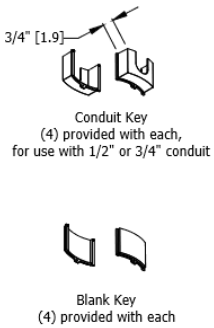
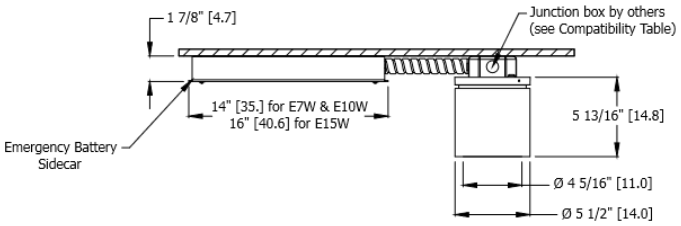
Conduit Cover



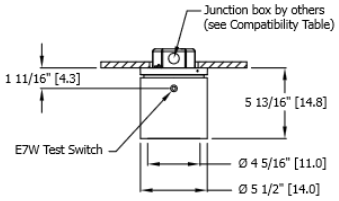


Emergency Battery Sidecar Enclosure

Emergency Battery Remote Test Switch (E7WR, E10WR, E15WR)



Emergency Battery Integral Test Switch (E7W)



How to Estimate Delivered Lumens in Emergency Mode
Delivered Lumens = 1.25 x P x LPW
P = Output Power/Wattage of Emergency Battery Driver (E7WR* = 7W, E10WR* = 10W, E15WR* = 15W)
LPW = Lumen per Watt rating of luminaire based on Ordering Code selections

SPECIFICATIONS

Optical System
- Bounding Ray™ optical design delivers low brightness apertures for a comfortable lighting experience. Bounding Ray™ optical design ensures no source image up to cut-off angle, minimizing glare.
- 45° visual cut-off angle to source for L9, L14 and L16 lengths and 65° visual cut-off for L5 length per CIE 117-1995 Discomfort Glare in Interior Lighting (UGR FAQ)
- Top-Down Flash characteristics avoid flash on trim until source becomes visible.
- Batwing distributions with feathered edges to provide even illumination fixture-to-fixture. Available with 0.8, 1.0, and 1.2 spacing-to-mounting-height ratio (s/mh).
- Clean beams with soft transitions from narrow spot 10° up to wide flood 60° distributions and available every 5°.
- Optics are field changeable. However, L5 Cylinder Length optics are not interchangeable with other Cylinder Length optics.

LED Light Engine
- Perfect Color™ consistency within 1/2-step MacAdam Ellipse using proprietary pick and place algorithm.
- 90% lumen maintenance at 55,000 hours.
- Available in 80, 90, or 95 CRI. 90 CRI has R9 greater than 50, 95 CRI has R9 greater than 80.

Trims
- Trims are field changeable via twist-lock (tool-free). However L5 Cylinder Length trims are not interchangeable with other Cylinder Lengths.
- Trims are available in 9 colors and 3 surface finishes (standard)
- Custom RAL and Paint colors available upon request.
- Trim lenses are made of Tempered Glass

Electrical
- 120, 277, 347, or Multi-Volt (MVOLT) 120-277 VAC input at 50/60 Hz.
- Power Factor > 85%.
- Input wires 18 AWG, 600V minimum, solid copper.

EMI/RFI
- EMI/RFI per FCC Title 47 CFR, Part 15, Class A rated standard.
- EMI/RFI per FCC Title 47 CFR, Part 15, Class B rated for Phase Dimming driver (ELV) except when used with Emergency Battery (E7WR, E10WR, E15WR) or at 15LM and above.

Controls (Optional)
- Luminaire can be equipped with interface for nLight wired, allowing it to communicate over an nLight network. nLight wired options ship with an nPS 80 EZ power pack to be mounted to a plenum j-box through (via 1/2" knockout) and connected to the Fixture control wires. Couple with nLight-enabled sensors, power packs, or WallPods using CAT-5 cabling to create an nLight Control Zone. Link Control Zone to a Gateway directly or via a Bridge for remote status monitoring and control using SensorView software.
- Luminaire can be equipped with interface for nLight Air, allowing it to communicate over the wireless nLight control platform. nLight Air options ship with an rPP20 power pack to be mounted to a plenum j-box through (via 1/2" knockout) and connected to the Fixture control wires. Can be paired to other luminaires and wall switches through CLAIRITY+, a mobile app, which allows individual fixture control.

Dimming
- Luminaire Is capable of continuous dimming without perceivable flicker (stroboscopic) as measured by flicker index (ASNI/IES RP-16-10).
- Available dimming ranges include: 100%-10% (MIN10), 100%-1% (MIN1), and 100%-0.1% (DARK) of rated lumen output.
- Available with smooth shut off function from minimum dimming level to 0%.
- EldoLED drivers (EZT, DALI) conform to IEEE P1789 standards.
- Drivers are inaudible in 24dB environment and stable even when input voltage conditions experience typical commercial environment fluctuations.

Emergency Battery (Optional)
- Luminaires equipped with battery pack (E7W, E7WR, E10WR, E15WR) comply with NFPA 101 (Life Safety Code) and deliver constant light output for a duration of 90 minutes minimum with AC power loss.
- Emergency batteries with Remote Test Switch (E7WR, E10WR, E15WR) are mounted to ceiling via remote enclosure (sidecar).
- Emergency battery is CEC T20 compliant.

Installation
- Luminaire can be installed to 4" Octagonal j-box (1-1/2" or 2-1/8" deep depending on ordering configuration).
- Luminaire can be installed to 4" Square j-box (1-1/2" deep) when used with Cylinder Adaptor Plate (CLYLJBOXADPT 4SQ20CT).
- Optional, field configurable Conduit Covers are available and match Cylinder finish and diameter.

Construction
- Heavy-gauge extruded Aluminum construction.
- Reflector design allows air flow across heatsink to improve thermal management.
- Light Engine and Driver are field replaceable and serviceable from below the ceiling.

Listings
- Fixtures are CSA certified to meet US and Canadian standards.
- All fixtured are manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" per UL.
- Damp Location standard.
- Wet Location available.

Photometrics
- All photometry is conducted by IESNA standard LM-79-08 in an accredited lab.
- LEDs are tested to LM-80 standards. Lumen maintenance is calculated via TM-21.

Warranty
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:
- Actual performance may differ as a result of end-user environment and application.
- All values are design or typical values, measured under laboratory conditions at 25 °C.
- The product images shown are for illustration purposes only and may not be an exact representation of the product.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

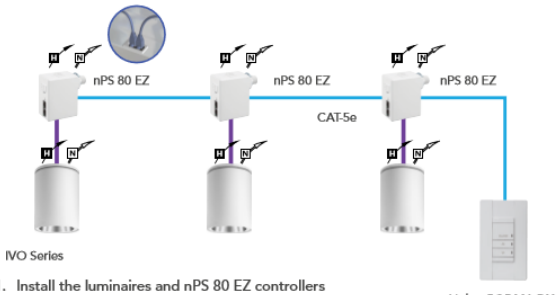
NLIGHT

Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Controls



1. Install the luminaires and nPS 80 EZ controllers and make the low-voltage connections
2. Install the nLight Wired wall switch
3. Connect the nLight devices using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Controls

1. Install the luminaires and rPP20 power/relay packs
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY™+ mobile app to pair the luminaires with the wall switch and if desired, customize the device settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

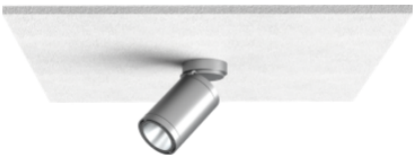
High Center Beam Tilt/Rotate Surface Ceiling Cylinder 2"



OVERVIEW

Feature Set

- Adjustable tilt (90°) and rotation (365°)
- Thirteen optimized distribution patterns allow designers to achieve tailored objectives
- Bounding Ray™ optical design
- 50° Cutoff to source and source image
- Field interchangeable optic
- Surface mounted or recessed mounted driver options
- 70% lumen maintenance at 60,000 hours
- 2.5 SDCM; 85 CRI typical, 90+ CRI optional
- Fixtures are wet location, covered ceiling (WL option) available
- ENERGY STAR® Certified product
- 20 standard colors in textured and gloss finish; custom & RAL colors also available

Options		Architectural Colors - Powder Paint[9]			
90CRI[1]	High CRI (90+)	DDB	Gloss Dark Bronze	DDBT	Textured Dark Bronze
N80[7]	nLight Lumen Compensation	DBL	Matte Black	DBLB	Textured Black
WL[8]	Wet Location	DWH	Gloss White	DWHG	Textured White
		DMB	Matte Medium Bronze	DBNH	Textured Bronze
		DNA	Gloss Natural Aluminum	DNAT	Textured Natural Aluminum
		DSS	Gloss Sandstone	DSST	Textured Sandstone
		DGC	Gloss Charcoal Grey	DSPD	Textured Dark Grey
		DTG	Gloss Tennis Green	DSPE	Textured Green
		DBR	Gloss Bright Red	DSPH	Textured Light Red
		DSB	Gloss Steel Blue	DWHAMF	Gloss White with Anti-microbial finish

ACCESSORIES — order as separate catalog numbers (shipped separately)

GCOLORS KIT	Architectural colors chip kit, consisting of powder-coat and plated finishes.
IC020PTC XXD	Additional optics for field installation. Replace "XX" with beam angle.
IC020PTC KIT	Kit including a field interchangeable optic for each of the 13 preset beam distribution patterns
HS234FL	Hole saw for RGH option
SDT 347/120 75VA	347V/120V, 75VA step down transformer. Must be remote mounted.

ORDERING NOTES

1. 5000K CCT not available with 90CRI.
2. Not available with Reflector Finish.
3. Refer to Tech 240 for compatible dimmers.
4. RGH with 2000LM option requires 120 or 277 (non-IC).
5. Field installed. Access required to location of remote mounted device.
6. ER for use with generator supply power. Will require an emergency hot feed and normal hot feed.
7. Requires NLT or NLTER.
8. Not available with SGBCC or JBXCC.
9. For details on RAL and Custom colors please see Architectural colors.

SPECIFICATIONS

Optical and Trim Assembly

Fully serviceable and upgradeable lensed LED light engine suitable for field maintenance or service from below the ceiling.

Optical design is a Bounding Ray™ design with 50° cutoff to source and source image. Top down flash characteristic for superior glare control.

Superior 100% Virgin-silicone refractive optic, enables maximum dimensional stability and optical transmission with no discoloration over life. Field inter-changeable optics.

Electrical

The luminaire shall operate from a 50 or 60 Hz ±3 Hz AC line over a voltage ranging from 120 VAC to 277 VAC. Support 347V via remote-mounted stepdown transformer. The fluctuations of line voltage shall have no visible effect on the luminous output.

The luminaire shall have a power factor of 90% or greater at all standard operating voltages and full luminaire output.

Sound Rated A+. Driver shall be >80% efficient at full load across all input voltages. THD @ Full Load is >20%. Inrush current meets NEMA-410 requirments. Surge Protection +/- 1kV DM, +/- 2kV CM.

Controls

Luminaire shall be equipped with interface for nLight wired or nLight AIR networks with integral power supply as per specification.

Dimming

The luminaire shall be capable of continuous dimming without perceivable stroboscopic flicker as measured by flicker index (ANSI/IES RP-16-10) over a range of 100 – 1.0% of rated lumen output with a smooth shut off function to step to 0%.

Driver is inaudible in 24dB environment, and stable when input voltage conditions fluctuate over what is typically experienced in a commercial environment.

Construction

Surface Gear Box (SGB) for direct installation to 4" recessed or surface octagonal (by others).

Recessed Gear Housing (RGH) ships with driver box for recessed or surface installation.

Die cast with flangeless reflector allows flow-through passive thermal management.

Accommodates between 3/8" to 3"-thick ceilings.

Listings

Fixtures are UL Certified to meet US and Canadian Standards: All fixtures manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" to UL, damp location standard; wet location covered ceiling optional (WL).

RGH option is IC rated up to 1500LM

Luminaire configurations are Energy Star certified through testing in EPA–recognized laboratories, with the results reviewed by an independent, accredited certification organization. Visit www.energystar.gov for specific configurations listed

Buy American

This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FARS, DFARS and DOT. Please refer to https://www.acuitybrands.com/resources/buy-american for additional information.

Photometrics

LEDs tested to LM-80 standards. Measured by IESNA Standard LM-79-08 in an accredited lab. Lumen output shall not decrease by more than 30% over the minimum operational life of 60,000 hours.

Color appearance from luminaire to luminaire of the same type and in all configurations, shall be consistent both initially and at 6,000 hours and operate within a tolerance of <2.5 MacAdam ellipse as defined by the center of the quadrangles defined in ANSI C78.377-2015.

Warranty

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:

Actual performance may differ as a result of end user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a shaded background*
- This luminaire is part of an A+ Certified solution for nLight® control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

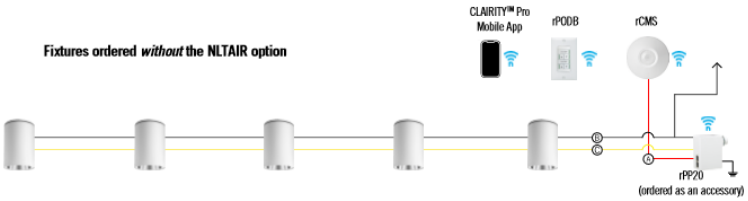
NLIGHT AIR

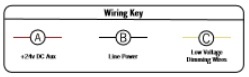
nLight® AIR is the ideal solution for retrofit or new construction spaces where adding communication wiring is cost prohibitive. The integrated nLight AIR rPP20 Power Pack is part of each EVO Luminaire ordered with the NLTAIR option. These individually addressable controls offer the ultimate in flexibility during initial setup and for space repurposing.

Possibilites for nLight® AIR

Fixtures ordered *without* the NLTAIR option



Fixtures ordered *with* the NLTAIR option



nLight® AIR Control Accessories
Order as separate catalog number. Visit nLight AIR.

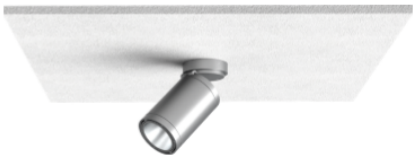
BAA BABA nLIGHT

High Center Beam Tilt/Rotate Surface Ceiling Cylinder 2"



OVERVIEW

Feature Set

- Adjustable tilt (90°) and rotation (365°)
- Thirteen optimized distribution patterns allow designers to achieve tailored objectives
- Bounding Ray™ optical design
- 50° Cutoff to source and source image
- Field interchangeable optic
- Surface mounted or recessed mounted driver options
- 70% lumen maintenance at 60,000 hours
- 2.5 SDCM; 85 CRI typical, 90+ CRI optional
- Fixtures are wet location, covered ceiling (WL option) available
- 20 standard colors in textured and gloss finish; custom & RAL colors also available

ACCESSORIES — order as separate catalog numbers (shipped separately)

GCOLORS KIT	Architectural colors chip kit, consisting of powder-coat and plated finishes.
ICO2OPTC XXD	Additional optics for field installation. Replace "XX" with beam angle.
ICO2OPTC KIT	Kit including a field interchangeable optic for each of the 13 preset beam distribution patterns
HS234FL	Hole saw for RGH option
SDT 347/120 75VA	347V/120V, 75VA step down transformer. Must be remote mounted.

ORDERING NOTES

1. 5000K CCT not available with 90CRI.
2. Not available with Reflector Finish.
3. Refer to Tech 240 for compatible dimmers.
4. RGH with 2000LM option requires 120 or 277 (non-IC).
5. Field installed. Access required to location of remote mounted device.
6. ER for use with generator supply power. Will require an emergency hot feed and normal hot feed.
7. Requires NLT or NLTER.
8. Not available with SGBCC or JBXCC.
9. For details on RAL and Custom colors please see Architectural colors.

SPECIFICATIONS

Optical and Trim Assembly

Fully serviceable and upgradeable lensed LED light engine suitable for field maintenance or service from below the ceiling.

Optical design is a Bounding Ray™ design with 50° cutoff to source and source image. Top down flash characteristic for superior glare control.

Superior 100% Virgin-silicone refractive optic, enables maximum dimensional stability and optical transmission with no discoloration over life. Field inter-changeable optics.

Electrical

The luminaire shall operate from a 50 or 60 Hz ±3 Hz AC line over a voltage ranging from 120 VAC to 277 VAC. Support 347V via remote-mounted step-down transformer. The fluctuations of line voltage shall have no visible effect on the luminous output.

The luminaire shall have a power factor of 90% or greater at all standard operating voltages and full luminaire output.

Sound Rated A+. Driver shall be >80% efficient at full load across all input voltages. THD @ Full Load is >20%. Inrush current meets NEMA-410 requirments. Surge Protection +/- 1kV DM, +/- 2kV CM.

Controls

Luminaire shall be equipped with interface for nLight wired or nLight AIR networks with integral power supply as per specification.

Dimming

The luminaire shall be capable of continuous dimming without perceivable stroboscopic flicker as measured by flicker index (ANSI/IES RP-16-10) over a range of 100 – 1.0% of rated lumen output with a smooth shut off function to step to 0%.

Driver is inaudible in 24dB environment, and stable when input voltage conditions fluctuate over what is typically experienced in a commercial environment.

Construction

Surface Gear Box (SGB) for direct installation to 4" recessed or surface octagonal (by others).

Recessed Gear Housing (RGH) ships with driver box for recessed or surface installation.

Die cast with flangeless reflector allows flow-through passive thermal management.

Accommodates between 3/8" to 3"-thick ceilings.

Listings

Fixtures are UL Certified to meet US and Canadian Standards: All fixtures manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" to UL, damp location standard; wet location covered ceiling optional (WL).

RGH option is IC rated up to 1500LM

Government Procurement

BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act Please refer to www.acuitybrands.com/buy-american for additional information

Photometrics

LEDs tested to LM-80 standards. Measured by IESNA Standard LM-79-08 in an accredited lab. Lumen output shall not decrease by more than 30% over the minimum operational life of 60,000 hours.

Color appearance from luminaire to luminaire of the same type and in all configurations, shall be consistent both initially and at 6,000 hours and operate within a tolerance of <2.5 MacAdam ellipse as defined by the center of the quadrangles defined in ANSI C78.377-2015.

Warranty

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:

Actual performance may differ as a result of end user environment and application.

All values are design or typical values, measured under laboratory conditions at 25 °C.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

NLIGHT

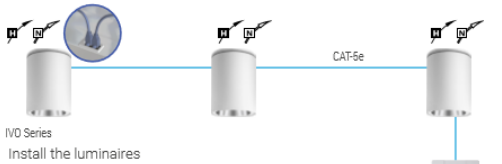
nLIGHT

Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Controls



1. Install the luminaires
2. Install the nLight Wired wall switch
3. Connect the luminaires using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Controls

1. Install the luminaires
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY+ mobile app to pair the fixtures with the wall switch and if desired, customize the sensor settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

ACCESSORIES

Surface mount adjustable cylinder with one (1) LED lighting source, 2000 delivered lumens, 3000K color engine, 80+ CRI, 40° optic and remote driver. Cylinder should operate on MVOLT voltage and be supplied with a 0-10v control option down to 1% with a 50,000 hour anticipated life. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Cylinder to have matte black finish. Cylinder should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

SPECIFICATIONS

Optical and Trim Assembly

Fully serviceable and upgradeable lensed LED light engine suitable for field maintenance or service from below the ceiling.

Optical design is a Bounding Ray™ design with 50° cutoff to source and source image. Top down flash characteristic for superior glare control.

Superior 100% Virgin-silicone refractive optic, enables maximum dimensional stability and optical transmission with no discoloration over life. Field inter-changeable optics.

Electrical

The luminaire shall operate from a 50 or 60 Hz ±3 Hz AC line over a voltage ranging from 120 VAC to 277 VAC. Support 347V via remote-mounted step-down transformer. The fluctuations of line voltage shall have no visible effect on the luminous output.

The luminaire shall have a power factor of 90% or greater at all standard operating voltages and full luminaire output.

Sound Rated A+. Driver shall be >80% efficient at full load across all input voltages. THD @ Full Load is >20%. Inrush current meets NEMA-410 requirments. Surge Protection +/- 1kV DM, +/- 2kV CM.

Controls

Luminaire shall be equipped with interface for nLight wired or nLight AIR networks with integral power supply as per specification.

Dimming

The luminaire shall be capable of continuous dimming without perceivable stroboscopic flicker as measured by flicker index (ANSI/IES RP-16-10) over a range of 100 – 1.0% of rated lumen output with a smooth shut off function to step to 0%.

Driver is inaudible in 24dB environment, and stable when input voltage conditions fluctuate over what is typically experienced in a commercial environment.

Construction

Surface Gear Box (SGB) for direct installation to 4" recessed or surface octagonal (by others).

Recessed Gear Housing (RGH) ships with driver box for recessed or surface installation.

Die cast with flangeless reflector allows flow-through passive thermal management.

Accommodates between 3/8" to 3"-thick ceilings.

Listings

Fixtures are UL Certified to meet US and Canadian Standards: All fixtures manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" to UL, damp location standard; wet location covered ceiling optional (WL).

RGH option is IC rated up to 1500LM

Government Procurement

BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act Please refer to www.acuitybrands.com/buy-american for additional information

Photometrics

LEDs tested to LM-80 standards. Measured by IESNA Standard LM-79-08 in an accredited lab. Lumen output shall not decrease by more than 30% over the minimum operational life of 60,000 hours.

Color appearance from luminaire to luminaire of the same type and in all configurations, shall be consistent both initially and at 6,000 hours and operate within a tolerance of <2.5 MacAdam ellipse as defined by the center of the quadrangles defined in ANSI C78.377-2015.

Warranty

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:

Actual performance may differ as a result of end user environment and application.

All values are design or typical values, measured under laboratory conditions at 25 °C.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

NLIGHT

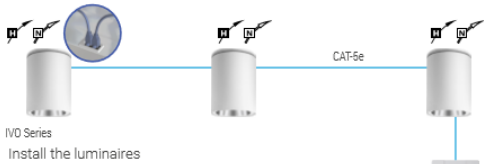
nLIGHT

Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Controls



1. Install the luminaires
2. Install the nLight Wired wall switch
3. Connect the luminaires using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Controls

1. Install the luminaires
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY+ mobile app to pair the fixtures with the wall switch and if desired, customize the sensor settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

Dimple Sconce

Sconces

YOUR PRODUCT CODE

DP-WS-S3-AA04-27-0.1_10V_UNV-IP20

DESCRIPTION

Dimple is a compact and flush-mounted sconce that casts a diffuse and soft, atmospheric light. It is cheekily named for the thick, domed circular diffuser embedded into its front face.

MATERIALS

Cast solid glass, aluminum

COLLECTION NOTES

Luminaire lumens listed are for AC input TRIAC control. DC input performance please see photometry downloads. Each form of cast glass is unique. We review each to ensure they conform to ASTM standards, which includes the presence of small air bubbles within the glass.

A Series

Sunlite 81080 LED Colored Filament A19 Light Bulb, 4.5 Watts, 55 Lumens, Medium E26 Base, 120 Volts, Transparent Blue, Dimmable, 320 Degrees Beam Angle, UL Listed, 2 Count

Filament Colored Series

DESCRIPTION:

Illuminate your space with a splash of color and a touch of elegance using the Sunlite LED Colored Filament A19 Light Bulb. With a common A19 shape and medium (E26) base they can be used to upgrade any standard fixture or lamp in your home or business. With a power consumption of only 4.5 watts, this LED bulb is an energy-efficient choice, helping you save on your electricity bills without compromising on the brightness. Built to last, it has an impressive average rated lifespan of 15,000 hours. UL Listed to meet strict safety and quality standards, assuring you of its reliability and durability. Rated for totally enclosed fixtures. Dimensions 4" L x 2.35" D.

FEATURES:

- *VIBRANT LIGHT - Emitting a rich and vibrant light, this bulb is designed to add a splash of color to any room or event, enhancing the aesthetic appeal. With a common A19 shape and medium (E26) base they can be used to upgrade any standard fixture or lamp in your home or business. They remain cool to the touch even when in use.*
- *ENERGY EFFICIENT - With a power consumption of only 4.5 watts, this LED bulb is an energy-efficient choice, helping you save on your electricity bills without compromising on the brightness. It provides extensive lighting coverage, illuminating your space uniformly and beautifully thanks to its 320-degree beam angle.*
- *LONG LIFE LED - Built to last, it has an impressive average rated lifespan of 15,000 hours, ensuring that you enjoy sustained lighting without the need for frequent replacements.*
- *DIMMABLE - This bulb comes with a dimmable feature, allowing you to adjust the light intensity according to your mood or the setting, creating the perfect ambiance.*
- *SAFETY & QUALITY - UL Listed to meet strict safety and quality standards, assuring you of its reliability and durability. Rated for totally enclosed fixtures. Dimensions 4" L x 2.35" D.*

INSTALLATION & AFTER CARE INSTRUCTIONS:

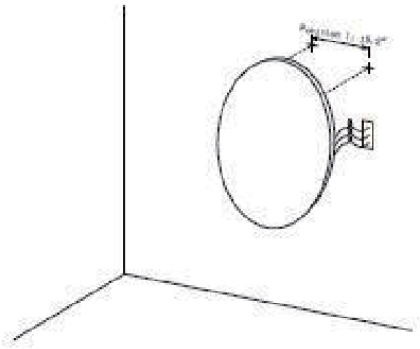
Installation:
All Paris Mirror backlit and LED mirrors have been independently tested for compliance with electrical equipment (safety) regulations.
All illuminated and backlit mirrors are IP44 rated.
Illuminated mirrors have been designed and independently tested for compliance to electrical equipment (safety) regulations, and are UL Certified.
LEDs have a life expectancy of 120,000 hours of continuous use. All LED light fittings are replaceable and are available through Paris Mirror customer service.

IMPORTANT: Always switch off the electrical supply at the mains during installation and maintenance. It is recommended that fuse
is withdrawn or circuit breaker switched off before installation begins.
Fitting in Bathrooms is subject to all regulations. It is not suitable for product installations in Saunas, Steam Rooms, or shower cubicles,and it is recommended for permanent installation.

Care Safety:
Wear suitable eye wear protection when drilling. Use caution when using power tools near water, beware of hidden cables or pipes.
Take care if drilling on tiled surfaces in case the drill slips. A piece of masking tape applied to wall before marking out fixing holes
will stop drill from moving.

Cleaning & Maintenance:
It is recommended that the unit is cleaned with a soft, dry, non-abrasive cloth when turned off.
Never use cleaning agents or abrasive
material on any type of surface finish.
Do not strike glass components with hard or pointed items.
Do not place very hot or cold items against or close proximity to glass surfaces.



120V DIMMABLE LED DRIVER INCLUDED

1- Decide on wall positional placement.
2- Prepare & install wall hooks measured to distance between mirror's anchors.
3- Match & attach 3 electrical wires from mirror to home electrical wires:
Live to Live, Ground to Ground, Neutral to Neutral.
4- Hang and affix to wall.

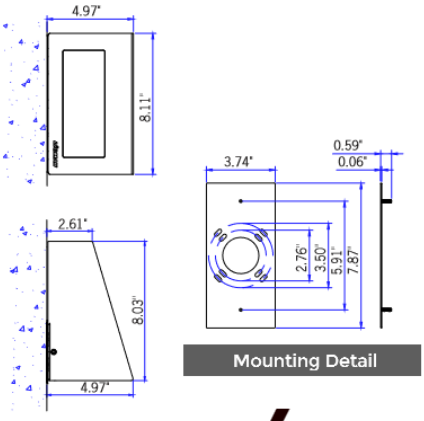
Leeds 2 Medium Surface Wedge Downlight

microVos TECHNOLOGY

LIGMAN LIGHTING USA

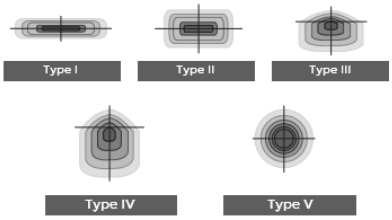
14w LED 1660 Lumens
IP65 • Suitable For Wet Locations
IK07 • Impact Resistant
Weight 12 lbs



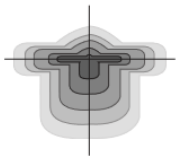
Mounting Detail

microVos TECHNOLOGY

Ligman's micro Variable Optical System provides the ability to interchange, mix & rotate optics to provide specific light distributions for optimized spacing and uniformity.



The variable optic system allows for the designer to create hybrid distributions for precise lighting requirements.



HYBRID
TYPE I & TYPE IV

Construction

Aluminum
Less than 0.1% copper content – Marine Grade 6060 extruded & LM6 Aluminum High Pressure die casting provides excellent mechanical strength , clean detailed product lines and excellent heat dissipation.

Pre paint
8 step degrease and phosphate process that includes deoxidizing and etching as well as a zinc and nickel phosphate process before product painting.

Memory Retentive -Silicon Gasket
Provided with special injection molded "fit for purpose" long life high temperature memory retentive silicon gaskets. Maintains the gaskets exact profile and seal over years of use and compression.

Thermal management
LM6 Aluminum is used for its excellent mechanical strength and thermal dissipation properties in low and high ambient temperatures. The superior thermal heat sink design by Ligman used in conjunction with the driver, controls thermals below critical temperature range to ensure maximum luminous flux output, as well as providing long LED service life and ensuring less than 10% lumen depreciation at 50,000 hours.

Surge Suppression
Standard 10kv surge suppressor provided with all fixtures.

BUG Rating
B0 - U0 - G0 [T2, T3/W30, T4, ME/W40]
B1 - U0 - G0 [T3/W40, W/W30, ME/W30, EW]
B2 - U0 - G0 [W/W40]
B1 - U0 - G1 [T1]

Finishing
All Ligman products go through an extensive finishing process that includes fettling to improve paint adherence.

Paint
UV Stabilized 4.9Mil thick powder coat paint and baked at 200 Deg C. This process ensures that Ligman products can withstand harsh environments. Rated for use in natatoriums.

Inspired by Nature Finishes
The Inspired by nature Finishing is a unique system of decorative powder coating. Our metal decoration process can easily transform the appearance of metal or aluminum product into a wood grain finish.

This patented technology enables the simulation of wood grain, and even marble or granite finish through the use of decorative powder coating.

The wood grain finish is so realistic that it's almost undistinguishable from real wood, even from a close visual inspection. The system of coating permeates the entire thickness of the coat and as a result, the coating cannot be removed by normal rubbing, chipping, or scratching.

The Coating Process
After pre-treatment the prepared parts are powder coated with a specially formulated polyurethane powder. This powder provides protection against wear, abrasion, impact and corrosion and acts as the relief base color for the finalized metal decoration.

The component is then wrapped with a sheet of non-porous film with the selected decoration pattern printed on it using special high temperature inks.

This printed film transfer is vacuum-sealed to the surface for a complete thermo print and then transferred into a customized oven. The oven transforms the ink into different forms within the paint layer before it becomes solid. Finally, the film is removed, and a vivid timber look on aluminum remains.

Wood grain coating can create beautiful wood-looking products of any sort. There are over 300 combinations of designs currently in use. Wood grains can be made with different colors, designs, etc.

Our powder coatings are certified for indoor and outdoor applications and are backed by a comprehensive warranty. These coatings rise to the highest conceivable standard of performance excellence and design innovation.

Added Benefits
- Resistance to salt-acid room, accelerated aging
- Boiling water, lime and condensed water resistant
- Anti-Graffiti, Anti-Slip, Anti-Microbial, Anti-Scratch
- Super durable (UV resistant)
- TGIC free (non-toxic)

Hardware
Provided Hardware is Marine grade 316 Stainless steel.

Anti Seize Screw Holes
Tapped holes are infused with a special anti seize compound designed to prevent seizure of threaded connections, due to electrolysis from heat, corrosive atmospheres and moisture.

Crystal Clear Low Iron Glass Lens
Provided with tempered, impact resistant crystal clear low iron glass ensuring no green glass tinge.

Optics & LED
Precise optic design provides exceptional light control and precise distribution of light. LED CRI > 80

Lumen • Maintenance Life
L80 /B10 at 50,000 hours (This means that at least 90% of the LED still achieve 80% of their original flux)

Clean, beautiful, surface wall fixtures with class leading performance. Minimalist form, yet the most powerful and flexible lighting tool of its type, offering packages up to 2,400 lumens and microVos technology.

A range of small, square and rectangular, ADA compliant wall mounted luminaires with options of upward or downward light distributions. Ideally suited to illuminate the wall and surfaces in front of wall and for light accents on vertical surfaces using high efficiency LED's. The Leeds is suitable for indoor and outdoor applications and provides a clean, visually appealing solution for small, unobtrusive wall mounted luminaires.

This luminaire is available in 3 different sizes and in combinations of down, up or up/down light distributions.

This fixture utilizes microVos technology, meaning the ability to do Type I,II,III,IV & V distributions as well as hybrid distributions to suit the designer's requirements.

Using the microVos optics allows for very wide spacing to mounting height ratios, while still providing perfect uniformity and code compliant light levels.

To meet International Dark Sky criteria, 3000k or warmer LEDs must be selected and luminaire fix mounted (+/- 15˚ allowable to permit leveling).

ORDERING NOTES

1. 05LM only available with L5 Cylinder Length and ZT or ELV. 05LM not available with E7W.
2. 90CRI not available with 50K Kelvin Temperature. 95CRI not available with 35K, 40K or 50K Kelvin Temperature.
3. Not available with WW style Function.
4. Not available with L5 Cylinder Length.
5. 347 only available with ZT Control Input. Min10LM-Max 45LM. Not available with nLight, Emergency or SF Options. Not available with L5 Cylinder Length.
6. Refer to Tech-240 for compatible dimmers.
7. ZT not available with DARK.
8. ELV only available with MIN1 and 120 volt.
9. DALI and DMX only available with DARK.
10. DMX not available with L5 Cylinder Length. Only available with SGB or SGBCC Mounting.
11. nLight controls are provided with each fixture and can be remote mounted or mounted to the junction box. Wired NLIGHT and NLIGHTER controls include nPS 80 EZ dimming pack. Wireless NLTAIR2 and NLTAIREM2 controls include rPP20 power pack. Includes EZT driver. See Tables of Use on page 10.
12. L5 available up to 30LM max. Not available with E7W or 347.
13. Only available with DMX Control Input option.
14. Not available with SGB or SGBCC.
15. Power Mounting Cords are field cuttable. Not available with WW style Function. Color is determined by Architectural Color: White for DWHG, DWH, DWHAMF; Black for DBL, DBLB; Gray for all other color options.
16. Not available with 05LM, 25LM or 30LM with EZT or DALI control input for L5 Cylinder Length. Not available with 05LM with EZT or DALI Control Input for L9, L14 or L16 Cylinder Lengths.
17. E7W only available with ZT or ELV. Not available with 347, C120, C180, or C240. Available up to 20LM max for L9. Available up to 35LM max for L14 L16. E7W with WL available up to 15LM max.
18. WL only available with JBX. Not available with DMX or Emergency options. Min 05LM-30LM max for ZT or ELV in L5 Cylinder Lengths. Min 07LM-Max 20LM for EZT or DALI in L5 Cylinder Lengths. 30LM max for ZT or ELV in L9, L14 or L16 Cylinder Lengths. 07LM-30LM max for EZT or DALI in L9, L14 or L16 Cylinder Lengths.
19. LW not available with D style Function.
20. Optical finishes are not available with WR, WRAMF WMR and BZR trim colors.
21. Replace with applicable RAL number and finish when ready to order. See RAL BROCHURE for available color options.

JUNCTION BOX AND CANOPY

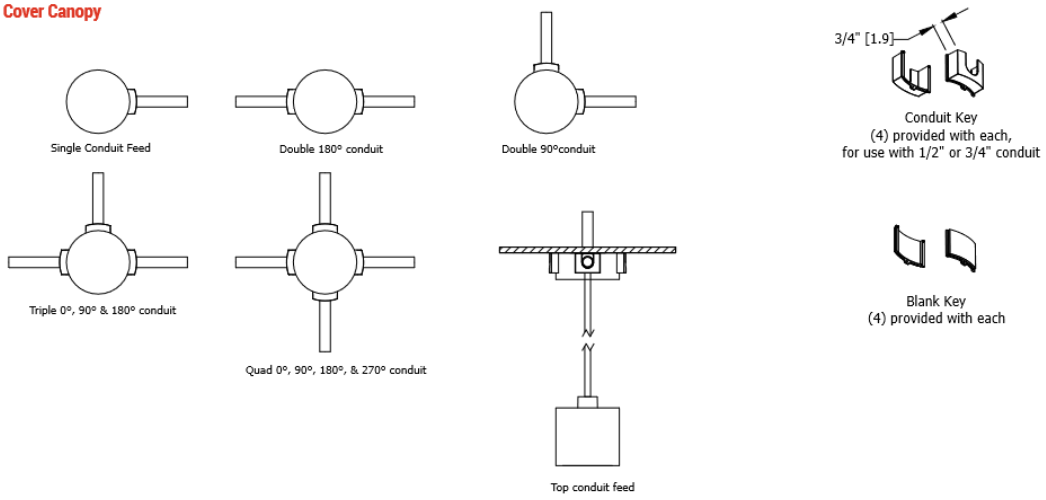
Conduit Covers and Emergency Battery Sidecar

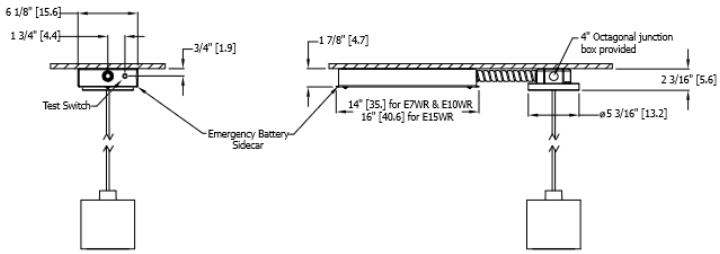
- Dimensions in inches [centimeters]
- Options shown are available for Rigid Stem Mount or Powered Mounting Cord.
- J-boxes available by others.

Conduit Cover Canopy

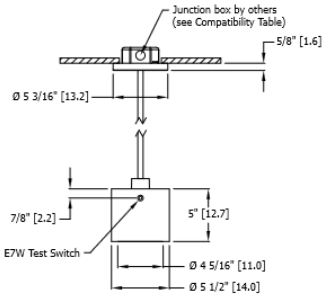


Emergency Battery Sidecar Enclosure

Emergency Battery Remote Test Switch (E7WR, E10WR, E15WR)



Emergency Battery Integral Test Switch (E7W)



How to Estimate Delivered Lumens in Emergency Mode
Delivered Lumens = 1.25 x P x LPW
P = Output Power/Wattage of Emergency Battery Driver (E7WR* = 7W, E10WR* = 10W, E15WR* = 15W)
LPW = Lumen per Watt rating of luminaire based on Ordering Code selections

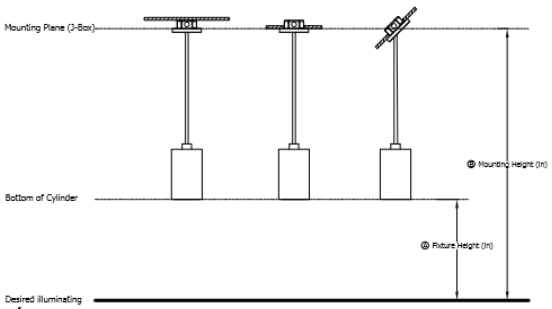
MOUNTING HEIGHT FORMULAS

Mounting Height Calculations for Field Cuttable Pendants

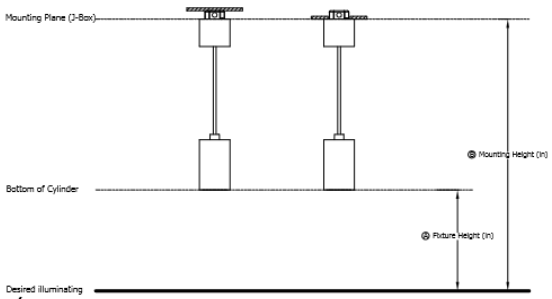
- Dimensions in inches [centimeters]
- J-boxes available by others.

Formulas for JBX/JBXCC



Rigid Stem Length=Ⓑ-Ⓐ- 5"
Mounting Cord Length=Ⓑ-Ⓐ

Formulas for SGB/SGBCC



Rigid Stem Length=Ⓑ-Ⓐ- 9"
Mounting Cord Length=Ⓑ-Ⓐ- 4"

Stabilization Kit

- Stabilization Kit (CYLSTBL KIT) offers additional support for applications where wind may be a factor and the Cylinder needs to be secured, for Rigid Stem Mount only.
- Clamping Collar consists of 2 half stem collars made of 304 grade stainless steel that clamp Rigid Stem using the socket head cap screw provided.
- 3 cables, ø1/16" x 20ft long and made of 304 grade stainless steel Aircraft Cable, support the Clamping Collar at one end and are anchored to the mounting surface at the other end (anchors by others).
- The Stabilization Kit is designed to withstand 90mph winds for 3 seconds per ASCE 7-10, MRI 50-year (fixture EPA is 0.2 sq ft).

SPECIFICATIONS

Optical System
- Bounding Ray™ optical design delivers low brightness apertures for a comfortable lighting experience. Bounding Ray™ optical design ensures no source image up to cut-off angle, minimizing glare.
- 45° visual cut-off angle to source for L9, L14 and L16 lengths and 65° visual cut-off for L5 length per CIE 117-1995 Discomfort Glare in Interior Lighting (UGR FAQ)
- Top-Down Flash characteristics avoid flash on trim until source becomes visible.
- Batwing distributions with feathered edges to provide even illumination fixture-to-fixture. Available with 0.8, 1.0, and 1.2 spacing-to-mounting-height ratio (s/mh).
- Clean beams with soft transitions from narrow spot 10° up to wide flood 60° distributions and available every 5°.
- Optics are field changeable. However, L5 Cylinder Length optics aer not interchangeable with other Cylinder Length optics.

LED Light Engine
- Perfect Color™ consistency within 1/2-step MacAdam Ellipse using proprietary pick and place algorithm.
- 90% lumen maintenance at 55,000 hours.
- Available in 80, 90, or 95 CRI. 90 CRI has R9 greater than 50, 95 CRI has R9 greater than 80.

Trims
- Trims are field changeable via twist-lock (tool-free). However L5 Cylinder Length trims are not interchangeable with other Cylinder Lengths.
- Trims are available in 9 colors and 3 surface finishes (standard)
- Custom RAL and Paint colors available upon request.
- Trim lenses are made of Tempered Glass

Electrical
- 120, 277, 347, or Multi-Volt (MVOLT) 120-277 VAC input at 50/60 Hz.
- Power Factor > 85%.
- Input wires 18 AWG, 600V minimum, solid copper.

EMI/RFI
- EMI/RFI per FCC Title 47 CFR, Part 15, Class A rated standard.
- EMI/RFI per FCC Title 47 CFR, Part 15, Class B rated for Phase Dimming driver (ELV) except when used with Emergency Battery (E7WR, E10WR, E15WR) or at 15LM and above.

Controls (Optional)
- Luminaire can be equipped with interface for nLight wired, allowing it to communicate over an nLight network. nLight wired options ship with an nPS 80 EZ power pack to be mounted to a plenum j-box through (via 1/2" knockout) and connected to the Fixture control wires. Couple with nLight-enabled sensors, power packs, or WallPods using CAT-5 cabling to create an nLight Control Zone. Link Control Zone to a Gateway directly or via a Bridge for remote status monitoring and control using SensorView software.
- Luminaire can be equipped with interface for nLight Air, allowing it to communicate over the wireless nLight control platform. nLight Air options ship with an rPP20 power pack to be mounted to a plenum j-box through (via 1/2" knockout) and connected to the Fixture control wires. Can be paired to other luminaires and wall switches through CLAIRITY+, a mobile app, which allows individual fixture control.

Dimming
- Luminaire Is capable of continuous dimming without perceivable flicker (stroboscopic) as measured by flicker index (ASNI/IES RP-16-10).
- Available dimming ranges include: 100%-10% (MIN10), 100%-1% (MIN1), and 100%-0.1% (DARK) of rated lumen output.
- Available with smooth shut off function from minimum dimming level to 0%.
- EldoLED drivers (EZT, DALI) conform to IEEE P1789 standards.
- Drivers are inaudible in 24dB environment and stable even when input voltage conditions experience typical commercial environment fluctuations.

Emergency Battery (Optional)
- Luminaires equipped with battery pack (E7W, E7WR, E10WR, E15WR) comply with NFPA 101 (Life Safety Code) and deliver constant light output for a duration of 90 minutes minimum with AC power loss.
- Emergency batteries with Remote Test Switch (E7WR, E10WR, E15WR) are mounted to ceiling via remote enclosure (sidecar).
- Emergency battery is CEC T20 compliant.

Installation
- Rigid Stems are field cuttable with no threading required.
- Rigid Stem lengths consist of 2ft and 4ft sections.
- Powered Mounting Cords are field cuttable down to 4" and include integrated Aircraft Cable (patented) for mechanical support without visible cable.
- Luminaire can be installed to 4" Octagonal j-box (1-1/2" or 2-1/8" deep depending on ordering configuration).
- Luminaire can be installed to 4" Square j-box (1-1/2" deep) when used with Cylinder Adaptor Plate (CLYLJBOXADPT 4SQ20CT).
- Optional, field configurable Conduit Covers are available and match Cylinder finish and diameter.

Construction
- Heavy-gauge extruded Aluminum construction.
- Reflector design allows air flow across heatsink to improve thermal management.
- Light Engine and Driver are field replaceable and serviceable from below the ceiling.

Listings
- Fixtures are CSA certified to meet US and Canadian standards.
- All fixtured are manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" per UL.
- Damp Location standard.
- Wet Location available.

Photometrics
- All photometry is conducted by IESNA standard LM-79-08 in an accredited lab.
- LEDs are tested to LM-80 standards. Lumen maintenance is calculated via TM-21.

Warranty
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:
- Actual performance may differ as a result of end-user environment and application.
- All values are design or typical values, measured under laboratory conditions at 25 °C.
- The product images shown are for illustration purposes only and may not be an exact representation of the product.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

NLIGHT

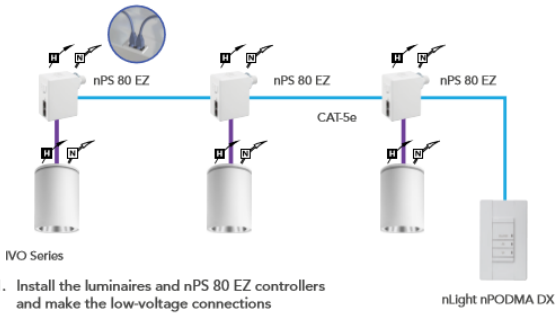
nLIGHT

Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Controls



1. Install the luminaires and nPS 80 EZ controllers and make the low-voltage connections
2. Install the nLight Wired wall switch
3. Connect the nLight devices using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Controls

1. Install the luminaires and rPP20 power/relay packs
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY™+ mobile app to pair the luminaires with the wall switch and if desired, customize the device settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

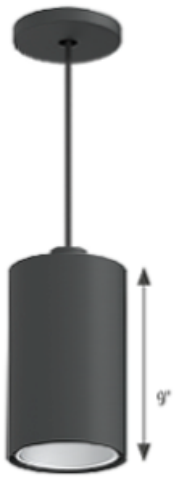
ACCESSORIES



Pendant mount fixed cylinder with one (1) LED lighting source, 2500 delivered lumens, 3000K color engine, 80+ CRI, 40° optic and integral driver. Cylinder should operate on Mvolt voltage and be supplied with a 0-10v control option down to .01 and include a minimum 5-year warranty with a 55,000 hour anticipated life. Cylinder to have black finish. Cylinder should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

ORDERING NOTES

1. 05LM only available with L5 Cylinder Length and ZT or ELV. 05LM not available with E7W.
2. 90CRI not available with 50K Kelvin Temperature. 95CRI not available with 35K, 40K or 50K Kelvin Temperature.
3. Not available with WW style Function.
4. Not available with L5 Cylinder Length.
5. 347 only available with ZT Control Input. Min10LM-Max 45LM. Not available with nLight, Emergency or SF Options. Not available with L5 Cylinder Length.
6. Refer to Tech-240 for compatible dimmers.
7. ZT not available with DARK.
8. ELV only available with MIN1 and 120 volt.
9. DALI and DMX only available with DARK.
10. DMX not available with L5 Cylinder Length. Only available with SGB or SGBCC Mounting.
11. nLight controls are provided with each fixture and can be remote mounted or mounted to the junction box. Wired NLIGHT and NLIGHTER controls include nPS 80 EZ dimming pack. Wireless NLTAIR2 and NLTAIREM2 controls include rPP20 power pack. Includes EZT driver. See Tables of Use on page 10.
12. L5 available up to 30LM max. Not available with E7W or 347.
13. Only available with DMX Control Input option.
14. Not available with SGB or SGBCC.
15. Power Mounting Cords are field cuttable. Not available with WW style Function. Color is determined by Architectural Color: White for DWHG, DWH, DWHAMF; Black for DBL, DBLB; Gray for all other color options.
16. Not available with 05LM, 25LM or 30LM with EZT or DALI control input for L5 Cylinder Length. Not available with 05LM with EZT or DALI Control Input for L9, L14 or L16 Cylinder Lengths.
17. E7W only available with ZT or ELV. Not available with 347, C120, C180, or C240. Available up to 20LM max for L9. Available up to 35LM max for L14 L16. E7W with WL available up to 15LM max.
18. WL only available with JBX. Not available with DMX or Emergency options. Min 05LM-30LM max for ZT or ELV in L5 Cylinder Lengths. Min 07LM-Max 20LM for EZT or DALI in L5 Cylinder Lengths. 30LM max for ZT or ELV in L9, L14 or L16 Cylinder Lengths. 07LM-30LM max for EZT or DALI in L9, L14 or L16 Cylinder Lengths.
19. LW not available with D style Function.
20. Optical finishes are not available with WR, WRAMF WMR and BZR trim colors.
21. Replace with applicable RAL number and finish when ready to order. See RAL BROCHURE for available color options.

ACCESSORIES – order as separate catalog numbers (shipped separately)

GCOLORS KIT	Architectural colors chip kit, consisting of powder-coat and plated finishes
GOTHAM IVO REFLECTOR COLOR KIT	Trim colors & finishes sample kit for standard IVO anodized and painted trim color options.
CYLJBOXADPT 4SQ2OCT __	4in Square J-box to 4in Octagonal J-box adaptor. Replace __ with Architectural Color or PRM for primed ready for field painting
CYLSTBL KIT	Stabilization Kit for securing pendant stem fixtures
IVO40PTC D MD	Field Replaceable 4" Downlight Optic, Medium Batwing Distribution, 0.8 s/mh, for L9-L16 Cylinder Lengths only
IVO40PTC D MWD	Field Replaceable 4" Downlight Optic, Medium Wide Batwing Distribution, 1.0 s/mh, for L9-L16 Cylinder Lengths only
NO40PTC D WD	Field Replaceable 4" Downlight Optic, Wide Batwing Distribution, 1.2 s/mh, for L9-L16 Cylinder Lengths only
IVO40PTC D 10D	Field Replaceable 4" Downlight Optic, 10°, for L9-L16 Cylinder Lengths only
IVO40PTC D 15D	Field Replaceable 4" Downlight Optic, 15°, for L9-L16 Cylinder Lengths only
IVO40PTC D 20D	Field Replaceable 4" Downlight Optic, 20°, for L9-L16 Cylinder Lengths only
IVO40PTC D 25D	Field Replaceable 4" Downlight Optic, 25°, for L9-L16 Cylinder Lengths only
IVO40PTC D 30D	Field Replaceable 4" Downlight Optic, 30°, for L9-L16 Cylinder Lengths only
IVO40PTC D 35D	Field Replaceable 4" Downlight Optic, 35°, for L9-L16 Cylinder Lengths only
IVO40PTC D 40D	Field Replaceable 4" Downlight Optic, 40°, for L9-L16 Cylinder Lengths only
IVO40PTC D 45D	Field Replaceable 4" Downlight Optic, 45°, for L9-L16 Cylinder Lengths only
IVO40PTC D 50D	Field Replaceable 4" Downlight Optic, 50°, for L9-L16 Cylinder Lengths only
IVO40PTC D 55D	Field Replaceable 4" Downlight Optic, 55°, for L9-L16 Cylinder Lengths only
IVO40PTC D 60D	Field Replaceable 4" Downlight Optic, 60°, for L9-L16 Cylinder Lengths only
IVO4SOPTIC D MD U	Field Replaceable Optic, Medium Distribution, for L5 Cylinder Length only
IVO4SOPTC D MWD U	Field Replaceable Optic, Medium Wide Distribution, for L5 Cylinder Length only
IVOSOPTC D WD U	Field Replaceable Optics, Wide Distribution, for L5 Cylinder Length only

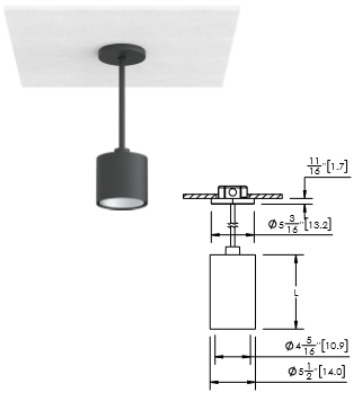
DIMENSIONAL DATA

Pendant Rigid Stem and Cord Mounting Options

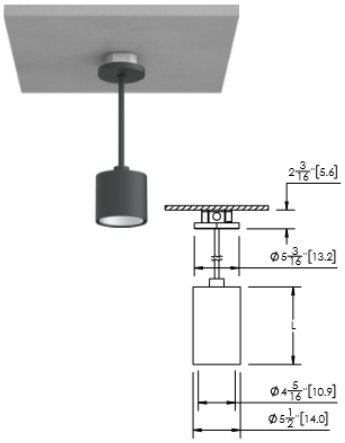
- Dimensions in inches [centimeters]
- Rigid Stems are Ø½" made of 2ft and 4ft field cuttable sections with no threading required, orderable from 2ft (S2) up to 20ft (S20).
- Powered Mounting Cords are Ø5/16" field cuttable down to 4" and include integrated Aircraft Cable (patent pending) for mechanical support without visible cable, orderable from 10ft (C120) up to 20ft (C240).
- J-boxes available by others (see Compatibility Table).

CYLINDER LENGTH (L)	DIMENSIONS INCHES (CM)
L5	5" (12.7)
L9	9" [22.9]
L14	13-5/8" [34.6]
L16	16" [40.6]

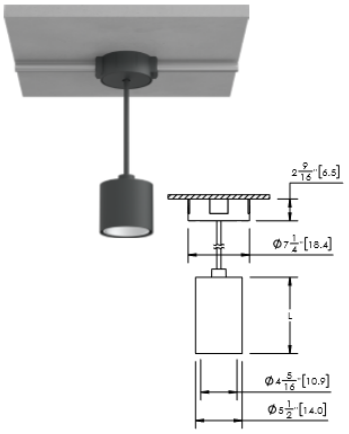
Canopy with Recessed J-box (JBX)



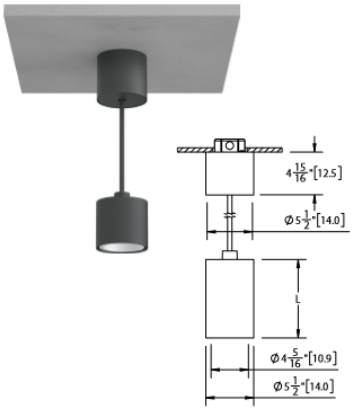
Canopy with Surface J-box (JBX)



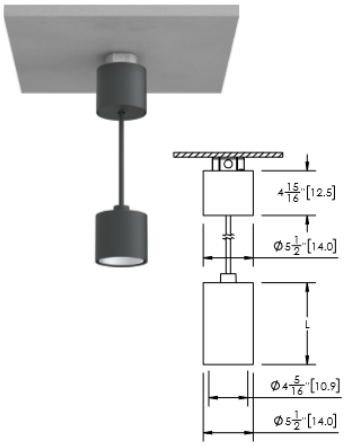
Conduit Cover Canopy with Surface J-box (JBXCC)



Surface Gear Box with Recessed J-box (SGB)



Surface Gear Box with Surface J-box (SGB)



Conduit Cover Surface Gear Box with Surface J-Box (SGBCC)

JUNCTION BOX AND CANOPY

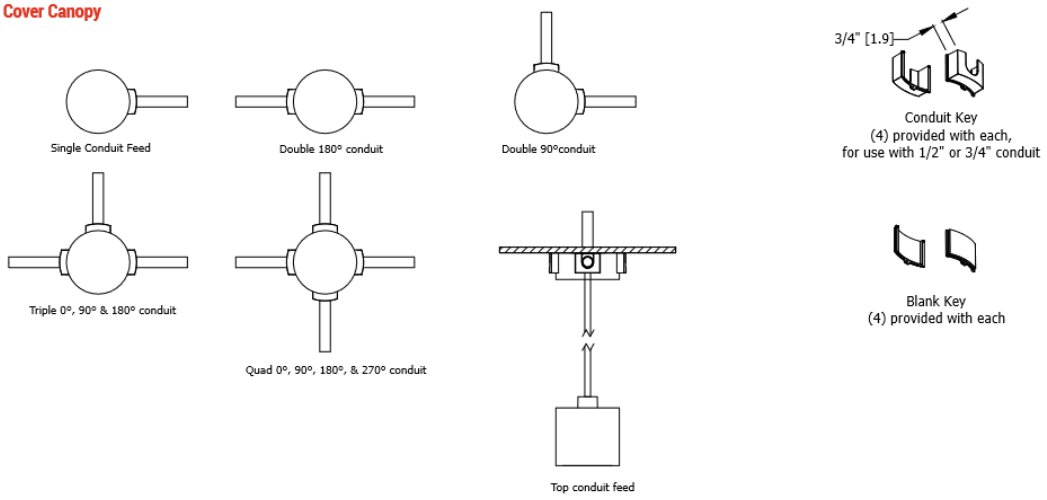
Conduit Covers and Emergency Battery Sidecar

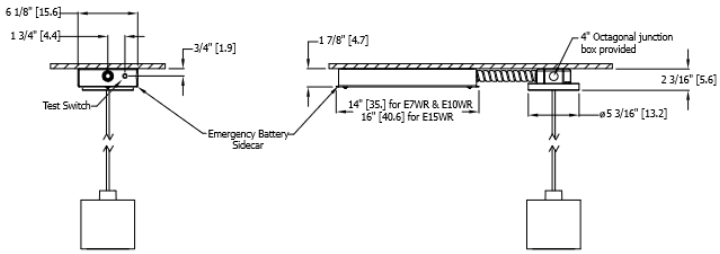
- Dimensions in inches [centimeters]
- Options shown are available for Rigid Stem Mount or Powered Mounting Cord.
- J-boxes available by others.

Conduit Cover Canopy

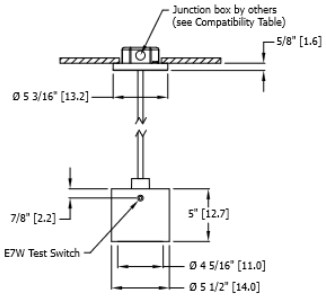


Emergency Battery Sidecar Enclosure

Emergency Battery Remote Test Switch (E7WR, E10WR, E15WR)



Emergency Battery Integral Test Switch (E7W)



How to Estimate Delivered Lumens in Emergency Mode

Delivered Lumens = 1.25 x P x LPW

P = Output Power/Wattage of Emergency Battery Driver (E7WR* = 7W, E10WR* = 10W, E15WR* = 15W)

LPW = Lumen per Watt rating of luminaire based on Ordering Code selections

GOTHAM ARCHITECTURAL DOWNLIGHTING | 1400 Lester Road Conyers, GA 30012 | P 800-705-SERV (7378) | gothamlighting.com

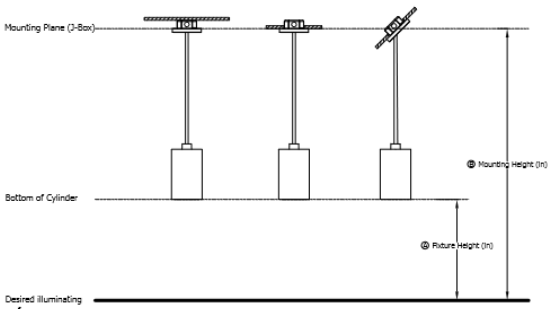
MOUNTING HEIGHT FORMULAS

Mounting Height Calculations for Field Cuttable Pendants

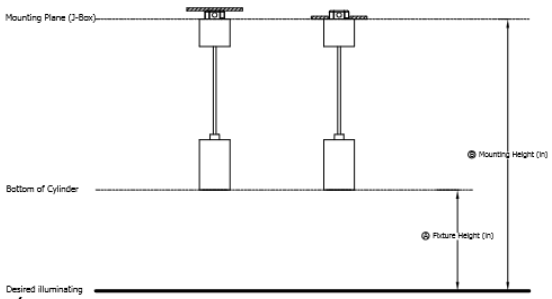
- Dimensions in inches [centimeters]
- J-boxes available by others.

Formulas for JBX/JBXCC



Rigid Stem Length=Ⓑ-Ⓐ- 5"
Mounting Cord Length=Ⓑ-Ⓐ

Formulas for SGB/SGBCC



Rigid Stem Length=Ⓑ-Ⓐ- 9"
Mounting Cord Length=Ⓑ-Ⓐ- 4"

Stabilization Kit

- Stabilization Kit (CYLSTBL KIT) offers additional support for applications where wind may be a factor and the Cylinder needs to be secured, for Rigid Stem Mount only.
- Clamping Collar consists of 2 half stem collars made of 304 grade stainless steel that clamp Rigid Stem using the socket head cap screw provided.
- 3 cables, ø1/16" x 20ft long and made of 304 grade stainless steel Aircraft Cable, support the Clamping Collar at one end and are anchored to the mounting surface at the other end (anchors by others).
- The Stabilization Kit is designed to withstand 90mph winds for 3 seconds per ASCE 7-10, MRI 50-year (fixture EPA is 0.2 sq ft).

SPECIFICATIONS

Optical System
- Bounding Ray™ optical design delivers low brightness apertures for a comfortable lighting experience. Bounding Ray™ optical design ensures no source image up to cut-off angle, minimizing glare.
- 45° visual cut-off angle to source for L9, L14 and L16 lengths and 65° visual cut-off for L5 length per CIE 117-1995 Discomfort Glare in Interior Lighting (UGR FAQ)
- Top-Down Flash characteristics avoid flash on trim until source becomes visible.
- Batwing distributions with feathered edges to provide even illumination fixture-to-fixture. Available with 0.8, 1.0, and 1.2 spacing-to-mounting-height ratio (s/mh).
- Clean beams with soft transitions from narrow spot 10° up to wide flood 60° distributions and available every 5°.
- Optics are field changeable. However, L5 Cylinder Length optics aer not interchangeable with other Cylinder Length optics.

LED Light Engine
- Perfect Color™ consistency within 1/2-step MacAdam Ellipse using proprietary pick and place algorithm.
- 90% lumen maintenance at 55,000 hours.
- Available in 80, 90, or 95 CRI. 90 CRI has R9 greater than 50, 95 CRI has R9 greater than 80.

Trims
- Trims are field changeable via twist-lock (tool-free). However L5 Cylinder Length trims are not interchangeable with other Cylinder Lengths.
- Trims are available in 9 colors and 3 surface finishes (standard)
- Custom RAL and Paint colors available upon request.
- Trim lenses are made of Tempered Glass

Electrical
- 120, 277, 347, or Multi-Volt (MVOLT) 120-277 VAC input at 50/60 Hz.
- Power Factor > 85%.
- Input wires 18 AWG, 600V minimum, solid copper.

EMI/RFI
- EMI/RFI per FCC Title 47 CFR, Part 15, Class A rated standard.
- EMI/RFI per FCC Title 47 CFR, Part 15, Class B rated for Phase Dimming driver (ELV) except when used with Emergency Battery (E7WR, E10WR, E15WR) or at 15LM and above.

Controls (Optional)
- Luminaire can be equipped with interface for nLight wired, allowing it to communicate over an nLight network. nLight wired options ship with an nPS 80 EZ power pack to be mounted to a plenum j-box through (via 1/2" knockout) and connected to the Fixture control wires. Couple with nLight-enabled sensors, power packs, or WallPods using CAT-5 cabling to create an nLight Control Zone. Link Control Zone to a Gateway directly or via a Bridge for remote status monitoring and control using SensorView software.
- Luminaire can be equipped with interface for nLight Air, allowing it to communicate over the wireless nLight control platform. nLight Air options ship with an rPP20 power pack to be mounted to a plenum j-box through (via 1/2" knockout) and connected to the Fixture control wires. Can be paired to other luminaires and wall switches through CLAIRITY+, a mobile app, which allows individual fixture control.

Dimming
- Luminaire Is capable of continuous dimming without perceivable flicker (stroboscopic) as measured by flicker index (ASNI/IES RP-16-10).
- Available dimming ranges include: 100%-10% (MIN10), 100%-1% (MIN1), and 100%-0.1% (DARK) of rated lumen output.
- Available with smooth shut off function from minimum dimming level to 0%.
- EldoLED drivers (EZT, DALI) conform to IEEE P1789 standards.
- Drivers are inaudible in 24dB environment and stable even when input voltage conditions experience typical commercial environment fluctuations.

Emergency Battery (Optional)
- Luminaires equipped with battery pack (E7W, E7WR, E10WR, E15WR) comply with NFPA 101 (Life Safety Code) and deliver constant light output for a duration of 90 minutes minimum with AC power loss.
- Emergency batteries with Remote Test Switch (E7WR, E10WR, E15WR) are mounted to ceiling via remote enclosure (sidecar).
- Emergency battery is CEC T20 compliant.

Installation
- Rigid Stems are field cuttable with no threading required.
- Rigid Stem lengths consist of 2ft and 4ft sections.
- Powered Mounting Cords are field cuttable down to 4" and include integrated Aircraft Cable (patented) for mechanical support without visible cable.
- Luminaire can be installed to 4" Octagonal j-box (1-1/2" or 2-1/8" deep depending on ordering configuration).
- Luminaire can be installed to 4" Square j-box (1-1/2" deep) when used with Cylinder Adaptor Plate (CLYLJBOXADPT 4SQ20CT).
- Optional, field configurable Conduit Covers are available and match Cylinder finish and diameter.

Construction
- Heavy-gauge extruded Aluminum construction.
- Reflector design allows air flow across heatsink to improve thermal management.
- Light Engine and Driver are field replaceable and serviceable from below the ceiling.

Listings
- Fixtures are CSA certified to meet US and Canadian standards.
- All fixtured are manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" per UL.
- Damp Location standard.
- Wet Location available.

Photometrics
- All photometry is conducted by IESNA standard LM-79-08 in an accredited lab.
- LEDs are tested to LM-80 standards. Lumen maintenance is calculated via TM-21.

Warranty
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:
- Actual performance may differ as a result of end-user environment and application.
- All values are design or typical values, measured under laboratory conditions at 25 °C.
- The product images shown are for illustration purposes only and may not be an exact representation of the product.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

30LM	13.6	10.6	10.6	13.6	10.6	10.6

*UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.

**Calculated using an AR (Clear reflector) with LSS (Semi-Specular) finish

NLIGHT

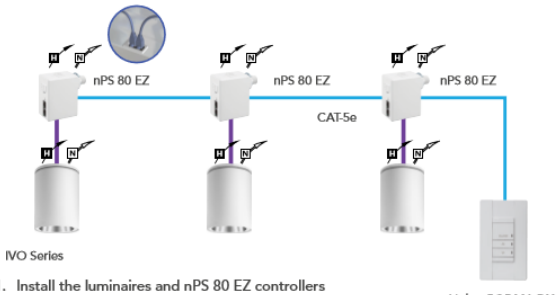
nLIGHT

Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Controls



1. Install the luminaires and nPS 80 EZ controllers and make the low-voltage connections
2. Install the nLight Wired wall switch
3. Connect the nLight devices using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Controls

1. Install the luminaires and rPP20 power/relay packs
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY™+ mobile app to pair the luminaires with the wall switch and if desired, customize the device settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

ACCESSORIES

Pendant mount fixed cylinder with one (1) LED lighting source, 1932 delivered lumens, 3000K color engine, 80+ CRI, 55° optic and integral driver. Cylinder should operate on 120 -277 voltage and be supplied with a 0-10v control option down to 1% and include a minimum 5-year warranty with a 60,000 hour anticipated life. Cylinder to have black finish. Cylinder should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

FEATURES & SPECIFICATIONS

INTENDED USE — Typical applications include corridors, lobbies, conference rooms and private offices.

CONSTRUCTION — Heavy-gauge aluminum housing.

Ceiling mount for direct installation to 4" octagonal or square junction box.

Pendant mount entry for 3/8" National Pipe Thread stem; wires supplied by others.

Textured polyester powder paint finish standard.

Multiple ceiling, pendant, cord, and wall mount options available.

OPTICS — LEDs are binned to a 3-step SDCM; 80 CRI minimum. 90 CRI optional.

LED light source concealed with diffusing optical lens.

General illumination lighting with 1.0 S/MH and 55° cutoff to source and source image.

Self-flanged anodized reflectors in specular, semi-specular, or matte diffuse finishes. Also available in white and black painted reflectors.

ELECTRICAL — Multi-volt (120-277V, 50/60Hz) 0-10V dimming drivers mounted to junction box, 10% or 1% minimum dimming level available.

347V available option; transformer must be field-installed to an accessible remote-mounted junction box.

0-10V dimming fixture requires two (2) additional low-voltage wires to be pulled.

70% lumen maintenance at 60,000 hours.

LISTINGS — Certified to US and Canadian safety standards. Damp location standard (wet location, covered ceiling optional).

GOVERNEMENT PROCUREMENT — BAA – Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.
BABA – Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

* All dimensions are inches (centimeters) unless otherwise noted.

4" CYLINDER
Non-IC

FEATURES & SPECIFICATIONS

INTENDED USE — Typical applications include corridors, lobbies, conference rooms and private offices.

CONSTRUCTION — Heavy-gauge aluminum housing.

Ceiling mount for direct installation to 4" octagonal or square junction box.

Pendant mount entry for 3/8" National Pipe Thread stem; wires supplied by others.

Textured polyester powder paint finish standard.

Multiple ceiling, pendant, cord, and wall mount options available.

OPTICS — LEDs are binned to a 3-step SDCM; 80 CRI minimum. 90 CRI optional.

LED light source concealed with diffusing optical lens.

General illumination lighting with 1.0 S/MH and 55° cutoff to source and source image.

Self-flanged anodized reflectors in specular, semi-specular, or matte diffuse finishes. Also available in white and black painted reflectors.

ELECTRICAL — Multi-volt (120-277V, 50/60Hz) 0-10V dimming drivers mounted to junction box, 10% or 1% minimum dimming level available.

347V available option; transformer must be field-installed to an accessible remote-mounted junction box.

0-10V dimming fixture requires two (2) additional low-voltage wires to be pulled.

70% lumen maintenance at 60,000 hours.

LISTINGS — Certified to US and Canadian safety standards. Damp location standard (wet location, covered ceiling optional).

GOVERNEMENT PROCUREMENT — BAA – Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.
BABA – Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

* All dimensions are inches (centimeters) unless otherwise noted.

‡ Option Value Ordering Restrictions

Option value	Restriction
LW4	Not available in ACC mount.
WR, BR	Not available with finishes.
PM	Supplied with 10" supply and dimming connections.
ACC, ACC180	White cord supplied with white housings. All other finishes supplied with black cord.
SF	Must specify voltage 120V or 277V.
NPP16D, NPP16DER, NPS80EZ, NPS80EZER	Specify voltage. ER for use with generator supply EM power. Will require an emergency hot feed and normal hot feed. Interface remote mounted. Access panel (supplied by others) recommended. See UL 924 Sequence of Operation table.
WL	Not available with ACC & ACC180 mounting options.
Architectural Colors	Additional architectural colors available; see www.lithonia.com/archcolors.
CYS, CRS	Color and length of stem must be specified (from 6" to 240" in even increments in maximum sections of 48"). Ex.: CYS06 DWHG. Ceiling attachment for interior use. Consult factory for exterior use.
SDT 347/120 75VA	Must be field-installed to an accessible remote-mounted junction box

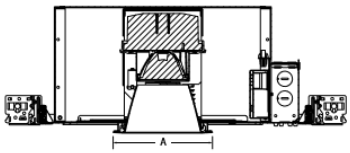
Bevel



A Dimension:
Self Flanged: 5.7"
Flangeless: 4.9"

FEATURES

SPOT ON! OPTICS

- 45° Visual cutoff to source and source image
- Field Interchangeable TIR Optics in 11 distributions including a Wide Batwing distribution for general illumination
- Accommodates up to 2 beam control lenses or filters

TRU-LINE™ PRECISION INSTALLATION

- Patented aperture translation features +/- ½" of translation ensures perfect fixture-to-fixture alignment (US Patent 8,277,090)
- Robust Pro-VI™ bar hangers provide robust, non-binding action. (US Patent 8,038,113)

EXCEPTIONAL PERFORMANCE FROM 4-INCH APERTURE

- Up to 3258 lumens delivered!
- Exceptionally consistent color with < 2SDCM for Static White & Tunable White; <1SDCM for WarmDim
- Excellent color rendition with 95+ CRI | 90+ R9 Available
- WarmDim® option mimics halogen dimming (3000K-1800K)
- Tunable White CCT range of 5000K –2700K

REFLECTOR FINISHES

BEVEL FINISHES

ORDERING NOTES

1. 32LM not available with ICAT and CP.
2. 95CRI available on 27K and 30K only. Contact factory for other CCT/CRI combinations.
3. For WDIM, 10D only available with 08LM and 12LM; 15D only available with 15LM and 17LM.
4. MVOLT standard on GZ1, EZ1, EZB, ECOD, EDXB, EDAB, EDABT8, NLT (unless NLIGHT). Must be 120 for FPC.
5. CP or ICAT not available with 17LM WDIM or 22LM TUWH
6. Must specify 120 or 277 volts for NLIGHT; MVOLT for NLT. NLIGHT only available with EZ1, EZB (for static white) or GZ1 (for warmDim). NLT not available with CP.
7. E6WT20R not available with WDIM, TUWH, EDXB, CP, ICAT, or NLIGHT.
8. Must specify FMA4 or SFM4 option.
9. Specify finish: B = Black, W = White.

PRODUCT SPECIFICATIONS

FIELD INTERCHANGEABLE LED LIGHT ENGINE

- Future proof and easy to maintain-serviceable from below the ceiling

Static White:

- <2SDCMBinning
- 2700K|3000K|3500K|4000K CCT
- 80 & 90CRI available for all CCTs
- 95+ CRI (>90 R9) available for 2700K, 3000K

WarmDim:

- Proprietary WarmDim technology mimics halogen,with CCT shifting from 3000K to 1800K when dimmed.
- <1SDCM Binning, 90+CRI

Tunable White:

- Tunable CCT range 5000K to 2700K
- <2 SDCM Binning, 90+ CRI

SPOT-ON! PRECISION OPTICS

- 45° Visual cutoff to source and source image
- Field Interchangeable TIR Optics delivering high centerbeam downlighting in 12° FWHM to 55° FWHM.
- Available with a wide batwing distribution for general illumination with up to 1.1 S/MH ratio.
- Patented self-adjusting optic holder accommodates up to 2 beam control lenses or filters (US Patent 8,950,911).
- UGR is zero for fixtures aimed at nadir with a cut-off equal to or less than 60°, per CIE 117-1996 Discomfort Glare in Interior Lighting. UGR FAQs

HIGH QUALITY TRIMS

- Available with die cast bevels and spun aluminum reflectors.
- Available in Self Flanged and Flangeless
- Must Specify FMA4 for gypsum flangeless installation
- Must specify SFM4 for wood, stone, tile flangeless installation

FIELD REPLACEABLE DRIVER

- Accommodates 120-277V input and multiple control protocols down
- Dims without perceived flicker to <1% depending on driver specified
- Field replaceable without tools from below the ceiling
- >0.9 Power Factor

BUY AMERICAN ACT

- This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
- Please refer to www.acuitybrands.com/resources/buy-american for additional information.

WARRANTY & RATED LIFE

- LED is rated for >50,000 hours at 70% lumen maintenance
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

EMERGENCY BATTERY

- Provides a minimum of 700 lumens (4DP, 3000K, 80CRI) for minimum duration of 90 minutes.
- Accessible below ceiling for simple service; Self-Testing
- Supplied with Class-2 plenum rated remote test switch
- CEC T20 Compliant

NEW CONSTRUCTION MOUNTING

- Features patented (US Patent 8,038,113) Pro-Vl™ bar hanger system offering compatible with wood stud and T-bar
- All fixtures also feature vertically adjustable mounting brackets (butterfly brackets)
- Centerline indicators on plaster frame and patented (US Patent 8,277,090) Tru-Line™ Platform featuring +/- ½" translation aids fixture alignment after installation, prior to finishing the ceiling.

JUNCTION BOX

- Rated for (4) No. 12 AWG 90°C through branch circuit conductors.
- Includes (6) ½", (1) ¾", (4) Non-metallic sheathed cable knock-outs.
- Push-in electrical connectors for field connections.

CODES & LABELS

- UL & cUL listed for through branch wiring, damp location
- Meets energy code Air Leakage requirements per ASTM E283
- ENERGY STAR® certified with select trims and housings
- Can be used to comply with Title 24, Part 6 with select trims and housings. Reference T24 JA-8 database for list of compliant housings and trims.
- ICAT Static White housings are rated for direct contact with insulation, including open and closed cell spray foam* with a maximum R-value of 7.2R/in. This allows use in ceiling cavities insulated up to R60.
- ICAT WarmDim and Tunable White housings are rated for direct contact with insulation, including open cell spray foam* with a maximum R-value of 3.8R/in. They are not suitable for use with closed cell spray foam. *Note: Options: "12LM WDIM", "ECOD", "EDXB", "NLT" & "NLIGHT" are excluded and not suitable for use with spray foam insulation.
- Union made

CEILING THICKNESS

- Accommodates ½" to 2" ceiling thickness

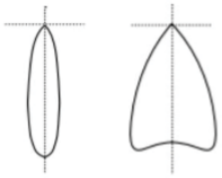
A+ CAPABLE LUMINAIRE

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning, when used with Acuity Brands controls products.

- All configurations of this luminaire are calibrated and tested to meet the Acuity Brand's specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

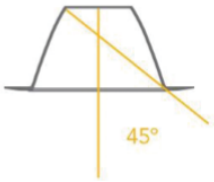
To learn more about Acuity A+ standards, specifications and testing, visit www.acuitybrands.com/aplus.

Spot On! Precision Optics



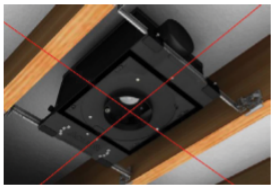
Smooth striation-free beam with high centerbeam or wide batwing distribution for general illumination

Exceptional Brightness and Glare Control



45-degree visual cutoff to source and source image

Tru-Line™ Precision Installation



Pro-Vl™ bar hangers, coupled with +/-1/2" aperture translation makes perfect installation achievable

DIMMER COMPATIBILITY

Phase Dimming (FPC) - Incandescent, Magnetic Low Voltage and Electronic Low Voltage Dimming

- Dimming range of 100% down to as low as 1% a minimum load of one fixture
- Dimming range and maximum rated load vary depending on dimmer type and model. See maximum load calculations below to identify max number of luminaires per dimmer.

Incandescent (INC) and Magnetic Low Voltage (MLV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 50%
(600/13W) X 0.5 = 23 Fixtures per Dimmer

Electronic Low Voltage (ELV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 75%
(600/13W) X 0.75 = 34 Fixtures per Dimmer

ACCESSORIES

Recessed mount fixed downlight with one (1) LED lighting source, 2500 delivered lumens, 3000K color engine, 80+ CRI, 45° optic. Downlight should operate on 120-277 voltage and be supplied with a 0-10v control option down to 0.1% and include a minimum 5-year warranty with a 55,000 hour anticipated life. Downlight to have clear anodized finish. Downlight should be CSA listed or an approved equivalent.

Feature Set

- Perfect Color™ consistency within ½-step MacAdam Ellipse
- Exceptional color rendering with 80 CRI, 90 CRI, or 95 CRI minimum
- Bounding Ray™ optical design delivers low brightness apertures for a comfortable lighting experience
- 45° visual cut-off angle to source
- Up to 90% lumen maintenance at 55,000 hours
- Wet Location optional, covered ceiling
- Easy installation and servicing with snap-in Driver
- Batwing distributions with feathered edges to provide even illumination fixture-to-fixture
- Clean beams with soft transitions from narrow spot up to wide flood distributions
- Field changeable optics available every 5°

ORDERING NOTES

1. 05LM only available with ELV or ZT. Not available with 347V.
2. 90CRI not available with 50K, 95CRI not available with 35K, 40K or 50K.
3. 347 only available with ZT and MIN1 or MIN10. Not available with nLight or Emergency options. 40LM max.
4. ZT is not available with DARK.
5. ELV only available with MIN1 and 120V.
6. DMX and DALI are only available with DARK.
7. E7WR is not available with CP housings.
8. E7W and E7WR and not available with ICAT.
9. E10W, E10WR and GTD not available with ICAT or CP.
10. GTD only available with NCH and ZT, ELV, or EZT.
11. Not available with Trim Finishes.
12. Replace with applicable RAL number and finish when ready to order. See RAL BROCHURE for available color options.
13. For use with different reflector flange color only (i.e AR, BZR, GR, PR, WR, WTR, WMR, WRAMF). Not available with BR (black reflector) or FL or FLM (flangeless) options.
14. For use with different reflector flange color only (i.e AR, BR, BZR, GR, PR, WTR). Not available with WR, WMR, WRAMF (white reflector) or FL or FLM (flangeless) options.
15. Corrosion Resistant Powder Coat.
16. 40LM and CP requires Marked Spacing.
17. 45LM and NCH requires Marked Spacing.
18. Refer to Tech-240 for compatible dimmers.
19. FLM requires Millwork Ceiling Cutout Template accessory, IVO*FLMKIT. Millwork Router Bit accessory, IVOFLMBIT, is optional or use similar. Millwork Adapter is included.

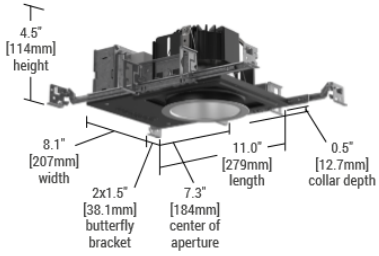
DIMENSIONAL DATA

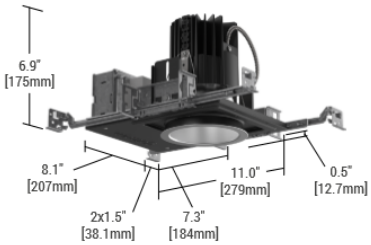
New Construction Dimensions

- Dimensions in inches [millimeters] are overall width and height (including mounting hardware Butterfly Brackets / Hanger Bars), length excludes extendable Hanger Bars.
- ½" clearance on all sides from non-combustible materials for non-IC applications required, unless marked spacing is noted otherwise.
- nLight Air Antenna extends 1.5" off the end of the j-box (lengthwise).
- Ceiling cutout for Flanged or Flangeless Trim is 5.0"
- Fixture with Marked Spacing require the following clearances (min): 24" center-to-center, 12" center to side building member, 2" overhead to building member
- Hanger Bars are extendable from 8.5" to 24".

Non-IC Housing (NCH) For 05LM to 30LM



Non-IC Housing (NCH) For 35LM to 40LM



Non-IC Housing (NCH) For 45LM – MARKED SPACING 24" x 12" x 2"

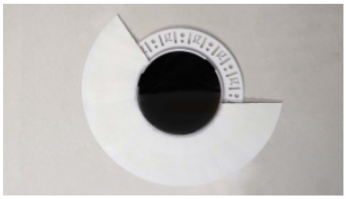
FLANGELESS

Flangeless Installation

Gotham's flangeless option utilizes a micro-thin polymer mud ring that minimizes the amount of drywall compound required to finish the ceiling. The end result is a virtually undetectable flangeless downlight installation.

The polymer mud ring is installed independent of the of the recessed frame, therefore floating with the ceiling. This innovation minimizes any surface cracks during reflector installation, ceiling movement and any future service to the recessed frame, wiring, electronics, etc.

Partially finished mud ring, showing cross-section detail.

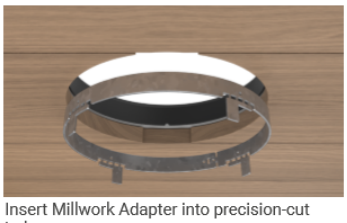


An IVO downlight requires only approximately 3" of plaster to finish.

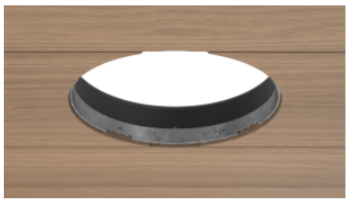
IVO with flangeless trim

Flangeless Millwork Installation

IVO's Flangeless in Millwork solution makes installation easy and precise. First, cut a hole in the Wood Ceiling using the Millwork Cutout Template (sold separately). Second, once Housing and ceiling are mounted in place, insert sheet metal Millwork Adapter (provided) lining up edge of tab with bottom of ceiling. Third, secure in place using finishing nails (provided) then remove tabs from Millwork Adapter. Last, install Trim!



Insert Millwork Adapter into precision-cut hole.



Secure with finishing nails.

Insert Trim and Module.

How to Estimate Delivered Lumens in Emergency Mode

Delivered Lumens = 1.25 x P x LPW

P = Output Power/Wattage of Emergency Battery Driver (E7WR* = 7W, E10WR* = 10W, E15WR* = 15W)

LPW = Lumen per Watt rating of luminaire based on Ordering Code selections

GOTHAM ARCHITECTURAL DOWNLIGHTING | 1 Acuity Way, Decatur, GA 30035 | P 800-705-SERV (7378) | gothamlighting.com

SPECIFICATIONS

Optical System
- Bounding Ray™ optical design delivers low brightness apertures for a comfortable lighting experience and ensures no source image up to cut-off angle, minimizing glare.
- 45° visual cut-off angle to source
- Top-Down Flash characteristics avoids flash on trim until source becomes visible.
- Batwing distributions with feathered edges to provide even illumination fixture-to-fixture. Available with 0.8, 1.0, and 1.2 spacing-to-mounting-height ratio (s/mh).
- Clean beams with soft transitions from narrow spot up to wide flood distributions with optics available every 5°
- Optics are field changeable (tool-free).

LED Light Engine
- Perfect Color™ consistency within ½-step MacAdam Ellipse using proprietary pick and place algorithm
- 90% lumen maintenance at 55,000 hours.
- Available in 80, 90, or 95 CRI. 90CRI has R9 greater than 50, 95 CRI has R9 greater than 80.

Trims
- Trims are field changeable via twist-lock (tool-free).
- Trims are available in 9 colors and 3 surface finishes (standard)
- Custom RAL and Paint colors available upon request.
- Wall Wash and Downlight Trims are designed to be interchangeable.

Electrical
- 120, 347, or Multi-Volt (MVOLT) 120-277 VAC input at 50/60 Hz
- Power Factor > 85%
- Input wires 18 AWG, 600V minimum, copper
- Fixtures are ROHS compliant

EMI/RFI
- EMI/RFI per FCC Title 47 CFR, Part 15, Class A rated standard.

Controls (Optional)
- Luminaire can be equipped with interface for nLight wired, allowing it to communicate over an nLight network. Couple with nLight-enabled sensors, power packs, or WallPods using CAT-5 cabling to create an nLight Control Zone. Link Control Zone to a Gateway directly or via a Bridge for remote status monitoring and control using SensorView software.
- Luminaire can be equipped with interface for nLight Air, allowing it to communicate over the wireless nLight control platform. Can be paired to other luminaires and wall switches through CLAIRITY+, a mobile app, which allows individual fixture control.

Dimming
- Luminaire Is capable of continuous dimming without perceivable flicker (stroboscopic) as measured by flicker index (ASNI/IES RP-16-10).
- Available dimming ranges include: 100%-10% (MIN10), 100%-1% (MIN1), and 100%-0.1% (DARK) of rated lumen output.
- Available with smooth shut off function from minimum dimming level to 0%.
- EldoLED drivers (EZT, DALI) conform to IEEE P1789 standards.
- Drivers are inaudible in 24dB environment and stable even when input voltage conditions experience typical commercial environment fluctuations.

Emergency Battery (Optional)
- Luminaires equipped with battery pack (E7W, E10W, E15W) comply with NFPA 101 (Life Safety Code) and deliver constant light output for a duration of 90 minutes minimum with AC power loss.
- Emergency battery is CEC T20 compliant.

Installation
- Patent-pending Wire-Form Mounting Springs with custom profile facilitates effortless installation, maintains tension across various ceiling thicknesses, and ensures a snug-fit of the trim to the ceiling with no sag.
- Plug-in Driver design allows for quick and easy installation and servicing.
- Light Engine, Driver, Housing, and Trim can be installed tool-free.
- Ceiling Thickness Adapters available for 1.25" to 3" thick ceilings.

Construction
- Access to Light Engine, Driver, and branch circuit conductors is available from below the ceiling without the use of tools.
- Universal Mounting Butterfly Brackets can adjust vertically 2.5" and accept various mounting bars including ¾" and 1-1/2" C Channel, ½" or ¾" Flat Strap, ½" Conduit, and ½" Angle Bars, as well as standard Hanger Bars (included).
- Hanger Bars are extendable from 8.5" to 24".
- Luminaire is constructed with 20 gauge min cold-rolled steel, galvanized steel, and aluminum.

Listings
- Fixtures are CSA certified to meet US and Canadian standards.
- Fixtures are NOM certified to meet Mexican standards
- All fixtures are manufactured in strict accordance with the appropriate and current requirements of the "Standards for Safety" per UL.
- Damp Location standard.
- Wet Location available, covered ceiling.

Photometrics
- All photometry is conducted by IESNA standard LM-79-08 in an accredited lab.
- LEDs are tested to LM-80 standards. Lumen maintenance is calculated via TM-21.

Warranty
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note:
- Actual performance may differ as a result of end-user environment and application.
- All values are design or typical values, measured under laboratory conditions at 25 °C.
- The product images shown are for illustration purposes only and may not be an exact representation of the product.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

*UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.

**Calculated using an AR (Clear reflector) with LSS (Semi-Specular) finish

UGR of zero for fixtures aimed at nadir with a cut-off equal to or less than 60deg per CIE 117-1995 Discomfort Glare in Interior Lighting. UGR FAQ

NLIGHT

nLIGHT

Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Embedded Controls

1. Install the luminaires with embedded controls
2. Install the nLight Wired wall switch
3. Connect the luminaires using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Embedded Controls

1. Install the luminaires with embedded controls
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY+ mobile app to pair the fixtures with the wall switch and if desired, customize the sensor settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

ACCESSORIES

Recessed mount adjustable downlight with one (1) LED lighting source, 2516 delivered lumens, 30k color engine, 90+ CRI, 30° optic and integral driver. Downlight should operate on 120-277 voltage and be supplied with a 0-10v control option down to .01% and include a minimum 5-year warranty with a 50,000 hour anticipated life. Downlight to have clear specular finish. Downlight should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	DIMMING

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

FEATURES

SPOT ON! OPTICS

- Field Interchangeable TIR Optics in 9 distributions
- Accommodates up to 2 beam control lenses or filters

ACU-AIM™ PRECISION AIMING

- Precision geared hot-aiming provides 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in low aperture brightness

EXCEPTIONAL PERFORMANCE FROM 4-INCH APERTURE

- Up to 3115 lumens, 27,000 CBCP Delivered!
- Exceptionally consistent color with < 2SDCM for Static White & Tunable White; <1SDCM for WarmDim
- Excellent color rendition with 95+ CRI | 90+ R9 Available
- WarmDim® option mimics halogen dimming (3000K-1800K)
- Tunable White CCT range of 5000K –2700K

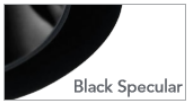
REFLECTOR FINISHES



BEVEL FINISHES

ORDERING NOTES

1. 32LM not available with ICAT and CP.
2. 95CRI available on 27K and 30K only. Contact factory for other CCT/CRI combinations.
3. For WDIM, 10D only available with 08LM and 12LM; 15D only available with 15LM and 17LM.
4. MVOLT standard on GZ1, EZ1, EZB, ECOD, EDXB, EDAB, EDABT8, NLT (unless NLIGHT). Must be 120 for FPC.
5. CP or ICAT not available with 17LM WDIM or 22LM TUWH
6. Must specify 120 or 277 volts for NLIGHT; MVOLT for NLT. NLIGHT only available with EZ1, EZB (for static white) or GZ1 (for warmDim). NLT not available with CP.
7. E6WT20R not available with WDIM, TUWH, EDXB, CP, ICAT, or NLIGHT.
8. Must specify FMA4 or SFM4 option.
9. WET not available with 4AC20.
10. Specify finish: B = Black, W = White.

PRODUCT SPECIFICATIONS

FIELD INTERCHANGEABLE LED LIGHT ENGINE
- Future proof and easy to maintain-serviceable from below the ceiling

Static White:
- <2SDCMBinning
- 2700K|3000K|3500K|4000K CCT
- 80 & 90CRI available for all CCTs
- 95+ CRI (>90 R9) available for 2700K, 3000K

WarmDim:
- Proprietary WarmDim technology mimics halogen,with CCT shifting from 3000K to 1800K when dimmed.
- <1SDCM Binning, 90+CRI

Tunable White:
- Tunable CCT range 5000K to 2700K
- <2 SDCM Binning, 90+ CRI

SPOT-ON! PRECISION OPTICS
- Field Interchangeable TIR Optics from 12° FWHM to 50° FWHM provide smooth, striation-free beams
- Patented self-adjusting optic holder accommodates up to 2 beam control lenses or filters (US Patent 8,950,911)
- UGR is zero for fixtures aimed at nadir with a cut-off equal to or less than 60°, per CIE 117-1996 Discomfort Glare in Interior Lighting. UGR FAQs

ACU-AIM™ PRECISION AIMING
- Precision Geared hot-aiming via Phillips screwdriver
- 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in maximum efficiency and low aperture brightness
- Numeric indicator marks allow contractor to pre-aim fixtures

HIGH QUALITY TRIMS
- Available with die cast bevels and spun aluminum reflectors.
- Available in Self Flanged and Flangeless
- Must Specify FMA4 for gypsum flangeless installation
- Must specify SFM4 for wood, stone, tile flangeless installation

FIELD REPLACEABLE DRIVER
- Accommodates 120-277V input and multiple control protocols down
- Dims without perceived flicker to <1% depending on driver specified
- Field replaceable without tools from below the ceiling
- >0.9 Power Factor

BUY AMERICAN ACT
- This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
- Please refer to www.acuitybrands.com/resources/buy-american for additional information.

WARRANTY & RATED LIFE
- LED is rated for >50,000 hours at 70% lumen maintenance
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

EMERGENCY BATTERY
- Provides a minimum of 700 lumens (4AC, 3000K, 80CRI) for minimum duration of 90 minutes.
- Accessible below ceiling for simple service; Self-Testing
- Supplied with Class-2 plenum rated remote test switch
- CEC T20 Compliant

NEW CONSTRUCTION MOUNTING
- Features patented (US Patent 8,038,113) Pro-VI™ bar hanger system offering compatible with wood stud and T-bar
- All fixtures also feature vertically adjustable mounting brackets (butterfly brackets)
- Centerline indicators on plaster frame and patented (US Patent 8,277,090) Tru-Line™ Platform featuring +/- ½" translation aids fixture alignment after installation, prior to finishing the ceiling.

JUNCTION BOX
- Rated for (4) No. 12 AWG 90°C through branch circuit conductors.
- Includes (6) ½", (1) ¾", (4) Non-metallic sheathed cable knock-outs.
- Push-in electrical connectors for field connections.

CODES & LABELS
- UL & cUL listed for through branch wiring, damp location
- Meets energy code Air Leakage requirements per ASTM E283
- ENERGY STAR® certified with select trims and housings
- Can be used to comply with Title 24, Part 6 with select trims and housings. Reference T24 JA-8 database for list of compliant housings and trims.
- ICAT Static White housings are rated for direct contact with insulation, including open and closed cell spray foam* with a maximum R-value of 7.2R/in. This allows use in ceiling cavities insulated up to R60.
- ICAT WarmDim and Tunable White housings are rated for direct contact with insulation, including open cell spray foam* with a maximum R-value of 3.8R/in. They are not suitable for use with closed cell spray foam. *Note: Options: "12LM WDIM", "ECOD", "EDXB", "NLT" & "NLIGHT" are excluded and not suitable for use with spray foam insulation.
- Union made

CEILING THICKNESS
- Accommodates ½" to 2" ceiling thickness

A+ CAPABLE LUMINAIRE
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning, when used with Acuity Brands controls products.
- All configurations of this luminaire are calibrated and tested to meet the Acuity Brand's specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications and testing, visit www.acuitybrands.com/aplus.

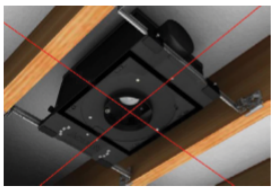
Spot On! Precision Optics

Smooth, striation-free beams with field-interchangeable TIR optics from 12° to 50°

Acu-Aim™ Precision Aiming

Precision geared hot-aiming is effortless. Centerbeam optics results in lower aperture brightness

Tru-Line™ Precision Installation



Pro-VI™ bar hangers, coupled with +/-1/2" aperture translation makes perfect installation achievable

DIMMER COMPATIBILITY

Phase Dimming (FPC) - Incandescent, Magnetic Low Voltage and Electronic Low Voltage Dimming

- Dimming range of 100% down to as low as 1% a minimum load of one fixture
- Dimming range and maximum rated load vary depending on dimmer type and model. See maximum load calculations below to identify max number of luminaires per dimmer.

Incandescent (INC) and Magnetic Low Voltage (MLV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 50%
(600/13W) X 0.5 = 23 Fixtures per Dimmer

Electronic Low Voltage (ELV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 75%
(600/13W) X 0.75 = 34 Fixtures per Dimmer

ACCESSORIES

Recessed mount adjustable downlight with one (1) LED lighting source, 2516 delivered lumens, 30k color engine, 90+ CRI, 35° optic and integral driver. Downlight should operate on 120-277 voltage and be supplied with a 0-10v control option down to .01% and include a minimum 5-year warranty with a 50,000 hour anticipated life. Downlight to have clear specular finish. Downlight should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	DIMMING

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

FEATURES

SPOT ON! OPTICS

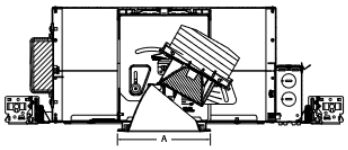
- Field Interchangeable TIR Optics in 9 distributions
- Accommodates up to 2 beam control lenses or filters

ACU-AIM™ PRECISION AIMING

- Precision geared hot-aiming provides 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in low aperture brightness

EXCEPTIONAL PERFORMANCE FROM 4-INCH APERTURE

- Up to 3115 lumens, 27,000 CBCP Delivered!
- Exceptionally consistent color with < 2SDCM for Static White & Tunable White; <1SDCM for WarmDim
- Excellent color rendition with 95+ CRI | 90+ R9 Available
- WarmDim® option mimics halogen dimming (3000K-1800K)
- Tunable White CCT range of 5000K –2700K



A Dimension:
Self Flanged: 5.7"
Flangeless: 4.9"

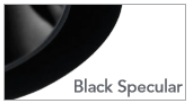
REFLECTOR FINISHES



BEVEL FINISHES

ORDERING NOTES

1. 32LM not available with ICAT and CP.
2. 95CRI available on 27K and 30K only. Contact factory for other CCT/CRI combinations.
3. For WDIM, 10D only available with 08LM and 12LM; 15D only available with 15LM and 17LM.
4. MVOLT standard on GZ1, EZ1, EZB, ECOD, EDXB, EDAB, EDABT8, NLT (unless NLIGHT). Must be 120 for FPC.
5. CP or ICAT not available with 17LM WDIM or 22LM TUWH
6. Must specify 120 or 277 volts for NLIGHT; MVOLT for NLT. NLIGHT only available with EZ1, EZB (for static white) or GZ1 (for warmDim). NLT not available with CP.
7. E6WT20R not available with WDIM, TUWH, EDXB, CP, ICAT, or NLIGHT.
8. Must specify FMA4 or SFM4 option.
9. WET not available with 4AC20.
10. Specify finish: B = Black, W = White.

ACCESSORIES

Beam Control Lenses & Filters

DIFF 300	Diffuse Spread lens
SOLITE 300	Solite Uniformity Lens
PRISM 300	Prismatic Lens
LSPREAD 300	Linear Spread Lens
HCLBL 300	Hexcell Louver
UVF 300	UV Filter Lens
DCCF 300 HAL4250	Daylight Blue Correction

Replacement Optics

Static White Optics

PRODUCT SPECIFICATIONS

FIELD INTERCHANGEABLE LED LIGHT ENGINE
- Future proof and easy to maintain-serviceable from below the ceiling

Static White:
- <2SDCMBinning
- 2700K|3000K|3500K|4000K CCT
- 80 & 90CRI available for all CCTs
- 95+ CRI (>90 R9) available for 2700K, 3000K

WarmDim:
- Proprietary WarmDim technology mimics halogen,with CCT shifting from 3000K to 1800K when dimmed.
- <1SDCM Binning, 90+CRI

Tunable White:
- Tunable CCT range 5000K to 2700K
- <2 SDCM Binning, 90+ CRI

SPOT-ON! PRECISION OPTICS
- Field Interchangeable TIR Optics from 12° FWHM to 50° FWHM provide smooth, striation-free beams
- Patented self-adjusting optic holder accommodates up to 2 beam control lenses or filters (US Patent 8,950,911)
- UGR is zero for fixtures aimed at nadir with a cut-off equal to or less than 60°, per CIE 117-1996 Discomfort Glare in Interior Lighting. UGR FAQs

ACU-AIM™ PRECISION AIMING
- Precision Geared hot-aiming via Phillips screwdriver
- 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in maximum efficiency and low aperture brightness
- Numeric indicator marks allow contractor to pre-aim fixtures

HIGH QUALITY TRIMS
- Available with die cast bevels and spun aluminum reflectors.
- Available in Self Flanged and Flangeless
- Must Specify FMA4 for gypsum flangeless installation
- Must specify SFM4 for wood, stone, tile flangeless installation

FIELD REPLACEABLE DRIVER
- Accommodates 120-277V input and multiple control protocols down
- Dims without perceived flicker to <1% depending on driver specified
- Field replaceable without tools from below the ceiling
- >0.9 Power Factor

BUY AMERICAN ACT
- This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
- Please refer to www.acuitybrands.com/resources/buy-american for additional information.

WARRANTY & RATED LIFE
- LED is rated for >50,000 hours at 70% lumen maintenance
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

EMERGENCY BATTERY
- Provides a minimum of 700 lumens (4AC, 3000K, 80CRI) for minimum duration of 90 minutes.
- Accessible below ceiling for simple service; Self-Testing
- Supplied with Class-2 plenum rated remote test switch
- CEC T20 Compliant

NEW CONSTRUCTION MOUNTING
- Features patented (US Patent 8,038,113) Pro-VI™ bar hanger system offering compatible with wood stud and T-bar
- All fixtures also feature vertically adjustable mounting brackets (butterfly brackets)
- Centerline indicators on plaster frame and patented (US Patent 8,277,090) Tru-Line™ Platform featuring +/- ½" translation aids fixture alignment after installation, prior to finishing the ceiling.

JUNCTION BOX
- Rated for (4) No. 12 AWG 90°C through branch circuit conductors.
- Includes (6) ½", (1) ¾", (4) Non-metallic sheathed cable knock-outs.
- Push-in electrical connectors for field connections.

CODES & LABELS
- UL & cUL listed for through branch wiring, damp location
- Meets energy code Air Leakage requirements per ASTM E283
- ENERGY STAR® certified with select trims and housings
- Can be used to comply with Title 24, Part 6 with select trims and housings. Reference T24 JA-8 database for list of compliant housings and trims.
- ICAT Static White housings are rated for direct contact with insulation, including open and closed cell spray foam* with a maximum R-value of 7.2R/in. This allows use in ceiling cavities insulated up to R60.
- ICAT WarmDim and Tunable White housings are rated for direct contact with insulation, including open cell spray foam* with a maximum R-value of 3.8R/in. They are not suitable for use with closed cell spray foam. *Note: Options: "12LM WDIM", "ECOD", "EDXB", "NLT" & "NLIGHT" are excluded and not suitable for use with spray foam insulation.
- Union made

CEILING THICKNESS
- Accommodates ½" to 2" ceiling thickness

A+ CAPABLE LUMINAIRE
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning, when used with Acuity Brands controls products.
- All configurations of this luminaire are calibrated and tested to meet the Acuity Brand's specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications and testing, visit www.acuitybrands.com/aplus.

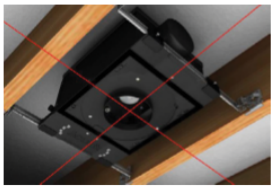
Spot On! Precision Optics

Smooth, striation-free beams with field-interchangeable TIR optics from 12° to 50°

Acu-Aim™ Precision Aiming

Precision geared hot-aiming is effortless. Centerbeam optics results in lower aperture brightness

Tru-Line™ Precision Installation



Pro-VI™ bar hangers, coupled with +/-1/2" aperture translation makes perfect installation achievable

In vertical aiming applications, aim point (X) is determined by dividing distance from the wall (D) by the tangent of the desired aim angle (A) (0.5774 for 30°, 1.0 for 45°).
CBCP • Centerbeam candlepower FC • Footcandles at beam center (aim point)

DIMMER COMPATIBILITY

Phase Dimming (FPC) - Incandescent, Magnetic Low Voltage and Electronic Low Voltage Dimming

- Dimming range of 100% down to as low as 1% a minimum load of one fixture
- Dimming range and maximum rated load vary depending on dimmer type and model. See maximum load calculations below to identify max number of luminaires per dimmer.

Incandescent (INC) and Magnetic Low Voltage (MLV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 50%
(600/13W) X 0.5 = 23 Fixtures per Dimmer

Electronic Low Voltage (ELV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 75%
(600/13W) X 0.75 = 34 Fixtures per Dimmer

ACCESSORIES

Recessed mount adjustable downlight with one (1) LED lighting source, 2700 delivered lumens, 3000K color engine, 90+ CRI, 45° optic and integral driver. Downlight should operate on 120-277 voltage and be supplied with a 0-10v control option down to .01% and include a minimum 5-year warranty with a 50,000 hour anticipated life. Downlight to have clear specular finish. Downlight should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

ACULUX®

AX4 SERIES | 4" APERTURE

Adjustable Accent | 1200 – 3200 Lumens

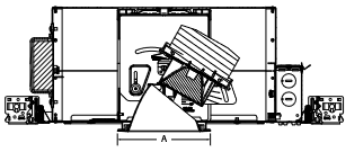
Angle-Cut Reflector

Bevel



A Dimension:
Self Flanged: 5.7"
Flangeless: 4.9"

FEATURES

SPOT ON! OPTICS

- Field Interchangeable TIR Optics in 9 distributions
- Accommodates up to 2 beam control lenses or filters

ACU-AIM™ PRECISION AIMING

- Precision geared hot-aiming provides 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in low aperture brightness

EXCEPTIONAL PERFORMANCE FROM 4-INCH APERTURE

- Up to 3115 lumens, 27,000 CBCP Delivered!
- Exceptionally consistent color with < 2SDCM for Static White & Tunable White; <1SDCM for WarmDim
- Excellent color rendition with 95+ CRI | 90+ R9 Available
- WarmDim® option mimics halogen dimming (3000K-1800K)
- Tunable White CCT range of 5000K –2700K

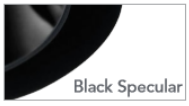
REFLECTOR FINISHES



BEVEL FINISHES

ORDERING NOTES

1. 32LM not available with ICAT and CP.
2. 35K available in 80CRI and 90CRI only. 40K available in 80CRI only. Contact factory for other CCT/CRI combinations.
3. For WDIM, 10D only available with 08LM and 12LM; 15D only available with 15LM and 17LM.
4. MVOLT standard on GZ1, EZ1, EZB, ECOD, EDXB, EDAB, EDABT8, NLT (unless NLIGHT). Must be 120 for FPC.
5. CP or ICAT not available with 17LM WDIM or 22LM TUWH
6. Must specify 120 or 277 volts for NLIGHT; MVOLT for NLT. NLIGHT only available with EZ1, EZB (for static white) or GZ1 (for warmDim). NLT not available with CP.
7. E6WT20R not available with WDIM, TUWH, EDXB, CP, ICAT, or NLIGHT.
8. Must specify FMA4 or SFM4 option.
9. WET not available with 4AC20.
10. Specify finish: B = Black, W = White.

PRODUCT SPECIFICATIONS

FIELD INTERCHANGEABLE LED LIGHT ENGINE
- Future proof and easy to maintain-serviceable from below the ceiling

Static White:
- <2SDCMBinning
- 2700K|3000K|3500K|4000K CCT
- 80+CRI available for all CCTs
- 90+CRI available for 2700K,3000K,3500K
- 95+ CRI (>90 R9) available for 2700K, 3000K

WarmDim:
- Proprietary WarmDim technology mimics halogen,with CCT shifting from 3000K to 1800K when dimmed.
- <1SDCM Binning, 90+CRI

Tunable White:
- Tunable CCT range 5000K to 2700K
- <2 SDCM Binning, 90+ CRI

SPOT-ON! PRECISION OPTICS
- Field Interchangeable TIR Optics from 12° FWHM to 50° FWHM provide smooth, striation-free beams
- Patented self-adjusting optic holder accommodates up to 2 beam control lenses or filters (US Patent 8,950,911)
- UGR is zero for fixtures aimed at nadir with a cut-off equal to or less than 60°, per CIE 117-1996 Discomfort Glare in Interior Lighting. UGR FAQs

ACU-AIM™ PRECISION AIMING
- Precision Geared hot-aiming via Phillips screwdriver
- 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in maximum efficiency and low aperture brightness
- Numeric indicator marks allow contractor to pre-aim fixtures

HIGH QUALITY TRIMS
- Available with die cast bevels and spun aluminum reflectors.
- Available in Self Flanged and Flangeless
- Must Specify FMA4 for gypsum flangeless installation
- Must specify SFM4 for wood, stone, tile flangeless installation

FIELD REPLACEABLE DRIVER
- Accommodates 120-277V input and multiple control protocols down
- Dims without perceived flicker to <1% depending on driver specified
- Field replaceable without tools from below the ceiling
- >0.9 Power Factor

BUY AMERICAN ACT
- This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
- Please refer to www.acuitybrands.com/resources/buy-american for additional information.

WARRANTY & RATED LIFE
- LED is rated for >50,000 hours at 70% lumen maintenance
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

EMERGENCY BATTERY
- Provides a minimum of 700 lumens (4AC, 3000K, 80CRI) for minimum duration of 90 minutes.
- Accessible below ceiling for simple service; Self-Testing
- Supplied with Class-2 plenum rated remote test switch
- CEC T20 Compliant

NEW CONSTRUCTION MOUNTING
- Features patented (US Patent 8,038,113) Pro-VI™ bar hanger system offering compatible with wood stud and T-bar
- All fixtures also feature vertically adjustable mounting brackets (butterfly brackets)
- Centerline indicators on plaster frame and patented (US Patent 8,277,090) Tru-Line™ Platform featuring +/- ½" translation aids fixture alignment after installation, prior to finishing the ceiling.

JUNCTION BOX
- Rated for (4) No. 12 AWG 90°C through branch circuit conductors.
- Includes (6) ½", (1) ¾", (4) Non-metallic sheathed cable knock-outs.
- Push-in electrical connectors for field connections.

CODES & LABELS
- UL & cUL listed for through branch wiring, damp location
- Meets energy code Air Leakage requirements per ASTM E283
- ENERGY STAR® certified with select trims and housings
- Can be used to comply with Title 24, Part 6 with select trims and housings. Reference T24 JA-8 database for list of compliant housings and trims.
- ICAT Static White housings are rated for direct contact with insulation, including open and closed cell spray foam* with a maximum R-value of 7.2R/in. This allows use in ceiling cavities insulated up to R60.
- ICAT WarmDim and Tunable White housings are rated for direct contact with insulation, including open cell spray foam* with a maximum R-value of 3.8R/in. They are not suitable for use with closed cell spray foam. *Note: Options: "12LM WDIM", "ECOD", "EDXB", "NLT" & "NLIGHT" are excluded and not suitable for use with spray foam insulation.
- Union made

CEILING THICKNESS
- Accommodates ½" to 2" ceiling thickness

A+ CAPABLE LUMINAIRE
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning, when used with Acuity Brands controls products.
- All configurations of this luminaire are calibrated and tested to meet the Acuity Brand's specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications and testing, visit www.acuitybrands.com/aplus.

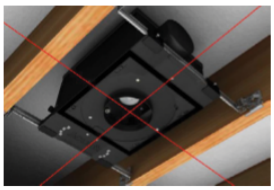
Spot On! Precision Optics

Smooth, striation-free beams with field-interchangeable TIR optics from 12° to 50°

Acu-Aim™ Precision Aiming

Precision geared hot-aiming is effortless. Centerbeam optics results in lower aperture brightness

Tru-Line™ Precision Installation



Pro-VI™ bar hangers, coupled with +/-1/2" aperture translation makes perfect installation achievable

DIMMER COMPATIBILITY

Phase Dimming (FPC) - Incandescent, Magnetic Low Voltage and Electronic Low Voltage Dimming

- Dimming range of 100% down to as low as 1% a minimum load of one fixture
- Dimming range and maximum rated load vary depending on dimmer type and model. See maximum load calculations below to identify max number of luminaires per dimmer.

Incandescent (INC) and Magnetic Low Voltage (MLV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 50%
(600/13W) X 0.5 = 23 Fixtures per Dimmer

Electronic Low Voltage (ELV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 75%
(600/13W) X 0.75 = 34 Fixtures per Dimmer

ACCESSORIES

Recessed mount adjustable downlight with one (1) LED lighting source, 2516 delivered lumens, 30k color engine, 90+ CRI, 50x20 optic and integral driver. Downlight should operate on 120-277 voltage and be supplied with a 0-10v control option down to .01% and include a minimum 5-year warranty with a 50,000 hour anticipated life. Downlight to have clear specular finish. Downlight should be UL listed for damp use or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	DIMMING

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

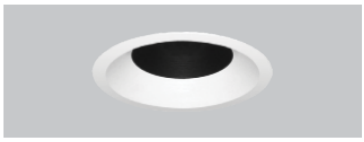
ACULUX®

AX4 SERIES | 4" APERTURE

Adjustable Accent | 1200 – 3200 Lumens

TRIM STYLES

Angle-Cut Reflector



Bevel

FEATURES

SPOT ON! OPTICS

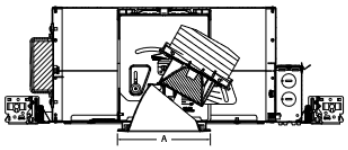
- Field Interchangeable TIR Optics in 9 distributions
- Accommodates up to 2 beam control lenses or filters

ACU-AIM™ PRECISION AIMING

- Precision geared hot-aiming provides 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in low aperture brightness

EXCEPTIONAL PERFORMANCE FROM 4-INCH APERTURE

- Up to 3115 lumens, 27,000 CBCP Delivered!
- Exceptionally consistent color with < 2SDCM for Static White & Tunable White; <1SDCM for WarmDim
- Excellent color rendition with 95+ CRI | 90+ R9 Available
- WarmDim® option mimics halogen dimming (3000K-1800K)
- Tunable White CCT range of 5000K –2700K



A Dimension:
Self Flanged: 5.7"
Flangeless: 4.9"

*Performance with 4AC trim at 30K | 80CRI (Static White), 30K | 90CRI (WarmDim) & 50K | 90CRI (Tunable White)
Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25°C

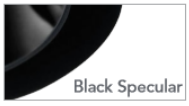
REFLECTOR FINISHES



BEVEL FINISHES

ORDERING NOTES

1. 32LM not available with ICAT and CP.
2. 95CRI available on 27K and 30K only. Contact factory for other CCT/CRI combinations.
3. For WDIM, 10D only available with 08LM and 12LM; 15D only available with 15LM and 17LM.
4. MVOLT standard on GZ1, EZ1, EZB, ECOD, EDXB, EDAB, EDABT8, NLT (unless NLIGHT). Must be 120 for FPC.
5. CP or ICAT not available with 17LM WDIM or 22LM TUWH
6. Must specify 120 or 277 volts for NLIGHT; MVOLT for NLT. NLIGHT only available with EZ1, EZB (for static white) or GZ1 (for warmDim). NLT not available with CP.
7. E6WT20R not available with WDIM, TUWH, EDXB, CP, ICAT, or NLIGHT.
8. Must specify FMA4 or SFM4 option.
9. WET not available with 4AC20.
10. Specify finish: B = Black, W = White.

ACCESSORIES

Beam Control Lenses & Filters

DIFF 300	Diffuse Spread lens
SOLITE 300	Solite Uniformity Lens
PRISM 300	Prismatic Lens

PRODUCT SPECIFICATIONS

FIELD INTERCHANGEABLE LED LIGHT ENGINE
- Future proof and easy to maintain-serviceable from below the ceiling

Static White:
- <2SDCMBinning
- 2700K|3000K|3500K|4000K CCT
- 80 & 90CRI available for all CCTs
- 95+ CRI (>90 R9) available for 2700K, 3000K

WarmDim:
- Proprietary WarmDim technology mimics halogen,with CCT shifting from 3000K to 1800K when dimmed.
- <1SDCM Binning, 90+CRI

Tunable White:
- Tunable CCT range 5000K to 2700K
- <2 SDCM Binning, 90+ CRI

SPOT-ON! PRECISION OPTICS
- Field Interchangeable TIR Optics from 12° FWHM to 50° FWHM provide smooth, striation-free beams
- Patented self-adjusting optic holder accommodates up to 2 beam control lenses or filters (US Patent 8,950,911)
- UGR is zero for fixtures aimed at nadir with a cut-off equal to or less than 60°, per CIE 117-1996 Discomfort Glare in Interior Lighting. UGR FAQs

ACU-AIM™ PRECISION AIMING
- Precision Geared hot-aiming via Phillips screwdriver
- 370° horizontal, 45° vertical aiming
- Optimized center beam optics translates center of the beam through the center of the aperture resulting in maximum efficiency and low aperture brightness
- Numeric indicator marks allow contractor to pre-aim fixtures

HIGH QUALITY TRIMS
- Available with die cast bevels and spun aluminum reflectors.
- Available in Self Flanged and Flangeless
- Must Specify FMA4 for gypsum flangeless installation
- Must specify SFM4 for wood, stone, tile flangeless installation

FIELD REPLACEABLE DRIVER
- Accommodates 120-277V input and multiple control protocols down
- Dims without perceived flicker to <1% depending on driver specified
- Field replaceable without tools from below the ceiling
- >0.9 Power Factor

BUY AMERICAN ACT
- This product is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
- Please refer to www.acuitybrands.com/resources/buy-american for additional information.

WARRANTY & RATED LIFE
- LED is rated for >50,000 hours at 70% lumen maintenance
- 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

EMERGENCY BATTERY
- Provides a minimum of 700 lumens (4AC, 3000K, 80CRI) for minimum duration of 90 minutes.
- Accessible below ceiling for simple service; Self-Testing
- Supplied with Class-2 plenum rated remote test switch
- CEC T20 Compliant

NEW CONSTRUCTION MOUNTING
- Features patented (US Patent 8,038,113) Pro-VI™ bar hanger system offering compatible with wood stud and T-bar
- All fixtures also feature vertically adjustable mounting brackets (butterfly brackets)
- Centerline indicators on plaster frame and patented (US Patent 8,277,090) Tru-Line™ Platform featuring +/- ½" translation aids fixture alignment after installation, prior to finishing the ceiling.

JUNCTION BOX
- Rated for (4) No. 12 AWG 90°C through branch circuit conductors.
- Includes (6) ½", (1) ¾", (4) Non-metallic sheathed cable knock-outs.
- Push-in electrical connectors for field connections.

CODES & LABELS
- UL & cUL listed for through branch wiring, damp location
- Meets energy code Air Leakage requirements per ASTM E283
- ENERGY STAR® certified with select trims and housings
- Can be used to comply with Title 24, Part 6 with select trims and housings. Reference T24 JA-8 database for list of compliant housings and trims.
- ICAT Static White housings are rated for direct contact with insulation, including open and closed cell spray foam* with a maximum R-value of 7.2R/in. This allows use in ceiling cavities insulated up to R60.
- ICAT WarmDim and Tunable White housings are rated for direct contact with insulation, including open cell spray foam* with a maximum R-value of 3.8R/in. They are not suitable for use with closed cell spray foam. *Note: Options: "12LM WDIM", "ECOD", "EDXB", "NLT" & "NLIGHT" are excluded and not suitable for use with spray foam insulation.
- Union made

CEILING THICKNESS
- Accommodates ½" to 2" ceiling thickness

A+ CAPABLE LUMINAIRE
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning, when used with Acuity Brands controls products.
- All configurations of this luminaire are calibrated and tested to meet the Acuity Brand's specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications and testing, visit www.acuitybrands.com/aplus.

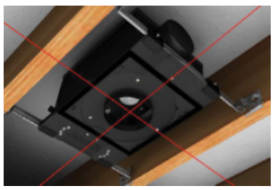
Spot On! Precision Optics

Smooth, striation-free beams with field-interchangeable TIR optics from 12° to 50°

Acu-Aim™ Precision Aiming

Precision geared hot-aiming is effortless. Centerbeam optics results in lower aperture brightness

Tru-Line™ Precision Installation



Pro-VI™ bar hangers, coupled with +/-1/2" aperture translation makes perfect installation achievable

In vertical aiming applications, aim point (X) is determined by dividing distance from the wall (D) by the tangent of the desired aim angle (A) (0.5774 for 30°, 1.0 for 45°).

DIMMER COMPATIBILITY

Phase Dimming (FPC) - Incandescent, Magnetic Low Voltage and Electronic Low Voltage Dimming

- Dimming range of 100% down to as low as 1% a minimum load of one fixture
- Dimming range and maximum rated load vary depending on dimmer type and model. See maximum load calculations below to identify max number of luminaires per dimmer.

Incandescent (INC) and Magnetic Low Voltage (MLV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 50%
(600/13W) X 0.5 = 23 Fixtures per Dimmer

Electronic Low Voltage (ELV)
Example: Fixture Rating = 13W; Dimmer Rating = 600W
Equivalent Incandescent Load (EIL) = 75%
(600/13W) X 0.75 = 34 Fixtures per Dimmer

ACCESSORIES

Recessed mount fixed downlight with one (1) LED lighting source, 1045 delivered lumens, 3000K color engine, 80+ CRI, 55° optic and integral driver. Downlight should operate on MVOLT voltage and be supplied with a 0-10v control option with a 60,000 hour anticipated life. Downlight to have specular finish. Downlight should be UL listed for wet use or an approved equivalent.

FEATURES & SPECIFICATIONS

INTENDED USE — Typical applications include corridors, lobbies, conference rooms and private offices.

CONSTRUCTION — Galvanized steel mounting/plaster frame; galvanized steel junction box with bottom-hinged access covers and spring latches. Reflectors are retained by torsion springs.

Vertically adjustable mounting brackets with commercial bar hangers provide 3-3/4" total adjustment.

Two combination 1/2"-3/4" and four 1/2" knockouts for straight-through conduit runs. Capacity: 8 (4 in, 4 out). No. 12 AWG conductors, rated for 90°C.

Accommodates 12"-24" joist spacing.

Passive cooling thermal management for 25°C standard; high ambient (40°C) option available. Light engine and drivers are accessible from above or below ceiling.

Max ceiling thickness 1-1/2".

OPTICS — LEDs are binned to a 3-step MacAdam Ellipse; 80 CRI minimum. 90 CRI optional.

LED light source concealed with diffusing optical lens.

General illumination lighting with 1.0 S/MH and 55° cutoff to source and source image.

Self-flanged anodized reflectors in specular, semi-specular, or matte diffuse finishes. Also available in white and black painted reflectors.

UGR — UGR is zero for fixtures aimed at nadir with a cut-off equeal to or less than 60deg per CIE 117-1996 Discomfort Galre in Interior Lighting. UGR FAQs

ELECTRICAL — Multi-volt (120-277V, 50/60Hz) 0-10V dimming drivers mounted to junction box, 10% or 1% minimum dimming level available.

0-10V dimming fixture requires two (2) additional low-voltage wires to be pulled.

LUMEN MAINTENANCE — 70% lumen maintenance at 60,000 hours.

LISTINGS — Certified to US and Canadian safety standards. Wet location standard (covered ceiling). IP55 rated. Drivers are ROHS compliant

GOVERNMENT PROCUREMENT — BAA – Product with the BAA option qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product with the BAA option also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA – Build America Buy America: Product with the BAA option also qualifies as produced in the United States under the definitions of the Build America, Buy America Act.

Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

All the above are UL 924 Listed products that are certified for field install external/remote to the fixture.
*Minimum delivered lumen output to assist in product selection for increased fixture mounting height.
The CP10 delivered emergency illuminations outperforms legacy 1400 lumen fluorescent emergency ballasts.
Please contact us at techsupport@iotaengineering.com for any Emergency Battery related questions.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

HOW TO ESTIMATE DELIVERED LUMENS IN EMERGENCY MODE

Use the formula below to estimate the delivered lumens in emergency mode

Delivered Lumens = 1.25 x P x LPW

P = Ouput power of emergency driver. P = 10W

LPW = Lumen per watt rating of the luminaire. This information is available on the ABL luminaire spec sheet.
The LPW rating is also available at Designlight Consortium.

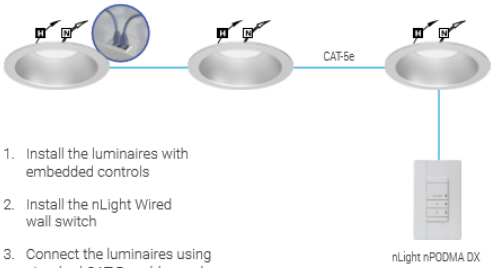
Single Lighting Controls Platform for Indoor & Outdoor Spaces

nLight® is your networked lighting controls platform, for indoor and outdoor applications, providing wired or wireless options. Scaling from room to campus-wide applications, it is the one platform that grows with your business today and tomorrow; to seamlessly address energy cost optimization, building code compliance, improved occupant comfort, and much more. nLight also interfaces with DALI®, BACnet®, DMX and additional third-party devices.

nLightcontrols.com

Wired Embedded Controls



1. Install the luminaires with embedded controls
2. Install the nLight Wired wall switch
3. Connect the luminaires using standard CAT-5e cables and the controls devices will automatically discover each other and work (plug and play)

Wireless Embedded Controls

1. Install the luminaires with embedded controls
2. Install the nLight AIR battery-powered wall switch
3. Use CLAIRITY+ mobile app to pair the fixtures with the wall switch and if desired, customize the sensor settings

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

FEATURES & SPECIFICATIONS

INTENDED USE — Typical applications include corridors, lobbies, conference rooms and private offices.

CONSTRUCTION — Galvanized steel mounting/plaster frame; galvanized steel junction box with bottom-hinged access covers and spring latches. Reflectors are retained by torsion springs.

Vertically adjustable mounting brackets with commercial bar hangers provide 3-3/4" total adjustment.

Two combination 1/2"-3/4" and four 1/2" knockouts for straight-through conduit runs. Capacity: 8 (4 in, 4 out). No. 12 AWG conductors, rated for 90°C.

Accommodates 12"-24" joist spacing.

Passive cooling thermal management for 25°C standard; high ambient (40°C) option available. Light engine and drivers are accessible from above or below ceiling.

Max ceiling thickness 1-1/2".

OPTICS — LEDs are binned to a 3-step MacAdam Ellipse; 80 CRI minimum. 90 CRI optional.

LED light source concealed with diffusing optical lens.

General illumination lighting with 1.0 S/MH and 55° cutoff to source and source image.

Self-flanged anodized reflectors in specular, semi-specular, or matte diffuse finishes. Also available in white and black painted reflectors.

UGR — UGR is zero for fixtures aimed at nadir with a cut-off equeal to or less than 60deg per CIE 117-1996 Discomfort Galre in Interior Lighting. UGR FAQs

ELECTRICAL — Multi-volt (120-277V, 50/60Hz) 0-10V dimming drivers mounted to junction box, 10% or 1% minimum dimming level available.

0-10V dimming fixture requires two (2) additional low-voltage wires to be pulled.

LUMEN MAINTENANCE — 70% lumen maintenance at 60,000 hours.

LISTINGS — Certified to US and Canadian safety standards. Wet location standard (covered ceiling). IP55 rated. Drivers are ROHS compliant

GOVERNMENT PROCUREMENT — BAA – Product with the BAA option qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product with the BAA option also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA – Build America Buy America: Product with the BAA option also qualifies as produced in the United States under the definitions of the Build America, Buy America Act.

Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

ILBHI CP15 HE SD A+	15W	90	1800	347-480V AC Input, Title 20, Self Diagnostic

All the above are UL 924 Listed products that are certified for field install external/remote to the fixture.
*Minimum delivered lumen output to assist in product selection for increased fixture mounting height.
The CP10 delivered emergency illuminations outperforms legacy 1400 lumen fluorescent emergency ballasts.
Please contact us at techsupport@iotaengineering.com for any Emergency Battery related questions.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provided consistent color appearance and out-of-the-box control capability with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about A+, visit www.acuitybrands.com/aplus.

HOW TO ESTIMATE DELIVERED LUMENS IN EMERGENCY MODE

Use the formula below to estimate the delivered lumens in emergency mode

Delivered Lumens = 1.25 x P x LPW

P = Ouput power of emergency driver. P = 10W

LPW = Lumen per watt rating of the luminaire. This information is available on the ABL luminaire spec sheet.
The LPW rating is also available at Designlight Consortium.

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

LPA Series
Premium LED Flat Panel

Model: _____ Date: _____
Accessories: _____
Job Name: _____ Type: _____

INVENTORY CLOSEOUT

DESCRIPTION
Trace-Lite's LPA Advantage Series of backlit LED panels offers incredible performance in an energy-efficient, slim profile package available in 1' x 4', 2' x 2' and 2' x 4' configurations. Ideal for office spaces, schools, hospitals and any indoor location that requires even illumination and lower maintenance. The LPA Series is compatible with most standard T-bar grid ceilings and includes 0-10V dimming standard. Trace-Lite LED panels offer soft and uniform light with PMMA optical lensing that will not yellow over time. All panels are packaged in a quantity of four.

SPECIFICATIONS
Construction:
- Precision die-formed steel enclosure in a white finish
- Aluminum frame with seamless corners
- Recessed design fits most standard T-bar grid ceilings
- Backlit design, LEDs sit at the back of the enclosure aimed directly at the diffuser to evenly illuminate the entire surface of the panel
- Sturdy frame prevents warping due to the slightly more elevated profile

Optics/LEDs:
- UV-stabilized PMMA optical lenses over the LEDs that will not yellow over time
- Soft and uniform light distribution, 120° beam
- Efficacies up to 140 LPW to maximize energy savings and utility rebates
- CRI ≥ 80
- L70 > 100,000 hours

Electrical:
- 120-277VAC, 50/60Hz
- 0-10V Dimming driver
- Power supply with high power factor of 90% typical

Testing & Compliance:
- cETL Listed, rated for insulated ceilings (IC Rated)
- Meets IP20 rating, Damp Location
- Operating temperatures: -10°C to 40°C (14°F to 40°C)

Installation:
- Unit simply lifts through grid ceiling and rests on T-bars
- Easy installation in new construction or retrofit
- Standard recessed mounting in most 1' x 4', 2' x 2' or 2' x 4' grid ceilings
- Earthquake clips included

Warranty:
- Five Year Warranty (Terms and Conditions Apply)

Intertek DAMP 5 YEAR WARRANTY

PROJECT:

FEATURES

- Sealed for weather tight performance
- Choice of open, hooded and grill faceplates in a variety of finishes
- LEDs provide high-efficacy and a variety of color temperature options
- LED module with driver allows for easy replacement or upgrades
- Available with frosted or opal lens
- Adjustable mounting brackets
- Designed for concrete pour applications
- Made Right Here® in the USA

SPECIFICATIONS

- HOUSING – Minimum .188″ thick cast aluminum housing with two 1/2″ NPS threaded hub and plugged conduit entry points.
- SHIELD – Removable cast aluminum shield gasketed and secured with countersunk, stainless steel allen head screws.
- LENS – Polycarbonate or frosted tempered glass, sealed with silicone.
- FINISH – Super durable polyester powder coat meets and exceeds AAMA 2604 specifications for outdoor durability.
- ELECTRICAL – High quality mid-power LED board. Rated for 50,000 hours at 70% lumen maintenance (L70). Prewired at factory for easy field installation.
- MOUNTING – Recessed wall mount. Adjustable aluminum mounting brackets provided.
- LISTINGS –
  - cETLus conforms to UL STD 1598; Certified to CAN/CSA STD C22.2 No. 250.0. Suitable for wet locations.
  - RoHS compliant.
  - Complies with the Buy American Act and other federal regulations. Request certification at hew.com/baa.
- WARRANTY – 5-year limited warranty, see hew.com/warranty.

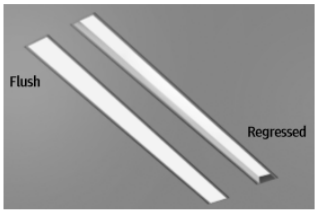
MARK
ARCHITECTURAL
LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

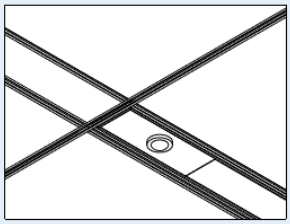
Note: *UGR data available on Page 5*

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Notes
1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

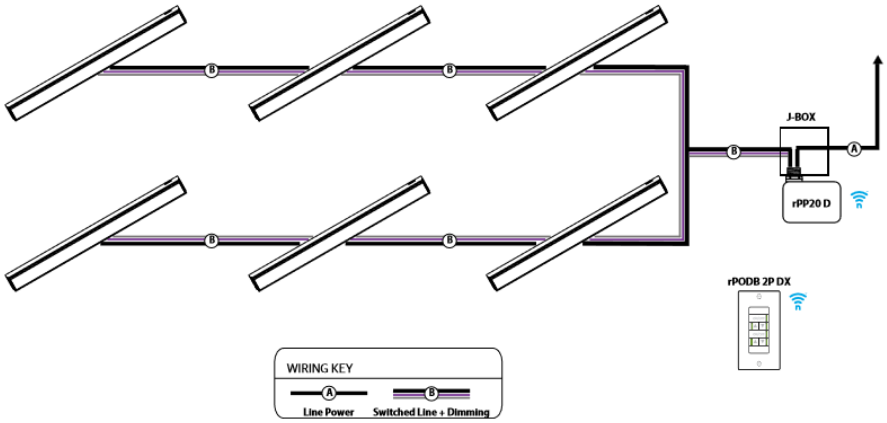
nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

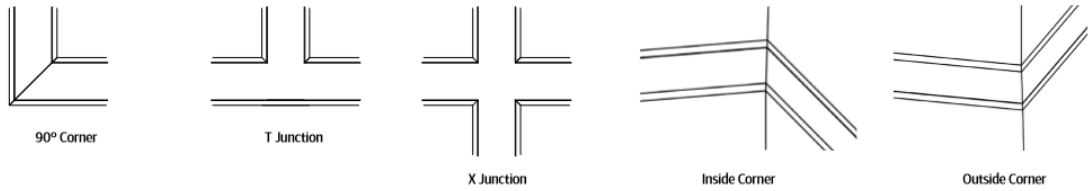


Continuous Runs

Slot 2 LED continuous rows can be configured in 1" increments.

Run Patterns, Corners and Junction

Slot 2 LED patterns be configured in 1' increments with illuminated 90° inside and outside corners, T junctions, and X junctions with standard 2' corner and junction lengths. For custom angles, corner or junction lengths, consult factory.



Layout Sketch

Please draw and configure your linear run below.

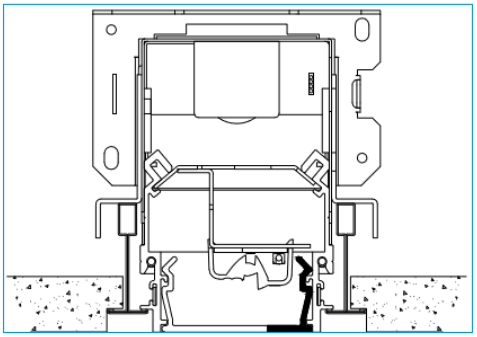
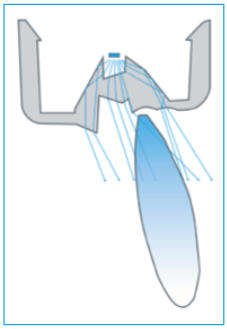
Slot 2 LED
Recessed Linear

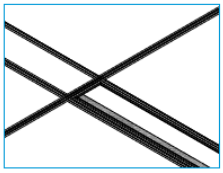
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

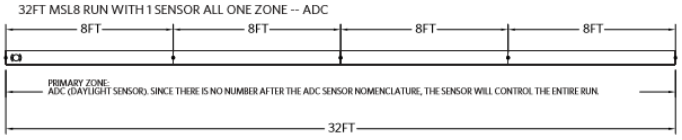




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

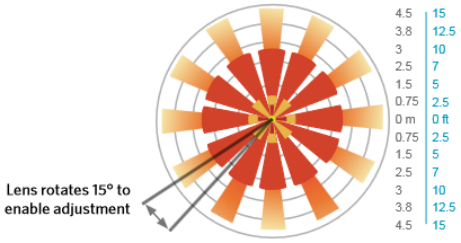
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)

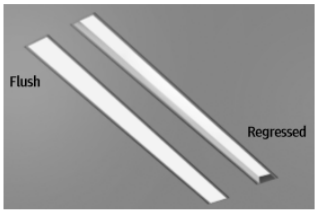
MARK
ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Type:

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA tested to UL 1598 standards. Optional Damp or Wet location listings available, see ordering tree. This product is IC rated.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.
All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.
To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

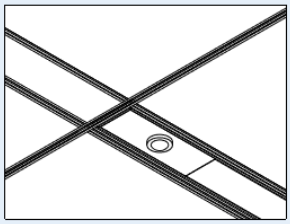
LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

* Requires longer lead time.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. No longer applicable.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, downlights or 2' or 3' units. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs, the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

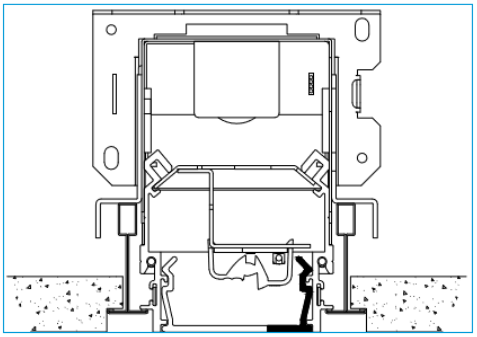
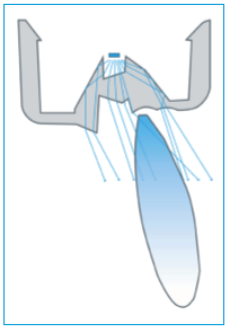
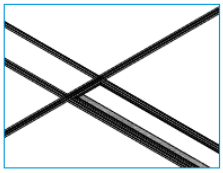
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

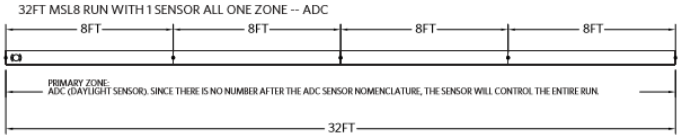




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

Options

CP[18]	Chicago Plenum
BAA	Buy America(n) Act and/or Build America Buy America Qualified
WL[3,9,20]	Wet Location Listing
DPL[20]	Damp Location Listing
PWS	6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

Slot 2 LED
Recessed Linear

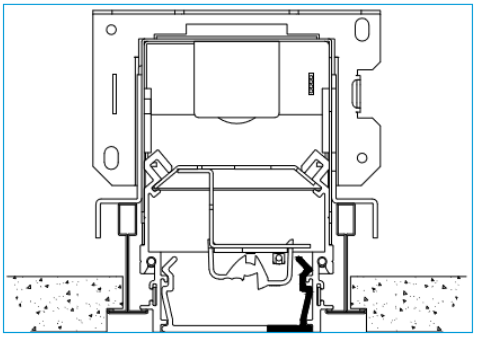
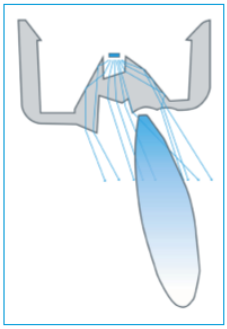
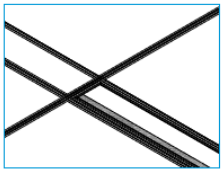
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

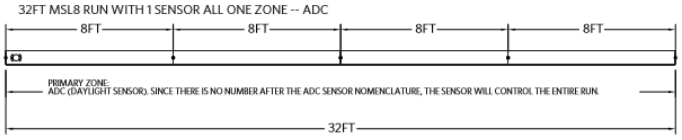




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

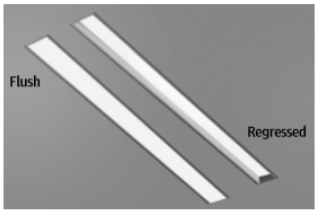
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

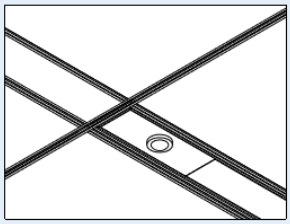
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

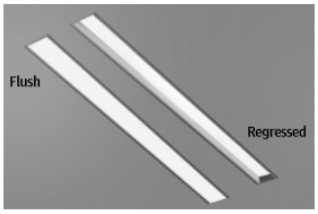
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:

DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

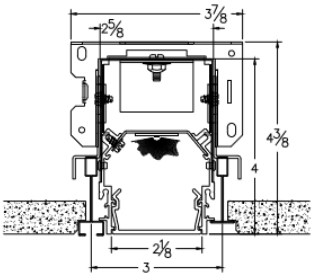
Technical Drawing



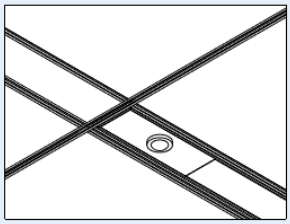
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

* Requires longer lead time.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

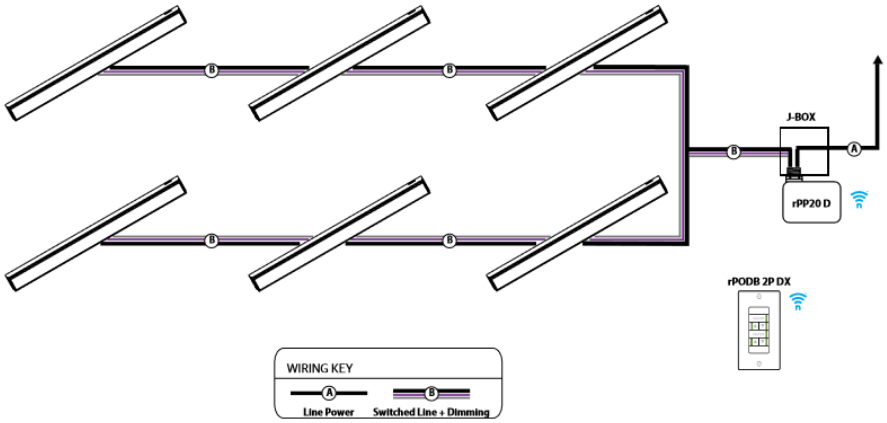
nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

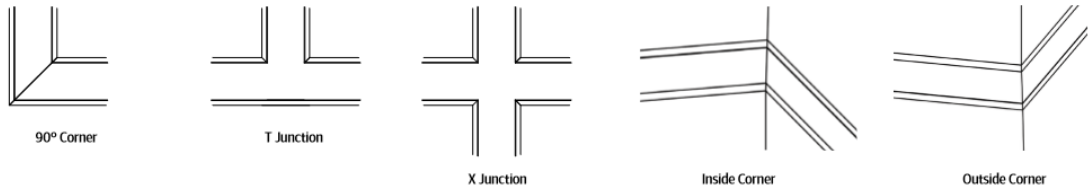


Continuous Runs

Slot 2 LED continuous rows can be configured in 1" increments.

Run Patterns, Corners and Junction

Slot 2 LED patterns be configured in 1' increments with illuminated 90° inside and outside corners, T junctions, and X junctions with standard 2' corner and junction lengths. For custom angles, corner or junction lengths, consult factory.



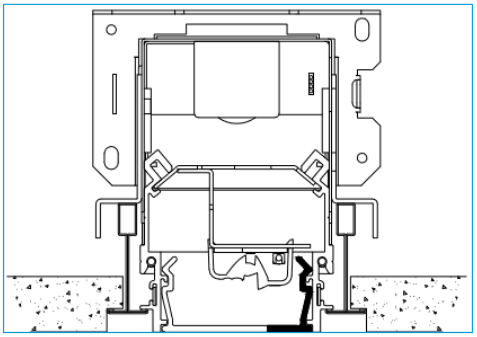
Layout Sketch

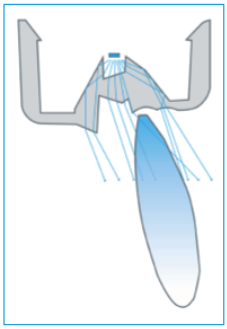
Please draw and configure your linear run below.

marklighting.com | 800-705-SERV (7378) | © 2015-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

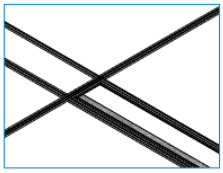
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

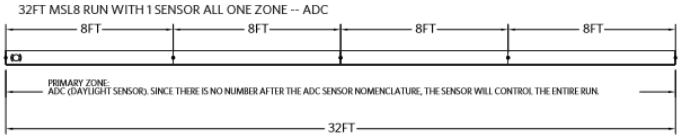




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

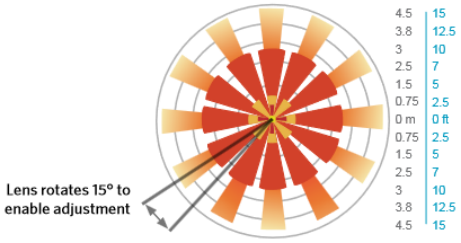
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW

6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

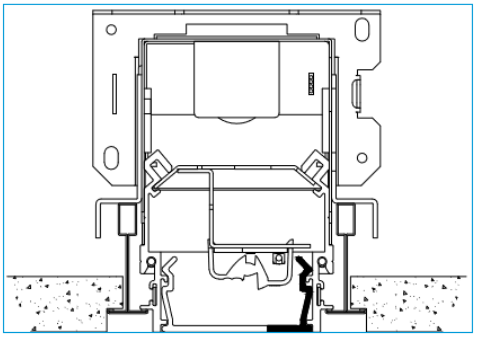
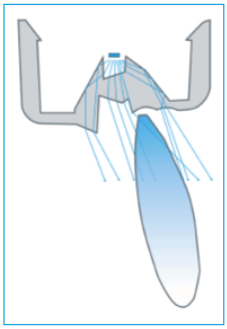
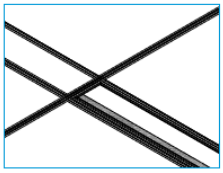
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

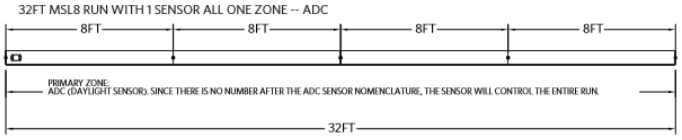




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

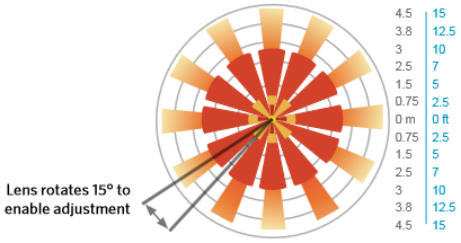
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

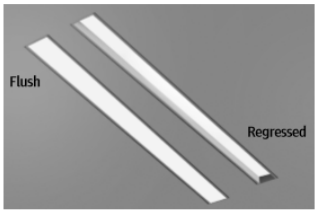
MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:

DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

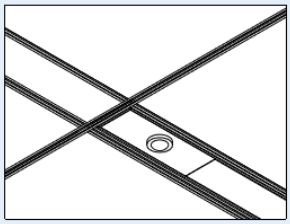
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

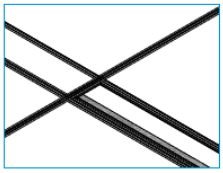
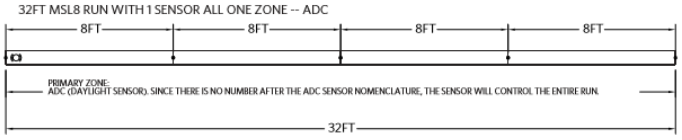
Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

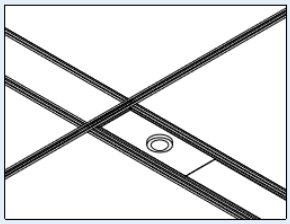
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

* Requires longer lead time.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

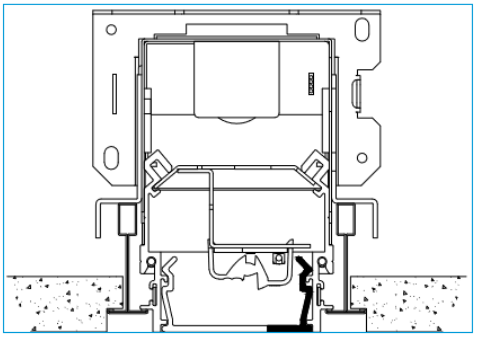
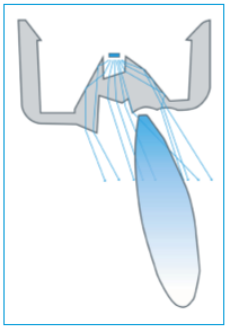
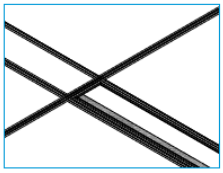
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

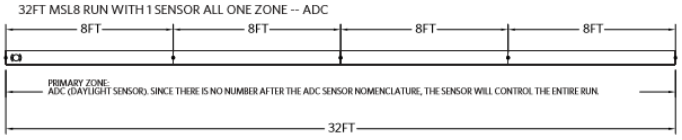




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

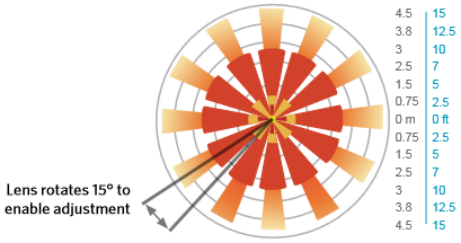
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW
400LMF	22.1	22.2	19.6	20.8	18.2	20.3
600LMF	24	24.1	21.5	22.7	20.1	22.3
800LMF	25	25	22.4	23.7	21.1	23.2
1000LMF	25.7	25.7	23.1	24.4	21.8	23.9

**UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.*

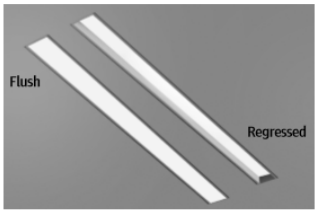
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:

DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

WL[3,9,20]	Wet Location Listing
DPL[20]	Damp Location Listing
PWS	6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

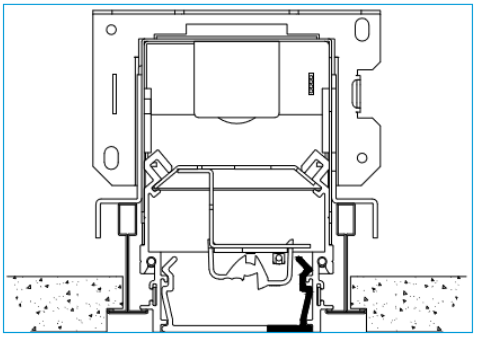
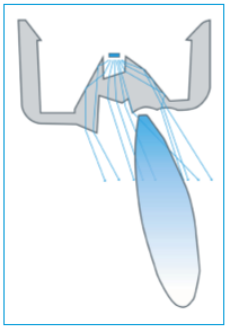
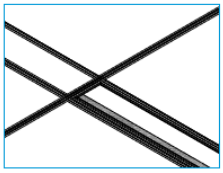
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

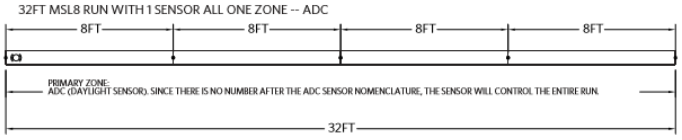




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

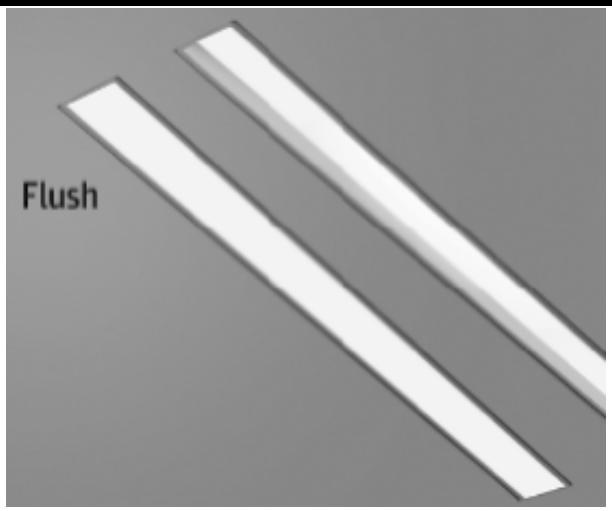
ACCESSORIES



Recessed mount wall wash linear with one (1) LED lighting source, 600W/FT delivered lumens, 3000K color engine, 80+ CRI, wall wash optic and integral driver. Linear should operate on 120-277 voltage and be supplied with a 0-10v control option with a 50,000 hour anticipated life. Linear to have white powder coat finish. Linear should be UL listed or an approved equivalent.

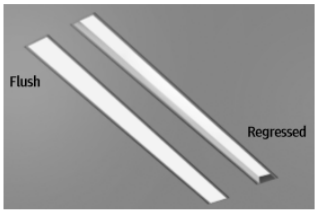
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

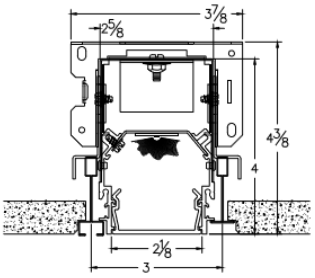
Technical Drawing



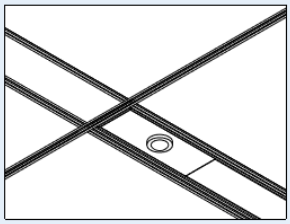
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

* Requires longer lead time.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect. *See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

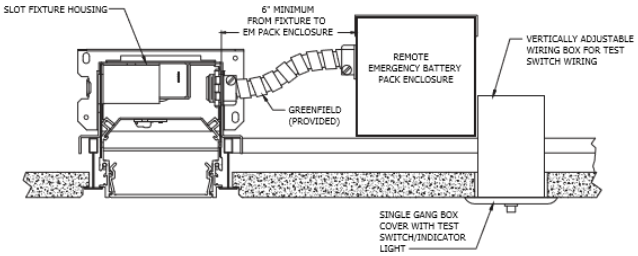
Remote Mounted (RE10WLCP)



Notes

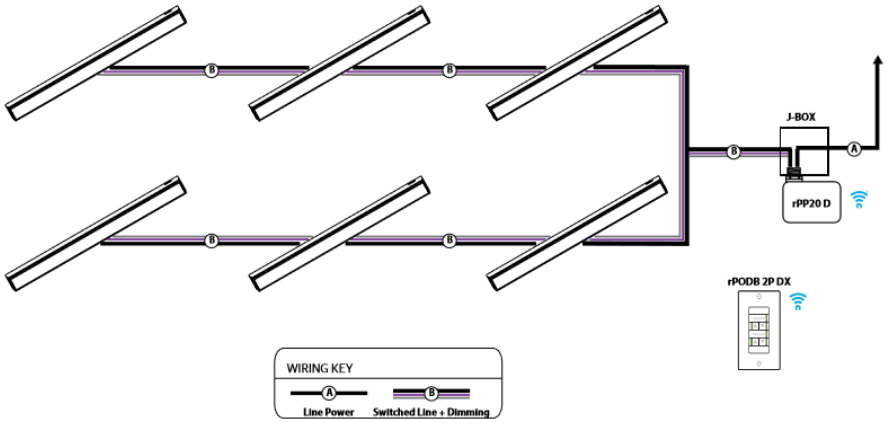
- Delivers 700 lumens per 4FT length. Default location is the right side of fixture and end of run.
- Provided with 4FT of flexible conduit. Maximum of 25FT remote distance if extended. Extension provided by others.
- See ordering tree notes for remote battery pack scenarios.

marklighting.com | 800-705-SERV (7378) | © 2015-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

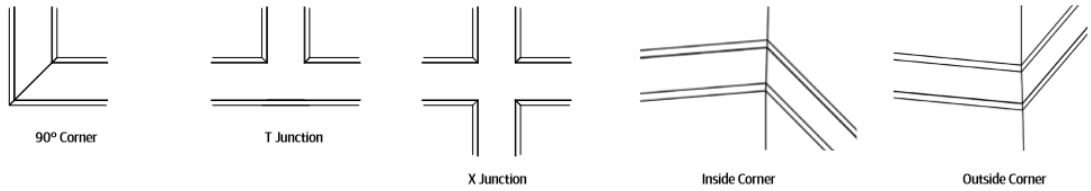


Continuous Runs

Slot 2 LED continuous rows can be configured in 1" increments.

Run Patterns, Corners and Junction

Slot 2 LED patterns be configured in 1' increments with illuminated 90° inside and outside corners, T junctions, and X junctions with standard 2' corner and junction lengths. For custom angles, corner or junction lengths, consult factory.



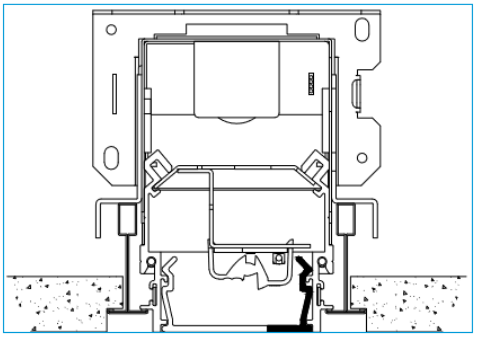
Layout Sketch

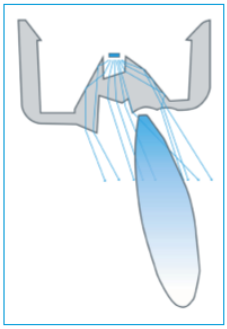
Please draw and configure your linear run below.

marklighting.com | 800-705-SERV (7378) | © 2015-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

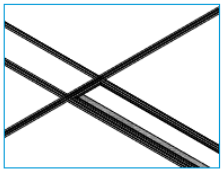
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

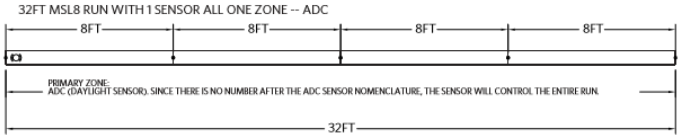




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

- (blank) No additional zones/sensors
- SNS Multi-zone, with no sensor in secondary zone, No Sensors
- SPDT [13] Dual Technology Occupancy Sensor, PIR and Microphonics Sensor, No Sensors
- SADC [13] Daylight Dimming Sensor, No Sensors
- SAPI [14] Passive Infrared Occupancy Sensor and Daylight Dimming Sensor, No Sensors
- SAPD [14] Dual Technology Occupancy Sensor and Daylight Dimming Sensor, No Sensors

Tertiary Zone
- (blank) No additional zones/sensors
- TNS Multi-zone, with no sensor in tertiary zone

Options
- CP [18] Chicago Plenum
- BAA Buy America(n) Act and/or Build America Buy America Qualified
- WL [3,9,20] Wet Location Listing
- DPL [20] Damp Location Listing
- PWS 6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes
1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

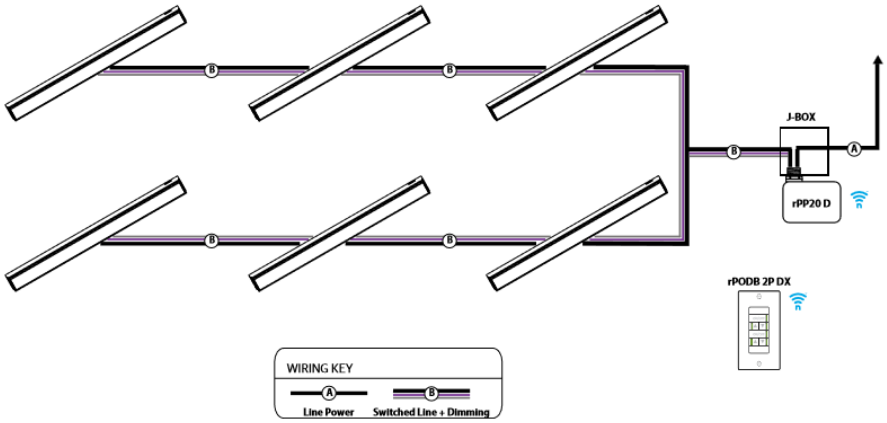
nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

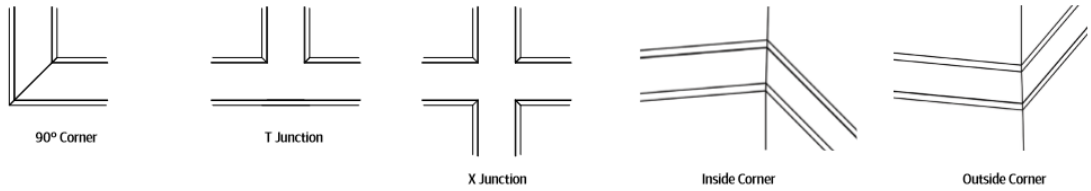


Continuous Runs

Slot 2 LED continuous rows can be configured in 1" increments.

Run Patterns, Corners and Junction

Slot 2 LED patterns be configured in 1' increments with illuminated 90° inside and outside corners, T junctions, and X junctions with standard 2' corner and junction lengths. For custom angles, corner or junction lengths, consult factory.



Layout Sketch

Please draw and configure your linear run below.

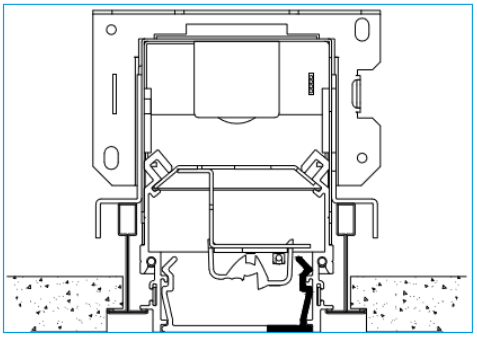
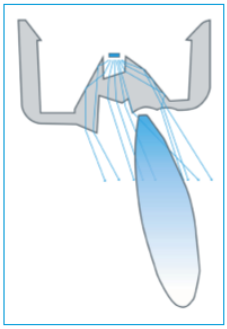
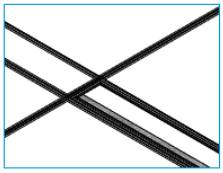
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

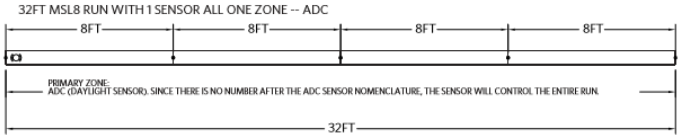




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

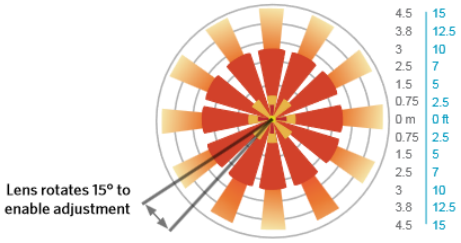
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW
400LMF	22.1	22.2	19.6	20.8	18.2	20.3
600LMF	24	24.1	21.5	22.7	20.1	22.3

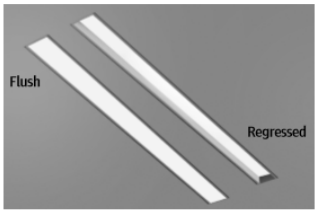
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

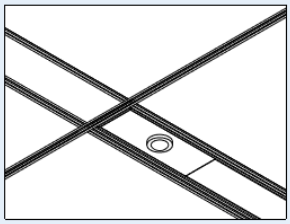
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Options

CP[18]	Chicago Plenum
BAA	Buy America(n) Act and/or Build America Buy America Qualified
WL[3,9,20]	Wet Location Listing
DPL[20]	Damp Location Listing
PWS	6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

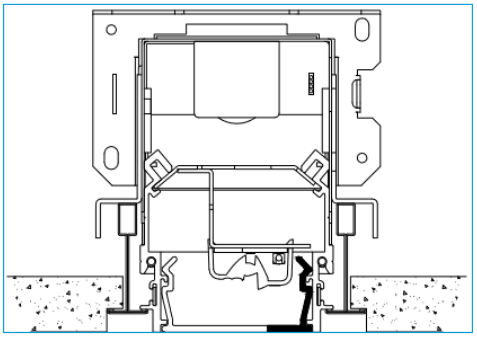
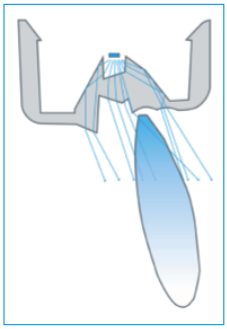
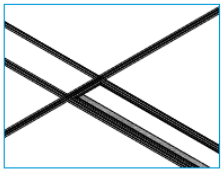
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

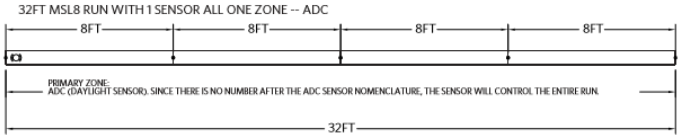




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

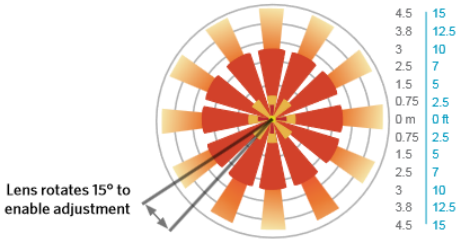
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

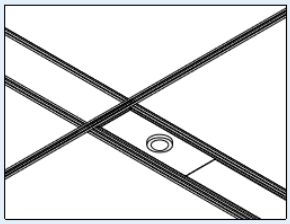
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Options

CP[18]	Chicago Plenum
BAA	Buy America(n) Act and/or Build America Buy America Qualified
WL[3,9,20]	Wet Location Listing
DPL[20]	Damp Location Listing
PWS	6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

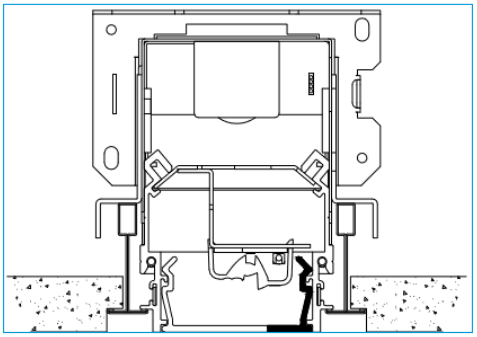
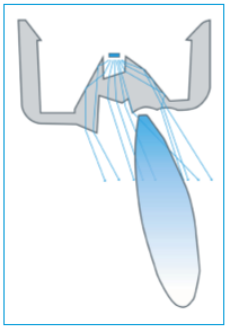
MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

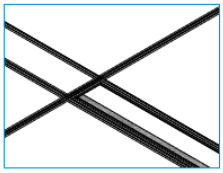
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

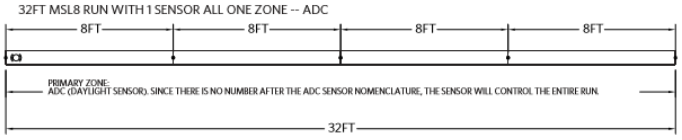




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

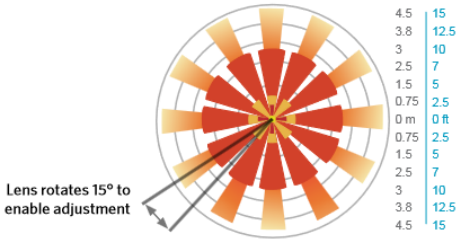
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW
400LMF	22.1	22.2	19.6	20.8	18.2	20.3
600LMF	24	24.1	21.5	22.7	20.1	22.3
800LMF	25	25	22.4	23.7	21.1	23.2
1000LMF	25.7	25.7	23.1	24.4	21.8	23.9

**UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.*

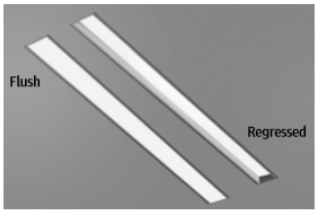
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2' x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1' increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

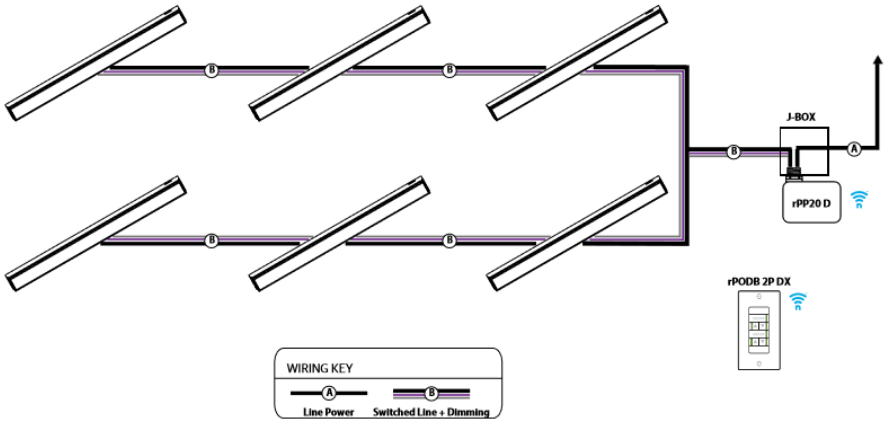
nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

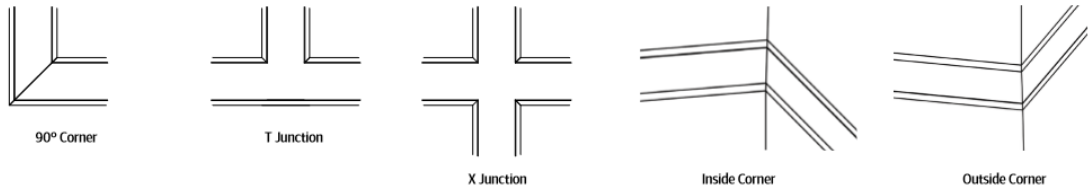


Continuous Runs

Slot 2 LED continuous rows can be configured in 1" increments.

Run Patterns, Corners and Junction

Slot 2 LED patterns be configured in 1' increments with illuminated 90° inside and outside corners, T junctions, and X junctions with standard 2' corner and junction lengths. For custom angles, corner or junction lengths, consult factory.



Layout Sketch

Please draw and configure your linear run below.

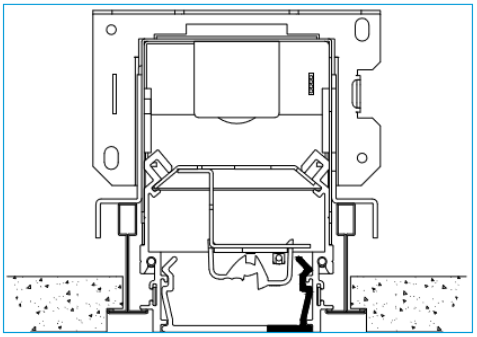
marklighting.com | 800-705-SERV (7378) | © 2015-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

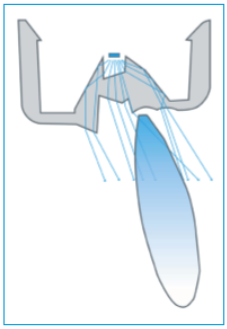
MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

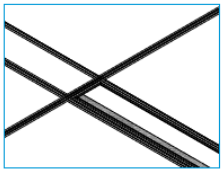
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

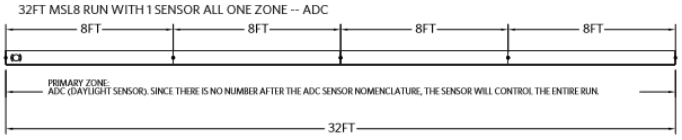




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

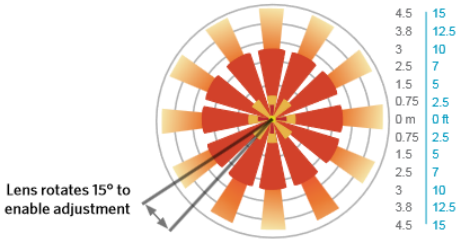
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW
400LMF	22.1	22.2	19.6	20.8	18.2	20.3
600LMF	24	24.1	21.5	22.7	20.1	22.3
800LMF	25	25	22.4	23.7	21.1	23.2
1000LMF	25.7	25.7	23.1	24.4	21.8	23.9

**UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.*

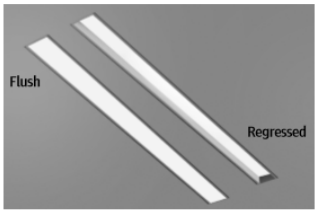
Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear



Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

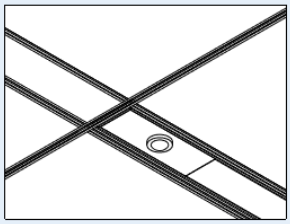
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

WL[3,9,20]	Wet Location Listing
DPL[20]	Damp Location Listing
PWS	6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

Slot 2 LED
Recessed Linear

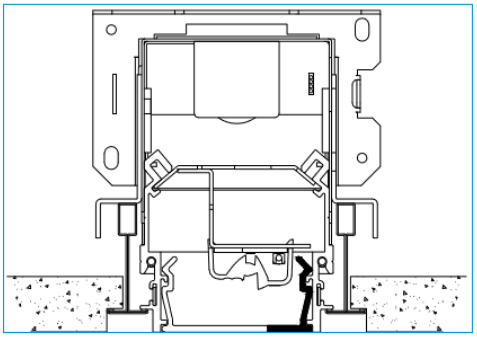
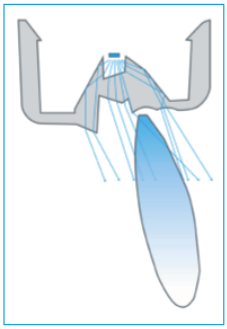
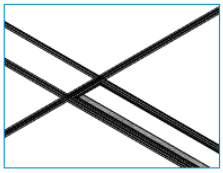
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

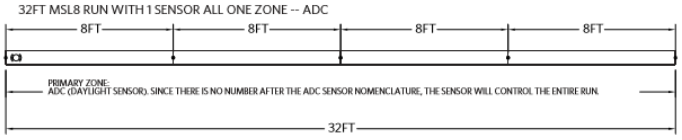




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

* Requires longer lead time.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect. *See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

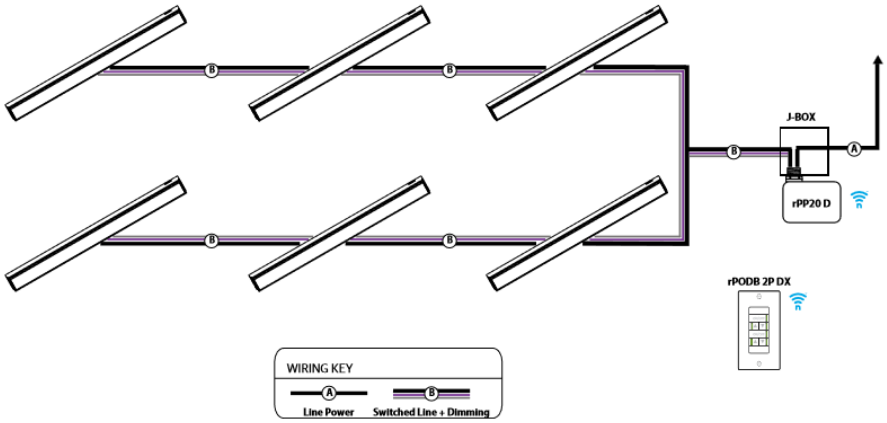
nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

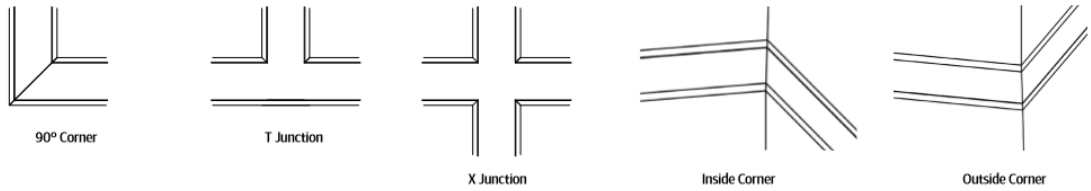


Continuous Runs

Slot 2 LED continuous rows can be configured in 1" increments.

Run Patterns, Corners and Junction

Slot 2 LED patterns be configured in 1' increments with illuminated 90° inside and outside corners, T junctions, and X junctions with standard 2' corner and junction lengths. For custom angles, corner or junction lengths, consult factory.



Layout Sketch

Please draw and configure your linear run below.

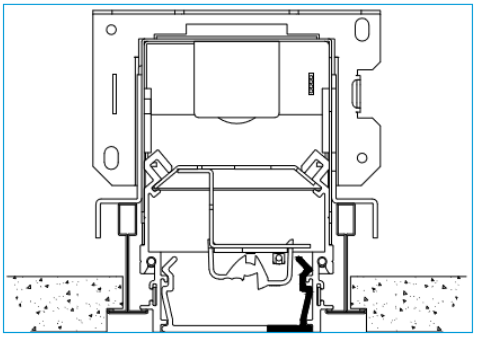
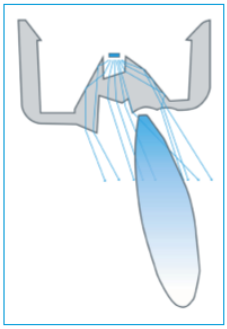
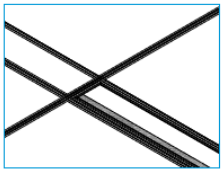
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

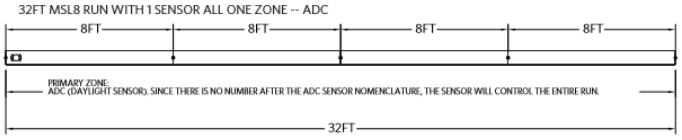




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

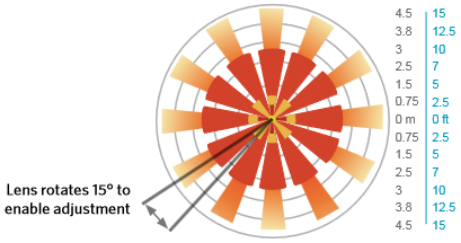
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW

Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

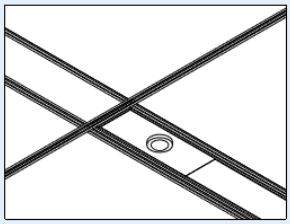
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

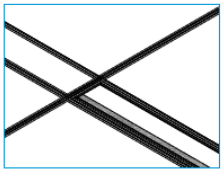
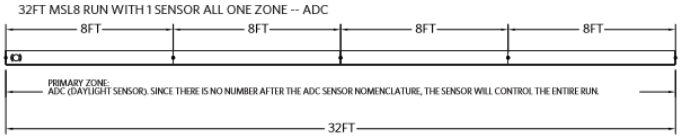
Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

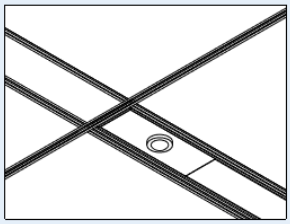
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

- WL[3,9,20] Wet Location Listing
- DPL[20] Damp Location Listing
- PWS 6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes
1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.

Recessed Linear

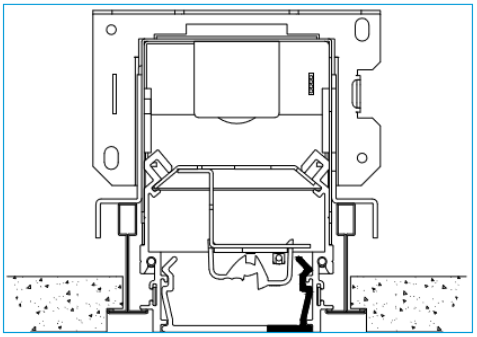
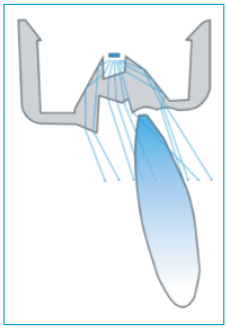
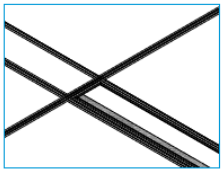
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

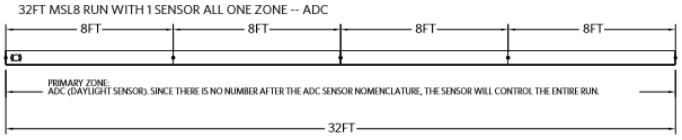




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

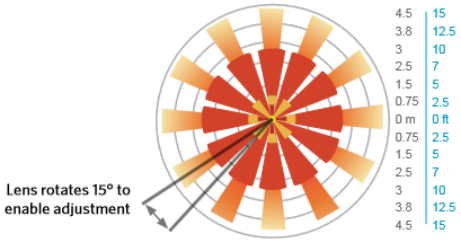
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW
400LMF	22.1	22.2	19.6	20.8	18.2	20.3
600LMF	24	24.1	21.5	22.7	20.1	22.3
800LMF	25	25	22.4	23.7	21.1	23.2
1000LMF	25.7	25.7	23.1	24.4	21.8	23.9

**UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.*

8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

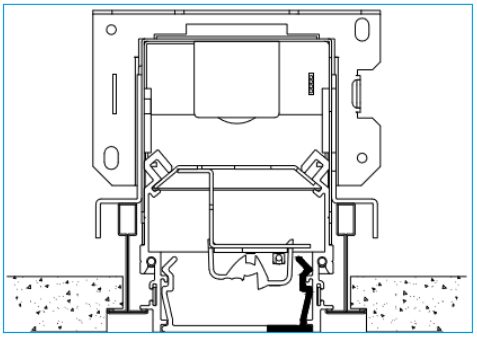
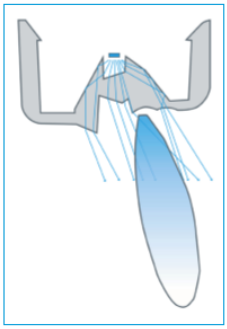
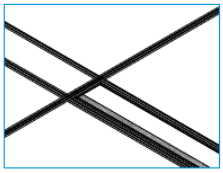
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

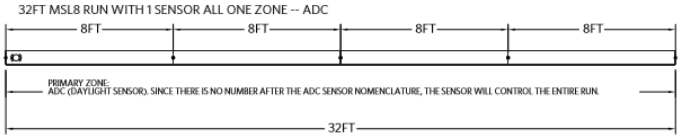




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

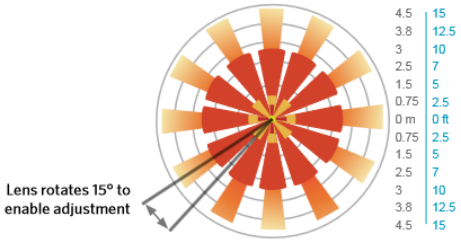
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)

Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:

DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

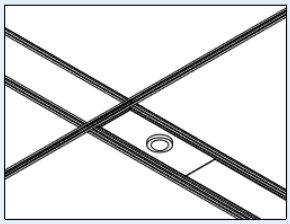
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

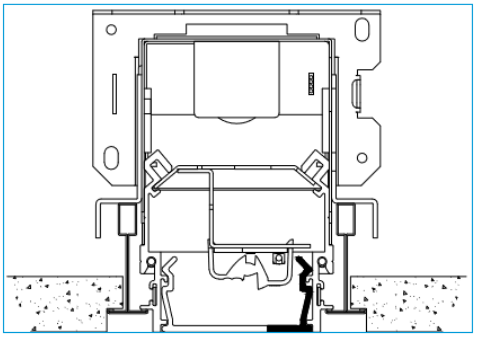
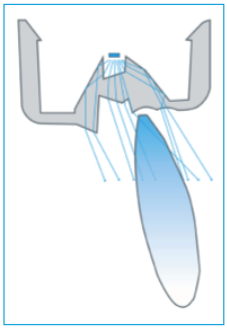
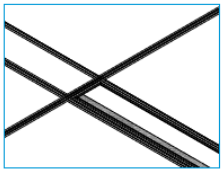
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

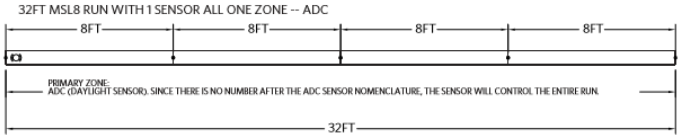




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

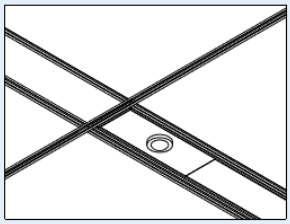
Flush - (FLP)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

Options

CP[18]	Chicago Plenum
BAA	Buy America(n) Act and/or Build America Buy America Qualified
WL[3,9,20]	Wet Location Listing
DPL[20]	Damp Location Listing
PWS	6' Pre-Wire, 3/8" Diameter, 18 Gauge

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

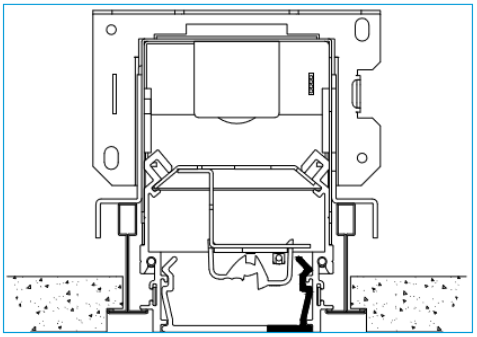
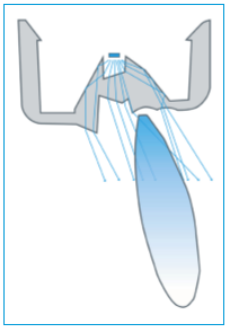
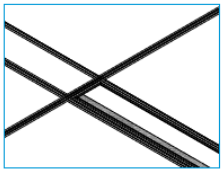
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

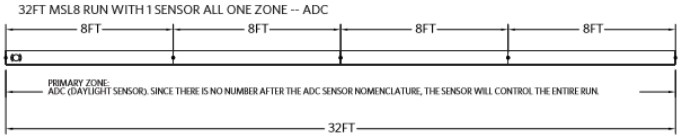




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

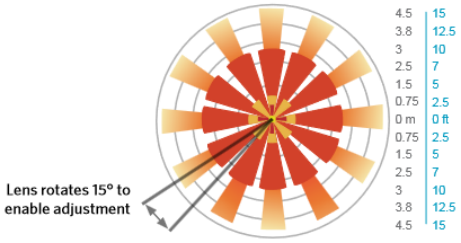
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



UGR CHART

Lumen Package	UGR (70% 50% 20% REFLECTANCE USING A 4H X 8H ROOM SIZE)					
	Crosswise			Endwise		
	FLP	RLP	WW	FLP	RLP	WW
400LMF	22.1	22.2	19.6	20.8	18.2	20.3
600LMF	24	24.1	21.5	22.7	20.1	22.3
800LMF	25	25	22.4	23.7	21.1	23.2
1000LMF	25.7	25.7	23.1	24.4	21.8	23.9

**UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire configuration for each application.*

Type:

MARK ARCHITECTURAL LIGHTING™

Slot 2 LED
Recessed Linear

Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:

DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

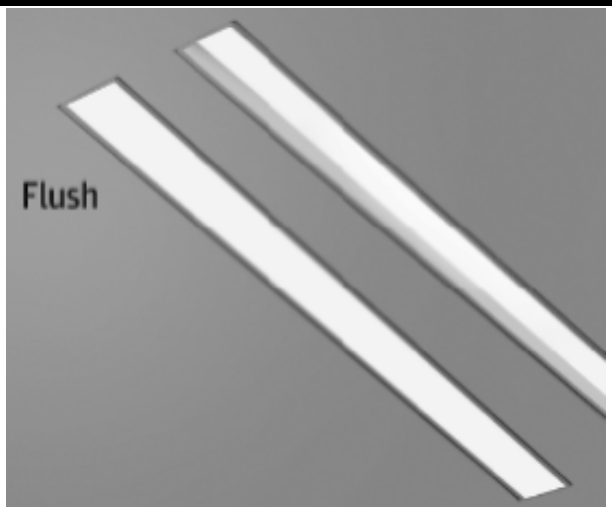
ACCESSORIES



Recessed mount wall wash linear with one (1) LED lighting source, 600LM/FT delivered lumens, 3000K color engine, 90+ CRI, wall wash optic and integral driver. Linear should operate on MVOLT voltage and be supplied with a 0-10v control option with a 65,000 hour anticipated life. Linear to have white powder coat finish. Linear should be UL listed or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	DIMMING

NOTES

Final Lengths to be confirmed onsite before fixture order is placed. Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

MARK
ARCHITECTURAL
LIGHTING™

Slot 2 LED
Recessed Linear

Slot 2 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 2 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design and the flush lens now has a Wet Label option.

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.

Specification Features

Housing
Nominal 2" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1" increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Polyester powder coat painted finish.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens. Lens is not sealed or gasketed.
Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750). This product is IC rated. Optional Damp (DPL) or Wet (WL) location listings available with specified nomenclature. Wet location listing is suitable for covered ceiling mount installation only, where any water exposure is beneath the non-porous mount surface.

Government Procurement
BAA - Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.

BABA - Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.

All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specification for chromatic consistency - including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing, visit www.acuitybrands.com/aplus

***Note:** Actual performance may differ as a result of end-user environment and application.*

All values are design or typical values, measured under laboratory conditions at 25 °C.

Specifications subject to change without notice.

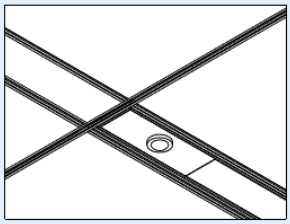
LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.



Occupancy Sensor (PDT) and/or Photocell (ADC)

Integrated Controls
Optional nLight® embedded controls make luminaire addressable- allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

Photometry
For photometric information refer to www.marklighting.com.

* Requires longer lead time.

Notes

1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Wet Location label not available with regressed lens, sensor options or PWS. Cannot be installed on vertical surfaces.
4. Not intended for post sheetrock installation.
5. Wall wash not available with RLP lens or all sensor options.
6. Not available with NLIGHT or NLTAIR2.
7. Not available with 2' sections, E10WLCP or sensors. Only available with NODIM or MIN1 with ZT.
8. Default battery pack is integral, battery pack will be remote on 2' & 3' (RE10WLCP) If 5' or 6' unit, integral battery pack is only available with ZT or NLTAIR2. Battery will be remote with RLP, WW or sensors. Only 1 integral battery pack per unit. CP listing must have an intergral battery. Remote batteries are not wet location listed, they may be used with a wet location fixture is the battery itself is mounted in a dry location.
9. Not available with ECOD control input.
10. Standard 4' EC section, defaults to end of run. 2ft, 3ft and 5ft powers entire fixture, 6ft powers 3ft EC section.
11. Only available with NODIM option.
12. Sensors not available with WW, NODIM driver, WL, RLP, or downlights. Not available with 347 & NLIGHT together. Default location for sensor is the left side of the fixture. For runs the first fixture will include the sensor.
13. Requires ZT or NLIGHT Control Input.
14. Requires ZT, NLIGHT or NLTAIR2 Control Input. Only Design Select when ordered with NLTAIR2.
15. MIN10 not available with 347, sensors, NLIGHT or NLTAIR2, requires ZT.
16. ECOD not available with sensors and requires MIN1 dimming.
17. Must select MIN1 or DARK. Not available with RLP, WW, PDT, ADC or 347, DPL or WL.
18. CP not available with NLTAIR2.
19. DALI is only available with DARK or MIN1. It is not available with sensors or downlights.
20. Lens is not sealed or gasketed.
21. 1" increments will have extended lead time.
22. Not available with RLP regressed lens option.

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

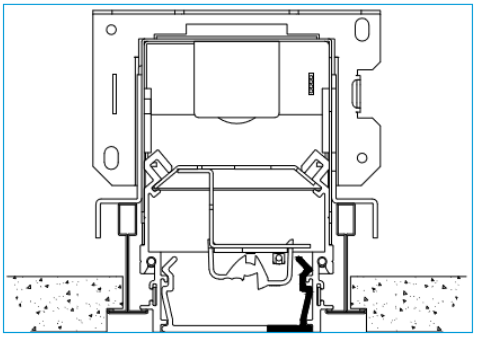
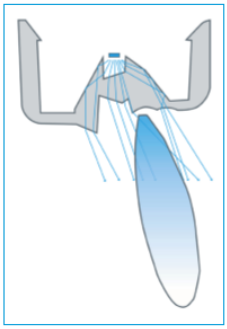
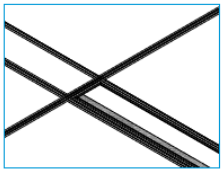
OPTICS

Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.

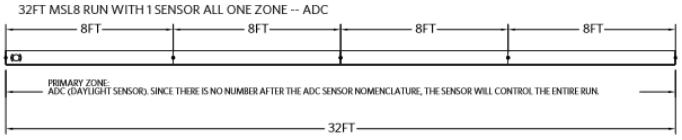




Optional Wall Wash (WW)



INTEGRATED SENSOR LAYOUT



Notes:
- Only one sensor per zone

OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.

- APDT Dual technology Occupancy and Daylight Dimming Sensor
- APIR Passive Infrared Occupancy and Daylight Dimming Sensor

Sensors are only available with FLL lens. Sensors are not available with DCT, 347, NODIM, WEC, DALI & ECOD.
1. PDT or ADC are not available with NLTAIR2.
Design Select sensors only available with NLTAIR2.

Secondary Zone
- (blank) No Sensor/Zones
- SNS_ No Sensor, Secondary Zone (Specify length in feet)
- SADC[1] Daylight Dimming Sensor
- SPDT[1] Dual Technology Occupancy, PIR and Microphonics Sensor
- SAPDT Dual technology Occupancy and Daylight Dimming Sensor
- SAPIR Passive Infrared Occupancy and Daylight Dimming Sensor

Sensors are only available with FLL lens. Sensors are not available with DCT, 347, NODIM, WEC, DALI & ECOD.
1. SPDT or SADC are not available with NLTAIR2.
Design Select sensors only available with NLTAIR2.

Tertiary Zone
- (blank) No Tertiary Zone
- TNS_ No Sensor, Tertiary Zone (Specify length in feet)

Mounting
- F1/[1] T-Bar Ceiling (universal mounting bracket)
- F1A/[1] T-Bar Ceiling (UMB with integrated J-BOX)
- F2/ Hard ceiling (horizontal J-box)

1. Please reference page 6 for ceiling type details.

Overall Suspension
- 36A 36" Adjustable
- 72A 72" Adjustable
- 144A 144" Adjustable
- 240A 240" Adjustable
- 300A[1] 300" Adjustable

1. Black cord is not available with 300A.

Canopy Form
- RDCY Round Canopy
- SQCY Square Canopy

Canopy Color
- WHTCY White Canopy
- SLVCY Silver Canopy
- BLKCY Black Canopy

Cord Color
- WCRD White cord
- BCRD Black cord
- CCRD Clear cord

CAT5 cord, when included will be white.

Options
- (blank) No Options
- PIF[1] Feed Cord Installed
- MCS Matching Canopy
- BAA Buy America(n) Act and/or Build America Buy America Qualified

1. Cord length will match overall suspension length specified.

NOTE: *Unit length and lumen outputs may affect available options. Please contact your Acuity representative for assistance.*

design select

Items marked by a shaded background qualify for the Design Select program and ship in 15 days or less. To learn more about Design Select, visit www.acuitybrands.com/designselect.
*See ordering tree for details

Maximum order quantity for Design Select lead times is 350 linear feet.

*Calculations based on a 4 foot fixture @ 35K 80CRI
**UGR varies based on luminaire options and is affected by application dependent parameters. Numbers depicted here are considered "Luminaire-UGR" and/or "Point-UGR" values. To determine a more precise maximum UGR value ("Application-UGR"), a full lighting design layout should be completed with the selected luminaire
*** Click here from more information: UGR FAQ

marklighting.com | 800-705-SERV (7378) | © 2022-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

LINEAR PLAN

Mark Lighting offers the ability to provide a continuous run plan to suit your requirements by optionally offering three different methods of configuration.

LLP- Linear Longest Possible
In this configuration, the longest length available is optimized, resulting in the fewest segments and mounting locations. Caution should be used where balanced appearance is a concern. Example: 20 FT run would have 2, 8 FT segments and 1, 4 FT segment at the end of the run.

LLP	8 FT	8 FT	4FT

LCB- Linear Center Balanced:
This configuration incorporates the longest center segment(s) along with any additional lengths required to fill the run length, added to the run ends. Example: 16 FT run would have 2, 4 FT segments (one at each end) and 1, 8 FT segment in the center.

LCB	4 FT	8 FT	4FT

LSL- Linear Same Length:
In this configuration, each segment is the same length and is standardized based on the longest length available and is the only option provided. Because it is dependent on one segment length and there are mathematical limitations on what overall row lengths can be achieved. Example: 20 FT row would be achieved with 5, 4 FT long segments equaling 20 FT (nominal).

LSL	4FT	4FT	4FT	4FT	4FT

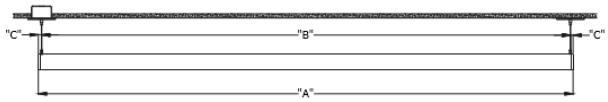
Total Run Length
This system is not modular. Runs longer that 8FT will be automatically configured with left, intermediate and right sections, based on how you specify the TOTAL RUN LENGTH and MAXIMUM SECTION LENGTH parameters in the ordering information. Always order the total run length, not the individual sections.

Example: This run must be ordered as 1pc "S4PD LLP 32FT MSL8..."

Example: If you order as 4pcs "S4PD LLP 8FT MSL8... you will receive these INDIVIDUAL sections that cannot be joined together

Maximum Section Length
The run will be broken out using as many sections at the chosen maximum section length as possible. Shorter sections will then complete the desired run length.

Examples:
S4PD LLP 21FT MSL5... = 5FT / 4FT / 4FT / 4FT / 4FT
S4PD LLP 21FT MSL6... = 6FT / 6FT / 5FT / 4FT
S4PD LLP 21FT MSL7... = 7FT / 7FT / 7FT
S4PD LLP 21FT MSL8... = 8FT / 8FT / 5FT



INDIVIDUAL FIXTURES				
ORDERED LENGTH	"A" O.A.L.	"B" O.C.	"C" FROM END	APPROX. WEIGHT
2FT	2'- 0 9/16"	1'- 11 13/16"	3/8"	2

MOST COMMON MOUNTING TYPES AND OPTIONS
Options available for this specific luminaire are checked in the boxes below.

Mounting Type

F1/* For use with most T-Bar and screw slot grid ceilings. Designed for on-grid and off-grid applications. (J-box by others)

F1A/* For use with most T-Bar grid ceilings. Designed for on-grid applications. *Comes complete with J-box with built-in cutout to go over grid*

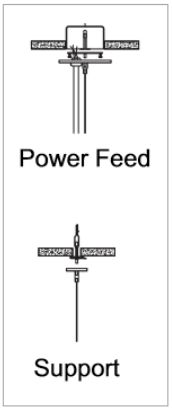
F2/ For use with recessed or surface mount horizontal J-box applications. (J-box by others)

Mounting Options

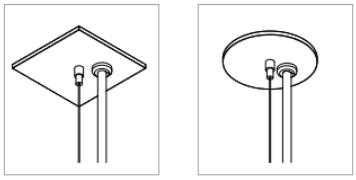
MCS MCS canopy supplies 5" canopy to match feed point canopy size. Matching canopy at support for aesthetics.

PIF Feed cord installed in fixture.

*For use with flush ceiling tiles only. For tegular ceiling tiles, purchase of new universal bracket with longer bolt is required. (*249E5A)

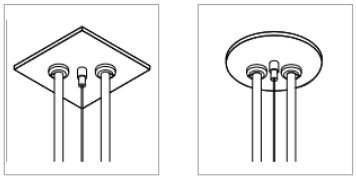


Mounting with Feed (SPSW1FK)



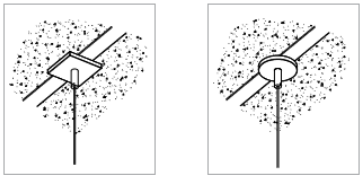
5" Square | 5" Round

Mounting with Dual Feed (SPSW2FK)



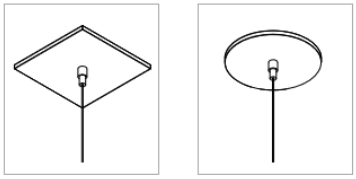
5" Square | 5" Round

Mounting Support (SPSWSK)



2" Square | 2" Round

MCS Option



5" Square | 5" Round

For more information, please consult our technical guides for nLight or nLight Air.

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

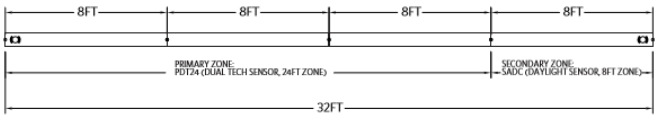
marklighting.com | 800-705-SERV (7378) | © 2022-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

INTEGRATED SENSOR LAYOUT

For runs longer than 8FT:
ALWAYS order the run by the TOTAL RUN LENGTH. Ordering the sections individually will not provide the correct joining hardware to allow connection in the field.

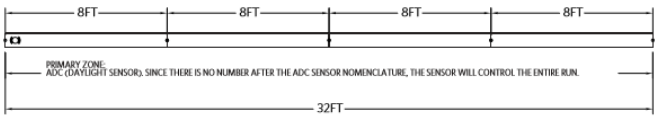
CORRECT:

32FT MSL8 RUN WITH 2 SENSORS WITH PRIMARY ZONE 24FT AND SECONDARY ZONE 8FT -- PDT24 SADC8



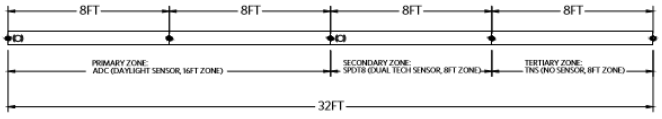
Total Run Length to Order

32FT MSL8 RUN WITH 1 SENSOR ALL ONE ZONE -- ADC



Total Run Length to Order

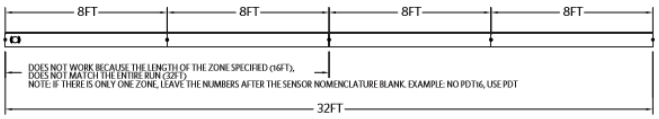
32FT MSL8 RUN WITH 2 SENSORS WITH PRIMARY ZONE 16FT, SECONDARY ZONE 8FT, AND TERTIARY ZONE 8FT-- ADC16 SPDT8 TNS8



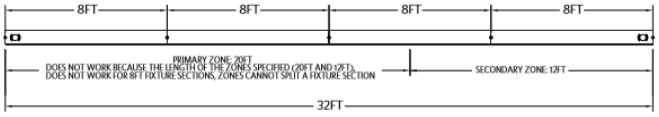
Total Run Length to Order

INCORRECT:

32FT MSL8 RUN WITH 1 SENSOR ALL ONE ZONE -- PDT16



32FT MSL8 RUN WITH 2 SENSORS WITH PRIMARY ZONE 20FT AND SECONDARY ZONE 12FT -- PDT20 SADC12



Notes:
- Only one sensor per zone
- At the most, the entire run can only have 2 sensors (thus 2 sensors zones at the most)
- Sensor zone can not split fixture sections
- No overlapping zones

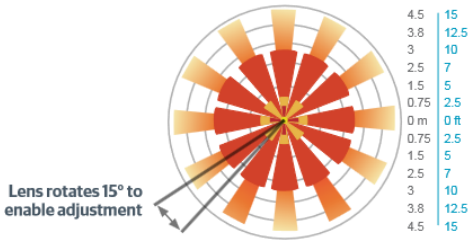
OCCUPANCY DETECTION COVERAGE

At the 7.5 ft (2.9 m) hanging height of a typical pendant mount fixture the sensor provides 10 ft (3.05 m) radial detection of small motion. At a 9 ft (2.74 m) hanging height the radius is 12 ft (3.66 m) for small motion.

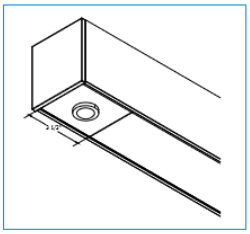
Adequate for walking motion detection from mounting heights between 7.5 ft (2.29 m) and 20 ft (6.10 m).

Initial detection will occur earlier when walking across sensor's field of view than when walking directly at sensor.

Initial detection of walking motion into long coverage segment will occur at distances of 2x the mounting height up to 15 ft (4.57 m) and 1.75x up to 20 ft (6.10 m). Lens assembly rotates 15° to enable adjustment in order to line up long segments.



Integrated Controls
Optional nLight® integrated controls make Slot LED luminaires addressable- allowing them to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling (included).



Occupancy Sensor and/or Photocell

nLight Air Wireless Antenna Location
Note: Antenna will be shipped separately and will need to be attached to the coax connector.

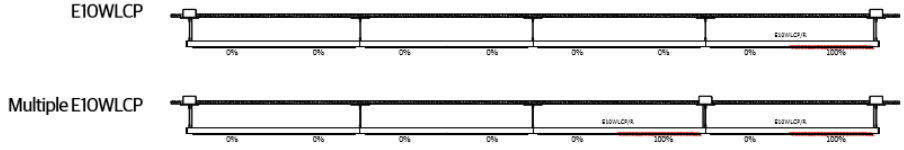
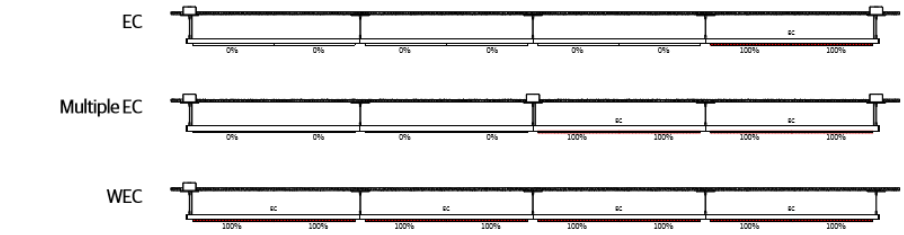
EMERGENCY OPTIONS

Emergency Battery Packs

The PS1055LCP battery is integral to the fixture and comes standard with test switch and self-diagnostics.
Only direct light portion operated by emergency, as indicated below.



Emergency Circuits



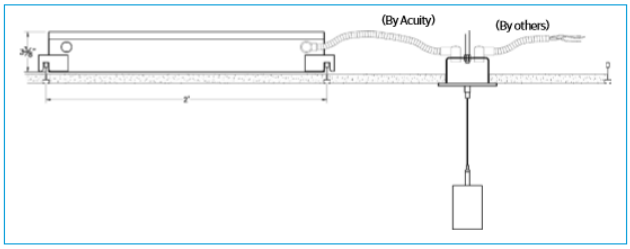
Note: *Whole run on emergency circuit (Not available with NLIGHT or NLTAIR2)*

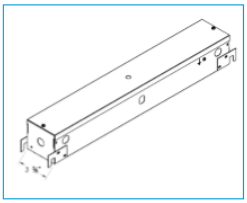
How to Estimate Delivered Lumens in Emergency Mode
Use the formula below to estimate the delivered lumens in emergency mode
Delivered Lumens = 1.25 x P x LPW
P = 10W for PS1055LCP
LPW = Lumen per watt rating of the luminaire This information is available on page 1 of this spec sheet or appropriate IES file.

Section Length	E10WLCP	EC
U2	None	Entire unit
U3	None	Entire unit
U4	Entire unit	Entire unit
U5	Last 3'	Entire unit
U6	Last 3'	Entire unit
U7	Last 4'	Entire unit
U8	Last 4'	Entire unit

Remote GTD Mounting Option

Recessed in ceiling. Consult factory for other ceiling types or canopy options.
6 foot flexible conduit included, GTD option should be mounted within 6 feet of junction box above fixture.





Accessible Ceiling

marklighting.com | 800-705-SERV (7378) | © 2022-2025 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

SPECIFICATIONS

Housing
One-piece extruded aluminum housing

Finish
Standard colors for fixtures and end caps are polyester powder coated white, black, or silver with satin sheen. Consult factory for custom colors and RAL color options.

Optics (Distribution)
Wall Wash (WW), Wall Graze (WG), and Direct Batwing (DBW) incorporate co-extruded lenses and films.

Lenses/Shielding
Direct: Extruded acrylic lens, (FLL, CLL). Edge Glow lens, (EGLD), Aluminum baffle with either a powder coat finish (LVRR) or aluminum finish (LVRRA). Extruded acrylic drop lens (DRP05, DRP1, DRP15).

LED Components
Multiple lumen packages available with 2700K, 3000K, 3500K, 4000K and 5000K CCT. The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. The color a variation of no greater than a 2.5 Step MacAdam (2.55DECM) along the black body locus from board to board.

Electrical
Long-life LEDs, coupled with high-efficiency drivers, provide superior quantity and quality of illumination for extended service life. 90% LED lumen maintenance at 60,000 hours (L90/60,000).

Circuits
Single and dual switching options available. Dual switching offered with shared neutral.

Controls System Networking Options
Optional integrated nLight® controls make each fixture addressable - allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors, and photocontrols. Connection to nLight is simple. It can be accomplished with remote nLight AIR wireless or through standard Cat-5 cabling. (cabling "by others") nLight offers unique plug-and-play convenience as devices and luminaires automatically discover each other, while nLight AIR is commissioned easily through an intuitive mobile app.

Emergency Battery (Optional)
Integral emergency battery (E10WLCP) for 90 minutes of operation. Emergency battery pack, 10W, Linear Constant Power Certified in CA Title 20 MAEDBS.

Remote generator transfer device (GTD) works in conjunction with an auxiliary generator or a central inverter system to power fixtures for safe egress lighting.

Dimming Drivers
Factory tuned constant current electronic dimming driver is standard. Flicker free dimming available down to <1%. LED drivers perform within the recommended operating areas for flicker as a function of frequency and modulation (%) IEEE Standard 1789-2015 (IEEE Recommended Practices for Modulating Current in High-Brightness LEDs for Mitigating Health Risks to Viewers), in typical operating conditions at representative dimming levels. Electrical specifications at maximum driver load: PF > 0.9 and THD <20%. Meets FCC Title 47 Class A or Class B. Other available drivers include Lutron and DALI protocol drivers. All drivers are RoHS compliant.

Environment
Suitable for damp location. Indoor use only.

Certification
CSA certified to meet U.S. and Canadian standards (UL1598 and UL8750).

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

Ambient Operating Temperature
-20°C (-4° F) to +25°C (+77°F).

Government Procurement
BAA – Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.
BABA – Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

Fixture Weight
1 lbs per foot, less packaging.

Warranty
5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: *Actual performance may differ as a result of end-user environment and application.*
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

423-000034-30

Exterior compact linear grazing luminaire with intelligent white and color light

Graze Compact is a high-performance, exterior linear luminaire designed to highlight architectural features like molding details, archways and windows up to two stories high. Graze Compact IntelliHue utilizes Color Kinetics IntelliHue technology to produce millions of saturated colors, pastels, and high-quality white light, in the same precisely controllable luminaire. Multiple luminaire lengths and beam angles support a large range of façade or surface illumination applications. The brand new low-profile housing, connectorized cabling, a universal power input range, and direct line voltage make Graze Compact luminaires easy to install and operate.

- Tailor light output to specific applications—Available in four standard lengths (1, 2, 3, and 4 ft), and three standard 10° x 60°, 30° x 60°, and 60° x 60° beam angles.
- Ultra compact form factor—Graze Compact's ultra-low profile is half the size of Graze, allowing it to fit discretely into almost any layout, from simple to elaborate.
- Innovative optical design features fully mixed light directly out of the luminaire. This allows for smaller setbacks than many other luminaires.
- Color-changing and high-quality white light from the same luminiare—IntelliHue is an advanced approach to color mixing that enables high-quality intelligent color and white light from a single luminaire. Multiple channels of LED light sources combine to produce a full spectrum of precisely controllable light, including millions of saturated colors, pastels, and uniform white light with CRI of greater than 80 in the 2700 K to 4000 K range.
- Improve color consistency between all LED luminaires in a family with Chromasync technology. During the manufacturing process a calibrated light measurement device creates an algorithm to define a common color gamut for an entire family of LED luminaires. When Chromasync is enabled, color consistency between luminaires is achieved without having to manually adjust color points on each luminaire.
- Integrates patented Powercore technology that controls power output to luminaires directly from line voltage – rapidly, efficiently, and accurately. The Color Kinetics Data Enabler Pro merges line voltage with control data and delivers them to luminaires over a single standard cable, dramatically simplifying installation and lowering total system cost.
- Graze Compact provides years of reliable use under rugged conditions. Graze Compact raises reliability even further with more protection from corrosion by meeting ASTM B117 standard and ANSI C136.31-2010 standard with a 3G vibration rating.
- Works seamlessly with the Color Kinetics full range of controllers, including iPlayer 3, iPlayer 4, Antumbra iColor Keypad, and ColorDial Pro—as well as third-party controllers.
- Convenient push-and-click connectors let you easily and rapidly install Leader Cables and Jumper Cables. Constant torque locking hinges offer simple and consistent position control from various angles.
- Customizable accessories - Customize your Graze luminaire with a choice of accessories: mounting arm, masking shield, symmetric louver, and masking tray. Mounting arm available in three sizes.

† 305 mm (1 ft) 2700 K lumen output measurements comply with IES LM-79-08 testing procedures. All other measurements including 610 mm (2 ft), 914 mm (3 ft), and 1219 mm (4 ft) lengths are estimated based on the 305 mm (1 ft) 2700 K measurements.
§ Lxx = xx% lumen maintenance (when light output drops below xx% of initial output). All values are given at B10, or the median value where 90% of the LED population is better than the reported or calculated lumen maintenance measurement.
¶ Minimum surge limits per IEC 61547, tested in accordance with IEC 61000-4-5.
§§ Efficacy measurements are estimated based on the 305 mm (1 ft) measurements.
¶¶ Lumen maintenance figures are based on lifetime prediction graphs supplied by LED source manufacturers. Whenever possible, figures use measurements that comply with IES LM-80-08 testing procedures. In accordance with TM-21-11, Reported values represent the interpolated value based on six times the LM-80-08 total test duration (in hours). Calculated values represent time durations that exceed six times the total test duration.

ACCESSORIES

Surface mount adjustable linear with one (1) LED lighting source, 518 delivered lumens, Intelihue color engine, 30°x60° optic and remote driver. Linear should operate on 100-277 voltage and be supplied with a dmx control option. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Linear to be rated for IP66 or equivalent. Linear should be UL listed for wet use or an approved equivalent.

CONTROL

PROTOCOL	DMX
INTENT	

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

Exterior compact linear grazing luminaire with intelligent white and color light

Graze Compact is a high-performance, exterior linear luminaire designed to highlight architectural features like molding details, archways and windows up to two stories high. Graze Compact IntelliHue utilizes Color Kinetics IntelliHue technology to produce millions of saturated colors, pastels, and high-quality white light, in the same precisely controllable luminaire. Multiple luminaire lengths and beam angles support a large range of façade or surface illumination applications. The brand new low-profile housing, connectorized cabling, a universal power input range, and direct line voltage make Graze Compact luminaires easy to install and operate.

- Tailor light output to specific applications—Available in four standard lengths (1, 2, 3, and 4 ft), and three standard 10° x 60°, 30° x 60°, and 60° x 60° beam angles.
- Ultra compact form factor—Graze Compact's ultra-low profile is half the size of Graze, allowing it to fit discretely into almost any layout, from simple to elaborate.
- Innovative optical design features fully mixed light directly out of the luminaire. This allows for smaller setbacks than many other luminaires.
- Color-changing and high-quality white light from the same luminiare—IntelliHue is an advanced approach to color mixing that enables high-quality intelligent color and white light from a single luminaire. Multiple channels of LED light sources combine to produce a full spectrum of precisely controllable light, including millions of saturated colors, pastels, and uniform white light with CRI of greater than 80 in the 2700 K to 4000 K range.
- Improve color consistency between all LED luminaires in a family with Chromasync technology. During the manufacturing process a calibrated light measurement device creates an algorithm to define a common color gamut for an entire family of LED luminaires. When Chromasync is enabled, color consistency between luminaires is achieved without having to manually adjust color points on each luminaire.
- Integrates patented Powercore technology that controls power output to luminaires directly from line voltage – rapidly, efficiently, and accurately. The Color Kinetics Data Enabler Pro merges line voltage with control data and delivers them to luminaires over a single standard cable, dramatically simplifying installation and lowering total system cost.
- Graze Compact provides years of reliable use under rugged conditions. Graze Compact raises reliability even further with more protection from corrosion by meeting ASTM B117 standard and ANSI C136.31-2010 standard with a 3G vibration rating.
- Works seamlessly with the Color Kinetics full range of controllers, including iPlayer 3, iPlayer 4, Antumbra iColor Keypad, and ColorDial Pro—as well as third-party controllers.
- Convenient push-and-click connectors let you easily and rapidly install Leader Cables and Jumper Cables. Constant torque locking hinges offer simple and consistent position control from various angles.
- Customizable accessories - Customize your Graze luminaire with a choice of accessories: mounting arm, masking shield, symmetric louver, and masking tray. Mounting arm available in three sizes.

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

RRL - RELOC®-Ready Luminaire

- RRL connectors can be used with Quick-Flex®, System 820 and OnePass® systems.
- Load side of connector factory installed to luminaire.
- 4-pole mating connector with push-in terminations allows for simple installation.
- Touch-safe design on both halves meets UL/CSA requirement.
- Wiping contact design allows safe disconnect under load.

Notes

1 C, ABE, and C12S options are not used with Quick-Flex QFC, QSFC, QPT, and QD.

PLUG-IN WIRING INFORMATION

Advanced plug-in system with two-circuit capability. Available on industrial and strip products and a variety of architectural products mounted in continuous rows. PLR22 (2-circuit) and crossover harness switches hot circuit serving next fixture in row. Reduces fixture types on job for alternating circuit applications (see example below.)

Easy one-step installation, saves up to 35% on labor costs. Expanded switching flexibility helps save energy.

Rows can be 50% longer with two-circuit systems. Polarized, lock-together nylon connectors prevent miswiring in the field. #12 THHN conductor, rated 600V, 90°C. White neutral wire included. Grounding accomplished by fixture in-row connectors.

CSA certified systems available with up to 2 circuits. G ground required.

Not for use with dedicated emergency circuits.

Note: Specifications subject to change without notice.

Wiring

PLR

Advanced 1 or 2-Circuit Plug-In

ORDERING INFORMATION Lead times will vary depending on options selected. Consult with your sales representative.

Series	Number of hot wires		Branch circuits		Dimming	Ground
			Circuits to which driver is connected	Battery charging circuit (must be unswitched)		
PLR	(blank)	Not required for PLR22	(blank) Not required for PLR22	(blank) No battery charging circuit	LV Low-voltage dimming	G Ground (required)
PLR22	1	Black	A Black wire	ELA Battery pack wired to black wire		
	2	Black and red	B Red wire	ELB Battery pack wired to red wire		

Typical Applications

- Multiple-circuit and single-circuit for longer continuous rows
- Multiple-circuit with alternating fixtures on separate circuits and 2-circuit PLR22
- Multiple circuit with night-lights located along row as desired

LITHONIA LIGHTING®

LED Linear

CLX

24", 36", 48" and 96" Lengths

FEATURES & SPECIFICATIONS

INTENDED USE — The CLX is a linear lighting solution that is available in multiple lengths, lumen packages and distributions. Designed for versatility, the CLX can address virtually any indoor lighting need. The CLX is also offered in standard and high efficacy configurations and capable of being continuous row mounted or installed as a stand-alone fixture. Ideal for uplight and downlight in commercial, retail, manufacturing, warehouse, and display applications. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate.** Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.

CONSTRUCTION — Channel and cover are formed from code-gauge cold-rolled steel. Housing and lens endcaps are injection molded plastic to provide a more architectural look and feel. The endcaps come standard with a 7/8" knock out for continuous mounting but can be ordered without.

Finish: Paint options include high-gloss, baked white polyester (WH), galvanized (GALV), matte black (MB) and smoke gray (SKGY). Five-stage iron phosphate pre-treatment ensures superior paint adhesion and rust resistance.

OPTICS — Offered with acrylic lens and less lens configurations. Provides a choice of optical distributions including, wide, narrow, and aisle.

Models with wide diffuse lens provide up to 12% uplight. Please check the IES file for specific uplight value.

ELECTRICAL — Utilizes high-output LEDs integrated on a two-layer circuit board, ensuring cool-running operation. Optional internal pluggable wiring harness for reduced labor cost in row mounting applications. (See PLR_ ordering information on page 9.) Electronic LED driver is multi-volt input and 0-10V dimming standard (see Operational Data on page 6 for actual wattage consumption). This fixture is designed to withstand a maximum line surge of 2.5kV at 0.75kA combination wave for indoor locations, for applications requiring higher level of protection additional surge protection must be provided. Color Variation within 3-step MacAdam ellipse (3SDCM).

L70>100,000 hours at 25°C.

LEDs provide nominal 80 CRI or 90 CRI at 3000 K, 3500 K,4000 K, or 5000 K.

Lumen output up to 2,500 lumens per foot.

INSTALLATION — Fixture may be ceiling or wall mounted (with or without THCLX hanger or angle mounted with CLXANGBKT), pendant or stem mounted with appropriate mounting options.

WARNING — Removing the lens and opening the fixture during installation exposes the LEDs, putting them at risk for damage.

If you plan to surface mount the fixture, we recommend using the THCLX. This eliminates the need to open the fixture.

If you plan to continuous row mount, we recommend using the PLR wiring harness option. This eliminates the need to open the fixture.

Damage to the LEDs caused during installation will not be covered under the warranty.

LISTINGS — CSA certified to US and Canadian safety standards. For use in damp locations between -4°F (-20°C) and 104°F (40°C). Optional High Ambient (HA) ranging to 122°F(50°C) available on certain lumen packages (See ambient temperature chart for additional information).
DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

GOVERNMENT PROCUREMENT — BAA – Product with the BAA option qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product with the BAA option also qualifies as manufactured in the United States under DOT Buy America regulations.
BABA – Build America Buy America: Product with the BAA option also qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning when used with Acuity Brands controls products.
All configurations of this luminaire are calibrated and tested to meet the Acuity Brands' specifications for chromatic consistency – including color rendering, color fidelity, and color temperature tolerance around standard CIE chromaticity coordinates.

To learn more about Acuity A+ standards, specifications, and testing visit www.acuitybrands.com/aplus.

CS6WG16STOWD5D	Not available with Individual controls, nLight wired networking, nLight wireless networking, nLight wireless zone control options. Not available with PLR options.
Driver	When continuous row mounting, fixtures must all have the same driver selection.
E10W	Not available with HA. Not available with 347V or 480V. Not available with BGTD option. Requires SPD option. Not available with L24 or L36. Not available with L48 in combination with N100.
E10WSTAR	Not available with HA. Not available with 347V or 480V. Not available with BGTD option. Requires SPD option. Not available with L24 or L36. Not available with L48 in combination with N100.
EPNKO	Not available OUTEND.
EZ1	Not available with HA option. Not available with 5000LM, 7500LM.
FDL, RDL, WDL	Only available with general distribution. Not available with CLXRN accessories.
GZ1, GZ10	Not available with Individual controls, nLight wired networking, nLight wireless networking, nLight wireless zone control options.
HA	Not available with L24, L26. Not available with BGTD option. Not available with EZ1. Only available with L48 3000/4000/5000LM and L96 6000/8000/10000LM.
HEF	Not available with L48 3000LM and L96 6000LM
LUGR	Not available with L36 length. Only available with WH finish. Not compatible with THCLX Hanger or wireguard accessories. LUGR option required for some DLC premium qualifications - Please check the DLC Qualified Products List to determine if LUGR option is necessary to meet requirement. If mounting in continuous rows, ensure all models ordered with LUGR option if required on any configuration to ensure rows match in form factor. LUGR reflectors ship in standard fixture carton and are not sold as separate accessory - this option MUST be specified as part of the CLX model number.
MSD7, MSDPDT7, MSD7ADC, MSDPDT7ADC	Not available with any other control option. Requires EZ1. Sensor housing will be the same color as lens end caps.
N100, N100EMG	nLight EMG option requires a connection to existing nLight network. Power is provided from separate N100 enabled fixture.
ND, WD, AD2	Not available with CLXRN accessories. Available L/LENS only.
NES7, NESPDT7, NES7ADCX, NESPDT7ADCX	Not available with any other control option. Requires EZ1. Requires N100 or N100EMG option, N100EMG with NES7 requires RFA. Sensor housing will be the same color as lens end caps.
NLTAIR2 RES7(EM), NLTAIR2 RES7PDT(EM), NLTAIR2 RIO(EM)	Sensor housing will be the same color as lens end caps. For EM, see UL924 Sequence of Operation chart below.
OCS	Must specify voltage.
OUTCR	Not available with L24. Not available with PLR options.
OUTEND	Not available with PLR options.
PLR1LVG	Not available with Individual controls, NLight Wired, or NLight Wireless options. Refer to page 9 for more PLR details. Not available with cord set options.
SBLW, SBLMB, SBLGV, SBLSKGY	When ordered with L24 only available with 1500LM or 2000LM in combination with GZ10 driver. Not for use with THCLX, CLXANGBKT or WGCLX accessories. Not available with RDL lens options.
SEF	Not available with EZ1 when ordered with L24 with 5000LM or L36 with 7500LM.
SPD	Required with E10W, BGTD.
THCLX ___, CLXANGBKT ____	Not available with louver or wireguards. THCLX___ not available with LUGR.
Wireguards	Not for use with LUGR option. For L96 fixtures, use qty 2 48" wireguards.
SQ	No available with L24 or L36

UL924 Sequence of Operation

The below information applies to all nLight AIR devices with an EM option.

- EM devices will remain at their high-end trim and ignore wireless lighting control commands, unless a normal-power-sensed (NPS) broadcast is received at least every 8 seconds.
- Using the CLAIRITY+ mobile app, EM devices must be associated with a group that includes a normal power sensing device to receive NPS broadcasts.
- Only non-emergency rPP20, rLSXR, rSBOR, rSDGR, and nLight AIR luminaires with version 3.4 or later firmware can provide normal power sensing for EM devices. See specification sheets for control devices and luminaires for more information on options that support normal power sensing.

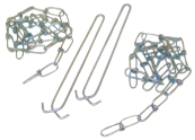
OPTIONS AND ACCESSORIES

Wireguard
Ships separately from fixture:
96" fixture requires two WGCLX48.
Order as:
WGCLX24__
WGCLX36__
WGCLX48__

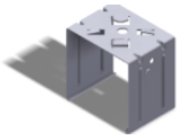
LUGR glare reflector
NOT available as accessory - must be specified as part of the fixture nomenclature. See ordering notes on page 3.

Aircraft Cable with Canopy
Available in 120" or 240"
Order as:
ZAC120
ZAC240



HANGER CHAIN
36" chain with Y hanger. ships as a pair
Order as:
HC36

ZACVH HANGER
10' Aircraft cable with Y hanger.
Order as:
ZACVH



Tong hanger
Ships as a pair
Order As:
THCLX__

POWER SENTRY EMERGENCY BATTERY PACKS

		SEF Emergency Lumens	HEF Emergency Lumens
E10W	Factory installable	1400	1500
PS1555LCP	Field installable, remote mount only	2000	2100

Note: For emergency lumen output of specific model, please consult factory. One board will be illuminated during emergency operation.

Emergency Battery Pack Options - Field Installable

Battery Model Number	Wattage	Runtime (Minutes)	Lumen Output* @ 120 Lumens/Watt	Other
ILB CP07 2H A	7W	120	840	Storm Shelter / 2 Hour Runtime
ILB CP10 A	10W	90	1200	
ILBLP CP10 HE SD A	10W	90	1200	Title 20, Self Diagnostic
ILB CP10 HE AELR A	10W	90	1200	Title 20; Enabled with Self Testing, Automated Reporting (STAR)
ILBLP CP15 HE SD A	15W	90	1800	Title 20, Self Diagnostic
ILB CP20 HE A	20W	90	2400	Title 20
ILB CP20 HE SD A	20W	90	2400	Title 20, Self Diagnostic

All the above are UL Listed products that are certified for field install external/remote to the fixture.
*Minimum delivered lumen output to assist in product selection for increased fixture mounting height.
The CP10 delivered emergency illumination outperforms legacy 1400 lumen fluorescent emergency ballast.
Please contact us at techsupport@iotaengineering.com for any Emergency Battery related questions.

Enabled with STAR

Emergency Lighting with Self-Testing Automated Reporting (STAR), enables self-testing and automated reporting to aid in life safety code compliance. Build your solution and choose your preferred deployment from Mobile STAR, where test data is logged in each individual unit and broadcast to the CIAIRity™+ app, or Connected STAR, where test data is logged in the STAR Gateway by IOTA® and emailed directly. **Leave the ladders, disruptions and written records behind with emergency lighting solutions with STAR!**

Life Safety Code NFPA 101 testing and reporting requirements for emergency lighting include:

- Testing for 30 seconds every 30 days
- Testing for 90 minutes once a year
- Record keeping and to report to the authority having local jurisdiction

RRL - RELOC®-Ready Luminaire

- RRL connectors can be used with Quick-Flex®, System 820 and OnePass® systems.
- Load side of connector factory installed to luminaire.
- 4-pole mating connector with push-in terminations allows for simple installation.
- Touch-safe design on both halves meets UL/CSA requirement.
- Wiping contact design allows safe disconnect under load.

ORDERING INFORMATION Lead times will vary depending on options selected. Consult with your sales representative. **Example:** RRLA

Series		Wiring instructions	
RRL	RELOC®-ready luminaire	A	Hot conductor wired to position #1 (phase A)
		B	Hot conductor wired to position #2 (phase B)
		C	Hot conductor wired to position #3 (phase C) [1]
		C12S	Ballast/driver wired to pin position #1 (120V, 277V, 347V - Phase A). Low voltage wire (positive/purple) (data1) wired to pin position #2. Low voltage wire (common/gray) (data2) wired to pin position #3 [2]

Compatible RELOC® Cables for Industrial Luminaires (ordered and shipped separately)

OCS

OCU

OD

DC

PT

Notes

1 C, ABE, and C12S options are not used with Quick-Flex QFC, QSFC, QPT, and QD.

2 RRLC12S option is to be used with the OnePass OCU, OCS, OD, OFC and OD for 0-24V integrated single-circuit or 0-10V low voltage controls applications. Not available with integral dimming sensors.

PLUG-IN WIRING INFORMATION

Advanced plug-in system with two-circuit capability. Available on industrial and strip products and a variety of architectural products mounted in continuous rows. PLR22 (2-circuit) and crossover harness switches hot circuit serving next fixture in row. Reduces fixture types on job for alternating circuit applications (see example below.)

Easy one-step installation, saves up to 35% on labor costs. Expanded switching flexibility helps save energy.

Rows can be 50% longer with two-circuit systems. Polarized, lock-together nylon connectors prevent miswiring in the field. #12 THHN conductor, rated 600V, 90°C. White neutral wire included. Grounding accomplished by fixture in-row connectors.

CSA certified systems available with up to 2 circuits. G ground required.

Not for use with dedicated emergency circuits.

Note: Specifications subject to change without notice.

Wiring

PLR

Advanced 1 or 2-Circuit Plug-In

ORDERING INFORMATION Lead times will vary depending on options selected. Consult with your sales representative.

Series	Number of hot wires		Branch circuits (PLR2A / PLR2B Only)		Dimming		Ground	
PLR22	(blank)	Not required for PLR22	(blank)	Not required for PLR22	(blank)	No Dimming	G	Ground (required)
PLR	1	Black	(blank)	Not required for PLR1	(blank)	No Dimming	G	Ground (required)
	2	Black and red	**Circuits to which driver is connected**	**Battery charging circuit (must be unswitched)**	LV	Low-voltage Dimming	G	Ground (required)
			(blank) Not required for PLR22	(blank) No battery charging circuit				
			A Black wire	ELA Battery pack wired to black wire				
			B Red wire	ELB Battery pack wired to red wire				

Typical Applications

Notes:

When specifying PLR1, you will not specify A or B as there is only a single hot wire which would be black in color.

- Multiple-circuit and single-circuit for longer continuous rows
- Multiple-circuit with alternating fixtures on separate circuits and 2-circuit PLR22
- Multiple circuit with night-lights located along row as desired

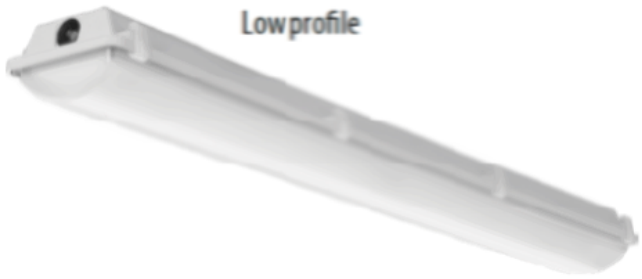
ACCESSORIES



Surface mount fixed linear with one (1) LED lighting source, 6000 delivered lumens, 3000K color engine, 80+ CRI, 280° optic and integral driver. Linear should operate on 120-277 voltage and be supplied with a 0-10v control option down to 10% and include a minimum 5-year warranty. Linear to have white finish. Linear to be rated for IP67 or equivalent. Linear should be UL listed for wet use or an approved equivalent.

CONTROL

PROTOCOL	0-10V

FEATURES & SPECIFICATIONS

INTENDED USE — A general purpose and energy-efficient surface-mounted or suspended LED fixture, suitable for wet, damp and/or cold locations. For vapor-tight demanding environments where moisture or dust is a concern and where relatively low fixture mounting heights and wide fixture spacing are common. Not for use or installation in direct outdoor sunlight. Must be installed under canopy or covered ceiling. For direct sunlight installations, please refer to the FEX product family. Typical applications include industrial facilities, parking garages, retail malls, multi-purpose rooms, garden centers, and food processing. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate. Click here for Acrylic-Polycarbonate Compatibility table for suitable use.**

Certain airborne contaminants may adversely affect the functioning of LEDs and other electronic components, depending on various factors such as concentrations of the contaminants, ventilation, and temperature at the end-user location. Click here for a list of substances that may not be suitable for interaction with LEDs and other electronic components.

CONSTRUCTION — One-piece SVA fiberglass housing with integral perimeter channel utilizing continuous poured-in-place NEMA 4X gasket. Approved for through wiring. Captive polymeric latches are standard. Stainless steel latches (#316) available as an option for food processing or more demanding applications.

Power connection is easily accomplished through pre-drilled holes.

OPTICS — Injection molded, acrylic lens (.080" thick) provides high impact-resistance comparable to 100% DR. A UV stabilized polycarbonate diffuser is available (.080" thick) in clear or frosted for additional impact strength where vandal protection is desired.

Expected service life of 60,000 hours at 80% lumen maintenance (L80); predicted life of more than 100,000 hours.

ELECTRICAL — Utilizes high-efficiency LEDs mounted to core circuit boards. High-efficiency drivers operate 120-277 (MVOLT) and 347-480 (HVOLT) offered with 0-10 volt dimming, dims to 10%. Standard Luminaire Surge Protection Level: 6kV/3kA Surge Rated per ANSI C82.77-5-2015.

INSTALLATION — A pair of stainless steel surface mount brackets (SMB) are included (unless another mounting option is chosen) allowing for surface (ceiling) or suspension mount applications using included bail with aircraft cable or chain. Optional pair of dual pendant mount brackets (DPMB) are available for surface (ceiling) or suspension mount applications using either 3/8" threaded rod or included bail with aircraft cable or chain. Optional pair of angle mounting brackets (ANGBKT) for wall mount applications.

LISTINGS — CSA Certified to UL and C-UL Standards. Suitable for wet location. IP65,IP66, IP67 rated. NSF Splash Zone 2 and Non-Food Zone rated. NEMA 4X rated. Sensors maintain IP65 and IP66 only. See chart on page 5 for Ambient Temperatures.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

BUY AMERICAN ACT — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT regulations.
Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

NOTE: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

Options

Emergency:

E10WMCP	EM Self-diagnostics battery pack, MVOLT, 10W, Constant Power Certified in the California Title 20 Modernized Appliance Efficiency Database (MAEDBS) ‡
BE6WCP	Cold Weather EM battery pack, 120/277V, 6W, Constant Power Certified in the California Title 20 Modernized Appliance Efficiency Database (MAEDBS) ‡
BGTD	Generator transfer device

Other Options:

ANGBKT	Angle bracket shipped with fixture ‡
BAA	Buy America(n) Act Compliant
DPMB	Dual pendant mounting bracket ‡
SPD	Surge protection device, additional 10kV/6kA
STSL	Stainless steel latches
TRS	Tamper Resistant Torx® T10 screws
WLF	Wet location fitting (two outboard, top (L24 - 20 inches off-center, L48 - 48 inches off-center, L96 - 95.7 inches off-center) ‡
WLFEND	Wet location fitting (one end) ‡
WLFEND2	Wet location fitting (both ends) ‡
WLFPMP	Wet location pendant monopoint ‡

Cord Sets: ‡

CPSB16YWLBH	Brad Harrsion Mini-Change® cordset with straight blade plug, 16 gauge, 3 conductors, 6ft, yellow ‡
CPSB16YWL12FTBH	Brad Harrsion Mini-Change® cordset with straight blade plug, 16 gauge, 3 conductors, 12ft, yellow ‡
CRSB16YWLBH	Brad Harrison Mini-Change® receptacle ‡
CNP16WWL	Cord only (no plug), 16 gauge, 3 conductors, white, 6ft, wet location ‡
CNP16WWL12FT	Cord only (no plug), 16 gauge, 3 conductors, white, 6ft, wet location ‡
CNP164CWWL	Cord only (no plug), 16 gauge, 4 conductors, white, 6ft, wet location (for use when unswitched circuit is required for battery pack) ‡

Individual Controls: ‡

SBOR10	360° Low mount sensor, (8-15' mounting heights), outdoor PIR, ON/OFF occupancy (LINK) (formerly MSI10NWL)
SBOR10 HL 3V	360° Low mount sensor, (8-15' mounting heights), outdoor PIR, occupancy controlled dimming (bi-level) (LINK) (formerly MSI102L3VWL)
SBOR10 P	360° Low mount sensor, (8-15' mounting heights), outdoor PIR, ON/OFF photocell (LINK) (formerly MSI10NWL DSCNWL)

nLight Wireless: ‡

NLTAIR2 RSBOR10	nLight® Air Generation 2 enabled, 360° low mount sensor, (8-15' heights) (LINK)
NLTAIR2 RIO	nLight® Air Generation 2 enabled, fixture embedded network interface, 0-10V dimming output (LINK)

NOTE: ‡ indicates option chosen has ordering restrictions. Please reference ordering restrictions chart, page 3. Options are sorted alphanumerically.

Accessories: *Order as separate catalog number.*

MHCH 36	3 foot (36 inches) jack chain (pair)
MHHK120	10 foot (120 inches) single leg air craft cable (ships as pair)
MHHK120SS	10 foot (120 inches) single leg air craft cable, stainless steel (ships as pair)
RK1 T10BIT W/PIN U	Hex-base driver bit, Torx TX10, for tamper resistant screws with center reject pin
FEMDPMB	Dual pendant mounting bracket (ships as a pair) ‡
FEMANGBKT	Angle bracket (ships as pair) ‡
FEMSMB	Surface mount bracket (ships as pair) ‡

See Accessories and ordering restrictions on next page.

‡ Option Value Ordering Restrictions	
Option value	**Restriction**
ANGBKT, FEMANGBKT	For wall mount applications. If mounted in an upward orientation, fixture will be damp location listed only.
BE6WCP	Utilizes Bodine BSL36 Cold-Pak emergency driver. Not available with L24 length. Order with CNP164CWWL when unswitched hot is required for battery. Not available with 347V,480V,HVOLT.
CNP16WWL, CNP16WWL12FT	Not available with BE6WCP or E10WMCP.
CNP164CWWL	Available with BE6WCP or E10WMCP only. **Not NEMA4X rated.**
Cord Sets	**Not NEMA4X rated.**
CPSB16YWLBH, CPSB16YWL12FTBH	Not available with BE6WCP or E10WMCP.
CRSB16YWLBH	Not available with BE6WCP or E10WMCP.
E10WMCP	Utilizes Power Sentry, PS1055MCP battery pack. Order with CNP164CWWL when unswitched hot is required for battery. Not available with 347V,480V,HVOLT.
DPMB, FEMDPMB	For surface (ceiling) or suspension mount applications using either 3/8" threaded rod or included bail with aircraft cable or chain.
FEMSMB	Ships standard with fixture (unless another mounting option is chosen). For surface (ceiling) or suspension mount applications using included bail with aircraft cable or chain.
HVOLT	When ordered with L24, available with 6000LM only. When ordered with L48, not available with 3000LM or 4000LM.
Individual Controls	**Not NEMA4X rated. IP65 and IP66 rated.**
L24	Not available with BE6WCP.
L48	Not available with WLFPMP.
L96	Not available with WLFPMP
nLight® Wireless	**Not NEMA4X rated. IP65 and IP66 rated.**
WLF	If cord is ordered, cord will exit from the end of the fixture. **Not NEMA4X rated.**
WLFEND	If cord is ordered, cord will exit from the end of the fixture. **Not NEMA4X rated.** Available with cord or sensor option. Choose only one.
WLFEND2	Not available with sensor or cord options. **Not NEMA4X rated.**
WLFPMP	Available only with L24. **Not NEMA4X rated.**

ACCESSORIES	

Surface mount fixed linear with one (1) LED lighting source, 9000 delivered lumens, 3000k color engine, 80+ CRI, frosted optic and integral driver. Linear should operate on 120-277 voltage and be supplied with a 0-10v control option and include a minimum 5-year warranty. Linear to be rated for IP67 or equivalent. Linear should be UL listed for wet use or an approved equivalent.

CONTROL	
PROTOCOL	0-10V

FEATURES & SPECIFICATIONS

INTENDED USE — A general purpose and energy-efficient surface-mounted or suspended LED fixture, suitable for wet, damp and/or cold locations. For vapor-tight demanding environments where moisture or dust is a concern and where relatively low fixture mounting heights and wide fixture spacing are common. Not for use or installation in direct outdoor sunlight. Must be installed under canopy or covered ceiling. For direct sunlight installations, please refer to the FEX product family. Typical applications include industrial facilities, parking garages, retail malls, multi-purpose rooms, garden centers, and food processing. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate.** **Click here for Acrylic-Polycarbonate Compatibility table for suitable use.**

Certain airborne contaminants may adversely affect the functioning of LEDs and other electronic components, depending on various factors such as concentrations of the contaminants, ventilation, and temperature at the end-user location. **Click here for a list of substances that may not be suitable for interaction with LEDs and other electronic components.**

CONSTRUCTION — One-piece 5VA fiberglass housing with integral perimeter channel utilizing continuous poured-in-place NEMA 4X gasket. Approved for through wiring. Captive polymeric latches are standard. Stainless steel latches (316SS) available as an option for food processing or more demanding applications.

Power connection is easily accomplished through pre-drilled holes.

OPTICS — Injection molded, acrylic lens (.080" thick) provides high impact-resistance comparable to 100% DR. A UV stabilized polycarbonate diffuser is available (.080" thick) in clear or frosted for additional impact strength where vandal protection is desired.

Expected service life of 60,000 hours at 80% lumen maintenance (L80); predicted life of more than 100,000 hours.

ELECTRICAL — Utilizes high-efficiency LEDs mounted to core circuit boards. High-efficiency drivers operate 120-277 (MVOLT) and 347-480 (HVOLT) offered with 0-10 volt dimming, dims to 10%. Standard Luminaire Surge Protection Level: 6kV/3kA Surge Rated per ANSI C82.77-5-2015.

INSTALLATION — A pair of stainless steel (316SS) surface mount brackets (SMB) are included (unless another mounting option is chosen) allowing for surface (ceiling) or suspension mount applications using included bail with aircraft cable or chain. Optional pair of dual pendant mount brackets (DPMB) (316SS) are available for surface (ceiling) or suspension mount applications using either 3/8" threaded rod or included bail with aircraft cable or chain. Optional pair of angle mounting brackets (ANGBKT) (316SS) for horizontal wall mount applications.

LISTINGS — CSA Certified to UL and C-UL Standards. Suitable for wet location. IP65, IP66, IP67 and IP69K (optional) rated. NSF Splash Zone 2 and Non-Food Zone rated. NEMA Type 4X rated. Sensors maintain IP65 and IP66 only. See chart on page 5 for Ambient Temperatures.

DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

GOVERNMENT PROCUREMENT — BAA – Product with the BAA option qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product with the BAA option also qualifies as manufactured in the United States under DOT Buy America regulations.
BABA – Build America Buy America: Product with the BAA option also qualifies as produced in the United States under the definitions of the Build America, Buy America Act.
Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

NOTE: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

Options

Emergency:

BE6WCP	6W internal cold battery, illuminated test switch, cold rated -20°C min, wet location, Certified in CA Title 20 MAEDBS ‡
E10WMCP	10W internal constant power battery, self-diagnostic test switch, 5°C min, wet location, Certified in CA Title 20 MAEDBS ‡
E7W2H	7W internal constant power battery, illuminated test switch, 2hr operation, 0°C min, wet location, Certified in CA Title 20 MAEDBS ‡
ETS	Emergency lighting control device for UL924 operation when using auxiliary generator or central inverter ‡
247OP	24/7 Operation with emergency battery and 3 conductor cord or plug ‡

Mounting:

ANGBKT	Angle bracket shipped with fixture (316SS) ‡
DPMB	Dual pendant mounting bracket (316SS) ‡
EMK	(2) End mount suspension brackets (304SS) ‡
QMB	(2) Quick mount brackets (304SS) ‡
WLF	Wet location fitting (two outboard, top (L24 - 20 inches off-center, L48 - 48 inches off-center, L96 - 95.7 inches off-center) ‡
WLFEND	Wet location fitting (one end) ‡
WLFEND2	Wet location fitting (both ends) ‡
WLFPMP	Wet location pendant monopoint ‡
WLF4X	Wet location fittings, NEMA Type 4X rated ‡
WLFPMP4X	Wet location fitting for pendant mounting, NEMA Type 4X rated ‡
WLFEND4X	Wet location one end, NEMA Type 4X fittings ‡
WLFEND24X	Wet Location both-ends, NEMA Type 4X fittings ‡

Other Options:

A0	Adjustable output dimming ‡
DL	Damp Location ‡
DRYLBL	Dry Location ‡
IP69K	IP69K rating, includes vent plugs ‡
SPD	Surge protection device, additional 10kV/6kA
STSL	Stainless steel latches (316SS)
TRS	Tamper Resistant Torx® T10 screws (18-8SS)
BAA	Buy America(n) Act and/or Build America Buy America Qualified

Cordsets:

CNP16WWL	Cord, no plug, 16 gauge, 3 conductors, white, wet locations, 6 feet, other lengths available ‡
CNP164CWWL	Cord, no plug, 16 gauge, 4 conductors for use with EM battery, white, wet locations, 6 feet, other lengths available ‡
CNP165CWWL	Cord, no plug, 16 gauge, 5 conductors for use with ER controls or ETS device with 2 power sources, white, wet locations, 6 feet, other lengths available ‡
CNP165CDWWL	Cord, no plug, 16 gauge, 5 conductors for 0-10V dimming, white, wet locations, 6 feet, other lengths available ‡
CPTL16W	Cord with NEMA twist lock 15 amp plug, 16 gauge, 3 conductors, white, damp location, 6 feet, other lengths available
CPTL16WWL	Cord with NEMA twist lock 15 amp plug, 16 gauge, 3 conductors, white, wet location, 6 feet, other lengths available
CPTL20A16W	Cord with NEMA twist lock 20 amp plug, 16 gauge, 3 conductors white, damp location, 6 feet, other lengths available
CPTL20A16WWL	Cord with NEMA twist lock 20 amp plug, 16 gauge, 3 conductors white, wet location, 6 feet, other lengths available
CPSB16W	Cord with NEMA straight blade 15 amp plug, 18 gauge, 3 conductors white, damp location, 6 feet, other lengths available
CMCMBH16YWL	Cord with Brad Mini Change® male connector, nonmetallic coupling nut, 3 pole, 16 gauge, yellow, wet location, 6 feet, other lengths available ‡
MCRMBH16WL	Receptacle with Brad Mini Change® male connector, stainless steel coupling nut, 3 pole, 16 gauge leads, wet location ‡

See chart for additional cordset options

Reloc®:

OCS	Reloc® One Pass® circuit selector system drop, 18 gauge, 3 conductors, 6 feet, other lengths available ‡
OCS4C	Reloc® One Pass® circuit selector system drop, 18 gauge, 4 conductors, for use with EM battery, 6 feet, other lengths available ‡

See chart for additional Reloc® options

Sensor Switch Embedded Controls:

SBOR10	360° Low Mount Sensor, (8-15' mounting heights, more options available), on/off occupancy, Sensor/control mounted external to the luminaire via a KO ‡
SBOR10 D 3V	360° Low Mount Sensor, (8-15' mounting heights, more options available), high/low/off occupancy dimming, Sensor/control mounted external to the luminaire via a KO ‡
SBOR10 P	360° Low Mount Sensor, (8-15' mounting heights, more options available), on/off photocell, Sensor/control mounted external to the luminaire via a KO ‡

Accessories: *Order as separate catalog number.*					
MHCH 36	3 foot (36 inches) jack chain (pair)	RK1 T10BIT W/PIN U	Hex-base driver bit, Torx TX10, for tamper resistant screws with center reject pin	FEMSMB	Surface mount bracket (ships as pair) (316SS) ‡
MHHK120	10 foot (120 inches) single leg air craft cable (ships as pair)	FEMDPMB	Dual pendant mounting bracket (ships as a pair) (316SS) ‡	FEMEMK	End mount suspension brackets (ships as a pair) (304SS) ‡
MHHK120SS	10 foot (120 inches) single leg air craft cable, stainless steel (ships as pair)	FEMANGBKT	Angle bracket (ships as pair) (316SS) ‡	FEMQMB	Quick mount brackets (ships as pair) (304SS) ‡

‡ Option Value Ordering Restrictions	
Option value	**Restriction**
2470P	Required when an EM battery and a 3 conductor cordset is selected. The driver and EM battery power inputs will be tied together and the fixture will be not be able to be turned off without controls. When ordered with a cordset that includes a plug, the max cord length will be 3 feet. Consult local codes to determine if this is allowable.
ANGBKT	For wall mount applications. If mounted in an upward orientation, fixture will be damp location listed only.
AO	Not available with L24. Not available with Sensor Switch embedded dimming controls, nLight embedded controls, 5 conductor dual voltage (CNP165C) or 5 conductor dimming (CNP165CD) cordsets. Available with non-dimming Sensor Switch embedded controls (SBOR6 or SBOR10; occupancy only).
BE6WCP	Utilizes Bodine® BSL36 Cold-Pak emergency driver. Not available with L24 length, 347, 480 or HVOLT. Available with 4 conductor (CNP164C) cordsets. Also available with 3 conductor (CNP16) cordsets or a cordset with a plug (CPTL16, CPTL20A16). Plug requires 2470P option.
CMCMBH16YWL	Not available with ETS, ER controls or WLFEND2. Not NEMA Type 4X rated.
CNP164CWWL	Not available with ETS, ER controls or WLFEND2. Not NEMA Type 4X rated. When damp location is required, remove the WL from the nomenclature.
CNP165CDWWL	Not available with ETS, AO, Sensor Switch embedded dimming controls, nLight embedded controls or WLFEND2. Available with non-dimming Sensor Switch embedded controls (SBGR; occupancy only). 2470P required when ordered with EM batteries. **Not NEMA Type 4X rated.** When damp location is required, remove the WL from the nomenclature.
CNP165CWWL	Available with ETS or ER controls only. Not NEMA Type 4X rated.
CNP16WWL	Not available with BE6WCP, E10WMCP or WLFEND2. 2470P required when ordered with EM batteries. **Not NEMA Type 4X rated.** When damp location is required, remove the WL from the nomenclature.
CPSBW	Damp Location only. Not available with ETS or ER controls. When ordered with EM battery, 2470P is required. **Not NEMA Type 4X rated.**
CPTL16W, CPTL20A16W	Damp Location only. Not available with ETS or ER controls. When ordered with EM batteries, 2470P is required. **Not NEMA Type 4X rated.**
CPTL16WWL, CPTL20A16WWL	Not available with ETS or ER controls. When ordered with EM batteries, 2470P is required. **Not NEMA Type 4X rated.**
DL	Required with damp location cords such as CNPW or CPSBW.
DPMB	Replaces standard surface mount bracket. For surface (ceiling) or suspension mount applications using either 3/8" threaded rod or included bail with aircraft cable or chain.
DRYLBL	Required with OCS and OCS4C.
EMK	Requires the WLFEND2 option.
E7W2H	Utilizes IOTA® ILB CP07 2H battery. UL924 compliant. Not available with L24, ETS, ER Controls 347, 480 or HVOLT. Available with 4 conductor (CNP164C) cordsets. Available with 3 conductor (CNP16, CPTL16, CPTL20A16) cordsets with 2470P option. Consult local codes to determine if this is allowable.
E10WMCP	Utilizes Power Sentry® PS1055MCP battery. Not available with ETS, ER Controls 347, 480 or HVOLT. Available with 4 conductor (CNP164C) cordsets. Also available with 3 conductor (CNP16) cordsets or a cordset with a plug (CPTL16, CPTL20A16). Plug requires 2470P option. Consult local codes to determine if this is allowable.
ETS	Not available with EM batteries (E10WMCP, BE6WCP), EM or ER controls. 120-277V only. Available with a 5 conductor dual voltage cordset (CNP165C), but not required. Utilizes IOTA ETS DR emergency lighting control device.
FEMANGBKT	For wall mount applications. If mounted in an upward orientation, fixture will be damp location listed only.
FEMDPMB	For surface (ceiling) or suspension mount applications using either 3/8" threaded rod or included bail with aircraft cable or chain.
FEMSMB	Replacement only; ships standard with fixture (unless another mounting option is chosen). For surface (ceiling) or suspension mount applications using included bail with aircraft cable or chain.
FEMQMB	For surface mount applications.
HVOLT	When ordered with L24, available with 6000LM only. When L24 with 2000LM, 3000LM, or 4000LM requires 347 or 480 voltage to be specified. Not available with HVOLT. Utilizes a step-down transformer when 347 and 480V are required. When ordered with L48, not available with 3000LM or 4000LM.
IP69K	Requires STSL option. Not available with wet location fittings (WLF, WLFEND, WLFEND2), any cordset, any battery pack, or any sensor.
L24	Not available with BE6WCP or AO options.
L48	Not available with WLFPMP options.
L96	Not available with WLFPMP options.
MCRMBH16WL	Not available with WLFEND2. 2470P required when ordered with EM batteries. **Not NEMA Type 4X rated.**
NLTAIR2 APIRKO, NLTAIREM2 APIRKO, NLTAIRER2 APIRKO	Not available WLFEND2. **Not NEMA Type 4X rated. IP65 and IP66 rated.**
NLTAIR2, NLTAIREM2, NLTAIRER2	**Not NEMA Type 4X rated. IP65 and IP66 rated.**
OCS DRYLBL	Dry location label required. When ordered with a battery, 2470P option is required.
OCS4C DRYLBL	Dry location label required. For use when battery option is ordered and battery requires unswitched hot.
QMB	Replaces standard surface mount bracket. For surface mount applications.
SBOR10, SBOR10 D 3V, SBOR10 P	Not available with WLFEND2. **IP65 and IP66 rated. Not NEMA Type 4X rated.** If high mount sensor is required, remove 10 from nomenclature and replace with 6. EX: SBOR6
WLF	In addition to top mounted fittings, includes (2) Pre-drilled 7/8" holes with water tight plugs (both ends). L24 - 20 inches off-center, L48 - 48 inches off-center, L96 95.7 inches off-center. If cord is ordered, cord will exit from the end of the fixture. Not available with SBOR or APIRKO options. **Not NEMA Type 4X rated.**
WLF4X	In addition to top mounted fittings, includes (2) Pre-drilled 7/8" holes with water tight plugs (both ends). L24 - 20 inches off-center, L48 - 48 inches off-center, L96 95.7 inches off-center. If cord is ordered, cord will exit from the end of the fixture.
WLFEND	Includes (1) Pre-drilled 7/8" hole with water tight plug (opposite end). If cord is ordered, cord will exit from the end of the fixture. Available with cord or sensor option. Choose only one. **Not NEMA Type 4X rated.**
WLFEND2	Available with NLTAIR2, NLTAIREM2 or NLTAIRER2 (nLight air RIO only). Not available with NLTAIR2 APIRKO, NLTAIREM2 APIRKO or NLTAIRER2 APIRKO (nLight air sensors), SBOR sensors or any cord option. **Not NEMA Type 4X rated.**
WLFEND24X	Not available with sensor or cord options.
WLFEND4X	Includes (1) Pre-drilled 7/8" hole with water tight plug (opposite end). If cord is ordered, cord will exit from the end of the fixture. Available with cord or sensor option. Choose only one.
WLFPMP	In addition to the one top mounted fitting, includes (2) Pre-drilled 7/8" holes with water tight plugs (both ends). **Not NEMA Type 4X rated.**
WLFPMP4X	In addition to the one top mounted fitting, includes (2) Pre-drilled 7/8" holes with water tight plugs (both ends).

PROVIDED BY	

ACCESSORIES

Wall mount fixed mid-rail light with one (1) LED lighting source, 300 lm/ft delivered lumens, 3000K color engine, 80+ CRI, 110° optic and remote driver. Mid-rail Light should operate on 110-277 voltage and be supplied with a 0-10v control option with a 50,000 hour anticipated life. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Mid-rail light to have tbd finish. Mid-rail Light to be rated for IP65 or equivalent. Mid-rail Light should be UL listed or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	Dimming

NOTES

Illuminated rail to be in the mid rail location. Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

SINGLE COLOR - STRIP LIGHT RAIL

Powered by Q-tran® LED

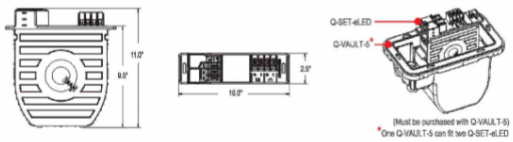
Q-SET-eLED	-	sizing will depend on location	-	UNV	-	24VDC	-	0-10V
SERIES		SIZE		INPUT VOLTAGE		OUTPUT VOLTAGE		DIMMING
		100 = 100W 200 = 100W X 2		UNV = 110-277V		24VDC = 24 VOLTS		0-10v = DIMMING N/A = NO DIMMING

FEATURES

- MUST BE PURCHASED WITH A Q-VAULT-5 HOUSING
- DIMENSIONS: 11.0"L x 10.0"W x 2.5"D
- CONSTANT VOLTAGE OUTPUT
- DIMMABLE WITH ADDITIONAL 0-10V DIMMING MODULE:
- LIMITED OUTPUT VOLTAGE AND CURRENT, PLUS ISOLATION SAFE OPERATION
- FULLY POTTED DRIVER(S) FOR MOISTURE RESISTANCE
- IP 68 RATING DIRECT BURIAL WITH Q-VAULT-5 ENCLOSURE
- SUITABLE FOR DRY, DAMP AND WET LOCATIONS
- SUITABLE FOR OUTDOOR USE
- CLASS 2 OUTPUT
- WARRANTY: 5 YEARS
- EMI/RFI COMPLIANT TO FCC 47 PART 15B, CISPR15, & CISPR 22 CLASS A
- UL LISTED (UL1838, UL2108)
- CSA #239924



SPECIFICATIONS

INPUT			
• INPUT VOLTAGE (Vrms)	120-277		
• INPUT CURRENT, MAX (Arms)	0.98A @ 120V		
• INRUSH CURRENT, MAX (Apk)	45A @ 120V		
• INPUT FREQUENCY (Hz)	50/60		
• INPUT POWER (W)	177		
OUTPUT			
• OUTPUT VOLTAGE, NOM (VDC)	24		
• OUTPUT CURRENT (A)	100W 4.1A @ 24V 200W, 2X4.1A @ 24V		
• OUTPUT POWER (Wmax)	100W 200W (2X100)		
ENVIRONMENTAL	**MIN**	**NOM**	**MAX**
• THD (%)	--	---	20
• PF (%)	0.90	---	---
• WORKING TEMP (°F)	4	---	104
PROTECTIONS			
• SHORT CURCUIT PROTECTION			
• OVER LOADING PROTECTION

LED RAILING
VAULT POWER SUPPLIES
PRODUCT TECHNICAL SPECIFICATIONS

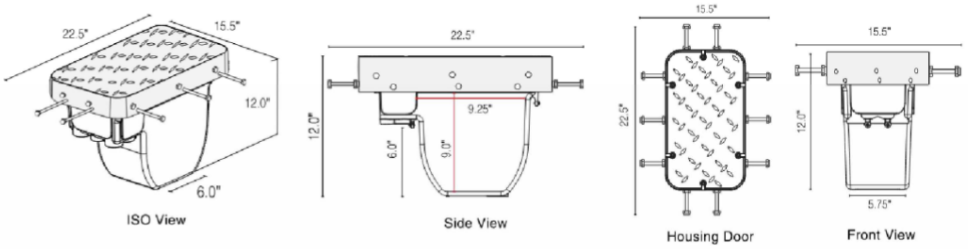
DRAWN BY	DATE
NBB	11/1/20

PROJECT NAME: LED
DWG. NUMBER: LED-VAULT-SPEC-1

REMOTE VAULT POWER SUPPLIES

Powered by Q-tran® LED

Q-VAULT-5



POWER SUPPLY MAX FEED LENGTH		
	100W	200W
3.0 W/FT STRIP	25 FT	2 x 25 FT
4.0 W/FT STRIP	19 FT	2 x 19 FT
5.0 W/FT STRIP	15 FT	2 x 15 FT
PODS/CIRCUIT @ 2' OC*	37 PODS	2 x 37 PODS
PODS/CIRCUIT @ 4' OC*	36 PODS	2 x 36 PODS

* BASED ON 16 AWG WIRING BETWEEN PODS - INCREASED SPACING REDUCES NUMBER OF PODS PER CIRCUIT

FEATURES

- FOR USE WITH Q-SET-eLED POWER SUPPLIES ONLY
- FITSUP TO (2X) Q-SETs
- STAINLESS STEEL COVER
- STAINLESS STEEL LAWN GUARD / CONCRETE POUR RING
- IP 68 RATED
- SUITABLE FOR INGROUND, DIRECT BURIAL, OUTDOOR APPLICATIONS
- WARRANTY: 5 YEARS
- CSA LISTED (UL1838, UL2108)

DISTANCE POWER SUPPLY TO FIRST LED
(3% VOLTAGE DROP)

STRIP LED	LOAD - TOTAL WATTS			
WIRE GAUGE	50W 2.1A	60W 2.5A	70W 2.9A	76W 3.2A
20 AWG	15 ft	15 ft	10 ft	10 ft
18 AWG	25 ft	20 ft	20 ft	17 ft
16 AWG	40 ft	35 ft	30 ft	28 ft
14 AWG	65 ft	55 ft	45 ft	45 ft
12 AWG	105 ft	90 ft	75 ft	70 ft
10 AWG	170 ft	140 ft	120 ft	110 ft

* USABLE WATTAGE OF DRIVER IS 80% OF MAX VALUE. IE. 80% * 96WATTS = 76 WATTS

1) CALCULATE TOTAL LOAD: Multiply the strip light part nominal power consumption (watts/ft) from table on page 1 by the total length of light to be connected to the power supply. Example: 1.46 watts/ft * 30 ft = 43.8 watts.
2) FIND THE COLUMN WITH APPLICABLE LOAD: Find LOAD column associated with the calculated load. Round up if between two loads. Example: 43.8 watts - look at 50W/2.1A load column.
3) FIND DISTANCE FROM DRIVER TO LOAD: Within the LOAD column, find the appropriate distance from power supply to first LED strip light.
4) CHOOSE WIRE GAUGE: Follow the row the far left of the table for the listed wire gauge.

POD LED	LOAD - # OF PODS			
WIRE GAUGE	25	30	35	37
20 AWG	15 ft	13 ft	12 ft	10 ft
18 AWG	25 ft	20 ft	15 ft	15 ft
16 AWG	40 ft	35 ft	30 ft	25 ft
14 AWG	65 ft	55 ft	45 ft	45 ft
12 AWG	105 ft	85 ft	75 ft	70 ft
10 AWG	165 ft	140 ft	120 ft	115 ft

* BASED ON 16 AWG WIRING BETWEEN PODS, 2FT SPACING, & 96 W DRIVER - INCREASE POD SPACING CHANGES REQUIREMENTS.

1) FIND THE COLUMN WITH APPLICABLE LOAD: Find LOAD - # OF PODS column associated with the project requirements. Round up if between two loads. Example: 23 pods - look at 25 POD load column.
2) FIND DISTANCE FROM DRIVER TO LOAD: Within the LOAD (# OF PODS) column, find the appropriate distance from power supply to first LED POD.
3) CHOOSE WIRE GAUGE: Follow the row to far left of the table for the listed wire gauge.

*TABLES PROVIDE GENERAL GUIDELINES FOR DETERMINING WIRE GAUGE BASED ON TOTAL LOAD AND DISTANCE FROM LED DRIVER TO BEGINNING OF LUMINAIRE. ALWAYS CONSULT A QUALIFIED ELECTRICIAN BEFORE WIRING. LOW VOLTAGE STRANDED-INSULATED COPPER WIRE RATED FOR IN WALL USE IS RECOMMENDED.

-120VAC WIRE SIZING, CONNECTION TO MAIN POWER, AND ALL DRIVER CONNECTIONS TO BE PERFORMED BY A QUALIFIED ELECTRICIAN. ALWAYS VERIFY MAIN POWER IS SHUT OFF BEFORE PERFORMING ANY WORK ON ELECTRICAL COMPONENTS.

ACCESSORIES

Surface mount fixed tape light with one (1) LED lighting source, 37/99/18 delivered lumens, RGB color engine, 120° optic and remote driver. Tape Light should operate on 120 voltage and be supplied with a dmx control option and include a minimum 5-year warranty with a 50,000 hour anticipated life. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Tape light to have white finish. Tape Light to be rated for IP20 or equivalent. Tape Light should be UL listed or an approved equivalent.

CONTROL

PROTOCOL	DMX

NOTES

See plans for exact lengths. Fixture mounting conditions to be confirmed prior to procurement. Extrusion to be confirmed with Millwork before ordering. Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

Product Number: wp-RGB3000K-4in1-CC5050-60-12-10m

Specifications

Ambient Temperature	-20°C to 40°C
Brightness	65/235/50/215 lumens/meter
Brightness 2	300/500/700/700mW/meter
Country of Origin	China
Height (English)	0.26 in
Height (Metric)	6.5 mm
Input Current	3750 mA
IP Rating	IP65
LED Density	60 LEDs/meter
LED Node Size	5050
LED Spacing (English)	0.66 in
LED Spacing (Metric)	16.7 mm
Length (English)	32.81 ft
Length (Metric)	10 m
Light Color	RGB + White
Light Color Detail	Red, Green, Blue, 3,000K White
Manufacturer	Environmental Lights
Min. Cutting Increment (English)	3.9 in
Min. Cutting Increment (Metric)	99 mm
Rating	UL, RoHS
Beam Angle	120°
Input Voltage	24 DC
Warranty	5 years limited
Power (Watts)	90
Power (Watts/ft)	2.7
Power (Watts/m)	9
Wavelength	630/520/463
Width (English)	0.63 in
Width (Metric)	16 mm

ACCESSORIES

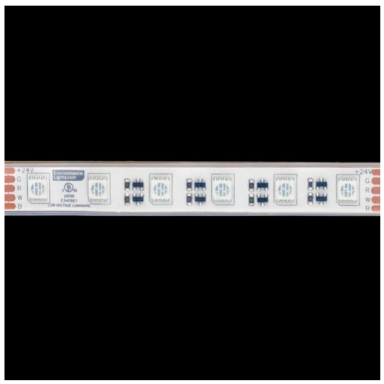
Surface mount fixed tape light with one (1) LED lighting source, 65/235/50/70 PER METER delivered lumens, RGBA color engine, 120° optic and remote driver. Tape Light should operate on 120 voltage and be supplied with a dmx control option and include a minimum 5-year warranty with a 50000 hour anticipated life. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Tape light to have white finish. Tape Light to be rated for IP20 or equivalent. Tape Light should be UL listed or an approved equivalent.

CONTROL

PROTOCOL	DMX
INTENT	

NOTES

See plans for exact lengths. Fixture mounting conditions to be confirmed prior to procurement. Extrusion to be confirmed with Millwork before ordering. Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.



Waterproof MaxRun RGBA 4-in-1 5050 LED Strip Light - 60/m - 10m reel

Environmental Lights | waterproof | UL US LISTED | Color Change | RoHS Compliant

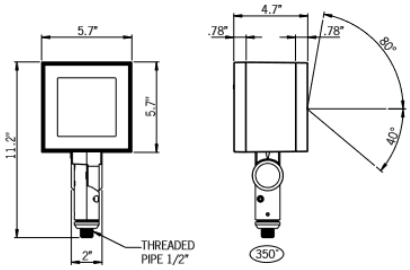
Mounting Options

Yoke Mount [ULD-50031]

Pedestal Mount [ULD-50111]

TURTLE FRIENDLY

39w LED 3568 Lumens
IP66 • Suitable For Wet Locations
IK08 • Impact Resistant (Vandal Resistant)
Weight 7.3 lbs



Construction

Aluminum
Less than 0.1% copper content – Marine Grade 6060 extruded & LM6 Aluminum High Pressure die casting provides excellent mechanical strength , clean detailed product lines and excellent heat dissipation.

Pre paint
8 step degrease and phosphate process that includes deoxidizing and etching as well as a zinc and nickel phosphate process before product painting.

Memory Retentive -Silicon Gasket
Provided with special injection molded "fit for purpose" long life high temperature memory retentive silicon gaskets. Maintains the gaskets exact profile and seal over years of use and compression.

Thermal management
LM6 Aluminum is used for its excellent mechanical strength and thermal dissipation properties in low and high ambient temperatures. The superior thermal heat sink design by Ligman used in conjunction with the driver, controls thermals below critical temperature range to ensure maximum luminous flux output, as well as providing long LED service life and ensuring less than 10% lumen depreciation at 50,000 hours.

Surge Suppression
Standard 10kv surge suppressor provided with all fixtures.

BUG Rating
B5 - U5 - G5

Finishing
All Ligman products go through an extensive finishing process that includes fettling to improve paint adherence.

Paint
UV Stabilized 4.9Mil thick powder coat paint and baked at 200 Deg C. This process ensures that Ligman products can withstand harsh environments. Rated for use in natatoriums.

Inspired by Nature Finishes
The Inspired by nature Finishing is a unique system of decorative powder coating. Our metal decoration process can easily transform the appearance of metal or aluminum product into a wood grain finish.

This patented technology enables the simulation of wood grain, and even marble or granite finish through the use of decorative powder coating.

The wood grain finish is so realistic that it's almost undistinguishable from real wood, even from a close visual inspection. The system of coating permeates the entire thickness of the coat and as a result, the coating cannot be removed by normal rubbing, chipping, or scratching.

The Coating Process
After pre-treatment the prepared parts are powder coated with a specially formulated polyurethane powder. This powder provides protection against wear, abrasion, impact and corrosion and acts as the relief base color for the finalized metal decoration.

The component is then wrapped with a sheet of non-porous film with the selected decoration pattern printed on it using special high temperature inks.

This printed film transfer is vacuum-sealed to the surface for a complete thermo print and then transferred into a customized oven. The oven transforms the ink into different forms within the paint layer before it becomes solid. Finally, the film is removed, and a vivid timber look on aluminum remains.

Wood grain coating can create beautiful wood-looking products of any sort. There are over 300 combinations of designs currently in use. Wood grains can be made with different colors, designs, etc.

Our powder coatings are certified for indoor and outdoor applications and are backed by a comprehensive warranty. These coatings rise to the highest conceivable standard of performance excellence and design innovation.

Added Benefits
- Resistance to salt-acid room, accelerated aging
- Boiling water, lime and condensed water resistant
- Anti-Graffiti, Anti-Slip, Anti-Microbial, Anti-Scratch
- Super durable (UV resistant)
- TGIC free (non-toxic)

Hardware
Provided Hardware is Marine grade 316 Stainless steel.

Anti Seize Screw Holes
Tapped holes are infused with a special anti seize compound designed to prevent seizure of threaded connections, due to electrolysis from heat, corrosive atmospheres and moisture.

Crystal Clear Low Iron Glass Lens
Provided with tempered, impact resistant crystal clear low iron glass ensuring no green glass tinge.

Optics & LED
Precise optic design provides exceptional light control and precise distribution of light. LED CRI > 80

Lumen • Maintenance Life
L80 /B10 at 50,000 hours (This means that at least 90% of the LED still achieve 80% of their original flux)

Square surface architectural floodlight range. Four sizes of square artistic precision with wide range of beam distributions.

A range of square outdoor IP66 floodlight projectors that meets both aesthetic and functional applications. This cubic floodlight range is available with 4 different sizes, starting with a small 2.4" square profile, and increases proportionately to 3" , 4.5" and 5.5" square. This glare free luminaire is available in Narrow 10˚ beam, Medium 19˚, Wide 33˚, Very Wide 71˚ and Elliptical 41˚x14˚ beam patterns.

This luminaire is engineered to meet harsh outdoor environments, as well as being able to be used as a decorative indoor product. The Lador is provided with an integral driver and has accessories that include; dichroic color filters, linear spread lens, honeycomb louvres and anti-glare visors.

This floodlight also has a unique aiming and locking system for precise mounting and beam aiming.

The Lador product family consists of; floodlights, wall sconces, ceiling mounted squares and cluster column event poles.

This luminaire is available with a natatorium rated coating.

BUG RATING
For all optics,
Head down 0°: B0 U1 G0
Head 45°: B0 U1 G0

MATERIAL
Boby: Die-cast aluminum
Diffuser: Toughened glass.

MOUNTING
Install with flange accessory or fasten to solid ground.

ADJUSTMENT
Each head can pan 355° and tilt 90°

ELECTRICAL
Constant current 350mA.
See remote LED driver options on page 2

DIMMING
See dimmable options on page 2

FINISH
Anthracite gray (24) or black (09) painted finish, following a double powder paint in 3 step process: surface treatment containing ceramic nano particles (Bonderite). Epoxy primer paint. Polyester powder paint with high resistance against UV rays and harsh weather conditions.
See page 1 for other premium finishes available: white (01), green (07), aluminum gray (14) and burnished bronze (20).
Resistance test protection Marine applications : 1200h.
We provide RAL numbers that are similar, but we cannot guarantee an exact color match. For a more accurate color and gloss match, please contact customer service for a sample chip.
Similar RAL numbers:
Anthracite gray RAL9007, black RAL9005, white RAL9016, green RAL6028, aluminum gray RAL9006 and burnished bronze RAL8019.

HALO

DESCRIPTION

Miniature size, decorator finishes, push-in connectors, economy, all combine to make single-circuit Miniature Trac perfect for residential or commercial use. Polarized connectors and end caps are molded polycarbonate. Halo Miniature Track accepts both Halo and Lazer-by-Halo lampholders.

Catalog #		Type	
Project			
Comments		Date

SPECIFICATION FEATURES

A. Structural
- Extruded aluminum .060" [1.5mm] nominal wall thickness

B. Line Conductor
- Solid copper bus bars [cross section equivalent to #12 AWG wire].

C. Insulating Liner
- Extruded polyvinyl insulator.

D. Ground Conductor
- Exclusive independent grounding bus conductor. Maintains an independent positive ground #12 AWG path between lampholder, Trac channel and building's ground system.

E. Neutral Conductor
- Cross section equivalent of #12 AWG wire.

F. Polarity Indicator (Neutral)
- Visual polarity groove indicates proper electrical installation of lampholder adapter.

Listings
- cULus listed for use with Halo and Lazer-by-Halo lampholders.

Mounting
- Track system is recommended for ceiling mount only. For alternate mounting methods consult factory.

GENERAL INFORMATION

The Source Four Mini LED can go where no full-sized Source Four has gone before. ETC's 12 W Source Four Mini LED features the same crisp optics, user-friendly functionality, and sleek look of the legendary Source Four fixture, but in a compact format at a fraction of the size.

The Source Four Mini LED has four field-angle choices and comes in a portable version for mounting with a clamp, a canopy-mount, or track-mount design. Surprisingly bright for its size, the Mini LED offers crystal-clear image projection and a bright, even field.

APPLICATIONS

- Museums
- Retail
- Restaurants
- Hospitality
- Theatres

FEATURES

- Rugged, die-cast fixture body
- 19°, 26°, 36°, and 50° interchangeable lens tubes
- Long-life dimmable white LED source available in a wide variety of color temperatures and color rendering levels
- Three-plane shutters
- Multiple accessories available for color, pattern, and filtering
- Available for portable, canopy, and track mounting
- F-Drive compatible versions available
- Custom paint colors available; contact ETC

Luminaire Structure

- Die-cast aluminium housing
- Pre-treated before powder coating ensuring high corrosion resistance
- 6 mm thick front ring in grade 316 stainless steel or aluminium
- Single cable entry, through wiring upon request
- Stainless steel fasteners in grade 316
- Durable silicone rubber gasket
- High-efficiency PMMA lens
- Clear or frosted toughened glass
- Integral control gear for HA-60036, HA-60037, HA-60049, HA-60050, HA-60196, HA-60197, HA-60209, HA-60215, HA-60295, HA-60296, HA-60305, HA-60306
- Remote driver, remote box (IP-rated) and recessing box are included for HA-60385, HA-60386, HA-60395, HA-60396
- Recessing box in high-density polyethylene is included
- Suitable for walk-over with a maximum load of 200 kg

POWER SUPPLY

TYPE	Integral
PROVIDED BY	

ACCESSORIES

In-grade mount adjustable accent with one (1) LED lighting source, 294 delivered lumens, 3000K color engine, 95+ CRI, 22° optic and integral driver. Accent should operate on 220 -240 voltage and be supplied with a 0-10v control option and include a minimum 10-year warranty. Accent to have stainless steel finish. Accent to be rated for IP67 or equivalent. Accent should be UL listed or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	Dimming

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

Luminaire Structure

- Die-cast aluminium housing
- Pre-treated before powder coating ensuring high corrosion resistance
- 6 mm thick front ring in grade 316 stainless steel or aluminium
- Single cable entry, through wiring upon request
- Stainless steel fasteners in grade 316
- Durable silicone rubber gasket
- High-efficiency PMMA lens
- Clear or frosted toughened glass
- Integral control gear for HA-60036, HA-60037, HA-60049, HA-60050, HA-60196, HA-60197, HA-60209, HA-60215, HA-60295, HA-60296, HA-60305, HA-60306
- Remote driver, remote box (IP-rated) and recessing box are included for HA-60385, HA-60386, HA-60395, HA-60396
- Recessing box in high-density polyethylene is included
- Suitable for walk-over with a maximum load of 200 kg

ACCESSORIES

In-grade mount linear wall wash with one (1) LED lighting source, 3573 delivered lumens, 3000K color engine, 80+ CRI, 27° x 60° optic and remote driver. Wall Wash should operate on 220-240 voltage and be supplied with a 0-10v control option and include a minimum 10-year warranty. Contractor to provide and install remote driver in location shown in plans or recommend alternate location, to be approved by designer or system integrator, while conforming to manufacturer's recommend installation documentation. Wall wash to have stainless steel finish. Wall Wash to be rated for IP67 or equivalent. Wall Wash should be UL listed or an approved equivalent.

CONTROL

PROTOCOL	0-10V
INTENT	Dimming

NOTES

Contractor to field verify mounting conditions and provide all hardware necessary to complete installation. Refer to the plans, equipment schedule and specifications for additional accessories and mounting requirements.

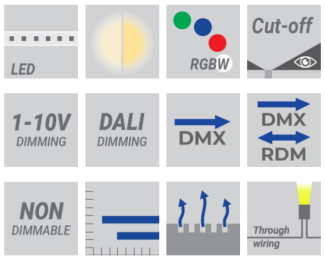
IP67 IK10

Efficient quality linear fixture portfolio.
Coordinated in-ground range with multiple optics and component options.

Luminaire Structure

- Die-cast aluminium end-caps
- Extruded aluminium housing
- Pre-treated before powder coating ensuring high corrosion resistance
- Stainless steel frame on request
- Single cable entry, through wiring upon request or two cable entries for through wiring
- Stainless steel fasteners in grade 316
- Durable silicone rubber gasket
- Clear toughened glass
- Integral control gear for LA-60001, LA-60002, LA-60003, LA-60004, LA-60013, LA-60014
- Remote driver is not included for constant voltage (CV) products
- Recessing box is included
- Suitable for walk-over with a maximum load of 500 kg
- 24 VDC input, DMX/RDM address with stable signal

Feature



Optic

GLP Good Labour Practices

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes limited scope general construction materials and methods, electrical equipment coordination, and common electrical installation requirements as follows:

1. Access doors in walls, ceilings, and floors for access to electrical materials and equipment.
2. Sleeves and seals for electrical penetrations.
3. Joint sealers for sealing around electrical materials and equipment, and for sealing penetrations in fire and smoke barriers, floors, and foundation walls.
4. Sealing penetrations through noise critical spaces.

1.02 DEFINITIONS

A. The following abbreviations apply to this and other Sections of these Specifications:

1. AHJ: Authority(ies) having Jurisdiction
2. ATS: Acceptance Testing Specifications
3. EMT: Electrical Metallic Tubing
4. EPDM: Ethylene-propylene-diene terpolymer rubber
5. MC: Metal Clad
6. N/A: Not Available or Not Applicable
7. NBR: Acrylonitrile-butadiene rubber
8. NRTL: Nationally Recognized Testing Laboratory
9. PCF: Pounds per Cubic Foot
10. STC: Sound Transmission Class

B. The following definitions apply to this and other Sections of these Specifications:

1. HOMERUN: That portion of an electrical circuit originating at a junction box, termination box, receptacle or switch with termination at an electrical panelboard. Note: Where MC Cable is utilized for receptacle and/or lighting branch circuiting loads, the originating point of the homerun shall be at the first load in the circuit or at a junction box in an accessible ceiling space immediately above the first load.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate arrangement, mounting, and support of electrical equipment:

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping, ducts, and other systems installed at required slopes and/or elevations.
4. So connecting raceways, cables, and wireways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed.

D. Coordinate electrical testing of electrical, mechanical, and architectural items, so equipment and systems that are functionally interdependent are tested to demonstrate successful interoperability.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements":

1. Product data for the following products:
   a) Sleeve seals
   b) Through and membrane penetration firestopping systems
   c) Joint Sealers
   d) Acoustical sealers
2. Shop drawings for:
   a) Detailed fabrication drawings of access panels and doors
3. Through and Membrane Penetration Firestopping Systems Product Schedule: Provide UL listing, location, wall or floor rating and installation drawing for each penetration fire stop system.
   a) Where Project conditions require modification to qualified testing and inspecting agency's illustrations for a particular firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.
   b) Qualifications Data for testing agency.

4. Endothermic Wrap drawings and system details: Provide UL listing, assembly rating and installation drawing for each case specific installation. Include installation instructions indicating layers of wrap required and securing method.

5.

6. Record Drawings: Submit Record Drawings as required by Division 1 and Division 26

   a) Accurately record actual locations of firestopped penetrations and access panel/door locations. Indicate dimensions from fixed structureal elements.

1.05 NOISE CRITICAL SPACES

A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). The table below designates the noise-critical spaces that will require application of sound attenuating measures and acoustical sealants.

		STC Level
1.	Offices	25
2.	Sound/Lighting Control Rooms	25
3.	Stage	25
4.	A/V Spaces	25

PART 2 - PRODUCTS

2.01 ACCESS TO EQUIPMENT

A. Available Manufacturers:

1. Bar-Co., Inc.
2. Elmdor Stoneman.
3. JL Industries
4. Jay R. Smith Mfg. Co.
5. Karp Associates, Inc.
6. Milcor
7. Nystrom Building Products
8. Wade
9. Zurn

B. Access Doors:

1. Provide access doors for all concealed equipment, except where above lay-in ceilings. Refer to Section “Identification for Electrical Systems” for labeling of access doors.

2. Access doors shall be adequately sized for the devices served with a minimum size of 18 inches x 18 inches, furnished by the respective Contractor or Subcontractor and installed by the General Contractor.

3. Access doors must be of the proper construction for type of construction where installed.

4. The exact location of all access doors shall be verified with the Contract Administrator prior to installation.

5. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.

6. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.

    a) For installation in masonry, concrete, ceramic tile, or wood paneling: 1-inch-wide exposed perimeter flange and adjustable metal masonry anchors.

    b) For installation in gypsum wallboard or plaster: perforated flanges with wallboard bead.

    c) For installation in full-bed plaster applications: galvanized, expanded metal lath and exposed casing bead, welded to perimeter of frame.

7. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.

    a) Fire-Rated Units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.

8. Locking Devices:

    a) Flush, screwdriver-operated cam locks.

    b) Where indicated on the drawings or where access panels are installed in locations accessible to the public, provide 5-pin or 5-disc type cylinder locks, individually keyed; provide 2 keys per access panel.

2.02 SLEEVES

A. Steel Sleeves for Raceways and Cables:

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends and drip rings.

B. Cast iron wall pipe sleeves for raceways and cables:

1. Available Manufacturers:

a) Josam Mfg. Co.

b) Smith (Jay R) Mfg. Co.

c) Tyler Pipe/Wade Div.; Subs of Tyler Corp.

d) Watts Industries, Inc.

e) Zurn Industries, Inc.; Hydromechanics Div.

2. Cast-iron sleeve with integral clamping flange with clamping ring, and nuts for membrane flashing.

a) Underdeck Clamp: Clamping ring with setscrews.

3. Sleeves for rectangular Openings: Galvanized sheet steel with minimum 0.52- inch or 0.138- inch thickness as indicated and of length to suit application.

4. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 7 Section “Through-Penetration Firestop Systems.”

2.03 SEALANTS

A. SLEEVE SEALS

1. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

2. Available Manufacturers:

a) Advance Products & Systems, Inc.

b) Calpico, Inc.

c) Metraflex Co.

d) O-Z/Gedney

e) Pipeline Seal and Insulator, Inc.

3. Sealing Elements: Interlocking or solid sealing links shaped or pre-drilled to fit surface of cable or raceway. Include type and number required for material and size of raceway or cable.

a) EPDM

b) NBR

c) Neoprene

4. Pressure Plates: Include two for each sealing element. For multi-phase circuits, use slotted pressure plates if metal.

a) Plastic

b) Carbon Steel

c) Stainless Steel

d) PVC-coated Steel

5. Connecting Bolts and Nuts: Provide bolts of length required to secure pressure plates to sealing elements.

a) Carbon Steel with Corrosion-Resistant Coating

b) Stainless Steel

B. JOINT SEALERS

1. General: Joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.

2. Colors: As selected by the Contract Administrator from manufacturer's standard colors.

3. Elastomeric Joint Sealers: Provide the following types:

a) Silicone Joint Sealants, One-part nonacid-curing, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for masonry, glass, aluminum, and other substrates recommended by the sealant manufacturer. Provide one of the following:

1) Dow Corning, Dowsil 790

2) Dow Corning, Dowsil 795

3) GE, Silglaze II SCS

4) GE, Silpruf SCS 2000

5) Owens Corning, Energy Complete

6) Pecora, 864 NST

7) Tremco, Spectrem 1

8) Tremco, Spectrem 2

b) Mildew Resistant Sealants, one-part mildew-resistant, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, metal or porcelain plumbing fixtures and nonporous joint substrates; formulated with fungicide; intended for sealing interior joints with nonporous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes. Provide one of the following:

1) Dow Corning, Dowsil 786

2) GE, Momentum SCS 1700

3) Pecora, 898 Silicone NST

c) Hybrid Joint Sealants: One-part, nonsag, paintable complying with ASTM C 920, Type S, Grade NS, Class 50 recommended for exposed applications on interior and exterior locations involving joint movement of not more than plus or minus 50 percent. Subject to compliance with requirements, provide one of the following:

1) BASF, MasterSeal NP 100

2) Pecora, DyanTrol I-XL

3) Tremco, Dymonic FC

C. FIRESTOPPING

1. Sealants and accessories shall have fire-resistance ratings indicated, as established by testing identical assemblies in accordance with UL 2079 or ASTM E 814, by Underwriters' Laboratories, Inc., or other NRTL acceptable to AHJ. Subject to compliance with requirements, provide one of the following:

a) Available Manufacturers:

1) 3M Corp., Fire Barrier Sealant

2) Hilti, Inc.

3) Tremco, Tremstop Fyre-Sil

4) Pecora, AC-20 FTR

5) RectorSeal

6) Specified Technologies Inc. Firestop

7) USG, SHEETROCK Firecode Compound

8) Owens Corning Firestopping Insulation

D. ACOUSTICAL SEALANTS

1. General: Penetrations by conduit through surfaces that are around and between noise critical spaces shall be sleeved, packed and sealed airtight with foam rod, non-hardening sealant and/or packing material as described herein.

2. Foam Backer Rod: Closed cell polyethylene suitable for use as a backing for non-hardening sealant.

3. Non-Hardening Penetration Sealant: Sealant for penetrations shall be non-hardening, permanently flexible, approved firestop putty may be used in lieu of the sealant on foam rod in noise critical walls that are also fire rated

4. Packing Material: Mineral fiber; non-combustible; resistant to water, mildew and vermin. Expanding resilient foams manufactured for this purpose are an acceptable alternative only if the material density is at least 15 PCF (40 kg/m3).

5. Acoustical Joint Sealant: Manufacturer's standard non-sag, paintable, non-staining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90. Meeting ASTM E 84 for a smoke flame spread index of less than 25 / 50. Subject to compliance with requirements, provide one of the following:

   a) Pecora, AC-20 FTR

   b) Pecora, AIS-919

   c) USG, SHEETROCK Acoustical sealant

PART 3 - EXECUTION

3.01 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping".

C. Coordinate seals with wall, ceiling, roof or floor materials and rating of the surface (sound, fire, waterproofing, etc.)

D. Comply with NECA 1.

E. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items, unless indicated otherwise.

F. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

G. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

H. Right of Way: Give to raceways and piping systems installed at a required slope.

3.02 ACCESS DOORS

A. Verify the exact location, sizes, and types of all access doors with the Contract Administrator prior to purchase.

B. Provide access doors for all concealed electrical equipment, except where above lay-in ceilings.

C. Coordinate with architectural finishes to set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.

D. Adjust hardware and panels after installation for proper operation.

E. Label all access doors with a nameplate as described in Division 26 Section "Identification for Electrical Systems".

3.03 SLEEVES AND SLEEVE SEALS

A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

B. Provide all sleeves for required openings in all concrete and masonry construction and fire, smoke, or both, partitions, for all electrical Work that passes through such construction. Coordinate with all other trades and Divisions to dimension and lay out all such openings.

C. Only those openings specifically indicated on the Architectural or Structural Drawings will be provided under other Divisions.

D. New Construction:

1. Coordinate with Divisions 03 and 04 for installation of sleeves and sleeve seals integrally in cast-in-place, precast, and masonry walls and horizontal slabs where indicated on the Drawings or as required to support raceway penetrations.

E. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls. Do not cut or core drill new construction without written approval from the Contract Administrator and Structural Engineer.

F. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

G. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

H. Install pipe and rectangular sleeves in above-grade walls and slabs, where penetrations are not subject to hydrostatic water pressures. Ensure that drip ring is fully encased and sealed within the wall or slab.

I. Sleeve Length:

1. Sleeves through walls: Cut sleeves to length for mounting flush with both surfaces of walls.

2. Sleeves through floors: Extend sleeves 2 inches above finished floor level.

J. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed; in which case, size sleeves as recommended by the seal manufacturer.

K. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.

L. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint.

M. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials.

N. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

O. Aboveground, Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (or larger, if required by the seal manufacturer) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

P. Above Grade Concrete or Masonry Penetrations

1. Provide sleeves for cables or raceways passing through above grade concrete or masonry walls, concrete floor or roof slabs. Sleeves are not required for core drilled holes in existing masonry walls, concrete floors or roofs. Provide sleeves as follows:

   a) Install schedule 40 galvanized steel pipe for sleeves smaller than 6 inches in diameter.

   b) Install galvanized sheet metal for sleeves 6 inches in diameter and larger, thickness shall be 0.138 inches.

   c) Install galvanized sheet metal for rectangular sleeves

   d) Schedule 40 PVC pipe sleeves are acceptable for use in areas without return air plenums.

2. Seal elevated floor, exterior wall and roof penetrations watertight and weather tight with non-shrink, non-hardening commercial sealant. Pack with mineral wool and seal both ends with minimum of ½" of sealant.

Q. Underground, Exterior-Wall Penetrations: Install cast-iron wall pipes for sleeves. Size sleeves to allow for 1-inch (or larger, if required by the mechanical sleeve manufacturer) annular clear space between sleeve and cable or raceway. Provide mechanical sleeve seal.

1. Use type and number of sealing elements recommended by manufacturer for pipe material and size. Position pipe in center of sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

2. Inspect installed sleeve and sleeve-seal installation for damage and faulty work. Verify watertight integrity of sleeves and seals installed below grade to seal against hydrostatic pressure.

R. Concrete Slab on Grade Penetrations:

1. Provide ½" thick cellular foam insulation around perimeter of raceway passing through concrete foundation. Installation shall extend to 2" above and below the concrete slab.

S. Elevated Floor Penetrations of waterproof Membrane:

1. Provide cast-iron wall pipes for sleeves. Size wall pipe for minimum ½" annular space between wall pipe and cable or raceway.

2. Pack with mineral wool and seal both ends with minimum of ½" of waterproof sealant.

3. Secure waterproof membrane flashing between clamping flange and clamping ring.

4. Extend bottom of wall pipe below floor slab as required and secure underdeck clamp to hold wall pipe rigidly in place.

T. Interior Foundation Penetration: Provide sleeves for horizontal raceway passing through or under foundation. Sleeves shall be cast iron soil pipe two normal pipe sizes larger than the pipe served.

U. Interior Penetrations of Non-Fire-Rated Walls: Seal annular space between sleeve and cable or raceway, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of ½" of sealant.

V. Exterior Wall Penetrations: Seal annular space between sleeve and raceway or duct, using joint sealant for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of ½" of waterproof sealant.

W. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

X. Sleeve-Seal Installation

1. Install sleeve seals for all underground raceway penetrations through walls at elevations below finished grade. Additionally, install seals inside raceways, after conductors or cables have been installed, in all raceway penetrations through walls at elevations below finished grade.

2. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

Y. Inspect installed sleeve and sleeve-seal installations for damage and faulty work. Verify watertight integrity of sleeves and seals installed below grade and above grade where installed to seal against hydrostatic pressure.

Z. Sleeves shall be protected throughout the course of construction, and when damaged shall be replace and/or repaired to a satisfactory condition.

3.04 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire/smoke-rated floor and wall assemblies to restore original fire-resistance rating of assembly.

3.05 JOINT SEALERS

A. Preparation for Joint Sealers

1. Clean surfaces of penetrations, sleeves, or both, immediately before applying joint sealers, to comply with recommendations of joint sealer manufacturer.

2. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

B. Application of Joint Sealers

1. General: Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.

a) Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.

b) Comply with recommendations of ASTM C 790 for use of acrylic-emulsion joint sealants.

2. Tooling: Immediately after sealant application and prior to time shinning or curing begins, tool sealants to form smooth, uniform beads; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

C. Installation of Fire-Stopping Sealant: Install sealant, including forming, packing, and other accessory materials, to fill openings around electrical raceways

penetrating floors and walls, to provide fire-stops with fire-resistance ratings indicated for floor or wall assembly in which penetration occurs. Comply with installation requirements established by testing and inspecting agency.

3.06 ACOUSTICAL PENETRATIONS

A. Do not allow direct contact of raceways with shaft walls, floor slabs and/or partitions. Sleeve, pack and seal airtight with foam rod, non-hardening sealant and/or packing material, as described herein, for all penetrations by raceway, through surfaces that encompass or are between noise critical spaces. Seal and pack with caulking for the full depth of the penetration all openings around raceways in the structure surrounding the electrical equipment and surrounding noise-critical spaces. This includes all slab penetrations and penetrations of noise critical walls.

B. Where a raceway passes through a wall, ceiling or floor slab of a noise critical space, cast or grout a metal sleeve into the structure. The internal diameter or dimensions of the sleeve shall be 2 inches larger than the external diameter or dimensions of the raceway passing through it. After all of the raceways are installed in that area, check the clearances and correct, if necessary, to within 1/2-inch. Pack the voids full depth with packing material sealed at both ends, 1-inch deep, with non-hardening sealant backed by foam rod.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes limited scope for electrical connections to equipment specified under other Sections or Divisions, or furnished under separate contracts or by the Owner.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Unless otherwise noted, perform all electrical Work required for the proper installation and operation of equipment, furnishings, devices and systems specified in other Divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.

B. Coordinate with work described in Division 11 Sections for equipment requiring electrical connection.

C. Coordinate with work described in Division 23 Section “Common Work Results for HVAC”.

D. Coordinate with work described in Division 23 Section “Direct-Digital Control for HVAC”.

E. Obtain and review shop drawings, product data, and manufacturer's instructions for equipment furnished under other sections.

F. Determine connection locations and rough-in requirements based on Shop Drawings.

G. Sequence rough-in of electrical connections to coordinate with installation schedule for equipment.

H. Sequence electrical connections to coordinate with start-up schedule for equipment.

1.03 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”:

1. Product data for the following products for:
    a) Special connectors
    b) Special conductors or cable assemblies
2. Shop drawings for:

a) Detailing electrical characteristics, wiring diagrams, fabrication and installation for wiring systems.

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to Authorities Having Jurisdiction.

2. Marked for intended use.

B. Comply with NFPA 70.

PART 2 - PRODUCTS

2.01 CORDS AND CAPS

A. Attachment Plugs: Conform to NEMA WD 1.

B. Configuration: NEMA WD 6, matching receptacle configuration at outlet provided for equipment, or as required by the equipment manufacturer.

C. Cord: See Paragraph “Flexible Cords” in Division 26 Section “Low-voltage Electrical Power Conductors and Cables”.

D. Provide cord size suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify conditions of equipment and installation prior to beginning work.

B. Verify that equipment is ready for connecting, wiring, and energizing.

3.02 INSTALLATION, GENERAL

A. Install in accordance with manufacturer’s instructions.

3.03 ELECTRICAL DEVICES

A. Install disconnect switches, controllers, control stations, and control devices (other than temperature control devices) as indicated, specified in other Divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.

3.04 ELECTRICAL CONNECTIONS

A. Make electrical connections in accordance with equipment manufacturers' instructions.

B. Make conduit connections to equipment using flexible conduit. Use liquid tight flexible conduit with watertight connectors in damp or wet locations.

C. Make wiring connections using conductors and cable with insulation suitable for temperatures encountered in heat producing equipment.

D. Provide receptacle outlet where connection with attachment plug is indicated. Provide cord and cap where field-supplied attachment plug is indicated on the Drawings.

E. Provide suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.

F. Provide interconnecting conduit and wiring between devices and equipment where indicated on the Drawings.

3.05 EQUIPMENT

A. When equipment is delivered in separate parts and field assembled, internal wiring, indicated on Shop Drawings as field wiring, will be provided by the equipment supplier, unless otherwise noted.

B. Provide power connection to all equipment as required and as indicated in the equipment supplier's installation drawings.

C. Provide all control and interlock wiring for all equipment that is not included within the responsibility of Division 22 or 23.

D. Motorized Damper: Provide lockable toggle, pilot lighted disconnect switch in an accessible location at each motor actuator, or group of motor actuators.

3.06 SMOKE EVACUATION

A. Life Safety feeders shall be installed in fire rated enclosures or shall be constructed as a rated assembly per NEC 700 and IBC 403.

B. Life Safety feeders shall not be routed in the same enclosures as other feeder types except as permitted by NEC 700.

C. Life Safety loads shall be as defined by NEC 700 and IBC 403 including but not limited to the following:

1. Egress Lighting
2. Smoke Evacuation Fans
3. Stair Pressurization Fans
4. Atrium Ventilation Fans

3.07 FOOD SERVICE (SERVERY) EQUIPMENT

A. Provide power connection to all equipment as indicated or as otherwise required to accommodate the equipment indicated in the food service equipment drawings and specifications.

B. Coordinate and provide the appropriate receptacle for equipment being installed as required for proper operation. Coordinate the required quantity of conductors prior to pulling wire to outlet box.

C. Provide a local recessed non-fused equipment disconnect for kitchen equipment as required by the applicable codes and jurisdictions. Coordinate exact location prior to rough-in and maintain all code required clearances.

D. Provide control wiring and conduit for all equipment that is not indicated as being within the responsibility of the equipment manufacturer or installer.

E. When equipment is delivered in separate parts and field assembled, internal wiring, indicated on Shop Drawings as field wiring, shall be provided by the equipment installer, unless otherwise noted.

F. Coolers and Freezers: Cut conduit openings in freezer and cooler walls, floor, and ceilings, in accordance with manufacturers' instructions, when openings are not provided by the manufacturers. Seal around conduit penetrations air tight with an approved pliable material suitable for low temperatures. Effectively seal interiors of conduits, by installing a conduit fitting at the boundary of the two spaces, and filling it with an approved pliable material, after conductors or cables have been installed and tested.

G. Provide all grounding systems as required by the equipment supplier.

3.08 DOOR OPERATORS AND HARDWARE

A. Provide electrical connections to automatic entry doors, automatic corridor doors, electrically held door latches, remote release doors, and all other required electrical connections for door systems included in other sections of these specifications.

B. Provide power connection to all equipment as required and as indicated in the equipment supplier's installation drawings.

C. Provide all control wiring and conduit for all equipment that is not included within the responsibility of the door hardware installer. Provide connection from junction boxes to the door operators or hardware and from door operators to actuation devices as required. Install key operated switches, push pad switches, and other electrically controlled door operation devices furnished by other divisions within this contract.

D. Provide fire alarm devices and wiring as required for proper operation of door systems in accordance with the NFPA codes.

3.09 SIGNAGE AND WAYFINDING

A. Provide junction boxes and disconnect switches per manufacturer's installation drawings.

B. Coordinate rough-in requirements with signage.

C. Coordinate box locations and conduit routing with parapets and roof elevations.

D. Provide labelling on all junction boxes and disconnects in accordance with Division 26 section “Identification for Electrical Systems”

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Provisions for Underground Secondary Electrical Service.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Utility service voltage:

1. 480Y/277 volts, three-phase, four-wire, 60Hz

B. Utility service ampacity: As indicated on the Drawings.

C. The extent of Work for the secondary electrical service includes providing the following:

1. Raceways
2. Provisions for Metering
3. Grounding and Bonding
4. Concrete pad for service transformer
5. Service lateral

1.03 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”:

B. Product data for the following products for:

1. Meter bases
2. Current transformer cabinets

C. Shop drawings for:

1. Utility Company prepared installation drawings
2. Cast-in-place concrete pads

D. Field quality-control test reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
4. Utility voltage adjustment request.

E. Where equipment or materials are specified to comply with utility standards and are listed above as required submittals, obtain approval from the serving utility before submitting to the Contract Administrator.

F. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":

1. Accurately record actual routing of interior conduits two-inch and larger trade size and all exterior buried raceway, including coordination with other surrounding utilities and underground structures. Provide scaled plans and sections that Indicate dimensions from finished grade or other fixed structural elements.

1.04 QUALITY ASSURANCE

A. Perform all work in accordance with Utility Company installation drawings and service standards.

B. Maintain one copy of Utility Company installation drawings and service standards at the site.

C. Prior to commencing work in this Section, meet with the Utility Company representative to review service entrance requirements and details.

D. Verify that field measurements are as indicated on Utility Company drawings.

E. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that are acceptable to authorities having jurisdiction.

2. Marked for intended use.

F. Comply with NFPA 70.

PART 2 - PRODUCTS

2.01 (NOT USED)

PART 3 - EXECUTION

3.01 SECONDARY SERVICE ENTRANCE UNDERGROUND

A. Provide an underground secondary service lateral from the pad mounted transformer in accordance with NFPA 70 Article 230 and the Utility Company standards. Reference the Drawings for service lateral conductor and raceway quantities, sizes, and types.

B. The Utility Company will provide the service transformer.

C. Provide a concrete pad, complying with the Utility Company standards, for transformer mounting, and set coated GRS conduit elbows and riser(s), with grounding bushing(s), to receive primary and secondary raceways. Where direct burial primary is used, set coated GRS conduit elbow(s) and riser(s), with grounding bushing(s), to receive primary cables.

D. Make connections to the secondary terminals of the transformer as required and in conformance with Utility Company requirements. Utility Company will provide primary conductors and terminal connections unless otherwise directed by the Utility Company.

3.02 METERING

A. Provide a 2-inch empty PVC Schedule 80 conduit, with pull cord, from the secondary compartment of the pad-mounted service transformer to the meter locations shown in the drawings, or as directed by the Utility Company. Provide a #6 AWG bare copper wire parallel to conduit with 6' of coiled length at each end.

B. Install the meter base furnished by the Utility Company.

C. Install the current transformer cabinet furnished by the Utility Company.

D. The Utility Company will provide the meter and meter wiring.

3.03 UTILITY SERVICE CHARGES

A. It shall be the responsibility of the Division 26 contractor to apply for the electrical service, including the preparation and completion of all forms. Submit the completed application along with all other required documentation for the new or modified service.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Conductors, cables, and cords rated 600V and less.

B. Connectors and terminations rated 600V and less.

1.02 DEFINITIONS

A. The following abbreviations apply to this and other Sections of these specifications:

1. MC: Metal Clad
2. NBR: Acrylonitrile-butadiene rubber
3. NETA ATS: Acceptance Testing Specification.

B. The following definitions apply to this and other Sections of these Specifications:

1. HOMERUN: That portion of an electrical circuit beginning at a junction box, termination box, receptacle or switch with termination at an electrical panelboard.

a) Note: Where MC Cable is allowed to be utilized for receptacle and/or lighting branch circuiting loads, the originating point of the homerun shall be at the first load in the circuit or at a junction box in an accessible ceiling space immediately above the first (most upstream) load.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate sizes of raceways, boxes, and equipment enclosures installed under other sections with the actual conductors to be installed, including adjustments for conductor sizes increased for voltage drop and temperature deration.
2. Coordinate routing of feeders and control conduits requiring fire-resistive protective assembly or electrical circuit protective system. Fire-resistive protective assembly or electrical circuit protective system for feeders and control circuit conductors and cables shall have a fire-resistance rating of not less than 2 hours and shall be provided where required by NFPA or local building codes. Types of systems requiring a fire-resistive protective assembly include, but are not limited to:

a) Feeders for Emergency Power systems where in areas not protected by an automatic fire suppression system.

b) Smoke Removal systems

3. Coordinate with electrical equipment installed under other sections to provide terminations suitable for use with the conductors to be installed.

4. Coordinate electrical testing of electrical, mechanical, and architectural items, so equipment and systems that are functionally interdependent are tested to demonstrate successful interoperability.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”:

1. Product data for the following products:

a) Conductors, cables, and cords rated 600V and less.

b) Metal Clad (MC) cable and fittings.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conductors and cables, including detailed information on materials, construction, ratings, listings, and available sizes, configurations, and stranding.

C. Field quality-control test reports in accordance with NETA ATS:

1. Submit all system and component test results.

1.05 QUALITY ASSURANCE

A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.

B. Provide products listed and classified by Underwriters Laboratories, Inc (UL) as suitable for the purpose specified and indicated.

C. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with NFPA 70.

1.06 PROJECT CONDITIONS

A. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than 14 degrees F, unless otherwise permitted by

manufacturer's instructions. When installation below this temperature is unavoidable, notify Contract Administrator and obtain direction before proceeding with work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conductors and cables in accordance with manufacturer's instructions.

PART 2 - PRODUCTS

2.01 CONDUCTORS AND CABLES - GENERAL

A. Conductor Material: Annealed (soft) copper complying with ICEA S-95-658/NEMA WC70 and UL Standards 44 or 83, as applicable.

1. Solid conductor for No. 10 AWG and smaller; concentric, compressed stranded for No. 8 AWG and larger.
2. Stranded for all flexible cords, cables, and control wiring.
3. As noted otherwise below.

B. Conductor Insulation Types: Type THHN/THWN-2 or XHHW-2 complying with ICEA S-95-658/NEMA WC70.

C. Sizes of conductors and cables indicated or specified are American Wire Gage (Brown and Sharpe).

D. Conductors shall not be smaller than No. 12 AWG, with the exception of wiring for signal and pilot control circuits; and pre manufactured whips for light fixtures which may be No. 14 AWG.

E. Unless otherwise indicated, special purpose conductors and cables, such as low voltage control and shielded instrument wiring, shall be as recommended by the system equipment manufacturer.

F. Refer to Part 3 "Conductor and Insulation Applications" Article for insulation type, cable construction, and ratings.

2.02 SINGLE CONDUCTORS

A. Manufacturers:

1. Alan Wire
2. Cerrowire
3. Colonial Wire & Cable Co., Inc.
4. Encore Wire Corporation
5. General Cable (Prysmian Group)

6. Northern Cables Inc.
7. Okonite Company
8. Priority Wire and Cable
9. Southwire Company

B. 600V, insulated conductors as noted above shall be color-coded as follows, unless noted otherwise:

PHASE	120/240V	240D/120V	208Y/120V	480Y/277V
A	Black	Black	Black	Brown
B	Red	Orange	Red	Orange
C	N/A	Red	Blue	Yellow
Neutral	White	White	White	Gray**
Equipment Ground	Green	Green	Green	Green
Isolated Ground	N/A	N/A	Green/Yellow Stripe	Green/Yellow Stripe

**Except as provided in NFPA 70.

2.03 METAL CLAD CABLE, TYPE MC

A. General:

1. Shall not be used for life safety or critical systems.

B. MC Cable (with insulated green grounding conductor, no bonding conductor):

1. Manufacturers:
   a) Atkore/AFC Cable Systems
   b) Cerrowire
   c) Encore Wire Corporation (MC)
   d) Kaf-Tech
   e) Northern Cables, Inc.
   f) Southwire Company (Amorlite)
2. 600V, Unjacketed and/or PVC-jacketed UL Standard 83, UL Standard 1569 for Type MC, UL Standard 1685, Federal Specification A-A59544, IEEE 1202 Vertical Cable Tray Flame Test and NFPA 70. Type MC Cable shall be listed for use in UL 1, 2, and 3 Hour Through-Penetration Firestop Systems.
3. Armor Assembly: Aluminum interlocked armor (aluminum color).
4. Phase Conductors: Solid soft-drawn copper, THHN-insulated single conductors, color-coded as listed for single conductors with solid colors using ICEA Method 1.

5. Grounding Conductor: Solid soft-drawn copper, THHN/THWN-2 green insulated grounding conductor sized per NFPA 70.

6. Marking: Cable markings shall comply with the requirements of NFPA 70.

C. MC Cable (with 0-10V dimming control wiring):

1. Manufacturers:

a) Atkore/AFC Cable Systems

b) Cerrowire

c) Encore Wire Corporation (MC- LED)

d) Southwire Company (MC – PCS Duo)

2. 600V, Unjacketed and/or PVC-jacketed UL Standard 83, UL Standard 1569 for Type MC, UL Standard 1685, Federal Specification A-A59544, IEEE 1202 Vertical Cable Tray Flame Test and NFPA 70. Type MC Cable shall be listed for use in UL 1, 2, and 3 Hour Through-Penetration Firestop Systems.

3. Armor Assembly: Aluminum interlocked armor (aluminum color).

4. Phase Conductors: Solid soft-drawn copper, THHN-insulated single conductors, color code: ICEA Method 1.

5. Grounding Conductor: Solid soft-drawn copper, THHN/THWN-2 green insulated grounding conductor sized per NFPA 70.

6. Control Conductors: Color-coded Class 2/Class 3 twisted jacketed pairs

7. Marking: Cable markings shall comply with the requirements of NFPA 70.

D. MC Cable Fittings:

1. Manufacturers:

a) ABB/T&B

b) Arlington

c) Eaton/Crouse-Hinds

d) Emerson/O-Z Gedney

2. Fittings used for connecting Type MC cable to boxes, cabinets, or other equipment shall be UL listed and identified for such use with an MCI-A marking on the fitting carton or package.

3. Fittings shall be insulated type not requiring the use of anti-short bushings.

4. Romex style, clamp type fittings are not acceptable.

2.04 FLEXIBLE CORDS

A. Manufacturers:

1. Cerrowire
2. Priority Wire and Cable
3. Southwire

B. 600V, multi-conductor (2, 3, or 4 as indicated on the Drawings), oil-resistant black jacket, extra-hard-usage; Type SEO, SO, or STO for indoor dry and damp locations; SEOW, SOW, or STOW for damp, wet, and outdoor locations; or as required by the manufacturer of the equipment to which the cords are connected.

C. 300V, multi-conductor (2, 3, or 4 as indicated on the Drawings), oil-resistant black jacket, hard-usage; Type SJEO, SJO, or SJTO for indoor dry locations; SJEOW, SJOW, or SJTOW for damp, wet, and outdoor locations; or as required by the manufacturer of the equipment to which the cords are connected.

2.05 CONTROL WIRING

A. Refer to Division 23 Section “Direct-Digital Control for HVAC”

B. Unless otherwise noted, all control wiring will be the responsibility of the Section or Division in which the control system is specified.

2.06 CONNECTORS

A. Available Manufacturers:
1. AMP; Tyco
2. FCI-Burndy
3. Gould
4. Ideal Industries, Inc.
5. Ilsco
6. NSi Industries, Inc.
7. O-Z/Gedney
8. NSI Industries, Inc. (Polaris)
9. Panduit
10. Thomas and Betts
11. 3-M Electrical Products Division

B. Compression connectors for conductors No. 8 AWG and larger: Long-barreled, UL 486-listed, circumferential compression type (Burndy "Hylug”, or equal), insulated with clamp-on, cold-shrink, or molded covers, or wrapped with multiple over-lapping layers of 3-M Scotch electrical tape.
1. Termination fittings for copper conductors: Bare copper 1-hole pad and inspection port.

2. Termination fittings for aluminum conductors: Tinned aluminum 1-hole pad.

C. Mechanical connections for conductors No. 8 AWG and larger: UL-listed, dual-rated, mechanical type, insulated with clamp-on, cold-shrink, or molded covers, or wrapped with multiple over-lapping layers of 3-M Scotch electrical tape.

1. Termination fittings: Bare copper, 1-hole pad and inspection port; or,

2. Termination fittings: Tinned Aluminum, 1-hole pad.

D. Connectors for solid conductors No. 10 AWG and smaller: twist-on insulated spring connectors (wirenuts). Color-coded for size, except use green only for grounding connections.

E. Connectors for stranded conductors No. 10 AWG and smaller: Tinned copper, insulated-sleeve, compression type, UL-listed, with wire insulation grip. Terminations: ring-tongue type.

F. Connectors and terminations for aluminum conductors and cables No. 1 and larger: UL 486B listed and marked AL7CU for 75 deg C rated conductors and AL9CU for 90 deg C rated conductors.

G. Do not use insulation-piercing or insulation-displacement connectors designed for use with conductors without stripping insulation.

H. Do not use push-in wire connectors as a substitute for twist-on insulated spring connectors.

PART 3- EXECUTION

3.01 PREPARATION

A. Coordinate seals with wall, ceiling, roof or floor materials and rating of the surface (sound, fire, waterproofing, etc.)

B. Electrical conductor and cable work is schematically represented on the Drawings. Unless otherwise indicated, conductor sizes shown on the Drawings are based on not more than three single current-carrying conductors in a raceway in free air. Current ratings are based on copper at 75 degrees C temperature rating for all power circuits. Modify raceway and conductor sizing as may be necessitated by any deviation from these conditions. Do not decrease the indicated conductor size due to the use of conductors having a temperature rating of 90 degrees C.

C. Conductor sizes shown are minimum based on code requirements, voltage drop, and/or other considerations. Where approved by the Engineer and at no extra cost to the Owner, larger conductor sizes may be installed at Contractor's option in order to utilize stock sizes, provided raceway sizes are increased where necessary to conform with NFPA 70 (determine the effect of the use of larger conductors on

the short circuit current ratings of the electrical equipment, and provide increased short circuit current rated equipment as required).

3.02 INSTALLATION

A. General:

1. Unless otherwise indicated on the Drawings on in other Sections, install all conductors in raceway. Install continuous conductors between outlets, devices and boxes without splices or taps. Do not pull connections into raceways. Leave at least 12 inches of conductor at outlets for fixture or device connections.
2. Install in accordance with manufacturer’s instructions.
3. Use manufacturer-approved pulling compound or lubricant where necessary; compound used shall not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
4. Use pulling means, including fish tape, cable, rope, and basket weave conductor/cable grips that will not damage conductors/cables or raceway.
5. Where parallel conductors are shown, install each set of conductors in separate raceways of essentially the same length.
6. Wiring at Outlets: Install conductors at each outlet with at least 12 inches of slack.
7. Common or Shared Neutrals are not allowed unless shown on the plans or specifically noted to be allowed.
8. Where multi-wire branch circuits are utilized (i.e., shared neutral), shall be provided with a means that will simultaneously disconnect all ungrounded conductors at the point the branch circuit originates. Multi-pole breakers or 3 single pole breakers with a handle tie are two examples.
9. Neatly train and bundle conductors inside boxes, wireways, panelboards and other equipment enclosures.
10. Group or otherwise identify neutral/grounded conductors with associated ungrounded conductors inside enclosures in accordance with NFPA 70.
11. When multiple home runs are combined into a single raceway such that the number of conductors exceeds four (conductor count is made up of any combination of phase and neutral conductors), the following restrictions apply (unless shown or noted otherwise on drawings,) which are in addition to those in NFPA 70:
    a) Emergency Power Circuits – includes all circuits covered under Articles 700, 701 and 702.

1) Maximum of eight conductors in a single raceway. Minimum raceway size: ¾-inch. Do not install any other type of circuit in this raceway.

2) Only 15A and 20A branch circuit homeruns may be combined into one raceway.

b) Normal or Non-Essential circuits.

1) Maximum of 16 conductors in a single raceway. For up to eight conductors in a raceway, minimum raceway size: 3/4 inch. For greater than eight conductors, minimum raceway size: 1 inch. Do not install any other type of circuit in this raceway.

2) The minimum wire size for all conductors in this raceway: No. 10 AWG.

3) Only 15A and 20A branch circuit homeruns may be combined into one raceway.

c) GFCI-protected circuits.

1) Do not use multi-conductor circuits, with a shared neutral, for any GFCI circuit breaker or receptacle circuit.

d) Isolated Ground (IG) Circuits:

1) Do not use multi-conductor or MC cables.

2) Do not share neutrals between separate circuits.

3) Do not share the isolated grounding conductor with more than one device (i.e., each device on an IG circuit shall have its own dedicated IG conductor back to the branch panelboard IG bus).

4) The equipment grounding conductor may be shared between IG circuits sharing a common raceway.

12. For branch circuits fed from GFCI circuit breakers, limit the one-way conductor length to 100 feet between the panelboard and the most remote receptacle or load on the GFCI circuit.

13. Where the number of conductors for branch circuits is not shown on the Drawings, determine the number of conductors in accordance with NFPA 70. Provide adequate conductors so as to allow performance of all functions of the device.

14. Provide all conductors with 600V insulation of the following types, unless otherwise noted on the Drawings or in these Specifications:

a) Wet or dry locations, in raceways:

1) Service entrance: Type THHN/THWN-2, THWN, or XHHW-2.

2) Feeders and branch circuits: Type THHN/THWN-2, THWN, or XHHW-2.

3) Conductors 6 AWG and smaller: Types THHN/THWN-2 or THWN.

4) Conductors used between a variable frequency drive (VFD) and associated motor: Type XHHW-2.

B. Aluminum Conductor Option:

1. Terminations: Tinned, mechanical type only; UL-listed for copper and aluminum conductors at 75 degrees C minimum.

2. Increase the raceway size as required, at no additional cost to the Owner, to accommodate the increased size of the aluminum conductors.

3. Aluminum conductor size shall meet or exceed the ampere rating of the scheduled copper conductors at 75 degrees C.

4. Option applies only for the following feeders or services; minimum size as indicated in "Conductors and Cables" materials section above:

a) Service entrance conductors

b) Service and feeder conductors under 200A shall be copper.

c) Normal power service and feeder wiring 200A and over shall be aluminum unless otherwise prohibited. Copper may be used at no additional cost.

1) Exceptions:

(a) All feeders connecting directly to motors including, but not limited to chillers and fire pumps shall be copper to minimize loosening of connectors due to cyclical thermal expansion.

(b) Branch circuits shall be copper.

(c) All essential power systems shall be copper.

d) Feeders to switchboards

e) Feeders to panelboards

f) Feeders to motor control centers

g) Feeders to transformers

5. Measure the temperature of all aluminum conductors at all splices and terminations. Make each test under typical building load conditions after the building is occupied and in operation for a minimum of two weeks. Replace all joints or splices indicating excessive heating.

6. Take measurements with a non-contact type infrared thermometer, with target size not exceeding one inch at five feet and an accuracy of two

percent or better. Submit the meter specifications and calibration date with the test results.

C. Metal Clad Type MC Cable:

1. Securing and Supporting:

a) Support per NFPA 70 for MC cable

b) Secure cable within 12 inches of every box or fitting.

c) Secure/supporting intervals shall not exceed six (6) feet for MC cable.

d) Utilize steel cable hangers, Arlington SMC series or equivalent, for MC cable support wherever possible so as to provide for cable routing in a neat and workmanship like manner.

2. Type MC cable may only be used:

a) In lieu of flexible conduit and wiring from light fixtures in accessible ceilings to junction boxes (attached to building structure) above the ceiling. Provide cable whips of sufficient lengths to allow for relocating each light fixture within a 5-foot radius of its installed location, but not exceeding 6 feet in unsupported lengths.

b) For vertical drops in stud walls.

c) In lieu of metal raceway, only for 15A and 20A branch circuits with up to four (4) conductors, not including grounding and/or bonding conductor(s), and only in dry concealed locations above grade, except where specifically not permitted by NFPA 70.

3. MC cable shall not be used for any use not listed in the paragraph above. Examples of those uses include, but are not limited to:

a) Unjacketed MC:

1) In locations not permitted by NFPA 70.

2) When specifically not allowed by the local AHJ.

3) Where exposed to view.

4) Where subject to physical damage.

5) Corrosive or Hazardous locations.

6) Wet locations.

7) Branch circuits serving HVAC, elevator/escalator, medical and kitchen equipment loads.

8) Within mechanical, electrical or telecommunication equipment rooms.

9) Emergency circuits covered by NFPA 70.

b) PVC Jacketed MC

1) In locations not permitted by NFPA 70.

2) When specifically not allowed by the local AHJ.

3) Homeruns to panelboards.

4) Where exposed to view.

5) Where subject to physical damage.

6) Branch circuits serving HVAC, elevator/escalator, medical and kitchen equipment loads.

7) Within mechanical, electrical or telecommunication equipment rooms.

8) Emergency circuits covered by NFPA 70.

D. Flexible Cords

1. Refer to Division 26 Section, ""Equipment Wiring Systems", for electrical connections to equipment.

E. Control Wiring

1. Unless otherwise indicated on the Drawings or in other sections, install all control wiring in raceway, regardless of voltage. A qualified Electrician shall install all control wire operating at 120V nominal and above. Control wiring operating at less than 120V (e.g., 12V and 24V) may be installed under the Division furnishing it.

2. Open wiring in air handling plenums: UL listed and classified for use in air plenums without raceway. Where indicated on the Drawings or otherwise specified, and permitted by local codes, only cable for communication or fire alarm systems and low voltage control wiring may be installed without raceways.

a) Low voltage wiring not routed in a race way shall be supported by cable tray or j-hooks secured independently of ceiling supports. Cabling shall not be supported directly by the ceiling system.

F. Connections:

1. Apply a zinc based, anti-oxidizing compound to connections.

2. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

4. Use oxide inhibitor in each splice and tap conductor for aluminum conductors.

5. Use only resin pressure splices and splicing kits that totally encapsulate the splice for splices in underground junction boxes. Arrange the splicing kit to minimize the effects of moisture.

6. Use connectors as indicated in equipment schedules. Where not indicated use connections as noted below.

   a) Compression – Conductors No. 8 AWG and larger to panelboards, switchboards and apparatus

   b) Compression – splices, terminals

   c) Mechanical – where temporary removal is required

7. Do not use terminals on wiring devices to feed through to the next device.

3.03 IDENTIFICATION

A. General: Provide all identification per Division 26 “Identification for Electrical Systems”.

B. Single Conductors: Identify and color-code conductors to indicate voltage and phase according to Part 2 of this Section. Identification method shall be either:

1. Factory provided colored insulation

2. Color-Coding Conductor Tape.

3. On feeders with isolated ground, use colored tape, alternating bands of green and yellow tape to provide a minimum of three bands of green and two bands of yellow.

C. Power-Circuit Conductor Identification: For primary and secondary conductors 1/0 AWG and larger in pull boxes and junction boxes identify voltage source and circuit number of each set of conductors. For single conductor cables, identify phase in addition to the above.

D. Branch-Circuit Conductor Identification: Where there are conductors for more than three branch circuits in the same junction or pull box identify each ungrounded conductor according to voltage, source and circuit number.

E. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.

3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.

F. Conductors for controls (lighting, controls): Label each conductor with Markers for Conductor and Control Cables. – identify conductors using method as noted in Division 26 Section “Identification for Electrical Systems”. Note conductor identification on record Drawings.

3.04 FIELD QUALITY CONTROL

A. Do not perform insulation resistance tests of the distribution wiring to equipment with the surge protective devices installed. Disconnect surge protective device before conducting insulation resistance tests and reconnect immediately after the testing is over

B. Perform the following field tests and inspections and prepare test reports:

1. After installing conductors and cables and before electrical circuitry has been energized, test for compliance with requirements. Test all wiring prior to energizing to ensure that it is free from unintentional grounds and shorts, is properly phased, and that all connectors are tight.

2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.3. Certify compliance with test parameters.

C. Test Reports: Prepare a written report to record the following:

1. Test procedures used.

2. Test results that comply with requirements.

3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes grounding of electrical systems and equipment. Grounding requirements specified in this Section may be supplemented by special requirements of systems described in other Sections.

B. This Section includes:

1. Grounding Electrodes
2. Ground Bars
3. Grounding Conductors
4. Connector Products

1.02 DEFINITIONS

A. The following apply to this and other Sections of these Specifications:

1. Ground ring: Bare underground grounding conductor encircling the building or structure.
2. NETA ATS: Acceptance Testing Specification.
3. PSF: Pounds per Square Foot
4. EMT: Electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. FMC: Flexible metal conduit.
7. GRS: Galvanized Rigid Steel Conduit
8. IMC: Intermediate metal conduit.
9. LFMC: Liquidtight flexible metal conduit.
10. LFNC: Liquidtight flexible nonmetallic conduit.
11. RAC: Rigid Aluminum Conduit
12. RMC: Rigid Metal Conduit
13. RNC: Rigid nonmetallic conduit.

1.03 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”:

1. Product data for the following products:

a) Electrodes, mechanical and compression connectors, and exothermic connectors.

B. Qualification Data: For a qualified testing and inspecting agency engaged by Contractor.

C. Quality-Control Test Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

D. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section “General Electrical Requirements”:

1. Accurately record actual locations of all buried electrodes, bonding conductors and ground rings. Indicate dimensions from fixed structural elements.

1.04 QUALITY ASSURANCE

A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.

B. Test Equipment Suitability and Calibration: Comply with NETA ATS (current version), "Suitability of Test Equipment" and "Test Instrument Calibration."

C. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
2. Marked for intended use.
3. Comply with UL 467.

D. Comply with NFPA 70.

PART 2 - PRODUCTS

2.01 GROUNDING CONDUCTORS, CONNECTORS, AND ELECTRODES:

A. Manufacturers:

1. ABB, Inc.
2. Advanced Lightning Technology (ALT)
3. AFL Global
4. Boggs, Inc.

5. Burndy; Hubbell, Inc.
6. Cooper Power; Eaton.
7. Copperweld Corp.
8. ECN/Korns; Division of Robroy Industries.
9. Encore Wire Corporation.
10. Erico; nVent.
11. Galvan Industries, Inc.
12. Greaves Corp.
13. Harger.
14. Hastings Fiber Glass Products, Inc.
15. Heary Brothers Lightning Protection Co.
16. Ideal Industries, Inc.
17. ILSCO.
18. Lightning Master Corp.
19. Lyncole XIT Grounding; Division of VFC.
20. NSI Industries, Inc. (Polaris).
21. O-Z/Gedney Co.; Emerson.
22. Panduit, Inc
23. RACO; Hubbell, Inc.
24. Robbins Lightning, Inc.
25. Southwire.
26. Superior Grounding Systems, Inc.

2.02 GROUNDING ELECTRODES

A. Ground Rods: UL-listed

1. Copper-clad steel; bonded copper electrolytic ally-applied to minimum thickness of 10 mils.
2. Size: 5/8 inch by 8 feet. Provide sectional types when longer rods are indicated.

2.03 GROUND BARS

A. General

1. Ground bars described in this section are intended to be wall mounted bars used for grounding and bonding. Equipment ground buses for

switchboards, panelboards and miscellaneous equipment are described in the individual equipment sections.

2. Supports: Minimum of two each 1-1/2-inch insulators and 1-inch stainless steel offset mounting brackets.

2.04 GROUNDING CONDUCTORS

A. For insulated conductors, comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables"

B. Material:

1. Copper.

C. Equipment Grounding Conductors: Insulated and identified as indicated in Part 3 of this section.

D. Grounding Electrode Conductors: Bare, stranded, unless otherwise indicated.

E. Underground Conductors:

1. Tinned-copper conductor.

2. No. 2/0 AWG minimum

3. Stranded, unless otherwise indicated.

F. Bare Copper Conductors:

1. Solid Conductors: Comply with ASTM B 3

2. Concentric-Lay Stranded Conductors: ASTM B 8.

3. Tinned Conductors: Comply with ASTM B 33.

G. Copper Bonding Conductors:

1. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG copper conductor, 1/4 inch in diameter.

2. Bonding Conductor: No. 4 or No. 6 AWG, stranded copper conductor.

3. Bonding Jumper: Bare copper tape, braided bare copper conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

4. Tinned Bonding Jumper: Tinned-copper tape, braided copper conductors, terminated with copper ferrules; 1-5/8 inches (wide and 1/16 inch thick.

2.05 CONNECTOR PRODUCTS

A. Comply with IEEE 837 and UL 467; listed for use for specific types, sizes, and combinations of conductors and connected items.

B. Bolted Connectors: Bolted-pressure-type connectors.

C. Compression Connectors: Burndy Hyground, or equal, permanent, pure, wrought copper, meeting ASTM 8 1 87, essentially the same as the conductors being connected; clearly and permanently marked with the information listed below:

1. Company symbol and/or logo.
2. Catalog number.
3. Conductors accommodated.
4. Installation die index number or die catalog number is required.
5. Underwriters Laboratories “Listing Mark:”.
6. The words “Suitable for Direct Burial” or, where space is limited, “Direct Burial” or “Burial” per UL Standard ANSI/UL467 (latest revision).

D. Cast connectors: copper base alloy according to ASTM B 30 (latest revision).

E. Welded Connectors: Exothermic-welded type, in kit form, and selected per manufacturer's written instructions.

2.06 MISCELLANEOUS

A. Test Wells:

1. Traffic Areas: Polymer concrete reinforced with heavy weave fiberglass; H-20 load rating; minimum 24 inches deep.
2. Non-traffic Areas: High density polyethylene; 350 PSF minimum load rating; minimum 10.25 inches deep.
3. Cover: Factory-identified by permanent means with word "GROUND".

PART 3 - EXECUTION

3.01 PREPARATION

A. Examine areas and conditions under which electrical grounding connections are to be made and notify the Contract Administrator and the Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with Work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. GENERAL

1. Provide all materials, labor and equipment for an electrical grounding system in accordance with applicable portions of NFPA 70 and NECA. Coordinate electrical work as necessary to interface installation of electrical grounding systems with other work.

2. Accomplish grounding and bonding of electrical installations and specific requirements for systems, circuits and equipment required to be grounded for both temporary and permanent construction.

3. Where the size of the grounding conductors are not shown, size in accordance with NFPA 70 Route along shortest and straightest paths possible, unless otherwise indicated. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Application

1. Use only copper conductors for both insulated and bare grounding conductors in direct contact with earth, concrete, masonry, crushed stone, and similar materials.

2. Underground Grounding Conductors: Unless noted otherwise, bury at least 24 inches below grade, or 6 inches below the official frost line, whichever is greater, or when crossing a duct bank, bury 12 inches above duct bank.

C. Grounding Electrode System: Provide connection to required and supplemental grounding electrodes indicated to form grounding electrode system.

1. Provide continuous grounding electrode conductors without splice or joint.

2. Install grounding electrode conductors in raceway where exposed to physical damage. Bond grounding electrode conductor to metallic raceways at each end with bonding jumper.

3. Ground Rod Electrodes:

a) Install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes.

b) Unless otherwise indicated, install ground rod electrodes vertically.

1) Outdoor Installations: Unless otherwise indicated, install with top of rod 6 inches below finished grade.

2) Indoor Installations: Unless otherwise indicated, install with 4 inches of top of rod exposed.

c) Where encountered rock prohibits vertical installation, install at 45 degree angle or bury horizontally in trench at least 30 inches (750 mm) deep in accordance with NFPA 70. If depth is unachievable, notify Contract Administrator and Engineer.

d) Interconnect ground rods with grounding electrode conductors. Use exothermic welds, except at test wells and as otherwise indicated. Make connections without exposing steel or damaging copper coating.

e) Verify that final backfill and compaction has been completed before driving rod electrodes.

f) Install one test well for each service at the ground rod electrically closest to the service entrance. Set top of well flush with finished grade, pavement, or floor.

4. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70, using a minimum of 20 feet of bare, tinned copper conductor not smaller than No. 4 AWG. If concrete foundation is less than 20 feet long, coil excess conductor within the base of the foundation. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor above footer and foundation and connect to building structural steel or other grounding electrode external to concrete.

5. Metal Water Service Pipe: Provide insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes by grounding clamp connectors. Where a dielectric main water fitting is installed, connect grounding conductor to street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.

6. Metal In-Ground Support Structures: Provide connection to metal in-ground support structure that is in direct contact with earth in accordance with NFPA 70.

D. Equipment Grounding Conductors:

1. Comply with NFPA 70, for types, sizes, and quantities of equipment grounding conductors, unless specific types, larger sizes, or more conductors than required by NFPA 70 are indicated.

2. Install equipment grounding conductors in all feeders and branch circuits.

3. In branch circuit and feeder raceways, use insulated equipment grounding conductors.

4. Air-Duct Equipment Circuits: Install an equipment grounding conductor to duct-mounted electrical devices operating at 120V and more, including air cleaners and heaters. Bond conductor to each unit and to air duct.

5. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate equipment grounding conductor to each electric water heater, heat-tracing, and antifrost heating cable. Bond conductor to heater units, piping, connected equipment, and components. On water heaters, bond metal hot and cold water pipes together, across the heater tank.

6. Nonmetallic Raceways: Install an equipment grounding conductor in nonmetallic raceways unless they are designated for telephone or data cables.

E. Ground Bars:

1. Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated on the Drawings.

a) Use insulated spacers and mounting brackets, and support from wall 2 feet above finished floor, unless otherwise indicated.

F. Signal and Communication Systems: For telephone, alarm, voice and data, and other communication systems, provide No. 6 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.

1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a ground bar.

2. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

G. Separately Derived Systems: Bond the derived neutral (grounded) conductor of all separately derived system (e.g., transformers, generators, UPS) to the nearest available grounding electrode, or back to the service grounding electrode if no approved electrodes are readily available. Size the grounding electrode conductor and bonding jumpers as indicated on the Drawings or as required by NFPA 70, whichever is larger.

H. Bonding: Provide bonding for equipment grounding conductors, equipment ground busses, metallic equipment enclosures, metallic raceways and boxes, device grounding terminals, and other normally non-current-carrying conductive materials enclosing electrical conductors/equipment or likely to become energized as indicated and in accordance with NFPA 70:

1. Bonding Straps and Jumpers: Install so vibration by equipment mounted on vibration isolation hangers and supports is not transmitted to rigidly mounted equipment. Use exothermic-welded connectors for outdoor locations, unless a disconnect-type connection is required; then, use a bolted clamp. Bond straps directly to the basic structure taking care not to penetrate any adjacent parts. Install straps only in locations accessible for maintenance.

2. Bond each aboveground portion of gas piping system upstream from equipment shutoff valve.

3. Bond interior metal piping systems and metal air ducts to equipment grounding conductors of associated pumps, fans, blowers, electric heaters, and air cleaners. Use braided-type bonding straps.

4. Bond metallic elements likely to become energized or where indicated on the Drawings, including but not limited to fences around electrical equipment and metal drain bodies near pools or electrical equipment.

5. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with grounding clamp connectors.

6. Pole Mounted Luminaires: Bond metal enclosures and components of pole mounted luminaires to the grounding system per the Manufacturer's requirements.

3.03 CONNECTIONS

A. General: Make connections so galvanic action or electrolysis possibility is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible. Provide electrical bonding plates, connectors, terminals, lugs and clamps as recommended by the manufacturers for indicated applications. Provide electrical insulating tape, heat-shrinkable insulating tubing, welding materials, and bonding straps as recommended by the manufacturers for types of service indicated.

1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer to order of galvanic series.

2. Make connections with clean, bare metal at points of contact.

3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.

4. Make aluminum-to-galvanized steel connections with tin-plated copper jumpers and mechanical clamps.

5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

B. Exothermic-Welded Connections: Comply with manufacturer's written instructions. Replace welds that are puffed up or that show convex surfaces indicating improper cleaning. Use exothermic welded connections for the following:

1. Connecting conductors together.

2. Connecting conductors to ground rods, except at test wells.

3. Connecting conductors to building steel.

4. Connecting conductors to plates.

C. Compression-Type Connections: Use hydraulic compression tools to provide correct circumferential pressure for compression connectors. Use tools and dies recommended by connector manufacturer. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on grounding conductor.

1. Compression Fittings: Permanent compression-type fittings may be used for the following rather than exothermic connections:

a) Connecting conductors together.

b) Connecting conductors to building steel.

c) Connecting conductors to ground rods, except at test wells.

D. Mechanical Pressure-Type Connections: Tighten screws and bolts for grounding and bonding connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

1. Mechanical Pressure Fittings: Use bolted mechanical (removable) pressure-type clamps for the following:

a) Connecting conductors to ground rods at test wells.

b) Connecting conductors to pipes.

E. Equipment Grounding Conductor Terminations: For No. 8 AWG and larger, use pressure-type grounding lugs. No. 10 AWG and smaller grounding conductors may be terminated with winged pressure-type connectors.

F. Noncontact Metal Raceway Terminations: If metallic raceways terminate at metal housings without mechanical and electrical connection to housing, terminate each conduit with a grounding bushing. Connect grounding bushings with a bare grounding conductor to grounding bus or terminal in housing. Bond electrically noncontinuous conduits at entrances and exits with grounding bushings and bare grounding conductors, unless otherwise indicated.

G. Connections at Test Wells: Use compression-type connectors on conductors and make bolted- and clamped-type connections between conductors and ground rods

H. Moisture Protection: If insulated grounding conductors are connected to ground rods or grounding buses, insulate entire area of connection and seal against moisture penetration of insulation and cable.

3.04 GROUND RING

A. Ground the steel framework of the building with a buried electrode at the base of every corner column and at intermediate exterior columns at distances not more than 60 feet apart. Provide a grounding conductor (counterpoise), electrically connected to each ground rod and to each steel column, extending around the perimeter of the building. Protect taps for steel framing connections from physical damage at foundations and transitions to steel columns.

3.05 IDENTIFICATION

A. Provide identification as specified in Division 26 “Low-Voltage Electrical Power Conductors and Cables” and “Identification for Electrical Systems”.

3.06 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

1. After installing grounding system but before permanent electrical circuitry has been energized, test for compliance with requirements.

2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, and at ground test wells. Measure ground resistance not less than two full days after the last trace of precipitation, and without the soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance. Perform tests by the fall-of-potential method according to IEEE 81.

3. Provide drawings locating each ground rod and ground rod assembly and other grounding electrodes, identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

4. Inspect and test in accordance with NETA ATS except Section 4.

5. Perform inspections and tests listed in NETA ATS, Section 7.13.

6. Perform ground electrode resistance tests under normally dry conditions. Precipitation within the previous 48 hours does not constitute normally dry conditions.

7. Perform point-to-point megohmmeter tests to determine the resistance between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.

8. Test Values:

   a) The resistance between the main grounding electrode and earth ground shall be no greater than 5 ohms.

   b) Equipment Rated 500 kVA and Less: 10 ohms.

   c) Equipment Rated 500 to 1000 kVA: 5 ohms.

   d) Equipment Rated More Than 1000 kVA: 3 ohms.

9. Minimum system neutral-to-ground insulation resistance: one megohm.

10. Investigate point-to-point resistance values that exceed 0.5 ohms.

    a) Check for loose connections.

    b) Check for absent or broken connections.

    c) Check for poor quality welds.

    d) Consider other reasons.

11. Investigate and correct deficiencies where measured ground resistances do not comply with specified requirements

12. Excessive Grounding Electrode Resistance: If measured resistance to earth ground value exceeds specified values, add grounding electrodes and additional conductors as required to obtain the specified value.

13. Submit detailed reports indicating inspection and testing results and corrective actions taken.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes the following:

1. Hangers and supports for electrical equipment and systems.
2. Construction requirements for concrete bases.

1.02 DEFINITIONS

A. EMT: Electrical metallic tubing.

B. IMC: Intermediate metal conduit.

C. RMC: Rigid metal conduit.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate sizes and arrangement of supports and bases with the actual equipment and components to be installed.
2. Coordinate the work with other trades to provide additional framing and materials required for installation.
3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
4. Coordinate the arrangement of supports with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
5. Notify Contract Administrator of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
6. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
7. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

B. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members in path of conduit groups with supports.

2. HVAC items, plumbing items and architectural features in the paths of conduit groups with common supports.

C. Sequencing:

1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 03 30 00.

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1. Submit fabrication drawings and product literature.

B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.05 SUBMITTALS

A. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:

1. Trapeze hangers. Include Product Data for components.

2. Steel slotted channel systems. Include Product Data for components.

3. Nonmetallic slotted channel systems. Include Product Data for components.

a) Include strength derating requirements related to ambient temperature.

4. Equipment supports.

1.06 QUALITY ASSURANCE

A. Comply with NFPA 70 and applicable building code.

B. Installer Qualifications for Powder-Actuated Fasteners: Certified by fastener system manufacturer with current operator's license.

PART 2 - PRODUCTS

2.01 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. General:

1. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.

B. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly. Use corrosion resistant materials suitable for the environment where installed.

1. Manufacturers:

a) Allied Tube & Conduit; Atkore International.

b) Eaton

c) Erico; nVent.

d) GS Metals Corp.

e) PHD Manufacturing.

f) Thomas & Betts Corporation.

g) Unistrut; Atkore International.

h) Wesanco, Inc.

2. Metallic Coatings:

a) Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.

b) Zinc-Plated Steel: Electroplated in accordance with ASTM B633.

3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.

4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.

5. Channel Dimensions: Selected for applicable load criteria.

C. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

D. Conduit and Cable Support Devices: Steel and Malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

1. Conduit Straps: One-hole or two-hole type.

2. Conduit Clamps: Bolted type unless otherwise indicated.

E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

a) Available Manufacturers:

1) Hilti Inc.

2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.

3) MKT Fastening, LLC.

4) Powers Fasteners, Inc;

5) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.

2. Mechanical-Expansion Anchors: Insert-wedge-type, [zinc-coated] [stainless] steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.

a) Available Manufacturers:

1) Cooper B-Line, Inc.; a division of Cooper Industries.

2) Empire Tool and Manufacturing Co., Inc.

3) Hilti Inc.

4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.

5) MKT Fastening, LLC.

3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.

4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.

5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.

6. Toggle Bolts: All-steel springhead type.

7. Hanger Rods: Threaded zinc-plated steel unless otherwise indicated.

H. Wire Rope Hanging Systems:

1. Manufacturers:

   a) Gripple.

2. General: Wire rope hanger system shall have a minimum 5 to 1 safety factor based upon the applied working load being supported.

3. Source Limitations: Furnish associated fittings, accessories, and hardware produced by a single manufacturer.

4. Wire Rope: Zinc coated, stainless steel or galvanized steel, with wire thread type as required to support the applied working load being supported. Provide same size wire for all applications based on worst case loading.

5. Accessories: Hanger attachments and structural attachments shall be compatible with wire rope hanger system and shall be by the same manufacturer as the wire rope hanger system.

2.02 FABRICATED METAL CONDUIT OR EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

C. Rooftop support assemblies: Steel pedestals with thermoplastic or rubber bases that rest on top of roofing membrane.

1. Conduit supports: Unless noted otherwise, surface mounted fittings not requiring any attachment to the roof structure and not penetrating the roofing assembly with support fixtures.

2. Equipment supports: Attachment fittings for connection to roof structure.

D. Base Sizes: As required to prevent overturning and to distribute load sufficiently to prevent indentation of roofing assembly.

E. Mounting Height: Provide minimum clearance of 6 inches under supported components to top of roofing.

PART 3 - EXECUTION

3.01 APPLICATION

A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

B. Unless specifically indicated or approved by the Contract Administrator and Structural Engineer, do not provide support from roof deck.

C. Where support wires are permitted, identify independent electrical component support wires above accessible ceilings with color distinguishable from ceiling support wires in accordance with NFPA 70.

D. Steel Components: Use corrosion resistant materials suitable for the environment where installed.

1. Indoor Dry Locations: Use zinc-plated steel or approved equivalent unless otherwise indicated.

2. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel, stainless steel, or approved equivalent unless otherwise indicated.

E. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway:

1. Minimum rod size shall be 1/4 inch (6 mm) in diameter, unless otherwise indicated.

a) Equipment Supports: 1/2 inch diameter minimum.

b) Busway Supports: 1/2 inch diameter minimum.

c) Single Conduit larger than 1 inch (27 mm) trade size: 3/8 inch diameter minimum.

d) Trapeze Support for Multiple Conduits: 3/8 inch diameter minimum.

2. Space supports for EMT, IMC, and RMC as required by NFPA 70.

F. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with:

a) two-bolt conduit clamps

b) single-bolt conduit clamps using spring friction action for retention in support channel

G. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

H. The use of wire rope hanging systems is an acceptable alternate hanging method when installed in strict accordance with manufacturer's instructions. Supported load shall not exceed manufacturer's recommended load rating.

3.02 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of electrical work.

C. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

D. Install in accordance with manufacturer's instructions.

E. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

1. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported with a minimum safety factor of 1.5. Include consideration for vibration, equipment operation, and shock loads where applicable.

F. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.

G. Do not use products for applications other than as permitted by NFPA 70 and product listing.

H. Remove temporary supports when no longer required.

I. Preset Concrete Inserts: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.

J. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.

2. To New Concrete: Bolt to concrete inserts.

3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.

4. To Existing Concrete: Expansion anchor fasteners.

a) Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.

5. To Steel:

a) Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts

b) Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69

c) Spring-tension clamps.

6. To Light Steel: Sheet metal screws.

7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

K. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.03 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

D. Minimize overhanging materials and protrusions, and provide protective caps and fittings on exposed material ends where:

1. Accessible to untrained personnel.

2. Located within confined spaces.

E. Rooftop support assemblies:

1. Conduit supports: Unless noted otherwise, coordinate installation of support system after roofing materials are complete. Provide adhesive materials to secure conduit supports where required. Where attachment to roof structure is required or otherwise specified, coordinate installation of supports with roofing material installation.

2. Equipment supports: Coordinate installation of supports with roofing material installation.

3.04 CONCRETE BASES

A. Construct concrete bases of dimensions indicated but not less than 4 inches (100 mm) larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 "Concrete"."

C. Anchor equipment to concrete base.

1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

2. Install anchor bolts to elevations required for proper attachment to supported equipment.

3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.05 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).

B. Comply with requirements in Division 09 "Finishes" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

D. Inspect support and attachment components for damage and defects. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes:

1. Raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

1.02 DEFINITIONS

A. Terminology used in this specification is as defined below:

1. EMT: Electrical Metallic Tubing
2. FMC: Flexible Metal Conduit
3. GRS: Galvanized Rigid Steel Conduit
4. IMC: Intermediate Metal Conduit
5. LFMC: Liquidtight Flexible Metal Conduit
6. LFNC: Liquidtight Flexible Nonmetallic Conduit
7. RAC: Rigid Aluminum Conduit
8. RMC: Rigid Metal Conduit
9. RNC: Rigid Nonmetallic Conduit
10. RTRC: Reinforced Thermosetting Resin Conduit

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination

1. Coordinate the work with other trades to avoid placement of raceway, boxes, or other potential obstructions within the dedicated equipment spaces and working clearances for equipment installed by other trades in accordance with the codes and manufacturer requirements.
2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
3. Coordinate minimum sizes of boxes with the actual installed arrangement of conductors, clamps, support fittings, and devices, calculated according to NFPA 70.
4. Coordinate minimum sizes of pull boxes with the actual installed arrangement of connected conduits, calculated according to NFPA 70.
5. Coordinate the placement of boxes with millwork, furniture, devices, equipment, etc. installed under other sections or by others.

6. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted boxes where indicated. Coordinate the work with other trades to preserve insulation integrity.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".

B. Product data for the following products:

1. Floor boxes
2. Poke-Through Outlets

C. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":

1. Accurately record actual routing of all exterior buried raceway and all interior raceways three inches and larger. Indicate dimensions from fixed structural elements.

1.05 QUALITY ASSURANCE

A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.

B. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to AHJ.
2. Marked for intended use.

C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.01 CONDUITS, SURFACE MOUNTED RACEWAYS AND ACCESSORIES

A. Metal Conduit and Tubing

1. Manufacturers:
   a) ABB, Inc.
   b) Atkore
   c) American Conduit
   d) Anamet Electrical, Inc.
   e) Electri-Flex Co.
   f) Hubbell (Fittings).

g) Nucor Tubular Products.

h) O-Z/Gedney Co.; Emerson.

i) Southwire Company, LLC

j) Western Tube and Conduit Corporation.

k) Wheatland Tube Co.

2. RMC:

a) GRS: Hot-dip galvanized: ANSI C80.1, UL 6.

b) RAC: ANSI C80.5, UL6A.

3. IMC: ANSI C80.6, UL 1242.

4. EMT and Fittings: ANSI C80.3, UL 797. Only steel products allowed. Reduced wall EMT is not allowed.

a) Fittings: Set-screw or Compression.

5. FMC: Aluminum or Zinc-coated steel: UL 1.

6. LFMC: Flexible steel raceway with PVC jacket: UL 360.

a) Fittings: NEMA FB 1; compatible with raceway and tubing materials.

B. Nonmetallic Raceway

1. Manufacturers:

a) ABB, Inc.

b) American Pipe and Plastics, Inc.

c) Anamet Electrical, Inc.

d) Atkore

e) Cantex Inc.

f) Carlon

g) Champion Fiberglass, Inc.

h) Electri-Flex Co.

i) Hubbell Inc. (Fittings)

j) IPEX USA, LLC.

k) Prime Conduit.

l) Southwire Corporation.

m) Superflex Ltd.

n) United Fiberglass of America, Inc.

2. RNC: Schedule 40 anelboeleeeijfsaoidjfsdfoijd 80 PVC: NEMA TC 2, UL 651.
    a) Fittings: match to raceway type and material: NEMA TC 3, NEMA TC 6, UL 651, as applicable.
    b) Fittings: match to tubing type and material: NEMA TC 3, NEMA TC 6, UL 651, as applicable.
3. RTRC (Fiberglass): UL 2515 AG, NEMA TC 14; SW (Standard Wall)
4. Phenolic Conduit (RTRC) for use in UL 2196 2-Hour Fire Resistive systems: UL 2515 AG, NEMA TC 14
    a) Must be used as part of a UL-certified FHIT 2-hour listed fire resistive system.

C. Metal Wireways
1. Manufacturers:
    a) BEL Products, Inc.
    b) Cooper B-Line; Eaton.
    c) EPI-Electrical Enclosures
    d) Hoffman.
    e) Square D.
2. Material and Construction: 14 gauge (minimum) sheet steel, sized and shaped as indicated, NEMA 1, 3R, 12, or 4X.
3. Fittings and Accessories: Include couplings, offsets, elbows, expansion/deflection joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70. Where indicated, provide a barrier to divide wireway into compartments.
4. Wireway Covers:
    a) Screw-cover type
5. Finish: Manufacturer's standard phosphate pre-treatment and baked enamel finish.

D. Nonmetallic Wireways
1. Manufacturers:
    a) ABB, Inc.
    b) Enduro Composite Systems
    c) Hoffman.

2. Description: Fiberglass reinforced polyester, extruded and fabricated to size and shape indicated, with no holes or knockouts. Gasketed cover with oil-resistant gasket material.

   a) Corrosion resistant captive screws

3. Description: PVC, extruded and fabricated to size and shape indicated, with snap-on cover and mechanically coupled connections with plastic fasteners.

4. Fittings and Accessories: Include couplings, offsets, elbows, expansion/deflection joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

5. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70.

2.02 BOXES, ENCLOSURES AND CABINETS

A. General

1. Manufacturers:

   a) ABB, Inc.

   b) American Midwest Power

   c) Appleton/O-Z Gedney Co.; Emerson.

   d) BEL Products, Inc.

   e) Cooper Crouse-Hinds; Eaton.

   f) Erickson Electrical Equipment Co.

   g) FSR, Inc.

   h) Hoffman.

   i) Hubbell, Inc.

   j) Legrand.

   k) Molex; Koch Industries.

   l) Robroy Industries, Inc.; Enclosure Division.

   m) Spring City Electrical Manufacturing Co.

2. Provide products listed, classified, and labeled as suitable for the purpose intended. Do not use boxes and associated accessories for applications other than as permitted by NFPA 70 and product listing.

3. Provide all boxes, fittings, supports, and accessories required for a complete raceway system and to accommodate devices and equipment to be installed.

4. Where box size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

B. Outlet and Device Boxes Up to 100 cubic inches, Including Those Used as Junction and Pull Boxes:

1. Sheet-Steel Boxes: Comply with NEMA OS 1, and list and label as complying with UL 514A.

2. Cast Metal Boxes: Comply with NEMA FB 1, Type FD, with gasketed cover. Furnish with threaded hubs.

a) List and label as complying with UL 514A for non-hazardous locations;.

b) List and label as complying with UL 886 for hazardous locations, where required.

3. Nonmetallic Boxes: Comply with NEMA OS 2, and list and label as complying with UL 514C.

4. Boxes for Supporting Luminaires and Ceiling Fans: Listed as suitable for the type and weight of load to be supported; furnished with fixture stud to accommodate mounting of luminaire where required.

5. Boxes for Ganged Devices: Use multi-gang boxes of single-piece construction. Do not use field-connected gangable boxes.

6. Minimum Box Size, Unless Otherwise Indicated:

a) Wiring Devices (Other Than Communications Systems Outlets): 4 inch square by 1-1/2 inch deep (100 by 38 mm) trade size.

b) Ceiling Outlets: 4 inch octagonal or square by 1-1/2 inch deep (100 by 38 mm) trade size.

7. Do not use "through-wall" boxes designed for access from both sides of wall.

8. Wall Plates: Comply with Division 26 Section “Wiring Devices”.

C. Boxes for telephone, data, telecommunications and audio-video outlets, refer to:

1. Division 27 Section "Common Work Results for Communications."

D. Junction and Pull Boxes Larger Than 100 cubic inches:

1. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1, and list and label as complying with UL 514A.

2. Cast-Metal Pull and Junction Boxes: NEMA FB 1, cast iron with gasketed cover.

3. Provide screw-cover or hinged-cover enclosures unless otherwise indicated.

4. Boxes 6 square feet and Larger: Provide sectionalized screw-cover or hinged-cover enclosures.

E. Floor Boxes

1. General:

a) Floor Box Schedule on drawings: Refer to Drawings for specific floor box requirements.

b) Basis-of-Design Product: The specified floor box is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the schedule.

c) Provide a complete Floor Box Assembly.

d) UL514A listed for scrub water exclusion for all floor types.

e) Floor boxes for on or below grade installation shall be watertight, fully adjustable cast iron or epoxy coated steel.

f) Floor boxes for above grade shall be concrete-tight, fully adjustable, stamped galvanized steel box.

g) Provide shallow boxes where necessitated by slab depth. Conduits shown on plans are minimum size, select appropriate floor box based on slab type, thickness, and minimum conduit size.

h) Non-metallic PVC construction, watertight floor boxes may be used where specifically listed in schedule or specified on drawings.

i) Receptacles:

1) Provide receptacles complying with requirement of Division 26 “Wiring Devices”.

2) Duplex: Include a minimum of one Convenience Receptacle, or quantity as indicated on schedule, with features as noted on schedule.

3) GFCI: Include quantity of GFCI Receptacles as indicated on schedule, with features as noted on schedule.

4) Isolated Ground: Include quantity of Isolated Ground Receptacle as indicated on schedule, with features as noted on schedule.

5) Special: Include quantity of Special/Miscellaneous Devices as indicated on schedule, with features as noted on schedule.

j) Communications:

1) Provide dedicated mounting space (gang) for each communication device type indicated on schedule. Include

provisions for mounting devices in accordance with the requirements of the communication systems provider.

2) The following items are not provided per this specification section:

(a) Telecommunications outlet termination plate and termination connectors shall be provided per Division 27 Section “Communications Horizontal Cabling”. Coordinate all other Assembly components to ensure compatibility.

(b) Audio Video custom termination plates and connectors shall be provided per Division 27 Section “Audio Video Systems” and/or “Audio Video Systems Equipment”. Coordinate all other assembly components to ensure compatibility.

F. Poke-Through Outlets

1. General:

a) Poke-Through Schedule on drawings: Refer to Drawings for specific floor box requirements.

b) Basis-of-Design Product: The specified floor box is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the schedule.

c) Provide a complete Poke through assembly.

d) UL listed for scrub water exclusion for all floor types.

e) UL listed and UL Fire Classified, with one- to four-hour fire rating, as required by floor rating and type.

2. Receptacles:

a) Provide receptacles complying with requirement of Division 26 “Wiring Devices”.

b) Duplex: Include a minimum of one Convenience Receptacle, or quantity as indicated on schedule, with features as noted on schedule.

c) GFCI: Include quantity of GFCI Receptacles as indicated on schedule, with features as noted on schedule.

3. Communications:

a) Provide dedicated mounting space (gang) for each communication device type indicated on schedule. Include provisions for mounting devices in accordance with the requirements of the communication

systems provider. Communication devices to be defined and provided under specification of other divisions.

G. Cabinets and Enclosures

1. General:

a) Compliance: NEMA 250, and list and label as complying with UL 50 and UL50E or 508A, as applicable.

b) Cabinets and Hinged-Cover Enclosures, Other than junction and pull boxes: shall be keyed. Provide 2 keys for each enclosure.

c) NeMA 250 Environment ratings:

1) NEMA Type 1: Code-gauge phosphatized steel with continuously welded seams; manufacturer's standard ANSI 61 gray polyester powder finish inside and out; non-gasketed removable hinged front cover, with flush latch and concealed hinge; collar studs.

2) NEMA Type 3R: Code-gauge galvanized steel with drip shield top, seam-free front, side, and back; manufacturer's standard ANSI 61 gray polyester powder finish inside and out; non-gasketed continuous-hinged door, with stainless steel pin; captive, plated steel cover screws; hasp and staple for padlocking; collar studs.

d) Removable painted steel interior panel mounted on standoffs; metal barriers to separate wiring of different systems and voltages.

e) Provide enclosures wider than 36 inches with double doors; removable center posts; internal bracing, supports, or both, as required to maintain their structural integrity; and, accessory feet where required for freestanding equipment.

f) Provide clamps, grids, slotted wireways, or similar devices to which or by which wiring may be secured. Provide DIN-rail mounted terminal strips for terminating all incoming and outgoing control wiring, and power terminal blocks for incoming/outgoing power wiring.

g) Provide metal barriers to separate compartments containing control wiring operating at less than 50 volts from power and higher-voltage control wiring.

2.03 FACTORY FINISHES

A. Interior Finish: All interior components shall be factory finished; manufacturer’s standard grey unless otherwise noted.

B. Exterior Finish: For metal wireway and surface raceway, enclosure, or cabinet components, provide manufacturer's standard paint, applied to factory-assembled metal wireway and surface raceways, enclosures, and cabinets before shipping.

PART 3 - EXECUTION

3.01 INSTALLATION

A. General

1. Install in accordance with manufacturer's instructions

3.02 RACEWAYS

A. General

1. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on drawings or in this article are stricter.
2. Provide sizes and types of raceways as indicated on the Drawings. Sizes are based on THWN insulated copper conductors, except where noted otherwise. Where sizes are not shown on the Drawings or in the Specifications, size raceways in accordance with NFPA 70 requirements for the number, size and type of conductors installed. Minimum raceway size: 1/2 inch (concealed and exposed); 1 inch (underground and under slab).
    a) 1/2 inch conduit shall contain maximum (5) #12AWG conductors or (3) #10AWG conductors.
    b) 3/8 inch flexible conduit may be used for light fixture whips.
3. Provide all raceways, fittings, supports, and miscellaneous hardware required for a complete electrical system as described by the Drawings and Specifications.
4. Install a green-insulated, equipment-grounding conductor, which is bonded to the electrical system ground, in all raceways, with the exception of Service Entrance raceways.
5. Install grounding bushings or other code compliant connections on all conduit terminations and bond to the enclosure, equipment grounding conductor, and electrical system ground.
6. Install raceways concealed in walls or above suspended ceilings in finished areas. When approved by the Contract Administrator, raceways may be installed concealed in elevated floor slabs. Do not install raceways horizontally within slabs on grade.
7. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portions of bends are not visible above the finished slab.

8. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

9. Make bends and offsets so inside diameters are not reduced. Keep legs of bends in the same plane and keep straight legs of offsets parallel, unless otherwise indicated.

10. Install raceways:

    a) To meet the requirements of the structure and the requirements of all other Work on the Project.

    b) To clear all openings, depressions, ducts, pipes, reinforcing steel, and so on.

    c) Within or passing through the concrete structure in such a manner so as not to adversely affect the integrity of the structure. Become familiar with the Architectural and the Structural Drawings and their requirements affecting the raceway installation. If necessary, consult with the Contract Administrator.

    d) Parallel or perpendicular to building lines or column lines.

    e) When concealed, with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.

11. Raceways Embedded in Slabs:

    a) Raceways may only be embedded in concrete slabs with written permission from and only where directed, by the Structural Engineer.

    b) Install in middle 1/3 of slab thickness, where practical. At a minimum, concrete shall provide at least 2 inches of concrete cover for raceways.

    c) Secure raceways to reinforcing rods to prevent sagging or shifting during concrete placement.

    d) Space raceways laterally to prevent voids in concrete.

    e) Run conduit larger than 1-inch trade size parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.

12. Where masonry, brick, CMU or concrete walls are left unfinished, coordinate raceway installations with other trades so that the raceways and boxes are concealed and the wall will have a neat and smooth appearance.

13. Where masonry, brick, CMU or concrete walls in public spaces are left unfinished, coordinate raceway installations with other trades so that the raceways and boxes are concealed and the wall will have a neat and smooth appearance.

14. Support raceways from structural elements of the building as required by NFPA 70, Division 26 Section “Hangers and Supports for Electrical Systems”. Do not support raceways by hangers used for any other systems foreign to the electrical systems; and, do not attach to other foreign systems. Do not lay raceways on top of the ceiling system.

15. Provide support spacing in accordance with NFPA 70 requirements, and at a minimum in accordance with NEMA standards. Support by the following methods:

    a) Attach single raceway directly to structural steel with beam clamps.

    b) Attach single raceway directly to concrete with one-hole clamps or clips and anchors. Outdoors and wherever subject to dampness or moisture, offset raceways from the surface by using galvanized clamps and clamp backs, to mitigate moisture entrapment between raceways and surfaces.

    c) Attach groups of raceway to structural steel with slotted support system attached with beam clamps. Attach raceway to slotted channel with approved raceway clamps.

    d) Attach groups of raceway to concrete with cast-in-place steel slotted channel fabricated specifically for concrete embedment. Attach raceway to steel slotted channel with approved raceway clamps.

    e) Hang plumb horizontally suspended single raceway using a threaded rod. Attach threaded rods to concrete with anchors and to structural steel with beam clamps. Attach raceway to threaded rod with approved raceway clamps.

    f) Hang horizontally suspended groups of raceway using steel slotted support system suspended from threaded rods. Attach threaded rods to concrete with anchors and to structural steel with beam clamps. Attach raceway to steel slotted channel with approved raceway clamps.

    g) Support conductors in vertical raceway in accordance with NFPA 70 requirements.

    h) Cross-brace suspended raceway to prevent lateral movement during seismic activity.

    i) Use pre-fabricated non-metallic spacers for parallel runs of underground or under-slab conduits, either direct buried or encased in concrete.

16. Install electrically- and physically-continuous raceways between connections to outlets, boxes, panelboards, cabinets, and other electrical equipment with a minimum possible number of bends and not more than the equivalent of four 90-degree bends between boxes. Make bends

smooth and even, without flattening raceway or flakingfirefdfdfE the finish.

17. Protect all electrical Work against damage during construction. Repair all Work damaged or moved out of line after rough-in, to meet the Contract Administrator's approval, without additional cost to the Owner. Cover or temporarily plug openings in boxes or raceways to keep raceways clean during construction. Clean all raceways prior to pulling conductors or cables.

18. Align and install raceway terminations true and plumb.

19. Complete raceway installation before starting conductor installation.

20. Install a pull cord in each empty raceway that is left empty for installation of wires or cables by other trades or under separate contracts. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull cord.

21. Install approved expansion/deflection fittings where raceways pass through or over building expansion joints; or where structures providing a means of support are subject to relative movement greater than acceptable by the raceway manufacturer.

22. Route raceway through roof openings for piping and ductwork or through roof seals approved by the Contract Administrator, the roofing contractor, or both. Obtain approval for all roof penetrations and seal types from the Contract Administrator, Owner, roofing contractor, or all three as required to maintain new or existing roofing warranties.

23. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

    a) Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces or from building exterior to building interior.

    b) Where otherwise required by NFPA 70.

24. Stub-up Connections: Extend conduits through concrete floor for connection to freestanding equipment. Install with an adjustable top or coupling threaded inside for plugs set flush with finished floor. Extend conductors to equipment as required by other requirements of the construction documents. FMC may be used 6 inches above the floor. Install screwdriver-operated, threaded plugs flush with floor for future equipment connections.

25. Maintain 2" minimum spacing from bottom of roof deck to prevent raceway penetrations from above.

26. Do not route conduits across skylights, access panels, hatched tiles, HVAC diffusers, or equipment working space.

27. Route conduits serving rooftop equipment concealed inside the equipment curb and minimize roof penetrations and exterior conduit runs where practicable.

28. Install all underground conduits/raceways, outside the building footprint, a minimum of 24" below the bottom of paving/grade, unless noted otherwise, where practicable.

29. Install all underground conduits/raceways underneath building footprint slab-on-grade a minimum of 12" below bottom of slab, unless noted otherwise, where practicable.

30. Where conduits are subject to earth movement by settlement or frost, provide expansion fittings to prevent damage to enclosed conductors or connected equipment.

B. RMC

1. Use GRS or IMC in the following areas:

   a) Where indicated.

   b) For Emergency Feeders.

   c) Exterior applications where above grade and exposed.

   d) Below grade when concrete-encased, plastic-coated, or provided with a corrosion resistant approved mastic coating.

   e) All raceways penetrating slabs on grade (use plastic-coated raceway or provide with a corrosion resistant approved mastic coating). This shall include the 90-degree elbow below grade and the entire vertical transition to above grade.

   f) Interior spaces where exposed to damage. Includes but is not limited to the following areas.

      1) Corridors used for traffic of mechanized carts, forklifts and pallet handling units.

2. Use RAC in the following areas:

   a) Indoors above grade.

   b) Interior wet or damp locations.

   c) For circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.

3. Do not use RAC:

   a) Below grade.

   b) Imbedded in concrete or other areas corrosive to RAC.

C. EMT

1. Use EMT in the following areas:
    a) Where indicated.
    b) Interior concealed locations for:
        1) Branch circuits.
        2) Feeders.
        3) Emergency branch circuits.
        4) Low-voltage control, security, and fire alarm circuits
    c) Exposed where not subject to physical damage
        1) Mechanical rooms
2. Do not use EMT:
    a) Below grade.
    b) In exterior applications when exposed.

D. FMC and LFMC

1. Use FMC or LFMC:
    a) For the final 24 inches of raceway to all motors, transformers, and other equipment subject to vibration or movement.
    b) From outlet boxes (attached to building structure) to recessed light fixtures. Install sufficient length to allow for relocating each light fixture within a 5-foot radius of its installed location.
    c) Use FMC only in dry locations.
    d) Use LFMC in damp, wet, corrosive, outdoor locations, and food service and kitchen areas.
2. Do not use FMC or LFMC:
    a) For branch circuits, homeruns or feeders.
    b) In lengths exceeding 6 feet.

E. RNC

1. Solvent-weld RNC fittings and raceway couplings per the manufacturer's instructions and make all connections watertight. Use solvent of the same manufacturer as the raceway.
2. Where installed exposed outdoors or other areas subject to temperature variations, install expansion fittings per NFPA 70, to accommodate thermal expansion in straight runs.
3. RNC is only allowed to be used in the following locations:
    a) Where specifically indicated.

1) If an adopted code prevents use of RNC in a location where the contract documents specifically allows its use, contractor shall utilize other types of conduit allowed by the specification.

2) Allowed does not mean required.

b) Underground, single and grouped, in lieu of GRS or IMC, when indicated.

1) Direct buried

2) Concrete-encased (use approved rigid PVC interlocking spacers, selected to provide minimum duct spacing and cover depths indicated while supporting ducts during concreting and backfilling; produced by the same manufacturer as the ducts).

3.03 RACEWAY FITTINGS:

A. Compatible with raceways and suitable for use and location.

B. RMC and IMC: Use threaded rigid steel conduit fittings, unless otherwise indicated.

C. Join raceways with fittings designed and approved for that purpose and make joints tight.

D. Use insulating bushings to protect conductors at raceway terminations:

1. Where raceways are terminated with locknuts and bushings, align raceways to enter squarely and install locknuts with dished part against box. Use two locknuts, one inside and one outside box.

2. Where raceways are terminated with threaded hubs, screw raceways or fittings tightly into hub so end bears against wire protection shoulder. Where chase nipples are used, align raceways so coupling is square to box; tighten chase nipple so no threads are exposed.

3.04 WIREWAYS

A. Use flat head screws, clips and straps to fasten wireways to surfaces. Mount plumb and level.

B. Use suitable insulating bushings and inserts at connections to outlets and corner fittings.

C. Close ends of wireway and unused raceway openings.

3.05 BOXES

A. General

1. Verify locations of device boxes prior to rough in.
2. Set boxes at elevations to accommodate mounting heights as specified or indicated on the Drawings.
3. Electrical boxes are shown on Drawings in approximate locations unless dimensioned. Adjust box locations to accommodate intended purpose.
4. Install boxes to preserve fire ratings of walls, floors, and ceilings.
5. Install flush wall-mounted boxes without damaging wall insulation or reducing its effectiveness.
6. Support boxes independently of raceway.
7. Clean the interior of boxes to remove dust, debris, and other material. Clean exposed surfaces and restore finish.
8. Adjust flush-mounted boxes to make front edges flush with finished wall material.
9. Provide boxes of the depth required for the service, device and the application, and with raised covers set flush with the finished wall surface for boxes concealed in plaster finishes. Select covers with the proper openings for the devices being installed in the boxes. Install boxes flush unless otherwise indicated.
10. Install outlet boxes in firewalls complying with UL requirements, with box surface area not exceeding 16 square inches; and, when installed on opposite sides of the wall, separate by a distance of at least 24 inches.

B. NEMA Enclosure ratings, Suitable for the environment in which it is installed. At a minimum, provide the following ratings:
1. NEMA 250, type 3R
    a) Provide at exterior locations
2. NEMA 250, type 1
    a) Provide at interior and dry locations

C. Outlet Boxes
1. Install all electrical devices, such as plug receptacles, lamp receptacles, light switches, and light fixtures in or on outlet boxes.
2. Locations of outlets on Drawings are approximate; and, except where dimensions are shown, determine exact dimensions for locations of outlets from plans, details, sections, or elevations on Drawings, or as directed by Contract Administrator. Locate outlets generally from column centers and finish wall lines or to centers or joints of wall or ceiling panels.
3. Locate outlet boxes so they are not placed back-to-back in the same wall, and in metal stud walls, so they are separated by at least one stud space, to limit sound transmission from room to room. Install outlet boxes in

accessible locations and do not install outlets above ducts or behind furring.

4. Use cast iron boxes or cast aluminum boxes for damp or wet locations unless otherwise indicated or required; furnish with compatible weatherproof gasketed covers.
5. Use cast iron boxes or cast aluminum boxes where exposed galvanized steel rigid metal conduit or exposed intermediate metal conduit (IMC) is used.
6. Use cast aluminum boxes where aluminum rigid metal conduit is used.
7. Use nonmetallic boxes where exposed rigid PVC conduit is used.
8. Use suitable concrete type boxes where flush-mounted in concrete.
9. Use suitable masonry type boxes where flush-mounted in masonry walls.
10. Use raised covers suitable for the type of wall construction and device configuration where required.
11. Use shallow boxes where required by the type of wall construction.
12. Install extension and plaster rings as required by NFPA 70.
13. Carefully set outlet boxes concealed in non-plastered block walls so as to line up with wall joints. Coordinate the box and raceway installation with the wall construction as required for a flush and neat appearing installation. Outlet box extensions may be used where necessary.
14. Do not exceed allowable fill per NFPA 70.
15. Where multiple devices are shown grouped together, gang mount with a common cover plate.

D. Junction and Pull Boxes

1. Install junction and pull boxes above accessible ceilings and in unfinished areas.
2. Provide boxes set flush in painted walls or ceilings with primer coated cover.
3. Where junction and pull boxes are installed above an inaccessible ceiling, locate so as to be easily accessible from a ceiling access panel.
4. Boxes for exterior use shall be:
    a) PVC with a UV-stabilized PVC cover sealed and gasketed watertight.
    b) Cast aluminum with a cast aluminum cover sealed and gasketed watertight.
    c) Cast iron with cast iron cover sealed and gasketed watertight in vehicular traffic areas. Provide box and cover UL listed for use in vehicular traffic areas.

d) Install buried boxes so that box covers are flush with grade, unless indicated otherwise.

E. Floor Boxes

1. Use cast or non-metallic floor boxes for installations in slab on grade. Unless otherwise indicated, formed steel boxes are acceptable for slabs above grade.

2. Set metal floor boxes level and flush with finished floor surface.

3. Set non-metallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.06 CABINETS AND ENCLOSURES

A. Unless otherwise indicated on the Drawings, provide

1. NEMA 1 construction for indoor, dry locations

2. NEMA 12 for indoor, damp and dusty locations

3. NEMA 3R for outdoor locations

B. Install flush mounted in the wall in finished spaces, with the top 78 inches above finished floor. The front shall be approximately 3/4-inch larger than the box all around.

C. Install surface mounted in unfinished spaces, with the top 78 inches above finished floor. The front shall be the same height and width as the box.

D. Electrically ground all metallic cabinets and enclosures. Where wiring to cabinet or enclosure includes a grounding conductor, provide a grounding lug in the interior of the cabinet or enclosure. Cabinets and enclosures specified in this Section are intended to house miscellaneous electrical components assembled in a custom arrangement, such as contactors and relays.

E. All components that are specified or indicated for assembly in cabinets and enclosures shall each be individually UL listed and labeled. Arrange wiring so that it can be readily identified. Support wiring no less than every 3 inches. Install gauges, meters, pilot lights and controls on the face of the door.

F. Do not provide cabinets and enclosures smaller than the sizes indicated. Where sizes and types are not indicated, provide cabinets and enclosures of the size, type and classes appropriate for the use and location per the guidelines of the NEC. Provide all items complete with covers and accessories required for the intended use.

3.07 IDENTIFICATION

A. Refer to Division 26 Section “Identification for Electrical Systems” for identification materials.

B. Raceway Identification

1. Conduit and raceways are to be color coded for ease of identification. Where a facility standard already exists, that shall be followed. Where no standard exists for color-coding, provide in accordance with table below.

2. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size. Use the following means of identification:

   a) Spray paint at boxes .

3. Color for Printed Legend:

   a) Power Circuits: Black letters on an orange field.

   b) Legend: Indicate system or service and voltage, if applicable

C. Accessible Raceways of Auxiliary Systems: Identify the following systems using the same identification device as other accessible raceways 600V or less, and with the indicated color scheme for each system:

1. Fire Alarm System: Red.

2. Fire-Suppression Supervisory and Control System: Red and yellow.

3. Combined Fire Alarm and Security System: Red and blue.

4. Security System: Blue and yellow.

5. Mechanical and Electrical Supervisory System: Green and blue.

6. Telecommunication System: Green and yellow.

7. Control Wiring: Green and red.

D. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.

E. Junction Boxes and Pull Boxes:

1. Junction box and pull box covers shall be spray painted to identify the voltage and system. Circuit numbers and the panel they originate from shall be listed on the cover using permanent, waterproof, black ink marker.

2. The junction box where a homerun ends and the circuit is distributed shall be marked. Junction boxes shall be marked approximately every 100 feet along homerun path to panel.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Cable trays and accessories for the following types:

1. Steel
2. Aluminum
3. Stainless-steel

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the arrangement of cable tray and supports with structural members, ductwork, piping, equipment and other potential conflicts installed under other sections or by others. Coordinate the work with other trades to avoid installation of obstructions within cable tray required clearances.

B. Coordinate arrangement of cable tray with the dimensions and clearance requirements of the actual products to be installed.

C. Coordinate the work with placement of supports, anchors, etc. required for mounting.

D. Notify Contract Administrator of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

E. Coordination Drawings: Floor plans and sections, drawn to scale. Include scaled cable tray layout and relationships between components and adjacent structural, electrical, and mechanical elements. Show the following:

1. Vertical and horizontal offsets and transitions.
2. Clearances for access above and to side of cable trays.
3. Vertical elevation of cable trays above the floor or bottom of ceiling structure.

F. Cables shall not be installed within cable trays until associated raceway and cable tray system is complete.

G. Refer to Division 27 section “Common Work Results for Communications” for requirements for cable trays containing communication cabling.

1.03 SUBMITTALS

A. Product Data: Include data indicating dimensions, accessories and finishes for each type of cable tray indicated.

B. Shop Drawings: For each type of cable tray.

1. Show fabrication and installation details of cable tray, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.

C. Field quality-control reports.

D. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":

1. Accurately record actual cable tray routing and locations of supports.

E. Operation and Maintenance Data: For cable trays to include in emergency, operation, and maintenance manuals.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain cable tray system and associated components and accessories through one source from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NFPA 70.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store indoors to prevent water or other foreign materials from staining or adhering to cable tray. Unpack and dry wet materials before storage.

B. Handle products carefully to avoid damage to finish.

PART 2 - PRODUCTS

2.01 GENERAL

A. Provide new cable tray system consisting of all required components, fittings, supports, accessories, etc. as necessary for a complete system.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Unless otherwise indicated, provide cable tray system to meet span/load ratings in accordance with NEMA VE 1 for metal cable tray systems, or NEMA FG 1 for fiberglass cable tray systems, with safety factor of 1.5 and working load. Account for additional concentrated static loads at supports where required and allowed per NFPA 70.

D. Unless otherwise indicated, specified widths and loading depths are nominal values according to NEMA VE 1 for metal cable tray systems or NEMA FG 1 for fiberglass cable tray systems with applicable allowable tolerances.

2.02 MANUFACTURERS

A. Manufacturers:

1. ABB, Inc.
2. Cablofil, a brand of Legrand North America, Inc.
3. Chalfant Manufacturing Company.
4. Cooper B-Line; Eaton.
5. Cope; a division of Atkore International.
6. Enduro Composites
7. Mono-Systems; Niedax Group
8. MPHusky.

2.03 MATERIALS AND FINISHES

A. Cable Trays, Fittings, and Accessories: Steel, complying with NEMA VE 1.

1. Mill galvanized before fabrication, complying with ASTM A 653/A 653M, G90 (Z275) coating; with hardware galvanized according to ASTM B 633.

B. Cable Trays, Fittings, and Accessories: Aluminum, complying with NEMA VE 1, Aluminum Association's Alloy 6063-T6 for rails, rungs, and cable trays, and Alloy 5052-H32 or Alloy 6061-T6 for fabricated parts; with chromium-zinc, ASTM F 1136 splice-plate fasteners, bolts, and screws.

C. Sizes and Configurations: Refer to the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.

1. Center-hanger supports may be used only when specifically indicated.

2.04 CABLE TRAY TYPE

A. Basket Cable Trays: Wire mesh spacing shall not exceed 2 by 4 inches (50 by 100 mm).

1. Cable tray width and loading depth shall be as indicated on drawings.
2. Straight sections shall be supplied in 10 foot lengths.

B. Ladder Cable Trays:

1. Cable tray width and loading depth shall be as indicated on drawings.
2. Straight sections shall be supplied in 10 or 20 foot lengths.
3. Rung spacing of 6 inches.

C. Single Rail Cable Tray: Center rails and rungs with continuous square tube rungs with radius corners. Splice hangers shall be capable of acting as the support points for all-thread rod.

1. Cable tray width and loading depth shall be as indicated on drawings.

2. Straight sections shall be supplied in 10 foot lengths.

3. Rungs shall be spaced every 12 inches.

2.05 CABLE TRAY ACCESSORIES

A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

B. Covers: Solid type of same materials and finishes as cable tray.

C. Barrier Strips: Same materials and finishes as cable tray; with supports sufficient to resist cable pulling weight applied during installation.

D. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.06 SOURCE QUALITY CONTROL

A. Perform factory design and production tests according to NEMA VE 1 for metal cable tray systems or NEMA FG 1 for fiberglass cable tray systems.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Verify that conditions are satisfactory for installation prior to starting work.

B. Install in accordance with manufacturer’s instructions.

3.02 CABLE TRAY INSTALLATION

A. Remove burrs and sharp edges from cable trays.

B. Install cable tray in accordance with NECA 1 and comply with recommendations in NEMA VE 2.

C. Install as a complete system, including all necessary fasteners, hold-down clips, splice-plate support systems, barrier strips, hinged horizontal and vertical splice plates, elbows, reducers, tees, and crosses.

D. Arrange cable tray to provide required clearances and maintain cable access.

1. Minimum Clearance Above and Adjacent to Cable Tray: 12 inches.

E. Fasten cable tray supports to building structure.

1. Unless otherwise indicated, arrange cable tray to be parallel or perpendicular to building lines.
2. Place supports so that spans do not exceed maximum spans limits set by the manufacturer.
3. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.
4. Support bus assembly to prevent twisting from eccentric loading.
5. Manufacture center-hung support, designed for 60 percent versus 40 percent eccentric loading condition, with a safety factor of 3.
6. Locate and install supports according to NEMA VE 1 for metal cable tray systems or NEMA FG 1 for fiberglass cable tray systems.

F. Cable Tray Movement Provisions:

1. Provide suitable expansion fittings where cable tray is subject to movement, including but not limited to:
   a) Where cable tray crosses structural joints intended for expansion.
   b) Long straight cable tray runs in accordance with NEMA VE 2.
   c) Use expansion guides in lieu of hold-down clamps where prescribed in NEMA VE 2.
   d) Set gaps for expansion fittings in accordance with NEMA VE 2.

G. Make connections to equipment with flanged fittings fastened to cable tray and to equipment. Support cable tray independent of fittings. Do not carry weight of cable tray on equipment enclosure.

H. Install expansion connectors where cable tray crosses building expansion joint and in cable tray runs that exceed dimensions recommended in to NEMA VE 1 for metal cable tray systems or NEMA FG 1 for fiberglass cable tray systems. Space connectors and set gaps according to applicable standard.

I. Make changes in direction and elevation using standard fittings.

J. Make cable tray connections using standard fittings.

K. Sleeves for Future Cables: Install capped sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.

L. Workspace: Install cable trays with enough space to permit access for installing cables.

M. Install barriers to separate cables of different systems, such as power, communications, and data processing; or of different insulation levels, such as 600, 5,000, and 15,000 Volts.

N. Provide end closures at unconnected ends of cable tray runs.

O. After installation of cable trays is completed, install warning signs in visible locations on or near cable trays.

3.03 CABLE INSTALLATION

A. Install cables only when cable tray installation has been completed and inspected.

B. Fasten cables on horizontal runs with cable clamps or cable ties as recommended by NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.

C. On vertical runs, fasten cables to tray every 18 inches (457 mm). Install intermediate supports when cable weight exceeds the load-carrying capacity of the tray rungs.

D. Use suitable drop-out fittings or bushings where cables exit cable tray as required to maintain minimum cable bending radius.

E. Use suitable cable support fittings for long vertical cable tray runs with heavy cables.

F. Install covers after installation of cable is completed.

3.04 WARNING SIGNS

A. Legend: "WARNING! NOT TO BE USED AS WALKWAY, LADDER, OR SUPPORT FOR LADDERS OR PERSONNEL."

B. Materials and fastening are specified in Division 26 Section "Identification for Electrical Systems."

3.05 CONNECTIONS

A. Ground cable trays according to manufacturer's written instructions and comply with NEMA VE 2 where more stringent.

B. Install an insulated equipment grounding conductor with cable tray, in addition to those required by NFPA 70. Refer to Division 26 section “Grounding and Bonding for Electrical Systems” for additional requirements.

3.06 FIELD QUALITY CONTROL

A. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements. Perform the following field quality-control survey:

1. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable tray, vibration, and thermal expansion and contraction conditions, which may cause or have caused damage.
2. Verify that the number, size, and voltage of cables in cable tray do not exceed that permitted by NFPA 70. Verify that communication or data-processing circuits are separated from power circuits by barriers.
3. Verify that there is no intrusion of such items as pipe, hangers, or other equipment that could damage cables.
4. Remove deposits of dust, industrial process materials, trash of any description, and any blockage of tray ventilation.
5. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
6. Check for missing or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
7. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable tray.

B. Report results in writing.

3.07 PROTECTION

A. Protect installed cable trays.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
2. Repair damage to PVC or paint finishes with matching touchup coating recommended by cable tray manufacturer.
3. Install temporary protection for cables in open trays to protect exposed cables from falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials until the risk of damage is over.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Raceways, fittings and duct accessories for underground electrical site distribution

1.02 DEFINITIONS

A. Terminology used in this specification is as defined below:

1. GRS: Galvanized Rigid Steel Conduit
2. RMC: Rigid Metal Conduit
3. RNC: Rigid Nonmetallic Conduit

1.03 ADMINISTRATIVE REQUIREMENTS

A. COORDINATION

1. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.
2. Coordinate elevations of ducts and duct-bank entrances into manhole, handholes, and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by the Contract Administrator.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”:

1. Product data for the following products:
   a) Raceways, raceway fittings, separators, duct-bank materials, boxes, solvent cement, and warning tape.

B. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section “General Electrical Requirements”:

1. Accurately record actual routing of all exterior buried raceway including coordination with other surrounding utilities and underground structures. Provide scaled plans and sections that Indicate dimensions from finished grade or other fixed structural elements.

1.05 QUALITY ASSURANCE

A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.

B. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to AHJ.

2. Marked for intended use.

C. Comply with NFPA 70 and ANSI C2.

D. Test and inspect pre-cast concrete utility structures according to ASTM C 1037.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to project site with ends capped and store nonmetallic ducts with supports to prevent bending, warping, and deformation.

B. Store pre-cast and other factory –fabricated underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings, if present, are visible.

C. Lift and support pre-cast concrete units only at designated lifting or supporting points.

PART 2 - PRODUCTS

2.01 RACEWAYS, FITTINGS AND DUCT ACCESSORIES

A. Metal Conduit

1. Available Manufacturers:

a) ABB, Inc.

b) American Conduit

c) Atkore

d) Nucor Tubular Products

e) O-Z/Gedney; Emerson

f) Western Tube and Conduit Corporation

g) Wheatland Tube Co.

2. RMC:

a) GRS: Hot-dip galvanized: ANSI C80.1, UL 6

3. Plastic-Coated GRS and Fittings: NEMA RN 1, UL-listed. Coating thickness of 0.040 inches (1 mm), minimum.

4. Fittings: NEMA FB 1; compatible with raceway and tubing materials.

B. Nonmetallic Raceway and Tubing

1. Manufacturers:

a) ABB, Inc.

b) American Pipe and Plastics, Inc.

c) Anamet Electrical, Inc.

d) Atkore

e) Cantex Inc.

f) Carlon

g) Champion Fiberglass, Inc.

h) IPEX USA,

i) Prime Conduit

j) Southwire Corporation

k) United Fiberglass of America, Inc.

2. RNC: Schedule 40 (type EPC-40-PVC) PVC: NEMA TC 2, UL 651.

a) Fittings: match to raceway type and material: NEMA TC 3, NEMA TC 6, UL 651, as applicable.

3. RTRC: UL 2420 UG NEMA TC 14 SW (Standard Wall), HW (Heavy Wall) or XW (Extra Heavy Wall.)

C. Duct Accessories

1. Duct Separators shall be factory-fabricated rigid interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.

2. Underground-line warning tape specified in Division 26 Section "Identification for Electrical Systems."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Receive and inspect precast or premanufactured equipment.

B. Examine components before installation. Reject components that are damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. Install all components per manufacturer's recommendations.

3.03 UNDERGROUND DUCT APPLICATION

3.04 EARTHWORK

A. Excavation and Backfilling: Comply with Division 31 Section "Earth Moving" but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling and compaction is complete.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary top soiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 Sections "Turf and Grasses and "Plants"

D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01 Section "Cutting and Patching."

3.05 DUCT INSTALLATION

A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48-inches, both horizontally and vertically, at other locations, unless otherwise indicated.

C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in the same plane.

D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10-inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.

1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.
2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.
3. Grout end bells into structure walls from both sides to provide watertight entrances.

E. Building Wall Penetrations: Make a transition from underground duct to PVC coated rigid steel conduit at least 10 feet outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26 Section ”Common Work Results for Electrical.”

F. Sealing: Provide temporary closure at termination of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.

G. Pulling Cord: Install 100-lbf test nylon cord in ducts, including spares.

3.06 GROUNDING

A. Ground underground ducts and utility structures according to Division 26 Section “Grounding and Bonding for Electrical Systems.”

3.07 INSTALLATION ACCEPTANCE

A. Prior to final acceptance of the duct bank and associated structures, pull an aluminum or wood test mandrel through the duct to prove joint integrity and to verify ducts have not been deformed. Provide mandrel equal to 80 percent fill of the duct.

B. Test duct bank, manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections.

C. Measure and report ground resistance as specified in Division 26 Section “Grounding and Bonding for Electrical Systems.” Correct any deficiencies and retest as specified above.

D. Clean internal surfaces of manholes (including sumps) and handholes and remove foreign materials.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes the following:

1. Nameplates.
2. Labels for raceways and metal-clad cable.
3. Labels for junction boxes and pull boxes.
4. Labels for wiring devices and lighting control devices.
5. Markers for conductors, and control cables.
6. Tags.
7. Underground-line warning tape.
8. Warning labels and signs.
9. Arc Flash Warning Labels.
10. Instruction signs.
11. Miscellaneous identification products.
12. Painted Identification.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Where a facility identification standard already exists, that standard shall be continued. Where an identification standard does not exist, color-coding and identification shall be as described herein.

B. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

C. Verify final designations for equipment, systems, and components to be identified prior to fabrication of identification products.

D. Coordinate installation of identifying devices with location of access panels and doors.

E. Install identifying devices before installing acoustical ceilings and similar concealment.

1.03 SUBMITTALS

A. Product Data: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements" for each electrical identification product indicated:

1. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.04 QUALITY ASSURANCE

A. Electrical Equipment, Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, by an NRTL as defined by OSHA in 29 CFR 1910.7 and that are acceptable to authorities having jurisdiction.

2. Marked for intended use.

B. Comply with ANSI A13.1 and ANSI C2.

C. Comply with requirements of NFPA 70.

D. Comply with 29 CFR 1910.145.

PART 2 - PRODUCTS

2.01 GENERAL

A. Location, text, and method of identification to be used is noted in individual sections. Refer to other sections for additional identification requirements.

2.02 NAMEPLATES

A. Comply with UL RP 9691, Recommended Practice for Nameplates for Use in Electrical Installations.

B. Engraved, Laminated Acrylic or Melamine Label: Non-conductive phenolic with beveled edges.

1. Adhesive backed.

2. Minimum 1/16 inch (1.6 mm) thick for nameplates with either dimension greater than 4 inches (102 mm) and 1/8 inch (3.2 mm) thick for larger sizes.

C. Stainless Steel Nameplates: Minimum thickness of 1/32 inch; engraved or laser-etched text.

D. Aluminum Nameplates: Anodized; minimum thickness of 1/32 inch; engraved or laser-etched text

E. Text: Minimum text height shall be 1/8 inch (3.2 mm) unless otherwise required by local jurisdiction or owner standards. For elevated components, increase sizes of labels and letters to those appropriate for viewing from the floor.

F. Colors:

1. Normal systems - white letters on a black background.
2. Emergency systems - white letters on a red background.

G. Label Requirements:

1. Service Equipment Label

   LINE 1: NOMINAL VOLTAGE AND FREQUENCY IN HERTZ

   LINE 2: SERVICE EQUIPMENT BUS RATING IN AMPS

   LINE 3: SCCR OF SERVICE EQUIPMENT IN AMPS

   LINE 4: MAXIMUM AVAILABLE FAULT CURRENT IN AMPS

   LINE 5: DATE CALCULATED

   EXAMPLE:

   208Y/120V, 60HZ

   800A

   SCCR = 65,000A

   MAX AVAILABLE FAULT CURRENT = 58,815A

   CALCULATED: 01/01/2018

2. Panelboard/Switchboard Label:

   LINE 1: PANELBOARD/SWITCHBOARD DESIGNATION

   LINE 2: VOLTAGE, PHASE, WIRES, AMPS

   LINE 3: FED FROM “ “

   EXAMPLES:

   H1A

   480Y/277V, 3PH, 4W, 200A

   FED FROM MDB

   L1A

   208Y/120V, 3PH, 4W, 225A

   FED FROM H1A VIA XFMR T1

3. Transformer Label:

   LINE 1: TRANSFORMER DESIGNATION

   LINE 2: FED FROM “ “

   LINE 3: SUPPLIES “ “

   EXAMPLE:

T1

FED FROM H1A

SUPPLIES L1A

4. Disconnect Switch Label:

LINE 1: DESIGNATION OF EQUIPMENT SERVED BY DISCONNECT

LINE 2: VOLTAGE, PHASE, WIRES, AMPS

LINE 3: FED FROM " "

EXAMPLES:

WATER HEATER WH1

480V, 3PH, 3W, 100A

FED FROM MDB

2.03 LABELS FOR RACEWAYS AND METAL-CLAD CABLE

A. Factory Painted Raceways:

1. Metal Raceways: Continuous, rust-inhibiting paint factory applied.
2. Non-Metallic Raceways: Factory dyed or colored PVC sleeve.

B. Factory Painted Metal-Clad Cable: 2-inch wide, factory painted bands at a maximum of 6-foot on center spacing.

C. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

D. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

E. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches (50 mm) long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

F. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches (50 mm) wide; compounded for outdoor use.

2.04 LABELS FOR JUNCTION BOXES AND PULL BOXES

A. Junction box and pull box covers shall be spray painted to identify the voltage and system. Circuit numbers and the panel they originate from shall be listed on the cover using permanent, waterproof, black ink marker.

2.05 LABELS FOR WIRING DEVICES AND LIGHTING CONTROL DEVICES

A. Self-laminating Computer Printable Labels: Clear over-laminate to protect legend for permanent, clean identification. Self-laminating Polyester material with white print-on area.

B. Engraved cover plates: Provide with white letters. White or ivory cover plates shall have black letters.

C. Permanent Ink: Permanent, waterproof, black ink marker, hand printed legibly.

2.06 MARKERS FOR CONDUCTOR AND CONTROL CABLES

A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils (0.08 mm) thick by 1 to 2 inches (25 to 50 mm) wide.

2.07 TAGS

A. Write-On Tags: Polyester tag, 0.010 inch (0.25 mm) thick, with corrosion-resistant grommet and polyester or nylon tie for attachment to conductor or cable.

1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2.08 UNDERGROUND-LINE WARNING TAPE

A. Materials: Use foil-backed detectable type polyethylene tape suitable for direct burial, unless otherwise indicated.

B. Foil-backed Detectable Type Tape: 6 inches (152 mm) wide, with minimum thickness of 5 mil, unless otherwise required for proper detection.

C. Legend: Type of service, continuously repeated over full length of tape.

D. Color: Tape for Buried Power Lines: Black text on red background.

2.09 WARNING LABELS AND SIGNS

A. Comply with NFPA 70 and 29 CFR 1910.145. Attachment method shall be acceptable to the manufacturers of the equipment to which the nameplates are being applied and shall not compromise any NRTL listing or labeling criteria.

B. Self-Adhesive Warning Labels: Factory pre-printed or machine-printed multicolor self-adhesive polyester or self-adhesive vinyl labels; UV, chemical, water, heat, and abrasion resistant; produced using materials recognized to UL 969, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.

1. Use thermal transfer process printing machines and accessories recommended by label manufacturer.

2. Do not use labels designed to be completed using handwritten text.

C. Baked-Enamel Warning Signs: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application.

1. 1/4-inch (6.4-mm) grommets in corners for mounting. Nominal size, 7 by 10 inches (180 by 250 mm).

D. Metal-Backed, Butyrate Warning Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch (1-mm) galvanized-steel backing; and with colors, legend, and size required for application.

1. 1/4-inch (6.4-mm) grommets in corners for mounting. Nominal size, 10 by 14 inches (250 by 360 mm).

E. Warning label and sign shall include, but are not limited to, the following legends:

1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."

2. Workspace Clearance Warning (208 Volts): "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES (915 MM)."

3. Workspace Clearance Warning (480 Volts): "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 48 INCHES (915 MM)."

2.10 ARC FLASH WARNING LABELS

A. General: All labels will be based on recommended overcurrent device settings and will be printed after the results of the analysis have been presented and after any system changes, upgrades, or modifications have been incorporated in the system. Refer to Division 26 section “Power System Studies” for additional requirements.

B. Materials: Use machine-printed, high adhesion, polyester label; UV, chemical, water, heat, and abrasion resistant, for each work location analyzed.

C. Machine-Printed Labels: Use thermal transfer process printing machines and accessories recommended by label manufacturer. Labels shall be machine printed, with no field markings. Provide warning labels complying with ANSI Z535.4 to identify arc flash hazards for each work location analyzed by the arc flash and shock risk assessment.

D. Minimum Size: 3.5 inch by 5 inch (89 mm by 127 mm), unless otherwise noted by Owner.

E. Legend: Provide custom legend in accordance with NFPA 70E based on equipment-specific data as determined by arc flash and shock risk assessment. The label shall include the following information, at a minimum:

1. Location designation

2. Nominal voltage

3. Available fault current
4. Limited approach boundary
5. Arc flash boundary
6. Restricted approach boundary
7. Hazard risk category
8. Incident energy
9. Working distance
10. Site-specific PPE (personnel protective equipment) requirements.
11. Date calculations were performed.
12. Engineering report number, revision number and issue date.

2.11 INSTRUCTION SIGNS

A. Engraved, Laminated Acrylic or Melamine plastic: Non-conductive phenolic. Unless indicated otherwise, provide with minimum 3/8-inch- (10-mm-) high letters. For elevated components, increase sizes of labels and letters to those appropriate for viewing from the floor.

1. Minimum 1/16 inch (1.6 mm) thick for nameplates with either dimension greater than 4 inches (102 mm) and 1/8 inch (3.2 mm) thick for larger sizes.
2. Punched or drilled for mechanical fasteners.
3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.
4. Normal systems: Engraved legend with white letters on black face.
5. Essential Systems: Engraved legend with white letters on red face.

B. Stainless Steel Nameplates: Minimum thickness of 1/32 inch ; engraved or laser-etched text.

C. Aluminum Nameplates: Anodized; minimum thickness of 1/32 inch; engraved or laser-etched text

D. Colors:

1. General Information and Operating Instructions – Black letters on white background.
2. Normal systems - white letters on a black background.
3. Emergency systems - white letters on a red background.

2.12 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength: 50 lb (22.6 kg), minimum.
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black, except where used for color-coding.

B. Fasteners for Nameplates, Labels and Signs

1. Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat lock washers unless otherwise noted.

2.13 PAINTED IDENTIFICATION

A. Paint materials and application requirements are specified in Division 09 painting Sections.

1. Exterior Concrete, Stucco, and Masonry (Other Than Concrete Unit Masonry):
   a) Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.
      1) Primer: Exterior concrete and masonry primer.
      2) Finish Coats: Exterior semi-gloss acrylic enamel.
2. Exterior Concrete Unit Masonry:
   a) Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a block filler.
      1) Block Filler: Concrete unit masonry block filler.
      2) Finish Coats: Exterior semi-gloss acrylic enamel.
3. Exterior Ferrous Metal:
   a) Semi-gloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.
      1) Primer: Exterior ferrous-metal primer.
      2) Finish Coats: Exterior semi-gloss alkyd enamel.
4. Exterior Zinc-Coated Metal (Except Raceways):
   a) Semi-gloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.
      1) Primer: Exterior zinc-coated metal primer.
      2) Finish Coats: Exterior semi-gloss alkyd enamel.
5. Interior Concrete and Masonry (Other Than Concrete Unit Masonry):
   a) Semi-gloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior concrete and masonry primer.

2) Finish Coats: Interior semi-gloss alkyd enamel.

6. Interior Concrete Unit Masonry:

a) Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a block filler.

1) Block Filler: Concrete unit masonry block filler.

2) Finish Coats: Interior semi-gloss acrylic enamel.

7. Interior Gypsum Board:

a) Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior gypsum board primer.

2) Finish Coats: Interior semi-gloss acrylic enamel.

8. Interior Ferrous Metal:

a) Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior ferrous-metal primer.

2) Finish Coats: Interior semi-gloss acrylic enamel.

9. Interior Zinc-Coated Metal (Except Raceways):

a) Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior zinc-coated metal primer.

2) Finish Coats: Interior semi-gloss acrylic enamel.

PART 3 - EXECUTION

3.01 PREPARATION

A. Verify identity of each item before installing identification products.

B. Do not install adhesive products when ambient temperature is lower than recommended by manufacturer.

C. Provide identification product listed for the location in which it is to be installed.

D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.

E. Painted Identification: Prepare surface and apply paint according to Division 09 painting sections.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. For surfaces that require finish work, apply identification devices after completing finish work. Do not install identification products until final surface finishes and painting are complete.

C. Install self-adhesive labels and markers to achieve maximum adhesion, with no bubbles or wrinkles and edges properly sealed. Replace labels and markers that exhibit bubbles, wrinkles, curling or other signs of improper adhesion.

D. Location: Install identification products to be plainly visible for examination, adjustment, servicing, and maintenance without interference with operation and maintenance of equipment. Unless otherwise indicated, locate products as follows:

1. Surface-Mounted Equipment: Enclosure front.
2. Flush-Mounted Equipment: Inside of equipment door.
3. Free-Standing Equipment: Enclosure front; also enclosure rear for equipment with rear access.
4. Elevated Equipment: Legible from the floor or working platform.
5. Branch Devices: Adjacent to device.
6. Interior Components: Legible from the point of access.
7. Conduits: Legible from the floor.
8. Boxes: Outside face of cover.
9. Conductors and Cables: Legible from the point of access.
10. Devices: Outside face of cover.

E. Attach non-adhesive signs and plastic labels with screws and auxiliary hardware appropriate to the location and substrate.

1. Mounting Holes for Mechanical Fasteners: Two, centered on sides for sizes up to 1 inch high; Four, located at corners for larger sizes.

F. Equipment Nameplates and Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual.

1. Indoor Clean, Dry Locations: Use plastic nameplates, unless noted otherwise.
2. Outdoor Locations: Use plastic, stainless steel, or aluminum nameplates suitable for exterior use.

G. Install identification products centered, level, and parallel with lines of item being identified.

H. Mark all handwritten text, where permitted, to be neat and legible.

I. For refrigeration systems: Neatly bundle circuits and clearly tag and label each circuit with panelboard, branch circuit designation and refrigeration system number at each termination.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes computer-based studies for the following:

1. Short-circuit analysis.
2. Protective device coordination study.
3. Arc flash and shock risk assessment, including arc flash hazard labels.

B. Criteria for selection and adjustment of equipment and associated protective devices not specified in this section, as determined by the studies performed.

1.02 ADMINISTRATIVE REQUIREMENTS

A. The AIC ratings indicated on the Drawings are preliminary and will be finalized based on the results of the short-circuit study. Device ratings for furnished equipment shall be as required by the results of the short-circuit study at no additional cost.

B. Coordination:

1. Coordinate the work to provide equipment and associated protective devices complying with criteria for selection and adjustment, as determined by studies to be performed.
2. Notify Contract Administrator of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

C. Sequencing:

1. Initial Study:
   a) Study must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. Do not order equipment until matching study reports and product submittals have both been evaluated by the Contract Administrator.
   b) If study has not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the Contractor at no additional cost to the project.
2. Final Study:

a) Study must be completed and submitted for review prior to substantial completion. Do not print arc flash labels until final study has been evaluated by the Contract Administrator.

b) Verify naming convention for equipment identification prior to creation of final drawings, reports, and arc flash hazard warning labels.

D. Scheduling:

1. Arrange access to existing facility for data collection with Owner.

2. Where work of this section involves interruption of existing electrical service, arrange service interruption with Owner. Refer to Division 26 section “General Electrical Requirements” for additional requirements.

1.03 SUBMITTALS

A. Product Data: In addition to submittal requirements specified in other sections, include manufacturer's standard catalog pages and data sheets for equipment and protective devices indicating information relevant to studies.

1. Product data for computer software program to be used for studies.

2. Include characteristic time-current trip curves for protective devices.

3. Include impedance data for busway.

4. Include impedance data for engine generators.

5. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.

6. Include documentation of listed series ratings upon request.

7. Identify modifications made in accordance with studies to meet the results of the study.

B. Electronic files, in an SKM-compatible format, of the time-current characteristic curves for every different overcurrent device used in the reports.

C. Product Certificates: For coordination-study and short-circuit-study computer software programs, certifying compliance with IEEE 399.

D. Qualification Data:

1. Study Preparer Specialist qualifications.

2. Field Testing Agency qualifications.

E. Arc Flash Hazard Warning Label Samples: One of each type and legend specified.

F. Other Action Submittals:

1. Initial Study report, stamped or sealed and signed by study preparer, including:
    a) Cover page including date of study, study methodology, assumptions made and software products used.
    b) Study input data, including completed computer program input data sheets.
    c) Short-circuit study report.
    d) Equipment evaluation report.
    e) Coordination-study report.
    f) Settings report.
2. Final Study report, stamped or sealed and signed by study preparer, including:
    a) Cover page including date of study, study methodology, assumptions made, software products used, and summary of changes between initial and final studies.
    b) Study input data, including completed computer program input data sheets.
    c) Short circuit study report.
    d) Equipment evaluation report.
    e) Coordination-study report.
    f) Settings report.
    g) Arc-Flash Hazard Analysis, including labels.
3. Certification that field adjustable protective devices have been set in accordance with requirements of studies.

G. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section “General Electrical Requirements”:
1. Accurately record on the One-Line Diagram actual ratings and settings for all overcurrent devices, both adjustable and non-adjustable, including all changes made during construction, due to the study, or both.
2. Include computer software files used to prepare studies with file name(s) cross-referenced to specific pieces of equipment and systems.
3. Include copies of previous studies and existing drawings that were obtained during the data collection phase of the study.

1.04 QUALITY ASSURANCE

A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.

B. Study Preparer Qualifications: An organization experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

1. Professional engineer, licensed in the state in which the Project is located, shall be responsible for the study and with a minimum five years experience in the preparation of studies of similar type and complexity using the specified computer software. All elements of the study shall be performed under the direct supervision and control of engineer.

C. Comply with IEEE 399 for general study procedures.

D. Comply with IEEE 141, 242 and 551 for short-circuit currents and coordination time intervals.

E. Comply with IEEE 1584 and NFPA 70E for arc-flash hazard calculations.

PART 2 - PRODUCTS

2.01 COMPUTER SOFTWARE DEVELOPERS

A. Computer Software Developers: Subject to compliance with requirements, use the latest commercially available computer software programs utilizing the specified methodologies developed by one of the following:

1. CYME International, Inc. (Eaton): www.cyme.com.
2. EasyPower - Part of Bentley Systems: www.easypower.com.
3. ETAP/Operation Technology, Inc.: etap.com.
4. Power Analytics Corporation: www.poweranalytics.com.
5. SKM Systems Analysis, Inc.: www.skm.com

2.02 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

A. Comply with IEEE 399.

B. Analytical features of short-circuit-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399, Table 7-4.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices.

1. Zero-Sequence current.
2. Arcing faults.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

B. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices not submitted for approval with coordination study may not be used in study.

C. Short-circuit study and coordination study to be performed prior to the final submittals for any piece of electrical equipment which has an AIC rating or an over-current protective device so that correct equipment gets ordered for the project conditions.

D. Arc Flash Study must be performed after conductors and equipment have been installed and after the project's utility company confirms the available fault current. A final short-circuit and coordination study with all device settings shall be submitted with the Arc Flash Study. The goal of the revised settings is to minimize the arc flash hazard while maintaining reasonable coordination and selectivity. For the components of emergency and legally required standby system components, full selectivity must be maintained.

3.02 SYSTEM COMPONENTS TO BE INCLUDED IN STUDIES

A. Study shall begin with the utility and each alternate power source overcurrent device(s) serving the Project and end at the last branch circuit overcurrent protective device. This includes studies of the complete paths and operating modes on both sides of any transfer switch, contactor or circuit breaker.

B. Operating modes shall include, where applicable:

1. Utility as a source.
2. Generator as a source.
3. Maintenance settings.

C. Components include, but are not limited to:

1. Switchboards
2. Distribution Panelboards
3. Panelboards
4. Air Handling Equipment
5. Roof Top HVAC equipment
6. Elevator controllers

D. Non-linear load equipment to be included in harmonic study shall include, but not be limited to:

1. LED Lighting

2. Chiller controllers
3. Mechanical and plumbing system variable frequency drives
4. Uninterruptible power supplies larger than 3kVA
5. Elevator controllers

3.03 POWER SYSTEM DATA FOR STUDIES

A. Compile information on project-specific characteristics of actual installed equipment, protective devices, feeders, etc. as necessary to develop single-line diagram of electrical distribution system and associated input data for use in system modeling. Gather and tabulate the following input data to support studies:

1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Impedance of utility service entrance.
3. Electrical distribution system diagram showing the following:
    a) Indicate load current that is the basis for sizing continuous ratings of circuits for cables and equipment.
    b) Protective Devices: Include circuit-breaker and fuse-current ratings and types;
    c) Protective Relays: Include manufacturer/model, type, settings, current/potential transformer ratio, and associated protective device.
    d) Transformers: Include primary and secondary voltage ratings, kVA rating, winding configuration, percent impedance, and X/R ratio. kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
    e) Generators: Include manufacturer/model, kilovolt amperes, size, voltage, and source impedance.
    f) Cables: Indicate conduit material, sizes of conductors, conductor insulation, and length.
    g) Busways: Include bus material, ampacity and impedance.
    h) Motors: Include manufacturer/model, type (e.g. induction, synchronous), horsepower rating, voltage rating, full load amps, and locked rotor current or NEMA MG 1 code letter designation.
    i) Variable frequency drive rating, manufacturer, and model series.
4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram:

a) Special load considerations, including starting inrush currents and frequent starting and stopping.

b) Magnetic inrush current overload capabilities of transformers.

c) Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.

d) Ratings, types, and settings of utility company's overcurrent protective devices.

e) Special overcurrent protective device settings or types stipulated by utility company.

f) Protective Devices:

1) Circuit Breakers: Include manufacturer/model, type (e.g. thermal magnetic, electronic trip), frame size, trip rating, voltage rating, interrupting rating, available field-adjustable trip response settings, and features (e.g. zone selective interlocking).

2) Fuses: Include manufacturer/model, type/class (e.g. Class J), size/rating, and speed (e.g. time delay, fast acting).

g) Time-current-characteristic curves of devices indicated to be coordinated.

h) Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.

i) Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.

j) Panelboards, switchboards, motor-control center ampacity, and interrupting ratings in amperes rms symmetrical.

3.04 SHORT-CIRCUIT STUDY

A. Source Impedance: Utility company's fault current contribution as provided by utility.

B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project and use approved computer software program to calculate values. Include studies of system-switching configurations and alternate operation modes that could result in maximum fault conditions.

C. Calculate momentary and interrupting duties on the basis of maximum available fault current.

D. Comply with IEEE 241 and IEEE 242 recommendations for fault currents and time intervals.

E. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with the following:

1. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.50.

2. Low-Voltage Fuses: IEEE C37.46.

3. Circuit Breakers: IEEE C37.13.

F. Study Report:

1. Enter calculated X/R ratios and interrupting (5-cycle) fault currents on electrical distribution system diagram of the report.

2. List other output values from computer analysis, including momentary (1/2-cycle), interrupting (5-cycle), and 30-cycle fault current values for 3-phase, 2-phase, and phase-to-ground faults.

G. Equipment Evaluation Report: Prepare a report on the adequacy of overcurrent protective devices and conductors by comparing short-circuit current ratings of these devices with calculated short-circuit current momentary and interrupting duties. Identify locations where the available fault current exceeds the equipment short circuit current rating, along with recommendations.

3.05 COORDINATION STUDY

A. Perform coordination study and prepare a written report using the results of the short-circuit study and approved computer software program. Comply with IEEE 399.

B. Comply with NFPA 70 for overcurrent protection of circuit elements and devices.

C. Comply with IEEE 241 and IEEE 242 recommendations for fault currents and time intervals.

D. Analyze alternate scenarios considering known operating modes.

E. Transformer Primary Overcurrent Protective Devices:

1. Device shall not operate in response to the following:

a) Inrush current when first energized.

b) Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.

c) Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device shall protect transformer according to IEEE C57.12.00, for fault currents.

F. Motors served by voltages more than 600 V shall be protected according to IEEE 620.

G. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Verify adequacy of phase conductors at maximum three-phase bolted fault currents, equipment grounding conductors, and grounding electrode conductors at maximum ground-fault currents.

H. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:

1. Tabular Format of Settings Selected for Overcurrent Protective Devices:

   a) Device tag.

   b) Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.

   c) Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.

   d) Fuse-current rating and type.

   e) Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve the level of selective coordination required in the contract documents or by the edition of the National Electrical Code (including any local jurisdiction amendments) the project must comply with. Graphically illustrate that adequate time separation exists between series devices, including power utility company's upstream devices. Show the following specific information:

   a) For protective Devices:

      1) Device tags.

      2) Circuit Breakers: Include long time pickup and delay, short time pickup and delay, and instantaneous pickup.

      3) Protective Relays: Include current/potential transformer ratios, tap, time dial, and instantaneous pickup.

      4) Include ground fault pickup and delay.

      5) Include fuse ratings.

   b) Voltage and current ratio for curves.

   c) Three-phase and single-phase damage points for each transformer.

   d) No damage, melting, and clearing curves for fuses.

   e) Cable damage curves.

   f) Generator full load current, overload curves, decrement curves and short-circuit withstand points.

g) Transformer inrush points.

h) Maximum fault current cutoff point.

i) Capacitor full load current and damage curves.

3. Include conclusions and recommendations.

4. Completed data sheets for setting of overcurrent protective devices.

5. For emergency, legally required standby and health care essential power systems, such systems must selectively coordinate to the values indicated below unless local amendments to the National Electrical Code require a different value.

a) Emergency (NEC article 700) 0.01 seconds

b) Legally Required Standby (NEC article 701) 0.01 seconds

c) Elevator Systems (NEC article 620) 0.01 seconds

d) Health Care Essential Electrical Systems (NEC article 517)

1) Equipment Branch 0.10 seconds

2) Critical Branch 0.01 seconds

3) Life-Safety Branch 0.01 seconds

3.06 ARC-FLASH HAZARD ANALYSIS

A. Determine arc-flash incident energy levels and flash protection boundary distances based on the results of the Short-Circuit and Coordination studies in accordance with IEEE 1584. Perform the analysis under worst-case arc-flash conditions for all modes of operation.

B. In addition to the requirements outlined in IEEE 1584, the study shall include all equipment rated less than 240 Volts fed by transformers less than 125 kVA in the calculations.

1. Where reasonable, study preparer may assume a maximum clearing time of two seconds in accordance with IEEE 1584, provided that the conditions are such that a worker's egress from an arc flash event would not be inhibited.

2. For single-phase systems, the calculations may be performed assuming a three-phase system in accordance with IEEE 1584, yielding conservative results.

C. For equipment with main devices mounted in separate compartmentalized sections, perform calculations on both the line and load side of the main device.

D. Identify all locations and equipment to be included in the arc-flash hazard analysis:

1. Include a copy of the facility one-line in the report.

2. Identify the possible system operating modes including tie-breaker positions, and parallel generation.
3. Calculate the arcing fault current flowing through each branch for each fault location.
4. Determine the time required to clear the arcing fault current using the protective device settings and associated trip curves.
5. Select the working distances based on system voltage and equipment class.
6. Calculate the incident energy at each fault location at the prescribed working distance.
7. Determine the hazard/risk category (HRC) for the estimated incident energy.
8. Calculate the flash protection boundary at each fault location.
9. Document the assessment in reports and one-line diagrams.
10. Provide labels to be placed on each piece of equipment analyzed. Label shall show the calculated incident energy and hazard/risk category for the calculated incident energy.

E. Results of the arc-flash study shall be summarized in a final report containing the following:

1. Basis, method of hazard assessment, description, purpose, scope, and date of the study.
2. Tabulations of the data used to model the system components and a corresponding one-line diagram.
3. Descriptions of the modes of operation evaluated and identification of the worst case scenario used to evaluate equipment ratings.
4. Tabulations of equipment incident energies, hazard risk categories, and flash protection boundaries. The tabulation shall identify and clearly note equipment that exceeds allowable incident energy ratings.
5. Required arc-flash labeling and placement of labels.
6. Conclusions and recommendations, including recommendations for reducing incident energy at locations where calculated maximum incident energy exceeds 8 calories per sq cm.

3.07 OVERCURRENT PROTECTIVE DEVICE SETTING

A. Manufacturer's Field Service: Engage a factory-authorized service representative, of electrical distribution equipment being set and adjusted, to set overcurrent protective devices within equipment.

1. After installing overcurrent protective devices and during energizing process of electrical distribution system, perform the following:

a) Verify that overcurrent protective devices meet parameters used in studies.

b) Adjust devices to values listed in final study results.

c) Adjust devices according to recommendations in Chapter 7, "Inspection and Test Procedures," and Tables 100.7 and 100.8 in NETA ATS.

3.08 INSTALLATION

A. Install arc flash warning labels. Refer to Division 26 section Identification for Electrical Systems for additional requirements.

3.09 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:

1. Inspect and test protective devices in accordance with the NETA Acceptance Testing Specification. Certify compliance with test parameters.

C. Overcurrent protection devices will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports, including a certified report that identifies protective device settings have been adjusted in accordance with the requirements of the study. Include notation of conflicts with or deviations made from the studies or the contract documents, deficiencies detected, remedial action taken, and observations after remedial action.

3.10 TRAINING

A. Provide training for Owner’s personnel on electrical safety pertaining to arc flash and shock hazards.

B. Use site-specific arc flash and shock risk assessment report as training reference, supplemented with additional training materials as required.

C. Provide minimum of eight hours of training performed by a representative of the entity performing the study.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes the following lighting control devices:

1. Line-voltage dimming wall switches.
2. Line-voltage wall switch occupancy sensors.
3. Time switches.
4. Automatic load control relays.

1.02 DEFINITIONS

A. Acoustic Type: Occupancy sensor detection type that detects occupancy by listening for acoustic noises.

B. Closed loop: Photosensor control algorithm designed for influence by both daylight and electric light in a space or area.

C. DPDT: Double pole, double throw.

D. DPST: Double pole, single throw.

E. Dual-Technology Type: Occupancy sensor detection type that detects occupancy by using a combination of PIR and ultrasonic or acoustic detection technologies.

F. LED: Light-emitting diode.

G. Open loop: Photosensor control algorithm designed for influence by daylight entering in a space or area.

H. PIR Type: Passive infrared. Occupancy sensor detection type that detects occupancy by sensing a combination of infrared heat and movement.

I. SPST: Single pole, single throw.

J. Ultrasonic Type: Occupancy sensor detection type that detects occupancy by sensing a change in pattern of reflected ultrasonic energy.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”.

B. Product data for the following products:

1. Catalog cut sheets, including major and minor motion coverage patterns sensors, time delay and sensitivity adjustability settings, load restrictions, and performance specification items indicating compliance with this specification for all lighting control devices.

C. Shop Drawings:

1. Occupancy sensors and photoelectric switches

a) Show installation details.

b) Lighting plan showing location, mounting height, orientation and coverage area of each sensor and coordination with other trades.

c) Interconnection diagrams showing field-installed wiring.

d) Include diagrams for power, signal, and control wiring.

e) For any manufacturer submitted other than that listed as the Basis of Design, provide the following information for Engineer review:

1) Factory-generated occupancy sensor and photoelectric switch layouts on project lighting plans with sensor location, orientation and product type clearly marked on plans. Sensor placement shall be coordinated with project reflected ceiling plan layout, ceiling heights, lights, diffusers, and any other ceiling devices and equipment.

2) List of any deviations to this specification or Basis of Design products.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1. Occupancy sensors and photoelectric switches:

a) Manufacturer’s installation instructions, including instructions for storage, handling, protection, examination, preparation, start-up calibration and installation.

b) Product data clearly showing sensor field adjustments, including dip switch setting definitions and location of settings within sensors.

c) Manufacturer’s maintenance, including operating and adjustment instructions.

2. Timeclocks

a) Description of programmed timeclock settings at time of substantial completion.

3. Line-voltage wall box dimming switches

a) Provide operating instructions for each type of dimmer.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. Occupancy sensors and photoelectric switches

1. Products supplied shall be from a single manufacturer that has been continuously involved in the manufacturing of occupancy sensors for a minimum of 5 years.

2. Products shall be manufactured by an ISO 9001 certified manufacturing facility.

3. Manufacturer shall test all equipment prior to shipment.

1.06 WARRANTY

A. Manufacturers shall provide a five (5) year warranty for sensors and accessories from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 GENERAL INFORMATION

A. PIR type requirements:

1. Detector Sensitivity: Detect occurrences of 6-inch minimum movement of any portion of a human body that presents a target of not less than 36 sq. in.

2. Sensor shall utilize pulse count processing and digital signature analysis to respond only to those signals caused by human motion.

3. Sensor shall provide high immunity to false triggering from RFI and EMI.

4. Sensor shall have a multiple-segmented fresnel lens in a multiple-tier configuration, with grooves to eliminate dust and residue buildup. Sensor shall be capable of accepting mask inserts to mask specific portions of the lens to prevent false triggering.

B. Ultrasonic type requirements:

1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.

2. Detection Frequency (Small Area – 500 sq ft and less): Ultrasonic operating frequency shall be crystal controlled at 40 kHZ within +/- 0.005% tolerance to assure reliable performance and eliminate sensor cross-talk.

3. Detection Frequency (Medium and Large Areas – greater than 500 sq ft): Ultrasonic operating frequency shall be crystal controlled at 32 kHz within +/- 0.005% tolerance, to assure reliable performance and eliminate sensor cross-talk.

4. Sensors shall be capable of automatically adapting to airflow conditions or filtering frequency spectrum related to air movement.

C. Acoustic type requirements:

1. Detector Sensitivity: Acoustic type technology shall only be used as secondary to PIR in a Dual-Technology Type sensor. Specific sensitivity is based on PIR technology.

2. Sensors shall distinguish noises made by human activity (typing, talking, eating, etc.) and filter out noises made by the environment or building (HVAC, equipment, cars, etc.).

3. Acoustic technology shall enhance reliability and accuracy of PIR sensor.

D. Dual-Technology type requirements:

1. Dual-Technology sensors using ultrasonic technology shall have field-selectable controls on unit to determine if a particular technology or combination of technologies controls the on-off function.

2. Dual-Technology sensors using acoustic technology shall have the PIR technology initially detect motion and a combination of PIR and acoustic technologies shall keep the load on.

3. Sensitivity Adjustment: Separate for each sensing technology.

4. Different LED indicator colors for each sensing technology

5. PIR sensor component shall comply with all requirements listed under PIR type requirements.

6. Ultrasonic sensor component shall comply with all requirements listed under Ultrasonic Type requirements.

7. Acoustic sensor component shall comply with all requirements listed under Acoustic Type requirements.

2.02 LINE-VOLTAGE DIMMING WALL SWITCHES

A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.

B. Dimmer shall be suitable for dimmed load type of connected light fixture. Load types shall be as indicated on Drawings and confirmed per load type for connected luminaire as indicated in Light Fixture Schedule and approved light fixture and dimmer shop drawings.

2.03 LINE VOLTAGE WALL SWITCH OCCUPANCY SENSORS

A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.

B. General Requirements for Sensors:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C), unless indicated elsewhere for specific model and application.
3. Switch Rating: Not less than 800-VA fluorescent at 120 V, 1200-VA fluorescent at 277 V, and 800-W incandescent.
4. Operations: Refer to drawings for Sequence of Operations or other operational instructions. If none appear on drawings, the follow shall apply.
    a) Occupancy Sensor (auto-on): Upon occupancy of space, loads shall be energized. If occupancy is not detected within the time delay period, loads shall be de-energized.
    b) Vacancy Sensor (manual-on): Upon occupancy of space, loads are enabled such that manual operation of the switch shall energize loads. If occupancy is not detected within the time delay period, loads shall be de-energized.
5. Operation adjustment: Concealed, field-adjustable for auto-on or manual-on operation.
6. Time Delay adjustment:
    a) Concealed, field-adjustable.
    b) Time delay for de-energizing loads shall be adjustable with multiple increments from 30 seconds up to 30 minutes.
7. Adaptive technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false “off” switching.
8. Mounting: Single-gang wall box switch
9. Finish: Sensor finish shall be white.
10. Sensor:
    a) Vandal-resistant lens

b) Integral sliding blinders or pre-cut tape strips to block sensor views

c) Protrudes no greater than 0.50 inches from wall.

d) 180-degree field of view

e) Major and minor motion coverage patterns confirmed per Nema WD7 guidelines.

f) Detection types: Provide type or types indicated in Lighting Control Device Schedule. Refer to Section 2.1 General Information above for more information.

11. Indicators:

a) LED indicator for visual detection of motion

b) audible and/or visual alerts for pending shut-off

12. Suitable for switching load types used, including LED, fluorescent, incandescent, magnetic and electronic low voltage and motor load types. UL listed and labeled, zero-cross relay, no minimum load requirement, ground wire.

13. Wall switch shall have no leakage of current to load and integral service switch to permit a maintained off for servicing of lamps for safety purposes

14. Buttons/Relays: Provide control relay and push button quantities as indicated by model listed in Lighting Control Device Schedule.

15. Restriction on leakage to grounding conductor.

a) For new construction: Dual-technology wall switch sensor shall have not more than 0.5ma leakage of current to ground per UL requirements. Provide and connect a neutral conductor to these devices.

2.04 TIME SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Area Lighting Research, Inc.; Tyco Electronics.

2. Intermatic, Inc.

3. Leviton Mfg. Company Inc.

4. Lithonia Lighting; Acuity Lighting Group, Inc.

5. Paragon Electric Co.; Invensys Climate Controls.

6. Square D; Schneider Electric.

7. TORK; NSI Industries.

8. Wattstopper; a Legrand Company.

B. Electronic Time Switches: Electronic, solid-state programmable units with alphanumeric display; complying with UL 917.

1. Contact Configuration: SPST.
2. Contact Rating: 30-A inductive or resistive, 240-V ac.
3. Program: 8 on-off set points on a 24-hour schedule and an annual holiday schedule that overrides the weekly operation on holidays.
4. Circuitry: Allow connection of a photoelectric switch relay as substitute for on-off function of a program.
5. Astronomic Time: All channels.
6. Battery Backup: For schedules and time clock.

2.05 AUTOMATIC LOAD CONTROL RELAYS

A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings.

B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 924.

1. For control of emergency lighting circuits: Loss of normal power shall cause relay to automatically shunt emergency power to lighting circuit regardless of manual or automatic switch position. Emergency lighting circuit shall continue to operate at full power until normal power has been restored.
2. Coil Rating: 120 or 277 V, as indicated on Drawings.
3. Mounting: A 2-gang outlet box with separation barrier and plaster ring or a wall-mountable box with separate compartments. Mount per manufacturer's instructions.

PART 3 - EXECUTION

3.01 INSTALLATION

A. GENERAL

1. Install devices and associated power packs and wiring in accordance with manufacturer's instructions and applicable codes.

B. LINE VOLTAGE WALL SWITCHES

1. Install dimming wall switches to achieve full rating specified on Lighting Control Device Schedule taking into account de-rating for ganging as instructed by the manufacturer.
2. Provide a separate grounded (neutral) conductor for each circuit controlled by a line voltage switch.

a) Do not share neutral conductor on load side of dimmers.

b) If neutral termination is not required for the device, cap conductor and tag as “Neutral for future use”.

C. OCCUPANCY/VACANCY SENSORS AND PHOTOELECTRIC SWITCHES

1. Arrange a pre-installation meeting with manufacturer’s factory authorized field representative, at Owner’s facility, to verify placement of sensors and installation criteria.

2. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage areas specified in manufacturer's literature. The locations and quantities of sensors shown on the drawings are diagrammatic and indicate only the rooms or areas that are to be provided with sensors. Provide additional sensors as required to properly and completely cover the respective areas.

3. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems and partition assemblies.

4. Occupancy sensors with ultrasonic or dual-technology sensing technologies shall be located not closer than 4 feet from the nearest edge of air supply devices or similar obstructions that would adversely affect the sensor performance.

5. Adjust time delay setting of occupancy sensors to de-energize loads after space has been unoccupied for period of time indicated on the Drawings.

6. Install outdoor photoelectric switches with clear view of the northern sky unless noted otherwise on the Drawings.

7. Adjust settings of photoelectric switches to turn on lighting at illumination level indicated on the Drawings.

8. Install devices and auxiliary equipment in compliance with manufacturer’s instructions and recommendations.

9. Install relay units where concealed from view and where accessible.

10. Tighten electrical connectors and terminals according to manufacturer’s published torque-tightening values. If manufacturer’s torque values are not indicated, use those specified in UL 486A and UL 486B.

11. Install switchbox mounted occupancy sensors at same elevation as other lighting control switches.

D. TIME SWITCHES

1. Install time switches in locations as indicated on the Drawings.

2. Program time switches with current time and date information in accordance with manufacturer’s instructions.

3. Program timeclock settings as per Sequence of Operations on the Drawings. Confirm final timeclock settings with Owner prior to programming.

E. AUTOMATIC LOAD CONTROL RELAYS

1. When used with manual controls, install emergency shunt relay in separate enclosure adjacent to associated light switch. Label within enclosure the connected normal and emergency circuits.

2. When used with automatic controls, install where concealed from view in accessible ceiling near the automatic control device or wall mounted within electrical room. Label outlet box cover with connected normal and emergency circuits.

F. WIRING

1. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch (13 mm).

2. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

3. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.

4. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.02 IDENTIFICATION

A. General: Provide identification complying with requirements specified in Division 26 Section "Identification for Electrical Systems."

3.03 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.

2. Operational Test: Test all occupancy sensors in test mode to confirm sensor coverage and sensitivity of sensor per manufacturer’s instructions. Upon completion of tests, set sensor time delay as indicated on Lighting Control Device Schedule. Follow testing and adjustment procedures as written in the manufacturer’s installation instructions for each sensor model.

B. Lighting control devices that fail tests and inspections are defective work. Remove, replace, and retest devices that fail tests.

3.04 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

B. Photoelectric switch Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project for this purpose.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1500 kVA:

1. Distribution transformers.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

1.03 SUBMITTALS

A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, technical certification sheets and performance for each type and size of transformer indicated.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring.
2. Transformer ratings including:
    a) kVA
    b) Primary and secondary voltage
    c) Taps
    d) Basic impulse level (BIL) for equipment over 600 volts
    e) Design impedance
    f) Insulation class and temperature rise
    g) Sound level.

C. Qualification Data: For testing agency.

D. Source quality-control test reports.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.04 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

B. Source Limitations: Obtain each transformer type through one source from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

E. Transformers shall meet the requirements of the most current version of federal law 10 CFR Part 431 "Energy Efficiency Program for Certain Commercial and Industrial Equipment".

F. All transformers shall be UL listed and bear the UL label.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

PART 2 - PRODUCTS

2.01 GENERAL TRANSFORMER REQUIREMENTS

A. Manufacturers:

1. ACME Electric Corporation; Power Distribution Products Division
2. Eaton Electrical Inc.; Cutler-Hammer Products.
3. General Electric Company.
4. Hammond Company
5. Siemens Energy & Automation, Inc.
6. Sola/Hevi-Duty
7. Square D; Schneider Electric.

B. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

C. Cores: One leg per phase. Cores shall be constructed of high grade, non-aging silicon steel. The core and coil assembly shall be impregnated with non-hydroscopic, thermosetting varnish and cured to reduce hot spots and seal out moisture. The completed core and coil shall be bolted to the base of the enclosure but isolated by means of rubber, vibration-absorbing mounts. There shall be no metal-to-metal contact between the core and coil and the enclosure. The core of the transformer shall be visibly grounded to the enclosure by means of a flexible grounding conductor or strap sized in accordance with UL and NEC requirements. The neutral shall be brought to a stud to facilitate the required external grounding of the secondary

D. Coils: Continuous windings without splices except for taps.

1. Internal Coil Connections: Brazed or pressure type.

2. Coil Material: Aluminum.

E. Connections to transformers shall be by flexible metal conduit and using flexible couplings.

F. Transformers shall be designed for continuous operation at rated kVA, for 24 hours a day, 365 days a year operation, with normal life expectancy as defined in ANSI C57.96.

G. Wiring/Terminations:

1. Recommended external cable shall be rated 90 degrees C (sized at 75 degrees C ampacity) for encapsulated and 75 degrees C for ventilated designs.

2. Connectors should be selected on the basis of the type and cable size used to wire the specific transformer.

3. Lug kits shall be provided by the Manufacturer of the transformer.

2.02 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Enclosures: Unless otherwise specified, transformer enclosures shall be ventilated and be fabricated of heavy gauge, sheet steel construction. Enclosures shall have a baked polyester powder coat finish-gray in color and suitable for interior or exterior applications. Enclosures shall be constructed so that there are no exposed live parts. Enclosures shall have a removable front cover to allow access to internal parts and wiring terminations

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

2. Transformer locations:

a) Dry locations:

1) Ventilated.

2) NEMA 250, Type 2.

3. The maximum temperature of the enclosure shall not exceed 90 degrees C.

4. The maximum temperature of the top of the enclosure shall not exceed 50°C rise above a 40°C ambient.

C. Transformer Enclosure Finish: Comply with NEMA 250.

1. Finish Color: ANSI 61 gray.

D. Taps

1. Three-phase Transformers smaller than 24 kVA and all single phase transformers:

a) One 5 percent tap above and one 5 percent tap below normal full capacity.

2. Transformers 25 kVA through 500 kVA:

a) Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.

3. Transformers 501 kVA and Larger:

a) Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity manufacturer’s standard tap configuration.

E. Insulation Class for transformers less than 15 kVA: 185 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.

F. Insulation Class for transformers 15 kVA and larger: 220 deg C, UL-component-recognized insulation system with a maximum of 150 deg C rise above 40 deg C ambient temperature.

G. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Complying with the requirements of the most current version of federal law 10 CFR Part 431 "Energy Efficiency Program for Certain Commercial and Industrial Equipment" efficiency levels.

2. Tested in accordance with federal law 10 CFR Part 431.

H. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.

2. Indicate value of K-factor on transformer nameplate.

3. K-Factor rated transformers shall have an impedance range of 3% to 5%, and shall have a minimum reactance of 2% in order to prevent excessive neutral current when supplying loads with large amounts of third harmonic.

4. 115 degree C temperature rise.

5. All cores to be constructed with low hysteresis and eddy current losses. The core flux density shall be well below the saturation point to prevent core overheating and excessive sound level caused by harmonic voltage distortion.

6. Transformers shall be common core construction. Transformers utilizing more than one core, or Scott-T connections, shall not be acceptable.

7. Three-phase transformer secondary neutral terminals shall be sized for 200% of the secondary phase current.

8. The transformer shall be mounted on vibration absorbing pads.

I. Mounting Methods.

1. Transformers 75 KVA and larger shall be floor mounted unless indicated otherwise. Transformers 45 KVA and smaller may be wall mounted where wall construction is suitable for the load. Floor mounted transformers shall be securely bolted to a 4 inch housekeeping pad with vibration isolation pads. Wall mounted or suspended transformers shall have a means of isolating vibration from the support.

2. Transformers up through 1000 KVA shall be mounted on elastomeric vibration isolation pads. Pad shall be constructed of neoprene, rubber, glass fiber, or a combination thereof. Pads shall be "ribbed" or "waffled" in texture. Pads shall be selected for smallest durometer (hardness), preferably less than 50. Deflection of pad shall be .25" static minimum. Stack pads until the desired deflection is achieved.

3. Wall Mounting: Manufacturer's standard brackets.

4. Suspended Mounting: See transformer mounting detail on plans.

J. Low-Sound-Level Requirements: Maximum sound levels (NEMA ST 20), when factory tested according to IEEE C57.12.91, as follows:

1. 9 kVA and Less: 40 dBA

2. 10 to 50 kVA: 45 dBA

3. 51 to 150 kVA: 50 dBA

4. 151 to 300 kVA: 55 dBA

5. 301 to 500 kVA: 60 dBA

6. 501 to 700 kVA: 62 dBA

7. 701 to 1000 kVA: 64 dBA

8. 1001 to 1500 kVA: 65 dBA

2.03 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to ANSI C57.12.01 and IEEE C57.12.91.

2.04 FACTORY TESTING

A. The following standard factory tests shall be performed on the equipment provided under this section. All tests shall be in accordance with the latest version of ANSI and NEMA standards.

1. Ratio tests at the rated voltage connection and at all tap connections
2. Polarity and phase relation tests on the rated voltage connection
3. Applied potential tests
4. Induced potential test
5. No-load and excitation current at rated voltage on the rated voltage connection

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install in accordance with manufacturer’s instructions.

B. Floor mounted transformers shall be mounted on a 3-1/2 inch concrete housekeeping pad 2 inches larger all around transformer.

C. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.

D. Use flexible conduit under the provisions of Division 26 Section “Raceways and Boxes for Electrical Systems” for connections to transformer case. Minimum flexible conduit length shall be two (2) feet.

E. Mount transformers on vibration isolating pads suitable for isolating the transformer noise from the building structure.

F. CONNECTIONS

1. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

2. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.03 IDENTIFICATION

A. Nameplates: Label each transformer with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems." Nameplates shall be engraved with the following information:

1. Transformer name

2. Fed from (primary source)

3. Secondary voltage, phase, wires

B. Warning Labels: Label each panelboard with a warning label indicating NFPA 70 workspace clearance requirements, complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.04 FIELD QUALITY CONTROL

A. Testing: Perform the field quality-control tests and inspections listed in this section.

B. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

C. Remove and replace units that do not pass tests or inspections and retest as specified above.

D. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.05 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage

minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.

C. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.06 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Service and distribution switchboards rated 600 V and less.

B. Surge Protection Devices.

C. Disconnecting and overcurrent protective devices.

D. Accessory components and features.

1.02 DEFINITIONS

A. GFCI: Ground-fault circuit interrupter.

B. NETA ATS: InterNational Electrical Testing Association Acceptance Testing Specification.

C. SPD: Surge Protection Device

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section “Power System Studies”

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”.

B. Product Data: For each type of switchboard, switching and overcurrent protective device, instrumentation, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, weights, and finishes.

C. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.

a) Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

2. Detail enclosure types for types other than NEMA 250, Type 1.

3. Include outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.

4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses.

5. Detail short-circuit current rating of switchboard assembly and overcurrent protective devices.

6. Include descriptive documentation of barriers specified for electrical insulation and isolation.

7. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

8. Include schematic and wiring diagrams for power, signal, and control wiring.

9. Include nameplate legends.

10. Include list of materials.

D. Qualification Data: For qualified Installer and testing agency.

E. Field Quality-Control Reports:

1. Test procedures used.

2. Test results that comply with requirements.

3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

F. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for switchboards and all installed components.

2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

3. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E; Employs installers and supervisors who are trained and approved by manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."

D. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Comply with NEMA PB 2.

G. Comply with NFPA 70.

H. Comply with UL 891.

1.06 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Environmental Limitations:

1. Do not install switchboards until spaces are enclosed and weathertight. Equipment shall be protected from any remaining wet work in the space and work above secondary unit substation. Provide temporary HVAC system for maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

a) Ambient Temperature: Not exceeding 104 deg F (40 deg C).

b) Altitude: Not exceeding 6600 feet (2000 m).

3. Service Conditions: NEMA PB 2, usual service conditions, as follows:

a) Ambient temperatures within limits specified.

b) Altitude not exceeding 6600 feet (2000 m).

1.07 DELIVERY, STORAGE, AND HANDLING

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

C. Coordinate delivery of equipment to allow movement into designated space.

D. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.

E. Handle and prepare switchboard components according to NEMA PB 2.1 and manufacturer's written instructions. Use factory-installed lifting provisions.

1.08 WARRANTY

A. Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components and/or products of the switchboards that fail in materials or workmanship within the specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Refer to Division 26 section “Fuses” for spare fuse requirements. At a minimum, include spares for the following:

a) Fuses for fusible devices.

b) Potential transformer fuses.

c) Control power fuses.

2. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

PART 2 - PRODUCTS

2.01 GENERAL

A. Manufacturers:

1. ABB Inc.
2. Eaton.
3. Schneider Electric.

B. Front-Connected, Front-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

2.02 RATINGS

A. Nominal System Voltage: As indicated on the Drawings.

B. Main-Bus Continuous: As indicated on the Drawings.

C. Short-Circuit Current Rating (SCCR):

1. Refer to fault-current and coordination study submittal requirements listed in other parts of this section, in addition to specification section “Power System Studies”.
2. Rating value: Rated to interrupt symmetrical short-circuit current available at terminals. Switchboard shall be fully-rated, unless series-rated is indicated on the drawings. SCCR shall not be less than the highest AIC rating of any circuit breaker in switchboard.

2.03 FABRICATION

A. Indoor Enclosures: Steel, NEMA 250, Type 1.

1. Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.

B. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

C. Buses and Connections: Three phase, four wire unless otherwise indicated.

1. Bus bars shall connect between vertical sections and between compartments. Cable connections are not permitted.
2. Phase, and Neutral Bus Material: Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
3. Main-Phase Bus Size: Ampacity as indicated on drawings, with uniform capacity for entire length of switchboard's main and distribution sections.

4. Neutral Bus: 100 percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors.

5. Vertical Section Bus Size: Ampacity equivalent to horizontal bus, with uniform capacity for entire length of vertical section bus.

6. Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size required by UL 891.

7. For solidly-grounded wye systems, provide factory-installed main bonding jumper between neutral and ground busses, and removable neutral disconnecting link for testing purposes.

8. Equip distribution sections with full height vertical bussing to accommodate maximum utilization of space for devices.

D. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

E. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

F. Service Entrance Equipment:

1. Label: Where used as service entrance equipment, provide NRTL label for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

2.04 SURGE PROTECTION DEVICES

A. Provide surge protective devices as required by Division 26 Section “Surge Protective Devices”.

2.05 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Ratings:

1. Continuous ampere rating: as indicated on drawings.

2. Voltage and frequency rating: same as switchboard.

3. Short-circuit current rating (SCCR): Same as requirements for switchboard.

4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Switchboards shall be fully-rated, unless series-rated is indicated on the drawings.

B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

3. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:

   a) Standard frame sizes, trip ratings, and number of poles.

   b) Lugs: Mechanical style unless indicated otherwise on the Drawings, suitable for number, size, trip ratings, and conductor material.

   c) Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.

C. Arc Flash Mitigation

1. Circuit breakers, 1200 A and larger, shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.

2. Documentation shall be provided in accordance with the NEC for location of overcurrent device and method of clearing time reduction.

2.06 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

2.07 IDENTIFICATION

A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine switchboards before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.

B. Examine areas, surfaces, substrates, and elements to receive switchboards with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that field measurements are as indicated.

2. Verify that manufacturer's written instructions for environmental conditions have been established in spaces where equipment will be installed, before installation begins.

C. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.

2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install switchboards and accessories according to NEMA PB 2.1 and manufacturer's instructions.

B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

C. Equipment Mounting: Install switchboards on concrete bases.

1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of switchboard unless otherwise indicated . Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."

2. Anchor switchboards to concrete bases according to manufacturer's written instructions, seismic codes at Project, and requirements in Division 26 Sections "Hangers and Supports for Electrical Systems" ."

3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.

4. Install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

6. Install anchor bolts to elevations required for proper attachment to switchboards.

D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.

E. Mount equipment plumb and rigid without distortion of enclosure.

F. Install overcurrent protective devices, surge suppression devices and instrumentation.

G. Install filler plates in unused spaces of panel-mounted sections.

H. Arrange conductors in auxiliary compartments and gutters into groups and bundle and wrap with wire ties.

I. Comply with NECA 1.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

3.04 IDENTIFICATION

A. Equipment Nameplates: Label each contiguous main, or entrance, section with equipment nameplate.

B. Device Nameplates: Label each main, feeder and branch circuit device with a nameplate.

C. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

D. Diagram and Instructions:

1. Frame and mount under clear acrylic plastic. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. . Mount on front of switchboard.

    a) Operating Instructions: Printed operating instructions for switchboard, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.

2. Storage for Maintenance Instructions: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

E. Warning Labels: Label each switchboard with a warning label in accordance with NFPA 70 and NFPA 70E.

1. Provide Arc Flash and available fault current warning labels.

3.05 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions throughout periods when equipment environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.07 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Overcurrent Protective Device Coordination Study."

3.08 FIELD QUALITY CONTROL

A. Testing: Perform the field tests and inspections listed below :

B. Acceptance Testing Preparation:

1. After installing equipment but before equipment is energized, test for compliance with requirements.
2. Verify that grounding system at the equipment tested at the specified value or less.
3. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
4. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS . Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
2. Complete installation and startup checks according to manufacturer's written instructions.
3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

5. Report results of tests and inspections in writing. Record adjustable settings and measured insulation resistances. Attach a label or tag to each tested component indicating satisfactory completion of tests.

D. Switchboard will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.09 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories.

B. Video record demonstrations presentation for Owner’s records.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES:

A. Distribution panelboards.

B. Lighting and appliance branch-circuit panelboards.

C. Disconnecting and Overcurrent Protective Devices.

D. Fused Lighting and Appliance Branch-Circuit Panelboards.

E. Surge Protection Devices.

F. Accessory Components and Features.

1.02 DEFINITIONS

A. NETA ATS: InterNational Electrical Testing Association Acceptance Testing Specification.

B. SVR: Suppressed voltage rating.

C. SPD: Transient voltage surge suppressor.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section “Power System Studies.”

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”.

B. Product Data: For each type of panelboard, switching and overcurrent protective device, furnished accessories and components. Include dimensions and Manufacturer's technical data on features, performance, electrical characteristics, ratings, weights, furnished options, specialties, accessories, and finishes.

C. Shop Drawings: For each panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.

a) Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

2. Detail enclosure types and details for types other than NEMA 250, Type 1.

3. Include general arrangement drawing showing dimensions and weights of each assembled section.

4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses.

5. Detail short-circuit current rating of panelboard assembly and overcurrent protective devices.

6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

7. Include evidence of NRTL listing for series rating of installed devices.

8. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards; include selectable ranges for each type of overcurrent protective device. Submit electronic files, in an SKM-compatible format.

9. Include schematic and wiring diagrams for power, signal, and control wiring.

10. Include nameplate legends.

11. Include list of materials.

D. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.

E. Field Quality-Control Reports:

1. Test procedures used.

2. Test results that comply with requirements.

3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

F. Sample Warranty: For warranty.

G. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.

H. Panelboard Schedules: Submit final panelboard directories.

I. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for panelboards and all installed components.

2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

3. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

4. Video recording of operation training and demonstration.

1.05 QUALITY ASSURANCE

A. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."

B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NEMA PB 1.

E. Comply with NFPA 70.

1.06 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Environmental Limitations:

1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

a) Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C).

b) Altitude: Not exceeding 6600 feet (2000 m).

C. Service Conditions: NEMA PB 1, usual service conditions, as follows:

1. Ambient temperatures within limits specified.

2. Altitude not exceeding 6600 feet (2000 m).

1.07 DELIVERY, STORAGE, AND HANDLING

A. Coordinate delivery of equipment to allow movement into designated space.

B. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.

C. Handle and prepare panelboards for installation according to NEMA PB 1 and manufacturer's written instructions. Use factory-installed lifting provisions.

1.08 WARRANTY

A. Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components and/or products of the panelboards that fail in materials or workmanship within the specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Touchup Paint: Two containers of paint matching enclosure finish, each 0.5 pint (250 mL).

2. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

PART 2 - PRODUCTS

2.01 GENERAL

A. Manufacturers:

1. ABB Inc.
2. Eaton.
3. Schneider Electric.
4. Siemens Energy & Automation, Inc.

B. Enclosures: Flush- or surface-mounted cabinets as noted.

1. Rated for environmental conditions at installed location.
    a) Indoor Dry and Clean Locations: NEMA 250, Type 1.
    b) Outdoor Locations: NEMA 250, Type 3R.
    c) Kitchen and/or Wash-Down Areas: NEMA 250, Type 4X.
    d) Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 5.
2. Door: Standard door with concealed hinges. Secured with vault-type latch with tumbler lock; keyed alike.
3. Skirt for Surface-Mounted Panelboards: Same gauge and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
4. Finishes:
    a) Panels and Trim: Steel and galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    b) Back Boxes: Galvanized steel .
5. Directory Card: Inside panelboard door, mounted in transparent card holder.

C. Incoming Mains Location: Top and/or bottom as required.

D. Buses: Three phase, four wire unless otherwise indicated.

1. Phase, and Neutral Buses:
    a) Material:Tin-plated aluminum.
    b) Size: Ampacity as indicated on drawings, with uniform capacity for entire length of panelboard’s sections.
        1) Neutral bus: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
2. Ground Bus: Equipped with connectors for feeder and branch-circuit ground conductors. Ground lugs shall be dual rated for both aluminum and copper conductors. For busway feeders, extend insulated equipment

grounding cable to busway ground connection and support cable at intervals in vertical run.

a) Material: Hard-drawn copper, 98 percent conductivity or Tin-plated aluminum

b) Size: Minimum-size required by UL 67.

3. Provide any available breaker mounting space with bussing.

E. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: Dual rated for both aluminum and copper conductors.

2. Capacity rating: Same as associated bus.

F. Line-Side Conductor Connectors (Lugs):

1. General: Suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".

2. Material: Same as bus material.

3. Capacity rating: Same as associated bus.

4. Type: Provide mechanical type unless otherwise indicated on Drawings, refer to schedules and one-line diagram.

5. Provide properly sized lugs for all equipment, circuit breakers and other electrical devices to accommodate installed conductors. A larger frame, oversized lugs or non-standard product may be required in some instances.

a) Pin adapters may be utilized only as allowed by manufacturer and the authority having jurisdiction.

G. Feed-Through Lugs:

1. General: Suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".

2. Location: Locate at opposite end of bus from line side lugs or main device.

3. Material: Same as line side conductor connectors.

4. Capacity rating: Same as associated bus.

5. Type: Same as line side conductor connectors.

H. Subfeed (Double Lugs):

1. General: Suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".

2. Location: Locate at same end of bus as incoming lugs or main device.

3. Material: Same as line side conductor connectors.

4. Capacity rating: Same as associated bus.

5. Type: Same as line side conductor connectors.

I. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.

J. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

K. Panelboard Short-Circuit Current Rating (SCCR):

1. Refer to fault-current and coordination study submittal requirements listed in other parts of this section, in addition to specification section "Power System Studies".

2. Rating Value: Rated to withstand symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings. SCCR shall not be less than the highest AIC rating of any circuit breaker in panelboard.

2.02 DISTRIBUTION PANELBOARDS

A. Panelboards: NEMA PB 1, power and feeder distribution type.

B. Doors: For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.

C. Mains: As indicated on drawings.

D. Branch Overcurrent Protective Devices:

1. Connection to bus:

a) For Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.

b) For Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

2. Type: Provide types as indicated on drawings and as defined below.

E. Device Ratings:

1. Continuous ampere rating: as indicated on drawings.

2. Voltage and frequency rating: same as panelboard.

3. Short-circuit current rating (SCCR): Same as requirements for panelboard.

4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings.

2.03 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Panelboards: Circuit breaker type: NEMA PB 1, lighting and appliance branch-circuit type.

B. Mains: As indicated on drawings.

C. Branch Overcurrent Protective Devices:

1. Connection to bus: Plug-in circuit breakers, replaceable without disturbing adjacent units.

2. Type: Provide types as indicated on drawings and as defined below.

D. Device Ratings:

1. Continuous ampere rating: as indicated on drawings.

2. Voltage and frequency rating: same as panelboard.

3. Short-circuit current rating (SCCR): Same as requirements for panelboard.

4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings.

2.04 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

2. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

3. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:

a) Standard frame sizes, trip ratings, and number of poles.

b) Lugs: Mechanical type unless otherwise indicated on Drawings, suitable for number, size, trip ratings, and conductor materials.

c) Multipole units enclosed in a single housing or factory assembled to operate as a single unit.

2.05 FUSED LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS(1 TO 400A MAINS)

A. Basis-of-Design Product: Subject to compliance with requirements, provide comparable products by one of the following, the first listed manufacturer was used as the basis of design:

1. Eaton/Bussman Quik Spec Coordination Panelboards type QSCP
2. Mersen

B. Bus Bars: Shall be copper or tin-plated copper.

C. Panelboards: listed to UL 67

1. Provide space behind locking door for a minimum of 6 spaces to store replacement branch circuit fuses.

D. Mains:

1. Permanently installed lockout means shall be provided.
2. Quick-make, quick-break type.

E. Branch Overcurrent Protective Devices:

1. Device shall have visible circuit ON/OFF indication with colored and international symbol markings
2. Device shall provide open fuse indication via permanently installed neon or LED indicating light.
3. Fuse and disconnect assembly shall be a finger-safe component with trim installed.
4. No special tools shall be required for fuse removal.
5. Devices shall have bolt-on style bus connectors.
6. Device housing shall be clearly marked with device amperage.
7. Permanently installed lockout means shall be provided on the device for lockout tagout procedures. Permanently installed means for locking device in the ON position shall also be provided.
8. Device shall provide fuse amp rating rejection at the following ampacities to ensure continued circuit protection at the specified circuit rating: 15A, 20A, 30A, 40A, 50A, 60A, 70A, 90A & 100A.
9. Branch circuit overcurrent protection shall be 600Vac UL Listed minimum 200kA IR and CSA Certified minimum 200kA IR finger-safe fuse with Class J or CC performance characteristics.

2.06 SURGE PROTECTION DEVICES

A. Provide surge protective devices as required by Division 26 Section “Surge Protective Devices”.

B. Panelboards requiring SPD and the location of the devices shall be as indicated on the Drawings.

2.07 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

2.08 IDENTIFICATION

A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

B. Examine areas, surfaces, substrates, and elements to receive panelboards with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that field measurements are as indicated.
2. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.

C. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install panelboards and accessories according to NEMA PB 1.1 and manufacturer's instructions.

B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

C. Wall-Mounted Panelboards: Install panelboards on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For panelboards not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

E. Mount top of trim 72 inches (1788 mm) above finished floor unless otherwise indicated.

F. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

G. Install overcurrent protective devices and controllers not already factory installed.

H. Install filler plates in unused spaces.

I. Stub four 1-inch (27-GRC) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch (27-GRC) empty conduits into raised floor space or below slab not on grade.

1. Empty conduits shall be provided with pull strings.

2. Cap and label empty conduits for future use.

J. Arrange conductors in gutters into groups and bundle and wrap with wire ties.

K. Comply with NECA 1.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

3.04 IDENTIFICATION

A. Equipment Nameplates: Label each contiguous main, or entrance section with equipment nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

B. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

C. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

D. Diagram and Instructions:

1. Frame and mount under clear acrylic plastic. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of panelboard.

a) Operating Instructions: Printed operating instructions for panelboard, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.

E. Warning Labels: Label each panelboard with a warning label in accordance with NFPA 70 and NFPA 70E.

1. Exception: Do not install NFPA 70 working clearance requirements on flush panelboards and similar equipment in finished spaces.

F. Identify field-installed conductors, interconnecting wiring, and components; complying with Division 26 Section "Identification for Electrical Systems."

G. Panel Directories

1. Create a directory to indicate installed circuit loads; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

2. Noted the date the directory was created/updated.

3. Create directory after loads have been balanced to reflect actual as-built conditions.

4. Circuit descriptions shall be per code and shall be distinguishable from all others.

3.05 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

3.07 ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Power System Studies."

3.08 FIELD QUALITY CONTROL

A. Testing: Perform the following field tests and inspections and prepare test reports:

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, to assist in testing, and to assist in adjusting device settings.

B. Acceptance Testing Preparation:

1. After installing equipment but before equipment is energized, test for compliance with requirements.

2. Verify that grounding system at the equipment tested at the specified value or less.

3. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.

4. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.

2. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.

3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

5. Report results of tests and inspections in writing. Record adjustable settings and measured insulation resistances. Attach a label or tag to each tested component indicating satisfactory completion of tests.

D. Panelboards will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.09 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain panelboards, overcurrent protective

devices, instrumentation, and accessories[, and to use and reprogram microprocessor-based trip, monitoring, and communication units].

B. Video record demonstrations presentation for Owner's records.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Receptacles:

1. Convenience including single, duplex, automatically controlled, and isolated ground.
2. Ground fault current interrupter type (GFCI).
3. USB charging devices
4. Twist-locking type receptacles.
5. Surge protective device (SPD).
6. Special purpose/miscellaneous devices.

B. Wall Switches

C. Wall Plates and Covers

D. Emergency Power Off Buttons

E. Remote Ground Fault Circuit Interrupter (GFCI) Devices

1.02 DEFINITIONS

A. GFCI: Ground-fault circuit interrupter.

B. IG: Isolated Ground

C. PIR: Passive Infrared.

D. RFI: Radio Frequency Interference

E. SPD: Surge Protective Device

F. TR: Tamper Resistant

G. USB: Universal Serial Bus

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of outlet boxes with millwork, furniture, equipment, etc. installed under other sections or by others.

2. Coordinate wiring device ratings and configurations with the electrical requirements of actual equipment to be installed. This shall apply to equipment furnished under this contract and equipment furnished by Owner or under separate contract.

3. Coordinate the placement of outlet boxes for wall switches with actual installed door swings.

4. Coordinate the installation and preparation of uneven surfaces, such as split face block, to provide suitable surface for installation of wiring devices.

5. Notify Contract Administrator of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".

B. Product data:

1. Provide manufacturer's catalog information specifically marked to indicate which devices are being furnished, and showing dimensions, colors, and configurations for all devices, including, but not limited to: Receptacles, AC wall switches, cover plates, power poles, and multi-outlet assemblies.

C. Operations and Maintenance Data

1. Provide re-ordering instructions and directions for replacement surge modules for SPD receptacles.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of wiring device and associated cover plate from a single manufacturer and through one source. Where practical and possible, obtain all wiring devices and associated cover plates from a single manufacturer and one source.

B. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 10 years.

C. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that are acceptable to authorities having jurisdiction.

2. Marked for intended use.

D. Comply with NFPA 70.

1.06 SPARES

A. Furnish spare parts described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. SPD Receptacles With Replacement Surge Modules: [One for every 10] of each type installed, but no fewer than two of each type.

PART 2 - PRODUCTS

2.01 GENERAL

A. Wiring devices are defined as single discrete units of electrical distribution systems, such as convenience receptacles, switches, special purpose receptacles, and similar, which are intended to carry, but not use electrical energy. Install wiring devices as required by the Specifications and where indicated on the Drawings.

B. Wiring Device Finishes:

1. Provide wiring device finishes as described below, unless otherwise indicated.
2. Wiring devices connected to normal power systems: Gray. Cover plates: stainless steel.
3. Wiring devices connected to emergency power systems: Red. Cover plates: stainless steel and engraved with "EMERGENCY POWER" with black filler in the engraving. Engrave the panelboard designation and circuit number serving the emergency device into the cover plate.
4. Hospital grade receptacles: As specified above, with a green dot on its face.
5. SPD devices: Blue. Cover plates: stainless steel.
6. Isolated-Ground receptacles: Orange, with an orange trangle on its face. Cover plates: stainless steel.
7. Material for cover plates in unfinished spaces and for surface mounted wiring devices: Galvanized steel.

2.02 RECEPTACLES:

A. Available Manufacturers:

1. Eaton
2. Hubbell Incorporated
3. Legrand
4. Leviton

B. Receptacles - General Requirements: Self-grounding, impact-resistant nylon face, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 498; types as indicated on the drawings.

1. Wiring Provisions: Terminal screws for side wiringand screw actuated binding clamp for back wiring with separate ground terminal screw.

2. NEMA configurations specified are according to NEMA WD 6.

C. The basis-of-design catalog numbers listed below are generally for 20A rated duplex devices. Where 15A rated devices are indicated on the Drawings or required for circuit rating limitations, provide receptacles equivalent to those specified for 20A, but rated for 15A. Where simplex devices are indicated on the drawings, provide similar, but simplex receptacle.

D. Convenience Receptacle:

Type - Duplex Convenience Receptacle	**Heavy Duty Specification Grade**	**Commercial Specification Grade**	**Specification grade, rectangular decorator style**	**Hospital Grade**	**Hospital Grade, Rectangular Decorator Style**
Standard Duplex	Legrand 5362	Legrand CR20 or CRB5362	Legrand 26352	Legrand 8300H	Legrand 26362HG
Automatically Controlled (Dual-controlled)	Legrand 5362CD	Legrand 5362CD	Legrand 26352CD		
Automatically Controlled (Half-controlled)	Legrand 5362CH	Legrand 5362CH	Legrand 26352CH		
Tamper-Resistant	Legrand TR5362	Legrand TR220 or TR5352	Legrand TR26342 or TR26352	Legrand TR8300H	Legrand TR26362HG
Tamper-Resistant Automatically Controlled (Dual-controlled)	Legrand TR5362CD	Legrand TR5362CD			
Tamper-Resistant Automatically Controlled (Half-controlled)	Legrand TR5362CH	Legrand TR5362CH			
Weather-Resistant	Legrand WR5362	Legrand WR20TR			

Weather-Resistant/Tamper-Resistant		Legrand WR20TR			
Isolated Ground		Legrand IG5362	Legrand IG26362	Legrand IG8300	Legrand IG26362HG

E. GFCI Receptacles:

1. GFCI Receptacles - General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with UL 943, class A.

   a) Provide test and reset buttons of same color as device.

Type - Duplex GFCI	Specification Grade	Hospital Grade
Standard GFCI	Legrand 2097	Legrand 2097HG
Tamper-Resistant GFCI	Legrand 2097TR	Legrand 2097HGTR
Weather-Resistant GFCI	Legrand 2097TRWR	Legrand 2097HGTRWR
Weather-Resistant/Tamper-Resistant GFCI	Legrand 2097TRWR	Legrand 2097HGTRWR
GFCI with Isolated Ground	Legrand 2097IG	Legrand 2097IGHG
Blank Face	Legrand 2087	

F. USB Charging Devices:

1. USB Charging Devices - General Requirements: Listed as complying with UL 1310.

   a) Charging Capacity - Two-Port Devices: 3.1 A, minimum.

   b) Charging Capacity - Four-Port Devices: 4.2 A, minimum.

   c) For GFCI Devices, see GFCI paragraph above for additional requirements.

Type - USB	Specification Grade	Hospital Grade
USB A/A with Standard Duplex	Legrand TR5362USB	Legrand TR8300HUSB
USB A/C with Standard Duplex	Legrand TR20USBAC	Legrand TR20HUSBAC
USB C/C with Standard Duplex	Legrand TR20USBCC	Legrand TR20HUSBCC
USB only 4-Port	Legrand TM8USB4	
USB A/A with Tamper-Resistant Duplex	Legrand TR5362USB	Legrand TR8300HUSB
USB A/C With Tamper-Resistant Duplex	Legrand TR20USBAC	Legrand TR20HUSBAC

USB C/C with Tamper-Resistant Duplex	Legrand TR20USBCC	Legrand TR20HUSBCC
USB C/C with TR/WR GFCI Duplex	Legrand 2097TRWRUSBCC	
USB A/C with GFCI Duplex	Leviton GUAC2	
USB A/A with GFCI Duplex	Leviton GUSB2	

G. Twist-Locking Type Receptacles:

1. The basis-of-design catalog numbers listed below are generally for 20A rated simplex devices. Where 15A rated devices are indicated on the Drawings or required for circuit rating limitations, provide receptacles equivalent to those specified for 20A, but rated for 15A. Where duplex devices are indicated on the drawings, provide similar, but duplex receptacle.

Type - Twist Locking	
Standard Simplex	Legrand L520R
Isolated Ground Simplex	Legrand IGL52R

H. SPD Receptacles:

1. Surge Protection Receptacles - General Requirements: Listed and labeled as complying with UL 1449, Type 2 or 3.
   a) Energy Dissipation: Not less than 240 J per mode.
   b) Protected Modes: L-N, L-G, N-G.
   c) UL 1449 Voltage Protection Rating (VPR): Not more than 700 V for L-N, L-G modes and 1200 V for N-G mode.
   d) Diagnostics:
      1) Visual Notification: Provide indicator light to report functional status of surge protection.
      2) Audible Notification: Provide switchable audible alarm to report that surge protection is not functional.
   e) Special Warranty: Manufacturer agrees to repair or replace SPD receptacles, or replaceable surge modules (if removable), that fail in materials or workmanship within 5 years from date of Substantial Completion.

Type - SPD	**Specification grade, rectangular decorator style**	**Hospital grade, rectangular decorator style**
SPD Duplex	Legrand 5362SP	Legrand 8300SP
Tamper-Resistant SPD Duplex	Legrand TR5362SP	

Isolated Ground Duplex	Legrand IG5362SP	IG8300SP

I. Special/Miscellaneous Devices:

1. Special purpose receptacles: Grounding type, UL listed with NEMA configurations as indicated below or on the Drawings.

Purpose	NEMA Configuration	
Dryer	14-30R	Legrand 3864
Range	14-50R	Legrand 3894
Switch/Receptacle Combo	5-20R	Legrand 671TRI
Clock	5-15R	Legrand S3733

2.03 SWITCHES

A. Available Manufacturers:

1. Eaton
2. Hubbell Incorporated
3. Legrand
4. Leviton

B. Wall Switches - General Requirements: AC only, quiet operating, general-use snap switches with silver alloy contacts, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 20; types as indicated on the drawings.

1. Wiring Provisions: Terminal screws for side wiring with separate ground terminal screw.

C. The basis-of-design catalog numbers listed below are generally for 20A rated devices. Where 15A rated devices are indicated on the Drawings or required for circuit rating limitations, provide switches equivalent to those specified for 20A, but rated for 15A.

D. Standard Wall Switches:

Type - Switches	Heavy Duty Specification Grade	Commercial Specification Grade
1-Pole	Legrand PS20AC1	Legrand CS20AC1 or CSB20AC1
2-Pole	Legrand PS20AC2	Legrand CSB20AC2
3-Way	Legrand PS20AC3	Legrand CS20AC3 or CSB20AC3
4-Way	Legrand PS20AC4	Legrand CSB20AC4

E. Key operated light switches: Same as standard light switches except toggle handle shall be operated by a factory provided key.

2.04 WALL PLATES AND COVERS

A. Wall Plates: Comply with UL 514D.

1. Match corresponding wiring devices and manufacturer of wiring devices specified herein.
2. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
3. Size: Standardunless otherwise indicated..
4. Screws: Metal with slotted heads finished to match wall plate finish.

B. Nylon Wall Plates: Smooth finish, high-impact thermoplastic.

C. Stainless Steel Wall Plates: Brushed satin finish, Type 302 stainless steel.

D. Masonry walls and oversized wall openings: Jumbo size plates with same material as indicated above.

E. Weatherproof Receptacle Covers for Wet Locations: Gasketed, cast aluminum, with hinged lockable cover for horizontal mounting and corrosion-resistant screws; listed as suitable for use in wet locations while in use with attachment plugs connected and identified as extra-duty type. (Covers listed are single-gang for GFCI device, 2-gang or other device similar.) Back box must be suitable for conduit connections. Coordinate back box with wall depth.

Weatherproof cover for Wet Location In-Use	Cast Aluminum	High Impact Polycarbonate
Horizontal	Hubbell WP26EH	Hubbell RW58300
Vertical	Hubbell WP26E	Hubbell RW58300

2.05 EMERGENCY POWER OFF BUTTONS

A. Available Manufacturers:

1. ABB
2. Eaton
3. Schneider Electric

B. Push Button Operators: 30MM, watertight/oil tight, heavy duty, 600V maximum ac/dc, 10A continuous, momentary, non-illuminated, shrouded push button operator. Provide with 1 normally open and 1 normally closed contact block.

1. Basis of Design: Schneider Electric 9001KR1RH13

C. Push/Pull Button Operators: 30MM, watertight/oil tight, heavy duty, 600V maximum ac/dc, 10A continuous, 2 position maintained, non-illuminated, push/pull button operator. Provide with 1 normally open and 1 normally closed contact block.

1. Basis of Design: Schneider Electric 9001SKR9RH13

D. Break Glass Operators: 30MM, watertight/oil tight heavy duty, 600V maximum ac/dc, 10A continuous, push button operator that when disk is broken the operator is released to its open position. Provide with 1 normally closed contact block, surface or recess mounted, NEMA 1, 4, 4X enclosure with integral break glass hammer and chain.

1. Basis of Design: Schneider Electric 9001K15

2.06 REMOTE GROUND FAULT CIRCUIT INTERRUPTER (GFCI) DEVICES

A. Available Manufacturers:

1. Hubbell
2. Littlefuse
3. North Shore Safety

B. UL 943 Class A Ground Fault Circuit Interrupter (GFCI) device in NEMA 4X wet location enclosure, voltage, phase, and current rating as shown on drawings. UL 943. Device shall have power and fault status indication lights and manual test and reset buttons on exterior of enclosure. Device shall allow for reset as follows:

1. Automatic reset: Allows power downstream as long as power is available and will allow power downstream upon restoration of lost power. Requires reset button be pressed if unit trips due to fault condition.

PART 3 - EXECUTION

3.01 GENERAL

A. Outlets are only approximately located on the small scale Drawings. Use great care in the actual location by consulting the various large scale detailed Drawings used by other Division trades, and by securing definite locations from the Contract Administrator.

B. Do not use multi-conductor circuits, with a shared neutral, for any GFCI receptacle circuit. Provide a separate neutral conductor with all GFCI receptacle circuits.

C. Provide twist-locking type receptacles or other special type receptacles where indicated on the Drawings.

3.02 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.03 PREPARATION

A. If required, provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.04 INSTALLATION

A. Install in accordance with manuacturer's instructions.

B. Install all wiring devices plumb, level, and square with building lines. Wiring device bodies shall extend to the finished surface of the walls, ceiling or floor, as applicable, without projecting beyond them.

C. Connect wiring devices by wrapping conductors around screw terminals. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

D. Connect wiring device grounding terminal to branch circuit equipment grounding conductor and bond to metal outlet box. Exception: Do not bond grounding terminals of isolated ground receptacles to the outlet box.

E. Install devices shown on wood trim, cases or other fixtures symmetrically and, where necessary, set with the long dimensions of the plate horizontal, or ganged in tandem.

F. Unless dimensioned otherwise, install wiring devices a minimum of 24 inches from the closest edge of any sink.

G. Install switches with OFF position down.

H. Install cover plates on all switches, receptacles, and blank outlets.

I. Locate wiring devices so that the cover plate does not have to be cut to be installed.

J. Where devices are shown near wall openings, coordinate location if corner guards are to be installed so that cover plates do not require cutting.

K. Install cover plates after the wall has been finished (painted, wall paper, etc).

L. Install device boxes in brick or block walls such that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.

M. Provide engraved nameplate on emergency off buttons.

N. Provide ground fault circuit interruption capability for all 120V receptacles 50A or less and all 208/240V receptacles 100A or less in code required locations. Locations include, but are not limited to: bathrooms, kitchens/food prep areas, exterior locations and within 6' or sinks. Interruption capability can be achieved via a GFCI circuit breaker or a GFCI receptacle.

O. Provide type and quantity of normally open and/or normally closed contacts for emergency off buttons to meet the sequence of operations shown.

P. Install wiring devices shown back-to-back on a common wall offset a minimum of 12" horizontally to reduce sound transmission between rooms.

3.05 MOUNTING HEIGHTS AND ORIENTATION

A. Coordinate locations of outlet boxes provided under Division 26 Section "Common Work Results for Electrical".

B. Unless otherwise noted, install wiring devices at mounting heights indicated in the Electrical Symbols Legend on the construction drawings.

1. Receptacles:

a) General:

1) Unless indicated otherwise, install vertically with the ground slot mounted at the top.

2) Where Installed horizontally, install neutral slot mounted at the top.

b) Above counters:

1) Mount horizontally

c) Mechanical and electrical equipment rooms and janitors closets: mount horizontally.

d) Garages:

1) Wet location: Mount horizontally.

2) Other locations: Mount horizontally.

e) Weatherproof exterior receptacles: mount horizontally.

f) GFCI receptacles: Same as general receptacles.

g) Isolated ground receptacles: Same as general receptacles.

h) SPD receptacles: Same as general.

i) Concrete Block Walls: Dimensions above may be adjusted slightly, as required to compensate for variable joint dimensions, such that bottom or top of boxes, as applicable, are at block joints.

C. Switches:

1. Above counters: Same as for receptacles.

2. Concrete Block Walls: Dimension may be adjusted slightly, as required to compensate for variable joint dimensions, such that bottom of boxes are at block joints.

a) Walls with wainscoting: 6 inches minimum above wainscoting, but not exceeding 48 inches above finished floor.

D. Multi-outlet assemblies (unless otherwise indicated on the Drawings):

1. 36 inches above finished floor.

E. Telephone/Data Outlet Boxes:

1. General: Match mounting height of adjacent wiring device listed above.

F. Emergency Power Off Buttons and Break Glass Operators:

1. General: Match requirements of switches listed above.

3.06 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."

1. Emergency Power Off Buttons:

a) Provide engraved nameplate on emergency off buttons.

b) Identify equipment, device or system controlled by emergency power off button.

B. Automatically Controlled Convenience Receptacles: controlled receptacle marking on device face per NFPA 70.

C. Label all devices fed down stream of GFCI protected receptacles as “GFCI PROTECTED”.

3.07 FIELD QUALITY CONTROL

A. Inspect each wiring device for defects.

B. Operate each wall switch with circuit energized and verify proper operation.

C. Verify that each receptacle device is energized. After installing wiring devices and after electrical circuitry has been energized, test for proper polarity, ground continuity, and compliance with requirements.

D. Test all wiring devices for electrical continuity and proper polarity of connections.

E. Test each GFCI receptacle device for proper operation.

F. Correct wiring devices incorrectly installed.

G. Repair or replace all damaged items or damaged finishes at no expense to the Owner.

3.08 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

3.09 CLEANING

A. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Cartridge Fuses

B. Accessories

1. Fuseholders

C. Spare fuse cabinet

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate fuse clips furnished in equipment provided under other sections for compatibility with indicated fuses.

2. Coordinate fuse requirements according to manufacturer's recommendations and nameplate data for actual equipment to be installed and with system short-circuit levels.

3. Coordinate location of and access to spare fuse cabinet(s) with final electrical equipment layouts within electrical equipment rooms.

4. Notify Contract Administrator of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section “Power System Studies.”

1.03 SUBMITTALS

A. Product Data: For each type of product indicated; include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets.

1. Include the following for each fuse type indicated:

a) Dimensions and manufacturer's technical data on features, perfor, electrical characteristics, and ratings.

b) Current-limitation curves for fuses with current-limiting characteristics.

c) Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.

d) Coordination charts and tables and related data.

e) Fuse sizes for elevator feeders and elevator disconnect switches.

B. Operation and Maintenance For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. All items requested under “Product Data”.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Comply with NEMA FU 1 for cartridge fuses.

E. Comply with requirements of NFPA 70.

F. Comply with UL 248.

1.05 PROJECT CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C) or more than 100 deg F (38 deg C), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

PART 2 - PRODUCTS

2.01 GENERAL

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless specifically indicated to be excluded, provide fuses for all fusible equipment as required for a complete operating system.

C. Provide fuses of the same type, rating, and manufacturer within the same switch.

D. Selectivity: Where selectivity is required by the Documents, furnish products as required to achieve selective coordination.

2.02 MANUFACTURERS

A. Manufacturers:

1. Bussmann, a division of Eaton Corporation; www.cooperindustries.com.
2. Littelfuse, Inc;: www.littelfuse.com.
3. Mersen;: ep-us.mersen.com.
4. Edison Fuse, Inc; www.edisonfuses.net.

2.03 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

2.04 ACCESSORIES

A. Fuseholders: Compatible with indicated fuses.

2.05 SPARE-FUSE CABINET

A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.

1. Size: Adequate for storage of spare fuses specified with [15] percent spare capacity minimum.
2. Finish: Gray, baked enamel.
3. Identification: "SPARE FUSES" in 1-1/2-inch- (38-mm-) high letters on exterior of door.

B. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolearances and other conditions affecting performance, such as rejection features.

C. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install fuses in accordance with manufacturer's instructions.

B. Do not install fuses until circuits are ready to be energized.

C. Install fuses in fusible devices. Arrange fuses so manufacturer, type and rating information is readable without removing fuse.

D. Install spare fuse cabinet where indicated.

3.03 FUSE APPLICATIONS

A. Cartridge Fuses

1. Feeders:
    a) Greater than 600A:
        1) Class L, time delay
    b) 600A or less:
        1) Class RK1, time delay
2. Motor Branch Circuits:
    a) Class RK1, time delay
3. Other Branch Circuits:
    a) Class RK1, time delay
4. Control Circuits
    a) Class CC, fast acting

3.04 IDENTIFICATION

A. Install labels complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Fusible switches.

B. Non-fusible switches.

C. Enclosures.

1.02 DEFINITIONS

A. NC: Normally closed.

B. NO: Normally open.

C. SPDT: Single pole, double throw.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of enclosed switches, circuit breakers and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section “Power System Studies”.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”.

B. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensions and Manufacturer’s technical data on features, performance, electrical characteristics, ratings, weights, furnished options, specialties, accessories, and finishes.

C. Shop Drawings: For enclosed switches and circuit breakers.

1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.

    a) Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

2. Detail enclosure types and details for other than NEMA 250, Type 1.

3. Include general arrangement drawing showing dimensions and weights of each assembled section.

4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses.

5. Detail short-circuit current rating of enclosed switch or circuit breaker assembly and overcurrent protective devices.

6. Include time-current coordination curves for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Submit electronic files, in an SKM-compatible format.

7. Include schematic and wiring diagrams for power, signal, and control wiring.

8. Include nameplate legends.

9. Include list of materials.

D. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.

E. Field quality-control reports.

1. Test procedures used.

2. Test results that comply with requirements.

3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

F. Sample Warranty: For warranty.

1. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.

G. Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components and/or products of the enclosed switches and circuit breakers that fail in materials or workmanship within the specified warranty period.

H. Warranty Period: Three years from date of Substantial Completion.

1.05 EXTRA MATERIALS

A. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.

B. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Refer to Division 26 section “Fuses” for spare fuse requirements. At a minimum, include spares for the following:

a) Fuses for fusible devices.

b) Potential transformer fuses.

c) Control power fuses.

2. Touchup Paint: Two containers of paint matching enclosure finish, each 0.5 pint (250 mL).

3. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

1.06 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member Company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NFPA 70.

1.07 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Environmental Limitations:

1. Do not deliver or install enclosed switches and circuit breakers until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above equipment is complete, and temporary HVAC system is

operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

a) Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).

b) Altitude: Not exceeding 6600 feet (2010 m).

C. Interruption of Existing Electric Service: Refer to Division 26 section “General Electrical Requirements."

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver enclosed switches and circuit breakers in sections or lengths that can be moved past obstructions in delivery path.

B. Coordinate delivery of equipment to allow movement into designated space.

C. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.

D. Handle and prepare enclosed switches and circuit breakers components according to manufacturer's written instructions. Use factory-installed lifting provisions.

PART 2 - PRODUCTS

2.01 FUSIBLE SWITCHES

A. Manufacturers:

1. ABB Inc.
2. Eaton.
3. Schneider Electric.
4. Siemens Energy & Automation, Inc.

B. Type HD, Heavy Duty, Single Throw, 240 or 600-V ac (Minimum rating shall meet voltage served), 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

C. Short Circuit Current Rating: 100,000 rms symmetrical amps when fuses applied.

D. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
4. Hook stick Handle: Allows use of a hook stick to operate the handle.
5. Lugs: Mechanical type, suitable for number, size, and conductor material.

E. Arc Flash Mitigation

1. Fuses 1200 A and larger, shall have a clearing time of 0.07 seconds or less at the available arcing current, or shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
2. Documentation shall be provided in accordance with the NEC for location of overcurrent device and method of clearing time reduction.

2.02 NONFUSIBLE SWITCHES

A. Manufacturers:

1. ABB Inc.
2. Eaton.
3. Schneider Electric.
4. Siemens Energy & Automation, Inc.

B. Type HD, Heavy Duty, Single Throw, 240 or 600-V ac (Minimum rating shall meet voltage served), 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

C. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Hook stick Handle: Allows use of a hook stick to operate the handle.
4. Lugs: Mechanical type, suitable for number, size, and conductor material.

2.03 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.

B. Indoor, Dry and Clean Locations: NEMA 250, Type 1.

C. Outdoor Locations: NEMA 250, Type 3R.

2.04 IDENTIFICATION

A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine enclosed switches and circuit breakers before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.

B. Examine areas, surfaces, substrates, and elements to receive enclosed switches and circuit breakers with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that field measurements are as indicated.
2. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.

C. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install enclosed switches and circuit breakers and accessories in accordance with manufacturer’s instructions.

B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

C. Comply with mounting and anchoring requirements specified in Division 26 Section "Seismic Controls for Electrical Systems."

D. Wall-Mounted Switches and Circuit Breakers: Install enclosed switches and circuit breakers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For enclosed switches and circuit breakers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

F. Mount equipment plumb and rigid without distortion of enclosure.

G. Install fuses in fusible devices.

H. Comply with NECA 1.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

3.04 IDENTIFICATION

A. Equipment Nameplates: Label each section with equipment nameplate.

B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

C. Diagrams and instructions:

1. Frame and mount under clear acrylic plastic. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of equipment.

a) Operating Instructions: Printed operating instructions for switches and circuit breakers, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.

D. Warning Labels: Label equipment with a warning label in accordance with NFPA 70 and NFPA 70E.

1. Exception: Do not install NFPA 70 working clearance requirements on enclosed switches and circuit breakers in finished spaces.

3.05 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

3.07 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges and protective relay trip characteristics as specified in Division 26 Section "Power System Studies."

3.08 FIELD QUALITY CONTROL

A. Testing: Perform the following field tests and inspections and prepare test reports:

B. Acceptance Testing Preparation:

1. After installing equipment but before equipment is energized, test for compliance with requirements.
2. Verify that grounding system at the equipment tested at the specified value or less.
3. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
4. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

4. Report results of tests and inspections in writing. Record adjustable settings and measured insulation resistances. Attach a label or tag to each tested component indicating satisfactory completion of tests.

D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken and observations after remedial action.

3.09 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain panelboards, overcurrent protective devices, instrumentation, and accessories[, and to use and reprogram microprocessor-based trip, monitoring, and communication units].

B. Video record demonstrations presentation for Owner’s records.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. UPS systems.
2. Surge suppression.
3. Rectifier-charger.
4. Inverter.
5. Static bypass transfer switch.
6. Battery and battery disconnect device.
7. Internal maintenance bypass/isolation switch.
8. Remote status and alarm panel
9. Remote UPS monitoring provisions.
10. Battery monitoring.
11. Remote monitoring.
12. Lithium Ion battery system specialty requirements.

1.02 DEFINITIONS

A. Bypass: Isolation of UPS system and continued load operation without power loss.

B. Double Conversion: Series online static UPS design, isolating loads by continuous AC/DC conversions.

C. Firmware: Embedded instructions within hardware devices, stored in nonvolatile memory, to control functions, update instructions, and enable communications.

D. Inverter: Converts DC to AC power.

E. Line Interactive: Parallel online static UPS design, monitoring incoming source, and supplementing power when required.

F. Power Module: Containerized UPS, modular in design and installed in UPS frames or cabinets.

G. Rectifier: Conversion of AC to DC power.

H. VRLA: (Valve-regulated lead-acid) Sealed cells with valve that compensates for internal compared to ambient pressure. Recombinant battery technology, retaining water and acid instead of venting to environment; lead acid.

I. LCD: Liquid-crystal display.

J. LED: Light-emitting diode.

K. THD: Total harmonic distortion.

L. UPS: Uninterruptible power supply.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer's standard catalog pages and data sheets for equipment and protective devices, indicating information relevant to studies.

B. Shop Drawings: Submit dimensioned plan and elevation views of UPS system and power distribution, DC-Link, related equipment, and system components, with required clearances identified. Indicate locations of system components, attachment locations, and details of supports, fittings, building element penetrations, and equipment connections.

1. Include wiring diagrams showing factory and field connections with wire, overcurrent protective device arrangement, circuit breaker/fuse sizes, and circuiting arrangements. Include proposed connection method, size, type, and routing of conduits and cables.

2. Indicate outline and support point dimensions, unit arrangement and sizes, input/output voltages, bus ampacities, power ratings, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

3. Include system interconnection schematic diagrams showing factory and field connections, and requirements for interface with other systems.

C. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around UPS's where pipe and ducts are prohibited. Show transfer switch layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

1. For each equipment room, provide dimensioned layout of the electrical equipment within the space, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved.

2. Dimensioned concrete base, outline of UPS, and conduit entries; including equipment working clearances and manufacturer required access space.

3. Indicate structural members, light fixtures, sprinkler piping and heads, HVAC equipment, ducts and diffusers, plumbing piping and access fittings. Include maintenance access clearances.

4. Location of structural supports for structure-supported raceways.

5. Location and clearance of electrical equipment and raceways impacting equipment installation.

6. Proposed routing of equipment, in shipping splits, from exterior of the building to the final installed location. Include product weights, width and height restrictions encountered along the path. Include intended construction sequencing to mitigate conflicts.

7. Proposed routing of equipment for future removal, from within equipment room to exterior of the building without removal of non-related equipment or architectural elements.

D. Manufacturer Certificates: For each product, from manufacturer.

E. Factory Test Reports: Comply with specified requirements.

F. Field quality-control reports.

1. Test procedures used.

2. Test results that comply with requirements.

G. Performance Test Reports: Indicate test results compared with specified performance requirements, and provide justification and resolution of differences if values do not agree.

H. Manufacturer's field service report.

I. Operation and Maintenance Data: For UPS units to include in emergency, operation, and maintenance manuals.

1. Include detailed information on system operation, equipment programming, and setup, and replacement parts.

2. Include detailed information on status indicators, recommended maintenance procedures, and intervals.

3. Manufacturer's written instructions for testing central battery equipment.

4. Include contact information for entity providing contract maintenance and trouble call-back service.

J. Warranties: Sample warranties for each warranty type listed below.

K. Reports and Design Guide indicating requirements that must be met for the Lithium-ion battery cabinet to meet the unit level criteria listed in the UL9540A large scale fire test.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified with minimum 5 years of documented experience.

1. Authorized service facilities located within 250 miles of project site.

B. Installer Qualifications: Company specializing in performing work with minimum 5 years documented experience with similar UPS systems (e.g., similar size, type, and complexity).

1. Manufacturer's authorized installer.

2. Installer Personnel: Minimum 2 years of experience installing UPS systems.

C. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. UL Compliance: Listed and labeled under UL 1778 by an NRTL.

F. Comply with NFPA 70.

G. Comply with NFPA 111.

H. Comply with Fire Code for Energy Storage: ICC (IFC).

I. The Lithium-ion battery solution shall meet the requirements of the following standards:

1. Fire Safety: Must demonstrate that the UL9540A large scale fire test criteria are met at the unit level. The report shall be available upon request.

2. Safety: UL 1998, UL 991, UL 1973, UL 1642

3. EMC/EMI: EN 61000-6-2, EN 61000-6-4

1.05 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Between 64.4 degrees F (18 degrees C) and 82.4 degrees F (28 degrees C) for operation conditions. Betwen 32 degrees F (0 degrees C) and 104 degrees F (40 degrees C) for storage conditions.

2. Relative Humidity: Between 0 and 95 percent, noncondensing.

3. Altitude:

a) Up to 3,300 feet (1000 m) with no derating.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for central battery equipment, including clearances between central battery equipment and adjacent surfaces and other items.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store in a clean, dry space. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to system components, enclosure, and finish.

D. Equipment Containing Batteries: Do not exceed three months of storage without powering for eight hours to recharge batteries.

1.07 WARRANTY

A. Manufacturer Warranty: Provide manufacturer warranty for defects in material and workmanship for duration below. Complete forms in Owner's name and register with manufacturer.

1. UPS: Provide minimum standard warranty of 12 months from date of installation or acceptance by Owner, or 18 months from date of shipment, whichever occurs first.

2. Lithium Ion Batteries: Provide three year warranty from battery manufacturer.

1.08 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.

2. Cabinet Ventilation Filters: One complete set(s).

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following. The first listed manufacturer was used as the basis of design:

1. Schneider Electric

2. ABB.

3. Eaton Corporation Inc.

4. Mitsubishi Electric Automation, Inc.

5. Toshiba Power Electronics.

6. Vertiv Group Corp.

2.02 STATIC UPS SYSTEMS

A. The UPS shall be housed in a freestanding cabinet with casters. Maintenance shall be possible from the front.

B. Output power factor: 1.0.

C. Backfeed contactor included for input. Mandatory bypass backfeed protection must be implemented by:

1. Installation of upstream circuit breaker with shunt-trip connected to the UPS, or

2. Installation of optional breaker kit providing this functionality, or

3. Installation of manufacturer specific maintenance bypass cabinet.

D. The UPS shall support installation with either 3-wire (L1, L2, L3, PE) or

E. 4-wire (L1, L2, L3, N, PE). The supply for input and bypass must be solid-grounded WYE transformers. Delta input supply for either input or bypass is not permitted.

F. The UPS shall contain a static bypass switch and a display. The UPS shall be of the double conversion on-line topology with power factor corrected inputs.

1. The UPS shall be sized for kVA loads as indicated on the Drawings.

2. The UPS battery shall be sized for the runtime indicated on the Drawings.

G. The UPS shall have a minimum input short-circuit level of 65 kAIC.

H. The UPS shall be tested against EMC (electromagnetic compatibility) according to FCC part 15 Subpart B Class A.

I. System Input:

1. Nominal input voltage as indicated on the Drawings with input window of plus or minus 15%.

2. Input frequency of 60 Hz with window from 40-70 Hz.

3. Input power factor:

a) 0.99 at load >25%

b) 0.95 at load >15%

4. Total harmonic distortion: < 5%

J. System Output:

1. Nominal output voltage rating: As indicated on the Drawings, 3-phase.
2. Output voltage tolerance:
   a) +/- 1% for symmetrical loads.
   b) +/- 3% for asymmetrical loads.
3. Dynamic load response:
   a) +/- 5% after 2 ms
   b) +/- 1% after 50 ms
4. Output frequency: 50 or 60 Hz.
5. Output voltage harmonic distortion:
   a) <1% at 100% linear load
   b) <5% at 100% non-linear load
6. Overload capability:
   a) 150% for 1 minute (normal operation)
   b) 125% for 10 minutes (normal operation)
   c) 125% for 1 minute (battery operation)
   d) 125% continuous (bypass)
   e) 1000% for 60 ms (bypass)
7. Output power factor: 1.0
8. Audible noise at full load:
   a) 62 dBA at 70% load
   b) 65 dBA at 100% load
9. Systems directly supplying the primary side of transformers shall have output rating and overload capability required to accomodate transformer inrush currents during energization.

2.03 OPERATIONAL REQUIREMENTS

A. Automatic operation includes the following:

1. Normal Conditions: Load is supplied with power flowing from the normal power input terminals, through the rectifier-charger and inverter, with the battery connected in parallel with the rectifier-charger output.
2. Abnormal Supply Conditions: If normal supply deviates from specified and adjustable voltage, voltage waveform, or frequency limits, the battery supplies energy to maintain constant, regulated inverter power output to the load without switching or disturbance.

3. Power Failure:

    a) If normal power fails, energy supplied by the battery through the inverter continues supply-regulated power to the load without switching or disturbance.

    b) When power is restored at the normal supply terminals of the system, controls automatically synchronize the inverter with the external source before transferring the load. The rectifier-charger then supplies power to the load through the inverter and simultaneously recharges the battery.

    c) If the battery becomes discharged and normal supply is available, the rectifier-charger must charge the battery. The rectifier-charger must automatically shift to float-charge mode on reaching full charge.

4. Requested Static Bypass:

    a) The UPS can be transferred to requested static bypass following a command from the display. During static bypass operation, the load is supplied from the bypass source. If a fault is detected, the UPS will transfer to normal operation or forced static bypass operation. If there is an interruption to the utility/mains power supply during requested static bypass operation, the system will transfer to battery operation.

5. Forced Static Bypass:

    a) The UPS is in forced static bypass following a command from the UPS system or because the user has pressed the inverter OFF button on the UPS. During forced static bypass operation, the load is supplied directly by the bypass source.

6. External Maintenance Bypass:

    a) When the maintenance bypass breaker (MBB) is closed in the external maintenance bypass panel/cabinet, the UPS transfers to external maintenance bypass operation. The load is supplied with unconditioned power from the bypass source. Service can be performed on the entire UPS during external maintenance bypass

7. UPS Failure or Fault Conditions:

    a) If any element of the UPS system fails and power is available at the normal supply terminals of the system, the static bypass transfer switch must switch the load to the normal AC supply circuit without disturbance or interruption.

    b) If a fault occurs in the system supplied by the UPS, and current flows in excess of the overload rating of the UPS system, the static bypass transfer switch operates to bypass the fault current to the normal ac supply circuit for fault clearing.

1) When the fault has cleared, the static bypass transfer switch returns the load to the UPS system.

c) If the battery is disconnected, the UPS continues to supply power to the load with no degradation of its regulation of voltage and frequency of the output bus.

B. Manual operation includes the following:

1. Turning the inverter off causes the static bypass transfer switch to transfer the load directly to the normal ac supply circuit without disturbance or interruption.

2. Turning the inverter on causes the static bypass transfer switch to transfer the load to the inverter.

C. Maintenance Bypass/Isolation Switch Operation: Switch is interlocked so it cannot be operated unless the static bypass transfer switch is in the bypass mode. Device provides manual selection among the three conditions in subparagraphs below without interrupting supply to the load during switching:

1. Full Isolation: Load is supplied, bypassing the UPS. Normal UPS ac input circuit, static bypass transfer switch, and UPS load terminals are completely disconnected from external circuits.

2. Maintenance Bypass: Load is supplied, bypassing the UPS. UPS AC supply terminals are energized to permit operational checking, but system load terminals are isolated from the load.

3. Normal: Normal UPS AC supply terminals are energized and the load is supplied through either the static bypass transfer switch and the UPS rectifier-charger and inverter, or the battery and the inverter.

2.04 PERFORMANCE REQUIREMENTS

A. The UPS shall perform as specified in this article while supplying rated full-load current, composed of any combination of linear and nonlinear load, up to 100 percent nonlinear load with a load crest factor of 3.0, under the following conditions or combinations of the following conditions:

1. Inverter is switched to battery source.

2. Steady-state ac input voltage deviates up to plus or minus 10 percent from nominal voltage.

3. Steady-state input frequency deviates up to plus or minus 5 percent from nominal frequency.

4. THD of input voltage is 15 percent or more with a minimum crest factor of 3.0, and the largest single harmonic component is a minimum of 5 percent of the fundamental value.

5. Load is 30 percent unbalanced continuously.

B. Minimum Duration of Supply: If battery is sole energy source supplying rated full UPS load current at 80 percent power factor, duration of supply is as indicated on the Drawings.

C. Input Voltage Tolerance: System steady-state and transient output performance remains within specified tolerances when steady-state ac input voltage varies plus 10, minus 15 percent from nominal voltage.

D. Overall UPS Efficiency: Equal to or greater than 94 percent at 100 percent load, 94 percent at 75 percent load, and 94 percent at 50 percent load.

E. Maximum Energizing Inrush Current: Eight times the normal full-load current.

F. Maximum AC Output-Voltage Regulation for Loads up to 50 Percent Unbalanced: Plus or minus 2 percent over the full range of battery voltage.

G. Programmable Walk-In current or time.

H. Output Frequency: 60 Hz, plus or minus 0.1 percent over the full range of input voltage, load, and battery voltage.

I. Limitation of harmonic distortion of input current to the UPS shall be as follows:

1. Rectifier-charger circuits must limit THD to 5 percent, maximum, at rated full-load UPS current, for power sources with X/R ratio between 2 and 30. Provide tuned harmonic filter if required to meet harmonic distortion limit.

J. Maximum Harmonic Content of Output-Voltage Waveform: 5 percent rms total and 3 percent rms for any single harmonic, for 100 percent rated nonlinear load current, with a load crest factor of 3.0.

K. Minimum Overload Capacity of UPS at Rated Voltage:

1. 125 percent of rated full load for 10 minutes, and 150 percent for 30 seconds in all operating modes

L. Maximum Output-Voltage Transient Excursions from Rated Value: For the following instantaneous load changes, stated as percentages of rated full UPS load, voltage shall remain within stated percentages of rated value and recover to, and remain within, plus or minus 2 percent of that value within 50 ms:

1. 50 Percent: Plus or minus 3 percent.
2. 100 Percent: Plus or minus 5 percent.
3. Loss of AC Input Power: Plus or minus 1 percent.
4. Restoration of AC Input Power: Plus or minus 1 percent.

M. Input Power Factor: A minimum of 0.95 lagging when supply voltage and current are at nominal rated values and the UPS is supplying rated full-load current without additional filters.

N. Output Power Factor Rating: 1.0. Loads with power factor of 0.9 leading to 0.8 lagging must not require derating of the UPS. For loads with power factors outside this range, derate the UPS output as follows:

1. Derate the UPS a maximum of 5 percent for 0.7 PF lagging.
2. Derate the UPS a maximum of 10 percent for 0.6 PF lagging.
3. Derate the UPS a maximum of 15 percent for 0.5 PF lagging.
4. Derate the UPS a maximum of 20 percent for a range of 0.4 to 0.1 PF lagging.

O. EMI Emissions: Comply with FCC Rules and Regulations and with 47 CFR 15 for Class A equipment.

2.05 SURGE SUPPRESSION

A. Protect internal UPS components from surges that enter at each AC power input connection including main disconnect switch, static bypass transfer switch, and maintenance bypass/isolations switch. Protect rectifier-charger, inverter, controls, and output components.

1. Use factory-installed surge suppressors tested in accordance with IEEE C62.41.1 and IEEE C62.41.2, Category B.

2.06 RECTIFIER-CHARGER

A. The UPS shall include an active power factor correction rectifier.

B. Capacity: Adequate to supply the inverter during rated full output load conditions and simultaneously recharge the battery from fully discharged condition to 80% of UPS output rating at <40% load or 20% of UPS output rating at 100% within 10 times the rated discharge time.

C. Output Ripple: Limited by output filtration to less than 0.5 percent of rated current, peak to peak.

D. Control Circuits: Immune to frequency variations within rated frequency ranges of normal and emergency power sources.

1. Response Time: Field adjustable for maximum compatibility with local generator-set power source.

E. Battery Float-Charging Conditions: Comply with battery manufacturer's written instructions for battery terminal voltage and charging current required for maximum battery life.

F. Input power factor shall be 0.98 lagging at 100% load without the use of passive filters. Rectifier shall employ electronic waveform control technology to maintain the current sinusoidal.

G. Pulse Width Modulation (PWM) current control shall be used. Digital Signal Processors (DSP) shall be used for all monitoring and control tasks. Analog control shall not be acceptable.

H. Nominal input voltage shall be as indicated on the Drawings.

2.07 INVERTER

A. Description: Pulse-width modulated using DSP logic.

B. The inverter modules shall be rated for an output power factor at 1.0.

C. Nominal output voltage shall be as indicated on the Drawings.

2.08 STATIC BYPASS TRANSFER SWITCH

A. Description: The static bypass switch shall consist of fully rated Silicon Controlled Rectifiers (SCRs). Partly rated SCRs with a wraparound contactor shall not be acceptable.

B. Switch Rating: Continuous duty at the rated full UPS load current, minimum.

C. The static bypass switch shall automatically transfer the load to bypass supply without interruption after the logic senses conditions noted in Operational Requirements sections above:

2.09 BATTERY

A. Description: Lithium ion, lightweight compact units factory assembled in cabinets.

1. Arrange for battery cabinets to be front-access only for installation, service, and maintenance.

2. Each battery cabinet shall feature a DC rated circuit breaker. The circuit breaker within the battery cabinet shall only provide protection to the battery string within that battery cabinet.

B. Battery Monitoring:

1. Battery monitoring shall be provided at system level.

2. The UPS shall incorporate a battery capacity test that will determine the available runtimes.

3. The Li-ion battery solution shall communicate with the UPS via dry contacts.

4. Battery monitoring shall be provided at the module, rack, and system level. Two switched-mode power supplies (SMPS) shall be included and shall provide power for the battery monitoring system. These SMPS shall be supplied by the Lithium-ion battery strings themselves.

a) The SMPS shall be 1+1 redundant design, so when any SMPS power supply unit is inoperable, it should give alarm signal to the UPS

2.10 ENCLOSURE

A. The UPS shall be housed in a freestanding cabinet with casters.

B. Dust filter shall be available in two versions for different dust protection capabilities.

C. The cable entry shall be from the top of the UPS. A bottom entry cabinet is available as an option.

D. The cabling section shall be large enough to accept copper, copper-clad aluminum, and aluminum cables.

E. The UPS shall have an ingress level of minimum IP20.

F. The UPS shall offer an option of using 2-hole lugs to prevent risk of lug rotation after cable connection.

G. Each battery cabinet shall feature a DC-rated circuit breaker. The circuit breaker within the battery cabinet shall only provide protection to the battery string within that battery cabinet.

H. The cabinet shall have a second layer of cover plate for high voltage areas and battery modules for operator safety protection.

I. The cabinet shall be designed for natural air cooling

J. The Lithium-ion battery cabinet must meet the unit level criteria listed in the UL9540A large scale fire test.

2.11 CONTROLS AND INDICATIONS

A. Description: Group displays, indications, and basic system controls on a common control panel on front of UPS enclosure.

B. A color touch screen display shall be located on the front of the UPS.

C. The following metered data shall be available on the display:

1. Year, month, day, hour, minute, second of occurring events.
2. Input voltage.
3. Input current.
4. Input frequency.
5. Output voltage.

6. Output current.
7. Output frequency.
8. Battery voltage.
9. Battery current.
10. Battery temperature.
11. Energy monitoring

D. The display shall allow the user to display active alarms.

E. The following controls or programming functions shall be accomplished by use of the display unit.

1. Silence audible alarm.Set the alphanumeric display language.Display and set the date and time.
2. Enable or disable the automatic restart feature.
3. Transfer load to and from static bypass.
4. Test battery condition on demand.

F. Alarms: The following alarms shall be available through the Web interface. The Web interface shall allow the Owner to display a log of active alarms. The following minimum set of alarm conditions shall be available:

G. Under temperature – Cell: Battery cell under temperature

1. Voltage imbalance – Cell: Battery cell voltage imbalance
2. Temperature imbalance: Battery cell temperature imbalance
3. Communication failure 1: Communication failure between module BMS and rack BMS
4. Communication failure 2: Communication failure between rack BMS and system BMS
5. Communication failure 3: Communication failure between system BMS and UI
6. Voltage sensing error: Rack voltage sending error
7. Current sensing error: Rack current sensor failure
8. Fuse failure: Rack fuse failure
9. SW failure MCCB: Rack MCCB failure
10. SW sensor failure MCCB: Rack MCCB failure (sensor)
11. LEDs for indication of operation mode.

H. Push button user controls:

1. Inverter ON.

2. Inverter OFF.

I. For purposes of remote communications with the UPS, a network management card shall be integrated.

J. The Lithium-Ion battery system shall be monitored at all times at the module, rack, and system level. Three different Building Management System (BMS)

1. **Module BMS:** Cell Voltage and Temperature Measurement, Communication to Rack BMS
2. Rack BMS: Rack Voltage and Current Measure, SOC and SOH Calculation, Protection Control
3. **System BMS**: Consolidation at system level and Communication

K. Main Protections:

1. Overvoltage: Cell voltage ≥ 4.28V, 5 sec
2. Undervoltage: Cell voltage <=2.5V, 5 sec
3. Overcurrent 1: >=470A 60 sec
4. Overcurrent 2: >=495A 30 sec
5. Overcurrent 3: >=540A 10 sec
6. Overcurrent 4: >=600A 1 sec
7. Voltage – Imb: Max cell ≥ 3.8V & Cell △>= 100mV, 5 sec
8. Temp – Imb: Max cell T – Min cell T ≥ 104°F, 30 sec
9. Fuse Failure: Fuse blown

2.12 CONTROLS AND MONITORING ACCESSIBILITY

A. Software and connectivity:

1. The Ethernet Web/SNMP Adaptor shall allow one or more network manage- ment systems (NMS) to monitor and manage the UPS in TCP/IP network envi- ronments. The management information base (MIB) shall be provided in MIB formats. The SNMP interface adaptor shall be connected to the UPS via the RJ45 serial port on the standard communication interface board.
2. The UPS shall offer a Modbus interface.
3. The UPS shall be equipped with eight dry contacts (four inputs, four outputs) for user-assignable alarms or remote monitoring.

B. Remote UPS monitoring

1. At least one method of remote UPS monitoring shall be available.

C. Software compatibility

1. The UPS manufacturer shall have available software to support shutdown and or remote monitoring for the following systems.

D. Emergency Power Off Switch: Capable of local operation and operation by means of activation by external dry contacts.

2.13 SOURCE QUALITY CONTROL

A. Factory test complete UPS system before shipment. Use simulated battery testing. Include the following:

1. Test and demonstration of all functions, controls, indicators, sensors, and protective devices.
2. Full-load test.
3. Transient-load response test.
4. Overload test.
5. Power failure test.

B. Observation of Test: Give 14 days' advance notice of tests and provide opportunity for Owner's representative to observe tests at Owner's choice.

C. Report test results. Include the following data:

1. Description of input source and output loads used. Describe actions required to simulate source load variation and various operating conditions and malfunctions.
2. List of indications, parameter values, and system responses considered satisfactory for each test action. Include tabulation of actual observations during test.
3. List of instruments and equipment used in factory tests.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer’s instructions.

B. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.

C. Connections: Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams unless otherwise indicated.

3.02 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for conditions affecting performance of the UPS.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 GROUNDING

A. Separately Derived Systems: If not part of a listed power supply for a data-processing room, comply with NFPA 70 requirements for connecting to grounding electrodes and for bonding to metallic piping near isolation transformer.

3.04 IDENTIFICATION

A. Identify components and wiring according to Division 26 Section "Identification for Electrical Systems."

1. Identify each battery cell individually.

3.05 BATTERY EQUALIZATION

A. Equalize charging of battery cells according to manufacturer's written instructions. Record individual-cell voltages.

3.06 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Comply with manufacturer's written instructions.
2. Inspect interiors of enclosures, including the following:
3. Integrity of mechanical and electrical connections.
4. Component type and labeling verification.
5. Ratings of installed components.
6. Inspect batteries and chargers according to requirements in NETA Acceptance Testing Specifications.
7. Test manual and automatic operational features and system protective and alarm functions.
8. Test communication of status and alarms to remote monitoring equipment.
9. Load the system using a variable-load bank to simulate kilovolt amperes, kilowatts, and power factor of loads for unit's rating. Use instruments calibrated within the previous six months according to NIST standards.

10. Simulate malfunctions to verify protective device operation.

11. Test duration of supply on emergency, low-battery voltage shutdown, and transfers and restoration due to normal source failure.

12. Test harmonic content of input and output current less than 25, 50, and 100 percent of rated loads.

13. Test output voltage under specified transient-load conditions.

14. Test efficiency at 50, 75, and 100 percent of rated loads.

15. Test remote status and alarm panel functions.

16. Test battery-monitoring system functions.

D. The UPS system will be considered defective if it does not pass tests and inspections.

E. Record of Tests and Inspections: Maintain and submit documentation of tests and inspections, including references to manufacturers' written instructions and other test and inspection criteria. Include results of tests, inspections, and retests.

F. Prepare test and inspection reports.

3.07 PERFORMANCE TESTING

A. Monitoring and Testing Schedule: Perform monitoring and testing in a single 10-day period .

1. Schedule monitoring and testing activity with Owner, through Architect, with at least 14 days' advance notice.

2. Schedule monitoring and testing after Substantial Completion, when the UPS is supplying power to its intended load.

B. Monitoring and Testing Instruments: Three-phase, recording, power monitors. Instruments shall provide continuous simultaneous monitoring of electrical parameters at UPS input terminals and at input terminals of loads served by the UPS. Instruments shall monitor, measure, and graph voltage current and frequency simultaneously and provide full-graphic recordings of the values of those parameters before and during power-line disturbances that cause the values to deviate from normal beyond the adjustable threshold values. Instruments shall be capable of recording either on paper or on magnetic media and have a minimum accuracy of plus or minus 2 percent for electrical parameters. Parameters to be monitored include the following:

1. Current: Each phase and neutral and grounding conductors.

2. Voltage: Phase to phase, phase to neutral, phase to ground, and neutral to ground.

3. Frequency transients.

4. Voltage swells and sags.

5. Voltage Impulses: Phase to phase, phase to neutral, phase to ground, and neutral to ground.
6. High-frequency noise.
7. Radio-frequency interference.
8. THD of the above currents and voltages.
9. Harmonic content of currents and voltages above.

C. Monitoring and Testing Procedures for Each Test Period:

1. Exploratory Period: For the first two days of the first scheduled monitoring and testing period, make recordings at various circuit locations and with various parameter-threshold and sampling-interval settings. Make these measurements with the objective of identifying optimum UPS, power system, load, and instrumentation setup conditions for subsequent test and monitoring operations.
2. Remainder of Test Period: Perform continuous monitoring of at least two circuit locations selected on the basis of data obtained during exploratory period.
3. Set thresholds and sampling intervals for recording data at values selected to optimize data on performance of the UPS for values indicated, and to highlight the need to adjust, repair, or modify the UPS, distribution system, or load component that may influence its performance or that may require better power quality.
4. Perform load and UPS power source switching and operate the UPS on generator power during portions of test period according to directions of Owner's power quality specialist.
5. Operate the UPS and its loads in each mode of operation permitted by UPS controls and by the power distribution system design.
6. Using loads and devices available as part of the facility's installed systems and equipment, create and simulate unusual operating conditions, including outages, voltage swells and sags, and voltage, current, and frequency transients. Maintain normal operating loads in operation on system to maximum extent possible during tests.
7. Make adjustments and repairs to UPS, distribution, and load equipment to correct deficiencies disclosed by monitoring and testing and repeat appropriate monitoring and testing to verify success of corrective action.

D. Coordination with Specified UPS Monitoring Functions: Obtain printouts of built-in monitoring functions specified for the UPS and its components in this Section that are simultaneously recorded with portable instruments in this article.

1. Provide the temporary use of an appropriate PC and printer equipped with required connections and software for recording and printing if such units are not available on-site.

2. Coordinate printouts with recordings for monitoring performed according to this article, and resolve and report any anomalies in and discrepancies between the two sets of records.

E. Monitoring and Testing Assistance by Contractor:

1. Open UPS and electrical distribution and load equipment and wiring enclosures to make monitoring and testing points accessible for temporary monitoring probe and sensor placement and removal as requested.

2. Observe monitoring and testing operations; ensure that UPS and distribution and load equipment warranties are not compromised.

3. Perform switching and control of various UPS units, electrical distribution systems, and load components as directed by power quality specialist. Specialist shall design this portion of monitoring and testing operations to expose the UPS to various operating environments, conditions, and events while response is observed, electrical parameters are monitored, and system and equipment deficiencies are identified.

4. Make repairs and adjustments to the UPS and to electrical distribution system and load components, and retest and repeat monitoring as needed to verify validity of results and correction of deficiencies.

5. Engage the services of the UPS manufacturer's factory-authorized service representative periodically during performance testing operations for repairs, adjustments, and consultations.

F. Documentation: Record test point and sensor locations, instrument settings, and circuit and load conditions for each monitoring summary and power disturbance recording. Coordinate simultaneous recordings made on UPS input and load circuits.

G. Analysis of Recorded Data and Report: Review and analyze test observations and recorded data and submit a detailed written report. Include the following in each report:

1. Description of corrective actions performed during monitoring and survey work and their results.

2. Recommendations for further action to provide optimum performance by the UPS and appropriate power quality for non-UPS loads. Include a statement of priority ranking and a cost estimate for each recommendation that involves system or equipment revisions.

3. Copies of monitoring summary graphics and graphics illustrating harmonic content of significant voltages and currents.

4. Copies of graphics of power disturbance recordings that illustrate findings, conclusions, and recommendations.

5. Recommendations for operating, adjusting, or revising UPS controls.

6. Recommendation for alterations to the UPS installation.

7. Recommendations for adjusting or revising generator-set or automatic transfer switch installations or their controls.

8. Recommendations for power distribution system revisions.

9. Recommendations for adjusting or revising electrical loads, their connections, or controls.

H. Interim and Final Reports: Provide an interim report at the end of each test period and a final comprehensive report at the end of final test and analysis period.

3.08 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the UPS.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. This section includes transfer switches rated 600 V and less, including the following:

1. Automatic transfer switches.
2. Bypass/isolation switches.
3. Nonautomatic transfer switches.
4. Remote annunciation systems.
5. Remote annunciation and control systems.

B. This section does not include the following:

1. Double throw (manual type) switches. Refer to Division 26 section "Enclosed Switches and Circuit Breakers" for this equipment.

1.02 DEFINITIONS

A. Closed Transition (Make–Before–Break): In a switching device, a configuration in which the new connection path is established before the previous contacts are opened. This prevents the switched path from ever seeing an open circuit.

B. Open Transition (Break-Before-Make): A switch that is configured to break (open) the first set of contacts before engaging (closing) the new contacts. This prevents the momentary connection of the old and new circuit paths together.

C. Withstand duration: The withstand rating value is the level of fault current that must be withstood for a specified length of time, i.e., 42000 amps at 3 cycles.

D. Level 1 Equipment: Level 1 is the more stringent NFPA emergency life safety requirement and is imposed when failure of the emergency system, including the transfer equipment could result in loss of human life or serious injury.

E. Level 2 Equipment: Level 2 is the less stringent NFPA emergency life safety requirement and is imposed when failure of the emergency system including the transfer equipment is less critical to human life safety.

F. NETA ATS: InterNational Electrical Testing Association Acceptance Testing Specification.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of electrical equipment with other construction that penetrates walls or is supported by them, including electrical and other types

of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Overcurrent Protective Device Coordination Study"

1.04 SUBMITTALS

A. Product Data: For each type of transfer switch, switching and overcurrent protective device, instrumentation, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each transfer switch and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.

    a) Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

2. Detail enclosure types and details for other than NEMA 250, Type 1.

3. Include general arrangement drawing showing dimensions and weights of each assembled section.

4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses. Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.

5. Detail short-circuit current rating of transfer switch assembly and overcurrent protective devices.

6. Include descriptive documentation of barriers specified for electrical insulation and isolation.

7. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

8. Include time-current coordination curves for each type and rating of overcurrent protective device included in transfer switch; include

selectable ranges for each type of overcurrent protective device. Submit electronic files, in an SKM-compatible format.

9. Include schematic and wiring diagrams for power, signal, and control wiring.

10. Include nameplate legends.

11. Include list of materials.

C. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around transfer switches where pipe and ducts are prohibited. Show transfer switch layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

1. For each equipment room, provide dimensioned layout of the electrical equipment within the space, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved.

2. Dimensioned concrete base, outline of transfer switch, conduit entries, and ground rod locations; including equipment working clearances and manufacturer required access space.

3. Indicate structural members, light fixtures, sprinkler piping and heads, HVAC equipment, ducts and diffusers, plumbing piping and access fittings. Include maintenance access clearances.

4. Location of structural supports for structure-supported raceways.

5. Location and clearance of electrical equipment and raceways impacting equipment installation.

6. Proposed routing of equipment, in shipping splits, from exterior of the building to the final installed location. Include product weights, width and height restrictions encountered along the path. Include intended construction sequencing to mitigate conflicts.

7. Proposed routing of equipment for future removal, from within equipment room to exterior of the building without removal of non-related equipment or architectural elements.

D. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.

E. Qualification Data: For qualified manufacturer and testing agency.

F. Factory test reports.

G. Field Quality-Control Reports:

1. Test procedures used.

2. Test results that comply with requirements.

H. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

I. Manufacturer's field service report.

J. Sample Warranty: For warranties.

K. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.

L. Operation and Maintenance Data: For transfer switches to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for transfer switches and all installed components.

2. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.

3. Time-current curves; include selectable ranges for each type of overcurrent protective device. Provide relay-settings and calibration instructions, including software, where applicable.

4. Features and operating sequences, both automatic and manual.

5. Video recording of operation training and demonstration.

M. Follow-up service reports.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Source Limitations: Obtain automatic transfer switches through one source from a single manufacturer. The manufacturer furnishing the generator shall be the same supplier of the transfer switch. The transfer switch circuit breaker (if

present) shall be coordinated with the generator circuit breaker to provide coordinated tripping.

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Comply with NEMA ICS 1.

G. Comply with NFPA 70.

H. Comply with NFPA 110.

I. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.06 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Environmental Limitations:

1. Do not deliver or install transfer switches until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above equipment is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

a) Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C) .

b) Altitude: Not exceeding 6600 feet.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving equipment into place.

B. Deliver transfer switches in sections or lengths that can be moved past obstructions in delivery path.

C. Coordinate delivery of equipment to allow movement into designated space.

D. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy

canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.

E. Handle and prepare transfer switch components according to manufacturer's written instructions. Use factory-installed lifting provisions.

1.08 WARRANTY

A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of the Transfer Switch that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a) Damage from transient voltage surges.

B. Warranty Period: Cost to repair or replace any parts for two years from date of Substantial Completion.

C. Extended Warranty Period: Cost of replacement parts (materials only, f.o.b. the nearest shipping point to Project site), for eight years, that failed in service due to transient voltage surges.

1.09 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Indicating Lights: Four of each type installed.
2. Switching Contact Lubricant: One container.
3. Alarm Contacts: Equal to 10 percent of quantity supplied, but no fewer than two of each type.
4. Touchup Paint: Two containers of paint matching enclosure finish, each 0.5 pint (250 mL).
5. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

PART 2 - PRODUCTS

2.01 GENERAL

A. Manufacturers:

1. Contactor Transfer Switches:

a) Caterpillar; Engine Div.

b) Eaton Electrical Inc.; Cutler-Hammer

c) Emerson; ASCO Power Technologies, LP.

d) GE Zenith Controls.

e) Kohler Power Systems; Generator Division.

f) Onan/Cummins Power Generation; Industrial Business Group.

g) Russelectric, Inc.

h) Spectrum Detroit Diesel.

B. Indicated Voltage and Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated. Voltage ratings shall be consistent with applications from 115 volts AC to 600 volts and single or three phase as required by the application. Current ratings and the number of poles shall be as indicated on the plans.

C. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.

2. Where the transfer switch internal fault-current protection can not exceed the indicated fault-current values, an enclosed fused switch with current limiting fuses shall be installed ahead of the transfer switch.

D. Controls: Solid State control having repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C. All internal controls components shall be accessible from the equipment front.

E. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

F. Electrical Operation: Accomplish by a non-fused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

G. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Switch Action: Double throw; mechanically held in both directions.

2. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

H. Neutral Terminal: Solid and fully rated bus bar, unless otherwise indicated.

I. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. All factory wiring shall be accessible from the equipment front. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."

1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.

2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated. Power terminals shall be rated for 90 degree C and copper or aluminum cable.

3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

J. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

K. Bus and Wiring: All Bus and cable /control wire shall be copper.

L. Cable Entry: Cable entry shall be from the top.

2.02 AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

D. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

E. Automatic open-transition transfer switches: Include the following functions and characteristics:

1. Fully automatic break-before-make.

F. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.

G. Automatic Transfer-Switch Features:

1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.

2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.

3. Frequency: Monitor the frequency of the incoming normal power circuit. For the normal source, initiate transfer if the frequency varies more that 5% from the rated nominal value. For the emergency source, inhibit transfer if the normal source circuit frequency varies more that 5% from the rated nominal value.

4. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.

5. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.

6. Test Switch: Simulate normal-source failure.

7. Switch-Position Pilot Lights: Indicate source to which load is connected.

8. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.

   a) Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."

   b) Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."

9. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.

10. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.

11. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum. Engine starting contact shall remotely start the generator immediately upon initiation by the normal source monitor.

12. Engine Shutdown Contacts: Instantaneous; shall initiate shutdown sequence at remote engine-generator controls after retransfer of load to normal source.

13. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:

    a) Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.

    b) Push-button programming control with digital display of settings.

    c) Integral battery operation of time switch when normal control power is not available.

14. Elevator Application: Provide the following functions if automatic transfer is for elevator control:

    a) Auxiliary contact closure upon the transfer to the alternate source to signal the elevator controller(s) for emergency operation.

    b) Auxiliary contact closure, adjustable from 0 to 20 seconds before retransfer to normal source to allow for elevator motor-generator sets to disconnect from the power source.

    c) Auxiliary contact closure, adjustable from 0 to 20 seconds before testing transfer operation to signal the elevator controller(s) for emergency operation.

2.03 BYPASS/ISOLATION SWITCHES

A. Comply with requirements for Level 1 equipment according to NFPA 110.

B. Description: Manual type, arranged to select and connect either source of power directly to load, isolating transfer switch from load and from both power sources. Bypass/Isolation switch shall have main contacts and operating mechanism similar to the Automatic Transfer Switch except all operations shall be manual. Include the following features for each combined automatic transfer switch and bypass/isolation switch:

1. Means to lock bypass/isolation switch in the position that isolates transfer switch with an arrangement that permits complete electrical testing of transfer switch while isolated. While isolated, interlocks prevent transfer-switch operation, except for testing or maintenance.

2. Bypass/Isolation Switch Configuration, Current, Voltage, Closing, and Short-Circuit Withstand Ratings: Equal to or greater than those of associated automatic transfer switch, and with same phase arrangement and number of poles.

3. Contact temperatures of bypass/isolation switches shall not exceed those of automatic transfer-switch contacts when they are carrying rated load.

4. Operability: Constructed so load bypass and transfer-switch isolation can be performed by 1 person in no more than 2 operations in 15 seconds or less. Operation of the bypass/isolation switch shall be allowed regardless of the position of the automatic transfer switch. Switch operation shall provide for positive and complete sequencing of all contact motion and shall prevent any form of intermediate stop or delayed motion.

5. Engine Run Circuit Interface: There shall be sufficient controls included to assure that the engine run circuit remains closed when the switch is in the bypass-to-emergency position even though the associated transfer switch is in the normal position or completely removed from the enclosure.

6. Legend: Manufacturer's standard legend for control labels and instruction signs shall describe operating instructions.

7. Maintainability: Fabricate to allow convenient removal of major components from front without removing other parts or main power conductors. If the unit is constructed such that removal of components is not allowed, then the Automatic Transfer Switch section shall be isolated from the Bypass Isolation Switch section by means of insulated barriers.

8. The bypass isolation switch shall be provided with indicating lights identifying location in bypass position, full isolation position, and source availability.

C. Interconnection of Bypass/Isolation Switches with Automatic Transfer Switches: Factory-installed copper bus bars; plated at connection points and braced for the indicated available short-circuit current.

D. The bypass isolation switch maybe located in the same enclosure as the automatic transfer switch or maybe located separately in a dedicated enclosure adjacent to the automatic transfer switch enclosure.

E. The bypass/isolation switch shall maintain a mechanical separation of the normal and emergency power sources to guard against the inadvertent connection of unsynchronized sources together. Electrical interlocking alone will not be considered acceptable.

2.04 REMOTE ANNUNCIATOR SYSTEM

A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:

1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.

2. Switch position.

3. Switch in test mode.

4. Failure of communication link.

B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.

1. Indicating Lights: Grouped for each transfer switch monitored.

2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.

3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.

4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.05 SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

2.06 IDENTIFICATION

A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine transfer switches before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.

B. Examine areas, surfaces, substrates, and elements to receive transfer switches with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that field measurements are as indicated.

2. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.

C. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.

2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install transfer switches and accessories in accordance with manufacturer's instructions.

B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

C. Wall-Mounted Switch: Install transfer switches on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For transfer switches not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

D. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.

E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from enclosure and components.

1) Examine areas and conditions for compliance with requirements for medium-voltage transformers.

2) Examine roughing-in of conduits and grounding systems to verify the following:

(a) Wiring entries comply with layout requirements.

(b) Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

3) Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

4) Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be {CH#139615} ohms at location of transformer.

5) Proceed with installation only after unsatisfactory conditions have been corrected.

F. Mount equipment plumb and rigid without distortion of enclosure.

G. Arrange conductors in auxiliary compartments and gutters into groups and bundle and wrap with wire ties.

H. Comply with NECA 1.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

3.04 IDENTIFICATION

A. Equipment Nameplates: Label each contiguous main, or entrance, section with equipment nameplate.

B. Device Nameplates: Label each main and bypass device with a nameplate.

C. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

D. Diagram and Instructions:

1. Engraved, Laminated Acrylic or Melamine Label . Mount on front of transfer switch.

a) Operating Instructions: Printed operating instructions for transfer switch, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.

b) System Power One-Line Diagrams: Provide color-coded, large-format one-line diagram showing the new work is to be provided and installed in the associated electrical room. Depict power sources, feeders, distribution components, and major loads.

2. Storage for Maintenance Instructions: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

E. Warning Labels: Label each panelboard with a warning label in accordance with NFPA 70 and NFPA 70E.

3.05 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

3.06 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

3.07 ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.08 FIELD QUALITY CONTROL

A. Testing: Perform the following field quality-control tests and inspections.

B. Coordinate tests with tests of generator and run them concurrently.

C. Acceptance Testing Preparation:

1. After installing equipment but before equipment is energized, test for compliance with requirements.
2. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.
3. Test continuity of each circuit.

D. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
2. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
    a) Check for electrical continuity of circuits and for short circuits.
    b) Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
    c) Verify that manual transfer warnings are properly placed.
    d) Perform manual transfer operation.
3. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
    a) Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
    b) Verify time-delay settings.
    c) Verify pickup and dropout voltages by data readout or inspection of control settings.
    d) Test bypass/isolation unit functional modes and related automatic transfer-switch operations.

e) Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

4. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

5. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

E. Assist in field commissioning of equipment including pretesting and adjusting of equipment and components.

F. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

G. Transfer switches will be considered defective if they do not pass tests and inspections.

H. Prepare test and inspection reports, including a certified report that identifies transfer switches included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.09 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment, instrumentation, and accessories, and to use and reprogram microprocessor-based control, monitoring, and display functions.

B. Video record demonstrations presentation for Owner’s records.

C. Coordinate this training with that for generator equipment.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Permanently installed connection cabinets/docking stations with provisions for temporary power connections to portable equipment.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordinate layout and installation of electrical equipment with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Concrete, reinforcement, and formwork requirements are specified in Division 03.

C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section “Overcurrent Protective Device Coordination Study”

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product, including ratings, configurations, dimensions, finishes, weights, service condition requirements, and installed features.

B. Shop Drawings: Include dimensioned plan views and sections indicating locations of system components, required clearances, and field connection locations. Include system interconnection schematic diagrams showing factory and field connections.

C. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.

D. Operation and Maintenance Data: Include detailed information on system operation, replacement parts, and recommended maintenance procedures and intervals.

E. Project Record Documents: Record actual locations of system components, installed circuiting arrangements and routing, and final equipment settings.

F. Warranty

1.04 QUALITY ASSURANCE

A. Comply with the following:

1. NFPA 70.

2. Applicable local codes.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

C. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store in clean, dry space. Maintain factory wrapping or provide additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with manufacturer's instructions to avoid damage to components, enclosure, and finish.

1.06 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.07 WARRANTY

A. Provide minimum two year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. ESL Power Systems, Inc.; www.eslpwr.com

B. Foxfab Power Solutions; www.foxfab.com/#sle.

C. Schneider Electric; ASCO Power Technologies: www.ascopower.com/#sle.

D. Trystar; Trystar.com

2.02 CONNECTION CABINETS/DOCKING STATIONS

A. Description: Cabinets with provisions for temporary facility connection to portable generators and/or load banks.

B. General Requirements:

1. Listed as complying with UL 1008.
2. Temporary Connectors:
    a) Camlocks: Single-pole, series 16; 400 A rated.
    b) Lugs: Single-pole, mechanical type.
3. Input Camlock Connections for Generator: For each row, provide five camlock connectors (one for each phase, one for neutral, and one for ground).
4. Output Camlock Connections for Load Bank: For each row, provide four camlock connectors (one for each phase and one for ground).
5. Camlock Connector Color Code:
    a) 277 V to 480 V:
        1) Phase 1: Brown.
        2) Phase 2: Orange.
        3) Phase 3: Yellow.
    b) Neutral: White.
    c) Ground: Green.
6. Equipment Ground: Bonded to enclosure.
7. Bus Bar:
    a) Material: Tin-plated copper, unless otherwise indicated.
    b) Provide permanent connection to facility with mechanical set screw lugs.
8. Neutral Configuration:
    a) Input for Generator: 100 percent rated.
    b) Output for Load Bank: No neutral.

9. Temporary Cable Provisions: Provide access wiring entry/exit for conductors, with no sharp edges that may come in contact with conductor insulation.

C. Enclosure:

1. Material: Aluminum.
2. NEMA EN 10250 Rating: Type 3R.
3. Front Door: Lockable; capable of securing connection cables when locked.
4. Temporary Cable Access Panel: Hinged plate for bottom entry, mechanically interlocked with front door.
5. Finish Color: Manufacturer's standard.

D. Short Circuit Current Rating: Where not specified, provide connection cabinet with listed short circuit current rating not less than available fault current at installed location as indicated on drawings.

E. Connection Cabinet:

1. Input/Output Configurations: Input for generator, male camlocks.
2. Main Disconnect: Sized as indicated on drawings..
3. Ground: Minimum 25 percent rated.
4. Phase Poles: As indicated on drawings.
5. Ampere Rating: As indicated on drawings.
6. Voltage for Color Codes: As indicated on drawings.
7. Mounting Configuration: Wall mounted.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with NECA 1 for general workmanship.

B. Install products in accordance with manufacturer's instructions.

C. Arrange equipment to provide minimum clearances and required maintenance access; provide adequate space for temporary cable connections.

D. Provide required support and attachment; see Section 26 0529.

E. Install connection cabinets plumb and level.

F. Unless otherwise indicated, mount floor-mounted connection cabinets on properly sized concrete pad 3 inches in height.

G. Provide grounding and bonding; see Section 26 0526.

H. Provide identification; see Section 26 0553.

1. Identify system wiring and components.

2. Connection Cabinets for Portable Generators:

a) Use identification nameplate to identify phase rotation.

b) Use warning label or identification nameplate to identify system bonding requirements in accordance with NFPA 70.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes requirements for UL 96A Master Labeled lightning protection system consisting of air terminals on roofs, roof mounted mechanical equipment, stacks, bonding of structure and miscellaneous metal objects; Grounding electrodes; and interconnecting conductors.

B. System Design: Contractor shall perform all calculations and develop all plan and detail drawings required, in conjunction with these specifications, for installation of a complete and fully functional lightning protection system.

1.02 CODES, REFERENCES AND STANDARDS

A. Applicable Codes and Standards

1. NFPA 70 – National Electrical Code
2. UL 96 – Lightning Protection Components
3. UL 96A – Installation requirements for Lightning Protection Systems
4. NFPA 780 – Lightning Protection Systems
5. LPI 175 – Standard of Practice for the Design – Installation – Inspection of Lightning Protection Systems

1.03 DEFINITIONS

A. The following definitions apply to terms used in this section:

1. Air Terminal: A strike termination device that is a receptor for attachment of flashes to the lightning protection system and is UL listed for that purpose.
2. Bonding: An electrical connection between an electrically conductive object and a component of a lightning protection system that is intended to significantly reduce potential differences created by lightning currents.
3. Class I Materials: Lightning conductors, air terminals, ground terminals, and associated fittings required by NFPA 780 for protection of structures not exceeding 75 feet in height.
4. Class II Materials: Lightning conductors, air terminals, ground terminals, and associated fittings required by NFPA 780 for the protection of structures exceeding 75 feet in height.
5. Bonding conductor: A conductor intended to be used for equalization between grounded metal bodies and a lightning protection system.

6. Main conductor: A conductor intended to be used to carry lightning currents between strike termination devices (air terminals) and ground terminals.

7. UL: Underwriters Laboratories, Inc.

8. LPI: Lightning Protection Institute

1.04 SUBMITTALS

A. Product Data: Submit product data showing dimensions and materials of each component including listing in accordance with UL 96A.

B. Shop Drawings: For air terminals and mounting accessories.

1. Layout of the lightning protection system showing layout of air terminals grounding electrodes, and bonding connections, along with details of the components to be used in the installation.

2. Include indications for use of raceway, conductor sizes, roof and/or floor penetrations, data on how concealment requirements will be met, and calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.

3. Layout and installation drawings shall be fully coordinated with other trades. Failure of the lightning protection contractor to perform this coordination shall not relieve said contractor from properly completing the work.

C. Qualification Data: For qualified manufacturer. Include data on listing or certification by UL.

1. Manufacturer: A company specializing in lightning protection equipment with minimum 3 years documented experience and membership in good standing with the Lightning Protection Institute.

D. Certification, signed by Contractor, that roof adhesive is approved by manufacturer of roofing material.

E. Field quality-control reports.

F. Comply with recommendations in NFPA 780, Annex D, "Inspection and Maintenance of Lightning Protection Systems," for maintenance of the lightning protection system.

G. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features, including the following:

1. Ground rods.

2. Ground loop conductor.

1.05 QUALITY ASSURANCE

A. Installer Qualifications:

1. Certified by UL, trained and approved for installation of units required for this Project.

2. The contractor shall be recognized as being regularly engaged in the design and installation of lightning protection systems with a minimum of 3 years documented experience.

3. Include documentation of certification and experience with all submitted bids.

B. System Certificate:

1. UL Master Label.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 780, "Definitions" Article.

1.06 COORDINATION

A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.

C. Flashings of through-roof assemblies shall comply with roofing manufacturers' specifications.

PART 2 - PRODUCTS

2.01 LIGHTNING PROTECTION SYSTEM COMPONENTS

A. All materials used in the installation shall be new and shall comply in weight, size, and composition with UL 96 and NFPA 780. Materials shall be labeled or listed by UL for use on lightning protection systems.

B. Roof-Mounted Air Terminals: NFPA 780, Class I, aluminum unless otherwise indicated.

1. Available Manufacturers:

a) East Coast Lightning Equipment Inc.

b) ERICO International Corporation.

c) Harger.

d) Heary Bros. Lightning Protection Co. Inc.

e) Independent Protection Co.

f) Preferred Lightning Protection.

g) Robbins Lightning, Inc.

h) Thompson Lightning Protection, Inc.

i) VFC

2. Air Terminals More than 24 Inches (600 mm) Long: With brace attached to the terminal at not less than half the height of the terminal.

C. Main and Bonding Conductors: Copper and Class I.

D. Ground Rods: Copper-clad steel; 3/4 inch in diameter by 10 feet long.

2.02 SURGE PROECTIVE DEVICES

A. Surge Protective Devices SPD's required to meet UL 96A for UL Master Labeling shall be as specified in Division 26 Section "Surge Protective Devices".

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install lightning protection components and systems according to UL 96A and NFPA 780.

C. Install conductors with two direct paths from air terminals to ground connections. Avoid sharp bends. Follow the manufacturer's written installation instructions.

D. Conceal the following conductors:

1. System conductors.

2. Down conductors.

3. Interior conductors.

4. Conductors within normal view of exterior locations at grade within 200 feet of building.

E. Cable Connections: Use crimped or bolted connections for all conductor splices and connections between conductors and other components. Use exothermic-welded connections in underground portions of the system.

F. Air Terminals on Single-Ply Membrane Roofing: Comply with roofing membrane and adhesive manufacturer's written instructions.

G. Air Terminals on Mechanical Equipment: Air terminals on mechanical equipment shall be mounted such that maintenance operations can be performed without relocation of the air terminal or interconnecting conductors.

H. Bond extremities of vertical metal bodies exceeding 60 feet in length to lightning protection components.

I. Ground Loop: Install ground-level, potential equalization conductor and extend around the perimeter of structure.

1. Bury ground ring not less than 24 inches from building foundation.

2. Bond ground terminals to the ground loop.

3. Bond grounded building systems to the ground loop conductor within 12 feet of grade level.

4. Interconnect lightning protection ground loop with the building electrical service grounding electrode system at one place only.

J. Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot (18-m) intervals.

3.02 CORROSION PROTECTION

A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.

B. Use conductors with protective coatings where conditions cause deterioration or corrosion of conductors.

3.03 FIELD QUALITY CONTROL

A. Notify Architect at least 48 hours in advance of inspection before concealing lightning protection components.

B. UL Inspection: Meet requirements to obtain a UL Master Label for system.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. This section includes field or factory-mounted Surge Protective Devices (SPDs) for low-voltage (120 to 600 V) power distribution and control equipment, including:

1. Surge Protection Devices at Service Entrance Equipment
2. Surge Protection Devices at Distribution Equipment
3. Surge Protection Devices at Branch Panelboards
4. Surge Protection Devices at Utilization Equipment
5. Surge Protection Devices in Electronic-Grade Panelboards

1.02 DEFINITIONS

A. ATS: Acceptance Testing Specifications.

B. I*n* or In or I*nominal*: Nominal Discharge Current. Peak value of surge current, selected by the manufacturer, through the SPD having current wave shape of 8/20 microseconds where the SPD remains functional after 15 surges. I*n* is posted on the device UL label.

C. MCOV: Maximum Continuous Operating Voltage. The maximum continuous operating voltage rating of a Metal Oxide Varistor (MOV) that can be applied without the MOV being damaged and/or destroyed by thermal runaway. MCOV is posted on the device UL label.

D. SCCR: Short Circuit Current Rating. The maximum current rating the SPD can sustain without being damaged and/or destroyed. SCCR is posted on the device UL label.

E. SPD: Surge Protective Device: A broad class of protective devices, installed parallel with the distribution panel or service disconnect, meant to protect downstream electrical distribution equipment from the effects of high voltage surges on the line.

F. SPD Type definitions:

1. TYPE 1: Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including watt-hour meter socket enclosures and intended to be installed without an external overcurrent protective device. Type 1 devices are required for

Master Certification of Lightning Protection System installations under UL 96A.

2. TYPE 2: Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch circuit panel.

3. TYPE 3: Point-of-utilization SPDs, installed at a minimum conductor length of 10 meters (30 feet) from the electrical service panel to the point of utilization, e.g., cord-connected, direct plug-in, receptacle type and SPDs installed at the utilization equipment being protected. The distance (10 meters or 30 feet) is exclusive of conductors provided with or used to attach SPD's.

4. TYPE 4: Component SPDs, including discrete components as well as component assemblies for installation on panelboards or control panels.

G. VPR: Voltage Protection Rating. The average of measured limiting voltage before and after Nominal Discharge Testing (In),) rounded up to one of UL's VPR categories (Indicated in the latest ANSI/UL 1449 edition) such as 330 volt, 400 volt, 500 volt, etc. VPR is posted on each device UL label.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate SPD devices with Division 26 Section "Electrical Power Monitoring and Control."

B. Coordinate layout and installation of SPDs and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access.

C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Overcurrent Protective Device Coordination Study".

D. Do not energize or connect any electrical or low voltage equipment to their sources until SPDs are installed and connected.

E. Do not perform insulation resistance tests of the distribution wiring equipment with the SPD installed. Disconnect before conducting insulation resistance tests and reconnect immediately after the testing is over.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Division 01 and Division 26 Section “General Electrical Requirements”.

B. Product Data: For each SPD type, accessory, component and enclosure indicated. Include dimensions and Manufacturer’s technical data on features, performance, electrical characteristics, ratings, weights, furnished options, specialties, accessories, and finishes. Tabulate model number, SPD type, system voltage, phases, modes of protection, MCOV, VPR, and I_n.

C. Shop Drawings: For SPDs.

1. Detail enclosure types and details.
2. Include general arrangement drawing showing dimensions and weights of each assembled device.
3. Include installation and mounting details for SPDs internal to equipment.
4. Detail bus connection configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus.
5. Detail short-circuit current rating of SPD assembly and overcurrent protective devices.
6. Include schematic and wiring diagrams for power, signal, and control wiring.
7. Include insertion loss bode plots.
8. Include nameplate legends.
9. Include list of materials.

D. Product Certificates: For SPD devices, from manufacturer.

E. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.

F. Qualification Data: For qualified testing agency.

G. Field quality-control reports.

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

H. Manufacturer's field service report.

I. Sample Warranty: For warranty.

J. Project Record Documents: Record actual installed equipment and circuiting arrangements.

K. Operation and Maintenance Data: For SPD devices to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for SPDs and all installed components.
2. Manufacturer's written instructions for testing and adjusting SPDs.
3. Time-current curves for each type of overcurrent protective device.
4. Features and operating sequences, both automatic and manual.
5. Video recording of operation training and demonstration.

L. Follow-up service reports.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member Company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."

C. Source Limitations: Obtain SPDs of each type and associated components and accessories through one source from a single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.

E. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.

F. Comply with NEMA LS 1.

G. Comply with UL 1283 and ANSI/ UL 1449.

H. Comply with NFPA 70.

I. The SPD shall be compliant with the restrictions of the Hazardous Substances (RoHS) Directive 2002/95/EC.

1.06 PROJECT CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Environmental Limitations:

1. Do not install SPDs until spaces are enclosed and weathertight. Equipment shall be protected from any remaining wet work in the space and work above equipment. Provide temporary HVAC

system for maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

a) Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).

b) Operating Temperature: 30 to 120 deg F (0 to 50 deg C).

c) Humidity: 0 to 85 percent, noncondensing.

d) Altitude: Less than 20,000 feet (6090 m) above sea level.

C. Interruption of Existing Electrical Service: Refer to Division 26, Section “General Electrical Requirements”.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish.

B. Handle and prepare SPD components according to manufacturer's written instructions.

1.08 WARRANTY

A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Replaceable Protection Modules: One of each size and type installed.

PART 2 - PRODUCTS

2.01 GENERAL

A. Internally mounted and externally mounted SPD’s shall be provided by the same manufacturer. Coordinate with switchboard and panelboard manufacturers as required.

B. Manufacturers:

1. ABB USA.
2. Eaton
3. Intermatic, Inc.
4. LEA International.
5. Leviton Mfg. Company Inc.
6. Siemens.
7. Schneider Electric.
8. Surge Suppression Incorporated.
9. Vertiv.

C. Surge Protective Device Ratings: Device type ratings shall be:

1. Type 1 - Service entrances
2. Type 2 - Service entrance equipment or distribution equipment
3. Type 3 - Utilization equipment or point of use.

D. Nominal System Voltage: Match the system voltage to which the SPD is connected, as indicated on the drawings.

E. Maximum Continuous Operating Voltage: Not less than 125 percent of nominal system voltage for 240V or less power systems, and not less than 115 percent of nominal system voltage for 600V and 480V power systems.

F. Comply with ANSI/UL 1449.

G. SPDs for Lightning Protection: For Lightning Protection Systems specified or otherwise required to be "Master Labeled" per UL 96A utilize Type 1 (20kA rated I_n) SPDs.

2.02 SURGE PROTECTION DEVICES AT SERVICE ENTRANCE EQUIPMENT

A. Surge Protection Devices: Externally mounted, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:

1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.
3. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
4. LED indicator lights for power and protection status.
5. Six-digit transient-event counter set to totalize transient surges.

B. Nominal Discharge current (I*n*): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.

1. Type 1 SPD's shall be tested and labeled at 20kA per mode.

2. Type 2 SPD's shall be tested and labeled at 20kA per mode.

C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 200kA. Peak surge current rating must be arithmetic sum of the ratins of individual MOVs in a given mode.

D. Protection Modes:

1. Protection mode VPR for grounded wye circuits 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2.03 SURGE PROTECTION DEVICES AT DISTRIBUTION EQUIPMENT

A. Surge Protection Devices: Externally mounted, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:

1. Fuses, rated at 200-kA interrupting capacity.

2. Fabrication using bolted compression lugs for internal wiring.

3. Arrangement with wire connections to phase buses, neutral bus, and ground bus.

4. LED indicator lights for power and protection status.

5. Six-digit transient-event counter set to totalize transient surges.

B. Nominal Discharge current (I*n*): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.

1. Type 2 SPD's shall be tested and labeled at 20kA per mode.

C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 150kA. Peak surge current rating must be arithmetic sum of the ratins of individual MOVs in a given mode.

D. Protection Modes:

1. Protection mode VPR for grounded wye circuits 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2. Protection mode VPR for 240/120 V circuits shall be as follows:

2.04 SURGE PROTECTION DEVICES AT BRANCH PANLEBOARDS

A. Surge Protection Devices: Externally mounted, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:

1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.
3. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
4. LED indicator lights for power and protection status.
5. Four-digit transient-event counter set to totalize transient surges.

B. Nominal Discharge current (I*n*): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.

1. Type 2 SPD's shall be tested and labeled at 20kA per mode.

C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 100kA. Peak surge current rating must be arithmetic sum of the ratins of individual MOVs in a given mode.

D. Protection Modes:

1. Protection mode VPR for grounded wye circuits 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2. Protection mode VPR for 240/120 V circuits shall be as follows:

	240/120V, 1ph, 3w	240/120V, 3ph, 4w (high leg)
Line to Neutral	700	700, 1400 from high leg
Line to Ground	1000	1000, 1400 from high leg

Neutral to Ground	700	700

2.05 SURGE PROTECTION DEVICES AT UTILIZATION EQUIPMENT

A. Surge Protection Devices: Externally mounted, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:

1. Fabrication using bolted compression lugs for internal wiring.
2. Integral disconnect switch.
3. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
4. LED indicator lights for power and protection status.

B. Nominal Discharge current (I*n*): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.

1. Type 3 SPD's shall be tested and labeled at 10kA per mode.

C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 80kA. Peak surge current rating must be arithmetic sum of the ratins of individual MOVs in a given mode.

D. Protection Modes:

1. Protection mode VPR for grounded wye circuits 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2. Protection mode VPR for 240/120 V circuits shall be as follows:

2.06 SURGE PROTECTION IN ELECTRONIC-GRADE PANELBOARDS

A. Surge Protection Devices: Integrally mounted, wired-in, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:

1. Fabrication using bolted compression lugs for internal wiring.
2. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
3. LED indicator lights for power and protection status.

B. Nominal Discharge current (I*n*): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.

1. Type 2 SPD's shall be tested and labeled at 20kA per mode.

C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 100kA. Peak surge current rating must be arithmetic sum of the ratins of individual MOVs in a given mode.

D. Protection Modes:

1. Protection mode VPR for grounded wye circuits 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2. Protection mode VPR for 240/120 V circuits shall be as follows:

	240/120V, 1ph, 3w	240/120V, 3ph, 4w (high leg)
Line to Neutral	700	700, 1400 from high leg
Line to Ground	1000	1000, 1400 from high leg
Neutral to Ground	700	700

2.07 ENCLOSURES

A. All SPD Units shall be fully enclosed unless otherwise noted. Provide enclosures suitable for the locations indicated and as described below:

1. Indoor Enclosures:

a) NEMA 250 Type 1 constructed of a polymer or steel material

2. Outdoor Enclosures:

a) NEMA 250 Type 3R constructed of steel material and with a gasket to exclude dirt, windblown dust, and water (rain, sleet, and snow) from entering the enclosure when shut.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine surge suppression devices before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.

B. Examine areas, surfaces, substrates, and elements to receive SPDs with Installer present, for compliance with requirements for installation tolerances, structural

support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that field measurements are as indicated.
2. Verify that manufacturer's written instructions for environmental conditions have been established in spaces where equipment will be installed, before installation begins.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install SPDs and accessories in accordance with manufacturer’s instructions.

B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access.

C. Wall-Mounted Surge Protective Devices: Install SPDs on walls adjacent to equipment served, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For SPDs not at walls, mount to similar support structure for equipment served by device. Comply with Division 26 Section "Hangers and Supports for Electrical Systems."

D. Install SPD devices at service entrance on load side, with ground lead bonded to service entrance ground.

E. Install SPD devices for panelboards and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

1. Provide circuit breaker as a dedicated disconnecting means for SPD unless otherwise indicated.

F. Mount equipment plumb and rigid without distortion of enclosure.

G. Install fuses in fusible devices.

H. Comply with NECA 1.

3.03 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Connect to building automation system according to Division 26 Section “Electrical Power Monitoring and Control.”

3.04 IDENTIFICATION

A. Nameplates: Label external device enclosures with equipment served.

B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

C. Warning Labels: Label device with a warning label in accordance with NFPA 70 and NFPA 70E.

3.05 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

3.06 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

3.07 FIELD QUALITY CONTROL

A. Testing: Perform the field tests and inspections listed below :

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, to assist in testing, and to assist in adjusting device settings.

B. Acceptance Testing Preparation:

1. After installing SPD but before equipment is energized, test for compliance with requirements.
2. Verify that electrical wiring installation complies with manufacturer's written installation requirements.
3. Complete startup checks according to manufacturer's written instructions.
4. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3. Report results of tests and inspections in writing. Attach a label or tag to each tested component indicating satisfactory completion of tests.

D. SPD device will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.08 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment, overcurrent protectiv devices, instrumentation, and accessories.

B. Video record demonstrations presentation for Owner's records.

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Included in the work of this section are labor, material, and appurtenances required to complete the work of this Section as specified herein, including, but not limited to:

1. Interior light fixtures, lamps, LEDs, reflectors, lenses or faceplates, transformers, drivers and power supplies (includes exterior light fixtures normally installed on exterior surfaces of buildings).
2. LED Emergency Driver
3. Exit signs.
4. Emergency Lighting Mini-Inverter.

1.02 DEFINITIONS

A. CCT: Correlated color temperature

B. CRI: Color-rendering index.

C. CU: Coefficient of utilization.

D. IC Rated: Rated for direct contact with insulation.

E. L70: minimum 70% maintained initial-rated lumens at average rated life for LEDs

F. LED: Light Emitting Diode

G. LED Lamp: Replaceable LED light source with an integral driver within envelope of lamp. Lamp/Base types may include MR16/bi-pin, PAR/medium base, etc.

H. LED Module or LED Light Engine: Light source that contains LEDs, and may include additional components such as lenses, reflectors, or refractors, however do not include drivers.

I. LER: Light fixture (Luminaire) efficiency rating.

J. Light Fixture: Complete light fixture, including driver housing if provided.

K. LPD: Lighting power density.

L. RCR: Room cavity ratio.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Unless otherwise noted, perform all electrical Work required for the proper installation and operation of equipment, furnishings, devices and systems specified in other Divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.

B. Coordinate layout and installation of light fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including, but not limited to, HVAC equipment, fire-suppression system, and partition assemblies. Contractor shall arrange his installation in proper relation to other work so that there shall be no interference, damage or delay to other trades' work

C. Give ample notice of any special openings or rough-in work required for placing electrical/lighting work so as to avoid cutting or removal of completed work.

D. Where work of this Section is to be flush or concealed, install it so it does not project beyond finished lines of walls, ceilings or floor surface.

E. Verify all ceiling systems and coordinate light fixture type and accessories prior to ordering light fixtures. Coordinate and cooperate with ceiling installer in regards to the location and installation of light fixtures.

1.04 SUBMITTALS

A. General:

1. Submit all light fixtures, specified for use on this Project, in a single submittal package of portfolios, so that all light fixtures can be reviewed at one time.
2. Prepare portfolios from manufacturer's standard specification sheets, and include the fixture tag indicated on the Light Fixture Schedule to identify each light fixture. Do not combine more than one light fixture type on a single sheet.
3. Modifications to fixtures shall be in accordance with Contract Administrator's comments.

B. Product Data: For each type of light fixture, collated and bound in sets, and arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:

1. Summary page with the following for each light fixture type
   a) The number, type and wattage of the light fixture lamps or LEDs (including, but not limited to, assemblies, arrays, bars or modules).
   b) Light fixture driver or auxiliary device manufacturer, number and type.
2. Fixture cut sheets with name of manufacturer and options to be provided marked, including, but not limited to, voltage, lensing, and finish/color.

a) Descriptive information providing physical characteristics of light fixture, including, but not limited to, materials, dimensions, fixture efficacy and/or efficiency, and verification of indicated parameters.

3. Power supply, transformer, and/or driver cut sheet with options marked, providing physical description of auxiliary device including, but not limited to, voltage, power factor, amperage, wattage, and maximum remote distance charts between device and light fixture.

4. Lamp cut sheet with options marked, providing physical description of lamps, including, but not limited to, voltage, wattage, efficacy, CCT, CRI, lumens, and life expectancy.

5. Emergency driver cut sheet: Descriptive cut sheets providing physical description of emergency drivers for use in normal light fixtures, including, but not limited to, complete battery information, lumens, and method for testing per NFPA 101.

C. Submittal Schedule

1. Within 30 days of Division 26 contractor award, shop drawings covering all light fixtures within this section shall be forwarded to Contract Administrator to begin approval process. Any shop drawings submitted after the required time frame will require the contractor to submit only the 1st named manufacturer and associated specification data listed on the fixture schedule as the only approved manufacturer. No substitutions will be allowed after the specified time frame.

2. Within 15 days of "approved" and "approved as noted" shop drawings, contractor shall forward to Contract Administrator a guaranteed ship date for each specified fixture.

3. Within 15 days after contractor's receipt of "reject and resubmit" or "not approved" shop drawings, contractor shall provide Contract Administrator with resubmitted shop drawings for only those fixtures deemed unacceptable.

4. Contractor is responsible to call to the attention of the Contract Administrator any submittals that have not been returned to him in a timely manner that may affect delivery of fixtures.

D. Control Wiring

E. Qualification Data: For agencies providing photometric data for light fixtures.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For lighting equipment and fixtures to include in operation and maintenance manuals.

H. Warranties: Special warranties specified in this Section.

1.05 SUBSTITUTIONS

A. Refer to Division 26 Section “General Electrical Requirements”.

B. Prior to the Bid Date, substitutions will not be considered unless the Contracto Administrator has received written request for approval at least ten calendar days prior to the date for receipt of Bids. Include in each such request the Light Fixture Schedule designation, name of the material or equipment for which it is to be substituted and complete Product Data for the proposed substitute, as defined in SUBMITTALS above, and all other information necessary for an evaluation. Provide interior point-by-point photometric calculations, under both normal and emergency lighting conditions, as applicable, if required by the Engineer. Submit a $100.00 review fee to the Engineer with each such point-by-point calculation for use of electronic base files. The fee will be returned if the substitution is added to the specification.

C. During the Bid

1. Any proprietary, sole-sourced light fixture listed in the fixture schedule shall be unit priced only. Unit prices shall be clearly identified on the bid form.

2. Representative agents shall be allowed to offer mini-lot pricing (MLP). MLP shall be defined as:

   a) Agents can group only specified fixtures they represent, and

   b) Only represent in the region where the specification originated, and

   c) Exclude all fixtures outside their represented lines from the MLP, and

   d) Sole-sourced (proprietary) light fixtures shall not be included in the MLP.

3. Packaging of light fixtures will not be considered nor approved. Packaging is defined as: distributor(s) providing a single price for a light fixture package made up of specified and non-specified light fixtures. Any submittal package containing non-specified light fixtures or inclusion of lighting control systems will be immediately rejected in its entirety.

D. After the Bid Date, proposals to substitute light fixtures for those shown on the Drawings or specified herein, will only be considered as a deduct. Submit proposed substitutions separately, in Submittal form, with a list of proposed substitutions together with a deduct price for each substitution. Proposed substitutions will then be reviewed by the Contract Adminstrator.

E. During the construction period, no substitutions shall be considered if product delay is due to contractor’s failure to order products in a timely manner after presentation of fixture schedules and specifications. Additional costs associated with air freight or special factory runs to meet schedule due to contractor’s error shall be at the expense of contractor.

F. The Contract Administrator has the final authority as to whether the light fixture is an acceptable replacement to the specified item. The proposed substitution may also be rejected for aesthetic reasons if felt necessary or desirable. In the event the proposed substitutions herein described are rejected, provide the specified item(s).

1.06 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

2. Marked for intended use.

B. Comply with NFPA 70.

C. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

D. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.

E. Regulatory Agencies: Provide fixtures conforming to nationally- or internationally-recognized accredited testing agencies, such as U.S., ETL, ARL, or others in acceptance with local code enforcement policy.

F. Electrical Components and Devices: Provide only fixtures that comply with National Electric Code (NEC), and in particular to Section 410. All ceiling recessed fixtures, whether indicated in a catalog number or not, shall be equipped with an integral thermal protection device.

1.07 WARRANTY

A. General Guarantee: For a period of one year after Owner’s initial acceptance and establishment of the beginning date of the guarantee period, and at no cost to the Owner, Contractor shall promptly furnish and install replacements for any fixtures or components deemed by the Owner as defective in workmanship under normal operating conditions, excluding lamp replacement as noted in Special Warranty paragraph in this section. Contractor shall repair installed equipment on the job site to Owner’s satisfaction. For any time during said guarantee period that fixtures are not fully functional due to defects in material or workmanship, Contractor shall provide or pay for suitable temporary light fixtures, and shall remove said temporary fixtures upon installation of replacement elements. Contractor shall furthermore guarantee replacement fixtures for a period of one year following replacement.

B. Contractor shall not be held responsible for damage of fixtures or equipment components occurring after the beginning of the guarantee period due to acts of vandalism, acts of war, or acts of God.

C. LED Warranties: Shall be free from defects in materials and workmanship for the period indicated from date of factory shipment.

1. LED Luminaires, including LED modules, arrays and drivers: Five years.

2. LED Lamps: Three years.

D. Special Warranty for Emergency Lighting Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Emergency Lighting Unit Batteries: _____ years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining coverage years.

2. Warranty Period for LED Emergency Driver and Self-Powered Exit Sign _____ years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining coverage years.

PART 2 - PRODUCTS

2.01 GENERAL

A. Manufacturers

1. In Light Fixture Schedule, the following requirements apply to product selection:

a) Basis-of-Design Product: The design for each light fixture is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified that meets or exceeds performance characteristics of the named product.

B. Light Fixtures and Components

1. Provide light fixtures as shown on the drawings and/or specified. This shall include all lamps, material and labor to securely hang light fixtures, clean them and make them completely ready for use. Provide all hangers, supports, and miscellaneous hardware required to install light fixtures. Provide additional tie wires connected to structure to conform to applicable seismic requirements where required.

2. Light fixture models scheduled on the Drawings are to show the manufacturer, grade and style of light fixtures required. Regardless of the manufacturer's catalog number suffixes indicated, provide all options and features as described in the Light Fixture Schedule.

3. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures. Manufacturer of recessed fixtures shall provide mounting brackets suitable for connection to ceiling system structure. Modifications to standard mounting brackets shall be coordinated with contractor and delivered with fixture so that no delays to product delivery shall be allowed.

4. Metal Parts: Free of burrs and sharp corners and edges.

5. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

6. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

7. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

    a) White Surfaces: 85 percent.

    b) Specular Surfaces: 83 percent.

    c) Diffusing Specular Surfaces: 75 percent.

    d) Laminated Silver Metallized Film: 90 percent.

8. Plastic Diffusers, Covers, and Globes:

    a) Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

        1) Lens Thickness: At least 0.125 inch minimum unless different thickness is indicated.

        2) UV stabilized.

    b) Glass: Annealed crystal glass, unless otherwise indicated.

9. Where located within structural concrete, light fixture housing and any other luminaire components in direct contact with concrete shall be effectively coated and/or covered to prevent chemical reactions with the concrete in accordance with the American Concrete Institute Code.

10. Reflectors:

    a) Provide aluminum reflectors or reflecting cones for downlight style fixtures comprised of #12 aluminum reflector sheet, 0.57 inch or heavier and free of tool-making indentations, including spinning lines caused by assembly techniques. All reflectors shall be of first-quality, anodized finish :Alzak" with specular or semi-specular finish and color as selected. Provide specular reflectors with no apparent brightness above 45 degrees from Nadir and

semi-specular, diffuse reflectors with no apparent brightness above 75 degrees from Nadir.

11. Mounting hardware and trims:

    a) Coordinate as need to suit ceiling conditions.

    b) Light fixtures near or in contact with insulation shall comply with code.

    c) Maintain a 3” minimum working clearance between non-IC rated light future housings and insulation on all adjacent ductwork, piping, walls and ceilings.

12. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps, LEDs, and drivers. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.

    a) Label shall include the following lamp, LEDs, and driver characteristics:

        1) "USE ONLY" and include specific lamp or LED type.

            (a) LED type, wattage, beam angle (if applicable) for LED luminaires. Indicate maximum allowed wattage.

            (b) CCT and CRI for all luminaires.

13. Emergency lights and exit signs with integral battery back-up shall be connected to a separate unswitched conductor bypassing all other controls and contactors. Exit signs shall not be switched. Allow battery to charge for a minimum of 48 hours before light level testing. In order to prevent battery damage, do not turn off power for extended periods of time after the emergency light has been powered.

2.02 LED EMERGENCY DRIVER

A. Internal Type: Self-contained battery, charger, and electronic circuitry, factory mounted within light fixture body and compatible with driver. Comply with UL 924.

1. Emergency Connection: Provide wattage as scheduled on drawings to an LED load. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture driver.

2. Test Push Button and Indicator Light: Visible and accessible without opening fixture or entering ceiling space.

    a) Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.

    b) Indicator Light: LED indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

3. Battery: Sealed, high-temperature, maintenance-free, nickel-cadmium or lithium ion type. The batteries shall be of suitable rating and capacity to supply and maintain at not less than 87 1/ 2 percent of the nominal battery voltage for the total lamp load associated with the unit for a period of at least 1 1/ 2 hours, or the unit equipment shall supply and maintain not less than 60 percent of the initial emergency illumination for a period of at least 1 1/ 2 hours.

4. Charger: Fully automatic, solid-state, constant-current type with sealed power transfer relay.

5. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

B. External Type: Self-contained battery, charger, and electronic circuitry, compatible with driver, remote mounted from light fixture. Comply with UL 924.

1. Emergency Connection: Provide wattage as scheduled on drawings to an LED load. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture driver.

2. Battery: Sealed, high-temperature, maintenance-free, nickel-cadmium or lithium ion type. The batteries shall be of suitable rating and capacity to supply and maintain at not less than 87 1/ 2 percent of the nominal battery voltage for the total lamp load associated with the unit for a period of at least 1 1/ 2 hours, or the unit equipment shall supply and maintain not less than 60 percent of the initial emergency illumination for a period of at least 1 1/ 2 hours.

3. Charger: Fully automatic, solid-state, constant-current type.

4. Housing: NEMA 250, Type 1 enclosure.

5. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.

6. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

7. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.

8. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.03 EXIT SIGNS

A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

B. Internally Lighted Signs:

1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.

2. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.

a) Battery: Sealed, maintenance-free. Battery chemistry type shall be appropriate for installed environment.

b) Charger: Fully automatic, solid-state type with sealed transfer relay.

c) Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.

d) Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.

e) LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

f) Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.04 EMERGENCY LIGHTING MINI-INVERTER

A. Manufacturer

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

a) Bodine (by Signify),

b) Carpenter Emergency Lighting,

c) Chloride (by Signify),

d) Controlled Power Company,

e) Cooper Lighting,

f) DSPM, Inc,

g) Dual Lite,

h) Emergi-Lite,

i) Iota Engineering (Acuity Brands),

j) Inverter Systems, Inc (ISI),

k) Myers Emergency Power Systems,

B. Description – Self-contained uninterruptible or fast-transfer inverter designed for normal and emergency operation of connected lighting loads. Unit shall be capable of operating HID, incandescent, fluorescent, induction and LED fixtures with no break or interruption of illumination. UL 924 listed and meets NFPA 101, NFPA 70 and local codes.

1. Battery: Sealed, maintenance-free. Battery chemistry type shall be appropriate for installed environment. 68 degrees Fahrenheit to 86 degrees Fahrenheit optimum operating temperature.
2. Charger and Electronics: Fully automatic, thermal compensating variable rate battery charger. AC lockout feature, low battery voltage disconnect; DC overload, short circuit and brownout protection. 32 degrees Fahrenheit to 104 degrees Fahrenheit electronics operating temperature.
3. Operation: Inverter shall allow connected emergency lighting fixtures to be normally on. Upon loss of normal utility power, the emergency lighting fixtures will be delivered emergency power for their full lumen output rating with no break (???2 ms) in illumination for a minimum of 90 minutes.
4. 120V, single phase input and output voltages. Input voltage shall match output voltage, and +/- 3% voltage regulation, 60 Hz.
5. Maximum remote mounting distance of 1000’-0”.
6. Housing: Designed for surface mounting installation to floor or wall. 16 gauge steel housing with scratch-resistant powder coat paint finish..
7. Testing: Integral testing means by either manual test switch or self-testing, self-diagnostic with manual testing capabilities.
8. Onboard LED indicating lights for inverter status indication.
9. Manufacturer’s warranty or minimum 2 year warranty on electronics and battery and seven-year prorata warranty on battery, whichever is greater.
10. Overload and short circuit protection on input and output of inverter. Circuit breakers or fusing on output side.

C. Where wattage of inverter is different from Basis-of-Design manufacturer’s selected wattage, provide quantity of inverters as required to meet design intent. If additional inverters are required, confirm additional equipment will fit within available space constraints.

D. Where physical size of inverter is different from Basis-of-Design manufacturer, confirm equipment will fit within available space constraints.

2.05 LAMPS GENERAL

A. Unless specific manufacturers and lamp types are called for in the Light Fixture Schedule, all lamps provided for this project shall be by the same manufacturer. Lamps shall be manufactured by:

1. Eiko
2. General Electric
3. Osram/Sylvania
4. Philips
5. Soraa
6. Venture

B. All lamps shall be new and shall be delivered to the project in manufacturer's original sealed package.

C. Substitutions of specific lamp manufacturer as addressed in Fixture Schedule shall not be allowed. Costs associated with re-lamping due to non-compliance with specification, for both labor and material costs, shall be the sole responsibility of the contractor. For those fixtures with lamp included in fixture, contractor shall coordinate with manufacturer to ensure only approved lamp(s) is (are) installed. Lamp manufacturers indicated on Fixture Schedule are for reference. Where required, contractor shall coordinate with Owner regarding national purchasing agreement of specific lamp manufacturers. Purchasing of lamps, whether through competitive bidding of listed manufacturers or proprietary supply, shall be at the discretion of the Owner.

2.06 LED LAMPS AND LUMINAIRES

A. Comply with ANSI C78.377 for white light LED color range. Unless noted otherwise in the Light Fixture Schedule, LED color quality characteristics shall be 80 CRI minimum and 3000K CCT.

B. LED binning specification tolerance to be within 3 MacAdam ellipses of rated values or as indicated in the Light Fixture Schedule, whichever is more stringent. All LEDs used for same fixture type throughout the project to originate from same production bin.

C. Unless indicated otherwise in the Light Fixture Schedule, minimum 70% maintained initial-rated lumens at average rated life of as follows:

1. LED lamps: 20,000 hours
2. LED luminaires: 50,0000 hours

D. ROHS compliant

E. Manufacturer of LED chips will be evaluated based on the manufacturer’s product literature and data. At a minimum, LED fixtures or lamps will incorporate Bridgelux, Cree, Nichia, Osram or Xicato LEDs; additional manufacturers may be considered however the Contract Administrator or Engineer has the authority to

reject other manufacturers for technical or aesthetic reasons if felt necessary or desireable.

2.07 AUXILIARY DEVICES FOR LOW VOLTAGE AND LED FIXTURES

A. Provide remote power supplies, drivers and/or transformers for light fixtures as required for a complete and operational system. Where equipment is not indicated as plenum rated, provide an additional enclosure for the device(s) suitable for the installed environment.

2.08 LIGHT FIXTURE SUPPORT COMPONENTS

A. Comply with Section "260529 - Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.

B. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage.

2.09 TRANSFORMERS FOR LOW VOLTAGE FIXTURES

A. Provide transformers to low voltage lamps which are suitable for the electrical characteristics of the supply circuits to which they are to be connected. For remote electronic or magnetic transformers, contractor shall remote transformers so as to reduce voltage drop. For 25 amp low-voltage linear systems, contractor shall not daisy-chain 25A loaded runs together. Contractor shall provide home-run from end of run to remote transformer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify conditions of equipment and installation prior to beginning work.

B. Verify that equipment is ready for connecting, wiring, and energizing.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Light Fixtures: All work shall be executed to present a neat appearance. Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

C. Temporary Lighting: If it is necessary, and approved by Contract Administrator, to use permanent luminaires for temporary lighting, install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, install new lamps, and reinstall.

D. Support for Light Fixtures in or on Grid-Type Suspended Ceilings: Use grid as a support element.

1. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each fixture. Locate not more than 6 inches from light fixture corners.

2. Support Clips: Fasten to light fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.

3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.

E. Suspended Light Fixture Support:

1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.

2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.

3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end. Provide suitable connectors or collars to connect adjoining units to appear as a continuous unit.

F. Connect wiring according to Section "260519 - Low-Voltage Electrical Power Conductors and Cables."

G. Through wiring of recessed light fixtures, in suspended ceilings, is not permitted. Connect each light fixture by a whip to a junction box. The whip shall be of sufficient length to allow the light fixture to be relocated within a 6-foot radius.

H. Wall Mounted Light fixtures

1. Unless otherwise noted, conceal all raceways and back boxes for wall mounted light fixtures. Coordinate all wall-mounted light fixtures with interior elevations. Where specific elevations or dimensions are not indicated, verify the correct location with Contract Administrator prior to installation. Contractor shall supply structure to support weight of fixture.

I. Contractor shall construct light coves according to architectural details. Contractor shall ensure, unless otherwise directed, that top of fixture lamp is flush with top of cove lip. Contractor shall provide blocking as needed under fixture to ensure stated requirement.

J. Auxiliary Devices for low voltage and LED Fixtures

1. Install device within maximum remote distances and with wiring sized per manufacturer’s recommendations.

2. In public areas or other areas where remote device visibility is undesireable, install device where concealed from view, well ventilated and accessible. Provide access panels as required.

3. Provide label on device indicating fixture type and location/room served along with panelboard circuit number.

4. Properly support remote lighting devices, including transformers, power supplies, and drivers, per Code and manufacturer's recommendations.

3.03 DIMMING

A. For dimmable light fixtures, provide both control and power wiring between light fixture and control device and between light fixtures. Quantity of low voltage and line voltage wiring and wire type shall be per manufacturer's recommendations. At a minimum, provide the following based on control type at either 120V or 277V, unless recommended otherwise by the manufacturer:

1. 0-10V – two low voltage conductors and two line voltage conductors plus ground

2. 2-Wire dimming – two line voltage conductors plus ground

3. 3-Wire dimming – three line voltage conductors (1 for control and two for power) plus ground

4. DALI – two low voltage conductors and two line voltage conductors plus ground

5. Proprietary digitally addressable – as required per the manufacturer

6. DMX – two line voltage conductors plus ground and DMX cabling

B. Coordinate light fixture and control device dimming types for compatibility.

3.04 COORDINATION

A. Light fixtures shown on the Electrical Drawings represent general arrangements only. Refer to Architectural Drawings for exact locations.

B. Coordinate the installation and location of light fixtures with other work and all other trades before installation to avoid conflicts. Coordinate light fixture locations in mechanical rooms with final installed piping and ductwork layouts.

C. Verify all ceiling systems and coordinate light fixture type and accessories prior to ordering light fixtures. Coordinate and cooperate with ceiling installer in regards to the location and installation of light fixtures.

D. Coordinate final light fuxture locations in walk-in coolers and freezers with refrigeration coils and other trades.

E. Wall-Mounted Light fixtures

1. Coordinate all wall-mounted light fixtures with the architectural features of the building. Where specific elevations or dimensions are not indicated, verify the correct location with the Contract Administrator prior to beginning any work.

3.05 ADJUSTING

A. Contractor shall adjust all light fixture sockets to match the lamp specified and aim all adjustable light fixtures as directed by the Contract Administrator.

3.06 FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Clean light fixtures of dirt and debris upon completion of the installation. Protect installed light fixtures from damage during the remainder of the construction period.

C. Upon completion of the installation of light fixtures, and after building circuits have been energized, energize lighting branch circuits to demonstrate capability and compliance with the requirements. Where possible, correct malfunctioning units at the site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and proceed with retesting.

D. At the time of final acceptance of this project by the Owner, ensure that all lamps are in working order and all light fixtures are fully lamped.

E. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

B. Definitions:

1. As-built – The documentation of measurements, location, and quantities of material work performed.
2. Comply – To conform, submit, or adapt as required or requested.
3. Consultant – A specialist who provides services to the design team headed up by an architect or engineer under contract with a client.
4. Contract – A written document covering the understanding between the customer and the contractor.
5. Contract documents – Plans, specifications, and other documents that together set forth the requirements of the contract and become legally enforceable when the agreement is signed. Executed agreements between the owner and contractor that become part of a contract when the agreement is signed.
6. Coordinate – To bring into a common action, movement, or condition.
7. Deferred Submittal – A building code issue that allows the final design to be submitted after the permit has been issued. Deferred submittals are portions of the design that are not submitted by the design team at the time of building permit application. They are typically performed by a specialty engineer.
8. Delegated Design – A contractual issue between the owner and the contractor. The design professional or architect of record establishes the performance requirements for an element of a building, and a contractor assumes the responsibility of designing that element.
9. Furnish – To supply and deliver to the project site, ready for installation.
10. Install – To place in a position of service or use.
11. Pathway – Any physical method of supporting, enclosing, protecting, or otherwise transporting wiring systems.
12. Provide – To furnish and install, complete and ready for intended use.
13. Punch list – A short list of tasks that are required to be completed in order to close out a work order or project.
14. Raceway – Any enclosed physical pathway designed to protect or shield premises wiring systems.
15. Shall – Frequently used in codes and standards publications, the term indicates a mandatory requirement.
16. Shop drawings – Drawings, diagrams, schedules, and other data specially prepared for the work by the Contractor or a subcontractor, sub-subcontractor, manufacturer, supplier, or distributor to illustrate some portion of the work.
17. Should – Indicates a recommendation or that which is advised but not required.
18. Submittal – Information, documentation, or samples that a contractor may be requested to submit to the design team for review and approval before the commencement of work.
19. Substantial completion – A stage of construction or a building project that is sufficiently complete, in accordance with the contract documents, so that the owner may use or occupy the building project.
20. Record drawings – Construction drawings revised to reflect and represent the actual conditions of the project as it was constructed, usually based on marked-up prints, drawings, and other data furnished by the contractor to the architect.

C. Reference Standards:

1. ANSI/TIA-568.0-E, Generic Telecommunications Cabling for Customer Premises
2. ANSI/TIA-568.1-E, Commercial Building Telecommunications Infrastructure Standard
3. ANSI/TIA-569-E, Telecommunications Pathways and Spaces
4. BICSI TDMM, 14th edition
5. ISO 9001 – Quality Management
6. NFPA 70®, National Electrical Code® (NEC) (currently adopted edition)

1.03 ADMINISTRATIVE REQUIREMENTS

A. See Section 01 31 00 – Project Management and Coordination, for additional information.
B. Coordination:

1. Examine drawings and specifications for the entire project. Notify the Architect, General Contractor, or Consultant of discrepancies upon discovery.
2. Coordinate shut-downs, cutovers, or tie-ins with the Owner as required. Submit schedule for approval at least 2 weeks in advance.
3. Coordinate work with the Architect, General Contractor, and Subcontractors:

a. Converged cabling responsibilities:

1) Division 27 AV Contractor
2) Division 28 ESS Contractor

b. Deliverables:

1) General Contractor
2) Owner

c. Inspections:

1) AHJ

d. MDF/IDF:

1) Division 21 Contractor, for sprinkler head locations
2) Division 23 Contractor, for cooling requirements
3) Division 26 Contractor, for electrical, lighting, and bonding requirements
4) Division 27 and 28 Contractors, for equipment locations
5) General Contractor, for plywood backboard installation requirements

e. Rough-in, receptacle, conduit, cable tray, and underground pathway requirements:

1) Division 26 Contractor

C. Pre-installation meetings:

1. Convene pre-installation meetings with the Owner, Architect, Consultant, General Contractor, and other Subcontractors within 30 days before beginning work.
2. Meetings shall consist of construction drawing and specification review, submittal expectations, and project review.

D. Scheduling:

1. Coordinate, plan, and execute work according to the project schedule.
2. Adhere to project milestones and implementation schedule.
3. Submit a detailed schedule of installation milestones in the form of a Gantt chart to the design team and General Contractor within 30 days before beginning work.

1.04 ACTION SUBMITTALS

A. See Section 01 33 00 – Submittal Procedures, for additional information.

B. Product Data:

1. Submit product data in .pdf format for review no later than 60 days before beginning work. Products ordered or installed before receiving reviewed and returned submittals are subject to removal and replacement at the Contractor's expense.
2. Submit product data individually for each specification section under separate cover. Product data submittal shall include all certificates and material listed in the specification section.

    a. Submit cut sheets with part numbers, model numbers, and brief descriptions. Clearly indicate the product on each product data sheet using yellow highlighter.

3. Include a title sheet with the following information:

    a. Contractor name and contact information
    b. Date of submittal
    c. Project name
    d. Project number
    e. Sequential submittal number
    f. Specification section reference

4. Full-line and short-form catalogs are not acceptable.
5. Remove pages without part numbers and basic product descriptions, extraneous pages, blank pages, and repeated information.
6. Keep information pertinent to technical data only and as brief as possible.
7. Submittals will be reviewed for general compliance and not quantities. Individual submittals reviewed more than twice are subject to back charges being levied against the Contractor. Resubmittals shall be designated with a revision number beginning with R1 and increasing consecutively.
8. Combined submittals, submittals submitted under the incorrect specification section, submittals with extraneous pages, submittals with incorrect product data, or unapproved substitutions will be rejected.
9. Identify products with long lead times and anticipated ship dates that may affect the project schedule.

C. Shop Drawings:

1. Submit shop drawings in .pdf format, similar to the contract drawings, for review no later than 60 days before beginning work.
2. Create shop drawings from project Revit backgrounds. Shop drawings created using design team-issued contract drawings will not be accepted.
3. Shop drawings can be submitted as 1 complete set per discipline.

    a. Include the MDF, each IDF, cable tray pathways, conduit pathways, underground pathways, telecommunications outlet locations with field labeling, rack elevations, and backbone and bonding riser diagrams. Drawings and elevations created with Microsoft Visio are not permitted.

4. Include a title sheet with the following information:

    a. Contractor name and contact information
    b. Date of submittal
    c. Drawing reference
    d. Project name
    e. Project number

f. Sequential submittal number

5. Submit shop drawings on 24-inch by 36-inch (Architectural size D) sheets.
6. Scale shop drawings at an appropriate scale, but not smaller than 1/8-inch equals 1 foot.
7. Include sufficient information to describe the work being performed.
8. Shop drawings will be reviewed for general compliance and not dimensions or quantities. Shop drawings reviewed more than twice are subject to back charges being levied against the Contractor.

1.05 INFORMATIONAL SUBMITTALS

A. See Section 01 33 00 – Submittal Procedures, for additional information.
B. Certificates:

1. Submit certificates in .pdf format for review no later than 60 days before beginning work.
2. Submit certificates for each specification section with the associated product data.

a. BICSI:

1) RCDD
2) Technician
3) Installer 1 or 2

b. Manufacturer:

1) Cable and connectivity manufacturer certification for the company, Project Manager, and ICT installers.

c. Manufacturer reports:

1) Submit documentation stating that materials and products are BABA or TAA-compliant.

d. Sustainable Design Submittals:

1) Submit sustainable practice documentation for project materials and products from at least 1 of the following:

a) EPDs: Provide EPDs verified through UL Environment, a division of the safety science company UL.
b) HPDs: Provide reports published according to the Health Product Declaration Collaborative™ Standard.
c) LEED credits: Provide products that contribute towards LEED credits through EPDs and HPDs as well as the LEED certificate from the manufacturer.
d) Multi-Attribute Certifications: Provide certifications published through GreenCircle Certified, LLC, in accordance with internationally recognized standards and the Federal Trade Commission’s Green Guides.
e) Zero Waste to Landfill: Provide certification recognizing the achievement of a 100 percent landfill waste diversion rate.

1.06 CLOSEOUT SUBMITTALS

A. See Section 01 77 00 – Closeout Procedures, for additional information.
B. Format:

1. Submit closeout submittals in .pdf format to the Owner and Consultant for review and approval as soon as they are complete, but no later than 60 days before the date of substantial completion.

a. Include the following:

1) Warranty documentation:

a) Manufacturer warranties

2) Record documentation:

a) As-builts

3) Test reports:

a) Bonding test results
b) Copper cable test results
c) Optical fiber test results

4) Cable Matrix:

a) See Section 27 15 13 – Communications Copper Horizontal Cabling, for more information.

C. Warranty Documentation:

1. Submit authorized manufacturer warranty documentation as specified in other sections.

D. Record Documentation:

1. As-builts:

a. Include the MDF, each IDF, cable tray pathways, conduit pathways, underground pathways, and telecommunications outlet locations, including CCTV and AV, with field labeling, elevations, and riser diagrams. Remove references to project changes.
b. Submit 1 soft copy set of As-builts to the Owner after the review and approval process is complete. Create As-builts on 24-inch by 36-inch (Architectural size D) sheets.
c. Create As-builts from project Revit files. As-builts created from .pdf documents or other means will not be accepted.
d. Submit As-builts in .pdf and .rvt format.

2. Record Drawings:

a. Maintain a complete set of drawings and specifications at the job site to clearly and permanently mark changes made. Transfer changes to As-builts.
b. Create record drawings from project Revit files. Record drawings created from .pdf documents or other means will not be accepted.

c. Submit redlined record drawings in .pdf and .rvt format.
d. Submit redlined specification changes in .pdf format.

E. Test Reports:

1. See Section 27 05 26 – Grounding and Bonding for Communications Systems, for test report information.
2. See Section 27 13 13 – Communications Copper Backbone Cabling, for test report information.
3. See Section 27 13 23 – Communications Optical Fiber Backbone Cabling, for test report information.
4. See Section 27 15 13 – Communications Copper Horizontal Cabling, for test report information.
5. See Section 27 15 23 – Communications Optical Fiber Horizontal Cabling, for test report information.

1.07 QUALITY ASSURANCE

A. See Section 01 40 00 – Quality Requirements, for additional information.
B. Qualifications:

1. Installers:

a. The project requires certified installers experienced with similar installations in size and complexity.

2. Certifications:

a. Division 27 Cabling Contractor:

1) Minimum 1 current BICSI RCDD on staff as a full-time employee that shall regularly inspect work, stamp shop drawings, and review and stamp test results.
2) Minimum 1 current BICSI Technician on staff as a full-time employee who shall serve as the Project Manager.
3) Minimum 1 current BICSI Installer 1 or 2 involved with the installation.
4) Current cable manufacturer certification is required for the company, Project Manager, and installers. Clearly indicate which certified employee will be the Project Manager.

3. Project Management:

a. Assign a Project Manager to the project. Project Manager responsibilities include:

1) Completing and submitting the required documentation.
2) Continuously overseeing and directing the work and performance of employees and subcontractors.
3) Documenting and completing the punch list.
4) Ensuring completion of the scope of work on time.
5) Ensuring compliance with the contract documents.
6) Regularly inspecting work.
7) Reporting unexpected conditions that may result in delays or additional costs.
8) Scheduling cutovers or tie-ins.

C. Construction Observation:

1. The failure of the Consultant or another representative of the Architect or Owner to condemn any defective work or material shall not release the Contractor from the obligation to tear out, remove, repair, or replace upon discovery of non-conforming work or material at any time during the project.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements:

1. Coordinate with the General Contractor for any equipment, products, and materials to be delivered on-site.

B. Storage and Handling Requirements:

1. Coordinate with the General Contractor for any equipment, products, and materials to be stored on-site.
2. Store and protect products and materials following manufacturer recommendations.
3. Provide secure storage for equipment, products, and materials stored on-site.
4. Follow manufacturer guidelines on proper storage for material.

1.09 WARRANTY

A. Manufacturer Warranty:

1. The cable manufacturer shall have a minimum of a 20-year warranty on its products. The warranty shall cover the cable and associated components against defects in material and workmanship under normal use.

PART 2 - PRODUCTS

2.01 COMPONENTS

A. Manufacturers:

1. See Section 01 60 00 – Product Requirements, for additional information.
2. See Division 27 specification sections for product and material requirements.
3. Products shall be new, unused, and in the original packaging.
4. Products and materials used to accomplish project goals shall meet listed standards and be manufactured to ISO 9001 standards.
5. Products specified are intended to establish a baseline for operational, functional, and performance-based standards that proposed products shall meet or exceed by functionality and quality.
6. Products listed within Division 27 specifications shall be provided as part of a complete and functioning system unless determined otherwise by the Owner, Architect, or Consultant during the submittal process.
7. Provide incidental items required for a complete installation regardless of whether they are specified.

B. Substitution Limitations:

1. See Section 01 25 00 – Substitution Procedures, for additional information.
2. Specified products and materials establish the overall performance level and provide the physical appearance, part quality, construction quality, and background of proven reliability desired by the Owner and therefore define the minimum standards of quality required for the project. Certain products are not permitted to be substituted and are listed as “Substitutions: Not permitted.” Provide substitution requests for products permitted to be substituted. Substitution requests must contain sufficient information verifying equivalency to specified items or can be procured at a lower price to be considered for an approved substitution and shall be submitted before the bid date. Substitution requests submitted after the bid has been awarded will not be accepted without justification. See Section 01 25 00 – Substitution Procedures, for pre-bid substitution forms and requirements.
3. Installed products or materials that deviate from specified or submitted make, model, color, or other significant characteristics will be replaced by the Contractor with specified or submitted products at no additional cost and without impact on the construction schedule.

C. Product Options:

1. Procure material from local distribution sources. Utilize multiple local distribution sources to avoid procuring material from non-local sources.

D. Sustainability Requirements:

1. Provide materials and products that contribute to sustainable practices. Materials and products shall offer EPDs, HPDs, LEED credits, and Multi-Attribute Certifications. Products that do not contribute to sustainable practices will be rejected.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Perform a site survey before beginning work. Site surveys shall include pathways, raceways, space allocations, installation tolerances, installation hazards, and impediments affecting the installation.
2. Notify the General Contractor of conflicts, discrepancies, or omissions promptly upon discovery. Failure to adequately complete a site survey will not provide a basis for additional compensation.
3. Commencement of work without providing notification to the General Contractor indicates acceptance of conditions.
4. Errors and omissions in the drawings or specifications do not relieve the Contractor from performing omitted details of the work.
5. Verify quantities for equipment, cabling, components, and materials before submitting the bid.

3.02 INSTALLATION

A. See Section 01 73 00 – Execution, for additional information.

B. Systems Integration:

1. Field measure indicated mounting heights, as shown on the contract drawings. If mounting heights or other location criteria are not indicated, arrange, and install components and equipment to provide maximum headroom and working clearance.
2. Furnish labor, materials, tools, equipment, and services for the installation under general provisions of contract documents.
3. Provide supplementary or miscellaneous items and incidental devices necessary for a complete installation, whether specifically indicated in the contract documents.
4. Install products, materials, and equipment to facilitate service, repair, or replacement.
5. Execute work following NEC, OSHA, Fire Code, and BICSI standards, manufacturer written instructions or recommendations, and applicable codes. Where modifications are required due to code, regulations, or authorities, such changes shall be made without additional cost.
6. Follow industry standards of good practice for installations.
7. Products and materials shall be installed plumb, level, square, permanently attached, and held firmly in place.
8. Verify conduit, back boxes, junction boxes, pathways, raceways, and electrical requirements meet size and project requirements.

3.03 FIELD QUALITY CONTROL

A. Field Tests and Inspections:

1. Tests:

a. Test bonding, optical fiber, and copper cabling as specified in the following sections:

1) Section 27 05 26 – Grounding and Bonding for Communications Systems.
2) Section 27 13 13 – Communications Copper Backbone Cabling.
3) Section 27 13 23 – Communications Optical Fiber Backbone Cabling.
4) Section 27 15 13 – Communications Copper Horizontal Cabling.
5) Section 27 15 23 – Communications Optical Fiber Horizontal Cabling.

b. The Owner, Architect, or Consultant may elect to verify test data as part of the acceptance procedure. Provide personnel and testing equipment at no additional cost.

2. Inspections:

a. Inspections for appropriate installation practices are the responsibility of the Project Manager.
b. At the discretion of the Owner, Architect, or Consultant, provide personnel for periodic inspections, including a final inspection, at mutually agreed-upon times at no additional cost.
c. Scheduled inspections in which the work is deemed incomplete, unfinished, or otherwise not ready for inspection are subject to back charges being levied against the Contractor.

B. Non-Conforming Work:

1. See Section 01 77 00 – Closeout Procedures, for additional requirements.

2. Work found to be incomplete, unsatisfactory quality, failing to meet specifications, or unacceptable to the Owner, Architect, or Consultant will be documented as a non-conforming work notice, field observation, or punch list and provided to rectify at no additional cost. Provide written notification with pictures upon completion. Incomplete lists will be rejected.
3. The non-conforming work notice, field observation, or punch list will be considered complete only after being signed off by the Owner, Architect, or Consultant.

3.04 CLEANING

A. See Section 01 74 19 – Construction Waste Management and Disposal, for additional information.
B. Waste Management:

1. Remove trash and refuse after each workday.
2. Coordinate with the General Contractor for disposal of packaging and waste materials created during work to an approved common trash or recycling point or receptacle.
3. Keep work area neat, tidy, and free from accumulating waste materials.
4. Remove foreign material, dust, dirt, paint, unneeded labels, and stickers from equipment after completion.

3.05 CLOSEOUT ACTIVITIES

A. See Section 01 79 00 – Demonstration and Training, for additional information.
B. See Division 27 sections for closeout activities.

END OF SECTION 27 05 00

SECTION 270529

PATHWAYS FOR AV SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Conduits
B. Pull Boxes
C. Conduit Fittings
D. Floor Boxes
E. Cable Tray

1.02 DESCRIPTION OF WORK

A. Furnish and install all items listed in 1.1 required to support the AV systems cabling as indicated on the AV drawings, specified, or as otherwise required.

PART 2 - PRODUCTS

2.01 General

A. Refer to AV Drawings for pathway type required for each cable run. Substitution of pathway type requires Consultant's approval. Pathways shown without cable fill are for temporary or future cable use.

2.02 CONDUITS

A. General
   1. Provide Pull String in all conduits for AV system.
   2. The sizes of conduits shall be as shown on the drawings, minimum size is 0.75". All conduits shall be reamed and furnished with insulation and/or grounded bushings as required.

B. Flexible Steel Conduit
   1. Flexible steel conduits are not acceptable for AV systems installations

C. Electrical Metallic Tubing (EMT)
   1. EMT shall be zinc galvanized both inside and out with a minimum thickness of .0008". It shall be round with uniform wall thickness and continuously welded seams. EMT shall be furnished in ten-foot standard lengths.

D. PVC Conduit
   1. PVC conduit shall be rigid non-metallic Schedule 40 heavy wall.
   2. Use of PVC shall be limited to underground conduits only.

E. Conduits carrying fiber cables shall have large labels indicating "Fiber Optic Cable." These labels should be placed every 10 feet where exposed.

F. Buried conduits must have yellow “Caution Fiber Optic” tape laid 12 inches above duct bank.

2.03 PULL BOXES

A. Pull boxes shall be constructed of code gauge steel, etched, primed and shall have rust resistant ANSI 61 gray finish and be NEMA 1 construction with screw covers unless noted otherwise. For conduits 1-1/4" and larger terminating in a pull box, the minimum length of pull box shall be 8 times the diameter of the largest conduit terminating in the pull box. Splice boxes shall be sized as per EIA/TIA-569A Table 5.2-3.
B. Location and sizes of pull boxes and splice boxes shall meet the approval of the Architect and Consultant. Condulete type fittings (e.g. LB's, etc.) shall not be used in lieu of pull boxes or bends.
C. Exposed pull boxes in public areas shall be provided with tamperproof screws.
D. Boxes shall be free from unused openings, including knockouts.
E. Pull boxes larger than 12” x 12” for which a custom panel has not been specified, shall have hinged covers.
F. Gang, 4” square and 4-11/16” square boxes must be installed using open center brackets
G. Pull boxes for indoor wet or damp locations shall be NEMA 3R Rated with stainless steel screws.
H. Pull boxes for outdoor locations shall be NEMA 4X Rated stainless steel continuous hinges, door clamps and a hasp.
I. Provide junction box, pull box, and hand-hole assemblies sized as required by the NEC. Pull boxes/hand-holes shall be located using the following table:
    1. Runs with total of all bends <90 degrees – 600ft.
    2. Runs with total of all bends >=90 degrees and <180 degrees – 400ft.
    3. Runs with total of all bends >= 180 degrees and <270 degrees – 200ft.
    4. Runs with total of all bends >= 270 degrees are not allowed.

2.04 CONDUIT FITTINGS

A. All rigid, IMC and EMT fittings shall be galvanized malleable iron or steel. Connectors and couplings shall be threaded, setscrew, compression type, and concrete-tight.
B. Conduit bodies shall be malleable iron, threaded type. Provide neoprene cover gaskets for conduit body covers exposed to the weather.
C. Expansion fittings shall be O-Z/Gedney Type "AX" for rigid metal conduit and Type "TX" for electrical metallic tubing. For intermediate metal conduit applications, a 15-inch minimum length of rigid metal conduit shall be used with a Type "AX" expansion fitting. Provide O-Z/Gedney Type "BJ" bonding jumpers at all expansion fittings.
D. Rigid and IMC conduit bushings shall be of the insulated type with phenolic thermosetting insulation molded to a hot dipped galvanized malleable iron body of the threaded type.
E. EMT fittings shall be of the insulated throat type. Fittings larger than 2-1/2 inches shall have threaded bushings installed.
F. PVC conduit fittings shall be slip joint type.
G. All conduit sleeves will be fitted with “spillways” to maintain the bend radius of cables passing through the sleeve.

2.05 FLOOR BOXES

A. Refer to AV drawings for manufacturer, model, quantity, and location information.
B. Contractor to provide all parts and accessories required for a working floor box system including those required based on specific installation conditions unless otherwise noted.

C. Boxes to have a voltage divider to allow for power receptacles and low-voltage AV connections to reside within the same box. Conduits for high and low voltages must enter box on appropriate side of voltage divider to maintain separation. High and low-voltage wires may not cross within the box.
D. On-grade boxes to be cast-iron, and above grade, in-slab boxes to be steel.
E. Boxes to be fully adjustable, before and after the concrete pour.
F. Boxes shall have applicable approvals from a Nationally Recognized Testing Laboratory and meet all applicable local codes.
G. Floor Boxes on elevated floors must maintain proper fire rating of slab.
H. Provide equipment ground conductor as required by local code.

2.06 CABLE TRAY

A. Cable trays shall be installed as indicated on the AV drawings.
B. Unless otherwise noted on the Drawings, cable tray shall be 12 inches wide and have a usable minimum loading depth of 4 inches deep.
C. Industrial type, single-piece, formed aluminum trough cable tray for heavy cable loads and large cables shall be Chalfant Ladder Tray or Type 156 by B-Line, 4” usable depth and 9” rungs as indicated on the drawings. The tray shall be either trapeze or wall mounted.
D. Industrial type, single-piece, 16-ga fully welded tubular steel with 2-layer black powder coat finish with 9” rungs as indicated on the drawings.
E. Cable tray used in open ceilings in finished areas and storage rooms shall be solid bottom.
F. Straight sections shall be a maximum nominal 10-foot length.
G. Straight sections and fittings shall be assembled with nut and bolted splice plates. Hardware shall be zinc plated. Spring loaded and "snap" type fittings are not acceptable.
H. Factory end plates and fittings shall match the tray width, depth and metal type.
I. The cable tray system shall be U.L. Listed and classified with applicable U.L. labels applied. Cable tray installation shall meet all applicable UL standard requirements for use as an equipment ground conductor.

PART 3 - EXECUTION

3.01 INSTALLATION

A. General
1. Whenever possible, cable and raceway routing paths shall follow the logical structure of the building (e.g. follow hallways, aisles and corridors). Route all AV cables and raceways parallel to or perpendicular to the building structure. No diagonal runs will be permitted unless noted otherwise or pre-approved by the Architect and Consultant. Corridor crossovers shall be kept to a minimum.
2. Coordinate layout of conduits including specific routing and mounting elevations with building structure and work of other trades.
3. Provide a pull string in all raceways, cable trays and conduits.
4. Transitions between cable trays and conduit, etc. shall not exceed 10” horizontally, 24” vertically. Provide “drop-out” supports spillways, and radius controls for changes in elevation as required.
5. All power devices and power sources emit a given amount of radio frequency interference (RFI) and/or electro-magnetic interference (EMI). To reduce or eliminate the field effects of RFI/EMI on the signals residing on a given cable, runs shall be kept at the maximum possible distance from such sources. Running cables through the center of the building can reduce the external interference

effects of RFI/EMI in the cable tray. Open wiring and non-metallic raceway shall be routed a minimum of twelve (12") inches away from fluorescent fixtures. Special attention shall be given to the routing of such pathways away from lighting ballasts and high intensity discharge devices. Reference TA001 for the required separation distances of signals of different types.

B. Conduits
1. Provide continuous conduits across open or inaccessible ceiling areas. Exposed conduits shall be installed parallel and perpendicular to nearby surfaces and structural members. Exposed conduits shall be painted to match the surrounding surfaces. Coordinate color with Architect.
2. Changes from home run conduits to stub up must be approved by The Consultant.
3. Provide conduits from cable trays to accessible ceilings as required.
4. Conduits attached to cable trays shall be secured with approved conduit clamps.
5. Conduit buried in concrete slab pours shall be full weight rigid galvanized steel or Schedule 40 PVC. All elbows, stub ups and conduit above ground shall be rigid galvanized steel. All joints and terminations for PVC shall be made according to manufacturer's recommendations to ensure all joints are watertight.
6. Conduit buried in or beneath building slabs or exterior below grade shall be full weight rigid galvanized steel or Schedule 40 PVC. The conduit shall be encased in 3" concrete envelope or as called for on the Plan Drawings. All elbows and stub ups shall be rigid galvanized steel. All joints and terminations for PVC shall be made according to manufacturer's recommendations to ensure all joints are watertight.
7. Conduits and cables entering from outside the building shall be sealed water and moisture tight. Seal between conduit and sleeves, conduits and core drilled holes and around conductors inside conduits. Provide cast iron pipe or Schedule 40 galvanized steel conduit sleeves in exterior walls below grade, with intermediate wall stop and anchor collar set in place before concrete pouring. Sleeve shall be a part of the sealing assembly. When the wall opening is core drilled, the wall sleeve may be omitted. A mechanically compressed rubber sealing assembly shall be placed in the annular space between conduit and the sleeve or the core drilling.
8. Conduits stubbed out into accessible ceiling to be located no more than 2’-6” above finished ceiling.
9. All conduit stub-outs and junction boxes in accessible ceilings to remain accessible by ladders from the finished floor below.
10. Layout the conduit system to avoid crossing building expansion joints. Where crossings are necessary, use expansion joints.

C. Boxes
1. Wall or ceiling boxes must be mounted flush with finished surface.
2. Final mounting height of all boxes on finished surfaces to be coordinated with Architect for alignment with adjacent boxes.
3. In stud walls, boxes on opposite sides of the wall must be separated by a minimum of 1 stud cavity.
4. In CMU or concrete walls, boxes on opposite sides of the wall must be separated by a minimum of 16”.
5. Pull boxes shall be placed in straight sections of conduit runs and may not be used in lieu of a bend without approval of the Consultant. Pull boxes and/or splice boxes shall be installed in readily accessible locations. Where boxes are installed above suspended ceilings, they shall be located immediately above the suspended ceiling or the ceiling shall have a suitably marked and hinged panel to facilitate direct access to the pull box.
6. Boxes in accessible ceiling to be located no more than 2’-6” above finished ceiling.
7. All boxes mounted in accessible drop tile ceilings to remain accessible by ladders from the finished floor below.

D. Cable Tray
   1. Cable trays shall be trapeze hung and sway braced.
   2. Cable trays will not be permitted in FOH public areas, mechanical rooms, electrical rooms or any wet or damp rooms. In these area conduits are required.
   3. All changes in elevation of the cable tray or where cable leaves the cable tray factory produced radius drop offs, waterfalls and other devices shall be used to ensure the proper cable bend radius is maintained.
   4. When rated walls must be breached, cables shall pass through pre-established fire block systems by EZ-Path or similar. Multiple systems shall be used to equal the full capacity of the cable tray. Cables shall enter and/or exit areas at right angles to the structure.

E. Fire Stopping
   1. Where pathways pierce walls, floors and/or ceilings, restore fire rating and smoke stoppage integrity as required by code.

F. Excavation:
   1. It is the responsibility of the Contractor to obtain all permits and utility marking. Bids shall include landscaping restoration costs.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Raceways and Fittings

B. Polymer Handhole Enclosures

C. Pre-Cast Concrete Handholes and Boxes

D. Pre-Cast Maintenance Holes

E. Utility Structure Accessories

F. Equipment Enclosures for Exterior Spaces

G. Grounding and Bonding

1.02 RELATED REQUIREMENTS

A. General provisions of the Contract, including General and Supplementary Conditions and Division 01, 07, 31 and 32 Specification Sections.

B. Section 26 0500 - COMMON WORK RESULTS FOR ELECTRICAL

C. Section 26 05 43 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

D. Section 27 0010 - GENERAL COMMUNICATIONS REQUIREMENTS

E. Section 27 0500 - COMMON WORK RESULTS FOR COMMUNICATIONS

F. Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

1.03 ABBREVIATIONS AND ACRONYMS

A. See Section 27 0010 - GENERAL COMMUNICATIONS REQUIREMENTS for additional abbreviations and acronyms that pertain to this section.

B. GRS: Galvanized Rigid Steel Conduit

C. RMC: Rigid Metal Conduit

D. RNC: Rigid Nonmetallic Conduit

1.04 DEFINITIONS

A. See Definitions in Part 1 of 27 0010 - GENERAL COMMUNICATIONS REQUIREMENTS for additional definitions that pertain to this section.

1.05 REFERENCE STANDARDS

A. 7 CFR 1755.910 (PE-91) - RUS specification for outside plant housings and serving area interface systems; Current Edition.

B. 29 CFR 1910 - Occupational Safety and Health Standards; Current Edition.

C. AASHTO HB - Standard Specifications for Highway Bridges; 2005, with Errata.

1.06 SUBMITTALS

A. See Section 27 0010 - GENERAL COMMUNICATIONS REQUIREMENTS, for submittal procedures.

B. Pre-construction submittal

1. Product data

a) Raceways, Raceway fittings, separators, and accessories, duct-bank materials, manholes/handholes, solvent cement, sealants, tracer wire, warning tape / warning planks.

2. Shop drawings

a) Detailing fabrication and installation for custom manholes or handholes including duct entry provisions, reinforcing details, frame and cover design, manhole frame support rings, ladder details, grounding details, sump details, joint details, and cable racks, pulling irons, lifting irons.

b) Detailing of pathway and placement of manhole/handhole devices for underground duct bank pathways.

C. Project completion submittal

1. Accurately record actual routing of exterior buried raceway including coordination with other surrounding utilities and underground structures. Provide scaled plans and sections that indicate dimensions from finished grade or other fixed structural elements for all components of the pathway (duct bank sizing and location, conduit quantities and placement within the duct bank, tracer wire locations and sizing, warning plank location and sizing, manhole/handhole placement as well as sizing of each manhole/handhole installed).

1.07 QUALITY ASSURANCE

A. Pre-cast concrete manholes to be manufactured at a plant that holds a current NPCA certification Pre-cast concrete manholes to be manufactured at a plant that holds a current NPCA certification.

B. Materials shall be manufactured by companies specializing in the products specified in this Section, for a minimum of 5 years.

C. Communications and Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and is acceptable to AHJ.

2. Marked for intended use.

D. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by an independent testing agency.

2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.

3. Testing machine pressure gauges shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards

E. Refer to Section 27 0010 - GENERAL COMMUNICATIONS REQUIREMENTS for additional Quality Assurance requirements.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to project site with ends capped and store nonmetallic ducts with supports to prevent bending, warping, and deformation.

B. Store pre-cast and other factory-fabricated underground utility structures at project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings, if present, are visible.

C. Lift and support pre-cast concrete units only at designated lifting or supporting points.

1.09 FIELD CONDITIONS

A. Interruption of existing communications services to occupied facilities shall not occur unless permitted under the following conditions and then only after arranging to provide temporary electrical and communications services according to requirements indicated.

1. Notify Contract Administrator no fewer than two weeks in advance of proposed interruption of the electrical or communications services.

2. Coordinate service interruptions with the other trades, customer AHJ and architectural team.

a) Confirmation of the interruption shall be confirmed with a signed notice from the above-mentioned parties.

1.10 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

B. Where a list is provided, manufacturers are listed alphabetically and not in accordance with ranking or preference.

C. Substitutions: See Section 01 6000 - Product Requirements.

2.02 RACEWAYS AND FITTINGS

A. Metal Conduit

1. Manufacturers:

a) AFC Cable Systems, Inc.

b) Alflex Corporation, a Southwire Company

c) Anamet Electrical, Inc.; Anaconda Metal Hose.

d) Electri-Flex Co.

e) Indalex

f) Manhattan/CDT/Cole-Flex

g) O-Z/Gedney; Unit of General Signal (Fittings)

h) Republic Raceway

i) Tyco International; Allied Tube & Conduit Div.

j) Wheatland Tube Co.

k) Or approved equivalent

2. RMC:

a) GRS: Hot-dip galvanized steel (including threads): ANSI C80.1, UL 6

b) Plastic-Coated GRS and Fittings: NEMA RN 1, UL listed. Coating thickness of 0.40 inches (1 mm), minimum.

c) Fittings: NEMA FB 1; compatible with raceway and tubing materials.

B. Nonmetallic Raceway

1. Manufacturers:

a) AFC Cable Systems, Inc.

b) American International.

c) Anamet Electrical, Inc.; Anaconda Metal Hose.

d) Arnco Corp.

e) Cantex Inc.

f) Certainteed Corp.; Pipe & Plastics Group.

g) Condux International.

h) ElecSYS, Inc.

i) Electri-Flex Co.

j) Lamson & Sessions; Carlon Electrical Products.

k) Manhattan/CDT/Cole-Flex.

l) RACO; Division of Hubbell, Inc.

m) Spiralduct, Inc./AFC Cable Systems, Inc.

n) Superflex Ltd.

o) Thomas & Betts Corporation.

2. RNC: Extra-heavy Schedule 80 conduit type EPC-80-PVC, PVC: NEMA TC 2, NEMA TC 6&8, UL 651.

a) Fittings: match to raceway type and material: NEMA TC 3, NEMA TC 6&8, UL 651, as applicable and UL listed for direct burial as well as above ground use.

3. RNC: Heavy Schedule 40 conduit type EPC-40-PVC, PVC: NEMA TC 2, UL 651.

a) Fittings: match to raceway type and material: NEMA TC 3, NEMA BI 50063, UL 651, as applicable and UL listed for direct burial as well as above ground use.

C. Duct Accessories

1. Innerduct

a) Install size and quantity of innerduct within conduits as identified on the drawings.

b) Requirements:

1) Suitable for installation within the installed conduits

2) Sequential foot markings

3) Material shall be corrugated High Density Polyethylene (HDPE)

4) Manufacturer shall be: Duraline Corrugated, or approved equivalent.

5) Material shall be polyester/nylon textile containing 1250 lb polyester flat woven pull tape.

6) Manufacturer shall be: Maxcell ____

2. Duct Separators shall be factory-fabricated rigid interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.

3. Underground-line warning tape / tracer wire:

a) Description: Permanent, bright-colored, continuous-printed, polyethylene tape.

1) Not less than 6 inches wide by 4 mils thick.

2) Compounded for permanent direct-burial service.

3) Embedded continuous metallic strip or core.

4) Printed legend shall indicate type of underground line.

4. Concrete warning planks (to be installed over direct-buried duct-banks) shall be nominal 12 inches by 24 inches by 3 inches in size, manufactured from 6000 psi concrete.

a) Color: Red dye added to concrete during batching.

b) Labeling: Mark each plank with “COMMUNICATIONS” in 2 inches high, 3/8 inch deep letters.

5. Refer to details on drawings for additional accessories.

D. MicroDuct

1. Products

a) Manufacturers:

1) Clearfield

2) Duraline

3) Hexatronic

4) Sumitomo Electric Lightwave

2. Description

a) Configuration: See Drawings

b) MicroDuct OD: See Drawings

c) Colors: Orange

d) Fittings: Micro Couplers, Micro End Caps, Splice Kits, Mounting Bracket, Gas Block Connector, Enclosure Connector, Distribution Box, and Silicone Lubricant

e) Options: None

2.03 POLYMER HANDHOLE ENCLOSURES

A. General

1. Products

a) Product(s) identified on drawings forms Basis-of-Design. Equivalent product(s) that meet or exceed the specifications of the Basis-of-Design product and the specifications listed below will be considered from the following manufacturers.

b) Manufacturers:

1) Hubbell Power Systems, Inc. / Quazite

2) Oldcastle Pre-cast Group

2. Requirements

a) Comply with

1) UL (DIR)-Listed per SCTE 77

2) ASTM G154

3) RUS 7 CFR 1755.910 (PE-91)

4) ASTM D543

5) ASTM D570

6) ASTM D2444

b) Available materials

1) Polyolefin Blend

2) Aggregate combined with polymer resin and reinforced with fiberglass.

3) Fiberglass reinforced polymer (FRP)

4) Structural foam molded high density polyethene (HDPE)

c) Boxes

1) Wall Style: Straight Wall

2) Bottom Type: Open Bottom

3) Other requirements: Mousehole knockouts, Dividers, Box Collars, Pulling Eye, Cable Rack, and Ground Buss

d) Covers

1) The cover shall have “COMMUNICATIONS” molded into the cover.

2) Color: no preference

3) Bolts: LockDown LockOut(tm) Bolts

2.04 PRE-CAST CONCRETE HANDHOLES AND BOXES

A. General

1. Product(s) identified on drawings forms Basis-of-Design. Equivalent product(s) that meet or exceed the specifications of the Basis-of-Design product and the specifications listed below will be considered from the following manufacturers.

2. Manufacturers:

a) Carder Concrete Products.

b) Christy Concrete Products

c) Elmhurst-Chicago Stone Co.

d) Oldcastle Pre-cast Group

e) Riverton Concrete Products; a division of Cretex Companies, Inc.

f) Utility Concrete Products, LLC

g) Utility Vault Co.

h) Wausau Title, Inc.

i) Or Approved Equivalent

B. Comply with ASTM C858 for design and manufacturing process.

C. Pre-cast concrete handholes and boxes shall be factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of the handhole or box.

1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

2. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

3. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.

a) Cover Hinges: Concealed, with hold-open ratchet assembly.

b) Cover Handle: Recessed.

4. The cover finish shall be a nonskid finish with a minimum coefficient of friction of 0.50.

5. The cover shall have the following legend lettering molded into the cover:

a) “COMMUNICATIONS” for communications spaces

6. Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.

7. Extensions and slabs shall be designed to mate with bottom of enclosure and shall be same material as enclosure.

   a) Extension shall provide increased depth of 12 inches.

   b) Slab shall be same dimensions as bottom of enclosure and arranged to provide closure.

8. Windows shall be included as pre-cast openings in walls arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.

   a) Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.

   b) Window openings shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie into concrete envelopes of duct banks.

   c) Window openings shall be framed with at least two additional No.4 steel reinforcing bars in concrete around each opening.

9. Duct entrances into handhole walls shall have cast end-bell or duct-terminating fittings in the wall for each entering duct.

   a) Type and size shall match fittings to duct or conduit to be terminated.

   b) Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.

   c) Rigid steel conduits shall be hot-dipped galvanized malleable iron or steel threaded to the end if the conduit is cast in place in the wall of the manhole.

10. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

11. A clamped bonding ribbon shall be attached to rebar prior to encasement by concrete. Bonding ribbon shall exit manhole/handhole wall within 12 inches of top and between wall-mounted cable racks. Length shall be sufficient to attach to ground rod that stubs up 4 inches through manhole/handhole floor. Refer to detail on drawings and BICSI OSPDRM for more information.

2.05 PRE-CAST MAINTENANCE HOLES

A. Pre-cast-concrete manholes shall be furnished in sizes as indicated on the plans and as specified herein. Pre-cast manholes shall be constructed of reinforced concrete with a minimum 28-day concrete compressive strength for concrete at 4000 psi (min). Concrete used in the construction of the manhole shall contain

steel reinforcing bars to conform to applicable building codes. Reinforcing steel shall conform to ASTM E432 and ASTM C305.

B. Manholes shall be provided complete with appurtenances and accessories required.

1. Product(s) identified on drawings forms Basis-of-Design. Equivalent product(s) that meet or exceed the specifications of the Basis-of-Design product and the specifications listed below will be considered from the following manufacturers.

2. Manufacturers: Subject to compliance with requirements and hold a current NPCA certification, provide products by one of the following:

a) Barbour Concretes.

b) PreTech Corp.

c) Precision Precast Co.

d) Oldcastle Pre-cast Group.

e) Utility Concrete Products, LLC.

3. Substitution of Other Manufacturers: Subject to compliance with requirements; pre-caster shall hold a current NPCA certification. Requests to utilize an alternate pre-cast manufacturer shall be provided in writing and approved by Design Consultant prior to procurement and implementation.

C. Comply with ASTM C478 and with interlocking mating sections, complete with accessories, hardware, and features.

D. Windows: Pre-cast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.

1. Windows shall be located no less than 6 inches form interior surfaces of walls, floors, or roofs of manholes, but close enough to facilitate racking of cables on walls.

2. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie into concrete envelopes of duct banks.

3. Window openings shall be framed with at least two additional No.4 steel reinforcing bars in concrete around each opening.

4. Installer to coordinate location of openings with the design as depicted on the Telecommunications sheet/s for additional details.

E. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.

1. Type and size shall match fittings to duct or conduit to be terminated.

2. Fittings shall align with elevations of approaching ducts and be located near interior corners of manholes to facilitate racking of cable.

3. Installer to coordinate location of openings with the design as depicted on the Telecommunications sheet/s for additional details.

F. Concrete Knockout Panels: 1-1/2 inches to 32 inches thick, for future conduit entrance and sleeve for ground rod.

G. Each manhole shall provide a sump drywell of at least 8 inches in diameter.

H. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

I. Bonding Ribbon

1. A clamped bonding ribbon shall be attached to rebar prior to encasement by concrete. Bonding ribbon shall exit manhole/handhole wall within 12 inches of top and between wall-mounted cable racks. Length shall be sufficient to attach to Ground Rod that stubs up 4 inches through manhole/handhole floor. Refer to BICSI OSPDRM for more information.

2.06 UTILITY STRUCTURE ACCESSORIES

A. Utility structures shall be installed complete including accessories as listed below.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

a) Elmhurst-Chicago Stone Co.

b) McKinley Iron Works, Inc.

c) Neenah Foundry Company.

d) NewBasis

e) Oldcastle Precast Group

f) Osburn Associates, Inc.

g) Pennsylvania Insert Corporation.

h) Precision Precast

i) PreTech Corp

j) Riverton concrete Products; a division of Cretex Companies, Inc.

k) Strongwell Corporation; Lenoir City Division.

l) Underground Devices, Inc.

m) Utility Vault Co.

n) Wausau Tile, Inc

o) Or Approved Equivalent

2. Contractor shall provide cut sheets and engineered shop drawings for the manhole for review and approval prior to procurement and installation.

B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.

1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A48/A48M, Class 30B with milled cover-to-frame bearing surfaces; diameter, 32 inches; cover to be rated for heavy traffic H-20, UON.

a) Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

b) Special Covers: recess in face of cover designed to accept finish material in paved areas

c) For MV 12 feet to 20 feet in length two (2) covers shall be provided; for MV over 20 feet three (3) covers shall be provided.

2. Cover Legend: Cast in. Selected to suit system.

a) "COMMUNICATIONS"

3. Manhole Chimney Components: Pre-cast concrete rings with dimensions matching to those of roof opening.

a) Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C270, Type M, except for quantities less than 2.0 cu. ft. where packaged mix complying with ASTM C387/C387M, Type M, may be used. Manhole Sump Frame and Grate: ASTM A48/A48M, Class 30B, gray cast iron.

4. Pulling Irons in Concrete Walls:

a) Locate centrally over conduit ingress/egress locations: manufactured by Cooper Power Systems, Joslyn Manufacturing and Supply, Hubbell / Chance, or pre-approved equal. Devices shall be 7/8 inch in diameter with a length of 12 inches and a width of 10-7/8 inch; irons shall be embedded within the walls with a max tension of 13,000 lbf.

C. Pulling-In and Lifting Irons in Concrete Floors: 7/8 inch diameter, hot-dip galvanized, bent rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.

1. Ultimate Yield Strength: 40,000 lbf shear and 60,000 lbf tension

D. Bolting Inserts for concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of non-corrosive, chemical-resistant, non-conductive thermoplastic material; 1/2 inch ID by 2-3/4 inch deep, flared to 1-1/4 inch minimum at base.

1. Tested Ultimate Pullout Strength: 12,000 lbf minimum.

E. Expansion Anchors for Installation after Concrete is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2 inch bolt, 5,300 lbf rated pullout strength, and minimum 6,800 lbf rated shear strength.

F. Cable Rack Assembly: Stainless Steel stanchions and Non-metallic arms. Components fabricated from nonconductive, fiberglass-reinforced polymer.

G. Duct-Sealing Compound: Non-hardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

H. Fixed Manhole Ladders: Arranged for attachment to wall of manhole. Ladder and mounting brackets and braces shall be fabricated from nonconductive, structural-grade, fiberglass-reinforced resin.

I. Cover Hooks: Heavy duty, design for lifts 60 lbf and greater; two required, to be deliverd to the Owner prior to Substantial Completion.

J. Security: Secure access to utility structures. Provide LockDown, Inc. or McGard, LLC

2.07 EQUIPMENT ENCLOSURES FOR EXTERIOR SPACES

A. Refer to Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS for information.

2.08 GROUNDING

A. Ground Rods: UL-listed:

1. Copper-clad steel; bonded copper electrolytically-applied to minimum thickness of 10 mils.
2. 3/4 inch thick, by 10 ft long
3. Manufacturer shall be:
    a) Copperweld Steel Company
    b) ITT Weaver
    c) Thomas & Betts
    d) Pre-Approved equal.

B. Grounding Conductors and Connectors

1. Manufacturers:
    a) Apache Grounding/Erico Inc.

b) Boggs, Inc.

c) Chance/Hubbell.

d) Copperweld Corp.

e) Dossert Corp.

f) Erico Inc.; Electrical Products Group.

g) FCI/Burndy Electrical.

h) Galvan Industries, Inc.

i) Harger Lightning Protection, Inc.

j) Hastings Fiber Glass Products, Inc.

k) Heary Brothers Lightning Protection Co.

l) Ideal Industries, Inc.

m) ILSCO.

n) Kearney/Cooper Power Systems.

o) Korns: C. C. Korns Co.; Division of Robroy Industries.

p) Lightning Master Corp.

q) Lyncole XIT Grounding.

r) O-Z/Gedney Co.; a business of the EGS Electrical Group.

s) Panduit, Inc

t) Raco, Inc.; Division of Hubbell.

u) Robbins Lightning, Inc.

v) Salisbury: W. H. Salisbury & Co.

w) Superior Grounding Systems, Inc.

x) Thomas & Betts, Electrical.

y) Or approved equivalent

2. Grounding Conductors

a) Grounding Electrode Conductors: Bare, stranded, unless otherwise indicated.

b) Underground Conductors: Tinned-copper conductor, No. 2/0 AWG minimum stranded, unless otherwise indicated.

c) Bare Copper Conductors: Comply with the following:

1) Solid Conductors: ASTM B3.

2) Assembly of Stranded Conductors: ASTM B8.

3) Tinned Conductors: ASTM B33.

d) Copper Bonding Conductors

1) Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG copper conductor, 1/4 inch in diameter.

2) Bonding Conductor: No. 4 or No. 6 AWG, stranded copper conductor.

3) Bonding Jumper: Bare copper tape, braided bare copper conductors, terminated with copper ferrules; 1-5/8 inch wide and 1/16 inch thick.

3. Connector Products

a) Comply with IEEE 837 UL 467; listed for use for specific types, sizes, and combinations of conductors and connected items.

b) Bolted Connectors: Bolted-pressure-type connectors

1) Compression Connectors: Burndy Hyground, or equal, permanent, pure, wrought copper, meeting ASTM B187, essentially the same as the conductors being connected; clearly and permanently marked with the information listed below:

(a) Company symbol and/or logo.

(b) Catalog number.

(c) Conductors accommodated.

(d) Installation die index number or die catalog number is required.

(e) Underwriters Laboratories “Listing Mark:”.

(f) The words “Suitable for Direct Burial” or, where space is limited, “Direct Burial” or “Burial” per UL 467.

2) Cast connectors: copper base alloy according to ASTM B30.

c) Welded Connectors: Exothermic-welded type, in kit form, and selected per manufacturer's written instructions.

PART 3 - EXECUTION

3.01 INSTALLATION

A. GENERAL

1. Install in accordance with manufacturer's instructions.

2. Refer to Section 26 05 43 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS for additional

requirements. Where conflict exists, the more stringent requirements shall apply.

B. UNDERGROUND DUCT APPLICATION

1. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-80 PVC, in concrete-encased or direct-buried duct bank, unless otherwise indicated.

   a) For changes in elevation or direction, conduit shall be RMC or concrete-encased PVC.

2. Underground Ducts Crossing Paved Paths, Walks, and Driveways, Roadways, and Railroads: RNC, NEMA TC 2 Type EPC-80 PVC, encased in reinforced concrete.

C. UNDERGROUND ENCLOSURE INSTALLATION

1. Handholes and boxes Telephone, Communications, and Data Wiring:

   a) Units in roadways and Other Deliberate Traffic Paths: Pre-cast concrete. AASHTO HB H-20 structural load rating.

   b) Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Non-deliberate Loading by Heavy Vehicles: Pre-cast Concrete, AASHTO HB 17, H-20 structural load rating.

   c) Units in Sidewalk and Similar Applications with a Safety Factor for Non-deliberate loading by Vehicles: Pre-cast Concrete, AASHTO HB 17, H-10 structural load rating.

   d) Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced Polyester resin, structurally tested according to SCTE 77 with 3000 lbf vertical loading.

   e) Handholes shall be used as pull-through points only. Handholes shall not be used as splice points.

   f) Handholes shall not be used in conduit runs that have more than (3) three 4 inch conduits.

   g) Joint use of handholes by other trades is not allowed.

2. Maintenance holes: Pre-cast concrete.

   a) Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.

   b) Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating according to AASHTO HB 17.

D. EARTHWORK

1. Excavation and Backfilling: Comply with Section 31200 Earth Moving, but do not use heavy-duty, hydraulic-operated, compaction equipment.

2. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling and compaction is complete.

3. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary top soiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329000 Planting.

4. Cut and patch existing pavement in the path of underground ducts and utility structures according to Section 03 0100 - Maintenance of Concrete.

E. DUCT INSTALLATION

1. Maintain a minimum trench depth to allow for the top row of conduits in the duct bank to be 36 inch below grade.

2. Contractor shall remove rock and debris from backfill material. Contractor shall remove excess material from the site and compact the excavation. Unpaved areas shall be finished flush with the surrounding natural ground. Contractor shall restore damaged grassed areas.

3. Contractor shall tamp backfill material in 6 inch lifts with a mechanical tamp until compact density is at least equal to surrounding density

4. For concrete and driveway approaches, Contractor shall replace the entire joint of the approach unless otherwise directed by the Design Consultant. In areas with brick sidewalks, remove only the existing brick pavers necessary to install the conduit. Replace the brick pavers within seven (7) days of their removal. Furnish new bricks of similar type necessary to restore sidewalk area to its original appearance. New bricks shall identically match the existing brick pavers.

5. Contractor shall backfill the trench at locations along the trench path where non-movable objects, such as rocks and boulders, cannot be avoided causing a deviation in the elevation height of the multi-duct conduit system. The purpose of the backfill is to provide a gradual change in elevation of the trench, from the bottom to the highest point of the obstruction such that excessive bending and stress will not be transferred to the conduits once the conduit system is installed.

6. Slope: Pitch ducts a minimum slope of one-half percent down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

7. All underground conduits shall be slurry capped sealed.

8. Conduit lengths shall contain no continuous sections longer than 300 feet. If conduit lengths total more than 300 feet, pull points (manholes / handholes) shall be provided. The use of pull boxes to changes directions is prohibited, unless expressly detailed or indicated on the drawings.

9. Conduits shall have no more than 180 degrees of cumulative bends between pull points or more than 90 degrees of bends at any one point. Bends shall be long, sweeping bends with a radius of not less than six times the internal diameter of conduits 2 inches or smaller, or ten times the internal diameter of conduits larger than 2 inches. 48 inches sweeps are preferred.

    a) For changes in elevation or direction conduit shall change to RMC from PVC.

10. Required separation from other utilities.

    a) Power up to 1KVA:

        1) 12 inches of well-packed earth

        2) 4 inches of masonry

        3) 3 inches of concrete

    b) Gas, Oil, Water, etc.:

        1) 12 inches when parallel

        2) 6 inches when crossing

11. All conduits shall be mandrelled prior to installation of cable or (for spare conduits) prior to substantial completion; the OD of the test mandrel shall be no smaller than 80% of the conduit internal diameter.

12. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in the same plane.

13. Duct Entrances to Manholes and Handholes: Use end bells, spaced approximately 10 inches on center for 4 inches ducts, and vary proportionately for other duct sizes.

    a) Begin change from regular spacing to end-bell spacing 10 ft from the end bell without reducing duct line slope and without forming a trap in the line.

    b) Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in disturbed earth adjacent to manhole or handhole.

    c) Grout end bells into structure walls from both sides to provide watertight entrances.

    d) Ends of conduits shall be reamed.

    e) Conduits in the telecommunications duct bank shall enter one end of the manhole / handhole and exit the opposite end, UON.

14. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 ft outside the building wall without reducing duct line slope away from the building, and without forming a trap in the

line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Section 26 05 00 - Common Work Results for Electrical.

15. All conduits entering a building shall be pitched to drain away from the building to avert water intrusion. To prevent conduit shearing, conduits entering through walls shall be RMC and extend to undisturbed earth, particularly where such backfill is susceptible to load bearing tension.

16. Sealing: Provide temporary closure at termination of ducts that enter buildings. After cable installation, seal ducts (including spare) at termination.

17. Pulling Cord: Install 1250 lbf 1/2 inch (min) wide mule tape in conduits and in innerducts installed, including spares; mule tape shall provide footage markers and be indexed to facilitate future identification.

18. Concrete-Encased Ducts: Support ducts on duct separators.

    a) Separator installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 ft of duct. Spacers shall be installed / utilized per the manufacturer's standard specifications. Couplings for conduits shall be staggered at least 6 inch. Secure separators to earth and ducts to prevent floating during concreting. Stagger separators approximately 6 inch between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around the ducts or duct group.

    b) Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.

        1) Start at one end finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to the manufacturer's written recommendations or use other specific measures to prevent expansion-contraction damage.

        2) If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4 inch reinforcing rod dowels 18 inch into concrete on both sides of joint near corners of envelope.

    c) Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise in middle, uniformly filling open spaces. Do not use

power-driven agitating equipment unless specifically designed for duct bank application.

d) Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.

e) Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.

f) Minimum Space between Ducts: 3 inch between ducts and exterior envelope wall, 2 inch between ducts for like services, and 4 inch between power and signal ducts.

g) Depth: Install top of duct bank at least 24 inch below finished grade in areas not subject to deliberate traffic, and at least 30 inch below finished grade in deliberate traffic paths of vehicles, unless otherwise indicated.

h) Stub-Ups: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

1) Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inch of concrete.

2) Stub-ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inch from edge of base. Install insulated grounding bushings on terminations at equipment.

i) Warning Tape: Bury warning tape approximately 18 inch above concrete-encased ducts and duct banks. Align tape parallel to and within 3 inch of the centerline of duct bank. Provide an additional warning tape for each 12 inch increment of duct-bank width over a nominal 18 inch. Space additional tapes 12 inch apart, horizontally

j) Tracer Wire: Provide an orange #8 AWG high strength copper clad steel with a high-density polyethylene coated tracer wire' install by strapping it to the top row center conduit every 8 ft with a polyethylene-based tape; only (1) one tracer wire is required within the duct bank regardless of the dumber of conduits present. Tracer wire to terminate within every manhole / handhole to facilitate the application if an electrical current to the wire to aid in locating the duct bank in the future once the duct bank is buried.

19. Direct-Buried Duct Banks:

a) Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.

b) Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 ft of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6-inches between tiers.

c) Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as Specified in Division 31 Section "Earth Moving" for pipes less than 6-inches in nominal diameter.

d) Install backfill as Specified in Division 31 Section "Earth Moving".

e) After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4 inch over ducts and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving".

f) Install ducts with a minimum of 3 inch between ducts for like services and 6 inch between power and signal ducts, unless more restrictive separation is specified elsewhere in this section or on the drawings.

g) Depth: Install top of duct bank at least 36 inch below finished grade, unless otherwise indicated.

h) Set elevation of bottom of duct bank below the frost line.

i) Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

   1) Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inch of concrete.

   2) For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inch from edge of base. Install insulated grounding bushings on terminations at equipment.

j) Warning Planks: Bury warning planks approximately 18 inch above direct-buried ducts and duct banks placing them 24 inch on center. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12 inch increment of duct bank width over a nominal 18 inch. Space additional planks 12 inch apart, horizontally.

k) Tracer Wire: Provide an orange #8 AWG high strength copper clad steel with a high-density polyethylene coated tracer wire' install by strapping it to the top row center conduit every 8 ft with a polyethylene-based tape; only (1) one tracer wire is required within the duct bank regardless of the dumber of conduits present. Tracer wire to terminate within every manhole / handhole to facilitate the application if an electrical current to the wire to aid in locating the duct bank in the future once the duct bank is buried.

F. TEXTILE INNERDUCT INSTALLATION

1. Manufacturer may provide on-site installation assistance free of charge to Contractors unfamiliar with product. Use of this service is highly encouraged. Contact Maxcell at 888-387-3828 to find closest Territory Manager.

2. Provide textile innerduct in conduit using continuous unspliced lengths of textile innerduct between maintenance holes, pull boxes, and/or termination points as indicated on the drawings.

3. Make a 2 inch incision, approximately 18 inch from the end of textile innerduct. Pull out and cut off approximately 24 inch of pull-tape. Thus allowing the pull tape ends to retract back into the cells.

4. Using approximately 6 ft of pull tape, tie a non-slip knot to the incision. Then tie 3 to 6 half-hitch knots down to the end of textile innerduct. Apply black vinyl tape over knots and the end of textile innerduct. Using a Bow Line knot tie a swivel to the end of 3 ft pull tape. For multi-pack installations one swivel is sufficient but stagger each textile innerduct.

5. Using a bow line knot, attach the pull rope located in the rigid conduit to the other end of the swivel. Install textile innerduct - ensuring that no twist is introduced to the innerduct.

6. Provide suitable textile innerduct slack in the maintenance holes, hand holes, pull boxes, and at turns to ensure there is no kinking or binding of the product.

7. Textile Innerduct Mountings, Hangers, and Attachments: When exposed indoors or in maintenance holes, hold firmly in place using independent support.

8. Maintenance Hole and Hand Hole Installation:

a) At locations where textile innerduct will be continuous through a manhole or hand hole, allow sufficient slack so that the innerduct may be secured to the side of the vault maintaining the minimum bend radius.

b) At maintenance holes serving as the junction location, pull the exposed end of the innerduct to the far end of the vault, install termination bag, and secure to the vault.

9. Penetrations

   a) Seal conduit and textile innerduct entering structures at the first box or outlet to prevent entrance into the structure of gases, liquids, or rodents.

G. INSTALLATION OF CONCRETE MAINTENANCE HOLES, HANDHOLES, AND BOXES

1. Precast Concrete Handhole and Manhole Installation

   a) Comply with ASTM C891, unless otherwise indicated.

   b) Install each unit level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.

2. Elevations

   a) Install manholes / handholes per manufacturer's instructions; lid to manhole / handhole to be flush with the surrounding terrain so that no earth, roadway, or sidewalk removal is required to access the manhole / handhole interior. Contractor to provide chimney/ extensions / collars to facilitate the placement of the manholes / handholes to maintain the minimum distance to the surface above the highest row of conduits in the duct bank given the location of the manhole / handhole at the point of installation.

   b) Maintenance hole Roof: Install with rooftop at least 15 inch below finished grade.

   c) Install handholes with bottom below the frost line, 36" minimum below grade.

   d) Handhole Covers: Set surface flush with finished grade.

3. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.

4. Manhole Access: Circular opening in manhole roof; sized to match cover size.

   a) Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.

   b) Install chimney, constructed of precast concrete collars and rings to support frame and cover and to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for cast-iron frame to chimney.

5. Waterproofing: Apply waterproofing to exterior surfaces of maintenance holes and hand holes after concrete has cured at least three days. Waterproofing materials and installation are specified in Division 07 Section "Elastromeric Sheet Waterproofing". After ducts have been connected and grouted, and before backfilling, waterproof joints and

connections and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days

6. Dampproofing: Apply dampproofing to exterior surfaces of maintenance holes and hand holes after concrete has cured at least three days. Dampproofing materials and installation are specified in Division 07 Section "Bituminous Dampproofing". After ducts have been connected and grouted, and before backfilling, dampproof joints and connections and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.

7. Hardware: Install removable hardware, including pulling eye, cable stanchions, cable arms, and insulators, as required for installation and support of cable and conductors and as indicated.

8. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in maintenance holes.

9. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inch for manholes and 2 inch for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

10. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover

H. GROUNDING

1. Manholes and Handholes: Install a driven ground rod close to wall and set rod depth so 4 inch will extend above finished floor. If necessary, install ground rod before manhole is placed and provide a No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive tape or heat-shrunk insulating sleeve from 2 inch above to 6 inch below concrete. Seal floor opening with waterproof, nonshrink grout.

2. Connections to Manhole Components: Connect exposed-metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 6 AWG minimum, stranded, hard-drawn copper conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.

3. Equipment Grounding Conductors

   a) Use only copper conductors for both insulated and bare grounding conductors in direct contact with earth, concrete, masonry, crushed stone, and similar materials.

b) Underground Grounding Conductors: Bury at least 24 inch below grade, or 6 inch below the official frost line, whichever is greater, or when crossing a duct bank, bury 12 inch above duct bank.

4. Connections

a) General: Make connections so galvanic action or electrolysis possibility is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible. Provide electrical bonding plates, connectors, terminals, lugs and clamps as recommended by the manufacturers for indicated applications. Provide electrical insulating tape, heat shrinkable insulating tubing, welding materials, and bonding straps as recommended by the manufacturers for types of service indicated.

1) Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer to order of galvanic series.

2) Make connections with clean, bare metal at points of contact.

3) Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.

4) Make aluminum-to-galvanized steel connections with tin-plated copper jumpers and mechanical clamps.

5) Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

b) Compression Fittings: Permanent compression-type fittings may be used for the following:

1) Connecting conductors together.

2) Connecting conductors to ground rods

c) Tighten screws and bolts for grounding and bonding connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

d) Compression-Type Connections: Use hydraulic compression tools to provide correct circumferential pressure for compression connectors. Use tools and dies recommended by connector manufacturer. Provide embossing die code or other standard method to make a visible indication that a connector is adequately compressed on grounding conductor.

e) Moisture Protection: If insulated grounding conductors are connected to ground rods or grounding buses, insulate entire area

of connection and seal against moisture penetration of insulation and cable.

5. Field Quality Control

a) Testing: Perform the following field quality-control testing:

1) Test completed grounding system at each location. Measure ground resistance not less than two full days after the last trace of precipitation, and without the soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance. Perform tests by the fall-of-potential method according to IEEE 81.

2) Provide drawings locating each ground rod and ground rod assembly and other grounding electrodes, identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

3) Perform point-to-point megohmmeter tests between the ground rod and cable shields, splice cases, locate wires, and racking hardware to determine the resistance.

4) Investigate point-to-point resistance values that exceed 0.5 ohms.

(a) Check for loose connections.

(b) Check for absent or broken connections.

(c) Check for poor quality welds.

(d) Consider other reasons.

5) Excessive Grounding Electrode Resistance: If measured resistance to earth ground value exceeds specified values, add grounding electrodes and additional conductors as required to obtain the specified value.

I. GRADING AND PLANTING

1. Restore surface features, including vegetation, at areas disturbed by Work of this Section. Reestablish original grades, unless otherwise indicated. If sod has been removed, replace it as soon as possible after backfilling is completed. Restore areas disturbed by trenching, storing of dirt, cable laying, and other activities to their original condition. Include application of topsoil, fertilizer, lime, seed, sod, sprig, and mulch. Comply with Division 31 and 32. Maintain restored surfaces. Restore disturbed paving as indicated.

3.02 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

END OF SECTION

SECTION 27 13 23

COMMUNICATIONS OPTICAL FIBER BACKBONE CABLING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Multimode optical fiber cabling
2. Single mode optical fiber cabling

B. Related Requirements:

1. Section 27 05 26 – Grounding and Bonding for Communications Systems
2. Section 27 05 53 – Identification for Communications Systems
3. Section 27 11 19 – Communications Termination Blocks and Patch Panels
4. Section 27 16 19 – Communications Patch Cords, Station Cords, and Cross Connect Wire

1.02 REFERENCES

A. Abbreviations and Acronyms:

1. dB – Decibel
2. ID - Identification
3. I/O - Indoor/Outdoor
4. LED – Light Emitting Diode
5. nm – Nanometer
6. OFCP – Optical Fiber Conductive Plenum
7. OFNP – Optical Fiber Nonconductive Plenum
8. OLTS – Optical Loss Test Set
9. OM – Optical Fiber, Multimode
10. OS – Optical Fiber, Single mode

B. Reference Standards:

1. ANSI/TIA-526-7-A, Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant
2. ANSI/TIA-526-14-A, Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant
3. ANSI/TIA-568.0-E, Generic Telecommunications Cabling for Customer Premises
4. ANSI/TIA-568.1-E, Commercial Building Telecommunications Infrastructure Standard
5. ANSI/TIA-568.3-D, Optical Fiber Cabling and Components
6. ANSI/TIA-568.3-D-1, Optical Fiber Cabling and Components – Addendum 1: General Updates
7. BICSI TDMM, 14th edition
8. NECA/FOA 301-2016, Standard for Installing and Testing Fiber Optics
9. NFPA 70®, National Electrical Code® (NEC) (currently adopted edition)
10. TIA-455-78, Revision C – IEC-60793-1-40 Optical Fibres – Part 1-40: Measurement Methods and Test Procedures - Attenuation

11. TIA-492AAAD – Detail specification for 850-nm Laser-Optimized, 50m Core Diameter/125m Cladding Diameter Class Ia Graded-Index Multimode Optical Fibers Suitable for Manufacturing OM4 Cabled Optical Fiber
12. TIA-492CAAB – Detail Specification for Class IVa Dispersion-Unshifted Single-Mode Optical Fibers with Low Water Peak

1.03 ADMINISTRATIVE REQUIREMENTS (NOT USED)

1.04 ACTION SUBMITTALS

A. Product Data:

1. Submit product data in .pdf format for review no later than 60 days before beginning work.

a. Optical fiber backbone cabling

B. Shop Drawings: (Not used)
C. See Section 27 05 00 – Common Work Results for Communications, for submission requirements

1.05 INFORMATIONAL SUBMITTALS

A. See Section 27 05 00 – Common Work Results for Communications, for additional information
B. Loss budget:

1. Submit link loss budget for each optical fiber backbone cable before beginning work.

1.06 CLOSEOUT SUBMITTALS

A. Format:

1. See Section 27 05 00 – Common Work Results for Communications, for additional information

B. Warranty Documentation:

1. Submit authorized cable manufacturer warranty certificate stating the terms of the cable warranty.

C. Record Documentation: (Not used)
D. Test Reports:

1. Submit test reports in .pdf format as well as in the format native to the tester. Provide tester software if not readily available for the tester manufacturer website.
2. Test reports can be delivered electronically or on electronic media. Hard copy test reports are not required.
3. Test results shall be 100 percent complete and 100 percent passing.
4. Submitting test results that fail due to length is not permitted and will not be accepted.
5. Failure to provide test reports as requested may result in the hiring of an outside testing firm to complete testing at the Contractor’s expense.
6. Submit test results in sequential order, starting at the beginning of each patch panel and working through to the last patch panel. Test results submitted out of order will be rejected.

1.07 QUALITY ASSURANCE

A. Qualifications:

1. Installers:

a. The project requires manufacturer-certified installers experienced in optical fiber installation, splicing, and testing.

PART 2 - PRODUCTS

2.01 COMPONENTS

A. Manufacturers:

1. 24 strand OM4 I/O OFNP:

a. Belden (FD4D024P9A)
b. Berk-Tek (PDP024FB3010/F5-I/O)
c. CommScope (P-024-OD-5K-FSUBK)
d. Corning (
e. General Cable (BL0241ANU)
f. Hubbell (HFCD14024P4BK)
g. Optical Cable Corporation (DX024KALE9QP)
h. Superior Essex (W4024PK01)

2. 24 strand OS2 I/O OFNP:

a. Belden (FDSD024P9)
b. Berk-Tek (PDP024AB0707-I/O)
c. CommScope (P-024-OD-8W-FSUBK)
d. Corning (
e. General Cable (AP0241ANU)
f. Hubbell (HFCD14024PSBK)
g. Optical Cable Corporation (DX024KSLA9YP)
h. Superior Essex (W4024KK01)

3. Substitutions: Submit for approval per Section 27 05 00 – Common Work Results for Communications

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verification of Conditions:

1. Verify pathways are complete and free of obstructions before installing cable.

3.02 INSTALLATION

A. Systems Integration:

1. Install backbone cabling in a star topology from the MDF to each IDF.
2. Calculate link loss budget to determine the total loss for each optical fiber link.
3. Do not exceed the bend radius for optical fiber cable of 20 times the outside diameter.
4. Do not exceed the pulling tension for optical fiber cable of 300 pound-force.
5. Install backbone cabling in a neat and professional manner.
6. Avoid abrasion and other damage to cable during installation. Cable found to be damaged or deformed shall immediately be replaced without additional expense.
7. Use correct environmentally rated cable for each cable. Install indoor/outdoor rated cable for wet locations.
8. Tie wraps are not permitted for cable dressing. Only hook-and-loop fasteners are permitted. Install hook-and-loop fasteners snugly without deforming the cable jacket.
9. Provide a minimum of 20 feet of slack cable in the MDF and each IDF.
10. Bond OFCP cable to the nearest bonding busbar.

3.03 FIELD QUALITY CONTROL

A. Field Tests and Inspections:

1. Tests:

a. Test optical fiber to a minimum of Tier 1 certification according to ANSI/TIA-568.3-D-1 and TIA-455-78. Verify testing parameters with the optical fiber manufacturer before testing to meet warranty requirements.
b. Acclimate the tester to the project site before testing.
c. Testers shall be referenced using the one-jumper method with the appropriate Test Reference Cords. Multimode Test Reference Cords shall measure a maximum loss of .15 dB. Single mode Test Reference Cords shall measure a maximum loss of .20 dB.
d. A new reference shall be set if the Test Reference Cords become disconnected from the tester.
e. Multimode optical fiber cable shall be tested with an LED source and Encircled Flux compliant Test Reference Cords.
f. Optical fiber backbone cable shall have loss no greater than was provided in the link loss budget. OM4 loss shall be no greater than 3.0dB per kilometer at 850 nm and 1.5 dB per kilometer at 1300 nm. OS2 loss shall be no greater than 1.0 dB per kilometer at 1310 nm and 1550 nm.
g. When testing, label each strand as the color and backbone being tested.
h. Optical fiber backbone cable shall be terminated on fusion-splice LC cassettes only. Other means of termination will not be accepted and will be replaced at no additional cost.
i. Tester shall have been factory calibrated within 1 year of the date of testing. Test results with outdated calibration will not be accepted.
j. Enter manufacturer cable type into the tester. Test results using a cable type different than what was installed will not be accepted and shall be retested with the correct cable type at no additional cost.
k. Test results shall have project name, cable ID, date and time of test, headroom, loss/margin, manufacturer cable type and test limit, cable length, reference in dBm, number of adapters, number of splices, connector type, patch length, date and time of reference, reference type, operator name, calibration date, model name, and serial number for each test. Discrepancies shall be corrected immediately without additional cost.

l. Test results shall verify a “PASS” on each strand and display the specified parameters, comparing test values with standards-based templates integral to the testing unit. “FAIL” results are unacceptable and will require retesting until “PASS” status is achieved at no additional cost to the Owner.
m. Submit test results with passing results only. Test results submitted with failing results or negative “PASS” values will immediately be rejected.
n. In the event of unsatisfactory test results, make adjustments, replacements, or changes and repeat the tests until they are deemed satisfactory by the Owner or Consultant at no additional cost.
o. Maintain clean connector faces at all times. Clean optical fiber cassette faces before substantial completion.
p. Provide connector end face pictures upon request.
q. Approved cable tester manufacturers (OLTS):

1) AEM (TestPro CV100)
2) Fluke (CertiFiber® Pro)
3) Softing (WireXpert)
4) Trend Networks (Fibertek IV)
5) Viavi (SmartClass & Certifier40G OLTS)

2. Inspections:

a. Inspection of the cabling for correct installation, terminations, and testing is the responsibility of the Project Manager.
b. The Owner, Architect, or Consultant may elect to verify data as part of the acceptance procedure. Provide personnel and equipment at no additional cost to the Owner.

END OF SECTION 27 13 23

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. System Description

B. Active Infrastructure

1. Bi-Directional Amplifier (BDA)
2. Uninterruptible Power Supplies (UPS)

C. Passive Infrastructure

1. Antennas
2. Coaxial Infrastructure
3. Pathway Survivability

D. Remote Annunciator

E. Section 01 3000 - Administrative Requirements

F. Section 01 6000 - Product Requirements

G. Section 07 8400 - Firestopping

H. Section 26 0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

I. Section 26 0533 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

J. Section 26 0553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

K. Section 28 3111 - DIGITAL, ADDRESSABLE FIRE ALARM SYSTEM

1.02 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authority Having Jurisdiction

B. BDA: Bi-Direction Amplifier

C. BOM: Bill-of-Material

D. DAS: Distributed Antenna System

E. DASI: Distributed Antenna System Integrator

F. ERCES: Emergency responder communication enhancement system; also referred to as ERCCS: Emergency responder communication coverage system

G. FCC: Federal Communications Commission

H. GROL: General Radio Operator's License

I. NFPA: National Fire Protection Association

J. NRTL: Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other NRTLs that are acceptable to the AHJ, and standards that meet the specified criteria.

K. RF: Radio frequency

L. SISO: Single-Input, Single-Output

M. UHF: Ultra high frequency

N. VHF: Very high frequency

1.03 DEFINITIONS

A. BDA: Active RF-emitting device, wired with coaxial cables, for amplification of band-selective or multi-band RF signals via uplink to base station and via downlink from base station to portable two-way radios for enhanced signals and improved coverate; also referred to as analog or digital signal boosters.

B. Fiber DAS Master/Remote: Active RF-emitting device, wired with fiber-optic backbone, for distributing band-selective or multi-band RF signals via uplink to master/remote station and via downlink from master/remote station to portable two-way radio for enhanced signals and improved coverage.

C. ERCES: In-building, two-way communication enhancement system application. Installed to enhance effective operation of radio communications systems for fire, emergency medical services, or law enforcement agencies within building or structure. System used by firefighters, police, and other emergency services personnel. Also referred to as ERCCS - emergency responder communication coverage system.

D. Public Safety/First Responder: Public safety or first responder agencies charged with responsibilities of responding to emergency situations including, but not limited to, law enforcement departments, fire departments, and emergency medical companies.

E. 47 CFR 90 - Private Land Mobile Radio Services; Current E.

F. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. ICC (IFC) - International Fire Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. ISO 9001 - Quality Management Systems — Requirements; 2015, with Amendment (2024).

I. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

J. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

K. NFPA 72 - National Fire Alarm and Signaling Code; Most Recent Edition Cited by Referring Code or Reference Standard.

L. NFPA 1221 - Standard for the Installation, Maintenance, and Use of Emergency Services Communications Systems; 2019, with Amendment (2021).

M. NFPA 1225 - Standard for Emergency Services Communications; 2022.

N. UL 2524 - Emergency Responder Communication Enhancement Systems; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate work with other sections, including fire alarm systems and associated communications cabling. See "Related Requirements" above.

B. Coordinate roof locations for system components and penetrations with Architect.

C. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

D. Retransmission Agreement: Provide prior written approval from FCC license holder(s) of systems being enhanced; meet to review their established criteria for installation prior to beginning work; do not energize system before obtaining written approvals.

E. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

F. Active RF-emitting devices and other active system components require FCC certification prior to installation.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements.

B. Include sufficient information, clearly presented, to determine compliance with specifications and drawings.

C. The following submittals are due as part of the Bid Submittal:

1. Scope of Work
2. Name of company
3. Primary point of contact for this project
4. Relevant Contractor Qualifications
5. References - List of projects and points of contact for past projects of similar size and scope.
6. Personnel Qualifications / Credentials
    a) Manufacturer's qualification statement.
    b) Manufacturer's certification that products meet or exceed specified requirements.
    c) Evidence of installer name and state license number with expiration date.
    d) Submit certificates and/or other documentation as required by the Quality Assurance section of this specification.

D. The following submittals are due as part of the Pre-Construction Submittal:

1. Division of Labor - Identify contractor and sub-contractors that are furnishing, installing, and commisioning/verifying the pathway infrastructure, passive infrastructure, and active infrastructure.
2. Name, Resume, and contact information for the Project Manager
3. Installation Schedule
4. Test Plan
    a) Test equipment to be used
    b) Calibration and test data on the test equipment
    c) After testing is complete, submit RF measurement drawing of each floor of building indicating relative RF field strength for each frequency band required by AHJ.
        1) Drawing clearly indicates areas that have passed or failed based on AHJ required parameters.
5. iBwave Design: Incorporating the results from testing the building/area pre-installation, include iBwave software-simulated radio propagation modeling with heat maps showing predicted signal coverage legels within building.

6. Parts List (Bill-of-Materials): Provide a typed list indicating part name, manufacturer, part number, quantity, description, and color (if applicable) for products specifically identified herein by the exact and complete part number (no wild-card characters).

7. Submit manufacturers' cut sheets or catalog cut sheets of each of the pathways not specifically identified by its exact part number:

    a) Cut sheets shall include the following information at a minimum:

        1) Manufacturers name and logo

        2) Size - including physical and loading dimensions

        3) Maximum span length

        4) Weight supported

        5) Type

        6) Fittings to be used

        7) Method of attachment to structure

8. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including ratings, configurations, standard wiring diagrams, dimensions, finishes, service condition requirements, and installed features.

9. Shop Drawings:

    a) Submit installation documentation required for plan review and permitting by AHJ and frequency license holder(s), including but not limited to floor plans, showing locations of fire alarm system or other interconnects, enlarged and drawn to identified scale plan view, and riser diagrams.

        1) Riser diagram of Emergency Responder Radio Coverage System (ERRCS) showing proposed and approved cable size and type; coordinated with floor plans and describing circuit class, survivability, and application specific information required by NFPA 72.

        2) Riser diagram of grounding and lightning protection system

        3) Typical wiring diagrams for devices, equipment, interconnects, annunciators, passive components, and active equipment.

        4) Requirements and control unit diagrams for interfacing with other systems.

    b) Scaled layout drawings showing ERRCS components:

        1) Donor and Coverage Antenna locations

        2) Cable routing, with cable type identified

3) Splitters, combiners, and coupler locations

4) Active equipment locations with elevation layout

5) Size/information/locations of all boxes, Pull Boxes, firestopping systems, and access panels.

6) Locations of components, circuits, and raceways; mark components with identifiers used in control unit programming.

7) Elevations of proposed equipment arrangements.

c) Details:

1) Donor Antenna and Coverage Antenna mounting

2) Grounding and Bonding

3) Remote Annunciator: Provide sheet details for exterior and interior views of panel enclosures and clearly show associated wiring information.

d) Calculations

1) RF Link Budget

2) UPS load and runtime

E. The following submittals are due at the Project Completion Submittal, pursuant to the Project Close-Out Instructions in Part 3 of this section:

1. Resubmit approved Pre-Construction Submittals of the following, updated to reflect all changes during construction:

a) Equipment List with length of warranty

b) Cut Sheets

c) Record Drawings

2. Operation & Maintenance Manuals

a) Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

b) Include detailed information on system operation, equipment programming and setup.

c) Include manufacturer's preventative maintenance recommendations.

d) Include contact information for entity responsible for providing contract maintenance and trouble call-back service.

3. Test Reports

a) Installer to submit inspection and test plan prior to closeout demonstration.

b) Acceptance Test - Acceptance and Operational testing shall be in accordance with ICC (IFC) with the following clarifications:

1) The AHJ shall review the as-built drawings and link budget to ensure the physical installation is the same as the as-built drawings during the final system acceptance test.

2) The final system acceptance test shall be witnessed by AHJ or specific designee and shall include a visual inspection of the physical installation of the emergency responder radio system. The AHJ shall conduct an on air test of the subject radio channels in all critical areas and spot tests in non-critical areas. A qualified Engineer or Technician from the designing or installing company shall be present with appropriate test equipment to verify all measurements are in compliance with ICC (IFC) Section 510.

3) As part of the acceptance test, backup batteries and power supplies shall be tested in accordance with Section 510 of the ICC (IFC).

4) Section 510 of the ICC (IFC) - As part of the installation a spectrum analyzer or other suitable test equipment shall be utilized to evaluate the system for the entire spectrum range of frequencies used by the AHJ to ensure spurious oscillations are not being generated or received by the building signal booster(s). This test shall be conducted at time of installation and subsequent annual inspections.

F. Maintenance

1. The emergency responder radio system coverage shall be maintained operational at all times in accordance with Section 510 of the ICC (IFC).

2. In the event of a service affecting failure of any portion of the emergency responder radio system, an initial evaluation shall be made by a qualified technician within 24 hours and repairs shall be complete within five working days. Building owner or designee shall notify AHJ forthwith of any service affecting outage.

3. In the event of a non-service affecting failure of any portion of the emergency responder radio system, an initial evaluation shall be completed by a qualified technician on the next business day and repairs shall be complete within 15-business days.

G. Annual Testing and Proof of Compliance

1. Annual testing and proof of compliance shall be in accordance with Section 510 of the ICC (IFC).

H. Warranty Documentation: Submit final executed manufacturer warranties and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.06 RF PRECONSTRUCTION BUILDING SURVEY FOR ERCES

A. Comply with requirements and standards for initial survey for public safety radio signal strength in accordance with NFPA 1225 (or NFPA 1221) and ICC (IFC).

B. Perform survey after building is substantially completed and prior to start of installation of electrical wiring.

C. Conduct survey using calibrated RF spectrum analyzer, system-compatible radio, or another suitable instrument with traceable NIST certificate of calibration. Analyze RF signal strength of ERCES signal into building and determine if amplification or distribution of signal is required. Determine, measure, calculate and document inbound and outbound signal strengths as required by code.

D. Public safety radio signal level inside Owner's facility determined per code, ordinance, or AHJ requirements.

E. Follow acceptance testing procedure requirements listed in "Field Quality Control" in Part 3.

F. Include report summary and recommendations if ERCES design is required.

1.07 QUALITY ASSURANCE

A. Comply with requirements in accordance with the following:

1. AHJ
2. Frequency license holder(s)
3. Local fire department
4. Applicable local codes
5. ICC (IFC)
6. NFPA 72
7. NFPA 1221
8. NFPA 1225

B. Register installed systems with FCC signal booster registry, regardless of system classification.

C. Obtain permits necessary for installation prior to commencement of work. Include permit costs and inspection fees.

1. Where filings require engineer's signature, submit documents for their review and signature. This responsibility includes furnishing required quantities of floor plans, descriptive notes, and specifications, wiring diagrams, shop drawings and amendment forms.

D. Early completion of ERCES required for Certificate of Occupancy.

1. Complete work results for ERCES at least 15 days before scheduled date of occupancy.

E. Telephone Operator's License: Tests conducted, documented, and signed by person in possession of FCC GROL. Testing personnel have certified and authorized by active RF-emitting equipment manufacturer in requirements for installation and operation of their equipment. Provide personnel qualifications as acceptable to AHJ and frequency license holder(s).

F. RF Preconstruction Building Survey Personnel: Performed by FCC technician holding current GROL license.

G. Designer Qualifications: Perform design under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1. ERCES design performed by RF system designer.
2. iBwave Level 2 or higher certified personnel.
3. Perform design under direct supervision of professional engineer (PE) or registered communications distribution designer (RCDD) experienced in design of this type of work and licensed in Project Location State.
4. Employing BICSI registered communications distribution designer (RCDD).
5. Designer personnel maintains NICET level II, level III, or Design certified in-building public safety communications (IB-PSC), employed by manufacturer, Contractor, or installer.

H. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least three years of documented experience. Certified for compliance with ISO 9001.

I. Software Modifications:

1. Provide use of hardware, software, programming tools, and documentation necessary to modify ERCES software on-site.
2. Modification includes addition, deletion, and changes to system operation and associated labeling.
3. System structure and software without limits on type or extent of software modifications on-site.

4. Modification of software maintains system power without loss of ERCES while modifications are being made.

J. Contractor & Personnel Qualifications

1. Minimum Qualifications of Personnel - The minimum qualifications of the system designer and lead installation personnel shall be in compliance with Section 510 of the ICC (IFC).

a) Responsibility - Design, oversight of installation, and system startup and commissioning.

b) Company Qualifications

1) Minimum of 3 years designing and commissioning Distributed Antenna Systems, with positive references for 2 Projects in which the Bidder has performed in a capacity comparable to the size, scope and type outlined in these Construction Documents.

c) Personnel Qualifications

1) Retain on staff an individual with an FCC-issued General Radio Operator's License (GROL).

2) The person(s) conducting testing of the active equipment and signal strength coverage shall be certified to operate the necessary test equipment.

K. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

L. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

1.08 WARRANTY

A. Active components of the Distributed Antenna System, as well as splitters, couplers, and antennas shall be covered by a 1-year warranty from date of substantial completion, pursuant to Division 1 and General Conditions.

B. Coaxial cable and connectors shall be covered by a 5-year manufacturers warranty from date of substantial completion.

C. The fiber optic cables shall be covered by a minimum of 20+ year Advanced System Warranty from the date of substantial completion.

D. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

E. Correct defective Work within a five year period after Date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Basis of Design: _____

B. Manufacturers: Subject to compliance with requirements, provide products from one of the following, unless specified otherwise.

1. Advanced RF Technologies, Inc. (ADRF)
2. Comba
3. Fiplex Communications
4. Honeywell
5. Notifier
6. SOLiD
7. SureCall
8. TowerIQ
9. Westell
10. _____
11. Substitution: See Section 01 6000 - Product Requirements
    a) Products other than basis of design are subject to compliance with specified requirements and prior approval of Engineer. By using products other than basis of design, Contractor accepts responsibility for costs associated with necessary modifications to related work, including design fees.
12. Source Limitations: Where possible, furnish system components and accessories produced by one manufacturer and obtained from one supplier.

2.02 SYSTEM DESCRIPTION

A. This is a performance-based turn-key system. Provide new ERCES to provide complete coverage in building for public safety agencies as required by AHJ, consisting of required components (e.g., equipment, conduit, boxes, wiring (including power), connectors, hardware, supports, accessories, software, system programming, and integration) as necessary for complete operating system that provides functional intent indicated. System users receive and transmit radio signals from two-way radios within building.

B. System shall comply with applicable AHJ codes and standards, including but not limited to:

1. ICC (IFC): Section 510, "Emergency Responder Radio Coverage"

2. NFPA 72: Section 24.5, "Two-Way Radio Communications Enhancement Systems"

3. Additionally comply with rules and regulations from local and state governments related to this system.

4. All products included as a part of this system shall be Listed, classified and labeled as suitable for purpose intended.

C. Frequency Range

1. List of Assigned Frequencies:

a) VHF: 136MHz to 174MHz

2. Additional Frequencies: In the event of a revision to frequencies as a result of FCC order or other Authority Having Jurisdiction (AHJ) notification, notify and coordinate with Design Team and Owner to modify or expand the emergency responder radio system coverage at Owner expense. The AHJ may require coverage in the future for FirstNet Broadband Services as NFPA 72, NFPA 1221 and ICC (IFC) Section 510 are amended.

D. System components may include for a complete fully operational system, but are not limited to:

1. Active Components: bi-directional amplifier (BDA), power supplies

2. Passive Components: donor antennas, antenna cabling, coverage antennas, coaxial cable, connectors, splitters, combiners, couplers, equipment racks, enclosures, surge suppressors, filters and grounding/bonding connections.

3. All enclosures shall be painted red with external labeling as required by AHJ.

4. External filters, duplexers, power supplies, or other non-OEM additions or modifications of original equipment are not acceptable, except where technically required and without violating UL 2524 certification. If required, external filters manufactured or certified by ERCES manufacturer are acceptable.

E. Power Sources:

1. System Design Voltage: DC

2. Provide monitoring integrity of power sources in accordance with NFPA 1225 (or NFPA 1221) and ICC (IFC).

3. Provide at least two independent and reliable power supplies in accordance with NFPA 1225 (or NFPA 1221) and ICC (IFC).

4. Primary: Dedicated branch circuits from facility power distribution system in accordance with NFPA 72.

5. Secondary: Storage batteries with capacity to operate system for period specified by NFPA 1225 (or NFPA 1221).

a) External uninterruptible power supplies (UPSs) are not acceptable.

b) Dedicated battery storage capacity:

1) Provide 12 hours of 100 percent system operation capacity.

2) Provide 2 hours and connection to stand-by generator power system that supports 100 percent system operation capacity.

(a) See Section 26 3213.

3) Provide 25 percent additional overall battery capacity correction factor.

F. Wiring and Wiring Methods:

1. General Requirements:

a) Comply with requirements for wiring and wiring methods in accordance with NFPA 70.

b) Conductors and cables installed exposed in spaces used for environmental air (only where specifically permitted): Plenum-rated, listed and labeled as suitable for use in return air plenums.

c) Special Occupancies: Comply with NFPA 70.

d) Comply with NFPA 70 for wire and cable plenum, riser, general-purpose, limited-use, and underground applications.

2. RF Coaxial cable: CMP plenum

3. Singlemode fiber optic cable: LC/APC fiber connectors.

4. Fire-rated cables and cable systems:

a) Provide cable fastening and listing requirements in accordance with NFPA 70.

b) Provide indication of application, use cases, and product make and model for which listing applies.

c) Provide additional classification suffix marking on cable system; observable by AHJ.

d) Emergency Communications Systems: Provide fire-rated protection for control equipment and circuits in accordance with NFPA 72.

e) Unsprinklered building, except high rise, fire-rated cable and associated firestopping of penetrations in accordance with NFPA 72 and NFPA 1225 (or NFPA 1221):

1) Two-hour fire-rated circuit integrity (CI) or fire-resistive cable.

2) Two-hour fire-rated cable system (electrical circuit protective systems).

3) Two-hour fire-rated enclosure or protected area.

4) One-hour fire-rated circuit integrity (CI) or fire-resistive cable.

5) One-hour fire-rated cable system (electrical circuit protective systems).

6) One-hour fire-rated enclosure or protected area.

G. System Monitoring

1. The public safety radio communications enhancement system shall include automatic supervisory and trouble reporting for malfunctions of the signal booster and power supplies that are annunciated by the fire alarm system and UL listed supervising station monitoring company or shall be monitored at a constantly attended location at the building and comply with the following:

a) The integrity of circuit monitoring signal boosters and power supplies shall comply with NFPA 72.

b) System and signal booster supervisory signals shall include the following:

1) Antenna malfunction

2) Signal booster failure

3) Low battery indication when 70% of the 24-hour operation capacity has been depleted

c) Power supply signals shall include the following for each signal booster:

1) Loss of normal power

2) Failure of battery charger

2. ERRS signals on fire alarm annunciator panel shall be labeled "EMERGENCY RESPONDER RADIO SYSTEM." There shall be one green LED signal indicating ERRS in normal mode and one yellow LED indicating system is in trouble.

3. Automatic smoke detection - Smoke detector shall be provided at the location of each ERRS control unit(s), storage battery unit(s) and monitoring panel.

4. Dedicated Panel - A dedicated monitoring panel shall be provided in an area acceptable and approved by the AHJ to annunciate the status of all signal booster locations. In buildings with fire alarm systems, a smoke detector shall be provided above monitoring panel. The monitoring panel

shall provide visual and labeled indication of the following for each signal booster:

a) Normal 120VAC power

b) Signal booster trouble

c) Loss of normal 120VAC power

d) Failure of battery power

e) Low battery capacity

5. In special circumstances where a dedicated panel cannot be installed, a request for modification must be submitted and approved to annunciate on FACP.

H. Coverage / Performance Requirements:

1. Propose and deploy a solution capable of receiving approval of the Authority Having Jurisdiction (AHJ).

2. Upon project completion and testing, the system shall provide coverage for the Public Safety Network frequencies listed above.

3. Network Management:

a) The system shall have a Network Management System (NMS) capable of alarm, monitoring, configuration and control of all Active Components.

b) The system shall be capable of integration with 3rd party SNMP-based NMS products for alarm purposes and provide alarming information to the Fire Alarm System.

4. Coverage:

a) Hardware and cabling installation shall be in accordance with the applicable portions of NFPA 72, ICC (IFC), and NFPA 70.

b) Radio coverage shall be provided throughout the building as a percentage of floor area as follows and shall be tested in accordance with ICC (IFC) with the following additional conditions:

1) Critical Areas - Critical areas such as the emergency or fire command center(s), the fire pump room(s), exit stairs, exit passageways, elevator lobbies, standpipe cabinets, sprinkler valve locations and other areas deemed critical by the AHJ shall be provided with 99% floor area radio coverage.

2) General Building Areas - General building areas shall be provided with 95% floor area radio coverage.

5. Signal strength:

a) Minimum DAQ of 3.0 or better and equivalent signal to interference noise ratio (SINR) applicable to technology for either analog or digital.

b) Downlink: Minimum signal strength of -95dBm throughout coverage area.

c) Uplink: Minimum signal strength of -95dBm received at AHJ radio system or as required by AHJ.

6. Provide FCC certification for active RF-emitting system components prior to installation. Comply with applicable sections of FCC rules, including but not limited to the following:

a) Private land mobile radio services: FCC 47 CFR 90.129.

b) _____

7. Under normal operating condition, maintain antenna isolation between donor antenna and inside antennas, DAS, to 20 dB minimum.

8. Survivability from attach by fire in accordance with NFPA 72, NFPA 1225 (or NFPA 1221), ICC (IFC) or as required by AHJ.

I. Just prior to the end of the 1-year warranty period, return to the project site to:

1. Check all equipment for proper system operation. Any defective equipment found shall be replaced or repaired under the terms of the system warranty.

2. Conduct the yearly testing to check coverage and signal strength requirements per the referenced NFPA 72.

2.03 ACTIVE INFRASTRUCTURE

A. General Requirements:

1. Compliance

a) NFPA 72

b) ICC (IFC)

c) UL 2524

d) NFPA 1221 (or NFPA 1225)

e) NFPA 70

f) NFPA 1

g) CSFM Listing

h) RoHS

i) Buy American Act

2. FCC Certifications

a) 47 CFR 15

b) 47 CFR 90

3. Provide public safety type system with Class A or Class B active RF-emitting devices, as designated by FCC or as required by AHJ.

4. FCC ID must be displayed on product in accordance with FCC.

5. Capable of field configuration via programmable software for frequency channels with adjustable bandwidths as specified by AHJ.

6. Active RF-emitting devices support Class A or Class B operation.

   a) Class A: Provide channel selective type with 75kHz, 62.5kHz, 50kHz, 37.5kHz, 25kHz, and 12.5kHz channel bandwidth options.

   b) Class B: Provide wide-band filters of greater than 75kHz to full-band.

7. Include oscillation suppression circuitry to protect public safety radio system in case of system malfunction or other causes. Circuitry allows for real-time automated oscillation correction and immediate detection capable of generating oscillation alarm, combined with programmable limited operation or auto-shutdown if performance migration fails.

8. Include uplink noise suppression function to eliminate uplink noise while in standby (e.g., no radio transmission from within building). Systems that produce measurable level of uplink noise while in standby are not acceptable.

9. Include uplink and downlink squelch, per channel, per timeslot.

10. Provide redundant fiber ports where applicable.

11. Provide rack-mounted fiber DAS master unit.

12. Fiber DAS digital signal: up to 40km or 18dBo maximum loss on singlemode fiber (SFP).

13. Rated minimum of 85dB plus/minus 2.0dB and gain adjustable by minimum of 28dB range.

14. Maximum propagation delay range: designer determined, adjustable and with filter delay options for compliance with system requirements or per AHJ.

15. Maximum noise: 9dB; throughout its published operable uplink gain range.

16. Include built-in automatic supervision of system malfunctions, including battery systems where applicable.

17. Non-OEM equipment add-ons and modifications are not acceptable.

18. Enclosure: NEMA 250 Type 4

B. Bi-Directional Amplifier (BDA)

1. Frequency Range: See System Description above.
2. Output Power: Size per RF link budget
3. Signal Booster Enclosure: Red, NEMA-4 (UL 508A)
4. Impedance: 50 Ohm
5. RF Connectors: N-Female

C. UPS - Uninterruptible Power Supplies

1. All active equipment serving this system shall be connected to a UPS, and emergency/stand-by generator power if available.
2. Performance Description:
   a) If normal/primary power fails, energy supplied by the battery through the inverter continues supply-regulated ac power to the load without switching or disturbance.
   b) When power is restored at the normal supply terminals of the system, controls automatically synchronize the inverter with the external source before transferring the load. The rectifier-charger then supplies power to the load through the inverter and simultaneously recharges the battery.
   c) The UPS shall perform as specified in this Article while supplying rated full-load current, composed of any combination of linear and nonlinear load, up to 100 percent nonlinear load with a load crest factor of 3.0, under the following conditions or combinations of the following conditions:
      1) Inverter is switched to battery source.
      2) Steady-state ac input voltage deviates up to plus or minus 10 percent from nominal voltage.
      3) Steady-state input frequency deviates up to plus or minus 5 percent from nominal frequency.
      4) THD of input voltage is 15 percent or more with a minimum crest factor of 3.0, and the largest single harmonic component is a minimum of 5 percent of the fundamental value.
   d) Surge Suppression: Protect internal UPS components from surges that enter at each ac power input connection
   e) Controls - shall include the following:
      1) Inverter on/off
      2) UPS start
      3) Battery test
      4) Alarm silence/reset

5) Output voltage adjustment

f) Monitoring

1) Alarm indications shall include the following:

(a) Trouble alarm

(b) Battery system alarm

2) Alarms shall notify Owner via integration with Fire Alarm monitoring.

3. Design Requirements:

a) Minimum Duration of Supply:

1) If battery is sole energy source, supply rated full UPS load current at 80% power factor, duration of supply shall last a minimum of 24 hours.

2) Where equipment is connected to an automatic-starting, engine-driven generator serving the system's dedicated branch circuit with at least 12 hours of 100% system operation capacity, duration of battery shall last a minimum of 2 hours at full UPS load current at 80% power factor.

b) Include load and UPS-sizing calculations in pre-construction submittals.

2.04 PASSIVE INFRASTRUCTURE

A. General

1. Provide passive components required in RF system design as required for complete system, included but not limited to passive RF-emitters, design frequency range, gain values, radiation patterns or heatmaps, voltage standing wave ratio, polarization, power handling, impedance, connector types, environmental ratings, device losses, isolation characteristics, signal rejection, component size, form factor, attenuation values, output accuracy, and thermal stability.

2. Submit equipment listings, manufacturer requirements, and quantities on products not limited to the following items if utilized in the system design.

B. Antennas

1. Donor Antennas

2. Coverage Antennas

3. Antenna Support Infrastructure

a) Comply with TIA-5053-A

C. Coaxial Infrastructure

1. Splitters
2. Duplexers-notch filters
3. Tappers
4. Passive Combiners
5. RF Cables (including but not limited to fiber, coaxial, hardline)
6. Antenna discharge units
7. Enclosures: NEMA 250 Type 4
8. Connectors and jumpers
9. Coaxial Surge Protectors -To be utilized for cables connected to an antenna/device subject to potential lightning strikes.

D. Pathway Survivability

1. All system riser cables shall be in conduits and shall consist of one or more of the following:

a) Buildings where interior exit stairway and ramp enclosure are required to have fire-resistance rating of no less than two hours:

1) 2-hour fire-rated circuit integrity (CI) cable
2) 2-hour fire-rated cable system
3) 2-hour fire-rated enclosure or protected area
4) 2-hour performance alternative approved by the AHJ

b) Buildings where interior exit stairway and ramp enclosure are required to have fire- resistance rating of no less than one hour.

1) 1-hour fire-rated Cl cable
2) 1-hour fire-rated cable system
3) 1.-hour fire-rated enclosure or protected area
4) 1-hour performance alternative approved by the AHJ

2.05 REMOTE ANNUNCIATOR

A. Provide dedicated supervisory monitoring panel within fire command center next to FACU, fire alarm system annunciator, or other location as designated by AHJ to annunciate status of active RF-emitter device locations. Include visual and labeled monitoring panel indication for the following and for each active RF-emitter:

1. Normal AC power
2. Signal booster trouble
3. Antenna failure

4. Loss of normal AC power
5. Failure of battery charger
6. Low battery c
7. Active system component failure

2.06 ACCESSORIES

A. Cables for network connections:
   1. Comply with manufacturer's requirements.
   2. See Section 27 1000.

B. As-Built document cabinets:
   1. Provide as-built document cabinet with size as indicated or as required.
   2. Cabinet: Steel with red finish; permanently identified with text "AS-BUILT DRAWINGS"; keyed to match ERCES equipment.
   3. Basis of Design: _____

C. Antenna discharge unit.

D. Surge Protection:
   1. Line voltage surge protection: Listed; provide for each line voltage circuit that supplies operating power for ERCES equipment.
   2. Low voltage surge protection: Listed; voltage/current ratings suitable for circuit to be protected; provide for each power limited low voltage circuit that exits protected premises.
   3. Basis of Design: _____

PART 3 - EXECUTION

3.01 EXAMINATION

A. If the installed infrastructure is insufficient for the proposed system, notify the Architect and Design Consultant immediately. Review drawings and/or building to ensure the following:
   1. Examine for adequate space for all equipment, antennas, cabling, etc.
   2. Examine for adequate available power for all active equipment.
   3. Examine for adequate available grounding and bonding system.
   4. Examine pathway elements intended for cable installation. Check raceways, cables and other elements for compliance with accessibility for installation and maintenance, and other conditions affecting installation.

5. Examine walls, floors, roofs, equipment bases, and roof supports for suitable conditions where equipment is to be installed.

B. Verify that field measurements are as indicated.

C. Verify that characteristics of system components are consistent with the indicated requirements.

D. Verify that circuit wiring installation is completed, tested, and ready for connection to system where applicable in accordance with NFPA 70.

E. Verify that mounting surfaces are ready to receive system components.

1. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not begin installation until unacceptable conditions are corrected.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General

1. Install in accordance with NFPA 1221 (or NFPA 1225), NFPA 72, NFPA 70, state and local codes, manufacturer's instructions, and as indicated on drawings.
2. Install products in accordance with applicable requirements of NECA 1 (general workmanship).
3. When cable penetrates fire-rated barrier, installation shall meet Section 07 8400 - Firestopping.
4. Per NFPA 72, provide monitoring and alarm capabilities to the fire alarm system in Section 28 3111 - DIGITAL, ADDRESSABLE FIRE ALARM SYSTEM.
5. All permitting and licensing fees for this system shall be paid by the Contractor.
6. Wiring Method: Install cables concealed in accessible ceilings, walls, and floors where possible. Install cables in raceways as indicated. Conceal raceways and wiring except in unfinished spaces. See Section 26 0533 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for more information.
7. Identification shall meet Section 26 0553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS
8. Provide dedicated 20 amp branch circuit for battery system.

9. Wiring in Telecommunication Rooms: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.

10. Conceal conduit, junction boxes, conduit supports, and hangers in finished areas. Conceal conduit, junction boxes, conduit supports, and hangers in unfinished areas; maintain code required access and clearances.

11. UL 2524 Listed Equipment: Do not drill holes or field fabricate openings in UL 2524 listed equipment; this voids warranty, listing, and enclosure rating.

    a) Mark equipment front with identifier "DO NOT DRILL INTO THIS CABINET" label.

    b) See Section 26 0553.

12. Donor antenna mounting:

    a) Fixed permanently on building where approved by AHJ.

    b) Moveable: Mount identification in accordance with ICC (IFC) and ICC (IBC).

13. Protect signal cables and connected components against transient-voltage surges by suppressors and absorbers designed specifically for the purpose. Provide ac-powered equipment with integral surge suppressors, complying with UL 1449.

14. Enclosure installation

    a) Wall panels/enclosures shall be installed on a plywood backboard or attached to a masonry wall. They should not be attached to sheet rock (gypsum wall board).

B. Grounding and Bonding

1. See Section 26 0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS for more information.

2. Where insulated conductors are necessary provide adequately rated insulation jackets or pathways to meet all required building codes. (I.e. Plenum, riser, outside plant, run entirely in conduit, etc.)

3. Grounding and bonding conductors should not be placed in ferrous metallic conduit. If it is necessary to place grounding and bonding conductors in ferrous metallic conduit that exceeds 3 feet (1 meter) in length, the conductors shall be bonded to each end of the conduit using a grounding bushing or a No. 6 AWG conductor, minimum.

4. Install grounding and bonding per manufacturer's installation instructions and in compliance with TIA-607, IEEE 142, IEEE 1100, NFPA 70 and NECA/BICSI 607.

5. Required Bonding Connections:

a) Provide one individual bonding conductor from each enclosure to the SBB in the room. Each conductor is to be “home run”; do not “daisy chain” the connections.

b) Provide and install one individual bonding conductor to the SBB from the entrance protector for any coaxial cable connected to a roof-mounted donor antenna.

c) Provide and install one individual bonding conductor to the SBB from any continuous conduit installed for systems that extends into the equipment room.

d) Where structural steel is available, is continuous, and properly bonded to the electrical grounding system, provide one individual bonding conductor from the SBB and connect to the nearest structural steel member. Indicate this location on the Record Drawings as well as the conductor size, length, and routing.

e) Where structural steel is not available, provide one individual bonding conductor from the SBB and connect to ground bus of the serving electrical panel (that the Active Equipment is connected to). Indicate this location on the Record Drawings as well as the conductor size, length, and routing. This conductor shall be routed in conduit and insulated.

f) Size all bonding conductors per the Table in Section 2 of this specification.

g) Provide and install all grounding connections per the referenced codes, standards, and guidelines, and per manufacturers’ instructions.

6. Cable Identification:

a) Label both ends of each bonding conductor within 6 inches of a connector terminal or splice. All labels shall include the following in addition to specific labeling requirements for each conductor. IF THIS CONNECTOR OR CABLE IS LOOSE OR MUST BE REMOVED, PLEASE CALL THE BUILDING TELECOMMUNICATIONS MANAGER.

7. Testing

a) As a minimum test, as described below, all metallic wires and cables installed under these Specifications.

b) Test the bonding conductors and the terminal connectors for total resistance between the equipment item being bonding and the main telecommunications bonding point in the room (SBB). This resistance shall be less than 0.10 Ohm.

c) Recommended test equipment:

1) An ohmmeter capable of indicating resistance down to 10 milli-ohms or below.

8. Shop Drawings & Record Drawings

a) The Shop Drawings and Project Record Drawings shall show the types and locations of installed bonding conductors.

3.03 COAXIAL INFASTRUCTURE INSTALLATION

A. Cable products shall be sweep tested at the factory before shipping at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.

B. Signal-handling components, including connecting cable, shall have end-to-end impedance-matched signal paths.

C. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps may not be used for heating.

D. Cable shall not be installed in same raceway with power cable.

E. Do not use cable pulling lubricants, without written approval from the Design Consultant and cable manufacturer.

F. Do not exceed manufacturer's recommended minimum bending radii.

G. Pulling Cable: Do not exceed manufacturer's recommended pulling tensions. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.

H. Signal Equalization: Where system performance may be degraded in certain operating modes, revise component connections and install distribution amplifiers and attenuators as required, providing a balanced signal across the system.

I. Label both ends of coax cable. Refer to “Identification/Labeling” part of this specification section.

J. Install coaxial cables in continuous lengths except for terminations; no splices are permitted. Avoid sharp bends or other physical distortions in the installation of cable. Cable terminations shall be properly installed with no visible sign of cable braid between cable end and the connector.

K. Maintain signal integrity. During installation, correct open grounds, broken shields, and other possible causes of poor RF signal quality.

L. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

M. Labeling

1. Provide sign on all doors providing access to ERRCS stating: “EMERGENCY RESPONDER RADIO COVERAGE SYSTEM EQUIPMENT INSIDE.”

2. Provide sign on donor antennas stating: “EMERGENCY RESPONDER RADIO COVERAGE SYSTEM."

3. Label cabling per TIA-606.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Manufacturer's Field Services: Provide service of factory-trained technician authorized by manufacturer to technically supervise and participate during pretesting and acceptance testing of system. Include manufacturer's detailed testing procedures and field reports with submittals.

C. Perform initial inspection and testing in accordance with NFPA 1221 (or NFPA 1225) and requirements of AHJ for ERCES; document each inspection and test.

1. Consult manufacturer's manual to determine proper testing and acceptance procedures when system is equipped with optional features.

2. Acceptance testing for ERCES is required upon completion of installation.

3. System gain requires setting and documented at time of final system test.

4. Provide coverage testing in accordance with NFPA 1221 (or NFPA 1225) and ICC (IFC) and as required by AHJ.

a) Testing Procedures:

1) Test building coverage for emergency communication systems, inside and outside, to and from the building, for the following minimums indicated in Part 2 under 'Radio Coverage' paragraph.

2) Capable of being tested throughout coverage area for both uplink and downlink by local fire department; received signal strength indicator (RSSI) measurement only.

3) Perform tests for cable insulation resistance and acceptance testing procedures in accordance with ICC (IFC) and NFPA 1225 (or NFPA 1221).

4) Utilize calibrated portable radios of same make and latest model used by AHJ.

5) Utilize spectrum analyzer or similar for monitoring oscillations from RF-emitting or other system active equipment.

6) Measure gain values of every ERCES amplifier and review test result against baseline data kept on file for annual testing.

7) Divide coverage for testing, options:

(a) Maximum 20 equal areas, per building floor. From center of area, use two-way communications to and from outside of building for interfacing with AHJ's public system.

(1) Comply with NFPA 1225 (or NFPA 1221) and ICC (IFC) maximum square footage per area.

(2) Failing to communicate in more than one test area is failed acceptance test.

(3) Failing to communicate in two adjacent areas is failed acceptance test.

(b) Utilize radios for simultaneous voice quality checks; subjective by testing personnel. Position one radio within 10 feet to indoor antenna and second radio distance furthest away from indoor antenna. Both radios select different frequencies within same band for testing.

(1) Signal strength less than DAQ 3.0 is failed acceptance test.

8) Nonconforming work:

(a) Repositioning test location for better results is not allowed.

(b) Alter system to meet coverage requirements and retest for acceptance for compliance.

5. Record rated dB and gain adjustments and documented at time of final system test.

6. Provide documentation in submittals for "initial acceptance testing requirements" in accordance with NFPA 1225 (or NFPA 1221) Chapter 20, Testing.

D. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

E. When testing and acceptance has been completed to satisfaction of both Contractor's job foreman and representatives of manufacturer and Owner, forward notarized letter cosigned by each attesting to satisfactory completion of said testing to Owner and fire department. Installer to submit results indicating inspection and testing results, and corrective actions taken.

F. Leave system in working order, and without additional expense to Owner, replace defective materials and equipment provided.

3.05 SYSTEM STARTUP

A. Provide manufacturer's field representative to perform systems startup.

B. Prepare and start equipment and systems in accordance with manufacturers' instructions and recommendations.

C. Adjust for proper operation within manufacturer's published tolerances.

3.06 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration:

1. Provide instruction as required for interfacing with system and making benefit of ERCES to achieve NFPA 1225 (or NFPA 1221) requirements.

2. Provide hands-on demonstrations of operation system components and functions; have drawings and operator instructions available during demonstration.

B. Training - Owner Personnel Instruction:

1. Provide the following instruction to designated Owner personnel:

a) Hands-on instruction: On-site, using operational system.

b) Classroom instruction: Owner furnished classroom, on-site or at other local facility.

c) Factory-certified instruction: ERCES manufacturer's authorized training facility.

2. Basic operation: One 1-hour session pre-closeout for attendant personnel, security officers, and engineering/facilities staff; combination of classroom and hands-on.

3. Detailed operation: One 2-hour session post-occupancy for engineering staff holding appropriate State license to operate, service, or maintain ERCES; combination of classroom and hands-on.

4. Furnish services of instructors and teaching aids; have copies of operation and maintenance data available during instruction.

5. Provide means of evaluation of trainees suitable to type of training given and report results to Owner.

3.08 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.09 MAINTENANCE

A. Provide to Owner as alternate to base bid, separate maintenance contract for service and maintenance of system for entire manufacturer's warranty period to include work described below; include complete description of preventative maintenance, systematic examination, adjustment, inspection, and testing, with detailed schedule.

B. Perform routine inspection, testing, and preventative maintenance as required by NFPA 1225 (or NFPA 1221) including the following:

1. Maintenance of devices connected to system.

2. Repairs required outside of warranty as approved by Owner.

3. Record keeping required by NFPA 1225 (or NFPA 1221), frequency license holders, and AHJ.

C. Annual Maintenance and Proof of Compliance:

1. ERCES must remain in operation in accordance with ICC (IFC).

2. System tested annually as part of routine maintenance or when structural changes, additions, or space layout configurations can affect initial coverage areas.

3. As part of annual testing, verify active RF-emitting devices for loss of gain compared to when system was originally commissioned.

4. Test power supplies and batteries for loss of power and communication failure.

5. Upon completion of annual test provide report to Owner and AHJ.

D. Provide trouble call-back service upon notification by Owner.

1. Provide on-site response within four hours of notifi

2. Include fee schedule for call-back service during and outside normal working hours; include definition of normal working hours.

E. Maintain on-site log listing date and time of each inspection and call-back visit, condition of system, nature of trouble, correction performed, and parts replaced.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED SECTIONS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and to all following Sections within Division 28.

1.02 SECTION INCLUDES

A. This Division requires providing complete functioning systems, and each element thereof, as specified, indicated, or reasonably inferred, on the Drawings and in these Specifications, including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the Work include, but are not limited to, materials, labor, supervision, supplies, tools, equipment, transportation, and utilities.

B. Division 28 of these Specifications, and Drawings numbered with prefixes TY, generally describe these systems, but the scope of the Electronic Safety & Security Work includes all such Work indicated in all of the Contract Documents, including, but not limited to: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Mechanical, Plumbing, Electrical and Telecommunications Drawings and Specifications; and Addenda.

C. Drawings are graphic representations of the Work upon which the Contract is based. They show the materials and their relationship to one another, including sizes, shapes, locations, and connections. They also convey the scope of Work, indicating the intended general arrangement of the equipment, fixtures, outlets and cabling without showing all of the exact details as to elevations, offsets, and other installation requirements. Use the Drawings as a guide when laying out the Work and to verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers' requirements, will ensure a complete, coordinated, satisfactory and properly operating system.

D. Specifications, along with the device schedules located on drawing legend sheets, define the qualitative requirements for products, materials, and workmanship upon which the Contract is based.

1.03 ABBREVIATIONS AND ACRONYMS

ADA	Americans with Disabilities Act
AFF	Above Finished Floor
AHJ	Authority Having Jurisdiction

ANSI	American National Standards Institute
ASTM	American Society for Testing and Materials
ETL	Electrical Testing Laboratories, Inc.
FCC	Federal Communications Commission
FM	Factory Mutual
IEEE	Institute of Electrical and Electronic Engineers
LED	Light Emitting Diode
NEC	National Electric Code
NESC	National Electrical Safety Code
NEMA	National Electrical Manufacturers Association
NFPA	National Fire Protection Association
NICET	National Institute for Certification in Engineering Technologies
NRTL	Nationally Recognized Testing Laboratory
OEM	Original Equipment Manufacturer
OFCI	Owner Furnished Contractor Installed
OSHA	Occupational Safety and Health Administration
UL	Underwriters Laboratories
UON	Unless Otherwise Noted

1.04 DEFINITIONS:

A. Whenever used in specifications or drawings, the following terms shall have the indicated meanings:

1. AHJ - The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.

2. Approved - Labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.

3. Approved Equivalents - For specific products, materials, equipment, or systems for which this Division specifically identifies the Contractor shall use as the basis for their bid. Where the term approved equivalent or equal is listed the Contractor may submit documentation for review by the Design Consultant for approval. The Design Consultant’s acceptance or rejection is final.

4. As Directed - As directed by the Contract Administrator, or their representative.

5. Concealed - Embedded in masonry or other construction, installed behind wall furring or within drywall partitions, or installed within hung ceilings.

6. Conditionally Approved – The manufacturer has been found reputable by the design professional, but the design professional has not verified that the product offering by manufacturer meets to all specification

requirements. Contractor shall adhere to submittal review process for final approval on products.

7. Contract Administrator: Where referenced in this Division, “Contract Administrator” is the primary liaison between the Owner and the Contractor. Specifically, for this project this is "the Architect".

8. Design Consultant - Where referenced in this Division, “Design Consultant” is the Design Professional for the Work under this Division, and is a Consultant to, and an authorized representative of, the Architect, as defined in the General and/or Supplementary Conditions.

9. Furnish - “To supply and deliver to the project site, ready for unloading, unpacking, assembling, installing, and similar operations.” When ‘furnish’, ‘install’, ‘perform’, or ’provide’ is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor “provide” is implied.

10. Furnished by Owner (or Owner-Furnished) or Furnished by Others: “An item furnished by the Owner or under other Divisions or Contracts, and installed under the requirements of this Division, complete, and ready for the intended use, including all items and services incidental to the Work necessary for proper installation and operation. Include the installation under the warranty required by this Division.”

11. Install - “To perform all operations at the project site, including, but not limited to, and as required: unloading, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, testing, commissioning, starting up and similar operations, complete, and ready for the intended use.”

12. NRTL - Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. NRTL certification/mark and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other NRTL’s that are acceptable to the AHJ, and standards that meet the specified criteria.

13. Provide - “To furnish and install complete, and ready for the intended use.”

14. Prime Contractor – a project’s overall Contractor responsible for all Divisions of Work, usually identified as a General Contractor or Construction Manager At Risk.

15. Submit - Submit to Contract Administrator for review.

16. Substitution: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor. Substitutions include Value Engineering proposals.

a) Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.

b) Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

17. Value Engineering (VE): A systematic method to improve the "value" of goods and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value can therefore be increased by either improving the function or reducing the cost. The goal of VE is to achieve the desired function at the lowest overall cost consistent with required performance.

18. Wet Location - A location subject to saturation with water or other liquids. Pathways installed in wet locations do not protect cables from moisture such that cables installed in pathways within wet locations must be identified by their manufacturer for use in wet locations.

a) For example: Slab-on-grade construction where pathways are installed underground or in or under concrete slabs that are in direct or indirect contact with soil (e.g., sand and gravel with or without a moisture barrier) is considered a "wet location."

19. (*) Asterisk – Where appearing in product part or model numbers; shall represent wild card character to be filled in by the Contractor to meet required specifications.

B. The terms "approved equal", "equivalent", or "equal" are used synonymously and shall mean "accepted by, or acceptable to, the Design Consultant as equivalent to the item or manufacturer specified".

1. Sub-base: as used in this Section refers to the compacted soil layer used in pavement systems between the sub-grade and the pavement base course material.

2. Sub-grade: as used in this Section refers to the compacted soil immediately below the slab or pavement system.

3. Unauthorized excavation consists of removal of materials beyond indicated sub-grade elevations or dimensions without specific direction from the Contract Administrator.

1.05 REFERENCE STANDARDS

A. Execute Work in accordance with, and comply at a minimum with, National Fire Protection Association (NFPA) codes, state and local building codes, and all other applicable codes and ordinances in force, governing the class of Work involved, for performance, workmanship, equipment, and materials. Additionally, comply with rules and regulations of public utilities and municipal departments affected

by connection of services. Where conflicts between various codes, ordinances, rules, and regulations exist, comply with the most stringent. Wherever requirements of these Specifications, Drawings, or both, exceed those of the above items, the requirements of these Specifications, Drawings, or both, shall govern. Code compliance, at a minimum, is mandatory. Construe nothing in these Construction Documents as permitting Work not in compliance, at a minimum, with these codes. Bring all conflicts observed between codes, ordinances, rules, regulations and these documents to the Contract Administrator's and Design Consultant's attention in sufficient time, prior to the opening of bids, to prepare the Supplementary Drawings and Specifications Addenda required to resolve the conflict.

B. If a conflict is not reported timely, prior to the opening of bids, resolve the conflict and provide the installation in accordance with the governing codes and to the satisfaction of the Contract Administrator and Design Consultant, without additional compensation. Contractor shall be held responsible for any violation of the law.

C. Obtain timely inspections by the constituted authorities having jurisdiction; and, upon final completion of the Work, obtain and deliver to the Owner executed final certificates of acceptance from these authorities having jurisdiction.

D. All material, manufacturing methods, handling, dimensions, methods of installation and test procedures shall conform to industry standards, acts, and codes. Refer to individual Sections for exact codes, references, and standards.

1.06 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with other Divisions for Electronic Safety and Security Work to be included but not listed in Division 28 or indicated on the Security or Fire Alarm Drawings.

B. Visit the site and ascertain the conditions to be encountered in installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing Work, and make do provisions for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, and incorrect or faulty installation of any of the Work under this Division or for additional compensation for any Work covered by this Division.

C. Refer to Drawings and Divisions of the other trades and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. Follow these drawings as closely as the actual construction and the Work of other trades will permit. Provide all offsets, fittings, and accessories, required to clear equipment, beams and other structural members which may be required but not shown on the Drawings.

D. Provide materials with trim that will fit properly the types of ceiling, wall, or floor finishes installed.

E. Maintain a project manager on the jobsite always to coordinate this Work with other trades so that various components of the Division 28 systems are installed at the proper time, fits the available space, allows proper service access to all equipment, and meets all required codes and standards.

F. Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

G. Carry on the Work in such a manner that the Work of the other trades will not be handicapped, hindered, or delayed at any time.

H. Work of this Division shall progress according to the "Construction Schedule" as described in Division 1 and as approved by the Contract Administrator. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule to ensure successful achievement of schedule dates.

I. Examine and compare the Contract Drawings and Specifications with the Drawings and specifications of other trades and report any discrepancies between them to the Contract Administrator and obtain written instructions for changes necessary in the Work. Install and coordinate the Work in cooperation with other related trades. Before installation, make proper provisions to avoid interferences.

J. Wherever the Work is of sufficient complexity, prepare additional detail drawings to scale to coordinate the Work with the Work of other trades. Detailed Work shall be clearly identified on the Drawings as to the area to which it applies. Submit these drawings to the Architect for review. At completion include a set of these drawings with each set of Record Drawings.

K. Before commencing Work, examine adjoining Work on which this Work is in any way affected and report conditions, which prevent performance of the Work. Become thoroughly familiar with actual existing conditions to which connections shall be made or which shall be changed or altered.

L. In cases of doubt as to the Work intended, or in the event of need for explanation, request supplementary instructions from the Contract Administrator.

M. Measurements and Layouts: The Drawings are schematic in nature but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the Work. Figured dimensions take precedence to scaled dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. Correct, at no additional costs to the Owner, errors that could have been avoided by proper checking and inspection.

1.07 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to the requirements of individual Sections. Additionally, prepare coordination drawings as required scope of installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one trade.

1. Information shall be project specific and drawn accurately to a scale large enough to resolve conflicts. Do not base coordination drawings on standard dimensional data.

2. Prepare floorplans, sections, elevations, and details as needed to adequately describe relationship of various systems and components.

3. Clearly indicate functional and spatial relationships of components of all systems specified in the Contract Documents, including but not limited to: architectural, structural, civil, mechanical, electrical, fire protection, and specialty systems.

4. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.

5. Show location and size of access doors required for access to concealed equipment, fittings, controls, terminations, and cabling.

6. Indicate required installation sequence to minimize conflicts between entities.

7. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Contract Administrator indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

8. The details of the coordination are the responsibility of the Contractor and, where indicated on the Drawings, minor adjustments in raceway routing, device placement, device type, or equipment arrangement are not to be considered changes to the Contract.

B. Equipment Room Coordination Drawings: In accordance with the submittal procedures outlined within these Specifications, provide dimensioned layouts of electrical equipment locations within electrical rooms/closets, mechanical rooms, generator rooms, and fire pump rooms with equipment drawn to scale and identified therein.

1. Clearly identify required working clearances and access provisions required for installation and maintenance.

2. Equipment layouts should be arranged accounting for considerations for required door openings and the clearances required by the equipment manufacturer.

3. Indicate path to allow for the future removal of each large piece of equipment (up to and including generators and unit sub-station transformers) without removal of non-related equipment or architectural elements.

4. Include Work provided by others routed through the equipment rooms.

C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:

1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.

2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.

a) Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Contract Administrator.

3. Where the Engineer's digital data files are provided to the Contractor for use in preparing coordination digital data files, the Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to the Drawings or Specifications.

4. Submit coordination drawings in accordance with the submittal procedures outlined within these Specifications.

D. Refer to Coordination requirements in specific Sections for additional information.

1.08 SUBMITTALS

A. Refer to Division 01 and General Conditions for submittal requirements in addition to requirements specified herein.

B. Refer to Division 01 for acceptance of electronic submittals. If not specified by Division 01, provide electronic submittals. If Division 01 requires paper submittals, provide the quantity of submittals required, but no fewer than seven (7) sets.

C. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Contract Administrator and Design Consultant that the submittals have been posted. If electronic submittal procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Contract Administrator's and Design Consultant's designated representatives. Contractor shall allow for the Design Consultant Review Time as specified.

Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.

D. Design Consultant Review Time: Transmit submittals as early as required to support the project schedule. Allow two weeks for Design Consultant review time plus to/from mailing time via the Contract Administrator, plus a duplication of this time for resubmittal if required. Transmit submittals as soon as possible after Notice to Proceed and before Mechanical construction starts.

E. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Design Professional. They shall not be copies of the work product of the Design Professional. If the Contractor desires to use elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.

F. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division as noted in each individual Section. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.

G. Separate submittals according to individual specification Sections. Only resubmit those Sections requested for resubmittal.

H. Unless noted otherwise within each individual Section, submittals shall be provided for approval in four distinct submittal stages:

1. Pre-bid

    a) Generally, means submittals required no less than two weeks prior to the due date for the submission of bids, such as:

        1) Product substitutions, approved alternate, or equivalent requests to be reviewed for approval (Prior to Bid). Coordinate with Division 1.

        2) Alternate personnel credentials to be reviewed for approval.

2. Bid

    a) Generally means submittals required at the time of the submission of bids, such as:

        1) Unit Pricing (if required by Sections in this Division)

        2) Personnel Qualifications

        3) Contractor Qualifications

        4) Voluntary Bid Alternates

3. Pre-Construction Submittal

a) Generally, means submittals required after the award of the project to the winning bidder and prior to starting construction. At a minimum, Pre-construction submittal shall include:

1) The project name.

2) The submitted contractor's company name, the individual's name responsible for the submittal, and contact information for that individual.

3) The Prime Contractor's stamp, which shall certify that the stamped submittals have been check by the Prime Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.

b) Submittals for this division shall be divided and titled in the following manner:

1) Division 28 Electronic Security Systems

2) Division 28 Fire Alarm Systems

3) Division 28 Mass Notification System

4) Division 28 Distributed Antenna System for Public Safety Radio Coverage

c) Submit the following items within 4 weeks after the notice to proceed:

1) Division of Labor amongst sub-contractors. Include:

(a) Information on each sub-contractor:

(1) Company Name

(2) Address

(3) Name of project manager for this project, including:

(4) E-mail

(5) Telephone number

(b) A detailed description or matrix identifying who is responsible for furnishing, installing, and verifying the following system components:

(1) General requirements:

(2) Various system power, backup power, and grounding/bonding items.

(3) Various conduit and other common Work items.

(4) Various low-voltage wires/cabling and terminations.

(5) Various structural and seismic items (including design)

(c) Individual Division 28 Sections

2) Updated Personnel and Contractor Qualifications (resubmit if there are no changes)

3) Schedule - A Gantt chart or Milestone list that includes the following timetables:

(a) Pre-Construction Submittals

(1) Include time for resubmittals.

(2) Unless otherwise stated elsewhere within these specifications, assume [1] week review time for the Prime Contractor and 2 weeks for the Architect/Division 28 Design Consultant for each submittal.

(b) Material purchase/shipping schedules (to identify any long lead times for critical components)

(c) Conduit Installation

(d) Cabling Installation

(e) Cabling termination and testing

(f) Power and backup power availability

(g) Equipment installation and testing

(h) System startup and configuration

(i) As-built drawings

(j) Operation and Maintenance Manual submission, resubmission, and approval

(k) Final Site Observation for Substantial Completion approval [to be at least [2] weeks prior to overall project Substantial Completion date]

(l) Owner Training sessions

(m) Other items as required by individual Sections in this Division.

4) Equipment List - A typed list, indexed by Specification Section, of products specifically identified by part number (no wild card characters) within each specification Section in this Division. Products are to be listed in the same order as in the specification. List is to include length of manufacturer warranty for each product.

5) Manufacturers' datasheets:

(a) At a minimum all product datasheets shall contain the following:

(1) The manufacturers' name and logo somewhere on the page

(2) All parts, pieces, and equipment submitted for review shall be identified specifically by stamp or highlighted in such a manner that the product(s) being considered are clearly identifiable and distinguished from all other materials, parts or equipment that may be on the submittal.

(3) For datasheets with accessories, additional parts, or derivations of the product being submitted all shall be clearly identified for the reviewer and acceptance.

(4) Sufficient detail for reviewer to identify all required information, such as size, weight, color, NRTL listings, approval or certification information, and other necessary identifying information to confirm product meets specifications.

(b) Datasheets are to be in the same sequential order as is presented within the specifications.

6) Warranty Information – For warranties required by this specification and other Related Sections, submit warranty terms and conditions for each system or product. These shall contain the following:

(a) Length of warranty period

(b) What is covered?

(c) All disclaimers, limitations, etc.

(d) What, if anything, is not covered

7) Samples – refer to individual Sections for exact sample requirements.

(a) Samples requested shall be physical examples that represent materials, equipment or workmanship and establish standards by which the Work will be judged. Contractor or Manufacturer is to cover return shipping if sample is to be returned.

8) Shop Drawings – Refer to individual Sections for exact Shop Drawing requirements.

d) And as required by individual Sections in this Division

4. Project Completion

a) Generally means, unless otherwise noted, submittals required to be submitted [4] weeks prior to Substantial Completion, for the Design Consultant to reference during the "Final Punch" Site Observation. Project Completion, aka "Close-out Documents" include the following:

1) Record Drawings

2) Operation and Maintenance Manuals

3) Owner training syllabus

4) Recorded Owner Training

5) Project test reports

6) Cable Databases (as applicable)

7) Warranty Certificate(s)

8) And as required by individual Sections within this Division

I. Provide submittals in sufficient detail to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.

J. Refer to individual Sections for additional submittal requirements.

K. No part of the Work shall be started in the shop or in the field until the shop drawings and /or samples for that portion of the Work have been submitted and accepted.

L. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.

M. Submittals shall contain the following information:

1. The project name.

2. The applicable specification Section and paragraph.

3. Equipment identification acronym as used on the drawings.

4. The submittal dates.

5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.

6. Submittals not so identified will be returned to the Contractor without action.

N. The checking and subsequent acceptance by the Design Consultant and/or Contract Administrator of submittals shall not relieve responsibility from the Contractor for (1) deviations from Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent Work. Contractor shall request and secure written acceptance from the Design Consultant and Contract Administrator prior to implementing any deviation.

O. Video Recordings: Record training and demonstrations in .AVI format, unless noted otherwise in Division 01 specifications or were approved by the Owner.

1.09 SUBSTITUTIONS

A. Refer to Bid documents, General and Supplementary Conditions and Division 01 Specification Sections for limitations and restrictions on substitutions in addition to requirements specified in this Section.

B. For products, materials, equipment, or systems for which this Division specifically identifies, the Contractor shall use it as the basis for their bid. However, if the Contractor feels a substitute is appropriate for consideration they may submit, as required in these documents prior to bid, for approval by the Design Consultant.

C. Materials, products, and equipment described in the Bidding Documents establish a standard of required function, performance, dimension, appearance and quality to be met by the proposed substitution.

D. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications, UON.

E. Request for Substitution:

1. Complete and send the Substitution Request Form attached at the end of this Section for each material, product, equipment, or system that is proposed to be substituted.

2. The burden of proof of the merit of the proposed substitution is upon the proposer.

3. Unless stated otherwise in writing to the Design Consultant by the Contractor, Contractor warrants to the Design Consultant, Contract Administrator, and Owner the following:

a) Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.

b) Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.

c) Proposed substitution has received necessary approvals of authorities having jurisdiction.

d) Same warranty will be furnished for proposed substitution as for specified Work.

e) If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.

f) Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

F. Substitution Consideration:

1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.

2. No substitutions will be considered prior to receipt of bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of bids.

3. If the proposed substitution is approved prior to receipt of bids, such approval will be stated in an addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.

4. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

1.10 ELECTRONIC DRAWING FILES

A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of $200 for a drawing set up to 12 sheets and $15 per sheet for each additional sheet.

B. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form.

C. The following must be received before electronic drawing files will be sent:

1. Engineer’s release agreement form

2. Payment

1.11 QUALITY ASSURANCE

A. Execute all Work under this Division in a thorough and professional manner by competent and experienced work persons duly trained to perform the Work specified.

B. Install Work in strict conformance with all manufacturers' requirements and recommendations unless these Documents exceed those requirements. Install all equipment and materials in a neat and professional manner, aligned, leveled, and adjusted for satisfactory operation, in accordance with NECA guidelines.

C. Unless indicated otherwise on the Drawings, provide all material and equipment new, of the best quality and design, free from defects and imperfections and with markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Provide all material and equipment of the same type from the same manufacturer whenever practicable.

D. Unless specified otherwise, manufactured items of the same types specified within this Division shall have been installed and used, without modification, renovation, or repair for not less than one year prior to date of bidding for this Project.

1.12 OPERATION AND MAINTENANCE DATA

A. Refer to Division 01 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.

B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.

C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.

D. Prior to Substantial Completion of the project, furnish to the Contract Administrator, for Engineer’s review, and for the Owner’s use, four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers, and plastic insert folders for Record Drawings. Include local contacts, complete with address and telephone number, for equipment, apparatus, and system components furnished and installed under this Division of the specifications.

E. Each manual shall contain equipment data, approved submittals, shop drawings, diagrams, capacities, spare part numbers, manufacturer service and maintenance data, warranties and guarantees.

F. Refer to Division 01 for acceptance of electronic manuals for this project. For electronic manuals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 1. Contractor shall notify the Contract Administrator and Design Consultant that the manuals have been posted.

If electronic manual procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Contract Administrator's and Design Consultant's designated representatives.

1.13 RECORD DRAWINGS

A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.

B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension from column lines.

C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Contract Administrator.

1.14 DELIVERY, STORAGE, AND HANDLING

A. Refer to Division 01 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.

B. Deliver equipment and material to the job site in their original containers with labels intact, fully identified with manufacturer's name, make, model, model number, type, size, capacity and Underwriter's Laboratories (UL LLC) certification labels/marks, and other pertinent information necessary to identify the item.

C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and always, take every precaution to properly protect equipment and material from damage, including the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which becomes rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Contract Administrator.

D. Be responsible for the safe storage of tools, material, and equipment.

1.15 WARRANTIES

A. Refer to Division 01 and General Conditions for Warranties in addition to requirements specified herein.

B. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.

C. Warrant each system and each element thereof against all defects due to faulty workmanship, design or material for a period of 12 months from date of Substantial Completion, unless specific items are required to carry a longer warranty in these Construction Documents or manufacturer's standard warranty exceeds 12 months. Remedy all defects, occurring within the warranty period(s), as stated in the General Conditions and Division 01.

D. The above warranties shall include labor and material. Make repairs or replacements without any additional costs to the Owner.

E. Perform the remedial Work within 48 hours, upon notice from the Contract Administrator or Owner.

F. At the time of Substantial Completion, deliver to the Owner all warranties, in writing and properly executed, including term limits for warranties extending beyond the one-year period, each warranty instrument being addressed to the Owner and stating the commencement date and term.

1.16 FIELD CONDITIONS

A. Conditions Affecting Excavations: The following project conditions apply:

1. Locate, maintain, and protect existing building services that transit the area affected by selective demolition.

2. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by excavation operations.

B. Use of explosives is not permitted.

C. Environmental Conditions: Apply joint sealers under temperature and humidity conditions within the limits specified by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

PART 2 - PRODUCTS

2.01 NOT USED

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Install in accordance with manufacturer's instructions.

3.02 FEES AND PERMITS

A. Secure and Pay all required fees and obtain all required permits related to the Electronic Safety and Security Systems' installation.

B. Pay royalties or fees in connection with the use of patented devices and systems.

3.03 ACCESS TO EQUIPMENT

A. Locate all pull boxes, junction boxes and controls to provide easy access for operation, service inspection and maintenance. Provide an access door where equipment or devices are located above inaccessible ceilings. Refer to 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY.

B. Maintain all code required clearances and clearances required by manufacturers.

3.04 PENETRATIONS

A. Unless otherwise noted as being provided under other divisions, provide sleeves, box frames, or both, for openings in floors, walls, partitions, and ceilings for all electrical Work that passes through construction. Refer to 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY.

B. Provide sleeves, box frames, or both, for all conduit, cable, and cable trays that pass-through masonry, concrete or block walls.

C. The cutting of new and/or existing construction will not be permitted except by written approval of the Contract Administrator.

D. Refer to Division 01, Division 02 and General Conditions for Excavation and Backfilling in addition to the requirements specified herein.

E. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the Work under this division. Excavation shall be in conformance with applicable Divisions and Sections of the Specifications.

F. Restore roads, alleys, streets, and sidewalks damaged during this Work to the satisfaction of Authorities Having Jurisdiction.

G. Do not excavate trenches close to walks or columns without prior consultation with the Contract Administrator.

H. Erect barricades around excavations, for safety, and place an adequate number of amber lights on or near the Work and keep those burning from dusk to dawn. Be responsible for all damage that any parties may sustain in consequence of neglecting the necessary precautions in prosecuting the Work.

I. Slope sides of excavations to comply with local, state, and federal codes and ordinances. Shore and brace as required for stability of excavation.

J. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state, and federal codes and authorities. Maintain shoring and bracing in excavations regardless of period excavations will be open.

1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inch below finished grade elevation.

K. Install sediment and erosion control measures in accordance with local codes and ordinances.

L. Dewatering: Prevent surface water and subsurface or ground water from flowing into excavations and from flooding project site and surrounding area.

1. Do not allow water to accumulate in excavations. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations.

2. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey surface water to collecting or run-off areas. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.

M. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.

1. Locate and retain soil materials away from edge of excavations. Do not store within dripline of trees indicated to remain.

2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.

N. Excavation for Underground Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 ft; plus, a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.

1. Excavate, by hand, areas within dripline of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.

2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.

O. Trenching: Excavate trenches for communications installations as follows:

1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of raceway and cables.

2. Excavate trenches to depth indicated or required for raceway and cables to establish slope, away from buildings and indicated elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.

3. Limit the length of open trench to that in which raceway and cables can be installed, tested, and the trench backfilled within the same day.

4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of raceway and cables. Provide a minimum of six inches of stone or gravel cushion between rock bearing surface and raceway and cables.

5. Excavate trenches for raceway, cables, and equipment with bottoms of trench to accurate elevations for support of raceway and cables on undisturbed soil.

P. Cold Weather Protection: Protect excavation bottoms against freezing when atmospheric temperature is less than 35 degrees F.

Q. Backfilling and Filling: Place soil materials in layers to required subgrade elevations for each area classification listed below, using materials specified in Part 2 of this Section.

1. Under walks and pavements, use a combination of subbase materials and excavated or borrowed materials.

2. Under building slabs, use drainage fill materials.

3. Under raceway and cables, use subbase materials where required over rock bearing surface and for correction of unauthorized excavation.

4. For raceway and cables less than 30 inch below surface of roadways, provide 4 inch thick concrete base slab support. After installation and testing of raceway and cables, provide a 4 inch thick concrete encasement (sides and top) prior to backfilling and placement of roadway subbase.

5. Other areas use excavated or borrowed materials.

R. Backfill excavations as promptly as work permits, but not until completion of the following:

1. Inspection, testing, approval, and locations of underground utilities have been recorded.

2. Removal of concrete formwork.

3. Removal of shoring and bracing, and backfilling of voids.

4. Removal of trash and debris.

S. Placement and Compaction: Place backfill and fill materials in layers of not more than 8 inch in loose depth for material compacted by heavy equipment, and not more than 4 inch in loose depth for material compacted by hand-operated tampers.

1. For vertical and diagonal raceway installations, thoroughly support raceways from permanent structures or undisturbed earth at no less than 10 ft intervals, while placing backfill materials, so that raceways are not deflected, crushed, broken, or otherwise damaged by the backfill placement.

T. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.

U. Place backfill and fill materials evenly adjacent to structures, piping, and equipment to required elevations. Prevent displacement of raceways and equipment by carrying material uniformly around them to approximately same elevation in each lift.

V. Compaction: Control soil compaction during construction, providing minimum percentage of density specified for each area classification indicated below:

1. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum density for soils which exhibit a well-defined moisture-density relationship (cohesive soils), determined in accordance with ASTM D1557 and not less than the following percentages of relative density, determined in accordance with ASTM D4253, for soils which will not exhibit a well-defined moisture-density relationship (cohesionless soils).

a) Areas Under Structures, Building Slabs and Steps, Pavements: Compact top 12 inch of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.

b) Areas Under Walkways: Compact top 6 inch of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.

c) Other Areas: Compact top 6 inch of subgrade and each layer of backfill or fill material to 85 percent maximum density for cohesive soils, and 90 percent relative density for cohesionless soils.

2. Moisture Control: Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water. Apply water in minimum quantity necessary to achieve required moisture content

and to prevent water appearing on surface during, or after, compaction operations.

W. Subsidence: Where subsidence occurs at mechanical installation excavations during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

3.05 CUTTING AND PATCHING

A. Cut walls, floors, ceilings, and other portions of the facility as required to install Work under this Division.

B. Obtain permission from the Contract Administrator prior to cutting. Do not cut or disturb structural members without prior approval from the Contract Administrator and Structural Engineer.

C. For post-tension slabs, x-ray slab and closely coordinate all core drill locations with Contract Administrator and Structural Engineer prior to performing any Work. Obtain approval from Contract Administrator and Structural Engineer for all core drills and penetrations at least four days prior to performing Work.

D. Penetrations shall be made as small as possible while maintaining required clearances between the building element penetrated and the system component.

E. Patch around openings to match adjacent construction, including fire ratings, if applicable.

F. Repair and refinish areas disturbed by Work to the condition of adjoining surfaces in a manner satisfactory to the Contract Administrator.

3.06 PAINTING

A. Refer to Division 09 Section “Painting” for painting requirements.

B. Paint exposed ferrous surfaces, including, but not limited to, hangers, equipment stands and supports using materials and methods as specified under individual Sections and Division 09 of the Specifications; colors shall be as selected by the Contract Administrator.

C. Re-finish all field-threaded ends of galvanized conduits and field-cut ends of galvanized supports with a cold-galvanizing compound approved for use on conductive surfaces. Follow closely manufacturer’s instructions for pre-cleaning surfaces and application.

D. Factory finishes and shop priming, and special finishes are specified in the individual equipment Specification Sections.

E. Where factory finishes are provided and no additional field painting is specified, touch up or refinish, as required by, and to the acceptance of, the Contract Administrator, marred or damaged surfaces so as to leave a smooth, uniform finish. If, in the opinion of the Contract Administrator, the finish is too badly damaged to be properly re-finished, replace the damaged equipment or materials at no additional costs to the Owner.

3.07 CLEANING

A. Remove dirt and refuse, resulting from the performance of the Work, from the premises as required to prevent accumulation. Cooperate in always maintaining reasonably clean premises.

B. Immediately prior to final inspection, make a final cleanup of dirt and refuse resulting from Work and assist in making the premises vacuum clean. Clean all material and equipment installed under this Division.

C. Remove dirt, dust, plaster, stains, and foreign matter from all surfaces.

D. Touch up and restore damaged finishes to their original condition.

E. All Electronic Safety and Security infrastructure and equipment shall be thoroughly vacuumed and wiped clean, in accordance with the manufacturers' instructions, prior to startup and at the completion of the project. Equipment shall be opened for observation as required.

3.08 ADJUSTING, ALIGNING AND TESTING

A. Adjust, align and test all Electronic Safety and Security infrastructure and equipment furnished and/or installed under this Division.

B. Check and test protective devices for specified and required application and adjust as required.

C. Verify that completed wiring system is free from short circuits, open circuits, unintentional grounds, and low insulation impedances.

D. Notify the Contract Administrator immediately of all operational failures caused by defective material, labor or both.

E. Refer to individual Sections for additional and specific requirements.

3.09 START-UP OF SYSTEMS

A. Prior to start-up of Electronic Safety and Security systems, check all components and devices, to confirm compliance with manufacturers’ recommended installation procedures.

B. Demonstrate that all equipment and systems perform properly as designed per Drawings and Specifications.

C. Refer to individual Sections for additional and specific requirements.

3.10 SUBSTANTIAL COMPLETION REVIEW

A. Prior to requesting a site observation for "CERTIFICATION OF SUBSTANTIAL COMPLETION", complete the following items:

1. Submit results of systems tests and adjustments per each individual Section.
2. Submit complete Operation and Maintenance Data.
3. Submit complete Record Drawings.
4. Perform all required training of Owner’s personnel.
5. Turn over all spares and extra materials to the Owner, along with a complete inventory of spares and extra materials being turned over.
6. Perform start-up tests of all systems.
7. Remove all temporary facilities from the site.
8. Comply with all requirements for Substantial Completion in the Division 01 and General Conditions.

B. Request in writing a review for Substantial Completion and scheduling of final acceptance. Provide a minimum of 5 business days' notice prior to the review for project sites.

C. State in the written request that the Contractor has complied with the requirements for Substantial Completion.

D. Upon receipt of a request for review, the Contract Administrator will either proceed with the review or advise the Contractor of unfilled requirements.

E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above-mentioned items, then provide reimbursement to the Contract Administrator and Design Consultant for time and expenses incurred for the visit.

F. Upon completion of the review, the Contract Administrator and Design Consultant will prepare a “final list” of outstanding items to be completed or corrected for final acceptance.

G. Omissions on the “final list” shall not relieve the Contractor from the requirements of the Contract Documents.

H. Prior to requesting a final review, submit a copy of the final list of items to be completed or corrected. State in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

3.11 CONNECTED PRODUCTS CYBERSECURITY

A. Software Requirements

1. All software and firmware in products furnished or provided by the Contractor shall be the latest and most up to date version(s) provided by the manufacturer.

2. All equipment requiring users to log on using a password shall be configured with user/site-specific passwords). No system/product default passwords shall be allowed. Coordinate user logins and passwords with Owner prior to system setup.

   a) Passwords shall always be guarded and protected, including during construction phase of the project. Passwords shall not be written on or in any device, enclosure, or room where access could be obtained by others.

   b) Passwords shall be transmitted to Owner, and Design Consultants via secure methods, obscuring or encrypting the document to be transmitted. This document shall be secured while stored for submission with the project(s) other submittals, including Shop Drawings and As-Built documentation.

3. Refer to individual Sections for additional software requirements.

B. Edge Device Requirements

1. All edge-connected devices included but not limited to security cameras, readers, intercom stations, controllers, furnished or provided by the Contractor shall support and utilize X.509v3 certificate-based authentication.

   a) Certificates shall be issued by a trusted PKI (Public Key Infrastructure) defined by the Owner or an approved Certificate Authority (CA).

   b) Self-signed certificates are not acceptable unless approved by Owner.

2. All edge-connected devices shall support and utilize Transport Layer Security (TLS)1.3 encrypted communication to the host server.

3. All edge-connected devices shall support and utilize Secure Boot funtionality to ensure only authorized firmware is installed on the device by verifying the digital signature of each firmware component during startup.

4. Refer to individual Sections for additional edge device requirements.

C. Network and Cybersecurity Requirements

1. For all Electronic Safety and Security Systems that have Contractor-provided equipment with an Ethernet/LAN port, Contractor shall coordinate with Owner's IT staff regarding Owner's network and cybersecurity requirements.

2. The Contractor shall take positive measures to prevent the introduction of cybersecurity threats to the Owner's technology infrastructure and network. These measures shall include but are not limited to:

a) Coordinate with the manufacturer to ensure newly procured equipment does not have any cybersecurity notices, bulletins, or alerts. Provide a letter to the Design Consultant with the submittal documents for that Specification Section confirming there are no active or known cyber threats.

b) Ensure all installers/technicians installing or configuring equipment are trained on the prevention of introduction of cyber threats to electronics.

c) The Contractor shall assess any cyber threats / vulnerabilities associated with the specified equipment, prior to procurement/installation. If cyberthreats are discovered, notify the Design Consultant immediately; but not greater than one day. Provide the make and model of the associated equipment and the vulnerability.

d) Follow additional cybersecurity requirements and procedures as directed by the Owner's IT staff.

D. Refer to individual Sections for additional Networking and Cybersecurity Requirements.

3.12 EARLY OCCUPANCY

A. Failure to meet the Substantial Completion date can result in the Owner needing to take early occupancy. Complete the systems which are necessary to allow partial early occupancy of the building by original Substantial Completion date.

1. Refer to individual Sections for additional requirements.

B. Verify and comply with requirements for temporary occupancy with the local Building and Fire Departments.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. Grounding and Bonding

B. Pathways for Electronic Security

1. Hangers and Supports
    a) Cable hook supports (J-hooks)
    b) Cable supports (saddle or loop)
2. Conduits and backboxes
    a) Conduits
    b) Outlet Boxes
    c) Junction Boxes
    d) Pull Boxes

C. Surface Raceways

D. Underground Ducts and Raceways

E. Sleeves and Sleeve Seals

F. Access Panels

G. Fire Stop Systems

H. Security Fastenings

I. Identification Common Work for Electronic Security

1.02 RELATED SECTIONS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 07 THERMAL AND MOISTURE PROTECTION

C. Division 26 ELECTRICAL

D. Division 27 COMMUNICATIONS

E. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

F. Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

G. Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY

1.03 ACRONYMS AND DEFINITIONS

A. Common Work: Work specified in this section.

B. Conduit Body: A separate portion of a conduit or tubing system that provides access through a removeable cover(s) to the interior of the system at a junction of two or more sections of the system or at a terminal point of the system. Boxes such as FS and FD or larger cast or sheet metal boxes are not classified as conduit bodies.

C. Conveniently Accessible: Capable of being reached from the floor or via the use of an 8 ft step ladder without crawling or climbing over or under obstacles such as piping, duct work, motors, transformers, pumps, etc.

D. Firestop System Assembly: Firestopping products tested and rated by a Nationally Recognized Testing Laboratory (NRTL), such as UL, to provide the required flame (F), fire and temperature (T), air and smoke (L), and water (W) containment for a given partition/penetration.

E. Ground or Grounding: A conducting connection, whether intentional or accidental, between an electrical circuit (e.g. telecommunications) or equipment and the earth, or to some conducting body that serves in place of earth.

F. Plenum: A compartment or chamber to which one or more air ducts are connected and forms part of the air distribution system.

G. Plenum-rated: A product listed by a NRTL as being suitable for installation into a plenum space.

H. Surface Metal Raceway: A metallic raceway intended to be mounted to the surface of a structure, with associated couplings, connectors, boxes, and fittings for the installation of electrical conductors.

I. Surface Nonmetallic Raceway: A nonmetallic raceway intended to be mounted to the surface of a structure, with associated couplings, connectors, boxes, and fittings for the installation of electrical conductors.

J. UL: Underwriters Laboratory

1.05 ADMINISTRATIVE REQUIREMENTS

A. Adjust location of pathways for communications systems to accommodate the work to prevent interferences, both anticipated and encountered. Determine the route and location of each conduit prior to fabrication:

1. Right-of-Way: Lines which pitch shall have the right-of-way over those which do not pitch. For example: condensate, steam, and plumbing drains normally have right-of-way. Lines whose elevations cannot be changed have right-of-way over lines whose elevations can be changed.

2. Provide offsets, transitions and changes in direction of conduit as required to maintain proper headroom and pitch on sloping lines.

3. So connecting raceways, cables, and wireways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for Division 28 equipment that are behind finished surfaces or otherwise concealed.

1.06 SUBMITTALS

A. Follow the requirements for submittals in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS.

B. Pre-bid submittal:

1. For products for which a substitute is to be considered as an approved equivalent or acceptable substitution, provide submittals with sufficient detail for review by the Design Consultant. Submittals shall at a minimum provide detailed information substantiating all performance requirements as well as all necessary code compliance and NRTL listing information. Be prepared to submit a sample should the Design Consultant request an evaluation.

C. Pre-construction submittal

1. Product Data

a) Manufacturers name and logo

b) Size – including physical and loading dimensions

c) Maximum span length

d) Weight supported

e) Type

f) Fittings to be used

g) Method of attachment to structure

h) Firestop system assembly information for each system to be installed:

1) Documentation from UL catalog for each system proposed. This documentation shall include the following information:

(a) Firestop manufacturer

(b) UL system number

(c) F, T, and L Ratings

(d) The complete description of the firestop system; To include what specific construction the system is intended to pass through such as a wall or floor assembly, the penetrating items allowed to pass through the opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the openings.

2. Shop Drawings:

a) Submit for review scaled layout drawings showing the size/routing of all pathways and the size/information/locations of all boxes, pull boxes, firestopping systems, and access panels.

1) Each pathway shall be identified by type and size on the drawings.

(a) Example #1: 4” EMT

(b) Example #2: 2” IMC

2) Each grounding conductor shall be identified by size (and insulation):

(a) Example: #3/0 insulated ground

3) Each firestop system assembly shall be identified by Manufacturer and Product, as well as UL system number for that particular location.

(a) Example #1 – Firestopping Sleeve: EZ-Path Series 22, UL System W-L-3255

(b) Example #2 – Backbox in Fire-Rated Wall: Specseal Power Shield, UL System QCSN/CLIV.R14288

4) Each pull box and access panel shall be identified by size and height above finished floor.

(a) Pull box Example: Pull box 8” x 24” x 40” approximately 12’ AFF.

b) Include pathway systems (conduit, cable tray, auxiliary supports, etc.) and other Common Work on the same shop drawings for Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

D. Project completion submittal

1. As Built Drawings:

a) Based on the work prints kept on the jobsite and official changes to the Contract Documents (such as Change Orders, Architect's Supplemental Instructions, and Design Change Directives), create final drawings incorporating any minor and approved changes to the submitted Shop Drawings. Submit this set in accordance with the Record Drawings requirements of Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS.

2. Keys – Supply two copies of every key as required for pull boxes, junction boxes, and access panels.

3. Pictures of firestop system assembly.

1.07 QUALITY ASSURANCE

A. Install Work in strict conformance with manufacturers' requirements and recommendations, unless these Documents exceed those requirements. Install equipment and materials in a neat and professional manner, aligned, leveled, and adjusted for satisfactory operation, in accordance with NECA 1.

B. Firestopping Systems

1. Firestopping material and systems shall be tested and listed by UL (DIR). Firestopping products shall bear this classification marking.

2. Installation technicians shall be by qualified and trained personnel. Acceptable installer qualifications are as follows:

a) FM Research, approved in accordance with FM 4991.

b) Individuals who are trained and certified by the firestopping manufacturer. For Specified Technologies, installers shall have current FIT Level 1 certification.

PART 2 - PRODUCTS AND MATERIALS

2.01 GROUNDING AND BONDING

A. Refer to drawings and Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS for grounding and bonding requirements.

2.02 PATHWAYS FOR ELECTRONIC SECURITY

A. Hangers and Supports

1. Cable hook supports (J-hooks)

a) Basis of design

1) Above ceiling: Eaton Corporation PLC; B-Line series BCH21, BCH32, BCH64

b) Other acceptable manufacturers

1) Hilti, Inc

2) MonoSystems

3) nVent Electric PLC; Caddy

4) Panduit Corporation

5) Substitution: See Division 01 - PRODUCT REQUIREMENTS.

c) Description

1) Non-continuous cable supports shall be designed to prevent degradation of cable performance and pinch points that could damage cable.

2) Non-continuous cable supports shall have flared edges to prevent damage while installing cables.

3) Have a flat bottom and sufficient width to comply with the minimum bend radius of all cabling as required by the referenced standards and manufacturers recommendations.

4) Be open for easy lay-in and removal of cabling.

5) Be designed so the mounting hardware is recessed to prevent cable damage.

6) Cable hooks for non-corrosive areas shall be pre-galvanized steel, ASTM A653/A653M. Where additional strength is required, cable hooks shall be spring steel with a zinc-plated finish, ASTM B633, SC3

7) Cable hooks for corrosive areas shall be stainless steel, AISI Type 304

8) Be factory assembled for direct attachment to walls, hanger rods, beam flanges, purlins, strut, floor posts, etc. to meet job conditions.

9) Be factory assembled multi-tiered cable hooks shall be used where required to provide separate cabling compartments, or where additional capacity is needed.

2. Cable supports (saddle or loop)

a) Basis of design

1) Above ceiling: nVent CADDY CAT 425, 425A6

b) Other acceptable manufacturers

1) nVent Electric PLC; Caddy

2) Substitution: See Division 01 - PRODUCT REQUIREMENTS.

c) Description

1) Non-continuous cable supports shall be designed to prevent degradation of cable performance and pinch points that could damage cable.

2) Suitable for air handling spaces (plenum)

3) Adjustable strap allows for multiple support sizes to reduce inventory.

B. Conduit and Backboxes

1. Conduit

a) Manufacturers

1) Refer to Division 26 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for list of Manufacturers.

b) Description

1) Refer to Division 26 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for product and material information. Sizes, methods, and more stringent requirements shall be adhered to when specified in this Division.

c) Conduits routed within the building as connection to outside devices (exterior to the footprint of the building) shall be rigid metal (RMC) or intermediate metal conduit (IMC) at the point it enters the building, emerges from an exterior wall or ground floor slab to the final Equipment Room termination/transition point.

1) If services enter a room or space such as a mechanical room, electrical room or other intermediate room due to convenience or proximity to the exterior and adequate space has not been provided within 50 feet for the equipment needed for transitioning these and future cables/services to an appropriately rated indoor cable then those conduits shall be continued uninterrupted (except for necessary pull boxes) to the final connection point or location where the transition point has been designated.

d) For interior devices (and devices on the face of exterior walls) Electrical metallic tubing (EMT) with compression connectors shall be used where concealed in walls, above ceiling, and exposed or concealed in equipment rooms.

e) Unless specifically identified on the Security drawings, flexible conduit shall not be used.

f) Conduits shall be dedicated to specific sub-systems (i.e. video cabling shall not be installed in any other sub-system conduit, such as access control, intrusion detection, fire alarm, etc.).

g) Provide conduit as indicated on the Drawings or required by this Specification.

1) Minimum conduit size for Category cabling shall be: 3/4 inch for interior locations and 1 inch for exterior locations (such as devices at light poles and gates).

2) Provide a polypropylene or monofilament plastic line with not less than 200 lb tensile strength in each conduit.

3) Permanently mark or tag each conduit at the source and inside each pull box, identifying it based on specific subsystem (Access Control, Intrusion Detection, etc) and far-end destination. Each conduit that is stubbed into the ceiling space from an outlet box shall be permanently marked or tagged; refer to Labeling requirements in Section 3 – Execution.

2. Outlet Boxes

a) Basis of design

1) Interior stud walls: Hubbell Incorporated; RACO 258/259

2) Plenum ceilings: Hubbell Incorporated; RACO 239

3) Interior 6 inch or 8 inch deep masonry walls: Hubbell Incorporated; RACO 695 (single-gang), 696 (dual-gang)

4) Exterior walls (weatherproof): ABB Ltd; Thomas & Betts IHD3-3 (single-gang), 2IHD5-3 (dual-gang)

b) Other acceptable manufacturers

1) ABB Ltd; Thomas & Betts, Steel City

2) Emerson Electric Company; Appleton

3) Hubbell Incorporated; RACO

4) Randl Industries, Incorporated

c) Description

1) Interior stud walls: dual-gang outlet box shall be a minimum size of 4-11/16 inch width by 4-11/16 inch height by 2-1/8 inch depth, with a raised cover/extension ring with depth matching wall gypsum board(s) thickness.

2) Plenum ceilings (flush or above accessible ceiling): plenum-rated, dual-gang outlet box shall be a minimum size of 4 inch width by 4 inch height by 2-1/8 inch inch

depth, with a raised cover/extension ring with depth matching ceiling tile thickness.

3) Interior 6 inch or 8 inch deep masonry walls: where single-gang faceplates are shown on the drawings, provide single-gang backbox a minimum of 3-1/2 inch deep; where double-gang faceplates are shown on the drawings, provide double-gang backbox a minimum of 3-1/2 inch deep.

4) Weatherproof: Aluminum die cast, weatherproof box with 1 inch conduit connection. Where single-gang faceplates are shown on the drawings, provide single-gang backbox a minimum of 2-1/2 inch deep; where double-gang faceplates are shown on the drawings, provide double-gang backbox a minimum of 2-1/2 inch deep.

3. Junction Boxes

a) Basis of Design: Hoffman A6N64 (or larger)

b) Other acceptable manufacturers

1) Hoffman

2) Hubbell/Wiegmann

3) NEMA Enclosures

c) Descriptions

1) Location: in accessible ceiling space above access controlled doors

2) Minimum Size 6 inch x 6 inch x 4 inch deep, or as noted on drawings/details, with hinged cover

3) NEMA 1 rating

4. Pull Boxes

a) Acceptable manufacturers

1) Hoffman

2) Hubbell/Wiegmann

3) NEMA Enclosures

b) Descriptions

1) Interior use only

2) mounted in Conveniently Accessible Locations.

3) NEMA EN 10250 listing: NEMA 1

4) Refer to Execution section for sizing requirements.

5) Shall be keyed

2.03 SURFACE RACEWAYS

A. Manufacturers

1. Hubbell Incorporated
2. Legrand SA; Wiremold
3. Mono-Systems Incorporated
4. Multilink
5. Panduit Corporation
6. Substitution: See Division 01 - PRODUCT REQUIREMENTS.

B. Description

1. Refer to Division 26 for specific product and material information. Where a conflict exists between Division 26 and Division 28 the more stringent requirements shall apply.
2. Raceways shall be sized per the quantity and size of the installed cables, plus 50% spare capacity. Minimum cross-sectional area shall be 1 inch.
3. Single gang and double gang surface boxes shall be a minimum of 2-1/2 inch deep.
4. Color shall be as directed by the Architect.

2.04 UNDERGROUND DUCTS AND RACEWAYS

A. General

1. Refer to Division 26 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS and Division 27 - UNDERFLOOR RACEWAYS FOR COMMUNICATIONS SYSTEMS for additional requirements. Where a conflict exists between Division 26 and Division 27 the more stringent requirements shall apply.

B. Handholes - for exterior, in-grade applications

1. Basis of Design: Hubbell Incorporated; Quazite PG
2. Other Acceptable Manufacturers
    a) Armorcast Products Company
    b) CRH PLC; Oldcastle Infrastructure
    c) MacLean Highline
    d) NewBasis
    e) Substitution: See Section 01 6000 - Product Requirements
3. Description
    a) Size: 11 inch x 18 inch x 12 inch

b) Design Load: 22,500 lb, tier 22

c) For use with one or two conduits, 2 inch diameter and smaller are installed.

d) Construction: Polymer Concrete with straight side with open bottom

2.05 SLEEVES AND SLEEVE SEALS

A. Sleeves in unrated barriers

1. Manufacturers

a) Refer to Division 26 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for list of Manufacturers.

2. Description

a) Nylon bushings at cable entry and exit, UL listed for plenum (UL 2043)

b) Conduit waterfall at areas where cables exiting sleeve will be damaged from pinch point or over bending. Panduit Corporation CWF400 or equal.

B. Sleeves in acoustical barriers

1. Basis of Design: Specified Technologies, Incorporated 33NEZ

2. Other Acceptable Manufacturers

a) 3M

b) Hilti Corporation

c) Substitution: See Division 01 - PRODUCT REQUIREMENTS.

3. Description

a) For use in place of conduit sleeves through walls of noise critical spaces.

b) Plenum Rated (to UL 2043)

c) Sound Transmission Classification (STC) as tested per ASTM E90 shall be greater than 60.

2.06 ACCESS PANELS

A. Manufacturers

1. Activar/J.L Industries

2. Acudor Products

3. Alfab/Barco

4. Elmdor Products

5. Karp Associates, Inc.
6. Milcor
7. Nystrom Building Products
8. Williams Brothers
9. Wind-lock
10. Substitution: See Division 01 - PRODUCT REQUIREMENTS.

B. Description

1. Where pull boxes are required above inaccessible ceiling spaces, or for other required conditions, provide an appropriately sized access panel.
2. Steel access doors and frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation.
    a) Joints and seams: continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
    b) Frames: 16-gauge steel, with a 1 inch wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling:
    c) For installation in masonry, concrete, ceramic tile, or wood paneling: 1 inch wide exposed perimeter flange and adjustable metal masonry anchors.
    d) For gypsum wallboard or plaster: perforated flanges with wallboard bead.
    e) For full-bed plaster applications: galvanized expanded metal lath and exposed casing bead, welded to perimeter of frame.
    f) Flush panel doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
    g) Fire-rated units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.
3. Locking devices: Where indicated, provide 5-pin or 5-disc type cylinder locks, individually keyed; provide 2 keys.
4. Indicate proposed size and locations on pre-construction shop drawings. No access panels shall be installed without Architect and Design Consultant approval.

2.07 FIRE STOP SYSTEMS

A. Basis of design

1. Barrier penetration: Specified Technologies Incorporated EZ-Path

2. Back boxes in fire-rated wall: Specified Technologies Incorporated SpecSeal Power Shield

3. Other applications: Specified Technologies Inc. - submit UL System documentation for each floor/wall type and product cutsheets for STI materials to be utilized.

B. Other acceptable manufacturers

1. 3M

2. Hilti

3. Substitution: See Division 01 - PRODUCT REQUIREMENTS.

C. Description

1. General

a) Refer to Division 07 - FIRESTOPPING for additional requirements. Where a conflict exists between Division 07 and Division 27 the more stringent requirements shall apply.

b) Communications ladder rack and cable tray shall not continue through a fire-rated wall. Stop the tray, install multiple fire-rated pathway devices, and continue tray on the other side. Ensure grounding of the tray is continuous through the wall.

2. Barrier penetration - for sleeves through a single penetration (wall or floor)

a) Minimum performance requirements: Shall meet testing requirements of ASTM E814 or UL 1479; Shall be installed in accordance with the NRTL. Provide fire stop systems appropriate for the specific application and in accordance with manufacturer's instructions.

b) Shall meet or exceed the ratings of the wall or floor that it penetrates.

c) Shall be a prefabricated and zero-maintenance solution which requires no action to activate the fire and smoke protective characteristics of the device.

d) Allows the installation and removal of cables without the need to remove or add materials.

e) Used to seal penetrations of cables through fire rated partitions.

3. Back boxes in fire-rated walls

a) Used to seal backboxes in fire rated partitions.

b) Minimum performance requirements: Shall meet UL testing requirements of UL 263 and classified as Wall Opening Protective Material (QCSN or CLIV); Shall be installed in accordance with

the NRTL. Shall meet or exceed the ratings of the wall or floor that it is located in.

c) Provide fire stop systems appropriate for the specific application and in accordance with manufacturer's instructions.

4. Other applications

a) For fire-rated penetrations where the conduit pathway extends beyond a single fire-rated partition/floor, and other required firestopping applications not previously addressed in this specification.

b) Shall be UL listed for the specific application; Shall meet or exceed the ratings of the wall or floor that it penetrates.

2.08 SECURITY FASTENINGS

A. Except in equipment rooms, exposed securing screws shall be stainless steel, center pin torx security screws. Security Fasteners: A maximum of two different sets of tools shall be required to operate security fasteners for Project. Provide stainless-steel security fasteners in stainless-steel materials.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Holo-Krome; a Danaher Corporation.
2. Safety Socket Screw Corporation.
3. Tamper-Pruf Screws, Inc.
4. Textron Inc.

2.09 IDENTIFICATION FOR COMMON WORK FOR ELECTRONIC SECURITY

A. Label Printers

1. Manufacturer

a) Aptiv PLC; HellermannTyton

b) Brady Corporation

c) Brother International Corporation

d) Epson Labelworks PX

e) Newell Company; DYNMO

f) Panduit Corporation

g) Substitution: See

2. Description

a) Refer to additional requirements in Part 3.

b) Refer to individual sections for additional identification requirements for work.

PART 3 - EXECUTION

3.01 PATHWAYS FOR ELECTRONIC SAFETY AND SECURITY

A. General

1. Refer to Electrical Division 26 for specific installation requirements.
   a) Sizes, methods, and more stringent requirements shall be adhered to when specified in this Division.
2. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
3. All supports shall be specifically designed to support the required cable weight and volume. Field manufactured supports will not be accepted.
4. Install a pull cord in each pathway (empty or not) for installation of new wires or cables. Use polypropylene or monofilament plastic line with not less than 200 lb tensile strength. Leave at least 12 inch of slack at each end of pull cord.
5. Unless otherwise noted, pathway routing shown on the Drawings is illustrative only and meant to indicate the general configuration of the work. Install pathways so that adequate clearances and offsets between pathways and other trades are provided. Coordinate pathways with other trades prior to installation.
6. Pathways shall include empty space for a minimum of 25% growth beyond initial installation of cabling.
7. Cables shall be rigidly supported by cable pathways as indicated on the drawings. Cables shall be physically supported at intervals not to exceed 5 ft.
8. Store and keep dry products in original container in a climate controlled environment until installation is to occur.
9. Install pathways:
   a) So that cables are allowed to be pulled in accordance with referenced standards and guidelines.
   b) So that cables are allowed to be pulled without damage to conductors, shield, armor, or jacket.
   c) So that cables are not forced or allowed to exceed minimum allowed bend radius by manufacturer or referenced standards and guidelines.
   d) So that the maximum allowable pulling tension is not exceeded.

e) To meet the requirements of the structure and the requirements of other Work on the Project

f) To clear all openings, depressions, ducts, pipes, reinforcing steel, and so on.

g) Within or passing through the concrete structure in such a manner so as not to adversely affect the integrity of the structure. Become familiar with the Architectural and the Structural Drawings and their requirements affecting the raceway installation. If necessary, consult with the Architect.

h) Parallel or perpendicular to building lines or column lines.

i) When concealed, with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.

10. Cables shall remain unattached to pathways or other cables and shall simply lay at rest on the supports provided by its pathway (including cable trays, wire basket, j-hooks, conduit, etc.). Wire ties, velcro straps, electrical tape or other methods shall not be used to attach cables to cable supports.

11. Provide adequate pathways so that cabling is not forced to attach, be supported, or use other pathways not specifically designed and provided for. Any deviation from this will not be accepted.

    a) At no point shall cables come in contact with, be supported by, or attach to other trades equipment or supports.

    b) At no point shall cables come in contact with, be supported by, or attach to building structures or supports.

12. Provide appropriately sized sleeves where cables (supported by J-hooks) are required to pass through non-rated full-height partitions. Where allowed, sleeves shall extend a minimum of 3 inches beyond the partition surface on both sides, and shall be rigidly supported to support the weight of cables. Sleeves shall be sized so that no more than 40% of the cross-sectional area is utilized by the cabling to be installed.

13. Suspended cables shall be installed with at least 3 inches of clear vertical space above the ceiling tiles and support channels (T-bars).

14. Waterproofing

    a) Avoid, if possible, the penetration of any waterproof membranes such as roofs, machine room floors, basement walls, and the like. If such penetration is necessary, make penetration prior to the waterproofing and furnish all sleeves or pitch-pockets required. Advise the Architect and obtain written permission before penetrating any waterproof membrane, even where such penetration is shown on the Drawings.

b) Restore waterproofing integrity of walls or surfaces after they have been penetrated without additional cost to the Owner.

15. Cutting and Patching

a) Where cutting, channeling, chasing or drilling of floors, walls, partitions, ceilings or other surfaces is necessary for the proper installation, support or anchorage of conduit or other equipment, layout the work carefully in advance. Repair any damage to the building, piping, equipment or defaced finished plaster, woodwork, metalwork, etc. using skilled tradespeople of the trades required at no additional cost to the Owner.

b) Do not cut, channel, chase or drill masonry, tile, etc., unless permission from the Architect is obtained. If permission is granted, perform this work in a manner acceptable to the Architect.

c) Patch around all openings to match adjacent construction.

d) Where conduit or equipment is mounted on a painted finished surface, or a surface to be painted, paint to match the surface. Cold galvanize bare metal whenever support channels are cut.

e) Provide slots, chases, openings and recesses through floors, walls, ceilings, and roofs as required. Where these openings are not provided, provide cutting and patching to accommodate penetrations at no additional cost to the Owner.

f) After the final waterproofing membrane has been installed, roofs may be cut only with written permission by the Architect.

16. Mounting Heights

a) Mounting heights for equipment and devices requiring operational access shall conform to ADA Standards.

b) Wall mounted devices requiring operational access shall be mounted a minimum of 15 inches above finished floor to bottom of device and a maximum of 48 inches above finished floor to top of device.

c) Mounting heights shall be from floor to center of device, unless otherwise noted. Verify exact locations and mounting heights with the Architect before installation.

d) Typical mounting heights shall match nearest adjacent typical electrical outlet mounting height UON or as directed by the Architect.

17. Painting

a) Refer to Division 09 Section “Painting” for painting requirements.

b) Paint exposed ferrous surfaces, including, but not limited to, hangers, equipment stands and supports using materials and

methods as specified under Division 09 of the Specifications; colors shall be as selected by the Architect.

1) If painting happens after cabling has been installed, cabling shall be masked off or otherwise protected so that cables are not painted. Paint on cables degrades the cable over time. PAINTED CABLES SHALL BE REPLACED with no additional cost to the Owner.

c) Re-finish all field-threaded ends of galvanized conduits and field-cut ends of galvanized supports with a cold-galvanizing compound approved for use on conductive surfaces. Follow closely manufacturer's instructions for pre-cleaning surfaces and application.

d) Factory finishes and shop priming and special finishes are specified in the individual equipment Specification sections.

e) Where factory finishes are provided and no additional field painting is specified, touch-up or refinish, as required by, and to the acceptance of, the Architect and Design Consultant, marred or damaged surfaces so as to leave a smooth, uniform finish. If, in the opinion of the Architect or Design Consultant, the finish is too badly damaged to be properly re-finished, replace the damaged equipment or materials at no additional costs to the Owner.

f) Provide touch-up paint as required by specification sections in this Division.

18. Fastenings

a) Fasten equipment to building structure in accordance with the best industry practice.

b) Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

c) Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1) To Wood: Fasten with lag screws or through bolts.

2) To New Concrete: Bolt to concrete inserts.

3) To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.

4) To Existing Concrete: Expansion anchor fasteners.

5) To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts.

6) To Light Steel: Sheet metal screws.

7) Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

d) Where weight applied to building attachment points exceeds 300 lb, coordinate with and obtain the approval of Architect and conform to the following as a minimum:

1) Provide suitable auxiliary channel or angle iron bridging between building structural steel elements to establish fastening points. Bridging members shall be suitably welded or clamped to building steel. Provide threaded rods or bolts to attach to bridging members.

e) For items, which are shown as being ceiling mounted at locations where fastening to the building construction element above is not possible, provide suitable auxiliary channel or angle iron bridging tying to the building structural elements.

f) Areas identified as noise critical spaces shall have all penetrations sealed to minimize sound transmission between adjacent spaces.

B. Access to pathways and associated equipment

1. Locate pull boxes, junction boxes and fire-rated pathway devices to provide easy access for operation, service inspection and maintenance.

2. Provide an access door/panel where equipment or devices are located above inaccessible ceilings. Where access doors/panels are necessary but not shown on the plans, coordinate type and location with Architect and Design Consultant through an RFI.

3. Maintain code required clearances and clearances required by manufacturers.

C. Cable Distribution

1. For low-voltage cabling (that provides power at 70v or less), refer to section above.

D. Conduits

1. Conduit shall be of the appropriate type required by code and as required by Electrical Division 26.

2. Adequate access shall be available where cables enter conduits.

3. Bond and ground metallic conduits and boxes in accordance with TIA-607.

4. Install conduits in the most direct route possible, running parallel to building lines.

5. Ream all conduit ends and fit them with an insulated bushing to eliminate sharp edges that can damage cables during installation or service.

6. Conduits which enter Telecommunications or Security/Equipment rooms shall extend 3 inches AFF or through the wall.

7. Flexible conduits may only be used where specifically allowed by these Contract Documents.

    a) Where indicated, flexible conduit sections shall be less than 20 ft in length.

8. No continuous section of a conduit may exceed 100 feet without a pull box.

9. No more than (2) 90° bends, or equivalent will be allowed between pull boxes.

    a) Each and any offset shall be considered a 90° bend.

    b) A pull box is required wherever a reverse bend is installed.

10. The minimum bend radius for conduits is:

    a) (6) times the inside diameter for 2 inches conduits or less.

    b) (10) times the inside diameter for conduits greater than 2 inches.

11. Conduits shall contain no electrical condulets (also known as LBs). Conduit Bodies serving an Electronic Security cable shall meet cable's bend radius requirements.

12. Underground Conduit Requirements

    a) Cabling and pathways serving devices exterior to the building, such as emergency phones/towers and security cameras.

    b) Requirements

        1) Refer to applicable details on drawings for illustrative requirements.

        2) Route all underground conduit so there is no more than (3) 90 degree bends, including stub-up bend at communications room/equipment cabinet.

            (a) For underground conduit serving outlets/boxes outside the footprint of the building that require more than (3) 90 degree bends, provide appropriately-sized handhole(s). Coordinate location with Architect and Owner, indicate proposed location(s) on shop drawings, and include

product information in pre-construction submittals. In general, handholes are NOT to be located in roadways, parking lots, sidewalks, or any location that may be subject to vehicular traffic.

(b) These underground conduits shall stub directly into the serving Communications Room/Equipment Room. If not, extend cabling within the building in IMC or RMC to the serving Equipment Room.

3) Approved conduit types:

(a) When routed below slab-on-grade or outside the footprint of the building:

(1) Horizontal conduit shall be RMC or Schedule 40 PVC a minimum of 12 inch below grade. If PVC is installed, also install tracer wire.

(2) All vertical and horizontal bends and areas subject to vehicular traffic (loads) such as parking lots and roadways shall be RMC or concrete-encased PVC.

E. Outlet boxes

1. No outlet boxes shall be located back-to-back in a wall cavity.

a) Where possible offset to next stud cavity, with a minimum of 6 inch separation.

2. Outlet boxes located in fire-rated walls are to have the appropriate firestopping for backboxes. These locations are to be identified on shop drawings.

3. Where cabling enters a backbox directly (not via conduit), provide black rubber grommet on knockout.

F. Pull Boxes

1. Pull boxes shall be placed in Conveniently Accessible locations.

2. Coordinate the location and installation of all Pull Boxes to ensure adequate access is provided.

3. Pull boxes above an accessible ceiling shall:

a) Be aligned directly over the ceiling grid to allow access.

b) Be installed with a minimum of 3 inch clearance to ceiling grid and tiles

4. No directional changes shall be allowed in pull boxes. Conduit shall continue in the same direction as it enters and then change direction via an appropriately sized bend in the conduit.

5. Size pull boxes according to the following chart:

TABLE 1: PULL BOX SIZING

CONDUIT TRADE SIZE	WIDTH	LENGTH	DEPTH	WIDTH INCREASE FOR ADDITIONAL CONDUIT (OF SAME SIZE)
¾" OR SMALLER	4"	4"	2-1/8"	NOT APPLICABLE
1"	4"	16"	3"	2"
1-1/4"	6"	20"	3"	3"
1-1/2"	8"	28"	4"	4"
2"	8"	36"	4"	5"
2-1/2"	10"	42"	5"	6"
3"	12"	48"	5"	6"
4"	16"	60"	8"	6"

3.02 LABELING

A. Labeling Installation

1. Labels are to be secured by adhesive. They shall have a type of adhesive that is appropriate for the surface upon which the label is to be installed. The mounting surface shall be free of dust, dirt, oil, etc. that would impede the adhesion of the labels.

B. Labeling Requirements

1. Labels are to be installed on or for:

a) Firestopping systems: For wall and floor penetrations, label on both sides. See Firestopping later in this section.

b) Pathways (e.g., conduit etc.) installed under this work.

1) Label all conduit with "SECURITY". Conduit labels shall utilize text readable from a standing position on the finished floor. Conduit sleeves which pass through a single wall or floor need not be labeled.

2) For wall stub-up locations, label overhead only.

3) For conduits greater than 10 ft, label both ends of conduit with far end location and Room/Number.

(a) Example – "Security to Panel 1 in Equipment Room 127".

4) For conduits that stub directly up or into an Equipment Room, label both ends of conduit.

(a) Example: underslab/ground conduit from Equipment Room 127 to Camera #13 attached to an exterior lightpole shall be labeled as follows:

(b) Conduit stub-up location in Equipment Room 127 – "Security to Camera #13".

(c) In the lightpole/junction box, immediately adjacent to serving conduit – "Security to Equipment Room 127".

5) All pull boxes and junction boxes for Security shall be labeled "SECURITY PULL BOX" on the cover, such that the text is of sufficient size to be readable from a standing position on the finished floor.

(a) Conduits entering and exiting all pull boxes and junction boxes shall be labeled with their destination/room number – ie "To Security Camera #17 in Room 114".

c) In general, the label is to be provided and installed by whomever installed the item that is being labeled.

d) Refer to individual Division 28 sections and to the drawings for additional information on labeling requirements.

3.03 FIRESTOPPING

A. General

1. Provide fire resistant materials of a type and composition necessary to restore fire ratings to all wall, floor or ceiling penetrations; including membrane penetrations. All materials shall be classified or listed as a complete system by UL (or an approved NRTL by the Design Consultant and AHJ) and meet NEC and local codes. The use of partial systems or components of systems is not allowed unless specifically identified in the documents.

2. All penetrations through fire rated floors and walls shall be sealed to prevent the passage of smoke, flame, toxic gas, or water through the penetration before, during or after a fire. The fire rating (F and T) of the penetration seal shall be at least that of the floor or wall into which it is installed, so that the original fire rating of the floor or wall is maintained as required by referenced building codes.

a) Assume all floors are fire-rated, unless otherwise noted.

b) Also install fire stops at any other locations indicated in the Specifications or Drawings.

3. Provide a label on both sides of fire rated assembly at all fire stop locations indicating:

   a) Fire stop Manufacturer

   b) Installer and company

   c) Date installed.

   d) UL system number with all relevant ratings indicated.

4. Include labels in each equipment room in which one or more fire-rated walls is installed. Provide a 2 inch letter stencil label on the inside of the room to indicate rating for each barrier.

5. Provide systems as identified on the drawings and specified herein. At locations where the cabling routing encounters a fire-rated barrier provide an adequately sized fire stop device for the quantities and types for all cables to be installed plus 25% growth.

B. Penetration Sealant – Conduits

1. Provide listed system to seal around openings between wall, floor, or partition around conduits in accordance with system listing and manufacturer’s instructions.

C. Penetration Sealant – Voids, Cavities, and Openings

1. Install fire stop materials in the framed openings through fire rated partitions per the Architect's drawings and in accordance with the NRTL listed system instructions.

2. Fire stop all voids, cavities, and openings left by the removal of cabling, conduits, conduit sleeves, cable trays, or other equipment related to the electronic security systems not to be reused.

3. Install the fire stop system in accordance with the manufacturer's instructions and local codes.

D. Fire-Rated Pathway Device

1. Provide fire-rated pathway device anywhere cables are required to pass through fire-rated walls, floors, or partitions.

2. Devices shall be installed in locations where required by the Contract Drawings, arranged individually or appropriately ganged.

3. Install the devices in strict accordance with the approved shop drawings and the equipment manufacturer’s recommendations.

4. Apply the factory supplied gasketing material (where required) prior to the installation of the wall plates.

5. Secure wall plates (where required) to devices per the equipment manufacturer’s recommendations.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. Confidentiality Notice

B. System Description

C. Personnel and Contractor Qualifications

D. Warranties

E. Coordination

F. Identification/Labeling

G. Start-up of Systems

H. Project Close-Out Instructions

I. This parent section pertains to subsections 281001 through 283999.

1.02 RELATED SECTIONS

A. General provisions of the Contract, including General and Supplementary Conditions and Division 01 specification sections.

B. Division 26 ELECTRICAL

C. Division 27 COMMUNICATIONS

D. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

E. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

F. Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

G. Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY

H. Section 28 1015 - TELECOMMUNICATIONS REQUIREMENTS FOR ELECTRONIC SECURITY

I. Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY

1.03 ACRONYMS AND DEFINITIONS

A. Electronic Security Contractor (ESC) – The primary Contractor of this and all related specification sections (281000 through 283999). The ESC is also responsible for fully coordinating all Electronic Security System requirements with other Divisions and sections, such as power, grounding/bonding, fire alarm, and pathways/other common work.

B. Equipment Grounding Conductor – as defined in the NFPA 70, the conductive path installed to connect normally non-current-carrying metal parts of equipment together and to the system ground conductor or to the grounding electrode conductor, or both.

C. Equipment Room – A secured room either exclusively reserved for Security System headend equipment, or shared with other low-voltage systems such as Telecommunications headend equipment, Fire Alarm panels, etc.

D. Final Acceptance Review – the final site observation by Design Consultant; refer to Submittal paragraph (in Part 1 of this Section) and Project Close-Out Instructions (in Part 3 of this Section) for additional information / requirements.

E. System – short for Electronic Security System, Work governed by this and related documents.

1.04 REFERENCE STANDARDS

A. 49 CFR 1520 - Protection of Sensitive Security Information; Current Edition.

B. ASIS PAP - Physical Asset Protection; Current Edition, Including All Revisions.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. NFPA 731 - Standard for the Installation of Premises Security Systems; current edition.

E. Texas Government Code Sec. 418 - Emergency Management; Online Edition.

F. TIA-569 - Telecommunications Pathways and Spaces; 2019e, with Addendum (2022).

G. TIA-942 - Telecommunications Infrastructure Standard for Data Centers; Current Edition.

H. UL (DIR) - Online Certifications Directory; Current Edition.

1.05 CONFIDENTIALITY NOTICE

A. Electronic Security System Work is confidential in nature. All drawings and relevant specification sections are considered confidential information and shall

remain secure. Track all physical copies of Electronic Security System documents, restrict document access to those working directly on the project; properly dispose of the physical documents when no longer needed. Share and/or restrict access of electronic documents to only those working directly on the project having "a need to know".

1. Proper disposal of physical documents means that they are crosscut shredded, incinerated, or pulped such that there is reasonable assurance the hard copy materials cannot be reconstructed.

2. These confidentiality requirements are a minimum. Follow local, state, and federal laws where more stringent. For projects in the State of Texas, failure to comply may result in a breach of Texas Government Code Sec. 418 .181.For aviation projects, failure to comply may result in breach of 49 CFR 1520 - Protection of Sensitive Security Information.

1.06 SYSTEM DESCRIPTION

A. Provide a complete and functioning electronically controlled physical security system ("Electronic Security System"), and each element thereof, as specified, indicated, or reasonably inferred, on the Drawings and in these Specifications, including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include, but are not limited to, materials, labor, supervision, supplies, tools, equipment, transportation and utilities.

1. All Electronic Security Systems shall have a level of immunity to power interruptions, be time synchronized, and employ a level of redundancy or failure recovery so as to minimize the loss of data, monitoring, and control.

2. For data center projects, the Electronic Security Systems shall meet the redundancy and failover requirements set forth by its classified Tier (I-IV) level as defined by TIA-942.

B. Specification sections 281000 through 283999, and Drawings numbered with prefixes TY, generally describe these systems, but the scope of the Electronic Security System Work includes all such Work indicated in all of the Contract Documents, including, but not limited to: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Mechanical, Plumbing, Electrical, Communications, and Fire Alarm System Drawings and Specifications; and Addenda.

C. The general scope includes, but is not limited to, these systems:

1. Provide a complete and functioning Electronic Security System comprised of the following subsystems:

a) Access Control System

b) Video Intercom System

c) Intrusion Detection System

2. Coordination with the Owner 's IT Department to connect all necessary Electronic Security equipment onto the Owner 's Local Area Network.

3. Provide time synchronization across all server and PC controlled and monitored Electronic Security System sub-systems. Where available, utilize the Owner's time server for time reference.

D. The Work also includes, but is not necessarily limited to, the following:

1. Conduit, backboxes, pull boxes, firestopping, and other pathways necessary for the completion of all Electronic Security Systems – installed per Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY; if another Sub-Contractor is providing the pathways/common work (as coordinated with the Prime Contractor), the Project Manager and/or Quality Control Specialist of this section shall coordinate and inspect the installation of all pathways/common work with that Sub-Contractor.

2. Cabling between the Electronic Security headend equipment and field devices, and between multiple Equipment Rooms.

3. Full build-out of Equipment Rooms, including all terminations, patch panels, patch cords, cabinets, equipment racks, ladder rack, backboards, etc. Where equipment rooms and pathways are shared with other systems, such as Telecommunications and/or Audio Video, coordinate Division of Labor for shared infrastructure.

4. A grounding/bonding system, as described in these construction documents, required by equipment manufacturers, and referenced codes and standards.

5. Appropriate cable supports as required by these construction documents, such that all cabling external to Equipment Rooms is either installed in conduit or supported via J-hooks or cable tray every 48 inches to 60 inches .

6. For cabling in Equipment Rooms, cable shall be supported every 18 inches for both horizontal and vertical routing, by either ladder-type cable tray or d-rings on backboards.

a) This is not a requirement for telecommunications cabling required for Work under this Division. Refer to Section 27 1000 - STRUCTURED CABLING for pathway requirements within Equipment Rooms.

7. Testing, labeling, and documentation of cables and hardware installed under this Division.

E. Prepare and submit shop drawings, testing reports, as-built drawings, and cabling documentation in a timely manner to conform to all project schedules and timelines.

1. Submittals are a crucial requirement to a successful project. No work may begin until Pre-Construction Submittals have been approved by the Design Consultant.

2. Incomplete submittals, including submission of unedited bid drawings as shop drawings, will be immediately rejected and not reviewed.

3. The first pre-construction Submittal shall be of such detail and thorough enough to demonstrate to the Design Consultant and Owner that the ESC understands the project requirements and for installers to have sufficient information to complete construction in accordance with the contract documents.

    a) The project schedule is dependent upon the first pre-construction submittals being thorough enough that only minor edits (if necessary) will be required to be resubmitted.

4. Accurate Record Drawings and other close-out documentation are integral to the Owner's use and maintenance of the System, and are to be submitted prior to the Final Acceptance Review.

1.07 SUBMITTALS

A. Refer to requirements in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS. At a minimum, follow these additional requirements:

1. Pre-Bid Submittal (due at the questions deadline during the bid window)

    a) Substitution Request for any one of the following:

        1) Product Substitutions

        2) Alternate Personnel Qualifications

        3) Contractor Qualifications (for ESCs wishing to be added to the Pre-qualified Contractors list)

2. Bid

    a) Additional cost to extend the warranty coverage from 1 year to 3 years.

3. Pre-Construction Submittal

    a) Submit the following information for Electronic Security Work together (Sections 281000 through 283999) at the same time, with information grouped in the following categories, then identified by section and in the exact order of the specifications:

        1) Cover Page, which includes name of ESC and contact name, phone, and email of the following:

            (a) Quality Control Specialist

            (b) Project Manager

        2) Division of Labor

(a) Indicate any sub-systems – such as Common Work (conduit, backboxes, etc.), cabling, structured cabling – that will either be provided by a Sub-Contractor to the ESC or to the Prime Contractor. Indicate the company name that is provided each sub-system.

3) Schedule

(a) Gantt chart format; coordinate with Prime Contractor as needed.

4) Equipment List

(a) Typed list in the following format:

(1) Product name / type

(2) Manufacturer

(3) Model name

(4) Model number

(b) Separated by specification section and in the exact order as listed in the specification sections.

5) Cut Sheets

(a) Separated by specification section and in the exact order as listed in the specification sections.

6) Shop Drawings

(a) Scaled floor plans, at not less than 1/8" = 1'-0" scale, to identify the following:

(1) Room names and numbers

(2) Door numbers (to match the Architect's Door Schedule)

(3) Conduit, firestopping, cable tray, and other common work locations, sizes and routing, as required by Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY.

(4) Cable type, quantities, routing, and approved identification,

(5) Equipment Room locations and serving areas,

(6) Dimensioned device locations and approved identifiers,

(7) Where the System controls electronic door hardware, identify type (of electronic door hardware) and voltage for each door.

(b) Enlarged scaled floor plans and elevations, at not less than 1/4" = 1'-0" scale, of Equipment Rooms, showing 3 feet of clearance space in front of all panels and wall-mounted racks/cabinets and 3 feet of clearance space in front of and behind all floor-mounted racks/cabinets.

(c) Details of the following:

(1) Termination, or pin-out, details of multiple or multi-conductor cables at the Device and Equipment ends for each type of device.

(2) Riser, block, functional, and grounding/bonding diagrams for all systems and sub-systems.

7) Electronic Security Network Requirements:

(a) As part of Pre-construction Submittal, include a spreadsheet in both PDF and Excel file formats with the following information for all new Electronic Security equipment that will be connected to the building's Electronic Security Network:

(1) Room Number of Equipment Location (Example: Room 113)

(2) Equipment Type (Example: POE Camera)

(3) Manufacturer (Example: Axis)

(4) Model Name (Example: 1080p Indoor Network Camera)

(5) Model Number (Example: P3346-VE)

(6) Mac Address (Example: 14:A9:9F:0D:3D:16)

(7) Serving Electronic Security Equipment Room (Example: MDF 120)

b) Refer to individual sections in this Division for additional Pre-Construction Submittal requirements.

4. Preliminary Project Completion Submittal

a) A minimum of 1 week prior to the Final Acceptance Review, submit Preliminary Project Completion Submittal, to include the following documentation:

1) Resubmit approved Pre-Construction Submittals of the following, updated to reflect all changes during construction:

(a) Equipment List

(b) Cut Sheets

(c) Preliminary Record Drawings – based on drawings kept on site.

(1) Scans of on-site drawings are acceptable, provided notes and minor changes are legible

(2) These drawings shall include the actual installed device and cable IDs that correspond to submitted test results.

2) Submit the following additional items (as part of each sub-system):

(a) Operation and Maintenance Manuals

(b) Test Results for all sub-systems.

(1) Device and cable IDs shall correspond to submitted Preliminary Record Drawings.

3) And additional items as required in other Division 28 Electronic Security specification sections.

b) Refer to the Project Close-Out Instructions in Part 3 of the section for additional information and requirements.

5. Final Project Completion Submittal

a) After Final Acceptance Review and before Substantial Completion:

1) Address all Punch List items generated from Final Acceptance Review,

2) Retest effected items

3) Conduct Owner Training and deliver any spare parts / physical items to Owner.

b) Submit the following items:

1) Cover Page – to include ESC company name and contact information for Warranty issues

2) (Updated) Equipment List (with length of manufacturer warranty that extends beyond 1 year), Cut Sheets, Operation & Maintenance Manuals, and Test Results

3) (Updated) Record Drawings, in AutoCAD and searchable PDF file formats

4) Spare Parts / Physical Media Confirmation – included scanned PDF of written confirmation from Owner that all spare parts and physical media were furnished to Owner at the time of Owner Training.

5) Manufacturer Warranty Information and Certificates

c) Update Electronic Security Network Requirements spreadsheet with any changes made during installation. Include PDF and Microsoft Excel file formats.

d) Refer to the Project Close-Out Instructions in Part 3 of the section for additional information and requirements.

e) Refer to individual sections in this Division for additional Project Completion Submittal requirements.

1.08 QUALITY ASSURANCE

A. Contractor Qualifications

1. Electronic Security Contractors (ESC)

a) For other Contractors wishing to be pre-qualified to bid and perform this Work, submit the following information for review and consideration by Owner and Design Consultant prior to the inquiry (questions) deadline before Bid (Pre-Bid Submittal).

1) ESC shall have a minimum five (5) continuous years in the business of integrating and/or installing Electronic Security equipment including but not limited to the systems identified with the Summary of Work paragraph of this Section.

2) Prior to bidding this project, the ESC shall be a certified installer by the equipment manufacturers whose products shall be incorporated into this project. Post-award certification will not be accepted.

3) ESC shall maintain certification by the manufacturers thru the duration of the warrantee period.

4) When requested, provide a list of projects (no less than 3) of similar size, scope and type in which the Bidder has performed in a capacity comparable to the size, scope and type outlined in these Construction Documents. Provide the project name, relevant project information for comparison evaluation, and contact names with telephone numbers of each such project.

5) ESC shall be a direct Contractor to the project's Prime Contractor, and shall not be Sub-Contractor under Division 26 or any other Division of Work.

b) ESC shall maintain a service facility or warehouse that will stock spare parts of all system components not readily available (within 24 hours) through local distribution channels.

B. Personnel Qualifications

1. Provide and maintain a Quality Control Specialist on staff as a full-time employee at all time. This person shall be familiar with the project and available to attend all scheduled project meetings when required by the Owner/Design Consultant. This person shall conduct weekly inspections and approve all submittals and work performed. This personal shall possess one or more of the following:

   a) Current ASIS Physical Security Professional (PSP) or Certified Protection Professional (CPP)

   b) An individual with substantial industry experience (10+ years); submit a copy of this person's resume with Pre-Construction submittals and whenever requested.

2. Provide and maintain a qualified Project Manager, who shall be on-site at all times Work in this (and Related Sections) is being conducted and shall attend all scheduled project meetings. This person shall possess one or more of the following:

   a) Current ASIS PSP or CPP certification.

   b) Technology-related degree from an ABET accredited institution.

   c) An individual with significant industry experience as a project manager (5+ years); submit a copy of this person's resume with Pre-Construction submittals and whenever requested.

3. Any additional personnel that will be physically installing any part of the Electronic Security System shall, at a minimum, be in good standing as one of the following:

   a) NJATC Installer Technician

   b) NICET Level III Technician (audio, automation, or video)

   c) Or be assigned to work under the direct supervision and direction of a person holding said certifications.

4. In addition, where required by state and local jurisdictions, any personnel working on-site shall be licensed, for security work or other work as required by this and related sections, and proof of licensure shall be submitted.

   a) For work in the State of Texas, any personnel conducting Work on-site under this and related sections shall be duly licensed by the Texas Department of Public Safety Private Security Bureau for the duration of the project. Submit proof of licensure as noted in Submittal Section.

5. These requirements are provided as a minimum level of qualification. Any additional or more stringent requirements by the specific manufacturer chosen to provide the proper level or term of warranty as specified in this division shall be met.

6. Alternate qualifications may be considered. Provide requested alternate considerations prior to Bid in accordance with the Substitution Request instructions in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS.

1.09 WARRANTIES

A. Per Division 01, and unless otherwise noted in Division 28 specifications, ESC shall warrant all work to be free of defects in workmanship and materials for a period of 1 year from the date of Substantial Completion.

B. ESC shall provide a point of contact (phone number) for all warranty and service calls, such that the ESC will respond and be on-site within 12 hours of the first call, and the repair completed to the satisfaction of the Owner within 36 hours of arrival on site.

1. For issues not properly resolved within this timeframe or those that are unable to be resolved in the field, ESC may elect from the following (subject to approval of the Owner):

a) Provide temporary/loaner equipment of comparable function until such time that the component can be fixed or replaced.

b) Reimburse the Owner for additional security staff necessary to cover the down time of that part of the System.

C. All Warranty Work shall be completed by factory-certified technician(s) of the component(s) being address.

D. ESC shall visit the job 30 days prior to the end of the 1-year warranty period to check all equipment for proper system operation. Any defective equipment found shall be replaced or repaired under the terms of the system warranty.

1.10 COORDINATION

A. The locations of outlets, devices, panels, equipment racks and other equipment indicated on the Drawings are approximate and are understood to be subject to such minor revision as may be found necessary or desirable at the time the work is installed in order to meet field conditions, coordinate with modular requirements of ceilings, simplify the work, establish sight lines for cameras, improve visibility for interactive security devices, or for other legitimate causes.

B. Exercise particular caution with reference to the location of outlets, devices, control panels, switches, etc. Verify with the Architect the exact location and mounting height of outlets, devices and equipment not dimensionally located on the Drawings.

C. The Drawings show only the approximate locations of outlets and devices, and, if shown, general run of raceways. Any significant changes in location of outlets, devices, etc., necessary in order to meet field conditions shall be brought to the immediate attention of the Architect for review before such alterations are made. Except for unforeseeable extenuating circumstances, modifications shall be made at no additional cost to the Owner.

D. Comply with NFPA 731 and ASIS PAP.

E. Camera, door, and device tags in the form of alpha/numeric characters are used where shown to indicate the designation numbers for identification purposes at the equipment panels and/or patch panels. Show the actual camera, door and device numbers on the as-built Record Drawings, on the associated typed field labels and in the printed and computer readable cabling and device schedules. Submit sample camera, door, and device information tags (proposed labeling scheme).

F. The drawings do not indicate the number of cables in conduit, or the actual identity of cables in specific conduits, cable tray or other cabling pathways. Under no circumstances shall 40 percent raceway fill be exceeded, regardless of the type of cabling installed.

G. Provide the correct cable type and quantity as required by the indicated outlets, devices, cable schedules, the design intent of any example drawings or schedules, referenced wiring diagrams (if any), the maximum distance limitations, and the applicable requirements of the NFPA 70 and TIA-569.

H. Cabling shall be installed complete and unspliced from field device termination to headend termination, unless otherwise noted.

I. Cabling installed in Damp or Wet Locations (as defined by the NFPA 70) shall be wet-rated / listed for installation in a Wet Location.

1. Underground pathways for devices exterior to the building shall stub up directly in the serving Equipment Room; if conduits stub up elsewhere in the building, a junction box is required in an accessible ceiling location and the cabling shall transition from wet-rated to plenum- or riser-rated cabling (per Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY and Section).

J. Wherever work interconnects with work of other trades, coordinate with other trades to ensure that they have the information necessary so that they may properly install the necessary connections and equipment.

1. At a minimum, coordinate the following with the Division 26 Contractor:

a) All electrical circuits serving Electronic Security System equipment shall be supplied with an Equipment Grounding Conductor for each circuit.

b) All electrical circuits serving Electronic Security System equipment shall have dedicated neutrals (no shared neutrals between branch circuits).

K. Within two weeks after the Notice to Proceed, schedule a meeting with the Owner's IT and Security staff to coordinate network requirements and programming of the Electronic Security Systems.

L. Coordinate sustainable requirements per Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS.

PART 2 - PRODUCTS AND MATERIALS

2.01 NOT USED

A. Refer to individual Electronic Security System sections for product requirements.

PART 3 - EXECUTION

3.01 IDENTIFICATION / LABELING

A. General Requirements

1. The inclusion or installation of any equipment or assembly which bears on any exposed surface any name, trademark, or other insignia which is intended to identify the manufacturer, the vendor, or other source(s) from which such object has been obtained, is prohibited.
2. Required UL (DIR) labels shall not be removed nor shall identification specifically required under the various technical sections of the Specifications be removed.

B. Refer to individual Electronic Security System sections for additional requirements.

3.02 START-UP OF SYSTEMS

A. Prior to system start-up, conduct or ensure the following safeguards:

1. Check all electrical circuits of the various devices for proper wiring polarity, grounding, and activation.
2. Verify that equipment is effectively bonded and grounded to earth.
3. Ensure all Equipment Rooms are properly conditioned and free of dust or other contaminants.

3.03 ELECTRONIC SECURITY NETWORK COORDINATION

A. Coordinate the following with the Owner's IT and Security Operations departments:

1. Quantity of additional data ports (PoE and non-PoE) required at each Telecommunications Room/Rack.
2. IP / Mac Addresses of all new Electronic Security equipment that will be connected to the building's Electronic Security Network.
3. Additional bandwidth requirements of the new Video Surveillance cameras from each Electronic Security Equipment Room.
4. Additional storage requirements of the new Video Surveillance cameras to be recorded onto the Owner's existing NVR / Storage Server(s).

B. As part of Pre-construction Submittal, include a spreadsheet with the following information for all new Electronic Security equipment that will be connected to the building's Electronic Security Network:

1. Room Number of Equipment Location (Example: Room 113)
2. Equipment Type (Example: POE Camera)
3. Manufacturer (Example: Axis)
4. Model Name (Example: 1080p Indoor Network Camera)
5. Model Number (Example: P3346-VE)
6. Mac Address (Example: 14:A9:9F:0D:3D:16)
7. WAN Access Required? (Example: No)
8. PoE / PoE+ (Example: Yes, PoE+)
9. Anticipated Bandwidth (Example: 133 kbps)
10. QoS (Quality of Service) (Example: Medium)
11. Serving Electronic Security Equipment Room (Example: MDF 120)

3.04 PROJECT CLOSE-OUT INSTRUCTIONS

A. Functional Testing

1. Conduct and finish functional tests of all sub-systems, and integrated testing where applicable. Correct any and all functional issues prior to requesting the Final Acceptance Review by the Design Consultant.

B. Preliminary Project Completion Submittal

1. Submit the following at least 1 week prior to requesting the Final Acceptance Review:
    a) A copy of Pre-Construction Submittals updated with all changes made during construction.
        1) If changes noted on the jobsite work prints are readily legible, a scanned copy is sufficient at this time.
        2) Otherwise, obtain reproducible electronic copies of the final Drawings and incorporate changes noted on the

jobsite work prints onto these drawings. These changes shall be done electronically in BlueBeam*, AutoCAD or BIM software and saved to PDF format. Each sheet shall contain the ESC's name/logo and be identified as "Preliminary Record Drawing".

(a) *Final Record Drawings shall be created in AutoCAD or BIM software; annotated PDF drawings will not be accepted.

b) Detailed Test Reports of the following sub-systems:

1) UPS testing per Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS.

2) Grounding and Bonding per Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS.

3) CAT-6/6a (Fiber) Test results per Section 27 1000 - STRUCTURED CABLING.

4) Functional Test Reports per individual sections for the following:

(a) Access Control doors, locations, and devices

(b) Intrusion Detection

(c) Intercom Entry

c) Copy of the Operation and Maintenance Manuals for each specified piece of equipment.

C. Final Acceptance Review

1. Upon completion of all functional testing, request in writing a Final Acceptance Review; this is a final site observation by the Design Consultant. Give the Architect and Design Consultant at least seven (7) days' notice prior to the review. Make the request sufficiently enough in advance for the review to properly be scheduled and completed such that punch list items can be addressed before substantial completion.

2. State in the written request that the ContractorContractor has complied with the requirements for Substantial Completion.

3. Upon receipt of a request for review, the Architect will either proceed with the review or advise the Contractor of unfilled requirements.

4. During the Final Acceptance Review, provide the following:

a) Services of the Project Manager, as identified in the Quality Assurance part of this Specification Section, and a minimum of two other technicians familiar with the project. The Project Manager shall facilitate the review and demonstration of the Electronic Security System and all sub-systems as requested by the Design Consultants.

1) Provide a minimum of two cell phones or radios to allow two-way communication between the headend or workstation location and a mobile technician to trigger various security alerts.

b) Ladders, lifts, and/or scaffolding as required to reach all cameras or other high-mounted devices.

c) Specific test equipment used during the Contractor's preliminary testing activities, and the services of qualified technicians to operate such test equipment.

1) Per individual sections, the Design Consultant may request the Contractor conduct random retesting to confirm the documented test results.

2) Refer to individual sections for exact requirements.

5. If the Contractor requests a Final Acceptance Review prior to completing the requirements of the Contract Documents, then provide reimbursement to the Design Consultant for time and expenses incurred for the visit.

6. Upon completion of the review, the Design Consultant will prepare a "punch list" of outstanding items not in compliance with the Contract Documents, to be completed or corrected for final acceptance.

a) Omissions on the "punch list" shall not relieve the Contractor from the requirements of the Contract Documents.

D. Punch List Completion

1. Complete all punch list items before Substantial Completion.

2. Retest affected items.

3. Update Preliminary Project Completion Submittal with all changes.

E. Project Completion Submittal

1. At the completion of the project, compile the following electronic files, divided into the following sub-folders:

a) Equipment List, in PDF and Microsoft Excel format, to include:

1) Specification Section number

2) Quantity

3) Manufacturer

4) Part Number

5) Serial Number

6) Manufacturer's warranty end date, if greater than 12 months after Substantial Completion

b) Cutsheets and Operation and Maintenance Manuals

c) Test Results and Cable Databases, in PDF and Microsoft Excel format

d) Record Drawings, in PDF and AutoCAD file formats

2. All products and submittals are to be in the exact order as these specifications.

3. Cutsheets and O&M Manuals are to be separate files identified by ## - Product Name – Manufacturer – Model.pdf, where ## is the sequential order of the product in that specification. Example (manufacturer and products may be different for this project):

a) 01 – Headend System – Lenel – OnGuard – 7.2

b) 02 – Server Software – Lenel – OnGuard – SWS-32ES

c) 03 – Workstation – Dell – Precision T3500

d) 04 – Controller – Lenel – Intelligent Dual Reader

e) 05 – Interface Module – Lenel – Dual Reader Interface Module

f) 06 – Power Supply – Altronix – Multi-Output Power Supply

g) 07 – Card Reader – HID – Multi-class Reader

h) 08 – (continue as needed)

4. Test Results and Cable Database requirements are to include the following:

a) Test Results to include PDF of passing Functional Test Report for each device, organized by sub-system. Refer to individual sub-sections for Functional Test Report requirements.

b) Cable Database requirements – refer to Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY and Section 27 1000 - STRUCTURED CABLING; these are to be submitted in PDF and Microsoft Excel file formats.

5. Record Drawings

a) Refer to Record Drawings paragraph in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS for additional requirements.

b) Record Drawings shall be updated versions of the approved Shop Drawings and shall meet all Shop Drawing requirements.

c) Record Drawings for each Electronic Security sub-system shall be provided with final cable routing and pathway routing noted.

1) J-hook / cable routing shall be indicated.

2) Conduit and pullbox routing and locations shall be indicated.

6. After Design Consultant makes comments on the Final Project Completion Submittal, incorporate changes and:

   a) Save a copy of these files onto the Workstations provided by the ESC.

   b) Forward updated Final Project Completion Submittal files to Owner. Include file path information for these updated files on the Workstations provided by the ESC.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. General Requirements

B. Low-Voltage Control and Power Cables

C. Telecommunications Cabling

D. Cable Identification Labels

1.02 RELATED REQUIREMENTS

A. Section 26 0519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

B. Section 27 1000 - STRUCTURED CABLING

C. Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY

D. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

E. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

F. Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

G. Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY

H. Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

I. Section 28 1015 - TELECOMMUNICATIONS REQUIREMENTS FOR ELECTRONIC SECURITY

1.03 DEFINITIONS

A. Damp Location – as defined by the NFPA 70, locations protected from weather and not subject to saturation with water or other liquids but subject to moderate degrees of moisture. For the purposes of Work under this division, assume all Damp Locations require wet-rated cabling.

B. Electronic Security Contractor (ESC) – The primary Contractor of this and all related specification sections (281000 through 283999). The ESC is also

responsible for fully coordinating all Electronic Security System requirements with other Divisions and sections, such as power, grounding/bonding, fire alarm, and pathways/other common work.

C. Point of Entrance (Building Entrance) – as defined by the NFPA 70, the point within a building where the security cabling routed through a Wet Location emerges from an external wall, a concrete floor slab, or IMC/RMC.

D. Qualified Electrician – one who has skills and knowledge related to the construction and operation of the electrical equipment and installations and has received safety training to recognize and avoid the hazards involved; in regards to this project, a Qualified Electrician is also licensed in the jurisdiction of the project to install electrical equipment (ie Journeyman or Master Electrician License).

E. Wet Location - as defined in the NFPA 70, installations underground or in concrete slabs or masonry in direct contact with the earth; in locations subject to saturation with water or other liquids, such as vehicle washing areas; and in unprotected locations exposed to weather.

1.04 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. UL (DIR) - Online Certifications Directory; Current Edition.

1.05 SUBMITTALS

A. Follow the requirements for submittals in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

B. Pre-Construction Submittal

1. Cut sheets shall contain the following information for each of the cables specified.

a) Manufacturers name and logo

b) Cable outside diameter

c) Number of conductors/strands in each cable and binder group

d) Gauge or strand thickness

e) Cable jacket material and rating (ie Plenum, Riser, wet-rated, etc.)

f) Maximum pulling tension

g) Jacket/Sheath color

h) Individual conductor or strand insulation colors (if applicable)

i) Minimum bend radius

1) During installation and post installation, if it differs.

2. Shop Drawings

a) Cable types required by this Section are to be identified on Shop Drawings for the following Electronic Security sub-systems: (separate 281010 Shop Drawings for this section are not needed)

1) Access Control

2) Intercom Entry Systems

3) Video Surveillance

4) Intrusion Detection

b) On the Shop Drawings for those Electronic Security sub-systems, show the proposed routing of all conductors and cables and the means of support:

1) Cable Tray

2) Conduit (solid line)

3) J-hooks every 48”-60” (dashed line), if allowed by Contract Documents

c) On the Shop Drawings for those Electronic Security sub-systems, include details showing the proposed termination and labeling (ID) scheme at each device and panel for each conductor/cable.

C. Preliminary Project Completion Submittal

1. Follow all requirements as specified in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

2. Update the approved shop drawings with any changes in cable routing, and submit as part of Preliminary Record Drawings per Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

3. Test Results

a) Include conductor/strand test as part of the Functional Test Reports for each Electronic Security sub-system.

4. Cable ID spreadsheet, saved in PDF and Microsoft Excel file formats, which shall include the following for each cable installed under this section:

a) Electronic Security Sub-System

b) Device Type

c) Device Identifier

d) Device Room Number (if not part of Device Identifier)

e) Headend Panel Identifier

f) Headend Panel Room Number (if not part of Headend Panel Identifier)

g) Cable Identifier

TABLE 1: CABLE IDENTIFICATION SPREADSHEET

Sub-System	Device Type/ID	Device Rm	Headend ID	Headend Rm	Cable ID
Access Control	Card Reader 01	Vestibule 101	ACP-01	IDF 114	AC-CR01-ACP01

D. Final Project Completion Submittal

1. Follow requirements as specified in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

2. Incorporate any changes from punch list items.

3. Include updated Cable ID spreadsheet.

PART 2 - PRODUCTS AND MATERIALS

2.01 GENERAL REQUIREMENTS

A. As part of a complete and functioning Electronic Security System and associated infrastructure, provide conductors and cables of appropriate type.

B. Conductor and cable requirements are unique to each manufacturer equipment / device. Unless otherwise noted, exact conductor and cable types are to be coordinated by the ESC to meet the requirements of the Electronic Security manufacturer.

C. Conductors and cables shall meet the following the requirements:

1. UL (DIR) Listed for the intended application.

a) Where areas above accessible ceilings are serving as plenum (air) return, and conductors/cabling is not installed in conduit from device to serving panel or Equipment Room, the conductors/cabling shall be Plenum (CMP) rated.

b) Where conductors/cabling are installed in conduit from device to serving panel or Equipment Room, the conductors/cabling shall be Riser (CMR) or Plenum rated.

c) Where conductors are/cabling are routed through a Damp or Wet Location, they shall be designed to withstand exposure to moisture and water and marked and listed as suitable for use in wet environments.

2. Cable type and conductor size/quantity shall be as recommended or required by the device/equipment manufacturer. Where the Contract Documents differ from manufacturer recommendations or requirements, notify the Architect requesting clarification.

3. Conductor sizes, if shown, are minimum. Where approved by the Design Consultant and at no extra cost to the Owner, larger conductor sizes may be installed at Contractor's option in order to utilize stock sizes, provided raceway sizes are increased to correspond with fill ratio requirements defined the NFPA 70.

4. Conductors and cables shall be shielded.

    a) Submit RFI for any manufacturer equipment that recommends non-shielded cable.

2.02 LOW-VOLTAGE CONTROL AND POWER CABLES

A. Basis of Design: See schedule on drawings

B. Manufacturers

1. Belden
2. Draka
3. General Cable
4. Tappan
5. West Penn Wire
6. Substitution: See Section 01 6000 - Product Requirements

C. Description

1. For 10 AWG through 24 AWG, and single conductors through 24-pair applications, as needed per project, submit product cutsheets concurrently with shop drawings, identifying cable type, manufacturer, and part number on the riser diagram. Include following information for each cable type with submittals.

    a) Shielded (overall shield)

    b) Stranded and insulated conductors

    c) Size conductors per manufacturer recommendations and power/voltage drop based on installed cable length.

    d) NFPA 70 jacket rating

2.03 TELECOMMUNICATIONS CABLING

A. Refer to Division 27 Specifications for telecommunications cabling requirements such as category cabling and optical fiber cabling.

2.04 CABLE IDENTIFICATION LABELS

A. Basis of Design: Brady BMP41

B. Available Manufacturers

1. Brady
2. Hellermann Tyton
3. Panduit

C. Description

1. Color Printing Capability: Single Color
2. Print Resolution: minimum 300 dpi
3. Print Technology: Thermal Transfer
4. Maximum Labels per Day: 25
5. Maximum Label/Tape Width: 1 inch
6. Device Connectivity: PC connected & Stand-alone

PART 3 - EXECUTION

3.01 CABLE INSTALLATION

A. Pre-Installation

1. Following the Notice to Proceed, the ESC's Quality Control Specialist or Project Manager (as defined in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS) shall coordinate with the Contractor or Sub-Contractor responsible for Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY (ie the conduits, backboxes, etc), if Contractors are different. Items of coordination shall include, but are not limited to:
   a) Conduit routing
   b) Conduit type to building entrance(s)
2. Conduit routing and type shall be indicated on at least one of the following Pre-Construction Shop Drawings:
   a) Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY
   b) Section 28 1000 - ELECTRONIC SECURITY SYSTEMS
3. After conduits/pathways are installed, but prior to cable installation, ESC's Quality Control Specialist and Project Manager shall inspect the Common Work (pathways and backboxes), paying special attention to:

a) Conduit sizes and quantities matches Construction Documents and Project requirements

b) Minimum bend radius

c) Quantity of bends in conduit between pull boxes (180 degree change in direction, maximum)

d) Building entrance conduits are of appropriate type.

e) Any visible indication of improper or incomplete installation that may damage cable as it is installed.

B. General Requirements

1. Unless otherwise noted, all cables shall be routed through concealed conduit raceway.

a) Conduits are not required above accessible (drop) ceilings; when not installed in conduit, cables shall be supported via j-hooks every 48 inches to 60 inches or less and at every change in direction. For areas where accessible ceiling is not available for pathway back to the equipment room, cables may be consolidated and routed in overhead conduit and conduit sleeves.

b) Contractor is responsible for determining final cable and conduit routing; conduits may be consolidated in overhead pullboxes in accordance with Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY; proposed (cable and) conduit routing and sizing shall be indicated on pre-construction shop drawings.

c) Conductors and cables as specified in this section shall be supported and installed into pathways, backboxes, firestopping, and other general/common work per Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY.

2. Install continuous conductors between outlets, devices and boxes without splices or taps. Do not pull connections into raceways. Leave at least 12 inches of conductor in backbox at each device location.

3. A Qualified Electrician shall install all control wire operating at 120V nominal and above. Control wiring operating at less than 120V (e.g., 12V and 24V) may be installed under the Division furnishing it.

4. Cables shall remain unattached to pathways or other cables and shall simply lay at rest on the supports provided by its pathway (including cable trays, wire basket, j-hooks, conduit, etc.). Wire ties, velcro straps, electrical tape or any other method shall not be used to attach cables to cable supports or to create cable bundles.

a) Except when supported by ladder racking within each Telecommunications room, UON.

5. At the same time horizontal cables are pulled into a conduit also install a pull cord to facilitate future cable pulls along those. Use polypropylene or monofilament plastic line with not less than 200 lb tensile strength. Leave at least 12 inches of slack at each end of pull cord.

6. Do not install kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable

7. Cables shall be masked, covered, or otherwise protected from being painted or coming in contact with any other substance that may degrade the performance or physical characteristics of the cable jacket or insulation over time.

8. Where space allows, all cables shall be provided with slack/service loops near each end of the cable, one in the accessible ceiling space or overhead J-box at the device and one at the Equipment Room. Each slack/service loop shall be a minimum of 3 feet in length, unless noted otherwise.

9. Prior to using any cable pulling lubricants provide the Design Consultant with written documentation from the cable manufacturer supporting the cable manufacturers' acceptance of its use in compliance with all required warranties as part of these contract documents. The use of non-water based lubricants shall be provided when pulling PVC jacketed and all cables not suitable for contact with water.

10. Install cables and conductors in compliance with the requirements of Article 725 of the NFPA 70, paying special attention to the following:

    a) Cables shall be installed in a neat and workmanlike manner. Comply with NECA 1.

    b) Separation requirements dependent upon installation location and proximity to other circuits.

11. Work shall meet Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS and Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY.

C. Outside plant (OSP)/wet-rated cable installation: for cables placed in Damp or Wet Locations or as required by these construction documents. (I.e. all cables which extend beyond the footprint/envelope of the building or pathways leading to floor-boxes embedded in a ground floor slab).

1. No portion of outdoor only (unlisted) cables may be installed with the cable jacket exposed in any plenum or other air handling space nor shall they be allowed to transition between different levels of the building.

2. Rigid or intermediate metallic conduit shall be used to route outdoor (unlisted) cabling to the serving Equipment Room in accordance with the NFPA 70; or a suitably-sized junction box shall be provided in an accessible location within 50 feet of where the outdoor cabling/conduit enters the building enters the building to allow the cable to transition from wet-rated to plenum-rated.

a) Indicate this location on pre-construction shop drawings and final Record Drawings.

3. All cables which extend beyond the envelope/footprint of the building shall be installed with entrance protectors in accordance with Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS.

3.02 CABLE TERMINATIONS

A. Cable connections to device and security panel shall be soldered and heat-shrunk from jacket to jacket. Exposed conductors, even within an enclosure or back box, are not allowed.

3.03 CABLE TESTING

A. Pre-installation testing:

1. Visually inspect all cables, cable reels/boxes, and shipping cartons to detect cable damage incurred during shipping and transport. Return visibly damaged items to the manufacturer.

2. Do not install any cable with less than the manufacturer's guaranteed number of serviceable conductors.

B. Post-installation testing (but prior to termination to devices/panels):

1. Conduct cable continuity testing upon completion of installation on each conductor.

2. Remove all defective cables from pathway systems. Do not abandon cables in place.

3.04 CABLE IDENTIFICATION

A. Label all cabling with machine-printed labels according to the labeling scheme identified on the drawings or as described in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS. Where the drawings and specifications are silent, submit RFI through appropriate channels requesting labeling scheme.

1. Shop drawings shall include floor plan and/or riser diagram that indicates proposed cable/device identification for each device.

B. Cables shall be labeled within 6 inches at each end.

3.05 ACCEPTANCE

A. The ESC's Quality Control Specialist shall conduct an inspection after conductors and cabling have been installed to ensure compliance with the Construction Documents and project requirements.

B. Functional tests of the conductors and cables connected to equipment will be conducted by the ESC as part of Test Reports as specified in Section 28 1000 -

ELECTRONIC SECURITY SYSTEMS and individual Electronic Security sub-system Sections.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. Copper patch cables

1. Copper patch cables
2. Copper station cables

1.02 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

C. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

D. Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

E. Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY

F. Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

G. Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY

H. Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY

1.03 DEFINITIONS

A. Advanced System Warranty – warranty covering material and performance of the Structured Cabling System (SCS) offered by a reputable manufacturer. Refer to the Warranty paragraph of this specification for more information.

B. Certified Structured Cabling Contractor – a Contractor that is certified by one of the approved Structured Cabling manufacturers to install the Structured Cabling required for Electronic Security Systems and covered by that manufacturer’s Advanced System Warranty.

C. Communications Room – for the purpose of this section, means the location of a floor-serving facility for housing telecommunication equipment, cable

terminations, and cross-connect wiring. This room is recognized in TIA-569 as the transition point between the telecommunications horizontal (station) pathway facilities and the backbone (riser) pathway facilities. The room may be identified by other names, including Equipment Room, IDF, MDF, IT, Telecom/Telecommunications Room, LAN, Network Room, etc. The functional connection points may also be in electronic security equipment rooms and/or racks; refer to drawings for exact locations and room names.

D. Damp Location – as defined by the NFPA 70, locations protected from weather and not subject to saturation with water or other liquids but subject to moderate degrees of moisture. For the purposes of Work under this division, assume all Damp Locations require wet-rated cabling.

E. Electronic Security Contractor (ESC) – The primary Contractor of this and all related specification sections (281000 through 283999). The ESC is also responsible for fully coordinating all Electronic Security System requirements with other Divisions and sections, such as power, grounding/bonding, fire alarm, and pathways/other common work.

F. Horizontal Cabling

1. Horizontal cable and its connecting hardware provide the means of transporting signals between the Work Area Outlet and the horizontal cross-connect located in the communications equipment room. This cabling and its connecting hardware are called permanent link, a term that is used in the testing protocols.

    a) Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the Work Area Outlet.

    b) Bridged taps and splices shall not be installed in the horizontal cabling.

    c) Splitters shall not be installed as part of the optical fiber cabling.

2. The maximum allowable horizontal cable length for Category copper cable is 295 feet, which includes total cable length (including vertical routing and slack). Horizontal cables longer than 295 feet shall be optical fiber with power conductors (hybrid cable) with a Power-over-Ethernet Extender transmitter/receiver on each end.

    a) Power-over-Ethernet Extenders are specified in Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY.

G. Structured Cabling – a fully-functional passive telecommunications system (infrastructure), that includes permanently installed category copper and/or fiber optic cable terminated onto a patch panel or outlet.

H. Wet Location - as defined in the NFPA 70, installations underground or in concrete slabs or masonry in direct contact with the earth; in locations subject to saturation with water or other liquids, such as vehicle washing areas; and in unprotected locations exposed to weather.

I. Work Area Outlet (WAO) - the outlet or connector at the far end of Horizontal Cabling.

1.04 REFERENCE STANDARDS

A. BICSI 005 - Electronic Safety and Security (ESS) System Design and Implementation Best Practices; Current Edition.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. TIA-526-7 - Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant, Adoption of IEC 61280-4-2 Edition 2: Fibre-Optic Communications Subsystem Test Procedures – Part 4-2: Installed Cable Plant – Single-Mode Attenuation and Optical Return Loss Measurement; 2015a (Reaffirmed 2022).

E. TIA-526-14 - Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant; IEC 61280-4.1 Edition 3.1, Fiber Optic Communications Subsystem Test Procedures- Part 4-1: Installed Cable Plant- Multimode Attenuation Measurement; 2023d.

F. TIA-568 (SET) - Commercial Building Telecommunications Cabling Standard Set; 2024.

G. TIA-569 - Telecommunications Pathways and Spaces; 2019e, with Addendum (2022).

H. TIA-606 - Administration Standard for Telecommunications Infrastructure; 2021d.

I. TIA-607 - Telecommunications Bonding and Grounding (Earthing) for Customer Premises; 2024e.

1.05 SUBMITTALS

A. Follow the requirements for submittals in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

B. Pre-Bid Submittal - the following submittals are due before the questions deadline before Bid:

1. For all products for which a substitute is to be considered as an approved equivalent or acceptable substitution provide submittals with sufficient detail for review by the Design Consultant. Submittals shall at a minimum provide detailed information substantiating all performance requirements as well as all necessary code compliance and NRTL listing information.

C. Pre-Construction Submittal

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:

a) Division of Labor – including Company name and contact information of Project Manager for the Contractor performing this Work.

b) Warranty Specimen

1) Sample warranty certificate for the Advanced System Warranty, indicating manufacturer and their terms/conditions.

2) Certified Structured Cabling Contractor Certificate from manufacturer that will issue Advanced System Warranty.

c) Contractor and Personnel Qualifications and Certificates

d) Schedule

e) Typed Parts List

f) Cut Sheets

1) Product data on cabling and patch cables shall contain the following:

(a) Manufacturers name and logo

(b) Cable outside diameter

(c) Number of conductors/strands in each cable

(d) Gauge or strand thickness

(e) Minimum transmission performance rating

(f) Cable jacket material and rating

(g) Maximum pulling tension

(h) Jacket/Sheath color

(i) Minimum bend radius

(j) During installation and post installation, if different

2) Product data on faceplates, modules, connectors, patch panels, and enclosures shall contain the following:

(a) Manufacturers name and logo

(b) Material type

(c) Performance rating

(d) Physical Dimensions

(e) Color

g) Shop Drawings

1) Scaled layout drawings showing the routing (and support method) of all cabling, and the locations where patch panels, Work Area outlets, cable types, cable jacket listing information, firestop locations (with quantity and NRTL system number identified), and fiber optic termination panels are to be installed.

2) Each individual Work Area Outlet on the drawings shall have proposed outlet identification indicated.

3) Scaled enlarged plan and rack elevation drawings showing the locations of patch panels and Rack-Mount Enclosures.

4) Unless otherwise required by these specifications, it is permissible to show Work in this section on Electronic Security shop drawings.

D. Preliminary Project Completion Submittal

1. As part of Section 28 1000 - ELECTRONIC SECURITY SYSTEMS – Preliminary Project Completion Submittal, include the following requirements:

a) Resubmit approved Pre-Construction Submittals of the following, updated to reflect all changes during construction:

1) Equipment List

2) Cut Sheets

3) Preliminary Record Drawings – based on drawings kept on site.

(a) Scans of on-site drawings are acceptable, provided notes and minor changes are legible.

(b) These drawings shall include the actual installed device and cable IDs that correspond to submitted test results.

b) Submit the following additional items:

1) Operation and Maintenance Manuals

2) Cable Test Results, in accordance with Part 3 of this section.

(a) Cable IDs shall correspond to submitted Preliminary Record Drawings.

E. Final Project Completion Submittal

1. As part of Section 28 1000 - ELECTRONIC SECURITY SYSTEMS – Final Project Completion Submittal, include the following requirements:

a) Updated Equipment List, Cut Sheets, Operation & Maintenance Manuals, and Test Results

b) Updated Record Drawings, in AutoCAD and searchable PDF file formats

c) Advanced System Warranty Information and Certificates, including contact number for any warranty claim.

1.06 QUALITY ASSURANCE

A. Contractor Qualifications

1. Certified Structured Cabling Contractor capable of offering Advanced Systems Warranty from one of the manufacturers listed in Warranty paragraph below.

2. Provide a list of projects (no less than 2) of similar size, scope, and type in which the Bidder has performed in a capacity comparable to the size, scope and type outlined in Construction Documents. Provide the project name, relevant project information for comparison evaluation, and contact names with telephone numbers of each such project.

B. Personnel Qualifications:

1. Provide and maintain a Project Manager who is a BICSI Registered Certified Technician Level 2 Installer in good standing on site at all times. This project manager shall attend scheduled project meetings and be responsible for submittals.

2. The person(s) conducting the testing for Structured Cabling shall be a current BICSI Certified Level II Commercial Installer or higher.

3. Any additional personnel physically installing part of the Structured Cabling covered by this Division shall, at a minimum, be a BICSI Certified Level 1 Commercial Installer in good standing or have equivalent manufacturer training certificate (of those identified as approved for this project) and approved by the Design Consultant.

4. Requirements are provided as a minimum level of qualification. Any additional or more stringent requirements by the specific manufacturer chosen to provide the proper level or term of warranty as specified in this division shall be met.

5. Alternate qualifications may be considered if requested alternates are provided in accordance with the substitution section herein prior to bid.

1.07 WARRANTY

A. See Division 01 - CLOSEOUT SUBMITTALS, for additional warranty requirements.

B. General: Provide 25-year standards-based performance warranty for connectivity hardware and cable for end-to-end structured cable solution. If the product fails to perform per TIA-568 (SET) or meet manufacturer's application assurance, the manufacturer shall provide materials and labor free of charge to the Owner to remediate the issue. Work shall be performed promptly upon written notice from Contract Administrator or Owner. Warranty shall be administered by the manufacturer. Warranty program shall be flexible, allowing eligible moves, adds, and changes to be submitted for registration either at the time of completion or at later , when changes have accumulated. At project completion submittal, deliver warranties, in writing and properly executed, with the following information:

1. Warranty Certificate
    a) Term Commencement Date
    b) Term
    c) Who is covered?
    d) What is covered?
2. Application Assurance: Applications covered (future and present)
3. Disclaimers, limitations, and exclusions

C. Copper Cable System: List of acceptable connectivity and cable manufacturers are below. Copper Cable System warranty shall be guaranteed by a manufacturer below:

1. Belden Incorporated
2. CommScope Holding Company Incorporated
3. Proterial, Ltd.; Proterial Cable America, Inc
    a) With following connectivity partners: Siemon, Ortronics, Panduit, Leviton, CommScope, Hubbell, OCC, and Belden
4. Hubbell Incorporated
5. Legrand SA, Ortronics
6. Leviton Manufacturing Company, Incorporated
7. Nexans SA, Berk-Tek
    a) With following connectivity partners: Belden, CommScope, Hubbell, Ortronics, Panduit, and Siemon
8. Panduit Corporation
9. Prysmian SpA; General Cable
    a) With following connectivity partners: Panduit

10. The Siemon Company
11. LS Corporation; Superior Essex
    a) With following connectivity partners: Ortronics
12. Substitution: See Division 01 - PRODUCT REQUIREMENTS

1.08 COORDINATION

A. Review pathways and other Work, as installed per Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY, prior to performing any Work under this section for conformance to all referenced codes, standards, and guidelines.

1. While Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY is being installed, the Project Manager of this section and the ESC's Quality Control Specialist shall make weekly inspections and report any issues to the Prime Contractor for correction prior to installation of any cabling.
    a) Example – Conduit for data outlets shall not contain more than two 90-degree bends between pull points.

B. Coordinate with ESC for all Work in Communications / Equipment Rooms.

PART 2 - PRODUCTS AND MATERIALS

2.01 COPPER TWISTED PAIR CABLE

2.02 COPPER PATCH CABLES

A. General

1. Supply necessary patch cables and cross-connect wires to support electronic security systems.
2. The manufacturer of patch cables shall be the same as the copper twisted pair connectivity, unless otherwise specified.
3. Patch cables shall be factory-terminated and tested.

B. Copper Patch Cords

1. Basis of Design: ____
2. Acceptable Manufacturers
    a) See Warranty paragraph in Part 1.
3. Description
    a) Category performance shall be the same as copper patch panels.
    b) Cable shall be 4-pair, twisted pair with factory-terminated RJ-45 modules on each end.

c) Small diameter: less than 0.2 inch for smaller bend radius.

4. Quantity and Color

a) Furnish patch cords to the Owner prior to substantial completion in the following lengths and quantities:

1) Total quantity shall be 100% of the terminated ports, in the following colors and lengths:

(a) Size length of patch cords to route between patch panel, through cable management, to associated network switch. Color shall be blue.

C. Copper Station Cables

1. Basis of Design: ____

2. Acceptable Manufacturers

a) See Warranty paragraph in Part 1.

3. Description

a) Same specification as Copper Patch Cords.

b) Cable shall be 4-pair, twisted pair with factory-terminated RJ-45 modules on each end.

c) Plenum: Use listed NFPA 70 Type CMP plenum cable.

PART 3 - EXECUTION

3.01 CABLE INSTALLATION

A. Pre-Installation

1. Following the Notice to Proceed, the Project Manager of the Work associated with this section shall coordinate with the ESC and the Contractor or Sub-Contractor responsible for Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY (i.e. the conduits, backboxes, etc.), if Contractor are different. Items of coordination shall include, but are not limited to:

a) Conduit routing

b) Conduit type for Building Entrance(s) – (see requirements below)

2. Conduit routing and type shall be indicated on at least one of the following Pre-Construction Shop Drawings:

a) Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

b) Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

c) Section 28 1015 - TELECOMMUNICATIONS REQUIREMENTS FOR ELECTRONIC SECURITY

3. After conduits/pathways are installed, but prior to cable installation, the Project Manager shall inspect the Common Work (pathways and backboxes), paying special attention to:

    a) Conduit sizes and quantities matches Construction Documents and Project requirements.

    b) Minimum bend radius

    c) Quantity of bends in conduit between pull boxes (180-degree change in direction, maximum)

    d) Building Entrance conduits are of appropriate type.

    e) Any visible indication of improper or incomplete installation that may damage cable as it is installed.

B. General Requirements

1. Unless otherwise noted, all cables shall be routed through concealed conduit raceway.

    a) Conduits are not required above accessible (drop) ceilings; when not installed in conduit, cables shall be supported via j-hooks every 48 inches to 60 inches or less and at every change in direction. For areas where accessible ceiling is not available for pathway back to the Equipment Room, cables may be consolidated and routed in overhead conduit and conduit sleeves.

    b) Contractor is responsible for determining final cable and conduit routing; conduits may be consolidated in overhead pull boxes in accordance with Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY; proposed (cable and) conduit routing and sizing shall be indicated on pre-construction shop drawings.

2. Follow sustainability requirements in Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS.

3. Follow seismic requirements in Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY.

4. Install continuous conductors between outlets, devices and boxes without splices or taps, unless otherwise noted. Do not pull connections into raceways. Leave at least 12 inches of slack in backbox at each device location.

5. Cables shall remain unattached to pathways or other cables and shall simply lay at rest on the supports provided by its pathway (including cable trays, wire basket, j-hooks, conduit, etc.). Wire ties, hook and loop straps, electrical tape or any other method shall not be used to attach cables to cable supports or to create cable bundles.

a) Except when supported by ladder racking within each telecommunications room, UON.

6. At the same time Horizontal Cabling are pulled into a conduit also install a pull cord to facilitate future cable pulls along those. Use polypropylene or monofilament plastic line with not less than 200 lb tensile strength. Leave at least 12 inches of slack at each end of pull cord.

7. Do not install kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.

8. Comply with all referenced standards and guidelines.

9. Cables shall be masked, covered, or otherwise protected from being painted or encountering any other substance that may degrade the performance or physical characteristics of the cable jacket or insulation over time.

10. Where space allows, all cables shall be provided with slack/service loops near each end of the cable, one in the accessible ceiling space or overhead J-box at the device and one at the Equipment Room. Each slack/service loop shall be:

    a) A minimum of 15 feet in length at camera locations.

    b) A minimum of 10 feet in length in the ladder rack of the serving Communications Room.

11. Use of any cable pulling lubricants is prohibited.

    a) Where lubricant is deemed necessary by the Contractor to facilitate installation of cable in conduit, submit RFI with explanation, effected conduit run, proposed lubricant type, letter from cable manufacturer indicating proposed lubricant will not damage or degrade cable, and a letter from the manufacturer providing the Advanced System Warranty that the use of this lubricant will not exclude that cable run from the required warranty.

12. Install all cables and conductors in compliance with the requirements of Article 725 of the NFPA 70, paying special attention to the following:

    a) Cables shall be installed in a neat and workmanlike manner. Comply with NECA 1.

    b) Separation requirements dependent upon installation location and proximity to other cables and sources of EMI.

C. Outside plant (OSP)/wet-rated cable installation: for cables placed in Damp or Wet Locations or as required by these construction documents. (i.e., all cables which extend beyond the footprint/envelope of the building or pathways leading to floor-boxes embedded in a ground floor slab)

1. No portion of outdoor only (unlisted) cables may be installed with the cable jacket exposed in any plenum or other air handling space, nor shall they be allowed to transition between different levels of the building.

2. Rigid or intermediate metallic conduit shall be used to route outdoor (unlisted) cabling to the serving Communications Room in accordance with the NFPA 70; or a suitably sized junction box shall be provided in an accessible location within 50 feet of where the outdoor cabling/conduit enters the building enters the building to allow the cable to transition from wet-rated to plenum-rated.

    a) Indicate this location on pre-construction shop drawings and final Record Drawings.

3. All cables which extend beyond the envelope/footprint of the building and serving devices mounted on the roof (or within 10 feet of the roof) shall be installed with entrance protectors in accordance with Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY.

D. Cables serving Elevators:

1. Provide cabling to the Elevator Demarcation Panel from the serving Communications Room.

2. For cameras located inside Elevator cabs, coordinate cable/conductor requirements with Elevator manufacturer/supplier/installer so that correct Elevator Traveling Cable(s) are installed. Additional adapters on each end of the Elevator Traveling Cable may be required to ensure camera signal distribution; include costs of such adapters in the Bid.

3.02 CONNECTOR INSTALLATION

A. Furnish and install all cable connectors as shown on the Drawings.

B. Provide number of connectors as required by the Drawings and as required by these documents, where the number of connectors required does not fill the entire faceplate provide blank inserts so that no opening is left.

C. Copper UTP Connector Installation

1. Terminate all four pairs of each cable on one outlet jack.

2. Furnish and install all cable connectors as shown on the Drawings or as indicated herein, unless otherwise noted.

3. The provision and termination of connectors for each cable shall be done as follows:

4. Where connector types are identified on the applicable drawings or in the specifications, Furnish and install the specified connectors on the specified cables. Installation of the connectors shall be in accordance with the manufacturer’s printed instructions.

5. All installed connectors, regardless of type, method of procurement or permanency, shall be adequately protected during and after installation.

D. Fiber Optic Connector Installation

1. In the Communications Room, all fiber optic cable strands shall be fusion-spliced to factory-terminated pigtailed adapters.

2. At device end, terminate/splice all fiber optic cable strands as shown on the Drawings.

3. All fiber optic connectors shall be installed with dust caps/covers.

3.03 FACEPLATE INSTALLATION

A. Furnish and install all faceplates in locations as shown on the Drawings. Provide label on front of faceplate with Cable Identification numbers.

3.04 BONDING AND GROUNDING

A. Comply with TIA-607.

3.05 CABLE IDENTIFICATION

A. Comply with TIA-606.

B. Follow cable identification requirements in Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY.

3.06 GENERAL CABLE TESTING

A. Pre-installation testing:

1. Visually inspect all cables, cable reels/boxes, and shipping cartons to detect cable damage incurred during shipping and transport. Return visibly damaged items to the manufacturer.

2. Mark reels or boxes as tested/inspected.

3. Do not install any cable with less than the manufacturer’s guaranteed number of serviceable conductors.

4. The field-test instruments shall be within the calibration period recommended by the manufacturer and shall contain the most recent software and firmware provided by the manufacturer prior to testing.

B. Post-installation testing:

1. Conduct cable testing as described below upon completion of installation. Test fully completed systems only. Piecemeal testing is not acceptable.

2. Provide testing in accordance with manufacturer’s requirements for a fully warrantied cabling system(s) as required by these Contract Documents.

3. All outlets, cables, patch panels, and associated components shall be fully assembled and labeled prior to field testing.

4. Invite the Owner and Design Consultant to witness, review, or both witness and review field-testing.

    a) The Owner and the Design Consultant shall be notified of the testing start date (2) weeks before testing commences.

5. Remove all defective cables from pathway systems.

6. All cables that fail testing are to be corrected prior to substantial completion and acceptance by owner. Replace entire cable if bad pair or conductor is found. Do not abandon cables in place.

C. All test results and corrective procedures are to be documented and submitted to the Design Consultant as part of the Project Completion submittal(s) of Section 28 1000 - ELECTRONIC SECURITY SYSTEMS a minimum of 1 week prior to the Final Acceptance Test.

1. Submit updated Record Drawings along with completed Test Results. Record Drawings shall have final outlet labels that correspond to the identification used in the Test Results.

2. Format of test results shall be:

    a) Electronic Database Test Results - Abbreviated results, in PDF and Excel/CVS file formats, shown in numerical / alphabetical order in a spreadsheet which depicts the following:

        1) Project Name

        2) Date of Preparation

        3) ID of Work Area Outlet / connector being tested.

        4) Date of test

        5) Contractor’s Name

        6) Media Type

        7) Make, Model and Serial Number of test equipment used.

        8) Date of Last Calibration

        9) Names of Test Crew

        10) Serving Communications Room Number

            (a) All tests shall be submitted in numerical / alphabetical order by Communications Room.

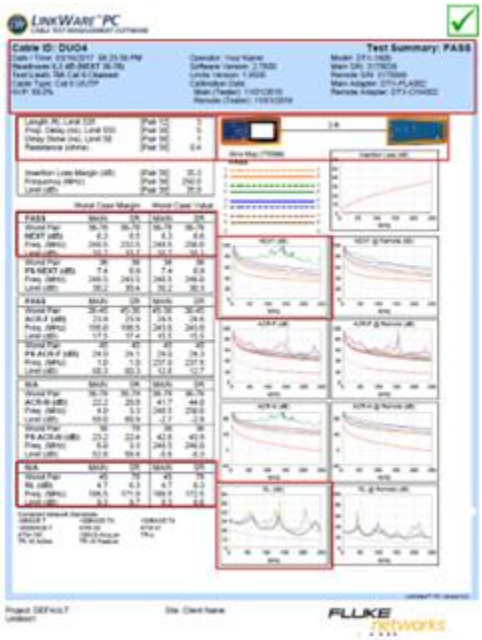
        11) Category of cable being tested.

        12) Abbreviated Test Results depicting Pass, Fail status.

    b) Full Test Results, native format – test results (in accordance with the Copper Cable Testing and Optical Fiber Testing paragraphs

below) saved within the field-test instrument and then transferred into a Windows-based database utility that allows for the maintenance, inspection, and archiving of the test records, shown in numerical / alphabetical order in the file format of the tester (example: .mdb file), and unaltered.

c) Full Test Results, PDF format – full-page PDFs of each circuit tested, both for copper and fiber, similar to the following:



3.07 COPPER CABLE TESTING

A. Perform all manufacturer recommended and required test calibration procedures prior to testing any cables.

B. Copper Twisted Pair Cables:

1. After terminating both ends of cables, but before any cross-connects are installed, test these cables for the following:

a) Wire map

b) Length

c) Insertion loss

d) Near-end crosstalk (NEXT) loss.

e) Power sum near-end crosstalk (PSNEXT)

f) Equal-level far-end crosstalk (ELFEXT)

g) Power sum equal-level far-end crosstalk (PSELFEXT)

h) Return loss

i) Propagation delay

j) Delay skew

3.08 OPTICAL FIBER CABLE INSTALLATION

A. General:

1. Place all optical fiber cabling in accordance with these specifications, and as indicated on the Drawings.

2. Splices between optical fiber cables are permitted only at those locations indicated on the Drawings.

3. Comply with all referenced standards and guidelines.

B. Pre-installation testing:

1. Optical fiber cables: Perform visible light continuity check on each fiber. If one end is not accessible: perform OTDR test to assure fiber continuity.

3.09 OPTICAL FIBER CABLE TESTING

A. Post-installation Optical Loss testing:

1. After installation of connectors, visually inspect each fiber end-face at 50X magnification. Refinish fibers with visible defects and/or striations in the core area.

2. Perform end-to-end, bi-directional attenuation (loss) test for each fiber strand at 850nm and 1300nm. Conduct tests in accordance with TIA-526-14 , Method B and with test instrument manufacturer's printed instructions.

3. Perform end-to-end, bi-directional attenuation (loss) test for each fiber strand at 1310 and 1550 (single mode) wavelengths. Conduct tests in accordance with TIA-526-7, Method A.1 and with test instrument manufacturer's printed instructions.

4. Demonstrate that measured link loss does not exceed the "worst case" allowable attenuation loss. Calculate worst case allowable attenuation loss by:

a) Utilizing the following formulas as specified in TIA-568 (SET):

1) Link Attenuation (dB) = Cable_Attn (dB) + Connector_Attn (dB) + Splice_Attn (dB)

2) Cable_Attn (dB) = Attenuation_Coefficient (dB/km) * Length (Km)

3) Connector_Attn (dB) = number_of_connector_pairs * connector_loss (dB)

4) Maximum allowable connector_loss = 0.75 dB

5) Splice_Attn (dB) = number_of_splices * splice_loss (dB)

6) Maximum allowable splice_loss = 0.3 dB

7) The values for the Attenuation Coefficient (dB/km) are listed in the table below:

TABLE 1: Fiber Optic Cable Attenuation Coefficient Values

TYPE OF OPTICAL FIBER	Wavelength (nm)	Attenuation Coefficient (dB/km)	Wavelength (nm)	Attenuation Coeffient (dB/km)
Multimode 62.5/125	850	3.5	1300	1.5
Multimode 50/125	850	3.5	1300	1.5
Singlemode (inside plant)	1310	1.0	1550	1.0
Singlemode (outside plant)	1310	0.5	1550	0.5

5. Strands whose measured attenuation fall outside the acceptable range shall be subject to further inspection and testing to determine the nature of the fault. At a minimum, the OTDR shall be used to: determine the true loss for each connector pair, the exact length of the fiber and to identify the presence of any core damage.

6. Faults related to fiber being connectorized shall be corrected, and the fiber re-tested as described above, until acceptable attenuation measurements are recorded.

7. Where defects are found to be inherent in the fiber itself: replace any cable having fewer than the manufacturer's guaranteed number of serviceable fibers.

8. Dust caps shall be placed on fiber end faces or adapters for each optical fiber link after all testing is complete on the fiber link.

B. Testing jumpers used shall remain connected at the test equipment for the entire duration of testing. If at any time the jumper becomes loose or removed, for any reason, the jumper shall be reinstalled and re-referenced. This procedure shall be documented each time it is performed to indicate date, time and who performed the procedure. This log shall accompany test reports submitted.

C. All test results and corrective procedures are to be documented and submitted to the Owner and Design Consultant a minimum of 1 week prior to the Final Acceptance Review (as specified in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

3.10 ACCEPTANCE

A. All Work in this section is subject to the Project Completion and Schedule requirements of Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

B. After Final Acceptance Review:

1. Complete all Punch List items.

2. Retest effected cables.

3. Among other requirements, submit updated and complete Record Drawings/Test Results and the Advanced System Warranty certificate as part of Section 28 1000 - ELECTRONIC SECURITY SYSTEMS – Project Completion Final Submittal.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. Entrance Protection

B. Racks, Cabinets,and Enclosures

1. Floor Mounted Cabinet
2. Cabinet Accessories
3. Remote Equipment Cabinet Light Pole

C. Cable Management

D. Rack-mounted Power Protection and Power Strips

1. Horizontal Power Strip
2. Vertical Power Strip
3. Power Distribution Unit (PDU)
4. Uninterruptible Power Supply (UPS)

E. This Section does not include wall-mounted Electronic Security panels or rack-mounted Electronic Security network equipment such as switches or servers. Refer to other Division 28 Sections for those sub-system requirements.

1.02 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 26 0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

C. Section 27 1000 - STRUCTURED CABLING

D. Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

E. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

F. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

G. Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

H. Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

1.03 DEFINITIONS

A. Cabinet – A floor or wall mount unit enclosed with side panels. Communications equipment is supported by mounting rails separated at 19 inches or 23 inches.

B. DVR – digital video recorder

C. Entrance Protection – Fittings that reduce risk to life, limb, or property by protecting against power surges. This definition shall encompass protection devices and fittings described in Article 770 “Optical Fiber Cables and Raceways” and Article 800 “Communications Circuits” of NFPA 70.

D. Ground or Grounding – A conducting connection, whether intentional or accidental, between an electrical circuit (e.g. telecommunications) or equipment and the earth, or to some conducting body that serves in place of earth.

E. NVR – network video recorder

F. Primary Bonding Busbar (PBB) – A busbar placed in a convenient and accessible location in an Equipment Room and bonded by means of the bonding conductor to the building service equipment (power) ground.

G. POE – Power-over-Ethernet

H. Rack – A floor or wall mount unit without side panels. Racks can be constructed with 2 or 4 vertical posts. Rack-mounted equipment is supported by mounting rails separated at 19 inches or 23 inches.

I. RU – Rack Unit (1.75 inches high)

J. Secondary Bonding Busbar (SBB) – A busbar placed in a convenient and accessible location in an Equipment Room and bonded by means of the bonding conductor to the building service equipment (power) ground.

1.04 REFERENCE STANDARDS

A. EIA/ECA-310 - Cabinets, Racks, Panels, and Associated Equipment; 2005e.

B. IEEE 1100 - IEEE Recommended Practice for Powering and Grounding Electronic Equipment; 2005.

C. NECA/BICSI 607 - Standard for Telecommunications Bonding and Grounding Planning and Installation Methods for Commercial Buildings; 2011.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. TIA-568 (SET) - Commercial Building Telecommunications Cabling Standard Set; 2024.

F. TIA-606 - Administration Standard for Telecommunications Infrastructure; 2021d.

G. TIA-607 - Telecommunications Bonding and Grounding (Earthing) for Customer Premises; 2024e.

H. UL 486A-486B - Wire Connectors; Current Edition, Including All Revisions.

I. UL 497 - Standard for Protectors for Paired-Conductor Communications Circuits; Current Edition, Including All Revisions.

J. UL 1363 - Standard for Relocatable Power Taps; current edition.

K. UL 1778 - Uninterruptible Power Systems; Current Edition, Including All Revisions.

1.05 SUBMITTALS

A. Follow requirements in Division 01 - ADMINISTRATIVE REQUIREMENTS for submittal procedures.

B. Pre-Bid Submittal

1. For all products for which a substitute is to be considered as an approved equivalent or acceptable substitution, provide submittals with sufficient detail for review by the Design Consultant. Submittals shall at a minimum provide detailed information substantiating all performance requirements as well as all necessary code compliance and NRTL listing information.

C. Pre-Construction Submittal

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:

a) Product Submittals (as part of complete Section 28 1000 - ELECTRONIC SECURITY SYSTEMS Pre-Construction Submittal):

b) Shop Drawings (as part of complete Section 28 1000 - ELECTRONIC SECURITY SYSTEMS Pre-Construction Submittal):

1) Enlarged Plans for each Equipment Room, at no smaller than 1/4 inch = 1 foot scale, showing 3 feet of clearance in front of all wall-mounted equipment and 3 feet of clearance

in front of and behind each floor-mounted equipment racks and cabinets.

2) Equipment rack and cabinet elevations, at no smaller than 1/2 inch = 1 foot scale, identifying each piece of rack-mounted equipment by product name, manufacturer, and part number.

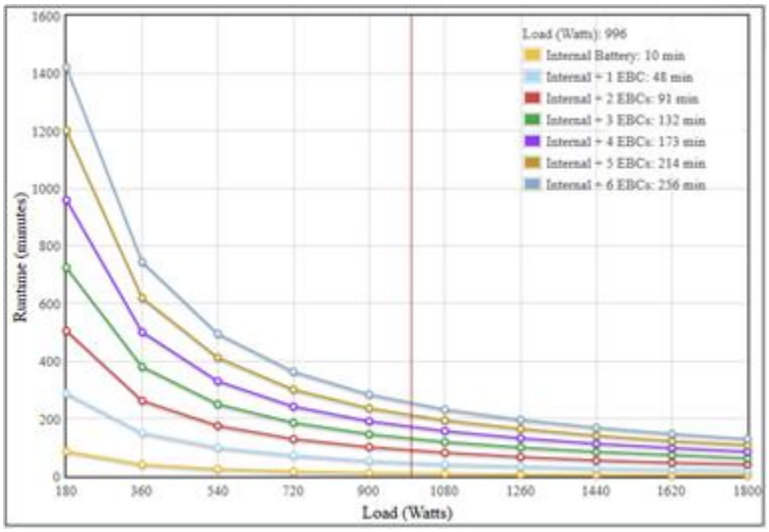
3) UPS Calculations

(a) On same sheet as equipment rack/cabinet elevation, include table showing power requirements (amperage) of each piece of rack-mounted equipment; at the bottom of the table, show total power requirements of all equipment. Show UPS battery calculations and runtime graph for the proposed UPS unit (and external batteries, if required) to meet the specified runtime requirements.

TABLE 1: Sample UPS Calculation

Equipment	Amps
Network Video Recorder	4.5
Owner's 48-port POE Switch	2.7
POE Extender Transmitters	1.1
Total Power Requirements	8.3

UPS runtime (Vertiv GXT4-2000RT120 with 1 external battery) @ 8.3A = 48 mins



D. Preliminary Project Completion Submittal

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:
    a) Test Results
        1) Include Test Report for all UPS units.

E. Final Project Completion Submittal
1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:
    a) Test Results
        1) Include Test Report for all UPS units.
    b) Record Drawings
        1) Grounding and Bonding
            (a) Add written confirmation that all required bonding connections have been made and the resistance tested to be 10 milli-ohms or below.

1.06 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of device from a single manufacturer and through one source. Where practical and possible, obtain all devices from a single manufacturer and one source.

B. Equipment room fittings shall be listed by a NRTL.

PART 2 - PRODUCTS AND MATERIALS

2.01 ENTRANCE PROTECTION

A. Surge Protection
1. Basis of Design:
    a) Wall-mount Protectors: Vertiv Edco CAT6-POE
    b) Rack-mount Protectors: Vertiv Edco RM-CAT6-**POE
    c) Camera-end Protection: Vertiv CAT6-5POE-FF
2. Manufacturers
    a) APC
    b) Blackbox
    c) ITWLinx
    d) Substitution: See Division 01 - PRODUCT REQUIREMENTS
3. Description

a) Fully protect each end of all incoming conductors which are considered to have lightning exposure in accordance with NFPA 70 chapter 8. This includes:

1) Cameras mounted on the roof, parapet, or exterior wall within 10 feet of roof line.

2) Cameras mounted to site light poles or fences.

b) Comply with UL 497.

c) Shall meet TIA-568 (SET) performance standards.

d) Shall be capable of being used with POE+ applications.

e) Wall-mount Protectors

1) For single cables, where quantity of cables in Equipment Room needing protection is 6 or less.

f) Rack-mount Protectors

1) For more than 6 cables in an Equipment Room require surge protection.

2) Shall be rack-mountable in 19 inches wide equipment rack.

3) Provide quantity of Category protectors/modules required for install, plus 25% spare.

g) Camera-end Protection

1) For exterior POE cameras should have integral protection against power surges and transients. Where cameras do not have integral protection, provide the following at the far-end of cable connecting exterior POE camera:

(a) Blackbox Corp.; SPD512A CAT6 In-Line Surge Protector

(b) Vertiv Emerson Edco; CAT6-5POE-FF Surge Protection Device

2.02 RACKS, CABINETS, AND ENCLOSURES

A. Floor Mounted Cabinet

1. Basis of Design:

a) Chatsworth NF7L-113C-C42-1 (N-Series TeraFrame Gen 3) with the following:

1) Full-height PDU bracket

2) Fill any unused rack units with Snap-In Filler Panels

2. Manufacturers

a) Cooper B-Line

b) Great Lakes

c) Hoffman

d) Middle Atlantic

e) Substitution: See Division 01 - PRODUCT REQUIREMENTS

3. Description

a) Approximately 7 feet in height with at least 45RU available to mount panels/equipment.

b) Mounting rails shall be spaced 19 inches wide per EIA/ECA-310. Mounting rails shall contain front and rear flange mounting holes for panels/equipment.

c) Finish shall be powder coated in black.

d) Minimum static load capacity: 1500 lb

e) Front-to-rear airflow.

f) Full front and back doors with perforated metal construction and key lock.

g) Side panels of solid metal construction.

h) Brush sealed cable entry on top.

i) All cabinet locks shall be keyed the same.

j) Secure cabinet to floor. Provide rack manufacturer's rack installation kit matching floor type of rack installation for a complete system meeting drawings and manufacturer instructions. Raised floor racks shall be mounted to sub or base floor with 5/8 inch threaded rods and steel brackets.

B. Cabinet Accessories

1. Temperature Sensor and Display

a) Based of Design:

1) For Middle Atlantic Cabinet: Middle Atlantic TEMP-DEC

2) For non-Middle Atlantic Cabinet: Middle Atlantic T1P with TEMP-DEC installed at top of the cabinet.

b) Description

1) Where active electronics are installed inside of a floor-mounted cabinet - such as network switches, DVRs/NVRs, or servers - provide temperature sensing of cabinet interiors.

2) Temperature display shall be visible external to the cabinet or in a 1RU panel located at the top of the front rack rails.

3) Temperature display shall connect to temperature sensor by a 5 feet cord. Install sensor away from drafts.

4) Connect dry switch closer/contact to Electronic Security alarm system and set sensor to trigger alarm at 95 degrees F. Coordinate final temperature alarm set point with Owner at time of Owner Training.

2. Tamper Switch

a) Basis of Design: GE Security / Sentrol 3010 series

b) Manufacturer shall be:

1) GE Security / Sentrol 3010 series

2) Substitution: See Division 01 - PRODUCT REQUIREMENTS

C. Remote Equipment Cabinet Light Pole

1. Basis of Design: Hoffman RE series

2. Description

a) as identified on drawings and/or for light pole locations as needed.

b) Minimum 16-gauge steel construction

c) Color shall be light grey.

d) Provide with lockable, hinged cover.

e) Size cabinet and provide all accessories needed for a complete installation, including but not limited to:

1) Patch Panel

2) Mounting brackets & rails

3) Fan w/dust filters

4) Back Board

5) Surge Suppression

6) Fiber Optic Brackets

2.03 CABLE MANAGEMENT

A. Where Electronic Security System equipment is co-located in a Communications Room, cable management shall be by Section 27 1000 - STRUCTURED CABLING Contractor, unless otherwise noted.

B. Where Electronic Security System equipment is in a Security Room only, cable management shall meet Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY.

2.04 RACK-MOUNTED POWER PROTECTION AND POWER STRIPS

A. Basis of Design: Refer to individual paragraphs.

B. Acceptable Manufacturers

1. Belden Incorporated
2. Chatsworth Products, Incorporated
3. CyberPower Systems (USA), Incorporated
4. Eaton Corporation PLC
5. Hammond Manufacturing
6. Hubbell Incorporated
7. Legrand SA; Middle Atlantic, Server Technology
8. Leviton Manufacturing Company, Incorporated
9. Lowell Manufacturing Company
10. nVent Electric PLC; Schroff
11. Panduit Corporation
12. Schneider Electric SE; APC
13. The Siemon Company
14. Tripp Lite
15. Vertiv Group Corporation; Geist
16. Substitution: See Division 01 - PRODUCT REQUIREMENTS

C. Horizontal Power Strip

1. Basis of Design: ____
2. Description
   a) UL Listed: UL 1363
   b) Operate at 120V AC / 60Hz.
   c) Minimum of 8 NEMA 5-15R receptacles.
   d) 1RU high and 19" wide per EIA/ECA-310.
   e) 15 A capacity with surge suppression on all outlets.

D. Vertical Power Strip

1. Description
   a) UL Listed: UL 1363
   b) Shall operate at 120 Vac / 60 Hz.
   c) Shall include a minimum of 10 NEMA 5-15R receptacles.

d) Shall have 20 A capacity with surge suppression on all outlets.

e) Provide one per equipment rack.

f) Cord Length: 10'-0"

E. Power Distribution Unit (PDU)

1. Description

a) UL Listed: UL 1363

b) Type: Monitored PDU

1) Metered

(a) Load meter LCD display on unit with amps.

2) Monitored

(a) Network interface for remote monitoring and reporting. Accessible via web browser and programmed to send alerts via e-mail.

(b) Remote environmental sensors: battery monitor

c) Input: NEMA 5-20P (20A, 120Vac, Single-Phase)

d) Output: Minimum of (8) NEMA 5-15P (15A,120Vac, Single-Phase)

e) Style: Vertical (7'-0")

f) Cord Length: 10'-0"

g) Mount Position: Side

F. Uninterruptible Power Supply (UPS)

1. Basis of Design: ____

2. Description

a) Type: Line Interactive UPS

b) Input: NEMA 5-15P (15A,120Vac, Single-Phase)

c) Output: Minimum of (8) NEMA 5-15P (15A,120Vac, Single-Phase)

d) Run Time: Minimum of 30 minutes

e) Style: Horizontal (2RU)

f) UL Listed: UL 1778

g) Monitored

1) Network interface for remote monitoring and reporting. Accessible via web browser and programmed to send alerts via e-mail.

2) Remote environmental sensors: battery monitor

h) Cord Length: 10'-0"

PART 3 - EXECUTION

3.01 GENERAL

A. Prior to start-up of Electronic Security System, check all electrical circuits that will serve Electronic Security Equipment to ensure correct wiring polarity and ground impedance is less than 5.0 ohm (per IEEE 1100). Notify Design Consultant of any issues in a timely manner and await correction prior to use of effected circuits.

B. Labeling requirements

1. Equipment Racks, Cabinets, and Enclosures are to be labeled at the top of both the front and back sides, minimum text height shall be 3/8 inch.

a) Submit proposed labeling scheme on Shop Drawings for review and approval by Design Consultant and Owner.

1) For multiple racks/cabinets in a single equipment room, racks are to be numbered left to right, from front of room to back.

2) For projects with more than one Equipment Room, labeling scheme shall first indicate Equipment Room number/designator.

2. Wall-mounted Entrance Protectors shall be labeled with device/location it is protecting. Example – "Camera #54 on SW corner of building".

3. Grounding and Bonding conductors that leave the room shall be labeled with size, far-end destination, and total length. Example - #1/0 to Panelboard A2, 50 feet.

C. Quantities and sizes of equipment room fittings shown on the Drawings are illustrative only and are meant to indicate the general configuration of the work. Provide the correct quantities of all materials necessary to accommodate the work described in these specifications and schedules and shown on the Drawings.

D. Sustainable requirements shall meet Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS.

3.02 ENTRANCE PROTECTION

A. Fully protect each end of all incoming conductors which are considered to have lightning exposure in accordance with NFPA 70 chapter 8.

B. Install grounding/bonding wire as straight as possible from protector to SBB/PBB.

C. Grounding and bonding

1. Bond all metallic shields and armored jacketing material for all incoming cables as close as practicable to the entry into the building.

2. Bonding conductors shall be connected to the SBB/PBB as specified in this Section and in accordance with NFPA 70 chapter 8.

3.03 RACKS, CABINETS, AND ENCLOSURES

A. Wall cabinets and enclosures shall be installed on a plywood backboard or attached to a masonry wall. The rack should not be attached to sheet rock (gypsum wall board).

B. Tags/labels shall be placed on each equipment rack, cabinet, and frame in accordance with TIA-606.

3.04 CABLE MANAGEMENT

A. Horizontal and Vertical Cable Managers

1. Install cable organizers and/or cable channel on equipment racks and within cabinets at locations as described in the Specifications and/or indicated on the Drawings.

3.05 RACK-MOUNTED POWER EQUIPMENT

A. Uninterruptible Power Supplies (UPS)

1. Examination

a) Examine areas and conditions, with Installer present, for compliance with requirements for conditions affecting performance of the UPS.

b) Proceed with installation only after unsatisfactory conditions have been corrected.

2. Installation

a) Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.

3. Grounding and Bonding

a) Ground/bond rack-mounted UPS equipment per manufacturer’s instructions.

4. Field Quality Control

a) Tests and Inspections:

1) Comply with manufacturer's written instructions.

2) Disconnect primary power source while connected equipment is in operation and document length of time until 10% battery life is left.

3) Test manual and automatic operational features and system protective and alarm functions.

4) Test communication of status and alarms to remote monitoring equipment / Owner's IT staff.

b) The UPS system will be considered defective if it does not pass tests and meets minimum runtime requirements.

c) Record of Tests and Inspections: Maintain and submit documentation of tests and inspections, including references to manufacturers' written instructions and other test and inspection criteria. Include results of tests, inspections, and retests.

d) Prepare test and inspection reports.

5. Demonstration

a) Train Owner's maintenance personnel to adjust, operate, and maintain the UPS.

3.06 GROUNDING/BONDING REQUIREMENTS

A. General:

1. Meet requirements of Section 26 0526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS and Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS.

2. Installation shall follow NECA/BICSI 607 Standard for Telecommunications Bonding and Grounding Planning and Installation Methods for Commercial Buildings.

3. Install the grounding and bonding conductors (wire) without splices or mechanical couplers installed between the wire points of origin and termination.

4. Where insulated conductors are necessary provide adequately rated insulation jackets or pathways to meet all required building codes. (I.e. Plenum, riser, outside plant, run entirely in conduit, etc.)

5. Size all grounding and bonding conductors per TIA-607.

6. Grounding and bonding conductors should not be placed in ferrous metallic conduit. If it is necessary to place grounding and bonding conductors in ferrous metallic conduit that exceeds 3 feet in length, the conductors shall be bonded to each end of the conduit using a grounding bushing and a No. 6 AWG conductor, minimum.

B. Required Connections:

1. Provide and install all bonding/grounding connections as required by Grounding Diagram Detail(s) on the drawings, and as required by equipment manufacturers, applicable codes, and the referenced standards.

2. Provide and install one individual ground wire from each equipment rack/cabinet/frame and wall-mounted enclosure to the SBB/PBB in the room. Each conductor is to be "home run"; do not "daisy chain" the connections, except as may be indicated on the drawings.

C. Connector Installation:

1. Provide all ground wire connectors as shown on the Drawings or as indicated herein, unless otherwise noted.

2. Follow the connector manufacturer's instructions for installing the connector to the cable and the connector to the cabinet/rack, ground bar, etc. Use the appropriate tools for the job, tighten nuts/bolts to proper torque, remove paint, insulation, oxidation as needed to assure good metal to metal contact, etc. If the manufacturer does not provide tightening specifications, follow the recommendations of UL 486A-486B.

D. Cable Identification:

1. Additional, provide a label above each SBB/PBB that states the following: IF CONNECTORS OR CABLES ARE LOOSE OR MUST BE REMOVED, PLEASE CALL THE BUILDING SECURITY MANAGER.

E. Quantities of Ground Wire / Bonding Conductors

1. Location and placement of grounding and bonding wires/conductors and components shall be as shown on the Drawings or defined herein.

2. Quantities of ground/bond wires/conductors, bonding components, etc. shown on the drawings are illustrative only and are meant to indicate the general configuration of the work. Provide the correct quantities of materials to construct a complete grounding and bonding system that meets the intent of these Specifications, the relevant codes, and referenced standards.

F. Testing

1. As a minimum test, as described below, all metallic bonding conductors installed under these Specifications.

2. Test the conductor and the terminal connectors for total resistance between the equipment item being grounded and the SBB/PBB in the room. This resistance shall be less than 0.10 Ohm (100 milliohms).

3. Recommended test equipment:

a) An ohmmeter capable of indicating resistance down to 10 milli-ohms or below.

b) Earth Ground Resistance Tester that is configured for continuity test (two-point test)

G. Record Drawings

1. The Project Record Drawings shall show the types and locations of installed grounding and bonding conductors.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. System Description

B. Owner Furnished Equipment

C. System Software

D. Head-end Equipment

1. Controllers
2. Entrance Protectors
3. Power Supplies & Integral Batteries
4. Wall-Mounted Enclosures

E. Devices

1. Card reader and Card reader/keypad
2. Credential cards
3. Mobile credentials
4. Request to Exit buttons - for remote door release
5. Push-button switches (Panic Buttons)
6. Interface with Door and Gate Hardware

F. Site Pedestal

G. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

H. Division 08 - DOOR HARDWARE

I. Division 08 - POWER DOOR OPERATORS

J. Division 11 - PARKING CONTROL EQUIPMENT

K. Division 11 - PEDESTRIAN CONTROL EQUIPMENT

L. Division 27 - COMMUNICATIONS

M. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

N. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

O. Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

P. Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY

Q. Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

R. Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY

S. Section 28 1523 - INTERCOM ENTRY SYSTEMS

T. Section 28 3100 - INTRUSION DETECTION

1.02 ABBREVIATIONS AND DEFINITIONS

A. Access Control Cloud Services: Subscription-based hosted application utilizing Software as a Service (SaaS) delivery model in lieu of on-premises servers/software.

B. ACP: Access Control Panel

C. ACS: Access Control System

D. Controller: An intelligent peripheral control unit that uses a computer for controlling its operation. Where this term is presented with an initial capital letter, this definition applies.

E. Credential: Data assigned to an entity and used to identify that entity.

F. ESC: Electronic Security Contractor

G. Fail-Safe (Door): If power fails, the door is to be unlocked.

H. Fail-Secure (Door): If power fails, the door remains secure (locked).

I. I/O: Input/Output

J. LAN: Local Area Network

K. LED: Light-emitting Diode

L. PDF: Portable Document Format. The file format used by the Acrobat document exchange system software from Adobe.

M. RS-232: TIA-232 standard for asynchronous serial data communications between terminal devices. This standard defines a 25-pin connector and certain signal characteristics for interfacing computer equipment.

N. RS-485: TIA-485 standard for multipoint communications.

O. WAN: Wide Area Network

1.04 SUBMITTALS

A. Follow the requirements for submittals in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

B. Pre-Bid Submittal - The following submittals are due before the questions deadline before Bid:

1. All products for which a substitute is to be considered as an approved equivalent or acceptable substitution, provide submittals with sufficient detail for review by the Design Consultant. Submittals shall at a minimum provide detailed information substantiating all performance requirements as well as all necessary Code compliance and NRTL listing information.

C. Pre-Construction Submittal

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:

a) Product Cut Sheets and Shop Drawings shall be submitted concurrently as part of the complete Electronic Security Systems pre-construction submittal. If the first submittal only includes Product Cut Sheets, submittal will be returned with a "Not Reviewed" response.

b) Shop Drawings:

1) Submit plans, elevations, and details that include the following:

(a) Indicate all system device locations on architectural floor plans, identified by number/ID. No other system(s) shall be included on these plans.

(b) Enlarged Equipment Room wall elevation(s), indicating all wall-mounted pathways/cable management, wall-mounted enclosures, and all internal components of wall-mounted enclosures.

(1) All components on these elevations shall be identified by part name, manufacturer and model number.

(c) Include full schematic wiring information on these Drawings for all devices. Wiring information shall include cable type, conductor routings, quantities, and connection details at device.

(d) Include a complete ACS one-line, block diagram.

(1) Each far-end device shall be identified by number/ID and room number.

(e) Include a statement of the system sequence of operation.

(f) Backup Power-Supply (Battery) Capacity Calculations

2) Graphical map screen shots within the access control software that will be used to depict building and device locations/status.

D. Preliminary Project Completion Submittal

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:

a) Test Results for the Access Control System. Refer to Project Close-Out Instruction in Part 3 of this Section.

E. Final Project Completion Submittal

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS submittal requirements, with additional requirements as noted:

a) Include scan of written documentation that Spare Parts/Physical Media were delivered to Owner at time of Owner training.

2. Refer to Project Close-Out Instruction in Part 3 of this Section and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for additional information and requirements.

1.05 QUALITY ASSURANCE

A. Contractor Qualifications

1. The ACS shall be provided by the Electronic Security Contractor (ESC), as defined in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

a) The ESC shall be a certified installed of the ACS vendor prior to bid; post-bid certification will not be accepted.

b) The ESC shall be pre-qualified; refer to Quality Assurance paragraph in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for a list of pre-qualified Contractor, and instructions for potential bidders wishing to become pre-qualified.

B. Personnel Qualifications

1. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for personnel qualifications.

1.06 WARRANTIES

A. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for warranty requirements.

1.07 COORDINATION

A. Access Control is an integrated system. Coordinate integration with installers and equipment of all other Electronic Security Systems.

B. Coordinate with elevator manufacturer and installer for integration of card readers for:

1. Call Button Control - For card reader(s) external to the elevator, adjacent to call buttons.

2. Floor Control - For card reader(s) internal to the elevator(s).

C. Within (2) weeks after the Notice to Proceed, schedule a meeting with the Owner's Security and/or Facility staff to confirm and coordinate additional sequence of operation and programming requirements of the ACS.

1. Document all direction from Owner in writing and distribute to the Design Consultant and Architect through the Prime Contractor.

PART 2 - PRODUCTS AND MATERIALS

2.01 SYSTEM DESCRIPTION

A. Provide a complete functioning Access Control System (ACS), and each element thereof, as specified, indicated, or reasonably inferred on the Drawings and in this Specification; including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the Work include, but are not limited to; materials, labor, supervision, supplies, tools, equipment, transportation, and utilities.

B. This Section consists of the control and monitoring of electro-mechanical barriers that limits physical access to authorized persons to openings (such as a gate or door) of a secured area (such as a property, facility, room, or cabinet). The system shall also monitor openings and initiate alarm if opening is forced open or left open for a set period of time.

C. The ACS shall be the platform for integration of all Electronic Security System sub-systems: thereby assuming the role of the Security Management System, as defined in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

D. Access Control Cloud Services

1. System shall consist of a cloud-hosted server provided by the Access Control as a Service (ACaaS) provider and new on-premise field-installed panels and devices. Coordinate connection to cloud serer with Owner's IT department, and provide gateway appliances as necessary.

2. Capacity: Unlimited cardholders; unlimited doors, readers, and administrators; unlimited workstations; unlimited events (viewable for 365 days).

3. Communication: Supports TLS 1.2+ authentication with AES-256 encryption.

4. Mobile Credentials: Supports Bluetooth Low Energy (BLE), Near Field Communication (NFC), and QR Code credentials.

a) Can function off-line and does not require a special application to be downloaded to the mobile device.

E. General Requirements

1. Unless otherwise designated, provide all of one type of equipment from one manufacturer.

2. Door Hardware Interface: Coordinate with Division 08 - DOOR HARDWARE that specify door and gate hardware required to be monitored or controlled by the ACS. The controllers in this Section shall have electrical characteristics that match the signal and power requirements of door hardware. Integrate door hardware specified in Division 08 - DOOR HARDWARE to function with the software and hardware in this Section.

3. Tamper Protection: Provide tamper switches on control units/enclosures, power supply and battery cabinets, detection devices, pull/junction boxes, and equipment cabinets. These shall initiate a tamper-alarm signal when unit is opened or partially disassembled and when entering conductors are cut or disconnected. Master control-unit alarm display shall identify tamper alarms and indicate locations.

4. Network connecting the Central Workstation/Server, other workstations/enrollment stations, and field-installed controllers/panels shall be via a dedicated VLAN on the Owner-provided network.

a) Additionally, the field-installed controllers/panels shall have a redundant network connection, via one of the following:

1) Dial-up modem connection using a standard dial-up (POTS) telephone line.

2) Cellular backup

2.02 OWNER FURNISHED EQUIPMENT

A. Certain technical system equipment shall be Owner furnished for use with the new technical system as indicated on the drawings and in these specifications. Provide any equipment not specifically noted as Owner Furnished Equipment (OFE).

B. Obtain this equipment from the Owner's Representative in a timely manner as required to coordinate with the project schedule. Verify all model numbers, quantities, sizes, and connector types as necessary to coordinate with system requirements. The Owner's Representative may elect to substitute other equipment in lieu of that listed prior to the submission of shop drawings.

C. Examine the equipment and perform normal operational checks to verify that the equipment is in good condition and is operating normally. Should any equipment defects be found (physical, electrical, or otherwise), identify, in writing to the Owner's Representative: a) defects found; and b) the estimated cost of any proposed repairs versus cost of replacement.

D. Where required for rack-mounting, furnish rack-mounting hardware or shelf for equipment not already having rack-mounting flanges. Also furnish security covers where such covers are required per the specifications.

E. Fully integrate the equipment with the technical system and provide all necessary signal connections and programming.

F. Proper operation and maintenance of such equipment remains the responsibility of the Owner's Representative.

G. Other Owner-furnished equipment may be used by the Owner's Representative with the new technical systems. Proper operation and maintenance of the equipment remains the responsibility of the Owner's Representative.

2.03 SYSTEM SOFTWARE

A. Owner's existing Access Control System (ACS) Software is Verkada .

2.04 HEAD-END EQUIPMENT

A. Controllers (Access Control Panels)

1. Access Control System hardware including intelligent controllers and modules (boards) for a complete and functional accesss control system.
2. Intelligent Controller shall:
    a) Store the credential holder database on-board.
    b) Support 10-BaseT/100Base-TX communication to the system Server/Central Workstation.
    c) Support 128-bit AES encryption, at a minium, between the system Server/Central Worksation and between the system modules.
    d) Support up to 16 card readers.
    e) Support OSDP readers.
3. Manufacturers
    a) Same manufacturer as the ACS.

B. Entrance Protectors

1. Basis of Design: DITEK Surge Protection
2. Manufacturer
    a) Same manufacturer as the ACS.
    b) Altronix
    c) LifeSafety Power
    d) Substitution: See Division 01 - PRODUCT REQUIREMENTS
3. Description

a) All cables which extend beyond the envelope/footprint of the building shall be installed with entrance protectors. Card Readers/devices on the exterior face/wall of the building do not require protection.

b) UL Listing: UL 497B

c) Operating Temperature: -40°F to 158°F

C. Power Supplies & Integral Batteries

1. Manufacturer

a) Same manufacturer as the ACS.

b) Altronix

c) LifeSafety Power

d) Substitution: See Division 01 - PRODUCT REQUIREMENTS

2. Requirements:

a) Coordinate with Division 08 - DOOR HARDWARE that specify door hardware and gate hardware. Power supplies shall support power requirements of electrified latches, strikes, or magnets required.

b) UL Listings: UL 294, UL 603, and UL 1076

c) FCC: 47 CFR 15

d) Outputs shall be individually fused.

e) Automatic switch shall instantaneously transfer to stand-by battery power upon AC input failure without interruption, providing a minimum run-time of 30 minutes at full-load.

1) Power supply shall have integral charger for sealed lead acid or gel type batteries.

2) Low voltage battery cutoff shall prevent battery damage from excessive discharge.

3) Power supplies shall have supervisory relay outputs for AC or battery failure.

f) Fire alarm disconnect which enables emergency egress. The fire alarm disconnect shall be:

1) Capable of either latching or non-latching configuration.

2) Supervised; indicating fire alarm control panel input is triggered via output relay.

3) Individually selectable for any or all outputs.

g) LEDs shall indicate the presence of AC or DC voltage for input and each individual output. Dedicated LEDs shall indicate status of individually energized relays.

h) Power supply include network module capable of utilizing WAN/LAN to monitor status of AC input, output current, output voltage, temperature, and battery faults. Unit shall be user programmable via web browser with ability to send email fault and battery service notifications. User shall be able to pull reports/event logs.

D. Wall-Mounted Enclosures

1. Basis of Design: Verkada

2. Manufacturer

a) Same manufacturer as the ACS.

b) Altronix

c) LifeSafety Power

d) Substitution: See Division 01 - PRODUCT REQUIREMENTS

3. Description:

a) UL Listing: UL 294

b) NEMA EN 10250 enclosure(s) that protect against dust, falling dirt, fibers, lint, and dripping noncorrosive liquids:

1) Interior Electronics: NEMA EN 10250 Type 12

2) Exterior Electronics: NEMA EN 10250 Type 3R, stainless steel.

3) Corrosion Resistant: NEMA EN 10250 Type 4X, stainless steel.

4) Screw Covers: Where enclosures are readily accessible, secure with security fasteners of type appropriate for enclosure.

2.05 DEVICES

A. Card Reader and Card Reader/Keypad

1. Basis of Design: See type schedule on Electronic Security Legend

2. Manufacturers

a) See type schedule on Electronic Security Legend

3. Description

a) Active-detection proximity card readers shall provide power to compatible credential cards through magnetic induction and shall receive and decode a unique identification code number transmitted from the credential card.

1) Reader shall operate at 125 kHz and 13.56 MHz

b) Card readers shall also be Bluetooth Low Energy (BLE), Near Field Communication (NFC), and QR Codes compliant to enable the use of mobile phones as access credentials.

c) Card-Reader Power: Powered from its associated controller, including its standby power source.

d) UL Listing: UL 294

e) IEC 60529 rating (minimum): IP65

f) Transmission Protocol: ISO/IEC 14443-4

g) Status Indicators: Digital indicators shall provide visible and audible status indications and user prompts. Indicate power on or off, whether user passage requests have been accepted or rejected, and whether the door is locked or unlocked.

h) Enclosure: Suitable for surface, semi-flush, pedestal, or weatherproof mounting. Mounting types shall additionally be suitable for installation in the following locations:

1) Indoors, controlled environment.

2) Indoors, uncontrolled environment.

3) Outdoors, with built-in heaters or other cold-weather equipment to extend the operating temperature range as needed for operation at the site.

i) Response Time: Card reader shall respond to passage requests by generating a signal that is sent to the controller. Response time shall be 800 msec. or less, from the time the card reader finishes reading the credential card until a response signal is generated.

B. Mobile Credentials:

1. Basis of Design: Verkada

2. Description

a) Digital credentials securely issued and stored on a Android or iOS mobile device.

b) Communication Protocols: Bluetooth Low Energy (BLE), Near Field Communication (NFC), and QR Codes

c) Security:

1) Minimum AES-128 encryption for credential storage.

2) Mutual authentication between device and reader.

C. Request-to-Exit Buttons - for remote door release

1. Basis of Design:

a) Momentary (MO) Push Button: Security Door Controls D15-2;

b) Momentary (MO) Push Button and Alternate Action (AA) Toggle Switch and Toggle: Security Door Controls D15-2-3

2. Description

a) Mounted under desk work surface.

b) Momentary and toggle SPDT push switch to release (unlock) an access-controlled door.

D. Push-button switches (Panic Buttons)

1. Wall-Mounted

a) Basis of Design: Schneider Electric XB4BS9445

b) Manufacturers

1) General Electric Company; GE Security, Inc.

2) Honeywell International Inc.; Honeywell Security.

3) Securitron

4) Visonic Ltd. (Johnson Controls)

5) Substitution: See Division 01 - PRODUCT REQUIREMENTS

c) Description

1) Switch shall lock in activated position until reset with a key.

2) Minimum Switch Rating: 50,000 operations.

3) Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.

2. Desk-Mounted

a) Basis of Design: Honeywell Security 269SN

b) Manufacturers

1) General Electric Company; GE Security, Inc.

2) Securitron

3) Schneider El

4) Visonic Ltd. (Johnson Controls)

5) Substitution: See Division 01 - PRODUCT REQUIREMENTS

c) Description

1) Switch shall lock in activated position until reset with a key.

2) Minimum Switch Rating: 50,000 operations.

3) Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.

E. Interface with Door and Gate Hardware

1. Exit Alarm/Door Position Switch: All doors equipped with and electric/electromagnetic lock or strike shall also be equipped with a Door Position Switch. Operation of these doors shall generate an alarm under certain conditions - refer to other paragraphs in this Section for alarm requirements. Exit devices and alarm contacts are specified in Division 08 - DOOR HARDWARE. Coordinate division of labor and cabling with Division 08 - DOOR HARDWARE Contractor and Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY Contractor.

2. Door Position Switches: Use appropriately sized and placed end-of-line (EOL) resistors to provide circuit supervision of door position monitoring switch. Un-commanded door opening shall cause the system to generate and transmit a forced entry alarm. Coordinate division of labor and cabling with Division 08 - DOOR HARDWARE Contractor and Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY contractor.

2.06 SITE PEDESTAL

A. Manufacturers

1. Pedestal Pro
2. Chase Security Systems
3. Substitution: See Section 01 6000 - Product Requirements

B. Description

1. Custom pedestal rated for exterior use.
2. Shall meet dimensional and material requirements identified on architectural and security details.
3. Custom housing/hood is required to allow for all co-located devices to be within the same housing/hood, unless otherwise noted.
4. Submit dimensioned shop Drawing from manufacturer as part of pre-construction submittal.

PART 3 - EXECUTION

3.01 GENERAL

A. Install in accordance with manufacturer's instructions.

B. Comply with NFPA 101.

C. See Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS for sustainability requirements.

D. See Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY for seismic controls.

3.02 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.

B. Examine roughing-in for LAN and control cable conduit systems to workstations, controllers, card readers, and other cable-connected devices to verify actual locations of conduit and back boxes before device installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 PREPARATION

A. Obtain detailed project planning forms from ACS manufacturer; develop custom forms to suit project. Fill in all data available from project plans and specifications and publish as project planning documents for review and approval.

1. Record setup data for server and workstations.
2. For each Location, record setup of controller features and access requirements.
3. Propose start and stop times for time zones and holidays, and match up access levels for doors.
4. Set up groups, facility codes, linking, and list inputs and outputs for each controller.
5. Assign action message names and compose messages.
6. Set up alarms. Establish interlocks between alarms, intruder detection, and video surveillance features.
7. Prepare and install alarm graphic maps.
8. Develop user-defined fields.
9. Develop screen layout formats.
10. Propose setups for guard tours and key control.
11. Discuss badge layout options; design badges.
12. Complete system diagnostics and operation verification.
13. Prepare a specific plan for system testing, startup, and demonstration.
14. Develop acceptance test concept and, on approval, develop specifics of the test.

15. Develop cable and asset-management system details; input data from construction documents. Include system schematics and Technical Drawings in electronic .dwg format.

B. In meetings with Architect and Owner, present Project planning documents and review, adjust, and prepare final setup documents. Use final documents to set up ACS software.

C. After turn-over of Equipment Rooms by the Prime Contractor and Division 26 (Electrical) Contractor:

1. Do not start up any powered ACS equipment until these requirements are verified.

a) Verify the Equipment Room is properly environmentally conditioned and all general construction dust and debris are removed.

b) Verify that all electrical branch circuits provided for the ACS equipment are installed properly and active.

2. Do not commence installation of any ACS equipment within Equipment Rooms until entry door to that room is equipped with a lock and construction key. All Equipment Room doors shall be locked, even during construction, when no personnel are present and working inside.

3.04 CABLING

A. Provide cabling for all access controlled doors and gates identified on the Drawings and these Specifications. Cable type and size shall meet all ACS vendor requirements for each type of device/connection. Coordinate the required cable Specifications with Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY Contractor (if different from the ESC) prior to Bid.

1. Utilize shielded cables/conductors, unless ACS vendor specifically forbids the use of shielded cables/conductors.

2. Use of a multi-conductor composite cable to access controlled doors is preferred, but not required, unless otherwise noted.

3. Coordinate cable size and pathway requirements with Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY Contractor.

B. Comply with NECA 1.

C. Cables and wiring shall be installed according to requirements in Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY.

D. Boxes and enclosures containing ACS components or cabling, and which are easily accessible to employees or to the public, shall be provided with a lock. Boxes above ceiling level in occupied areas of the building shall not be considered accessible. Junction boxes (J-boxes) and small device enclosures

below ceiling level and easily accessible to employees or the public shall be covered with a suitable cover plate and shall be secured with tamperproof screws.

E. Install appropriately sized and placed end-of-line (EOL) resistors at the field device location and not at the controller.

F. Ensure machine-printed, thermo-plastic labels are installed within 6 inches of each end of all cables.

G. Maintain insulation on all conductors to the final termination point within the enclosure; exposed copper conductors of any length are not allowed.

H. Provide a minimum of 6 inches of slack (service loop) at both ends of all cabling (at the device and within the ACS enclosure).

I. Obtain copper twisted pair patch cables from Section 27 1000 - STRUCTURED CABLING Contractor to connect ACS equipment to the Owner's network equipment. Coordinate Ethernet port assignments with Owner's IT staff. Provide and install patch cords at the IT rack and within the ACS enclosure(s).

3.05 CABLE APPLICATION

A. Coordinate these requirements with Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY.

B. Cable application requirements are minimum requirements and shall be exceeded if recommended or required by manufacturer of ACS hardware.

C. TIA-232 (RS-232) Cabling (as required)

1. Install at a maximum distance of 50 feet.

D. TIA-485 (RS-458) Cabling (as required)

1. Install at a maximum distance of 4000 feet.

E. Card Readers and Keypads:

1. Install size and number of conductors or pairs as recommended by manufacturer for the functions specified.
2. Unless manufacturer recommends larger conductors, install #22 AWG wire if maximum distance from controller to the reader is 250 feet. Install #20 AWG wire if maximum distance is 500 feet.
3. For greater distances, install "extender" or "repeater" modules as recommended by manufacturer of the controller and devices.
4. Install minimum #18 AWG shielded cable to readers and keypads that draw 50 mA or more.

F. Install minimum #16 AWG cable from controller to electrically powered locks. Adjust AWG in order to prevent voltage drop from power supply to the lock to drop below manufacture's stated minimum operating voltage.

G. Install minimum #14 AWG AC power wire from transformer to controller. Maximum distance of 25 feet.

3.06 BONDING AND GROUNDING

A. Properly bond and ground ACS equipment in accordance with:

1. Manufacturer's instructions
2. Per the Drawings
3. Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

B. Bond (to ground) cable shields, drain conductors, and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

C. Bond shields and drain conductors to ground at only one point (one end) in each circuit.

D. Each entrance protector shall have its own individual bonding/grounding conductor to the SBB. Do not bond entrance protectors to the ACS enclosure.

E. Each ACS enclosure shall have its own bonding/grounding conductor to the SBB. Do not daisy-chain enclosures together.

F. Minimum bonding/conductor size, in accordance with Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS , is #6 AWG.

3.07 IDENTIFICATION & LABELING

A. Coordinate with the Owner to develop an ACS identification plan. Use unique, alphanumeric designation for each cable, and label cable and jacks, connectors, and terminals to which it connects with the same designation. Use logical and systematic designations for facility's architectural arrangement.

1. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
2. Enclosures shall be labeled with 2 inches by 4 inches engraved plastic label with 3/4 inch tall white characters. Attach label to enclosure door/cover with screws that do not extend more than 1/8 inch into the interior of the door/cover.

B. All wiring conductors connected to terminal strips shall be individually numbered, and each cable or wiring group being extended from a panel or cabinet

to a building-mounted device shall be identified with the name and number of the particular device as shown.

C. At completion, Record Drawings and cable and equipment Excel spreadsheets shall reflect as-built conditions.

3.08 SYSTEM SOFTWARE

3.09 HEAD-END EQUIPMENT

A. Furnish, install, and configure (program) all required controllers, interfaces, and accessories in the rooms identified on the plans.

B. All head-end equipment shall be rack-mounted (where indicated) or shall be within wall-mounted enclosures. Refer to Drawings for mounting details.

C. Monitoring Requirements:

1. The ACS shall integrate with the Section 28 3100 - INTRUSION DETECTION. Event alarms from within the ACS shall communicate alarm type and location to the Intrusion Detection System.

2. The ACS shall monitor end devices and report an alarm for the following events:

a) Door Forced Alarm

b) Door Held Open Too Long

c) Panic/Duress Buttons

d) Invalid, Lost, Stolen, Expired, or Terminated Badge

D. Controllers (Access Control Panels) and Interfaces

1. Primary communication from the Access Control Panels to the Central Server/Workstation shall be over the Owner’s LAN/WAN.

a) The ACP shall maintain a current copy of the credential database.

b) In the event of a temporary LAN/WAN outage, the ACS shall continue to operate. When the LAN/WAN connection is restored, the ACS shall automatically upload events/logs to the Central Server and download a current copy of the credential database.

2. The ACS and ACPs shall be equipped with all required contact closures and interfaces to support the Monitoring Requirements paragraph above. Indicate these connections on Pre-Construction Shop Drawings and Record Drawings.

3. The ACS and ACPs shall be equipped with all required inputs and interfaces to support the Elevator Control requirements from Part 2 of this Section. Provide all materials and programming necessary that restricts access to the Elevator Cab and/or certain floors to authorized credential holders.

a) Coordinate with elevator installer for integration of in-cab card readers; the presentation of an authorized credential shall allow the elevator call button for approved/programmed floors to be enabled.

E. Wall-Mounted Enclosures

1. Install enclosures on plywood backboard, with bottom of enclosures parallel to floor. Bottom of bottom enclosure(s) shall be no lower than 30 inches above finished floor and top of top enclosure(s) shall be no higher than 74 inches above finished floor.

2. All enclosures, even within secured Equipment Rooms, shall be provided with locks. All locks shall be keyed the same. Turn over three keys to Owner at time of Owner training. Obtain written documentation from Owner at this time and include copy with the Final Project Close-out Submittal.

3. Ensure label is installed on front face of each enclosure in accordance with Identification & Labeling Section above.

4. Clearly identify/label the entry point/source of 120V power.

5. Ensure that any 120V wiring with the enclosure is installed in conduit; exposed 120v circuits are not allowed.

6. Layout of controllers and interfaces within enclosures shall be consistent from enclosure to enclosure and Equipment Room to Equipment Room. For renovation and expansion of an existing facility, match layout of existing ACS enclosures.

3.10 DEVICES

A. Electrified Door and Gate Hardware

1. Coordinate with the Owner to determine and establish schedules for interior and external doors with electric/electro-magnetic locks. Coordinate these doors and schedule with Owner during initial coordination meeting with Owner immediately following Notice to Proceed. Owner will provide schedule details for when to lock and unlock at certain day/time intervals; such that entry can be made through door without a valid credential during normal work hours.

2. In the event of a loss of power, doors shall Fail-Secure.

3. All egress doors shall allow individuals to freely exit the door without valid credential. Refer to Code Plans in the architectural set of Drawings for egress door locations. Notify the Architect and Design Consultant immediately for any egress doors where free exit (without valid credential) conflicts with Contract Documents.

B. Card readers and card reader/keypad

1. ADA actuator doors

a) Doors with ADA operators and managed by ACS shall be cabled, configured, and programmed to require valid credential before ADA push-button can actuate respective door opener.

3.11 SITE PEDESTALS

A. Coordinate site prep Work and Division of Labor with Prime Contractor prior to installation.

B. Ensure underground conduit pathways are free and clear of debris and that a pull wire was provided by the Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY Contractor.

3.12 FIELD QUALITY CONTROL

A. Refer to Part 3 of Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for general installation and project close-out instructions.

B. Perform the following functional tests and inspections - and correct any issues - before requesting Final Acceptance Review by Design Consultant:

1. Follow Test Methods as required by ACS vendor.
2. Also follow Test Methods as listed in NFPA 731, Table 10.4.3(a) and Table 10.4.3(b)
3. Test Reports:
    a) Use Sample Record of Completion Report from NFPA 731, Figure A.4.12.2.1(3)(a) as cover page of Access Control Test Reports.
    b) Use Sample Access Control Report from NFPA 731, Figure A.4.12.2.1(3)(c) to document testing of all ACS components.
    c) Scan to PDF and combine these reports, arranged logically by serving Equipment Room and Device type/ID. Include this PDF as part of Preliminary Project Completion Submittal.

C. After Final Acceptance Review by Design Consultant, address/correct any issues, and re-test effected devices and components of the ACS.

1. Update Test Reports and include complete Test Reports as part of Final Project Completion Submittal.

3.13 STARTUP SERVICE

A. Complete installation and startup checks according to approved procedures that were developed in “Preparation” Article and with manufacturer’s written instructions.

B. Enroll and prepare credentials for Owner’s operators, management, and security personnel.

3.14 OWNER TRAINING/DEMONSTRATION

A. Engage a factory-authorized service representative to Train Owner's security and facility/maintenance personnel to adjust, operate, and maintain security access system. Assume a minimum of two 4 hour training sessions are required.

B. A training schedule shall be developed and submitted by the Contractor and approved by the Owner a minimum of two weeks prior to the planned training.

C. Develop separate training modules for the following:

1. Computer system administration personnel to manage and repair the LAN and databases and to update and maintain software.
2. Operators who prepare and input credentials to man the control station and workstations and to enroll personnel.
3. Security personnel.
4. Hardware maintenance personnel.
5. Corporate management.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. System Description

B. Intercom Entry

1. Answering Stations
2. Video Stations

C. Cables

D. Accessories

1.02 RELATED SECTIONS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 27 - COMMUNICATIONS

C. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

D. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

E. Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY

F. Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY

G. Section 28 1000 - ELECTRONIC SECURITY SYSTEMS

H. Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY

I. Section 28 1020 - EQUIPMENT ROOM FITTINGS FOR ELECTRONIC SECURITY

J. Section 28 1300 - ACCESS CONTROL

K. Section 28 2000 - VIDEO SURVEILLANCE

1.03 ACRONYMS AND DEFINITIONS

A. AC: Alternating Current

B. Electronic Security Contractor (ESC): The primary Contractor of this and all related specification sections (281000 through 283999). The ESC is also responsible for fully coordinating all Electronic Security System requirements with other Divisions and sections, such as power, grounding/bonding, fire alarm, and pathways/other common work.

C. DC: Direct Current

D. I/O: Input/Output

E. IP: Internet Protocol

F. LED: Light Emitting Diode

G. RFID: Radio Frequency Identification

1.04 REFERENCES

A. ADA Standards - 2010 ADA Standards for Accessible Design; 2010.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. TIA-568 (SET) - Commercial Building Telecommunications Cabling Standard Set; 2024.

E. TIA-569 - Telecommunications Pathways and Spaces; 2019e, with Addendum (2022).

1.05 SUBMITTALS

A. Refer to requirements in Division 01 - ADMINISTRATIVE REQUIREMENTS, Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for submittal procedures.

B. Pre-construction Submittal

1. Product Data: Provide manufacturer's standard catalog pages and data sheets for each system component. Include configurations, standard wiring diagrams, dimensions, finishes, service condition requirements, and installed features.

2. Shop Drawings: Include plan views indicating locations of system components and proposed size, type, and routing of conduits and/or cables. Include system interconnection schematic diagrams.

3. Evidence of qualifications for installer.

4. Specimen Warranty: Submit sample of manufacturer's warranty.

5. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

C. Project Completion Submittal

1. See Division 01 - CLOSEOUT SUBMITTALS, for closeout submittals.

2. Manufacturer's certification that products meet or exceed specified requirements.

3. Field quality control test reports.

4. Operation and Maintenance Data: Include detailed information on system operation, equipment setup, replacement parts, and recommended maintenance procedures and intervals.

5. Executed Warranty: Submit documentation of final executed warranty completed in Owner's name and registered with manufacturer.

6. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

1.06 QUALITY ASSURANCE

A. Contractor qualifications:

1. The ESC, or a qualified Intercom Entry System Contractor acting as a sub-contractor to the ESC, shall have a minimum three (3) continuous years in the business of installing and integrating Video Intercom Systems.

2. ESC or qualified sub-contractor shall be a certified installer by the video intercom equipment manufacturers whose products shall be incorporated into this project. Post-award certification will not be accepted.

3. ESC or qualified sub-contractor shall maintain certification by the manufacturers thru the duration of the warrantee period.

B. Personnel qualifications

1. All equipment/device installation and programming shall be conducted by factory-certified technicians of the components being installed.

C. Warranty

1. At a minimum, the manufacturer(s) equipment shall be covered by a 1-year parts and labor warranty covered by the ESC starting from Substantial Completion.

2. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for warranty and service call requirements.

a) All Warranty Work shall be completed by factory-certified technician(s) of the component(s) being address.

1.07 COORDINATION

A. Refer to Section 28 1300 - ACCESS CONTROL and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for integration requirements with the Security Management System.

B. Coordinate the placement of intercom stations with millwork, furniture, equipment, etc. installed under other sections or by others.

C. Coordinate the work with other installers to provide power for equipment at required locations.

D. Coordinate the work with other installers to provide communication lines required for outside call forwarding where applicable.

E. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

F. Preinstallation Meetings:

1. Conduct meeting with facility representative to review intercom station and equipment locations.

2. Conduct meeting with facility representative and other related equipment manufacturers to discuss intercom entry system interface requirements.

G. Sequencing:

1. Do not install intercom stations until final surface finishes and painting are complete.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.09 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.10 WARRANTY

A. See Division 01 - CLOSEOUT SUBMITTALS, for additional warranty requirements.

B. Provide minimum one year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 - PRODUCTS AND MATERIALS

2.01 SYSTEM DESCRIPTION

A. Provide a complete functioning Intercom Entry System, and each element thereof, as specified, indicated, or reasonably inferred, on the Drawings and in these Specifications, including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include, but are not limited to, materials, labor, supervision, supplies, tools, equipment, transportation and utilities.

B. Installed separately from conventional general-purpose internal communications systems, the system shall be used for the following purposes as scheduled, indicated or required:

1. Intercom Entry communication
2. Integration with the access control system to unlock electrified locks at doors with intercom stations. Intercom exchange shall provide a dry contact input to the Access control system for requests to release locks at openings where intercoms are installed.

C. The system shall be comprised of:

1. Answering station(s)
2. Intercom entry station(s)
3. And associated cabling and equipment

D. The Intercom Entry System shall be integrated within the Security Management System (as defined in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS).

1. In addition to this integration, install and program the Intercom Entry System software client onto the Access Control System's security office workstation. This software client shall provide the same functionality as an Answering Station.
2. Intercom Entry System shall request to unlock door/gate through the Access Control System described in Section 28 1300 - ACCESS CONTROL.
3. Store and monitor camera video with Video Management System in Section 28 2000 - VIDEO SURVEILLANCE.

E. System Capacity: Support quantities of each station type indicated on Drawings.

2.02 INTERCOM ENTRY

A. Answering Station

1. Basis of Design: See Intercom Type Schedule on Electronic Security Legend

2. Manufacturers

a) See Intercom Type Schedule on Electronic Security Legend

B. Video Stations

1. Basis of Design: See Intercom Type Schedule on Electronic Security Legend

2. Manufacturers

a) See Intercom Type Schedule on Electronic Security Legend

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas to receive Intercom Entry System prior to install.

B. Notify Contract Administrator of conditions that would adversely affect installation or subsequent use.

C. Do not begin installation until unacceptable conditions are corrected.

3.02 INSTALLATION

A. Install in accordance with manufacturer instructions.

B. The work includes furnishing all labor, materials, tools, equipment and documentation required for a complete integrated intercom / security and communication system.

C. Perform work in accordance with NECA 1 (general workmanship).

D. Comply with ADA Standards and NFPA 101.

E. See Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS for sustainability requirements.

F. See Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY for seismic requirements.

G. Install intercom stations level and plumb.

H. Weatherproof Equipment: For units that are mounted outdoors, in damp locations, or where exposed to weather, install consistent with requirements of weatherproof rating.

I. Install power supplies and other auxiliary components in equipment rooms unless otherwise indicated.

J. Pathways shall meet Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY.

K. Bonding and Grounding shall meet Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS.

L. Cable Installation

1. Follow Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY and Section 27 1000 - STRUCTURED CABLING.

2. Installation of telecommunications cabling shall meet TIA-568 (SET) and TIA-569.

3. Conceal cables unless specifically indicated to be exposed.

4. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables so they identify media in coordination with system wiring diagrams.

M. ADJUSTING

1. Adjust Intercom Entry System for proper operation in accordance with manufacturer’s instructions.

3.03 FIELD QUALITY CONTROL

A. See Division 01 - QUALITY REQUIREMENTS, for additional requirements.

B. Provide services of a manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's field reports with submittals.

C. Test to verify wiring is free of shorts and grounds.

D. Prepare and start system in accordance with manufacturer's instructions.

E. Test system for proper operation.

F. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

G. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.04 CLEANING

A. See Division 01 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL, for additional requirements.

B. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 DEMONSTRATION AND TRAINING

A. See Division 01 - DEMONSTRATION AND TRAINING, for additional requirements.

B. Demonstration:

1. Demonstrate that integrated security and communication system functions properly.

2. Perform demonstration at final system inspection by qualified representative of manufacturer.

C. Instruction and Training:

1. Provide instruction and training of Owner's personnel as required for operation of Intercom Entry System.

2. Provide hands-on demonstration of operation of system components and complete system, including user-level program changes and functions.

3. Provide instruction and training by qualified representative of manufacturer.

3.06 PROTECTION

A. Protect installed integrated security and communication system from damage during construction.

END OF SECTION

PART 1 - GENERAL REQUIREMENTS

1.01 SECTION INCLUDES

A. System Description

B. System Component Requirements

C. Enclosures

D. Devices

1. Keypad and Display Module
2. Microwave-PIR Dual-Technology Sensors
3. Duress-Alarm Switches - Standard
4. Duress-Alarm Switches – Desk Mounted

E. Control Unit

F. Duress Alarm Strobe

G. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

H. Division 08 WINDOWS AND DOORS

I. Division 26 ELECTRICAL

J. Division 27 COMMUNICATIONS

K. Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS

L. Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS

R. Section 28 1300 - ACCESS CONTROL

S. Section 28 2000 - VIDEO SURVEILLANCE

1.02 ACRONYMS AND DEFINITIONS

A. PIR: Passive infrared

B. RFI: Radio-frequency interference

C. Control Unit: System component that monitors inputs and controls outputs through various circuits.

D. Primary Control Unit: System component that accepts inputs from other control units and may also perform control-unit functions. The unit has limited capacity for the number of protected zones and is installed at an unattended location or at a location where it is not the attendant's primary function to monitor the security system.

E. Monitoring Station: Facility that receives signals and has personnel always in attendance to respond to signals. A central station is a monitoring station that is listed.

F. Protected Zone: A protected premises or an area within a protected premises that is provided with means to prevent an unwanted event.

G. Standard Intruder: A person who weighs at least 100 lb and whose height is at least 48 inches; dressed in a long-sleeved shirt, slacks, and shoes.

H. Standard-Intruder Movement: Any movement, such as walking, running, crawling, rolling, or jumping, of a "standard intruder" in a protected zone.

I. Systems Integration: The bringing together of components of several systems containing interacting components to achieve indicated functional operation of combined systems.

J. Zone. A defined area within a protected premises. It is a space or area for which an intrusion must be detected and uniquely identified. The sensor or group of sensors must then be assigned to perform the detection, and any interface equipment between sensors and communication must link to primary control unit.

X. UL 681 - Installation and Classification of Burglar and Holdup Alarm Systems; current edition.

Y. UL 1610 - Central-Station Burglar-Alarm Units; Current Edition, Including All Revisions.

1.03 SUBMITTALS

A. Refer to requirements in Section 28 0010 - GENERAL ELECTRONIC SAFETY AND SECURITY REQUIREMENTS and Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

B. Include the following additional items as part of the Intrusion Detection submittals:

1. Bid

a) Unit Pricing: addition/deletion cost of an individual Motion Detector. Include all associated costs to furnish, install, terminate, test, and label, time, and fees to program the device into the

integrated Electronic Security System, and the required cabling and pathways to serve the device.

b) Alternate pricing to extend maintenance and support and product warranty as in the Quality Assurance section above.

1.04 QUALITY ASSURANCE

A. Contractor qualifications:

1. The ESC, or a qualified Intrusion Detection Contractor acting as a Sub-Contractor to the ESC, shall have a minimum five (5) continuous years in the business of installing and integrating Intrusion Detection Systems.

2. ESC or qualified Sub-Contractor shall be a certified installer by the intrusion detection equipment manufacturers whose products shall be incorporated into this project. Post-award certification will not be accepted.

3. ESC or qualified Sub-Contractor shall maintain certification by the manufacturers thru the duration of the warrantee period.

B. Personnel qualifications

1. All equipment/device installation and programming shall be conducted by factory-certified technicians of the components being installed.

C. Warranty

1. At a minimum, the manufacturer(s) equipment shall be covered by a 1-year parts and labor warranty covered by the ESC starting from Substantial Completion.

2. Refer to Section 28 1000 - ELECTRONIC SECURITY SYSTEMS for warranty and service call requirements.

a) All Warranty Work shall be completed by factory-certified technician(s) of the component(s) being address.

3. Include, as part of Base Bid, the associated cost to extend a parts and labor warranty for Intrusion Detection components from 1-year to 3 years.

PART 2 - PRODUCTS

2.01 SYSTEM DESCRIPTION

A. Provide a complete functioning Intrusion Detection System, and each element thereof, as specified, indicated, or reasonably inferred, on the Drawings and in these Specifications, including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include, but are not limited to, materials, labor, supervision, supplies, tools, equipment, transportation, and utilities.

B. The general scope includes, but is not limited to, these main systems:

1. Duress alarms, with communication links to perform monitoring, alarm, and control functions.

2. Systems Integration with the following systems and equipment:

a) Electronic door hardware via Access Control System.

b) Secondary reporting to Access Control System.

c) Video Surveillance System.

C. Description: Hard-wired, modular, microprocessor-based controls, intrusion sensors and detection devices, and communication links to perform monitoring, alarm, and control functions.

D. Review Construction Drawings for information related to the functional description of the system.

E. Supervision: System components shall be continuously monitored for normal, alarm, supervisory, and trouble conditions. Indicate deviations from normal conditions at any location in system. Indication includes identification of device or circuit in which deviation has occurred and whether deviation is an alarm or malfunction.

1. Alarm Signal: Display at primary control unit and actuate audible and visual alarm devices.

2. Trouble Condition Signal: Distinct from other signals, indicating that system is not fully functional. Trouble signal shall indicate system problems such as battery failure, open or shorted transmission line conductors, or control-unit failure.

3. Supervisory Condition Signal: Distinct from other signals, indicating an abnormal condition as specified for the particular device or control unit.

F. System Control: Primary control unit shall directly monitor intrusion detection units and connecting wiring.

G. System shall automatically reboot program without error or loss of status or alarm data after any system disturbance.

H. Operator Commands:

1. Help with System Operation: Display all commands available to operator. Help command, followed by a specific command, shall produce a short explanation of the purpose, use, and system reaction to that command.

2. Acknowledge Alarm: To indicate that alarm message has been observed by operator.

3. Place Protected Zone in Access: Disable all intrusion-alarm circuits of a specific protected zone. Tamper circuits may not be disabled by operator.

4. Place Protected Zone in Secure: Activate all intrusion-alarm circuits of a protected zone.

5. Protected Zone Test: Initiate operational test of a specific protected zone.

6. System Test: Initiate system-wide operational test.

I. Timed Control at Primary Control Unit: Allow automatically timed "secure" and "access" functions of selected protected zones.

J. Automatic Control of Related Systems: Alarm or supervisory signals from certain intrusion detection devices control the following functions in related systems:

1. Switch signal to selected monitor from video surveillance camera in vicinity of sensor signaling an alarm.

K. Report Generation: Pre-program the ability to easily generate a report (in spreadsheet file format) of the following - a record of alarm, supervisory, and trouble events. Entries shall include protected zone, device, and function.

L. Response Time: Two seconds between actuation of any alarm and its indication at primary control unit.

M. Circuit Supervision: Supervise all signal and data transmission lines, links with other systems, and sensors from primary control unit. Indicate circuit and detection device faults with both protected zone and trouble signals, sound a distinctive audible tone, and illuminate an LED. Maximum permissible elapsed time between occurrence of a trouble condition and indication at primary control unit is 20 seconds. Initiate an alarm in response to opening, closing, shorting, or grounding of a signal or data transmission line.

N. Programmed Secure-Access Control: System shall be programmable to automatically change status of various combinations of protected zones between secure and access conditions at scheduled times. Status changes may be preset for repetitive, daily, and weekly; specially scheduled operations may be preset up to a year in advance. Manual secure-access control stations shall override programmed settings.

O. Manual Secure-Access Control: Coded entries at manual stations shall change status of associated protected zone between secure and access conditions.

2.02 SYSTEM COMPONENT REQUIREMENTS

A. Compatibility: Detection devices and their communication features, connecting wiring, and primary control unit shall be selected and configured with accessories for full compatibility with the following equipment:

1. Door hardware specified in Division 08 - DOOR HARDWARE.

2. Access control system specified in Section 28 1300 - ACCESS CONTROL.

3. Video surveillance system specified in Section 28 2000 - VIDEO SURVEILLANCE.

B. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor entry connection to components.

1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements per Section 26 4313 - SURGE PROTECTIVE DEVICES.

2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Listed and labeled by a qualified testing agency for compliance with NFPA 731.

C. Intrusion Detection Units: Listed and labeled by a qualified testing agency for compliance with UL 639.

D. Interference Protection: Components shall be unaffected by radiated RFI and electrical induction of 15 V/m over a frequency range of 10 to 10,000 MHz and conducted interference signals up to 0.25-V rms injected into power supply lines at 10 to 10,000 MHz.

E. Tamper Protection: Tamper switches on detection devices, control units, annunciators, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled and when entering conductors are cut or disconnected. Primary control-unit alarm display shall identify tamper alarms and indicate locations.

F. Self-Testing Devices: Automatically test themselves periodically, but not less than once per hour, to verify normal device functioning and alarm initiation capability. Devices transmit test failure to primary control unit.

G. Antimasking Devices: Automatically check operation continuously or at intervals of a minute or less, and use signal-processing logic to detect blocking, masking, jamming, tampering, or other operational dysfunction. Devices transmit detection of operational dysfunction to primary control unit as an alarm signal.

H. Addressable Devices: Transmitter and receivers shall communicate unique device identification and status reports to primary control unit.

I. Remote-Controlled Devices: Individually and remotely adjustable for sensitivity and individually monitored at primary control unit for calibration, sensitivity, and alarm condition.

2.03 ENCLOSURES

A. Interior Sensors: Enclosures that protect against dust, falling dirt, and dripping noncorrosive liquids.

B. Interior Electronics: NEMA EN 10250, Type 12.

C. Exterior Electronics: NEMA EN 10250, Type 4X, stainless steel.

D. Corrosion Resistant: NEMA EN 10250, Type 4X, stainless steel.

E. Screw Covers: Where enclosures are readily accessible, secure with security fasteners of type appropriate for enclosure.

2.04 DEVICES

A. Keypad and Display Module

1. Basis of Design: Bosch Security Systems, Inc.
2. Acceptable Manufacturers
   a) ____
   b) Substitution: See Division 01 - PRODUCT REQUIREMENTS
3. Description
   a) Arranged for entering and executing commands for system-status changes and for displaying system-status and command-related data.
   b) Provide a Keypad compatible with the Intrusion Detection Control Panel.
   c) Shall have a minimum 5" color LCD touchsceen display.
   d) Shall have a built-in proximity reader as an option.
   e) Shall have be a.

B. Contacts (Door Position Switches):

1. Listed and labeled as complying with UL 634.
2. Magnetic Contacts: Encapsulated reed switch(es) and separate magnet; designed to monitor opened/closed position of doors or windows.
   a) Use standard security contacts (not balanced magnetic type) unless otherwise indicated.
   b) Use high security contacts (balanced magnetic type) for _____.
      1) High Security Contacts: Balanced magnetic type; designed to activate upon attempts to defeat contact through external magnetic tampering.
3. Contacts shall be Double Pole, Double Throw (DPDT) and connect to both the Access Control and Intrusion Detection Systems.
4. Contact Color: To be selected by Architect from manufacturer's available standard colors.

5. Basis of Design Products:
    a) _____.

C. Microwave-PIR Dual-Technology Sensors
1. Basis of Design: Honeywell DT7435
2. Acceptable Manufacturers
    a) Bosch Security Systems, Inc.
    b) General Electric Company; GE Security, Inc.
    c) Visonic Inc.
    d) ____
    e) Substitution: See Division 01 - PRODUCT REQUIREMENTS
3. Description
    a) Single unit combining a sensor that detects changes in microwave signals and a PIR sensor that detects changes in ambient level of infrared emissions caused by standard-intruder movement within detection pattern.
    b) Listed and labeled by a qualified testing agency for compliance with SIA PIR-01.
    c) Device Performance: An alarm is transmitted when either sensor detects a standard intruder within a period of three to eight seconds from when the other sensor detects a standard intruder.

D. Duress-Alarm Switches - Standard
1. Basis of Design: Schneider Electric XB4 BS9445
2. Acceptable Manufacturers
    a) General Electric Company; GE Security, Inc.
    b) Honeywell International Inc.; Resideo Technologies, Inc.
    c) Visonic Inc.
    d) ____
    e) Substitution: See Division 01 - PRODUCT REQUIREMENTS
3. Description
    a) Switch shall lock in activated position until reset with a key.
    b) Minimum Switch Rating: 50,000 operations.
    c) Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.

E. Duress-Alarm Switches – Desk Mounted
1. Basis of Design Product: Resideo Pro 269SN

2. Acceptable Manufacturers

a) General Electric Company; GE Security, Inc.

b) Schneider Electric

c) Visonic Inc.

d) ____

e) Substitution: See Division 01 - PRODUCT REQUIREMENTS

3. Description

a) Switch shall lock in activated position until reset with a key.

b) Minimum Switch Rating: 50,000 operations.

c) Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.

2.05 CONTROL UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Bosch Security Systems, Inc.

2. ____

3. Substitution: See Division 01 - PRODUCT REQUIREMENTS

B. Description:

1. Supervise sensors and detection subsystems and their connecting communication links, status control (secure or access) of sensors and detector subsystems, activation of alarms and supervisory and trouble signals, and other indicated functions.

a) System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.

b) Include a real-time clock for time annotation of events on the event recorder and printer.

c) Addressable initiation devices that communicate device identity and status.

d) Control circuits for operation of mechanical equipment in response to an alarm.

2. Construction: Freestanding equipment cabinet, modular, with separate and independent alarm and supervisory system modules. Alarm-initiating protected zone boards shall be plug-in cards. Arrangements that require removal of field wiring for module replacement are unacceptable.

3. Comply with UL 609, SIA CP-01, UL 603, and UL 1610.

4. Console Controls and Displays: Arranged for interface between human operator at primary control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

    a) Annunciator and Display: LCD, two lines of 40 characters, minimum.

    b) Keypad: Arranged to permit entry and execution of programming, display, and control commands.

    c) Control-Unit Network: Automatic communication of alarm, status changes, commands, and other communications required for system operation. Communication shall return to normal after partial or total network interruption such as power loss or transient event. Total or partial signaling network failures shall identify the failure and record the failure at the annunciator display and at the system printer.

    d) Field Device Network: Communicate between the control unit and field devices of the system. Communications shall consist of alarm, network status, and status and control of field-mounted processors. Each field-mounted device shall be interrogated during each interrogation cycle.

    e) Coordinate operator commands.

    f) Operator Controls: Manual switches and push-to-test buttons that do not require a key to operate. Prevent resetting of alarm, supervisory, or trouble signals while alarm or trouble condition persists. Include the following:

        1) Acknowledge alarm.

        2) Silence alarm.

        3) System reset.

        4) LED test.

    g) Timing Unit: Solid state, programmable, 365 days.

    h) Confirmation: Relays, contactors, and other control devices shall have auxiliary contacts that provide confirmation signals to system for their respective on or off status. Software shall interpret such signals, display equipment status, and initiate failure signals.

    i) Alarm Indication: Audible signal sounds and a plain-language identification of the protected zone originating the alarm appears on LCD display at primary control unit. Annunciator panel displays a common alarm light and sounds an audible tone. and Duress alarm activation sounds a siren and strobe as well as keypad annunciation.

5. Protected Zones: Quantity of alarm and supervisory zones as indicated, with capacity for expanding number of protected zones by a minimum of 25 percent.

6. Power Supply Circuits: Primary control units shall provide power for remote power-consuming devices. Circuit capacity shall be adequate for at least a 25 percent increase in load.

7. Verify that manufacturer can provide UPS to provide a minimum of six hours of primary control unit operation.

8. Cabinet: Lockable, steel enclosure arranged so operations required for testing, normal operation, and maintenance are performed from front of enclosure. If more than a single cabinet is required to form a complete control unit, provide exactly matching modular enclosures. Accommodate all components and allow ample gutter space for field wiring. Identify each enclosure by an engraved, laminated, phenolic-resin nameplate. Lettering on enclosure nameplate shall not be less than 1 inch high. Identify, with permanent labels, individual components and modules within cabinets.

9. Transmission to Monitoring Station: A communications device to automatically transmit alarm, supervisory, and trouble signals to the monitoring station, operating over client-provided Ethernet network (LAN).

2.06 DURESS-ALARM STROBE

A. Basis of Design: Federal Signal 141ST

B. Acceptable Manufacturers

1. General Electric Company; GE Security, Inc.

2. Honeywell International Inc.; Honeywell Security.

3. Visonic Inc.

4. _____

5. Substitution: See Division 01 - PRODUCT REQUIREMENTS

C. Description

1. Provide with a Red lens

2. Suitable for use with a 24VDC power supply.

3. Drive System Types: Pinned Torx.

4. Socket Flat Countersunk Head Fasteners:

a) Heat-treated alloy steel, ASTM F835.

b) Stainless steel, ASTM F879, Group 1 CW.

5. Socket Button Head Fasteners:

a) Heat-treated alloy steel, ASTM F835.

b) Stainless steel, ASTM F879, Group 1 CW.

6. Socket Head Cap Fasteners:

a) Heat-treated alloy steel, ASTM A574.

b) Stainless steel, ASTM F837, Group 1 CW.

PART 3 - EXECUTION

3.01 GENERAL

A. Install in accordance with manufacturer's instructions.

B. Meet sustainability requirements per Section 28 0013 - SUSTAINABLE DESIGN REQUIREMENTS.

3.02 INDENTIFICATION / LABELING

A. Label devices, switches, primary control unit(s), strobes, and associated cabling with identification number/room number as indicated on the drawings. Where drawings are silent, coordinate labeling scheme with Owner prior to pre-construction submittals and indicate proposed identification/labeling on pre-construction shop drawings.

B. Primary Control Unit enclosures shall be labeled as follows:

1. Cover shall be identified as “Electronic Security System – Intrusion Detection – Primary Control Unit (insert identifier)”

2. Cabling for devices shall be labeled at both ends with “(Device Type) – (insert identifier)”. Example: Motion Detector #12 (Corridor A101)

3.03 START-UP OF SYSTEMS

A. Prior to system start-up, conduct the following examinations:

1. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of intrusion detection.

2. Examine roughing-in for embedded and built-in anchors to verify actual locations of intrusion detection connections before intrusion detection installation.

3. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of intrusion detection.

4. Inspect built-in and cast-in anchor installations, before installing intrusion detection, to verify that anchor installations comply with requirements. Prepare inspection reports.

a) Remove and replace anchors where inspections indicate that they do not comply with requirements. Re-inspect after repairs or replacements are made.

b) Perform additional inspections to determine compliance of replaced or additional anchor installations. Prepare inspection reports.

5. For material whose orientation is critical for its performance as a ballistic barrier, verify installation orientation.

6. Proceed with installation only after unsatisfactory conditions have been corrected.

3.04 SYSTEM INSTALLATION

A. Comply with UL 681 and NFPA 731.

B. Install wall-mounted equipment, with tops of cabinets not more than 72 inches above the finished floor.

1. Comply with requirements for seismic-restraint devices specified in Section 28 0548 - SEISMIC CONTROLS FOR ELECTRONIC SECURITY.

C. Security Fasteners: Where accessible to standard intruder, install intrusion detection components using security fasteners with head style appropriate for fabrication requirements, strength, and finish of adjacent materials except that a maximum of two different sets of tools shall be required to operate security fasteners for Project. Provide stainless-steel security fasteners in stainless-steel materials.

D. Wiring Installation

1. Wiring Method: Install wiring in metal raceways according to Section 28 0510 - COMMON WORK RESULTS FOR ELECTRONIC SECURITY. Control and data transmission wiring shall not share conduit with other building wiring systems.

2. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Use lacing bars and distribution spools. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer. Install conductors parallel with or at right angles to sides and back of enclosure. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

3. Wires and Cables:

a) Conductors: Size as recommended in writing by system manufacturer unless otherwise indicated.

b) 120-V Power Wiring: Shall be by Division 26 Contractor coordinate final connection.

c) Control and Signal Transmission Conductors: Install shielded, twisted-pair cable unless otherwise indicated or if manufacturer recommends unshielded cable, according to Section 28 1010 - CONDUCTORS AND CABLES FOR ELECTRONIC SECURITY.

d) For Primary Control Unit connection to the Electronic Security Network, See Section 27 1000 - STRUCTURED CABLING for network cabling requirements.

e) Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

f) Install power supplies and other auxiliary components for detection devices at control units unless otherwise indicated or required by manufacturer. Do not install such items near devices they serve.

g) Identify components with engraved, laminated-plastic or metal nameplate for primary control unit and each terminal cabinet, mounted with corrosion-resistant screws.

E. GROUNDING

1. Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

2. Ground equipment in accordance with manufacturer requirements and TIA-607.

3. Refer to grounding requirements of Section 27 1100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS.

3.05 PROJECT CLOSE-OUT INSTRUCTIONS

A. Functional Testing

1. Conduct and finish functional tests of the Intrusion Detection system, and integrated testing where applicable.

2. Comply with provisions in NFPA 731, Ch. 9, "Testing and Inspections."

a) Inspection: Verify that units and controls are properly labeled, and interconnecting wires and terminals are identified.

b) Test Methods: Intrusion detection systems and other systems and equipment that are associated with detection and accessory equipment shall be tested according to Table "Test Methods" and Table "Test Methods of Initiating Devices."

3. Documentation: Comply with provisions in NFPA 731, Ch. 4, "Documentation" and submit as part of Preliminary Project Completion

Submittal as required by Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

B. Follow all other Project Close-Out requirements as detailed in Section 28 1000 - ELECTRONIC SECURITY SYSTEMS.

3.06 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other-than-normal occupancy hours for this purpose. Visits for this purpose shall be in addition to any required by warranty.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 7 Section “Penetration Firestopping” for material and methods for firestopping systems.
2. Division 28 Section "Common Work Results for Electronic Safety and Security," for materials and methods for coordination, sleeves and common installation requirements.

1.02 DESCRIPTION OF WORK

A. This Section requires the Contractor to furnish all materials required to install the fire alarm system. The Contractor shall be responsible for installing, testing, and start-up of a complete functioning fire alarm system, and each element thereof, as specified or indicated on the Drawings or reasonably inferred, including every article, device or accessory (whether or not specifically called for by item) necessary to facilitate each system's function as indicated by the design and the equipment specified. Elements of the work include materials, labor, supervision, supplies, equipment, transportation and utilities.

B. Division 28 of the Specifications and Drawings numbered with prefixes FP generally describe these systems, but the scope of the Fire Alarm work includes all such work indicated in the Contract Documents: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Fire Suppression, Mechanical, Plumbing, Fire Alarm and Electrical Drawings and Specifications; and Addenda.

C. The Drawings have been prepared diagrammatically and are intended to convey the scope of work, indicating the general location and arrangement of the major equipment, devices, appliances, etc. without showing all the exact details as to elevations, circuits, routing, and other installation requirements. Use the Drawings as a guide when laying out the system and verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers' requirements, will ensure a complete, coordinated, satisfactory and properly operating system.

D. The scope of work in this section includes:

1. Fire alarm control unit
2. Remote annunciator
3. Manual fire alarm pull stations
4. System smoke detectors
5. Notification appliances
6. Sprinkler system waterflow and valve tamper alarms
7. Elevator recall
8. Air handling unit shutdown
9. Battery stand-by power
10. Multi-channel one-way voice notification system
11. Digital alarm communicator transmitter (DACT)

1.03 QUALITY ASSURANCE

A. All work under this division shall be executed in a thorough professional manner by competent and experienced workmen licensed to perform the Work specified.

B. All work shall be installed in strict conformance with manufacturer's requirements and recommendations. Equipment and materials shall be installed in a neat and professional manner and shall be aligned, leveled, and adjusted for satisfactory operation.

C. Material and equipment shall be new, shall be of the best quality and design, shall be current model of the manufacturer, shall be free from defects and imperfections and shall have markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Material and equipment of the same type shall be made by the same manufacturer whenever practicable.

D. Installation of devices shall be performed or supervised by a National Institute for Certification of Engineering Technologies (NICET) Level 2 or higher Fire Alarm Technician. Submit copies of the certification for employees through shop drawing submittals.

1.04 APPLICABLE CODES AND STANDARDS

A. Execute Work in accordance with the National Fire Protection Association Standards and all Local, State, and National codes, ordinances and regulations in force governing the particular class of Work involved. Obtain timely inspections by the constituted authorities. Upon final completion of the Work obtain and deliver to the Owner executed final certificates of acceptance from the Authority Having Jurisdiction.

B. Any conflict between these Specifications and accompanying Drawings and the applicable Local, State and Federal codes, ordinances and regulations shall be

reported to the Architect in sufficient time, prior to the opening of Bids, to prepare the Supplementary Drawings and Specification Addenda required to resolve the conflict.

C. The governing codes are minimum requirements. Where these Drawings and Specifications exceed the code requirements, these Drawings and Specification shall prevail.

D. All material, manufacturing methods, handling, dimensions, method or installation and test procedure shall conform to but not be limited to the following industry standards and codes.

1. NFPA (National Fire Protection Association) 70, "National Electrical Code", 2020 Edition.
2. NFPA 72, "National Fire Alarm and Signaling Code", 2019 Edition.
3. Underwriters Laboratories, "Fire Protection Equipment Directory", Latest Edition.
4. International Building Code (IBC) 2021 Edition with local amendments.
5. International Fire Code 2021 Edition with local amendments.
6. ICC/ANSI A117.1, "Accessible and Useable Buildings and Facilities", Current edition.
7. ASME A17.1, "Safety Code for Elevators and Escalators", Current Edition.

E. Contractor shall comply with rules and regulations of public utilities and municipal departments affected by connections of services.

1.05 DEFINITIONS

A. General:

1. Furnish: The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation and similar operations."
2. Install: The term "install" is used to describe operations at the project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations."
3. Provide: The term "provide" means "to furnish and install, complete and ready for the intended use."
4. Furnished by Owner or Furnished by Others: The item will be furnished by the Owner or Others. It is to be installed and connected under the requirements of this Division, complete and ready for operation, including items incidental to the Work, including services necessary for proper installation and operation. The installation shall be included under the guarantee required by this Division.

5. NRTL: Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the AHJ over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other listed Manufacturers and models that meet the specified criteria.

6. FACP: Fire Alarm Control Panel.

7. NICET: National Institute for Certification in Engineering Technologies.

8. VESDA: Very Early Smoke-Detection Apparatus.

B. The terms "approved equal", “equivalent”, or "equal" are used synonymously and shall mean “accepted by or acceptable to the Engineer as equivalent to the item or manufacturer specified”. The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.

1.06 COORDINATION

A. The Contractor shall visit the site and ascertain the conditions to be encountered while installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make due provision for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, incorrect or faulty installation of Work under this Division or for additional compensation for Work covered by this Division.

B. The Contractor shall refer to Drawings of the other disciplines and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. The Contractor shall make offsets required to clear equipment, beams and other structural members; and to facilitate concealing piping in the manner anticipated in the design.

C. The Contractor shall maintain a foreman on the jobsite at all times to coordinate his work with other contractors and subcontractors so that various components of the Fire Alarm systems will be installed at the proper time, will fit the available space, and will allow proper service access to the equipment. Carry on the work in such a manner that the work of the other contractors and trades will not be handicapped, hindered, or delayed at any time.

D. Work of this Division shall progress according to the "Construction Schedule" as established by the Prime Contractor and his subcontractors and as approved by the Architect. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule so as to ensure successful achievement of schedule dates.

E. Where coordination and interfacing with other systems or equipment is required, it shall be the responsibility of the fire alarm system installer (contractor) to either provide the relays, contacts, power supplies and other necessary hardware or see to it that such hardware is provided with the other systems or equipment.

F. The contractor shall coordinate work in this section with all related trades. Work and/or equipment provided in other sections and related to the fire alarm system shall include, but not be limited to:

1. Sprinkler waterflow and valve tamper switches shall be provided by the fire sprinkler installer, but wired and connected by the fire alarm installer.

2. Duct smoke detectors shall be furnished, wired and connected by the fire alarm system installer. The HVAC installer shall furnish necessary duct opening to install the duct smoke detector's housing.

3. Air handling fan control circuits and contacts to be furnished by the HVAC control equipment.

4. Conduit shall be by Division 26 "Common Work Results for Electrical".

G. System shall be complete and operational with power and control wiring provided to meet the design intent shown on the drawings and specified within the specification sections.

1.07 MEASUREMENTS AND LAYOUTS

A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Figured dimensions shall be taken in preference to scale dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing the Contract Documents. The Contractor will be held responsible for errors which could have been avoided by proper checking and inspection.

1.08 SUBMITTALS

A. Refer to Division 1 and General Conditions for submittal requirements, in addition to requirements specified herein. Submittals not complying fully with the submittal requirements will be rejected.

B. Contractor shall prepare installation drawings (working shop drawings) based upon this design. Requests for deviations from the approved design shall be submitted in writing to the Engineer of Record for approval.

C. Shop drawings shall be of sufficient clarity to indicate the location, nature and extent of the work proposed and show in detail that it will conform to the provisions of this code and relevant laws, ordinances, rules and regulations. Drawings that are not legible, or that do not contain sufficient detail to verify compliance with applicable codes and standards, will be rejected without further review.

D. Submittals and shop drawings shall not contain HEI's firm name or logo, nor shall it contain the HEI's engineers' seal and signature. They shall not be copies of HEI's work product. If the contractor desires to use elements of such product, the

license agreement for transfer of information at the end of this section must be used.

E. Submit Shop Drawings as early as required to support the project schedule. Allow for two weeks Engineer review time plus mailing time plus a duplication of this time for resubmittal if required. Submit Shop Drawings as soon as possible before construction starts.

F. Before submitting Shop Drawings and material lists, the Contractor shall verify that the equipment submitted is mutually compatible and suitable for the intended use. Contractor shall verify that the equipment will fit the available space and allow ample room for maintenance. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.

G. Refer to Division 1 for acceptance of electronic submittals for this project. For electronic submittals, Contractor shall submit the documents in accordance with the procedures specified in Division 1. Contractor shall notify the Architect and Engineer that the shop drawings have been posted. If electronic submittal procedures are not defined in Division 1, Contractor shall include the website, user name and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives. Contractor shall allow the Engineer review time as specified above in the construction schedule. Contractor shall submit only the documents required to purchase the materials and/or equipment in the electronic submittal and shall clearly indicate the materials, performance criteria and accessories being proposed. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.

H. The Engineer's checking and subsequent acceptance of such submittals shall not relieve the Contractor from responsibility for deviations from Drawings or Specifications unless he has, in writing, called the Engineer's and Architect's attention to such deviations at the time of submission, and secured written acceptance; nor shall it relieve him from responsibility for errors in dimensions, details, sizes of members, or quantities; or for omissions of components or fittings; or for not coordinating items with actual building conditions and adjacent work.

I. Product Data: Provide a bill of materials and product cutsheets showing material specifications, electrical characteristics and connection requirements. Highlight or indicate specific product options and accessories as applicable to the project.

J. Shop Drawings:

1. Comply with recommendations and requirements in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.

2. Shop drawings shall be prepared by a NICET Level 3 or higher certified technician. Submit copies of the certification for the designer with submittal.

3. The fire alarm system equipment vendor shall provide shop drawings showing fire alarm floor plans and a full building riser diagram. Fire alarm floor plans and riser diagram shall show fire alarm control panel, annunciator, all fire alarm initiating devices and notification appliances. Show typical wiring diagrams of control panel/s, annunciator and each device and wiring connections required. Show all interfaces to other systems, such as temperature control systems, and security systems.

4. The fire alarm floor plans and riser diagram shall show wiring to all fire alarm devices/appliances, indicating wire sizes and quantities as well as conduit/raceway sizes and locations of end-of-line (EOL) resistors. The fire alarm floor plans and riser diagram shall clearly show the routing of all fire alarm system wiring, including all horizontal routing and vertical routing (in chases).

5. Routing of all fire alarm wiring shall comply with the "Survivability" requirements of NFPA 72.

6. Provide a Sequence of Operations Matrix that explains how the submitted fire alarm system functions.

7. Include voltage drop calculations for notification-appliance circuits.

8. Include battery-size calculations.

9. Shop drawing scale shall match the Engineer's drawings where possible. Scale shall not be less than 3/32" = 1'-0".

K. Indicate within the submittal all applicable UL listings and all applicable approvals or certifications.

L. Qualification Data: Submit copies of the certification for the Installer.

M. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of products.

1.09 ELECTRONIC DRAWING FILES

A. In preparation of shop or record drawings, Contractor may, at his option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of $200 for a drawing set up to 12 sheets and $15 per sheet for each additional sheet. Contact the Architect for Architect's written authorization. Contractor shall complete and send the form attached at the end of this section along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form. In addition to payment, Architect's written authorization and Engineer's release agreement form must be received before electronic drawing files will be sent.

1.10 SUBSTITUTIONS

A. Refer to Division 1 and General Conditions for Substitutions.

B. Materials, products and equipment described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.

C. No substitution will be considered prior to receipt of Bids unless written request for approval to bid has been received by the Engineer at least ten calendar days prior to the date for receipt of Bids. Each such request shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including drawings, cuts, performance and test data and other information necessary for an evaluation. A statement setting forth changes in other materials, equipment or other Work that incorporation of the substitute would require shall be included. The burden of proof of the merit of the proposed substitute is upon the proposer. The Engineer's decision of approval or disapproval to bid of a proposed substitution shall be final.

D. If the proposed substitution is approved prior to receipt of Bids, such approval will be stated in an Addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.

E. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

1.11 OPERATION AND MAINTENANCE DATA

A. Refer to Division 1 and General Conditions for Operational and Maintenance Manuals.

B. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.

C. The O&M Manuals shall be provided in labeled 3-ring binder with cover, binding label, tabbed fly sheets and plastic insert folders for Record Drawings. Include the following sections with the appropriate information for each section:

1. Typewritten Index.
2. Qualifications. Provide designer and installer qualification.
3. Bill of Materials. Provide complete nomenclature, model number and vendor information for all parts.
4. Operating Instructions. Complete instructions detailing operation and maintenance of all equipment installed.
5. Product Data: Provide product cutsheets for all equipment utilized and installed.
6. Riser diagram.
7. Device addresses.

8. Record copy of site-specific software.

9. Provide "Inspection and Testing Form" according to the "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:

   a) Equipment tested.

   b) Frequency of testing of installed components.

   c) Frequency of inspection of installed components.

   d) Requirements and recommendations related to results of maintenance.

   e) Manufacturer's user training manuals.

10. Manufacturer's required maintenance related to system warranty requirements.

11. Abbreviated operating instructions for mounting at fire alarm control unit and each annunciator unit.

12. Guarantee. Copy of all guarantees and warranties issued.

13. Contact list with minimum three service representative phone numbers.

1.12 RECORD DRAWINGS

A. A set of prints shall be kept on the jobsite during construction for the purpose of noting changes to location of all fire alarm equipment, devices, appliances and circuits as finally installed. During the course of construction, the Contractor shall indicate on these drawings, changes made from the Contract Drawings. Particular attention shall be made to those items which need to be located for servicing.

B. The record drawings shall show actual locations of initiating devices, notification appliances, and end-of-line devices. Show the approximate location, size and type of all wiring and routing of wiring. Drawings should also include one-line riser diagrams showing all devices.

C. The Contractor shall sign-off on the Record Drawings as being an accurate representation of the completed installation.

D. Refer to Division 1 and General Conditions for Record Drawings

E. At the completion of the project, the Contractor shall obtain at his expense, reproducible copies of the drawings and incorporate changes noted on the jobsite work prints onto these sheets. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", with date. These drawings shall be delivered to the Architect/Engineer.

1.13 SPARE PARTS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Provide 10% of the total or a minimum of one (1) manual pull station.
2. Provide 10% of the total or a minimum of two (2) of each type of automatic smoke detector.
3. Provide 5% of the total or a minimum of two (2) of each strobe type and candela rating.
4. Provide 5% of the total or a minimum of two (2) of each speaker type. Combination speaker/strobe units matching the units installed are acceptable.
5. Keys and Tools: One extra set for access to locked or tamper proofed components.

1.14 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing the products indicated in this section with minimum three years documented experience.

B. Installer: Company specializing in installing the products indicated in this section with minimum three years documented experience. Shall be bondable and licensed Contractor and employ full-time factory-trained and certified installers and technicians. Installers shall provide with the fire alarm submittal proof of factory training for each installer.

C. Final checkout and verification: Shall be conducted by a technician certified by the National Institute for Certification in Engineering Technologies (NICET) registered as level 2 or higher in the fire protection technology certification program. Provide certification information with fire alarm submittal.

D. The equipment manufacturer's service department shall be fully stocked in standard parts and components and engaged in the maintenance of fire alarm systems. On-the-premises service shall be available within 4 hours of notification, 7 days a week, 24 hours a day.

1.15 GUARANTEES AND WARRANTIES

A. Refer to Division 1 and General Conditions for Guarantees and Warranties.

B. Furnish service and maintenance of fire alarm system including wiring and raceways for one year from date of substantial completion.

C. All components, system software, parts and assemblies shall be guaranteed against defects in materials and workmanship for the one-year period stated above, unless specific items are noted to carry a longer warranty in the Construction Documents or manufacturer's standard warranty.

D. Labor (including travel expenses) to trouble-shoot, repair, reprogram, or replace components shall be furnished by this contractor at no charge during the warranty period.

E. All corrective software modifications made during warranty periods shall be updated on all user documentation and on user and manufacturer archived software.

1.16 PROJECT CONDITIONS

A. Use of Devices during Construction: Protect devices during construction unless devices are placed in service to protect the facility during construction.

1.17 SEQUENCING AND SCHEDULING

A. Existing Fire alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service, and label existing fire alarm equipment "NOT IN SERVICE" until removed from the building.

B. Equipment Removal: After acceptance of new fire alarm system, remove all unused fire alarm equipment, wiring and installation materials not necessary for system functionality or spare parts.

PART 2 - PRODUCTS AND MATERIALS

2.01 SYSTEM DESCRIPTION

A. Noncoded, UL-listed addressable system, with multiplexed signal transmission and voice/strobe evacuation.

B. All components provided shall be listed for use with the selected system.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Source Limitations for Fire alarm System and Components: Components shall be compatible with, and operate as an extension of, existing system. Provide system manufacturer's certification that all components provided have been tested, and will operate, as a system.

2.02 MANUFACTURER

A. Subject to compliance with requirements, provide products manufactured by the following manufacturers as indicated on the Drawings:

1. Notifier
2. SimplexGrinnell
3. Siemens-Cerberus Division
4. Kidde/Edwards
5. Gamewell-FCI

6. Fike

7. Silent Knight

2.03 SYSTEMS OPERATIONAL DESCRIPTION

A. Fire alarm signal initiation shall be by one or more of the following devices and systems:

1. Manual pull stations.

2. Smoke detectors.

3. Air-sampling smoke-detection system.

4. Automatic sprinkler system water flow.

5. Fire extinguishing system operation.

B. Fire alarm signal shall initiate the following actions:

1. Identify alarm and specific initiating device at fire alarm control unit and remote annunciators (if provided).

a) A pulsing alarm tone shall occur within the control panel until acknowledged.

b) The alarm LED shall flash on the control panel and remote annunciator panel until the alarm has been acknowledged at the control panel/remote annunciator panel. Once acknowledged, this same LED shall latch on and the custom label for the address in alarm shall be displayed on the alphanumeric LCD readout. A subsequent alarm received from another address after acknowledged shall flash the alarm LED on the control panel showing the new alarm information.

2. Transmit an alarm signal to the alarm supervising station.

3. Audible notification appliances shall sound until silenced by the alarm silence switch at the control panel.

4. All visible alarm notification appliances shall display a continuous synchronized pattern until reset by the Alarm Reset Switch.

5. Record events in the system memory.

6. Activate voice/alarm communication system.

7. All air-handling systems that are monitored shall shutdown and remain down until the fire alarm control panel is reset.

8. Activate emergency lighting control.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:

1. Valve supervisory switch.

2. Duct-smoke detectors

3. High- or low-air-pressure switch of a dry-pipe or pre-action sprinkler system.
4. Fire pump power phase reversal.
5. Independent fire detection and suppression systems.
6. User disabling of zones or individual devices.
7. Loss of communication with any panel on the network.

D. System Supervisory Signal Actions:
1. Identify specific device causing supervisory signal fire alarm control unit and remote annunciators (if provided).
    a) Visible and audible supervisory alarm indicated by address at fire alarm control panel.
    b) Manual acknowledge function at fire alarm control panel and remote annunciator panel silences audible supervisory alarm; visible alarm is displayed until device is returned to its normal position/supervisory condition is cleared.
2. Record events in the system memory.
3. Within 90 seconds transmit a supervisory signal to the alarm supervising station.
4. Duct-mounted smoke detectors shall shutdown their respective unit upon detection of smoke and remain down until manually reset.

E. System trouble signal initiation shall be by one or more of the following devices and actions:
1. Open circuits, shorts, and grounds in designated circuits.
2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
3. Loss of communication with any addressable sensor, input module, relay, control module, remote annunciator, printer interface, or Ethernet module.
4. Loss of primary power at fire alarm control unit.
5. Ground or a single break in internal circuits of fire alarm control unit.
6. Abnormal ac voltage at fire alarm control unit.
7. Break in standby battery circuitry.
8. Failure of battery charging.
9. Abnormal position of any switch at fire alarm control unit or annunciator.
10. Voice signal amplifier failure.

F. System Trouble Signal Actions:

1. Identify specific device causing trouble signal fire alarm control unit and remote annunciators (if provided).
    a) Visible and audible trouble alarm indicated by address at fire alarm control panel.
    b) Manual acknowledge function at fire alarm control panel and remote annunciator panel silences audible trouble alarm; visible alarm is displayed until device is returned to its normal position/trouble condition is cleared.
2. Record events in the system memory.
3. After a time delay of <90 seconds>, transmit a trouble signal to the alarm supervising station.

2.04 FIRE ALARM SYSTEM CONTROL UNIT

A. General Requirements for Fire alarm Control Unit:

1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864.
    a) System software and programs shall be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining the information through failure of primary and secondary power supplies.
    b) Include a real-time clock for time annotation of events on the event recorder and printer.
    c) Provide communication between the FACP and remote circuit interface panels, annunciators, and displays.
    d) The FACP shall be listed for connection to a central-station signaling system service.
    e) Provide nonvolatile memory for system database, logic, and operating system and event history. The system shall require no manual input to initialize in the event of a complete power down condition. The FACP shall provide a minimum 500-event history log.
    f) The control unit shall have dedicated alarm, supervisory and trouble LED’s and dedicated alarm, supervisory and trouble acknowledge, and alarm silence switches.
    g) Lamp Test: Manual lamp test function causes each LED to function at fire alarm control panel.
    h) Drill Sequence of Operation: Manual drill function causes alarm mode operation as described above.
    i) Install in a surface mounted enclosure.
    j) The fire alarm system control unit shall be UL listed for releasing service.

B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Annunciator and Display: Liquid-crystal type, 80 characters, minimum.

2. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.

C. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits: Provide circuitry, which meets the performance requirements during abnormal conditions, based upon the class of the circuitry selected.

1. Initiating Device Circuits: Class B.

a) Pathway Survivability: Level 0.

2. Notification Appliance Circuits: Class B.

a) Pathway Survivability: Level 0.

3. Signaling Line Circuits: Class B.

a) Pathway Survivability: Level 0.

D. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals and digital alarm communicator transmitters shall be powered by 24-V dc source.

1. The location of the dedicated branch circuit disconnecting means shall be permanently identified at the control unit.

2. The circuit disconnecting means shall have a red marking and be provided with a breaker lock or other approved method to avoid accidental operation.

3. Alarm current draw of entire fire alarm system shall not exceed 80 percent of the power-supply module rating.

E. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.

1. Batteries: Sealed lead acid.

2. The secondary power system shall operate system in standby mode for 24 hours followed by alarm mode for 15> minutes.

F. System Supervision: Automatically detects and reports open circuits, shorts, and grounds of wiring for initiating device, signaling line, and notification appliance circuits. Alarm, supervisory and trouble signals shall be monitored by the supervising station over a Digital Alarm Communicator Transmitter (DACT), or other approved method.

G. Elevator Recall and Shutdown: Provide output signals to the elevator controller(s) using addressable relays to initiate elevator recall and shutdown functions per ASME A17.1. Provide equipment, output signals and logic as required by code and by the elevator system supplier and installer.

1. Elevator recall shall be initiated by any one of the following alarm-initiating devices:

a) Elevator lobby detector(s).

b) Smoke detector in elevator machine room.

c) Smoke detector(s) in elevator hoistway.

2. Elevator controller shall be programmed to move the cars to the alternate recall floor if lobby detectors located on the designated recall floors are activated.

3. Elevator shutdown shall be initiated by any one of the following alarm-initiating devices:

a) Heat detector in elevator machine room.

b) Heat detector(s) in elevator hoistway.

2.05 EMERGENCY VOICE/ALARM COMMUNICATIONS SYSTEMS (EVACS):

A. The system shall incorporate one-way emergency voice communication via specified speakers. A central audible module shall provide for the necessary alarm message/tone generation, main and remote microphone connections and mixers/pre-amplifier circuits. Continuous supervision shall be provided along with specific information as to the type of failure (main microphone trouble, tone trouble, etc.)

1. Indicate number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711.

a) Allow the application of, and evacuation signal to, indicated number of zones and, at the same time, allow voice paging to the other zones selectively or in any combination.

b) Programmable tone and message sequence selection.

c) Standard digitally recorded messages for "Evacuation" and "All Clear."

d) Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire alarm control unit.

2. Hand held push to talk, noise canceling microphone in recessed protective panel mounted enclosure; 5 feet coiled cable; and LED to indicate the microphone push to talk has been pressed.

3. Audible power amplifiers shall be self filtered; contain 24 volt power supply, transformer and amplifier monitor circuits; Amplifier shall operate all system speakers plus twenty-five (25) percent spare capacity.

4. Digitized voice messages are required to notify building occupants during alarm conditions. Message player shall not rely on tape or mechanical means of transmitting the voice message. A standard evacuation message shall be provided; however, the system shall be capable of transmitting a custom message of up to five (5) minutes long.

5. Alarm sequence shall consist of a temporal (3) alarm tone for a maximum of 15 seconds followed by an automatic pre-selected message. At the end of the message the tone shall resume. This sequence shall continue until the fire alarm control panel has been silenced. Manual voice paging shall be available via panel switches to page individual floors or groups of floors. Each floor shall be an individual audible zone and have a corresponding audible switch.

2.06 DIGITAL ALARM COMMUNICATOR TRANSMITTER

A. Digital alarm communicator transmitter shall be acceptable to the central station and shall comply with UL 632.

B. Coordinate with General Contractor to ensure proper connections are provided for monitoring of the transmitter. Communication lines shall be two dedicated telephone lines, or other approved method complying with NFPA 72 and the Authority Having Jurisdiction.

C. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire alarm control unit and automatically capture two telephone line(s) and dial a preset number for a remote central station. When contact is made with supervising station(s), signals shall be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the supervising station over the remaining line. Transmitter shall automatically report telephone service restoration to the supervising station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.

D. Digital data transmission shall include the following:

1. Address of the alarm initiating device.
2. Address of the supervisory signal.
3. Address of the trouble signal.
4. Loss of ac supply.
5. Loss of power.
6. Low battery.
7. Abnormal test signal.

8. Communication bus failure.

E. Secondary Power: Integral rechargeable battery and automatic charger.

F. Self-Test: Conducted automatically every 24 hours with report transmitted to supervising station.

2.07 REMOTE ANNUNCIATOR

A. Description: Alphanumeric display and LED indicating lights shall match those of fire alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

1. Mounting: Flush.

2. Provide remote microphone and emergency/voice alarm system controls.

2.08 INITIATING DEVICES

A. Manual Fire Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.

1. Double action mechanism requiring two actions to initiate an alarm, pull lever type; with integral addressable module arranged to communicate manual station status (normal, alarm, or trouble) to fire alarm control unit.

2. Station Reset: Key or wrench operated switch.

3. Indoor Protective Shield: Factory fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.

B. System Smoke Detectors: Photoelectric type complying with UL 268 operating at 24-V dc, nominal with integral addressable module arranged to communicate detector status (normal, alarm, or trouble) to fire alarm control unit.

1. Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base.

2. Device shall have an integral visual-indicating light, LED type, indicating detector has operated and power-on status.

3. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.

4. Photoelectric detectors shall have sensitivity between 0.5 and 3.5 percent/foot smoke obscuration.

C. Duct Smoke Detectors: Photoelectric type complying with UL 268A with a standard, relay or isolator detector mounting base. Provide manufacturer’s standard housing to protect the measuring chamber from damage and

insects. Provide drilling templates and gaskets to facilitate locating and mounting the housing.

1. Provide for variations in duct air velocity between 100 and 4,000 feet per minute.
2. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied. Provide an air exhaust tube and an air sampling inlet tube that extends into the duct air stream up to ten feet.
3. Self-Restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
4. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor control circuit.
5. Provide remote alarm LEDs and remote test stations as shown on the plans.
6. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector for smoke detection in HVAC system ducts.

2.09 NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated, and with screw terminals for system connections.

1. Combination Devices: Factory integrated audible and visible devices in a single mounting assembly, equipped for mounting as indicated, and with screw terminals for system connections. Minimum audible level and strobe intensity shall meet all requirements for separate appliances.
2. Provide strobe synchronization as required per NFPA 72.
3. Wall mounted notification appliances shall be manufacturer standard white finish.
4. Ceiling mounted notification appliances shall be manufacturer standard white finish.

B. Alarm Speakers: Comply with UL 1480. High quality tone and voice reproduction; capacitor connected for connection to supervised notification appliance circuit; semi-flush mounting; four inch cone; high impact, flame retardant PC/ABS thermoplastic; 25 or 70 VRMS; multi-tapped output power rated ¼ to 2 watts and produce 79 to 88 dB at 10 feet.

C. Atlas/Soundolier Speakers (Wall Mount): Provide voice control loudspeaker, model number APF-15TU. Model shall be a double re-entrant type with 15 watts RMS audible power rating compression driver producing a UL-rated sound pressure level of 102 dB measured at 15 watts at 10 feet, within a frequency range of 400 Hz to 4 kHz. Loudspeaker assembly shall be furnished with mounting

bracket allowing adjustment on either a vertical or horizontal plane with a single locking pin and including provisions for mounting, banding or strapping. Wiring terminals for amplifier output shall be fully enclosed and vandal-resistant adapter cover shall provide connection facilities for cable or conduit. Unit shall be finished in red baked epoxy.

D. Atlas/Soundolier Speakers (Ceiling Mounted): Atlas/Soundolier #UHT, UL listed to Standard 1480, 8-inch cone, multi-tapped design with output power of 1/2, 1, 2, 5 watt and 10 watt with either 25 or 70.7 VRMS input. Semi-flush ceiling mounted; #U51-8 standard round grille with #U95-8 enclosure (required for UL listing). Speaker output shall exceed 80 dBa at 10 feet and not exceed 120 dBa at the minimum hearing distance from the device. The speakers shall have multiple taps and shall utilize the 2-watt tap on the Atlas/Soundolier 10 watt speaker.

E. Quam UL22/25 - Lay-in Speaker: UL Listed, shallow depth, lightweight, tile replacement, fire-protective signaling device with an 8C10PAFR - 8" O.D. loudspeaker, 10 oz. magnet, fire retardant components and a 4W-25V rotary select transformer. Integral enclosure is 1,412 CID molded fiber. Grille is perforated steel with five (5) seismic tie-off points in a white powder coat ?nish. Line supervision capacitor is included. No assembly required.

F. Visible Alarm Notification Appliances (Strobes): Xenon strobe lights complying with UL 1971, unfiltered or clear filtered white light, with candela ratings as indicated on drawings. Strobes shall meet all requirements of the Americans with Disabilities Act.

2.10 AUXILIARY DEVICES

A. Waterflow Alarm Switches: Shall be provided by the Fire Sprinkler Installer and shall be wired complete and ready for use by the Fire Alarm System Installer. Switch shall have an adjustable delay to minimize false alarms due to fluctuations in water pressure.

B. Valve (Tamper) Switches: Shall be provided by the Fire Sprinkler Installer and shall be wired complete and ready for use by the Fire Alarm System Installer.

C. Monitor Module: Addressable microelectronic module providing a system address for alarm initiating devices for wired applications with normally open contacts. Include address setting means on the module.

D. Control/Relay Module: Provide intelligent control relay modules. The Control Relay Module shall provide one form "C" dry relay contact rated at 2 amps @ 24 VDC to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware.

E. Fire Department Key Box: Shall be by Knox Company or as otherwise specified by the authority having jurisdiction. Provide with an internal switch to indicate a

supervisory condition at the fire alarm control and annunciator panels when the lid is removed.

2.11 DEVICE GUARDS

A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.

1. Factory fabricated and furnished by device manufacturer.

2. Finish: Paint of color to match the protected device.

2.12 FIRE ALARM WIRE AND CABLE

A. Fire Alarm Power Branch Circuits: Building wire as specified in Division 26.

B. Fire alarm Wire and Cable: NRTL listed and labeled as complying with NFPA 70 (NEC) Article 760. All wiring, including wiring to existing modified devices and appliances shall be new.

C. Signaling Line, Initiating Device and Notification Appliance Circuits: Power limited fire protective signaling cable, solid copper conductor, 300 volts insulation, suitable for temperature, conditions and location installed. Minimum wire size for initiating device circuits, control circuits and notification appliance circuits shall be determined by calculations and manufacturer's requirements or recommendations. Wire and cable shall be twisted and shielded if recommended by the system manufacturer.

D. The type of cable chosen should be based on fire alarm system requirements, specification requirements and applicable code requirements. Consideration should also be given to the length of cable runs and potential interference.

E. Initiating, notification, and control circuits shall be sized based on 20% additional power consuming devices.

F. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems.

G. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a 2-hour rating.

H. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket and red identifier stripe, NTRL listed for fire alarm and cable tray installation, plenum rated.

2.13 ACCESS TO EQUIPMENT

A. All detectors, modules, equipment, etc. shall be located so as to provide easy access for operation, service inspection and maintenance.

B. Access Doors:

1. Provide access doors for all concealed equipment, except where above lay-in ceilings.

2. Access doors shall be adequately sized for the devices served with a minimum size of 18" x 18", furnished by the respective Contractor or Subcontractor and installed by the General Contractor.

3. Access doors must be of the proper materials for type of construction where installed.

4. The exact location of all access doors shall be verified with the Architect prior to installation.

5. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.

6. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.

   a) For installation in masonry, concrete, ceramic tile, or wood paneling: 1 inch-wide-exposed perimeter flange and adjustable metal masonry anchors.

   b) For gypsum wallboard or plaster: perforated flanges with wallboard bead.

7. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.

   a) Fire-Rated Units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.

8. Locking Devices: Flush, screwdriver-operated cam locks.

9. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the work include, but are not limited to, the following:

   a) Arrow United Industries.

   b) Bar-Co., Inc.

   c) J.L Industries.

   d) Karp Associates, Inc.

   e) Milcor Div. Inryco, Inc.

   f) Nystrom Building Products

   g) Wade

   h) Zurn

PART 3 - EXECUTION

3.01 GENERAL

A. The Contractor shall install, program and test all new equipment identified in this contract.

B. The installation supervisor shall be on the job site during the entire installation. The installation supervisor shall maintain marked up copies of the drawings at the job site showing as-built conditions. These drawings shall be updated daily and available for Owner review.

C. The Contractor shall provide all required conduit and all associated hardware, and shall install (pull), connect, and test all cable for a complete fire alarm system. All wiring shall be installed in accordance with the guidelines of these specifications and documents as well as the NFPA codes and standards listed in these specifications.

3.02 EXAMINATION

A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.

B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 EQUIPMENT INSTALLATION

A. Comply with NFPA 72 and requirements of authorities having jurisdiction for installation and testing of fire alarm equipment. Install all electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."

1. Devices placed in service before all other trades have completed cleanup shall be replaced.

2. Devices installed but not yet placed in service shall be protected from construction dust, debris, dirt, moisture, and damage according to manufacturer's written storage instructions.

B. Install wall-mounted equipment, with tops of cabinets not more than 72 inches above the finished floor.

C. Manual Fire alarm Boxes: Provide manual fire alarm boxes as shown on drawings. Mount manual fire alarm box on a background of a contrasting color.

The operable part of manual fire alarm box shall be at 48 inches above floor level unless noted otherwise.

D. Smoke and Heat Detectors: Provide detectors as shown on drawings.

1. Comply with the "Smoke-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for smoke detector spacing.
2. HVAC: Locate detectors not closer than 36 inches from air-supply diffuser or return-air opening.
3. Lighting Fixtures: Locate detectors not closer than 12 inches from any part of a lighting fixture and not directly above pendant mounted or indirect lighting.
4. Install a cover on each smoke detector that is not placed in service during construction. Cover shall remain in place except during system testing. Remove cover prior to system turnover.
5. Install ceiling mounted detectors in areas with exposed structure tight to underside of floor/roof deck unless noted otherwise on drawings.

E. Duct Smoke Detectors: Comply with NFPA 72. Install sampling tubes so they extend the full width of the duct. Tubes more than 36 inches long shall be supported at both ends.

1. Do not install smoke detector in duct smoke detector housing during construction. Install detector only during system testing and prior to system turnover.

F. Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location. Do not install smoke detectors in unsprinklered elevator shafts.

G. Single Station Smoke Detectors: Where more than one smoke alarm is installed within a dwelling or suite, they shall be connected so that the operation of any smoke alarm causes the alarm in all smoke alarms to sound.

H. Remote Status and Alarm Indicators: Install in a visible location near each smoke detector, sprinkler water-flow switch, or valve-tamper switch that is not readily visible from normal viewing position.

I. Install ceiling mounted visible and audible/visible notification appliances in areas with exposed structure to bottom of floor/roof structure or at 30 ft AFF, whichever is lower.

J. Install ceiling mounted visible and audible/visible notification appliances in areas with finished ceilings flush with bottom of ceiling or at 30 ft AFF, whichever is lower.

K. Install wall mounted visible and audible/visible notification appliances with visible element (strobe) between 80 inches and 96 inches above finished floor unless noted otherwise on drawings.

L. Install wall mounted audible devices with the top of the device at least 90 inches above finished floor or 6 inches below the ceiling, whichever is lower, unless noted otherwise on Drawings. If combination devices are installed, they shall be installed per the visible signal device requirements.

3.04 PATHWAYS

A. Pathways shall be installed in conduit.

B. Minimum allowable conduit size shall be ¾ inch. The conduit shall be sized so that conduit fill does not exceed 75% of NFPA 70 maximum fill requirements. Cables in vertical risers shall not exceed 50% of NFPA 70 maximum fill requirements. Conduit installation shall be as required by the Contractor's layout and as described in these specifications. All conduit field routing shall be acceptable to the Owner. Routing not acceptable shall be rerouted and replaced without expense to the Owner.

C. All wire, cable, conduit and raceways shall be concealed in walls, ceiling spaces, electrical shafts or closets in finished areas except as specifically noted otherwise. Conduit and raceways may be exposed in unfinished areas or where specifically approved by the Owner.

D. Except as otherwise specified or indicated on the drawings, all conduit shall be installed parallel or perpendicular to dominant surfaces with right angle turns made of symmetrical bends or fittings. Except where prevented by the location of other work, a single conduit or a conduit group shall be centered on structural members.

E. Conduit shall be located at least six inches from hot water or steam pipes, and from other hot surfaces. Conduit shall not block access to any existing equipment or fixtures.

F. Mount end-of-line device in box with last device or separate box adjacent to last device in circuit for conventional hardwired class B initiating and notification appliance circuits.

G. Conduit shall be securely fastened to all boxes and cabinets. Threads on metallic conduit shall project through the wall of the box to allow the bushing to butt against the end of the conduit. The locknuts both inside and outside shall then be tightened sufficiently to bond the conduit securely to the box. Conduit shall enter cabinets from the bottom and sides only.

3.05 CONNECTIONS

A. All wiring shall be terminated at devices or panels using terminal connectors for screw type terminals. All terminal connectors for conductors shall be pre-insulated ring type or pre-insulated spade type. Pre-insulated terminal connectors shall include a vinyl sleeve, color coded to indicate conductor size. Pre-insulated

terminal connectors shall include a metallic support sleeve bonded to the vinyl-insulating sleeve and designed to grip the conductor insulation.

B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 36 inches (910 mm) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.

1. Smoke dampers in air ducts of designated HVAC systems.
2. Alarm initiating connection to elevator recall system and components.
3. Alarm initiating connection to activate emergency lighting control.
4. Connection to disable sound systems upon alarm activation.
5. Supervisory connections at valve supervisory switches.
6. Supervisory connections at low-air pressure switch of each dry-pipe sprinkler system.
7. Supervisory connections at elevator shunt-trip breaker.

3.06 INSTALLATION OF ACCESS DOORS

A. Set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.

B. Adjust hardware and panels after installation for proper operation.

3.07 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. All conduits and junction boxes shall be labeled as specified in Division 26 (red).

C. The location of end-of-line resistors shall be identified with a label indicating “EOL.”

D. Provide label at each initiating device indicating the device address. Label shall be visible from the floor below or immediately adjacent to the device.

3.08 GROUNDING

A. Ground fire alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire alarm control unit.

B. Ground shielded cables at the control panel location only. Insulate shield at device location.

3.09 FIELD QUALITY CONTROL

A. Systems shall be checked and tested in accordance with the instructions provided by the manufacturer to insure that the system functions as required and is free of grounds, opens, and shorts. Each device shall be tested.

1. Smoke detectors shall be tested with products of combustion.

B. Upon completion of the system installation and before the Date of Final Acceptance, a factory-trained technician shall perform all necessary tests and adjustments and shall then file a Letter of Certification and a Certificate of Completion (NFPA 72) with the Owner indicating that the system functions and conforms to the Fire Alarm System Specifications.

C. Upon completion of the system installation, a factory-trained technician shall perform all necessary tests and adjustments in the presence of the Owner's designated personnel. Test in accordance with NFPA 72 and requirements of the authority having jurisdiction. Perform the following tests at a minimum:

1. Visual Inspection: Conduct visual inspection prior to testing. Inspection shall be based on completed record Drawings and system documentation that is required by the "Completion Documents, Preparation" table in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.

2. System Testing: Comply with the "Test Methods" table in the "Testing" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

a) Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.

b) Test visible appliances for the public operating mode according to manufacturer's written instructions.

D. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

E. Fire alarm system will be considered defective if it does not pass tests and inspections.

F. Include services of factory trained and certified technician to supervise installation, adjustments, final connections, and system testing as performed by the fire alarm contractor's factory-trained technicians.

3.10 DEMONSTRATION

A. The equipment supplier's factory trained technician shall train the Owner's personnel in the proper use and maintenance of the system. Training sessions shall be conducted as needed, not to exceed a total of 2 sessions, with each session lasting a maximum of 4 hours each.

B. Demonstrate normal and abnormal modes of operation, and required responses to each.

C. Video tape the training sessions in format as agreed to with the Owner. Provide three copies of each session to the Owner and obtain written receipt from the Owner.

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. Section Includes:
1. Protecting existing vegetation to remain.
2. Removing existing vegetation.
3. Clearing and grubbing.
4. Stripping and stockpiling topsoil.
5. Stripping and stockpiling rock.
6. Removing above- and below-grade site improvements.
7. Disconnecting, capping or sealing, and removing site utilities, abandoning site utilities in place.
8. Temporary erosion and sedimentation control.

B. Related Requirements:
1. Section 015000 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.
2. Section 015639 – Temporary Tree and Plant Protection
3. Section 015713 – Temporary Erosion and Sediment Control
4. Section 312000- Earth Moving

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.
1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed trafficways if required by Owner or authorities having jurisdiction.

B. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises where indicated.

C. Utility Locator Service: Notify utility locator service for area where Project is located before site clearing.

D. Do not commence site clearing operations until temporary erosion- and sedimentation-control and plant-protection measures are in place.

E. Tree- and Plant-Protection Zones: Protect according to requirements in Section 015639 "Temporary Tree and Plant Protection."

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 312000 "Earth Moving."
   1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Excavating and filling for rough grading the Site.
   2. Preparing subgrades for slabs-on-grade,pavements, turf and grasses, and, plants.
   3. Excavating and backfilling for buildings and structures.
   4. Drainage course for concrete slabs-on-grade.
   5. Subbase course for concrete walks, pavements.
   6. Subbase course and base course for asphalt paving.
   7. Excavating and backfilling trenches for utilities and pits for buried utility structures.

B. Preinstallation Conference: Conduct preexcavation conference at Project site.

1.2 INFORMATIONAL SUBMITTALS

A. Material Test Reports:

1.3 FIELD CONDITIONS

A. Utility Locator Service: Notify utility locator service for area where Project is located before beginning earth-moving operations.

B. Do not commence earth-moving operations until plant-protection measures specified in Section 015639 "Temporary Tree and Plant Protection" are in place.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: Soil Classification Groups GW, GP, GM, SW, SP, and SM according to ASTM D2487, Groups A-1, A-2-4, A-2-5, and A-3 according to AASHTO M 145, or a combination of these groups; free of rock or gravel larger than **3 inches** in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D2487, Groups A-2-6, A-2-7, A-4, A-5, A-6, and A-7 according to AASHTO M 145, or a combination of these groups.
   1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a **1-1/2-inch** sieve and not more than 12 percent passing a **No. 200** sieve.

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 95 percent passing a **1-1/2-inch** sieve and not more than 8 percent passing a **No. 200** sieve.
   1. Arkansas Highway and Transportation Department Class 7 Aggregate Base Course (ABC)

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a **1-1/2-inch** sieve and not more than 12 percent passing a **No. 200** sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; except with 100 percent passing a **1-inch** sieve and not more than 8 percent passing a **No. 200** sieve.

H. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D448; coarse-aggregate grading Size 57; with 100 percent passing a **1-1/2-inch** sieve and zero to 5 percent passing a **No. 8** sieve.

2.2 ACCESSORIES

A. Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, **6 inches** wide and **4 mils** thick, continuously inscribed with a description of the utility; colored as follows:

B. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches** wide and **4 mils** thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to **30 inches** deep; colored as follows:
   1. To comply with local practice or requirements of authorities having jurisdiciton.

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

B. Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.

C. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.

D. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be

performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Engineer.

E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

END OF SECTION

PART 1 - GENERAL

1.1 QUALITY ASSURANCE

A. Perform Work in accordance with all applicable codes, and City of Bentonville Ordinances.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TOLERANCES

A. Section 014000 - Quality Requirements: Tolerances.

3.2 FIELD QUALITY CONTROL

A. Quality Control Testing During Construction: Allow testing service to inspect and approve each subgrade and fill layer before further backfill or construction work is performed. Basis of acceptance shall include but not be limited to compacted density performed as specified herein.
   1. Perform field density tests in accordance with ASTM D 1556 (sand cone method), ASTM D 2167 (rubber balloon method) or ASTM D 6938.

B. If in the opinion of the Engineer, based on testing service reports and inspection, subgrade or fills that have been placed are below specified density, Contractor shall perform additional compaction and testing, at his expense, until specified density is obtained.

END OF SECTION

PART 1 - GENERAL

1.01 DESCRIPTION

A. Perform foundation and under floor termite control treatment in accordance with the Arkansas Pest Control Law and to qualify construction under this Contract for continuous guaranteed protection specified.

B. Applicable Regulations:
   1. International Building Code
   2. Arkansas Pest Control Law.

1.02 RELATED DOCUMENTS

A. Applicable portions of the Agreement, Conditions of the Contract (General, Supplementary, and other Conditions), Drawings, Specifications, Addenda issued prior to the execution of the Contract, other documents listed in the Agreement and Modifications issued after the execution of the Contract shall apply to this Section. The general requirements for this work are located in Division 1 of the Specifications.

1.03 SUBMITTALS AND SUBSTITUTIONS

A. In accordance with Section 01 3000.
   1. Copy of applicator’s state license.
   2. Proof that the proposed chemical treatment is permitted by state plant board.
   3. Copy of required 5 year Damage Guaranty Contract

B. Substitutions will not be considered prior to the award of the General Contract.

1.04 GUARANTEE

A. Furnish damage guarantee with service and re-service for any subterranean termite infestation without cost to Owner. Write Damage Guaranty Contract additionally to cover any and all subterranean termite damage to the structures and contents in amount of $10,000.00. Such damage to be repaired, replaced or corrected at Contractor's expense.

B. Furnish damage guarantee effective for 5 year period after completion of initial treatment without payment of additional fees or premiums by Owner. Upon expiration of 5-year period, Owner has option of extending damage guarantee contract at an annual fee mutually agreed upon by Owner and applicator. Owner reserves the right to cancel as of any anniversary date. Service, re-service, and Damage Guaranty provisions of the extended damage contract are noncancellable by applicator. Annual fee subject to revision by giving advance written notice to Owner.

PART 2 - PRODUCTS

2.01 TERMITE CONTROL CHEMICALS

A. Use chemicals approved by the Arkansas State Plant Board and of type required to give guaranteed protection specified.

PART 3 - EXECUTION

3.01 PREPARATION

A. From investigation at the site determine soil texture or otherwise obtain this information from the County Agent, Soil Conservation Service or other approved authorities, if not already known.

B. Remove wood and cellulose containing materials from earth sub-grade to be treated before chemical is applied.

3.02 TREATMENT

A. Perform foundation and under floor termite control treatment at buildings to be constructed under this Contract. Use type chemical approved by the Arkansas State Plant Board and currently known to give guaranteed protection for the soil and fill used at this Project. Apply chemical using applicator licensed by the Arkansas State Plant Board. Apply in sufficient quantity under and around the structures, to qualify building and contents for continuous guaranteed protection against damage by subterranean termites.

B. Reapply soil treatment solution to areas disturbed by subsequent excavation or construction activities following application.

C. Under Slabs: Apply under slabs at the rate recommended by manufacturer. Apply after placement of gravel drainage fill and immediately prior to placement of vapor barrier . When necessary to insure proper penetration, the ground surface will be left loose or lightly scarified until treatment has been completed.

D. Critical Areas: Treat a one foot strip along critical areas under walls, around interior piers and pipes rising from the ground at the rate recommended by manufacturer. Treatment shall be applied as specified for overall treatment under slabs.

E. Outside of Foundations: Apply a one foot strip along the outside of the foundations of the building at the rate recommended by manufacturer. Apply in a trench dug to a depth of approximately 2" below finish grade. Loosen earth in trench to a depth of 12" before treating. This treatment is to be performed prior to finish grading.

3.03 PROTECTION

A. Unless treated surfaces are to be immediately covered, take means necessary to prevent disturbance of treated areas by human or animal contact.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes temporary excavation support and protection systems.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 INFORMATIONAL SUBMITTALS

A. Contractor Calculations: For excavation support and protection system. Include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

B. Record Drawings: Identify locations and depths of capped utilities, abandoned-in-place support and protection systems, and other subsurface structural, electrical, or mechanical conditions.

1.4 FIELD CONDITIONS

A. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks, and record existing elevations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Provide, design, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting earth and hydrostatic pressures and superimposed and construction loads.
   1. Design excavation support and protection system, including comprehensive engineering analysis by a qualified professional engineer.

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

A. Survey-Work Benchmarks: Resurvey benchmarks regularly during installation of excavation support and protection systems, excavation progress, and for as long as excavation remains open.
   1. Maintain an accurate log of surveyed elevations and positions for comparison with

original elevations and positions.

2. Promptly notify Architect if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.

B. Related Sections:
   1. 312000 – EARTH MOVING

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixtures: For each concrete mixture.

C. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement.

D. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork.

1.3 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Material certificates.

C. Material test reports.

D. Floor surface flatness and levelness measurements.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
   1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."
   2. Manufacturer shall provide concrete mix designs stamped and sealed by a licensed professional Engineer licensed in the State of Arkansas.

B. Testing Agency Qualifications: An independent agency, approved by Owner and Engineer qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
   1. Testing Agency shall be managed by a licensed professional engineer licensed in the State of Arkansas.

C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."

D. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
   1. ACI 301, "Specifications for Structural Concrete," Sections 1 through 5.
   2. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

E. Concrete Testing Service: Engage and provide a qualified independent testing agency to perform material evaluation tests and to sample and test concrete mixtures.

F. Preinstallation Conference: Conduct conference at Project site.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

2.2 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
   1. Portland Cement: ASTM C 150, Type I or Type II gray. Supplement with the following:
      a. Fly Ash: ASTM C 618, Class F or C.
      b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

B. Normal-Weight Aggregates: ASTM C 33, graded.
   1. Maximum Coarse-Aggregate Size: **1 inch** nominal.
   2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Water: ASTM C 94/C 94M and potable.

2.3 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately **9 oz./sq. yd.** when dry.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Water: Potable.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

F. Clear, Waterborne, Membrane-Forming Curing Compound-1: ASTM C 309, Type 1, Class B, non-dissipating, certified by curing compound manufacturer to not interfere with bonding of floor covering.

G. Clear, Solvent-Borne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.
   1. VOC Content: Curing and sealing compounds shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

H. Clear, Waterborne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.
   1. VOC Content: Curing and sealing compounds shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

A. Testing and Inspecting: Engage and provide a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Sample concrete materials for slump, temperature and strength testing as required by ACI 301.

C. Provide one (1) set of concrete tests for each 50 cubic yards of material or fraction thereof.

D. Concrete test samples shall include four concrete cylinders for strength testing; one to be tested at 7 day, two to be tested at 28 day, and one spare to be tested at 56 days as required.

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Hot-mix asphalt paving.

B. Related Sections:
   1. Section 321123 "Aggregate Base Course" for aggregate subbase and base courses.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include technical data and tested physical and performance properties.
   1. Job-Mix Design: For each job mix proposed for the Work.

1.3 INFORMATIONAL SUBMITTALS

A. Material Certificates:
   1. For each paving material, from manufacturer

1.4 QUALITY ASSURANCE

A. Allowable Tolerances:
   1. Subgrade after fine grading:
      a. Shall not vary more than 0.05 feet from plan elevation.
   2. Aggregate base:
      a. Shall not vary more than 0.05 feet from plan elevation.
   3. Asphalt concrete hot mix binder course:
      a. Shall not vary more than 0.04 feet from the plan elevation.
      b. Shall not vary more than 0.04 feet from specified thickness.
   4. Asphalt concrete hot mix wearing course:
      a. Shall not vary more than 0.03 feet from the plan elevation.
      b. Shall not vary more than 0.02 feet from specified thickness.
      c. Shall not vary more than 0.015 feet from the edge of a 10 foot straight edge laid thereon parallel to or at right angles to the direction of paving.
   5. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.
      a. Test and Design Mix Criteria:

         1) Contractor, at his expense, shall employ the services of an independent testing laboratory to perform tests and design mixes. Materials and mix designs shall be approved at least 10 days before starting of construction

            a) Aggregate tests (Aggregate Base Course):

b) The material to be used for the aggregate base course shall conform to Section 321123, Aggregate Base Course.
c) Preliminary job mix formula (Asphalt Concrete Hot Mix Surfacing):
d) A preliminary job mix formula shall be developed for the asphalt concrete hot mix surfacing material in accordance with AASHTO MP 2 or equal to AHTD requirements.
e) Resubmit a new job mix formula for OWNER'S approval if it becomes necessary to change the source of aggregates or when unsatisfactory results or other conditions warrant a change in mixture requirements.

1.5 FIELD CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:
   1. Tack Coat: Minimum surface temperature of **60 deg F**.
   2. Asphalt Base Course: Minimum surface temperature of **40 deg F** and rising at time of placement.
   3. Asphalt Surface Course: Minimum surface temperature of **60 deg F** at time of placement.

PART 2 - PRODUCTS

2.1 ASPHALT MATERIALS

A. Asphalt Bitumen for Binder Course and Surface Course: AASHTO M 320, PG 76-22

B. Bituminous Track Coat: CSS-1, CSS-1h, RC-70, MC-250, or OWNER approved equal.

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROLS

A. From time to time during progress of the work and/or upon completion of the work, OWNER may require that testing be performed to determine that materials provided for the work and its installation meets the specified requirements.

3.2 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Replace and compact hot-mix asphalt where core tests were taken.

END OF SECTION

PART 1 -GENERAL

1.1 QUALITY ASSURANCE

A. Qualifications of Installers:
   1. Provide at least 1 person at all times during execution of this portion of Work and who is thoroughly familiar with the type of materials being installed and is directly responsible for all Work performed under this Section.

B. Requirements of Regulatory Agencies:
   1. It is Contractor's responsibility to comply with the requirements of the regulatory agencies, including the purchase of any permits at their own expense.

C. Construction Tolerances:
   1. Vertical alignment shall not vary more than 1/8 inch from the edge of a 10-foot straight edge.
   2. Horizontal alignment shall not vary more than 1/2 inch from the plan alignment for pavement.
   3. Concrete thickness shall not be less than specified.
   4. Reinforcing bars shall be placed to the following tolerances:
      a. Clear distance to formed surface, plus or minus ¼ inch.
      b. Sheared length, plus or minus 1 inch.
      c. Concrete cover on top bars in slabs and beams 8 inches deep or less, 2 inches plus or minus 1/4 inch.
      d. Concrete cover on top bars in members 8 inches to 24 inches deep, 2 inches plus or minus 1/2 inch.
      e. Crosswise or lengthwise spacing, plus or minus 2 inches provided minimum spacing and cover requirements are not violated.

D. Referenced Standards:
   1. The current editions of the following American Concrete Institute (ACI) publications shall govern all Work performed hereunder, unless otherwise specified:
      a. Recommended Practice for Concrete Floor and Slab Construction - ACI 302.
      b. Recommended Practice for Hot Weather Concreting – ACI 305.
      c. Recommended Practice for Cold Weather Concreting - ACI 306.
      d. Recommended Practice for Construction of Concrete Pavements and Concrete Bases - ACI 316.
      e. Building Code Requirements for Reinforced Concrete - ACI 318.

E. Design Criteria:
   1. Contractor shall employ an approved independent materials testing laboratory and pay for the service of setting up the design mixes and to analyze the fine and coarse aggregate for the various uses of concrete utilized on the project. Design mixes shall be in accordance with the previously cited ACI 318 publication and in compliance with this Specification. The proposed mixes shall be submitted to

OWNER for approval prior to placing of any concrete. The approved mixes established by the laboratory shall be used in the Work as long as the characteristics of the ingredients remain unchanged. If any significant change is made in the ingredients, new mixes shall be prepared and submitted to OWNER for approval.

2. Concrete shall consist of a minimum 28 day compressive design strength of 4,000 psi using portland cement, aggregate, air entraining admixture, water and an air content ranging from 5 to 7 percent. Slump of concrete shall have a range of 2 to 4 inches.
    a. If any of the conditions vary from those as described, Contractor shall submit a revised mix design prepared by the testing laboratory along with a written request for the variance desired to OWNER for their consideration and approval.
    b. Concrete for portions of the structure required to be watertight, such as water storage, pumpstation wetwells and waste treatment tanks, shall be air-entrained and have a water-cement ratio not exceeding 0.48.
    c. Admixtures shall be used only with the approval in writing by OWNER. All admixtures shall be used in accordance with the manufacturer's instructions and shall be added at the plant. Calcium chloride shall not be used as an admixture.
    d. Mix designs shall be based on Type I cement. Type III (high early) cement or any other types of cement shall be used only when approved in writing by OWNER. When high-early cement is used, the 7-day strength test shall exceed the specified 28-day strength tests.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Form Material:
1. Form material shall be either sound lumber or steel, free of defects and variations in dimensions. The sides of all lumber shall be surfaced and matched to prevent mortar leakage. Metal forms shall be of standard manufacture and need not be new, but shall be free from rust and dirt. Metal forms shall be flat and true to line without punctures. All form material shall be sized and of strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal of same.
    a. Rigid forms are to be utilized on tangent alignment and curves having a radius of 150 feet or greater.
    b. Curved forms shall be utilized on the curved Work with a radius of 150 feet or less, and shall consist of flexible spring steel or laminated lumber.

B. Reinforcement Materials:
1. Reinforcing bars and dowels shall be of new billet steel conforming to ASTM A615, Grade 60 (60,000 psi yield). Sizes of bars shall be as indicated on Drawings or herein specified.
    a. Dowel bars when used for contraction and expansion joints shall be smooth steel bars coated with a thin uniform coating of liquid asphalt (MC-250) or grease on 1/2 the length of the bar plus 2 inches. In addition, dowel bars for

expansion joints shall be furnished with end caps designed with one end closed, a minimum length of 3 inches and be positioned to allow bar movement of not less than 1 inch.

b. Dowel bar assemblies may be permitted if fabricated to the width of the pavement section.

c. Tie bars for control, longitudinal and construction joints shall be deformed bars.

C. Concrete Materials:

1. Portland cement shall conform to ASTM C150.
   a. Cement shall be a low alkali cement (Type I) containing not more than 0.6 percent by weight of tri-sodium silicate oxide.
2. Coarse aggregate shall conform to Size 57 grade requirements of Table 2 of ASTM C33 standard.
3. Fine aggregate shall conform to ASTM C33 with fineness modulus not to vary more than 0.20 from value assumed in design mix.
4. Water shall be potable, clean and free from deleterious amounts of acid, alkali or organic material.

D. Admixtures:

1. Air entraining agent shall conform to ASTM C260 and shall be added at the mixer.
2. Water reducing agents, (such as super plasticizers), retarding agents, accelerating agents and all other admixtures, shall require approval by OWNER and if used, shall conform to ASTM C494. In no case shall admixtures be permitted as substitute for cement content specified, unless approved by OWNER.

E. Expansion Joint Material:

1. Joint filler material shall consist of a non-extruding standard bituminous bound type "Sealtight Asphalt Expansion Joint" as manufactured by W.R. Meadows, Inc., Elgin, Illinois or OWNER approved equal.
   a. Material shall conform to ASTM D994.
2. Joint filler material shall consist of preformed non-extruded bituminous bound type "Sealtight-Fibre Expansion Joint" as manufactured by W.R. Meadows, Inc., Elgin, Illinois; "Code 1390" as manufactured by W.R. Grace Company, Cambridge, Massachusetts or OWNER approved equal.
   a. Material shall conform to ASTM D1751.
   b. Material shall be 1/2 inch thick, unless otherwise noted, of widths equal to slab thickness less 1/2 inch or as otherwise indicated.
3. Joint sealant shall be a single component, polyurethane type "Sikaflex-la" as manufactured by Sika Chemical Corporation, Lyndhurst, New Jersey or OWNER approved equal. Color as selected by OWNER.

F. Curing Materials:

1. Kraft paper shall be waterproof and nonstaining "Sisalkraft 5K-10" conforming to ASTM C171.
2. Polyethylene film shall be white opaque sheet or roll material not less than 0.006 inch thick (6 mil) conforming to AASHTO-M171.
3. Contractor may at their option use a liquid curing compound for surfaces that will not receive treating oil or waterproofing membrane. Liquid curing compound shall conform to ASTM C309 and shall consist of the following:

a. Type 1D, translucent with fugitive dye.
b. Type 2, white pigmented, Class B (vehicle solids restricted to all resin).

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes the following:
1. Concrete Pavers
2. Joint Sand
3. Setting Bed Sand
4. Base Aggregate
5. Subbase Aggregate

1.02 REFERENCES

Note: Design street, industrial, port and airport pavement thicknesses in consultation with a qualified civil engineer, in accordance with established flexible pavement design procedures, and in accordance with Interlocking Concrete Pavement Institute Technical Bulletins.

ASTM International, latest edition:
1. C 33, Standard Specification for Concrete Aggregates.
2. C 136, Standard Test Method for Sieve Analysis of Fine and Course Aggregates.
3. C 140, Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units.
4. C 144 Standard Specifications for Aggregate for Masonry Mortar.
5. D 448, Standard Classification for Sizes of Aggregate for Road and Bridge Construction.
6. C 936, Standard Specification for Solid Concrete Interlocking Paving Units.

8. D 698 Test Methods for Moisture Density Relations of Soil and Soil Aggregate Mixtures Using a 5.5 lb (24.4 N) Rammer and 12 in. (305 mm) drop.
9. D 1557 Test Methods for Moisture Density Relations of Soil and Soil Aggregate Mixtures Using a 10-lb (44.5 N) Rammer and 18 in. (457 mm) drop.
10. C1645 Standard Test Method for Freeze-thaw and De-icing Salt Durability of Solid Concrete Interlocking Paving Units
11. D 2940 Graded Aggregate Material for Bases or Subbases for Highways or Airports.

1.03 SUBMITTALS

A. Concrete Pavers:
1. Samples for verification: Three representative full-size samples of each paver type, thickness, color and finish that indicate the range of color variation and texture expected upon project completion. Alternate size samples to represent colors and textures will be acceptable for production approval.
2. Accepted samples become the standard of acceptance for the product produced.
3. Test results from an independent testing laboratory for compliance

of concrete pavers with ASTM C 936.

4. Manufacturer's catalog product data, installation instructions, and material safety data sheets for the safe handling of the specified materials and products.

B. Setting Bed Sand:
   1. Provide three representative one pound samples in containers of Setting Bed Sand materials.
   2. Test results from an independent testing laboratory for sieve analysis per ASTM C 136 conforming to the grading requirements of ASTM C 144.

C. Polymeric Joint Sand:
   1. Test results from an independent testing laboratory for sieve analysis per ASTM C 136 conforming to the grading requirements of ASTM C 144.
   2. Samples for Initial Selection: Provide three representative samples in sample sleeves of Polymeric Joint Sand material, cured and dried, for color selection.
   3. Samples for Verification: Correct material to be used in job panel for approval.

D. Base and Subbase Aggregate:
   1. Test results from an independent testing laboratory for sieve analysis per ASTM C 136.

E. Paving Installation Contractor:
   1. Job references from a minimum of three projects similar in size and complexity. Provide Owner/Client/General Contractor names, postal address, phone, fax, and email address.

1.04 QUALITY ASSURANCE

A. Utilize a Manufacturer having at least ten years of experience manufacturing concrete pavers on projects of similar nature or project size.

B: Source Limitations:
   1. Obtain Concrete Pavers from one source location with the resources to provide products of consistent quality in appearance and physical properties.
   2. Paver must include Unilock's Enduracolor™ and EasyClean Technology™ in all pavers.
   3. Obtain Setting Bed Sands from one source with the resources to provide materials and products of consistent quality in appearance and physical properties.
   4. Obtain Polymeric Joint Sand from Antique Brick & Block Jason Garner Jason@antiquebrickinc.com or Adam McPike adam@antiquebrickinc.com 501-680-0450 Alliance Gator G2 Maxx Joint Sand (Color TBD)

C. Paving Contractor Qualifications:

1. Utilize an installer having successfully completed concrete paver installation similar in design, material, and extent indicated on this project.

D. Mockups:
1. Install a 5 ft x 5 ft paver area per each paving pattern.
2. Use this area to determine surcharge of the Setting Bed Sand layer, joint sizes, lines, laying pattern(s) and levelness. This area will serve as the standard by which the workmanship will be judged.
3. Subject to acceptance by owner, mock-up may be retained as part of finished work.
4. If mock-up is not retained, remove and dispose legally.

1.05 DELIVERY, STORAGE & HANDLING

A. In accordance with Conditions of the Contract and Division 1 Product Requirement Section.

B. Deliver Concrete Pavers in manufacturer's original, unopened and undamaged container packaging with identification labels intact.
1. Coordinate delivery and paving schedule to minimize interference with normal use of streets and sidewalks adjacent to paver installation.
2. Deliver Concrete Pavers to the site in steel banded, plastic banded or plastic wrapped packaging capable of transfer by forklift or clamp lift.
3. Unload Concrete Pavers at job site in such a manner that no damage occurs to the product or adjacent surfaces.

C. Store and protect materials free from mud, dirt and other foreign materials.

D. Prevent Joint and Setting Bed Sand from exposure to rainfall or removal by wind with secure, waterproof covering.

E. Store Polymeric Joint Sand on elevated platforms, under a cover and/or in a dry location.

1.06 PROJECT/SITE CONDITIONS

A. Environmental Requirements:
1. Install Concrete Pavers only on unfrozen and dry Setting Bed Sand.
2. Install Setting Bed Sand only on unfrozen and dry Base or Subbase Aggregate materials.
3. Install Base or Subbase Aggregates only over unfrozen subgrade.
4. Install Setting Bed Sand or Concrete Pavers when no heavy rain or snowfall are forecast within 24 hours.

1.07 CONCRETE PAVER OVERAGE AND ATTIC STOCK

A. Provide a minimum of 5% additional material for overage to be used during construction.

B. Contractor to provide 100 square feet of each product and size used to owner for maintenance and repair. Furnish Pavers from the same

production run as installed materials.

C. Manufacture to supply maintenance and reinstatement manuals for Concrete Paver units.

PART 2 – PRODUCTS

2.01 CONCRETE PAVERS

A. Basis-of-Design Product: The Concrete Paver shapes are based on:
   1. Unilock:
      a. Unilock 12x36x4 (300x900x100)
   2. As manufactured by: Unilock Aurora, IL
      Contact: Jason Garner Jason@antiquebrickinc,com or Adam McPike adam@antiquebrickinc.com 501-680-0450
   3. Substitutions: No substitutions permitted.

B. Product requirements:
   1. Concrete Paver Type 1: Unilock 12x36x4 (300x90x100)
      a. Finish: Premier Smooth
      b. Color: Unilock Blend #319 With EnduraColor™ and EasyClean Technology™
      c. Edge: Micro Chamfer with integral lug
      d. Size: Manufacture the sizes indicated with a maximum tolerance of plus or minus 1/16 inch for length and width. Maximum height tolerance of plus or minus 1/8 inch. Note: Imperial dimensions are nominal equivalents to the metric dimensions.
   2. Concrete Paver Type 2: Unilock 12x36x4 (300x90x100)
      a. Finish: Premier Shot Blast
      b. Color: Unilock Blend #319 With EnduraColor™ and EasyClean Technology™
      c. Edge: Micro Chamfer with integral lug
      d. Size: Manufacture the sizes indicated with a maximum tolerance of plus or minus 1/16 inch for length and width. Maximum height tolerance of plus or minus 1/8 inch. Note: Imperial dimensions are nominal equivalents to the metric dimensions.

C. Provide pavers meeting the minimum material and physical properties set forth in ASTM C 936, Standard Specification for Interlocking Concrete Paving Units. Efflorescence is not a cause for rejection.
   1. Average compressive strength 8000 psi (55MPa) with no individual unit under 7,200 psi (50 MPa).
   2. Average absorption of 5% with no unit greater than 7% when tested according to ASTM C 140.
   3. Conforming to ASTM C 1645 when tested for freeze-thaw requirements.
   4. Height tolerances +/- 3.2 mm (1/8 in).

D. Accept only pigments in concrete pavers conforming to ASTM C 979. Note: ACI Report No. 212.3R provides guidance on the use of pigments.

E. Maximum allowable breakage of product is 5%.

2.02 POLYMERIC JOINT SAND

A. Provide Polymeric Joint Sand as manufactured by: Antique Brick & Block
   1. Alliance Gator G2 MAXX
      a. Product Type: Dry mix, contains polymeric binding agent, activated with water.
      b. Color: (TBD from manufacturer standard colors)

B. Provide Polymeric Joint Sand meeting the minimum material and physical properties as follows:
   1. Compression Strength: proven resistance to compression of 300 PSI minimum after drying for 7 days under controlled conditions (73°F (23°C) at 50% humidity).
      a. Test sand sample shape: cylinder (2" (5 cm) dia. X 4" (10 cm) high).

2.03 SETTING BED SAND

A. Provide Setting Bed Sand as follows:
   1. Washed, clean, non-plastic, free from deleterious or foreign matter, symmetrically shaped, natural or manufactured from crushed rock.
   2. Do not use limestone screenings, stone dust, or sand material that does not conform to conform to the grading requirements of ASTM C 33.
   3. Do not use mason sand or sand conforming to ASTM C 144.
   4. Utilize sands that are as hard as practically available where concrete pavers are subject to vehicular traffic.
   5. Conform to the grading requirements of ASTM C 33 with modifications as shown in Table 2 below:

TABLE 2 – SETTING BED SAND GRADATION REQUIREMENTS FOR SETTING BED SAND

ASTM C 33	
Sieve Size	**Percent Passing**
3/8 in (9.5 mm)	100
No. 4 (4.75 mm)	95 to 100
No. 8 (2.36 mm)	85 to 100
No. 16 (1.18 mm)	50 to 85
No. 30 (0.600 mm)	25 to 60
No. 50 (0.300 mm)	10 to 30
No. 100 (0.150 mm)	2 to 10
No. 200 (0.075)	0 to 1

Note: Coarser sand than that specified in Table 1 above may be used for joint sand including C 33 material as shown in Table 2. Use material where the largest sieve size easily enters the smallest joints. For example, if the smallest paver joints are 2 mm wide, use sand 2

mm and smaller in particle size.

2.04 BASE AGGREGATE

A. Provide Base Aggregate materials conforming to ASTM D 2940 and gradation requirements as presented in Table 3.

TABLE 3 BASE AGGREGATE GRADATION REQUIREMENTS

ASTM D 2940	
Sieve Size	**Percent Passing**
2 in (50 mm)	100
1-1/2 in (37.5 mm)	95 to 100
3/4 in (19 mm)	70 to 92
3/8 in (9.5 mm)	50 to 70
No. 4 (4.75 mm)	35 to 55
No. 30 (600 µm)	12 to 25
No. 200 (75 µm)	0 to 8*

* In order to prevent damage by frost heaving, it may be necessary to limit the percentages of material passing the No. 200 sieve to less than shown in the tables.

2.05 SUBBASE

A. Reference Detail 2, sheet C5.02.

B. Provide Subbase Aggregate as designed per the structure engineer.

C. Insert gradation requirements here.

2.06 GEOTEXTILE

A. Provide Geotextile material conforming to the following performance characteristics, measured per the test methods referenced:
   1. 4 oz., nonwoven needle punched geotextile composed of 100% polypropylene staple fibers that are inert to biological degradation and resists naturally encountered chemicals, alkalis, and acids.
   2. Grab Tensile Strength: ASTM D 4632: 115 lbs.
   3. Grab Tensile Elongation: ASTM D 4632: 50%
   4. Trapezoidal Tear: ASTM D 4533: 50 lbs.
   5. Puncture: ASTM D 4833: 65 lbs.
   6. Apparent Opening Size: ASTM D 4751: 0.212 mm, 70 U.S. Sieve
   7. Permittivity: ASTM D 4491: 2.0 sec -1
   8. Flow Rate: ASTM D 4491: 140 gal/min/s.f.

B. As supplied by Antique Brick & Block
   Contact: Adam Mcpike adam@antiquebrickinc.com 501-680-0450
   1. Geostar Geogrid specification.

2.07 EDGE RESTRAINTS

A. Metal Edge Restraint
   1. Weathering steel, ¼" thickness, 8" wide, length per plan

Note: The provision of suitable edge restraints is critical to the satisfactory performance of interlocking concrete block pavement. Abut pavers tightly against the restraints to prevent rotation under load and any consequent spreading of joints. Install sufficiently stable edge restraints that are, in addition to providing suitable edge support for the paver units, able to withstand the impact of temperature changes, vehicular traffic and/or snow removal equipment.

Curbs, gutters or curbed gutter, constructed to the dimensions of municipal standards (noting that these standards generally refer to cast-in-place concrete sections), are considered to be acceptable edge restraints for heavy duty installations. Where extremely heavy industrial equipment is involved such as container handling equipment, review the flexural strength of the edge restraint carefully particularly if a section that is flush with the surface is used and may be subjected to high point loading.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine areas indicated to receive paving for compliance with requirements for installation tolerances and other conditions affecting performance for the following items before placing the Concrete Pavers.
   1. Verify that subgrade preparation, compacted density and elevations conform to specified requirements.
   2. Verify that Geotextiles, if applicable, have been placed according to drawings and specifications.
   3. Verify that the Base and Subbase Aggregate materials, thickness, compacted density, surface tolerances and elevations conform to specified requirements.
   4. Provide written density test results for soil subgrade, Base and Subbase Aggregate materials to the Owner, General Contractor and paver installation subcontractor.
   5. Verify location, type, and elevations of edge restraints, concrete curbing, concrete collars around utility structures, and drainage inlets.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Beginning of Bedding Sand and Concrete Paver installation signifies acceptance of Base and edge restraints.

3.02 PREPARATION

A. Verify that the subgrade soil is free from standing water.

B. Stockpile Setting Bed Sand, Joint Sand, Base and Subbase Aggregate materials such that they are free from standing water, uniformly graded, free

of any organic material or sediment, debris, and ready for placement.

C. Remove any excess thickness of soil applied over the excavated soil subgrade to trap sediment from adjacent construction activities before placing the Geotextile and Subbase Aggregate materials.

D. Keep area where pavement is to be constructed free from sediment during entire job. Remove and replace all Geotextile, Joint Sand, Setting Bed Sand, Base and Subbase Aggregate materials contaminated with sediment with clean materials.

E. Complete all subdrainage of underground services within the pavement area in conjunction with subgrade preparation and before the commencement of Base or Subbase Aggregate construction.

F. Prevent to damage underdrain pipes, overflow pipes, observation wells, or inlets and other drainage appurtenances during installation. Report all damage immediately.

G. Compact soil subgrade uniformly to at least 95 percent of Standard Proctor Density per ASTM D 698 for pedestrian areas. Compact soil subgrade uniformly to at least 98 percent Modified Proctor per ASTM D 1557 for vehicular areas. Stabilization of the subgrade and/or base material may be necessary with weak or saturated subgrade soils.

H. Backfill all service trenches within the pavement area to the sub- grade level with approved material placed in uniform lifts not exceeding 4 in. (100 mm) loose thickness. Compact each lift to at least 95 percent Standard Proctor Density as specified in ASTM D 698.

I. Trim the subgrade to within 0 to ½ in. (0 to 13mm) of the specified grades. Do not deviate the surface of the prepared subgrade by more than 3/8 in. (10mm) from the bottom edge of a 39 in. (1m) straight edge laid in any direction.

J. Proof-roll prepared subgrade according to requirements in Division 31 Section "Earth Moving" to identify soft pockets and areas of excess yielding. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting and replace with compacted backfill or fill as directed.

K. Do not proceed with further pavement construction, under any circumstances, until the subgrade has been inspected by the Architect/Engineer.

Note: Base compaction of the subgrade soil on the recommendations of the Design Engineer. Request the Architect/Engineer to inspect subgrade preparations, elevations and conduct density tests for conformance to specifications.

Note: Mechanical tampers (jumping jacks) are recommended for compaction of soil subgrade and aggregate base around lamp standards, utility structures, building edges, curbs, tree wells and other protrusions. Compact areas, not

accessible to roller compaction equipment, to the specified density with mechanical tampers. **CAUTION** – Proceed with care around the perimeters of excavations, buildings, curbs, etc. These areas are especially prone to consolidation and settlement. Do not place wedges of backfill in these areas. If possible particularly in these areas, proceed with backfilling and compacting in shallow lifts, parallel to the finished surface.

3.03 INSTALLATION

EDGE RESTRAINTS

1. Provide concrete edge restraints as indicated.
   a. Install job-built concrete edge restraints to comply with requirements in Division 3 Section "Cast-in-Place Concrete."
   b. Provide concrete edge restraint along the perimeter of all paving as indicated. Install the face of the concrete edge restraint, where it abuts pavers vertical down to the subbase.
   c. Construct concrete edge restraint to dimensions and level specified and support on a compacted subbase not less than 6 in (150 mm) thick.

2. Provide plastic or metal edge restraints as indicated. (Delete if not being used).
   a. Provide plastic or metal edge restraints along the perimeter of all paving as indicated and supported on a minimum of 6 inches (150 mm) of Base Aggregate.
   b. Provide 10” spiral galvanized or stainless steel spike to fasten plastic edge restraint at 24 inches on center for straight sections and 12 inches on center for curved sections.

A. GEOTEXTILES

1. Provide separation geotextile on bottom and sides of prepared soil subgrade. Secure in place to prevent wrinkling or folding from equipment tires and tracks.
2. Overlap ends and edges a minimum of 18 in. (450 mm) in the direction of drainage.

B. BASE AND SUBBASE AGGREGATE

1. Provide the Subbase Aggregate in uniform lifts not exceeding 6 in., (150 mm) loose thickness and compact to at least 100 percent Standard Proctor Density as per ASTM D 698.
2. Compact the Subbase Aggregate material with at least two passes in the vibratory mode then at least two in the static mode with a minimum 10 ton vibratory roller until there is no visible movement. Do not crush aggregate with the roller.
3. Tolerance: Do not exceed the specified surface grade of the compacted Subbase Aggregate material more than ±3/4 in. (20 mm) over a 10 ft. (3 m) long straightedge laid in any direction.
4. Provide the Base Aggregate material in uniform lifts not exceeding 6

in. (150 mm) over the compacted Subbase Aggregate (or Subgrade) material and compact to at least 95 percent Standard Proctor Density as per ASTM D 698.

5. Compact the Base Aggregate material with at least two passes in the vibratory mode then at least two in the static mode with a minimum 10 ton vibratory roller until there is no visible movement. Do not crush aggregate with the roller.
6. Tolerance: Do not exceed the specified surface grade of the compacted Base Aggregate material more than ±3/8 in. (10 mm) over a 10 ft. (3 m) long straightedge laid in any direction.
7. Compact and grade the upper surface of the base sufficiently to prevent infiltration of the bedding sand into the base both during construction and throughout its service life. Blend segregated areas of the granular base by the application of crushed fines that have been watered and compacted into the surface.

C. SETTING BED SAND

1. Provide, spread and screed Setting Bed Sand evenly over the compacted Base Aggregate course.
   a. Protect screeded Setting Bed Sand from being disturbed by either pedestrian or vehicular traffic.
   b. Screed only the area which can be covered by pavers in one day.
   c. Do not use Setting Bed Sand material to fill depressions in the base surface.
2. Keep moisture content constant and density loose and constant until Concrete Pavers are set and compacted.
3. Screed Setting Bed Sand using either an approved mechanical spreader (e.g.: an asphalt paver) or by the use of screed rails and boards. Maintain in a loose condition slightly ahead of the paving units and fully protect against incidental compaction following screeding. Loosen compacted sand by rain or screeded sand left overnight before further paving units are placed.
4. Inspect the Setting Bed Sand course prior to commencing the placement of the Concrete Pavers. Acceptance of the Setting Bed Sand occurs with the initiation of Concrete Paver placement.

D. CONCRETE PAVERS

1. Replace Concrete Pavers with chips, cracks, voids, discolorations, and other defects that might be visible in finished work.
2. Mix Concrete Pavers from a minimum of three (3) bundles simultaneously drawing the paver vertically rather than horizontally, as they are placed, to produce uniform blend of colors and textures. (Color variation occurs with all concrete products. This phenomenon is influenced by a variety of factors, e.g. moisture content, curing conditions, different aggregates and, most commonly, from different production runs. By installing from a minimum of three (3) bundles simultaneously, variation in color is dispersed and blended throughout the project). Exercise care in

handling face mix concrete pavers to prevent surfaces from contacting backs or edges of other units.

3. Provide Concrete Pavers using laying pattern as indicated. Adjust laying pattern at pavement edges such that cutting of edge pavers is minimized. Cut all pavers exposed to vehicular tires no smaller than one-third of a whole paver.
4. Use string lines or chalk lines on Setting Bed Sand to hold all pattern lines true.
5. Set paver surface elevation a minimum of 3 mm (1/8 inch) to a maximum of 6 mm (1/4 inch) above adjacent drainage inlets, concrete collars or channels (provided the change in slope does not impede or alter the drainage or direction of flow).
6. Place units hand tight against spacer bars. Adjust horizontal placement of laid pavers to align straight.
7. Provide space between paver units of 1/32 in. (1 mm) wide to achieve straight bond lines.
8. Prevent joint (bond) lines from shifting more than ±1/2 in. (±13 mm) over 50 ft. (15 m) from string lines.
9. Fill gaps between units or at edges of the paved area that exceed 3/8 inch (10 mm) with pieces cut to fit from full-size unit pavers.
10. Cut Concrete Pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
11. Prevent all traffic on installed Concrete Pavers until Joint Sand has been vibrated into joints. Keep skid steer and forklift equipment off newly laid Concrete Pavers that have not received initial compaction and Joint Sand material.
12. Vibrate Concrete Pavers into leveling course with a low-amplitude plate vibrator capable of a to 5000-lbf (22-kN) compaction force at 80 to 90 Hz. Perform at least three passes across paving with vibrator. Vibrate under the following conditions:
    a. After edge pavers are installed and there is a completed surface or before surface is exposed to rain.
    b. Compact installed Concrete Pavers to within 6 feet (2 meters) of the laying face before ending each day's work. Cover Concrete Pavers that have not been compacted and leveling course on which pavers have not been placed, with nonstaining plastic sheets to prevent Setting Bed Sand from becoming disturbed.
13. Protect face mix Concrete Paver surface from scuffing during compaction by utilizing a urethane pad.
14. Remove any cracked or structurally damaged Concrete Pavers and replace with new units prior to installing Joint Sand material.

E. JOINT SAND

1. Polymeric Joint Sand
    a. Install Polymeric Joint Sand per manufacturers recommended instructions.

F. FIELD QUALITY CONTROL

1. Verify final elevations for conformance to the drawings after sweeping the surface clean.
2. Prevent final Concrete Paver finished grade elevations from deviating more than ±3/8 in. (±10 mm) under a 10 ft (3 m) straightedge or indicated slope, for finished surface of paving.

G. LIPPAGE: PAVER-TO-PAVER LIPPAGE:

1. No greater than 3 mm (1/8 inch) difference in height between adjacent pavers. *Note: The industry standard acceptable lippage between adjacent pavers is 3 mm (1/8 inch). Achieving a completely flush paver surface is most desirable but may be unattainable depending on factors such as paver type, setting bed materials or depth, ASTM manufacturing standards or other specific project needs.*

3.05 REPAIRING, CLEANING AND SEALING

Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

Cleaning: Remove excess dirt, debris, stains, grit, etc. from exposed paver surfaces; wash and scrub clean.

Clean Concrete Pavers in accordance with the manufacturer's written recommendations.

3.06 PROTECTION

Protect completed work from damage due to subsequent construction activity on the site.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Cold-applied joint sealants.
   2. Hot-applied joint sealants.
   3. Joint-sealant backer materials.
   4. Primers.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: for each type of product

B. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of joint sealant.

C. Paving-Joint-Sealant Schedule: Include the following information:
   1. Joint-sealant application, joint location, and designation.
   2. Joint-sealant manufacturer and product name.
   3. Joint-sealant formulation.
   4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backer materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

2.2 JOINT-SEALANT BACKER MATERIALS

A. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

B. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.

C. Backer Strips for Cold- and Hot-Applied Joint Sealants: ASTM D5249; Type 2; of thickness and width required to control joint-sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.

PART 3 - EXECUTION

3.1 INSTALLATION OF JOINT SEALANTS

A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.

B. Cleaning of Joints: Clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

C. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer.

D. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions.

E. Install joint-sealant backers to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
   1. Do not leave gaps between ends of joint-sealant backer materials.
   2. Do not stretch, twist, puncture, or tear joint-sealant backer materials.
   3. Remove absorbent joint-sealant backer materials that have become wet before sealant application and replace them with dry materials.

F. Install joint sealants immediately following backer material installation, using proven techniques that comply with the following:
   1. Place joint sealants so they fully contact joint substrates.
   2. Completely fill recesses in each joint configuration.
   3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

G. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants in accordance with the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:
   1. Remove excess joint sealant from surfaces adjacent to joints.
   2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

H. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

I. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

END OF SECTION

PART 1 GENERAL

1.1 DESCRIPTION OF WORK

A. Provide steel fence framing and ornamental fences and gates of the following type:

Choose applicable fence and gate components from the following:

1. Wire mesh fence panels. Other Infill System.
2. Inclined section (formed main bar) fence panels.
3. Swing gates matching adjacent fence panels.
4. Sliding gates matching adjacent fence panels.

B. Related Work Specified Elsewhere:

1. Concrete Work: Section ____03 3000_____

2. Motor Operator For Gates: Section ___?__
3. Electrical Work In Connection With Motor Operated Gates: Division 16 ELECTRICAL.

1.2 PERFORMANCE CHARACTERISTICS

A. Polyester Powder Coating:

1. Salt Spray Resistance: When tested in accordance with ASTM B117, Bonderite 1000 steel panels, in a scored condition, exhibit no undercutting after 500 hours in 5 percent salt spray testing at 95 degrees F and 95 percent relative humidity. No rusting or blistering on panel face. Under the same conditions after 1000 hours, the panels showed less than 3/16 inch undercutting.

2. Weatherability: When tested in accordance with ASTM D822, with one year exposure in South Florida, with panels facing south and tilted at a 45 degree angle, a high gloss white polyester coating retains 88 percent of its gloss (gloss reading obtained on washed panels). No film failure.

3. Hardness: 2 H (min) when measured in accordance with ASTM D3363.

4. Direct Impact: Up to 160 in./lbs. when measured in accordance with ASTM D2794.

B. Polyurethane Coating: Tests below conducted on Bonderite 1000 panels at 1.0 mil dry film thickness, cured for 30 minutes at 180 degrees F and aged 14 days at room temperature (25 degrees C). Results of each test: Excellent or no failure.

1. 5 percent salt spray: 500 hours.
2. 100 percent relative humidity: 1000 hours.
3. Water immersion: 100 hours.
4. Lacquer thinner, acetone, MEK, gasoline, xylene - 20 double rubs with saturated cloth.
5. Lubricating oils, hydraulic fluids, and cutting oils.

6. Cold Check: 16 cycles, 24 hours at 100 percent humidity; 24 hours at 10 degrees F; 24 hours at 77 degrees F.
7. Pencil Hardness: H to 2H.
8. Flexibility: 1/8 inch conical mandrel.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's technical data for ornamental fences and gates.

B. Samples: For each fence panel type selected, submit one representative sample approximately 8 inches by 10 inches, showing fabrication workmanship and selected coating color.

C. Shop Drawings: Submit shop drawings for ornamental fences and gates, including plan layout and details illustrating fence height, location and sizes of support posts, footing requirements, gates and gate hardware.

If specifying motor operated gates, retain the following paragraph.

1. For motor operated gates, include details of provisions to accommodate motor operator components.

1.4 WARRANTY

A. MFR Manufacturing Corp., warrants that its fencing systems are free from defects in material and workmanship. The polyester-coated and galvanized metal is guaranteed not to rust for a period of 20 years. Accidental damage, defects resulting from improper installation and damage from vandalism or abuse are not included. Warranty is limited to prorated value of the coating, not to exceed the original value of the coating.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed fences and gates similar in material, design, and extent to those indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations for Fences and Gates: Obtain each color, grade, finish, type, and variety of component for fences and gates from one source with resources to provide fences and gates of consistent quality in appearance and physical properties.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. UL Standard: Provide gate operators that comply with UL 325.

E. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators serving as a required means of access.

1.6 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Architect not less than [two] <Insert number> days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Architect's written permission.

B. Field Measurements: Verify layout information for fences and gates shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Gate System
   a. MFR Manufacturing Corp, Inc..
      1065 Sill Ave
      Aurora, IL 60506
      TEL: 815-552-3333 FAX: 815-552-3315
      Website: www.mfrcorp.com e-mail: info@mfrcorp.com

2.2 GATES

A. This Section includes the following:

1. Single swing gate.
2. Double swing gate.
3. Single Horizontal slide gate.
4. Double Horizontal slide gate.

B. Metal Tubing framed gates, to match panel system. Steel. galvanized and powder polyester coated after fabrication.

1. Gate Height: _7’-6”?__ feet.

C. Hardware: Latches permitting operation from both sides of gate, hinges, [center gate stops] and, for each gate leaf more than 5 feet (1.5 m) wide, keepers. <Insert other hardware items and accessories.> [Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.]

1. <Insert requirements for padlocks and chains if not Owner furnished.>

D. Slide Gate Track Assembly: Manufacturer's standard track, with framing supports, bracing, and accessories, engineered to support size, weight, width, operation, and design of gate and roller assemblies.

E. Guide Posts and Roller Guards.

2.3 GATE OPERATOR

A. General: Provide factory-assembled automatic gate operation system designed for gate size, type, weight, construction, use, traffic-flow patterns, and operation frequency. Provide operation system for gate specified, of size and capacity and with features, characteristics, and accessories suitable for Project conditions, recommended [and provided]by gate manufacturer complete with electric motor and factory-prewired motor controls, remote-control stations, control devices, power disconnect switch, obstruction detection device, lockable weatherproof enclosures protecting controls and all operating parts, and accessories required for proper operation. Provide enclosures with corrosion-resistant-protective and decorative finish and two keys per lock. Include wiring from motor controls to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.

1. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
2. Provide operator with UL [approval] [-approved components].
3. Provide electronic components with built-in troubleshooting diagnostic feature.
4. Provide unit designed and wired for both right-hand/left-hand opening, permitting universal installation.

B. Comply with NFPA 70.

C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.

D. Electrohydraulic Operation: Provide unit designed for [gate] [surface] [concrete base/pad] [pedestal] [post] <Insert mounting> mounting; consisting of electric motor, pump, hydraulic actuator to suit gate type, valves, [heater to maintain constant temperature,] and [cold-weather] hydraulic fluid[; with hydraulic locking in both directions].

E. Electromechanical Operation: Provide unit designed for [gate] [surface] [concrete base/pad] [pedestal] [post] <Insert mounting> mounting; consisting of electric motor and factory-prewired motor controls, starter, speed control device, chain-drive assembly, [brake,] clutch or torque limiter, and as follows:

1. Enclosed worm gear reducer, roller chain drive.
2. Enclosed worm gear and chain and sprocket reducers, roller chain drive.
3. V-belt and [worm gear] [chain and sprocket] reducers, roller chain drive.
4. Enclosed worm gear reducer, wheel and rail drive.

F. Operation Cycle Requirements: Design gate operator to operate for not less than the

following duty and cycles per hour. One cycle equals one gate opening plus one gate closing.

1. Medium Duty: 10 cycles per hour.
2. Heavy Duty: 25 cycles per hour.
3. Peak Duty: 20 cycles per hour at peak periods.
4. <Insert requirements for duty and cycles per hour or day.>

G. Gate Operation Speed: [Minimum 45 fpm (0.229 m/s)] [Minimum 60 fpm (0.305 m/s)] <Insert speed>.

H. Electric Motors: High-starting torque, [reversible,] [single-direction,] continuous-duty, insulated electric motors, complying with NEMA MG 1, sized to start and operate size and weight of gate considering Project's service conditions without exceeding nameplate ratings or considering service factor.

1. Service Factor: According to NEMA MG 1, unless otherwise indicated.
2. Enclosure: [Totally enclosed, nonventilated or fan-cooled motors, fitted with plugged drain] <Insert another enclosure>.
3. Thermal Protection: Internal [manual] [automatic] reset.
4. Motors Smaller Than 1/2 hp: [Single phase] [Polyphase], <Insert voltage rating,> 60 Hz. [Motor horsepower as recommended by operator manufacturer] [Motor horsepower as indicated on Drawings] <Insert motor horsepower>.
5. Motors 1/2 hp and Larger: Polyphase, <Insert voltage rating,> 60 Hz. [Motor horsepower as recommended by operator manufacturer] [Motor horsepower as indicated on Drawings] <Insert motor horsepower>.

I. Remote Controls: Electric controls separated from gate and motor and drive mechanism, with [NEMA ICS 6, Type 1] [NEMA ICS 6, Type 4] <Insert another type of enclosure> enclosure for [surface] [recessed or flush] [concrete base/pad] [pedestal] [post] <Insert mounting> mounting, and with space for additional optional equipment. Provide the following remote-control device(s):

1. Control Station: Keyed, two-position, switch-operated control station located remotely from gate, with on and off functions. Provide two keys per station.
2. Control Station: Keyed, three-position, switch-operated control station with open and close functions and spring return to off position [with stop button]. Provide two keys per station.
3. Control Station: Momentary-contact, single-button-operated control station with open and close functions.
4. Control Station: Momentary-contact, three-button-operated control station with open, close, and stop positions, [and with key switch to lock out open and close buttons. Provide two keys per station].
5. Card Reader: Functions only when authorized card is presented. Magnetically coded, single-code system activated by coded card [and permitting four different access time periods]. Provide insertion-reader-type, face-lighted unit fully visible at night.
6. Card Reader: Functions only when authorized card is presented. Easily programmable, multiple-code capability permitting validating or voiding of individual cards [and permitting four different access time periods]. Provide face-lighted unit fully visible at night.

    a. Reader Type: [Touch plate] [Swipe] [Insertion] [Proximity].

b. Features: [Timed anti-passback] [Limited-time usage] [Capable of monitoring and auditing gate activity].

7. Digital Keypad Entry Unit: Functions only when authorized code is entered. Multiple-code capability of not less than [5] [100] [500] <Insert another number to suit Project> possible individual codes.
8. Digital Keypad Entry Unit: Functions only when authorized code is entered. Easily programmable, multiple-code capability permitting validating or voiding of not less than [100] [2500] [10,000] <Insert another number to suit Project> possible individual codes, consisting of [1 to 6] <Insert number> digits, [and permitting four different access time periods]. Provide face-lighted unit with [metal-keyed] [keyless-membrane] keypad fully visible at night.

   a. Features: [Timed anti-passback] [Limited-time usage] [Capable of monitoring and auditing gate activity].

9. Radio Control: Digital system consisting of code-compatible universal coaxial receiver, [one per gate] [where indicated on Drawings], remote antenna with coaxial cable and mounting brackets, and [one permanently mounted] [four portable] <Insert number and use condition to suit Project> transmitter[s] per receiver designed to operate gates. Provide easily programmable transmitter with multiple-code capability permitting validating or voiding of not less than [1000] [10,000] <Insert another number to suit Project> codes per channel configured for the following functions:

   a. Transmitters: Single-button operated, with open function.
   b. Transmitters: Single-button operated, with open and close functions.
   c. Transmitters: Three-button operated, with open, close, and stop functions.

      1) Provide transmitters featuring [two] [three] [four] <Insert another number to suit Project> independent channel settings controlling separate receivers for operating more than one gate from each transmitter.

10. Telephone Entry System: Hands-free voice-communication system for connection to building telephone system with digital-entry code activation of gate operator [auxiliary keypad entry].

    a. Residential System: Designed to be wired to same line with telephone.
    b. Multiunit System: Designed to be wired to a dedicated telephone line, with capacity to access [20] [100] <Insert number> telephones [and with electronic directory].

11. Vehicle Loop Detector System: System including automatic closing timer with adjustable time delay before closing [timer cut-off switch] and loop detector designed to [open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert function>. Provide electronic detector, with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light designed to detect presence or transit of a vehicle over an embedded loop of wire and to emit a signal activating the gate operator. Provide number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement at location shown on Drawings, as recommended in writing by detection system manufacturer for function indicated.

a. Loop: Wire, in size indicated for field assembly, and sealant; style for [pave-over] [saw-cut] installation.
b. Loop: Factory preformed in size indicated; style for [pave-over] [saw-cut] installation.

12. Vehicle Presence Detector: System including automatic closing timer with adjustable time delay before closing [timer cut-off switch] and presence detector designed to [open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>. Provide [retroreflective] [emitter/receiver] type detector, with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of a vehicle in gate pathway by interrupting an infrared beam in zone pattern and to emit a signal activating the gate operator.

J. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:

1. Action: Reverse gate in both opening and closing cycles and hold until clear of obstruction.
2. Action: Stop gate in opening cycle and reverse gate in closing cycle and hold until clear of obstruction.
3. Internal Sensor: Built-in torque or current monitor senses gate is obstructed.
4. Sensor Edge: Contact-pressure-sensitive safety edge, profile, and sensitivity designed for type of gate and component indicated, in locations as follows. Connect to control circuit using [take-up cable reel] [self-coiling cable] [gate edge transmitter and operator receiver system].

a. Along entire gate leaf leading edge.
b. Along entire gate leaf trailing edge.
c. Across entire gate leaf bottom edge.
d. Along entire length of gate posts.
e. Along entire length of gate guide posts.
f. Where indicated on Drawings.
g. <Insert extent and location.>

5. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in partition's path by interruption of an infrared beam in the zone pattern without obstruction contacting gate.

K. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop gate at fully retracted and fully extended positions.

L. Emergency Release Mechanism: Quick disconnect release of operator drive system of the following type of mechanism, permitting manual operation if operator fails. Design system so control circuit power is disconnected during manual operation.

1. Type: Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge.
2. Type: Mechanical device, key, or crank-activated release.

M. Operating Features: Include the following:

1. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features [with capability of monitoring and auditing gate activity]. Provide unit that is isolated from voltage spikes and surges.
2. Fully Systems Compatible: With controlling circuit board capable of accepting any type of input from external devices.
3. Master/Slave Capability: Control stations designed and wired for gate pair operation.
4. Automatic Closing Timer: With adjustable time delay before closing [and timer cut-off switch].
5. Open Override Circuit: Designed to override closing commands.
6. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
7. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.
8. Clock Timer: [24-hour] [Seven-day] <Insert time period> programmable for regular events.

N. Accessories: Include the following:

1. Mounting kit [including pedestal].
2. Audio Warning Module: Provide ADA-compliant audible alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving.
3. Visual Warning Module: Provide ADA-compliant visible [constant-] [strobe-]light alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving.
4. Battery Backup System: Battery-powered drive and access control system, independent of primary drive system, opening gate if power fails. <Insert additional requirements.>
5. External electric-powered lock with delay timer allowing time for lock to release before gate operates.

    a. Type: [Solenoid] [Magnetic] for swing gate.
    b. Type: [Solenoid] [Magnetic] for slide gate.

6. [Fire] [Postal] box.
7. Fire [strobe] [siren] sensor.
8. Intercom System: <Insert requirements.>
9. Instructional, Safety, and Warning Labels and Signs: [According to UL 325] [Manufacturer's standard for components and features specified] [As indicated on Drawings] <Insert requirements>.

2.4 CAST-IN-PLACE CONCRETE

A. General: Comply with ACI 301 for cast-in-place concrete.

B. Materials: Portland cement complying with ASTM C 150 <Insert type if required>, aggregates complying with ASTM C 33, and potable water [for ready-mixed concrete complying with ASTM C 94]. [Measure, batch, and mix Project-site-mixed concrete according to ASTM C 94.]

1. Concrete Mixes: Normal-weight concrete [air entrained] with not less than 3000-psi (20.7- MPa) compressive strength (28 days), 3-inch (75-mm) slump, and 1-inch (25-

mm) maximum size aggregate.

C. Materials: Dry-packaged concrete mix complying with ASTM C 387 for normal-weight concrete mixed with potable water according to manufacturer's written instructions.

2.5 GROUT AND ANCHORING CEMENT

A. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout, recommended in writing by manufacturer, for exterior applications.

B. Erosion-Resistant Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended in writing by manufacturer for exterior applications.

2.6 FENCE GROUNDING

A. Conductors: Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.

1. Material Above Finished Grade: [Copper] [Aluminum].
2. Material On or Below Finished Grade: Copper.
3. Bonding Jumpers: Braided copper tape, 1 inch (25 mm) wide, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.

B. Connectors and Ground Rods: Listed in UL 467.

1. Connectors for Below-Grade Use: Exothermic welded type.
2. Ground Rods: Copper-clad steel.

a. Size: 5/8 inch by 96 inches (16 by 2400 mm).

2.7 SITE FENCE:EXPANDED METAL MESH WEATHERING STEEL PANELS ON WEATHERING STEEL 4X4 POSTS. LIGHT GAUGE WEATHERING STEEL SUBFRAMING, W/PEDESTRIAN GATE

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for [a verified survey of property lines and legal boundaries,] site clearing, earthwork, pavement work, and other conditions affecting performance.

1. Do not begin installation before final grading is completed, unless otherwise permitted by Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet (152.5 m) or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.3 INSTALLATION, GENERAL

A. Install fencing on established boundary lines inside property line.

B. Post Excavation: Drill or hand-excavate holes for posts to diameters and spacings indicated, in firm, undisturbed or compacted soil.

C. Post Setting: Hand-excavate holes for post foundations in firm, undisturbed or compacted soil. Set posts in concrete footing. Protect portion of posts aboveground from concrete splatter. Place concrete around posts and vibrate or tamp for consolidation. Using mechanical devices to set posts is not permitted. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during placement and finishing operations until concrete is sufficiently cured.

1. Dimensions and Profile: As indicated on Drawings.

2. Dimensions and Profile: 12” diameter for terminal posts, 10” diameter for intermediate posts. Concrete to be 6” deeper than post length in ground.
3. Exposed Concrete Footings: Extend concrete 2 inches (50 mm) above grade, smooth, and shape to shed water.
4. Concealed Concrete Footings: Stop footings [2 inches (50 mm)] <Insert dimension> below grade [as indicated on Drawings] to allow covering with surface material.
5. Posts Set into Concrete in Sleeves: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with [nonshrink, nonmetallic grout,] [anchoring cement,] mixed and placed to comply with anchoring material manufacturer's written instructions, and finished sloped to drain water away from post.
6. Posts Set into Concrete in Voids: Form or core drill holes not less than 5 inches (125 mm) deep and 3/4 inch (20 mm) larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with [nonshrink, nonmetallic grout,] [anchoring cement,] mixed and placed to comply with anchoring material manufacturer's written instructions, and finished sloped to drain water away from post.

7. Mounting Plate Installation: Bolt mounting plates attached to each post to slab or structure as indicated, using expansion bolts.

3.4 GATE INSTALLATION

A. General: Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.5 GATE OPERATOR INSTALLATION

A. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.

B. Excavation for [Support Posts] [Pedestals] [Concrete Bases/Pads]: Hand-excavate holes for bases/pads, in firm, undisturbed or compacted soil to dimensions and depths and at locations as required by gate operator component manufacturer's written instructions and as indicated on Drawings.

C. Concrete Bases/Pads: Cast-in-place or precast concrete, made of not less than 3000-psi (20.7-MPa) compressive strength (28 days), [depth not less than 12 inches (300 mm)] <Insert depth 6 to 12 inches (150 to 300 mm) below frost line or detail on Drawings>, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.

D. Vehicle Loop Detector System: [Cut grooves in pavement and] bury and seal wire loop according to manufacturer's written instructions. Connect to equipment operated by detector.

E. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.

3.6 GROUNDING AND BONDING

A. Fence Grounding: Install at maximum intervals of [1500 feet (450 m)] <Insert a lesser distance where grounding resistance is high> except as follows:

1. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of [750 feet (225 m)] <Insert a lesser distance where grounding resistance is unusually high>.

    a. Gates and Other Fence Openings: Ground fence on each side of opening.

        1) Bond metal gates to gate posts.
        2) Bond across openings, with and without gates, except openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches (460 mm) below finished grade.

B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet (45 m) on each side of crossing.

C. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2, unless otherwise indicated.

D. Grounding Method: At each grounding location, drive a ground rod vertically until the top is 6 inches (150 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at the grounding location.

E. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.

F. Connections: Make connections so possibility of galvanic action or electrolysis is minimized.

Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.

1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
2. Make connections with clean, bare metal at points of contact.
3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

G. Bonding to Lightning Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning protection down conductor or lightning protection grounding conductor complying with NFPA 780.

3.7 FIELD QUALITY CONTROL

A. Ground-Resistance Testing Agency: [Owner will engage] [Engage] a qualified independent testing agency to perform field quality-control testing.

B. Ground-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure ground resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance. Perform tests by two-point method according to IEEE 81.

C. Desired Maximum Grounding Resistance Value: 25 ohms.

D. Excessive Ground Resistance: If resistance to ground exceeds desired value, notify Architect promptly. Include recommendations to reduce ground resistance and proposal to accomplish recommended work.

E. Report: Prepare test reports, certified by testing agency, of ground resistance at each test location. Include observations of weather and other phenomena that may affect test results.

3.8 ADJUSTING

A. Gate: Adjust gate to operate smoothly, easily, and quietly, free from binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Automatic Gate Operator: Energize circuits to electrical equipment and devices. Adjust operators, controls, safety devices, [alarms,] and limit switches.

1. Electrohydraulic Operator: Purge operating system, adjust pressure and fluid levels, and check for leaks.
2. Operational Test: After electrical circuitry has been energized, start units to confirm

proper motor rotation and unit operation. Test controls[, alarms,] and safeties. Remove damaged and malfunctioning units, replace with new units, and retest.

C. Lubricate hardware[, gate operator,] and other moving parts.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's personnel to adjust, operate, and maintain gates.

1. Test and adjust [operators,] [controls,] [alarms,] [safety devices,] hardware, and other operable components. Replace damaged or malfunctioning operable components.
2. Train Owner's personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
3. Review data in maintenance manuals. Refer to Division 1 Section "Contract Closeout."
4. Review data in maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data."
5. Schedule training with Owner[, through Architect,] with at least seven days' advance notice.

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. Furnish all labor, materials, equipment and instructions necessary for the complete installation of the landscape irrigation systems as drawn and specified. The work includes, but is not limited to:
   1. Trenching, backfilling, and compaction for irrigation lines.
   2. Provisions and installation for a turnkey automatic sprinkler system. Provide Controller, Sleeving, Piping, Heads, Drip Tubing, Valves, Quick Couplers, Valve Access Boxes, Low Voltage Wiring, applicable connection fees and all other items required for a complete system as shown on the Drawings, called for in the specifications or as may be required for proper operation of the system. The system shall be installed in strict accordance with all applicable codes, ordinances and regulations.
   3. Test all systems, make operative and adjust.
   4. Submit As-Built Record Drawings, Maintenance Manual and satisfactory evidence to show that all work has been installed in accordance with the ordinance and code requirements.
   5. Maintain and operate until substantial completion.
   6. One-year Guarantee Period.

B. Related work by others:
   1. General Contractor shall provide 1” Irrigation Water Meters, 1-1/2” Service Lines To Indoors, 1” Backflow Preventers In Riser Rooms, 1-1/2” Service Lines To Outdoors and 1-1/2” Gate Valves to be considered the POC - Points-Of-Connection for the Irrigation Contractor as shown on the drawings. The General Contractor shall be responsible for coordinating the application for the water meters with the city and for providing the permit fees. All materials, operations, installed conditions and personnel shall be in strict accordance with all applicable codes, ordinances and regulations.
   2. Sch40 PVC Sleeves as provided by General Contractor (See 3.3).
   3. Electrical work and Conduit as provided by Electrical Contractor for the Automatic Controllers (See 3.8 B).

C. Provide Drip Irrigation Zones as indicated assure 100% coverage. Lay out the system so that the shrub and groundcover beds are on separate zones as feasible.

D. Coordinate exact locations of water meter, backflow preventer, controller and sensors with the Architect and General Contractor.

E. The Contractor shall coordinate the installation of the sprinkler system with the landscape installation, avoiding the rootballs of trees and shrubs.

F. The Contractor shall install the irrigation system in accordance with the schedule requirements provided by the General Contractor.

PART 2 - PRODUCTS

2.1 GENERAL

A. The sprinkler system design shall be based on the equipment of HUNTER INDUSTRIES, NETAFIM or approved equal.

B. Materials shall be newly manufactured and without flaws or defects, and of quality and performance as specified. Excess materials at completion are property of the Contractor, to be removed from the site.

C. The Contractor shall be responsible for computing and supplying the required quantities necessary to make the irrigation system complete and operational in every way. Quantities shown on the drawings are for convenience only.

PART 3 - EXECUTION

3.1 PIPE INSTALLATION

A. Never install PVC pipe when there is water in the trench. Never install PVC pipe when the temperature is 32 degrees Fahrenheit or below.

B. Install the mainline at a bury depth of 18 inches and the lateral lines at a bury depth of 12 inches below finished grade. Maintain a 4 inch clearance between pipes that cross at an intersection and a 2 inch clearance between pipes that are buried in the same trench.

C. Remove all foreign matter or dirt from the inside of the pipe before joining. Cap or plug all lines after installation and prior to testing to minimize infiltration of foreign matter or dirt.

D. Snake pipe from side to side of trench bottom to allow for expansion and contraction. Install main lines and lateral lines in common trenches wherever possible.

3.2 WIRE INSTALLATION

A. Verify that the work of this section is installed in strict accordance with the latest edition of the National Electric Code and local electrical codes.

B. Install neutral and control wires, 12 inches below finish grade, in the same trenches as the main and lateral lines. The wires shall be installed in a neat and orderly fashion and bundled together and taped every 10 feet. Snake wires in trench to allow for expansion and contraction and provide slack loops at every splice, change of direction, at the valves, where the wire enters the conduit for the automatic controller and at least every 100 feet in runs more than 100 feet in length. The slack loops shall be created by wrapping 3 feet of wire around a 1/2 inch diameter pipe to form a coil.

C. Connect each solenoid to the controller with a "control wire" which is typically red in color. Connect a "common neutral wire" to all solenoids which is typically white in color.

D. Wire Splices must be properly insulated and waterproofed. Control wire splices will be allowed only in runs more than 500 feet and only in valve boxes.

3.3 CONTROLLER AND SENSOR INSTALLATION

A. Coordinate with the General Contractor the exact location where the automatic controller will be locat-ed. Connect all wiring and grounding in accordance with manufacturer's instructions. Provide separate, secured to the wall, conduits for both power supply and control wiring.

B. The General Contractor shall provide GFIC outlets with 115vac; 1phase power at the Controller and Backflow Preventer Enclosure locations, as shown on the drawings.

C. Install the rain and freeze sensors in an open area where the device is exposed to rain water but not sprinkler water. Mount away from overhanging objects that may interfere with rainfall. Connect wiring in accordance with manufacturer's instructions.

3.4 VALVE INSTALLATION

A. The remote control valves shall be installed in accordance with manufacturer's instructions. Valves shall be installed in Highline valve boxes or approved equal. Boxes shall be installed to a height that will not cause them to interfere with maintenance machinery and which is sufficient to prevent soil or mulch from washing into the box. Provide a 6-inch layer of washed gravel in the bottom of the valve box.
   1. Valves shall be set a minimum of two feet behind curbs.
   2. Valves shall not be set in curves which are vulnerable to damage by truck trailers over running curbs.

B. The quick coupling valves shall be installed on PVC threaded swing joints on the irrigation mainline. Space quick coupling valves as shown on the plans. Provide a 1"x1"x3' piece of angle iron next to the quick coupling valve and anchor with two (2) stainless steel hose clamps.

C. The automatic drain valves shall be installed in the low points of the lateral lines. Dig a minimum two (2) cubic foot hole where the drain valve is to be located. Install the drain valve in a PVC tee pointing downward at a 45 degree angle. Surround the drain valve with a minimum one (1) cubic foot of gravel. Place an 18"x18" piece of weed cloth or burlap on top of the gravel. Finish to grade with top soil.

D. Install in the low points of the mainline, manual gate valves as needed for draining. Install 24" off of the mainline in Highline 10" valve boxes or approved equal.

3.5 DRIP SYSTEM INSTALLATION

A. Drip Control Zone Kit. Install Drip Control Zone Kit level and below grade with a minimum of 4 inches clearance to the top and sides of the inside of a rectangular valve box. Place a minimum of 6 inches of gravel in the bottom of the valve box.

B. Landscape Dripline (Inline Emitter Tubing). Landscape bed areas shall be sup-plied with rigid PVC lateral piping. Landscape Dripline connection points shall be made in 6 inch valve boxes using compression adapter tees or ells as required. For under mulch installation, place tubing rows at 18 inch lateral spacing as indicated on the plans and hold in place with galvanized tie-down stakes spaced evenly every 2 to 3 feet, and with two staples on each change of direction. Install tubing in a serpentine manner and

bending is allowed provided the radius is sufficient enough that kinking does not occur. Backfill with mulch as noted in the landscaping specifications.

C. Landscape Dripline Compression Fittings. Landscape Dripline Compression Fit-tings shall be used at connection points to the PVC lateral piping, where tubing layout requires a tee and at bends or changes of direction to prevent kinking of the Landscape Dripline.
   1. Removable flush caps shall be installed at the low point of each dripline section. Depending on the site conditions and tubing layout, more than one flush cap may be required. Provide a 6 inch valve box for each flush cap.
   2. Air/vacuum relief valves shall be installed at the highest elevation within each dripline section. Depending on the site conditions and tubing layout, more than one air/vacuum relief valve may be required. Provide a 6-inch valve box for each air/vacuum relief valve.
   3. Install a visual pop-up indicator For Each Drip Zone in an inconspicuous location. Note locations of indicators on As-Built drawings.

3.6 MAINTENANCE AND COMPLETION OF THE WORK

A. The Contractor shall complete the irrigation system as drawn and specified, according to Schedule herein, and operate and maintain same until time of substantial completion of the project.

B. The Contractor shall orient the Owner's personnel to the operation and adjustments of the controller according to local seasonal requirements. The Contractor shall also familiarize the Owner with sprinkler and valve adjustments. The Owner is, in general, to be totally familiarized with the overall operation, adjustment, maintenance and intent of the irrigation system, including the measures that should be taken to provide winterization for the system. Such instructions should be in written form. The contractor shall also provide a color coded laminated plan, in the controller door, showing the locations of all zones.

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. This Section includes materials, labor, apparatus, tools, equipment, temporary construction, transportation, and services necessary for and incidental to performing the proper completion of Work, as required to make a complete and thorough preparation of the planting soil, including soil amendment products, imported topsoil, as required, to make up deficiencies in quantity of soil available on site, as shown in the Contract Drawings, and as specified herein this Section.

B. Work under this Section consists of, but is not necessarily limited to, furnishing and installing the following:
   1. Agronomic Soil Fertility Testing and Soil Percolation Testing.
   2. Topsoil.
   3. Pre-Plant Weed Control.
   4. Soil Conditioners, Amendments and Fertilizers (Organic & Chemical).

C. Related Requirements:
   1. Section 31 2000:"Earthwork"
   2. Section 32 9300 "Plants" for placing planting soil for plantings.
   3. Section 32 8400: "Planting Irrigation"
   4. Section 32 9200 "Turf and Grasses" for placing planting soil for turf and grasses.

1.2 QUALITY ASSURANCE

A. Installer Qualifications for requirements indicated herein this Section:
   1. Licensed Landscape Contractor, in the State of Arkansas.
      a. Engage an experienced, licensed Contractor who has completed landscaping work similar in material, design, and extent to that indicated for this Project and with a record of successful landscape establishment.
      b. Installer's Field Supervision: Contractor shall maintain an experienced, full-time landscape supervisor/superintendent at the Project Site during times that landscaping operations identified herein the Contract are in progress.

B. Manufacturer’s Directions: Follow Manufacturer’s directions and drawings in cases where the Manufacturers of articles used in this Section furnish directions covering points not shown in the Contract Drawings or Contract Specifications.

C. Permits, Fees, Bonds, Testing, and Inspections: Contractor shall arrange and pay for permits, fees, bonds, testing, and inspections necessary to perform and complete his portion of the Work.

D. Approved Testing Laboratory and Procedures for Agronomic Soil Fertility Analyses:
   1. Agronomic Soil Fertility Analyses shall be conducted by a reputable, certified, agronomic soils laboratory. Laboratory shall be a member of the Council on Soil

Testing and Plant Analysis. The same laboratory shall be used throughout the duration of the Contract:

2. Contractor shall verify and confirm the selected Testing Laboratory and specific location(s) of soil sample(s) with the Landscape Architect prior to commencing soil sampling operations.
3. For each Soil type, submit the physical Soil Samples directly to the selected Laboratory for analysis, per the procedures outlined per Part III herein this Section.
   a. In addition to the physical Soil Samples, Contractor shall also provide the Laboratory with a copy of the Soil Amendment and Fertilizer products indicated herein this Section.
4. Along with the testing data results, the Agronomic Soil Fertility Analysis shall also include written recommendations authored by the Laboratory conducting the Analyses for amending, treating, and/or correcting the sampled soils. Laboratory shall utilize the organic-based Soil Amendments and Fertilizers described herein this Section to the greatest extent possible to produce satisfactory planting soil(s) suitable for sustaining healthy viable plant growth.
   a. The Analyses shall also include Maintenance and Post-Maintenance fertilization programs for planted areas within the Contract.
5. Agronomic Soil Fertility Analyses shall be performed on each Soil Type samples, and include testing results for the following
   a. pH

      1) Electro-conductivity (salinity) measurement - saturated extract
      2) Measurement of sodicity (Sodium Absorption Ratio)
      3) Estimate of soil texture and soil organic matter
      4) Presence of lime
      5) Nutrients/Toxic Elements measurement of DPTA extract
      6) Saturation extracts for nitrate, sulfate, sodium, calcium, magnesium, potassium, soluble phosphate, and boron
      7) Parasitic nematodes
      8) Herbicide contamination
      9) (For Lightweight Soil Mixes): Test for physical and chemical composition, and saturated weight per cu.ft.
6. Planting operations shall not commence until the results of the Agronomic Soil Fertility Analysis and Recommendations are reviewed accordingly by the Landscape Architect.
7. The quantity or type of amendments may be modified by the Landscape Architect within fourteen (14) days of receipt of the results. The Agronomic Soil Fertility Analysis and Recommendations shall take precedence over the amendment and fertilizer application rates specified herein or on the Contract Documents.
8. The Agronomic Soil Fertility Report/Recommendation shall take precedence over the amendment and fertilizer application rates specified herein or on the Contract Documents.

1.3 CHEMICAL SOIL AMENDMENT COMPONENTS

A. General: Chemical Soil Amendment Components listed herein may or may not be used, depending on the results of the Agronomic Soil Fertility Report. Provide as required.

B. Gypsum: Commercially-processed and packaged agricultural-grade hydrated calcium sulfate product (CaSO4), 92.0% minimum, pH at 7.1.
   1. Commercial-Grade Products & Manufacturers: Subject to compliance with requirements, provide products by one (1) of the following:
      a. Ben Franklin® No. 1 Agricultural Gypsum, U.S. Gypsum Company.
      b. 100% Good Stuff Gypsum™, Art Wilson Company.
      c. CAL-SUL® Pelletized Agricultural Gypsum, North Pacific Group.
      d. Bumper Harvest Agricultural Gypsum, Domtar Gypsum.
      e. Premium 97 Solution-Grade Gypsum, Diamond K, Inc.
      f. Or equal, as approved by the Landscape Architect.

C. Soil Sulfur: Elemental Sulfur (90% min.) commercially manufactured, water degradable, palletized.
   1. Commercial-Grade Products & Manufacturers: Subject to compliance with requirements, provide products by one (1) of the following:
      a. Disper-Sul, Martin Resources, Inc.
      b. Soil Sulfur, Red Top.
      c. Or equal, as approved by the Landscape Architect.

D. Iron: Non-staining, 40% Fe minimum, complete with micro-nutrients and 2% humic acids, as derived from iron oxide, manganese oxide, or zinc oxide.
   1. Commercial-Grade Products & Manufacturers: Subject to compliance with requirements, provide products by one (1) of the follo
      a. Gro-Power Iron, Gro-Power, Chino, CA.
      b. Iron 45 w/ Micronutrients, Tri-C Enterprises LLC, Chino, CA.
      c. Or equal, as approved by the Landscape Architect.

E. Dolomite Lime: Agricultural-grade mineral soil conditioner containing 35% minimum magnesium carbonate, and 49% minimum calcium carbonate, 100% passing #65 sieve.

F. Potassium Sulfate (Sulfate of Potash K2O), (0-0-50 guaranteed analysis N-P2O5-K2O): Agricultural-grade, containing minimum 50% of water-soluble potash and 18% Sulfur (S).

G. Single Superphosphate P2O5 (0-15-0 guaranteed analysis N-P2O5-K2O): Commercial product, containing 15% available phosphoric acid and 14% Sulfur.

H. Triple Superphosphate P2O5, (0-45-0 guaranteed analysis N-P2O5-K2O): Commercial product, containing 45% available phosphate and 15% Calcium (Ca).

I. Ammonium Sulfate (NH4)2SO4, (21-0-0 guaranteed analysis N-P2O5-K2O): Commercial product containing approximately 21% ammonia.

J. Ammonium Nitrate NH4NO3, (34-0-0 guaranteed analysis N-P2O5-K2O): Commercial product containing approximately 34% ammonia.

K. Calcium Nitrate CaNO3, (15.5-0-0 guaranteed analysis N-P2O5-K2O): Agricultural grade containing 15-1/2% nitrogen.

L. Potassium Nitrate KNO3, (13-0-45 guaranteed analysis N-P2O5-K2O): Commercial

product containing approximately 13% nitrogen and 45% potassium.

M. Ureaformaldehyde (38-0-0 guaranteed analysis N-P2O5-K2O): Granular commercial product containing approximately 38% nitrogen.

N. Urea CO(NH2)2, (46-0-0 guaranteed analysis N-P2O5-K2O): Granular commercial product containing 46% nitrogen

O. I.B.D.U. (Iso Butyldiene Diurea): Commercial product containing 31% nitrogen.

1.4 ACCESSORIES

A. Drain Rock/Aggregate: Crushed Stone, conforming to ASTM C33, graded to ¾"-size, clean, hard, durable, free of materials toxic to plant growth, set in bottom of Planters, at depth indicated in Contract Drawings. Provide Geotextile Filter Fabric between Drain Rock/Aggregate and amended planting backfill soil.

B. Wetting Agent/Water Storing Polymer: Non-biodegradable, granular, polyacrylamide polymer soil amendment.
   1. Commercial-Grade Products & Manufacturers: Subject to compliance with requirements, approved through submittal.

C. Landscape Mulch Material:
   1. Organic Wood Mulch: Triple Hammered Hardwood Mulch
   2. Decomposed Granite: as specified on plans
   3. Landscape Mulch Material for Submersible Planting Pots: Native River Cobble, to be approved through submittal.

PART 2 - EXECUTION

2.1 APPLICATION RATES

A. Fertilizer Tablets shall be spread equidistantly around the perimeter within the Amended Planting Backfill Mixture, up to within three-inches (3") of the finished grade of the Mixture, and at the following rates:
   1. Size of Plant Material - One (1) gallon Container stock; Total Quantity of 7-gram tablets - One (1) Tablet
   2. Size of Plant Material - Five (5) gallon Container stock; Total Quantity of 7-gram tablets - Six (6) Tablets
   3. Size of Plant Material - Fifteen (15) gallon Container stock; Total Quantity of 7-gram tablets - Ten (10) Tablets
   4. Size of Plant Material - 2.5" Caliper Stock; Total Quantity of 7-gram tablets - Fifteen (15) Tablets
   5. Size of Plant Material - 3"-4" Caliper Stock; Total Quantity of 7-gram tablets - Twenty-two (22) Tablets
   6. Size of Plant Material - 5"-8" Caliper Stock; Total Quantity of 7-gram tablets - Thirty (30) Tablets
   7. Contractor shall not provide Fertilizer Tablets for designated native plant species, if directed by the Landscape Architect. Contractor shall verify with the Landscape

Architect, in writing, as to which plants are subject to not receive the Fertilizer Tablets.

B. Mycorrhizal Inoculum Application Rate:
   1. During application of Fertilizer/Planting Tablets, Mycorrhizal Inoculum shall be spread equidistantly around the perimeter within the Amended Planting Backfill Mixture, up to within three (3") inches of the finished grade of the Mixture, at the prescribed application rate per the Manufacturer's written recommendations.

2.2 MAINTENANCE

A. Protect graded areas from traffic and erosion. Keep free of trash and debris. Repair and reestablish grades in settled, eroded, and damaged areas.

B. Where completed areas are disturbed by construction operations or adverse weather, scarify surface, reshape, and compact to required density.

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. Provide sodded lawns as shown and specified. The work includes:
   1. Soil Preparation
   2. Sodding lawns and other indicated areas.
   3. Maintenance.

1.2 QUALITY ASSURANCE

A. Sod: Comply with American Sod Producers Association (ASPA) classes of sod materials.

B. Provide and pay for materials testing. Testing agency shall be acceptable to the Architect. Provide the following data:
   1. Test representative materials samples proposed for use.
   2. Topsoil:
      a. pH factor.
      b. Mechanical analysis.
      c. Percentage of organic content.
      d. Recommendations of type and quantity of additives required to establish satisfactory pH factor and supply of nutrients to bring nutrients to satisfactory level for planting.

1.3 INFORMATIONAL SUBMITTALS

A. Submit sod growers certification of grass species. Identify source location.

B. Submit the following materials certification:
   1. Fertilizer(s) analysis.

C. Submit materials test report.

D. Upon sodded lawn acceptance, submit written maintenance instructions recommending procedures for maintenance of sodded lawns.

1.4 FIELD CONDITIONS

A. Work notification: Notify Architect at least 7 working days prior to start of sodding operations.

B. Protect existing utilities, paving, and other facilities from damage caused by sodding operations.

C. Perform sodding work only after planting and other work affecting ground surface has been completed.

D. Restrict traffic from lawn areas until grass is established. Erect signs and barriers as required.

E. Provide hoses and lawn watering equipment as required.

1.5 WARRANTY

A. Provide a uniform stand of grass by watering, mowing, and maintaining lawn areas until final acceptance. Re sod areas, with specified materials, which fail to provide a uniform stand of grass until all affected areas are accepted by the Landscape Architect.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Sodding:
   1. Lay sod per plans to form a solid mass with tightly-fitted joints. Butt ends and sides of sod strips. Do not overlay edges. Stagger strips to offset joints in adjacent courses. Remove excess sod to avoid smothering of adjacent grass. Provide sod pad top flush with adjacent curbs, sidewalks, drains, and seeded areas.
   2. Do not lay dormant sod or install sod on saturated or frozen soil.
   3. Install initial row of sod in a straight line, beginning at bottom of slopes, perpendicular to direction of the sloped area. Place subsequent rows parallel to and lightly against previously installed row.
   4. Peg sod on slopes greater than 3 to 1 to prevent slippage at a rate of 2 stakes per yd. of sod.
   5. Water sod thoroughly with a fine spray immediately after laying.
   6. Roll with light lawn roller to ensure contact with sub-grade.

B. Sod indicated areas within contract limits and areas adjoining contract limits disturbed as a result of construction operations.

3.2 MAINTENANCE

A. Maintain sodded lawn areas, including watering, spot weeding, mowing, application of herbicides, fungicides, insecticides and resodding until a full, uniform stand of grass free of weed, undesirable grass species, disease, and insects is achieved and accepted by the Architect at the completion and acceptance of the entire project.
   1. Water sod thoroughly every 2 to 3 days, or as required to establish proper rooting.
   2. Repair, rework, and resod all areas that have washed out or are eroded. Replace undesirable or dead areas with new sod.
   3. Mow lawn areas as soon as lawn top growth reaches a 3" height. Cut back to 2" height. Repeat mowing as required to maintain specified height. Not more than 40% of grass leaf shall be removed at any single mowing.
   4. Apply Type B fertilizer to lawns approximately 30 days after sodding at a rate equal to 2.0 lbs. of actual nitrogen per 1,000 sq. ft. (140 lbs./acre). Apply with a mechanical rotary or drop type distributor. Thoroughly water into soil. *Only as required per soil test for Buffalo Sod

5. Apply herbicides as required to control weed growth or undesirable grass species.
6. Apply fungicides and insecticides as required to control diseases and insects

END OF SECTION

PART 1 -GENERAL

1.1 SUMMARY

A. Work Included: Provide trees, shrubs, ground covers, native perennials, native grasses and native wildflower and grass seed as shown and specified.
   1. Soil preparation.
   2. Trees, shrubs, groundcovers, native perennials and native grasses.
   3. Planting mixes.
   4. Mulch and planting accessories.
   5. Maintenance and Extended Management.

B. Related Requirements:
   1. Section 015713: Temporary Erosion and Sediment Control
   2. Section 328400 "Planting Irrigation" for complete irrigation systems.
   3. Section 329200 "Turf and Grasses" for turf (lawn) and meadow planting, hydroseeding, and erosion-control materials.
   4. Section 312100: Finish Grading
   5. Section 329400: Soil Preparation

C. Definitions:
   1. Plant Material(s) – Refers to living plant species, inclusive of trees, shrubs, groundcovers, vines, ornamental grasses, cacti/succulents, espaliers, annuals, perennials, etc., as indicated in the Contract Drawings.
   2. Planting Area (PA) – As denoted on the Contract Drawings, shall refer to areas to be installed with Plant Material(s), or areas where existing vegetation shall be protected.
   3. Plant Height – Measurement of main body height, not measurement to branch tip.
   4. Plant Spread – Measurement of main body diameter, not measurement from branch tip to branch tip.
   5. Amended Planting Backfill Mixture – Refer to Section 32 91 13 – Soil Preparation.
   6. Balled and Burlapped Stock – Healthy, vigorous exterior plants with firm, natural balls of earth in which they are grown, with ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of tree or shrub required; wrapped, tied, rigidly supported, and drum laced as recommended by ANSI Z60.1.
   7. Balled and Potted Stock – Healthy, vigorous exterior plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than diameter and depth recommended by ANSI Z60.1 for type and size of exterior plant required.
   8. Bare-Root Stock – Healthy, vigorous exterior plants grown with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than minimum root spread according to ANSI Z60.1 for type and size of exterior plant required.
   9. Compacted Settling Layer – Subgrade under where a plant is directly planted.
   10. Container-Grown Stock – Healthy, vigorous, well-rooted exterior plants grown in a

container with well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of exterior plant required.

11. Fabric Bag-Grown Stock – Healthy, vigorous, well-rooted exterior plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of exterior plant.
12. Finish Grade – Elevation of finished surface of planting soil.
13. Manufactured Topsoil – Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.
14. Multi-Stem – Where three (3) or more main stems arise from the ground from a single root crown or at a point right above the root crown.
15. Sub-grade – Surface or elevation of subsoil remaining after completing excavation, or top surface of a fill or backfill, before placing planting soil.
16. Subsoil – All soil beneath the topsoil layer of the soil profile and typified by the lack of organic matter and soil organisms.

1.2 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Requirement: Valid Arkansas Landscaping Contractor License.
   2. Engage an experienced Installer who has demonstrated completed landscaping work similar in material, design, and extent to that indicated for this Project and with a record of successful landscape establishment.
   3. Installer's Field Supervision Installer shall maintain an experienced full-time supervisor on the Project site during times that landscaping installations under this Section are in progress.
   4. Selections of Plant Material may be sourced and purchased by the Owner directly. Contractor to provide a line item installation cost and separate warranty identifying the schedule of values for each.

B. Plant Material:
   1. Trees, Shrubs, Grasses and Seed: Provide quality, size, genus, species, and variety of Plant Material indicated, complying with applicable requirements of ANSI Z60.1 "American Standard for Nursery Stock."
      a. At least one (1) plant of each Plant Material species delivered to the Project Site shall have an identification tag from supplying nursery showing botanical and common name of the plant as identified in the Contract Drawings. Landscape Architect shall be provided the opportunity for an on-site debriefing by the Contractor that identifies the size and specific type of Plant Material upon delivery.

         1) Incorrect Planting Materials

            a) Provide replacements equal to the size and quality to match the planted materials at the time the untrue species is discovered.

      b. Replace, at no cost to Owner, Plant Material that is revealed during the

course of the Contract as to being untrue to the species indicated in the Contract Drawings and reviewed accordingly under this Section.

2. Native Wildflower and Grass seed: Provide quality seed and/or custom mix identified within the Construction Documents. Noxious weed seeds shall not exceed one-half (1/2) percent by weight of the total of pure live seed and other material in the mixture. Johnson Grass, nutgrass or other noxious weed seed will not be allowed.
   a. At least one-half (1/2) pound of each seed/seed mix species delivered to the Project Site shall have an identification tag from supplying nursery showing botanical and common name of the plant as identified in the Contract Drawings. Landscape Architect shall be provided the opportunity for an on-site debriefing by the Contractor to verify the species of seed upon delivery.
   b. Incorrect Seed Materials:
      1) Replace, at no cost to Owner, Seed that is revealed during the course of the Contract as to being untrue to the species indicated in the Contract Drawings and reviewed accordingly under this Section.
      2) Provide replacement seed at the time the untrue species is discovered.
   c. Replacement of Plant Material: Refer to the Guarantee Article indicated herein this Section

C. Plant Material Observation: Landscape Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Landscape Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

D. Regulatory Requirements:
   1. Contractor shall meet the requirements of applicable laws, codes, and regulations as required by the authorities having jurisdiction over the Work. Plant names indicated, comply with "Standardized Plant Names" as adopted by the latest edition of the American Joint Committee of Horticultural Nomenclature. Names of varieties not listed conform generally with names accepted by the nursery trade. Provide stock true to botanical name and legibly tagged.

E. Permits, Fees, Bonds, and Inspections: Contractor shall arrange and pay for permits, fees, bonds, and inspections necessary to perform and complete Work under this Section.

F. Plant Material Review and Selection (Tagging):
   1. At the discretion of the Landscape Architect, Plant Material will be subject to review, photographed, and selected/tagged by the Landscape Architect at the nursery, or other place of growth, prior to delivery to the Project Site. Contractor shall verify with the Landscape Architect if tagging operations are required.
   2. Selecting/Tagging of Plant Materials at the nursery or place of growth does not cancel the right of the Landscape Architect to reject Plant Materials at the Project Site, if damaged or unacceptable conditions are found that were not detected at the nursery, place of growth, or in the submitted photographs.

G. Plant Material Delivery: Plant Material shall be delivered with original Plant Material tagging materials set in place, as selected, and marked by the Landscape Architect at the nursery or place of growth. Seed, topdressing, and any fertilizer materials shall be delivered in original containers. Include materials showing weight, analysis, and names of growers. Store all seed material in a manner to prevent wetting, excessive heating, or other deterioration. Contractor shall notify Landscape Architect upon delivery of Plant Material for review of stock and tagging materials. Plant Materials delivered without original tagging materials, or with broken, damaged, or altered tagging materials, shall be subject to rejection by the Landscape Architect. Rejected Plant Material shall be removed immediately.

H. Pre-installation Conference: Conduct conference at Project Site.

I. Protection of Existing Plant Material:
   1. Refer to Requirements specified in Section 015639 – Temporary Tree and Plant Protection.
   2. It is the intent of the Contract Documents that certain existing Plant Materials shall be retained. Prior to the removal of any Plant Materials, the Contractor shall confer with the Landscape Architect to determine which Plant Materials are to remain.
   3. All existing Plant Materials which are to remain in the project shall be tagged and identified by the Contractor prior to start of Work.
   4. Contractor shall be responsible for Plant Materials that are designated to remain. Damage to any Plant Materials which results in death or permanent disfiguration of said Materials shall result in compensation outlined in Section 01 56 39 – Temporary Tree and Plant Protection. The Landscape Architect shall be the sole judge of the condition of the Plant Materials.
   5. Existing Plant Materials designated to remain shall be protected at all times from damage by construction activity (tools, materials, equipment, personnel, etc.). Damage by the Contractor to existing Plant Materials shall be repaired at the Contractor's expense to the satisfaction of the Owner, as directed by the Landscape Architect.
   6. Contractor shall insure that no foreign material and/or liquid, such as paint, concrete, cement, oil, turpentine, acid or the like, be deposited or allowed to be deposited on soil within the drip line (the outside edge of the foliage overhang) of any Plant Material. Do not store construction materials, debris, or excavated material within drip line of existing Plant Material. Should any such poisoning of the soil occur, the Contractor shall thoroughly remove said soil as directed by the Landscape Architect and replace with acceptable soil at no additional cost to the owner.
   7. Excavation adjacent to existing Plant Materials: Where it is necessary to excavate in close proximity to the drip lines of existing Plant Materials, all possible caution shall be exercised to avoid injury to roots and trunk. Excavation close to Plant Materials shall be done by hand, with narrow-tine spading forks or other approved tools to comb soil to expose roots. Tunnel under roots two-inches (2") and larger in diameter. Cutting of roots two-inches (2") and larger shall be only on the approval of the Landscape Architect.
   8. Replacement of Damaged Plant Material: Replace existing Plant Material to remain as required, hat are damaged by Contractor during construction with accepted Plant Material of the same species, size, and quantity as those damaged, at no additional

cost to Owner. Owner shall be the sole judge as to the extent of the damage and the value of said damaged Plant Material.

1.3 FIELD CONDITIONS

A. Work notification: Notify Architect at least 7 working days prior to installation of plant material.

B. Protect existing utilities, paving, and other facilities from damage caused by landscaping operations.

C. A complete list of plants, including a schedule of sizes, quantities, and other requirements is shown on the draw¬ings. In the event that quantity discrepancies or material omissions occur in the plant materials list, the planting plans shall govern.

1.4 WARRANTY

A. Warrant plant material to remain alive and be in healthy, vigorous condition for a period of 1 year after completion and acceptance of entire project.
   1. A review of plants will be made by the Architect at Substantial Completion and Final Completion.

B. Replace, in accordance with the drawings and specifications, all plants that are dead or, as determined by the Architect, are in an unhealthy or unsightly condition, and have lost their natural shape due to dead branches, or other causes such as bark abrasions and misuse of chemicals, due to the Landscape Contractor's negligence. The cost of such replacement(s) is at Landscape Contractor's expense. Warrant all replacement plants for 1 year after installation.

C. Warranty shall not include damage or loss of trees, plants, or ground covers caused by fires, floods, freezing rains, lightning storms, or winds over 75 miles per hour, winter kill caused by extreme cold and severe winter conditions not typical of planting area, acts of vandalism or negligence on the part of the owner.

D. Remove and immediately replace all plants, as determined by the Architect, to be unsatisfactory during the initial planting installation.

PART 2 - PRODUCTS

2.1 PLANT MATERIALS

A. Immediately upon award of Contract for Work in this Section, Contractor shall locate and purchase or hold for purchase plant material as required.
   1. Contractor shall verify with Landscape Architect of Plant Material that has been nursery “contract grown” by the Owner for use of Work under this Contract.
   2. Contractor shall review the condition of the Plant Material with Landscape Architect at the nursery maintaining the Plant Material prior to delivery, and when delivered to the Project Site.

B. Quality: Plant Materials shall have a growth habit typical for each variety and species

indicated in the Plant List (as detailed on the Contract. Drawings).

1. All Plant Materials specified shall be superior/premium-grade nursery stock, full, densely foliated, symmetrical, with tightly knit branching, so trained or favored in development and appearance in form, number of branches, compactness and symmetry, healthy, and vigorous in growth, as reviewed and determined by the Landscape Architect
2. Plant Materials shall be free from insect pests, eggs and larvae, plant diseases, sun scalds, fresh bark abrasions, excessive abrasions, windburn, salt burn, weeds, or other disfigurements or conditions, as reviewed and determined by the Landscape Architect.
3. Plant Material shall be subject per the Arkansas State Department of Agriculture's Regulations for Nursery Inspections of Rules and Grading.
4. Growing Conditions: Plant Materials shall be nursery-grown in accordance with good horticultural practices under climatic conditions similar to those of project unless otherwise specifically authorized.

C. Container Stock (excluding annuals) shall be grown in boxes or containers in which delivered for at least one (1) growing season, but not over two (2) years. Plant Material grown in boxes or containers shall be cultivated during this time to permit full rooting within the specified box or container to bind the planting soil, but not so long as to create a "root-bound" condition.
   1. Plant Material shall be completely free of circling, kinked or girdling trunk surface and center roots, and show no evidence of a pot-bound condition.
   2. No boxed nor container Plant Material shall be planted which have cracked or broken balls of earth when separated from their boxes or containers.
   3. No Plant Material shall be planted with damaged roots, broken root balls, or which are found to be "root-bound" when separated from their containers.

D. Pruning:
   1. Do not prune Plant Materials unless directed by the Landscape Architect.
   2. Pruning of Plant Material as grown at the nursery shall conform to ANSI A300 Standards.
   3. Consult with Landscape Architect for pruning Plant Materials after delivery and installation.

E. Measurements: Measure Plant Material according to ANSI Z60.1 with branches and trunks or canes in their normal position. Do not prune to obtain required sizes.
   1. Take caliper measurement at a point on the trunk six-inches (6") above natural ground line for trees up to four-inches (4") in caliper (at a point twelve-inches (12") above the natural ground line for trees over four-inches (4") in caliper).
      a. Measure foliage across mean foliage dimension when branches are in their normal upright position.
      b. For trees to be supplied in "raised up" condition, foliage origin along main trunk shall be measured from soil line after installation.
      c. Height and spread dimensions specified refer to main body of plant and not branch tip to tip. Properly trimmed plants shall measure the same in any direction. If a plant is unevenly grown, it shall be classified in the size category of the smallest dimension.
   2. Size Range: If a range of size is given, do not use Plant Materials less than the

minimum size. The measurements specified are the minimum size acceptable and are the measurements after pruning, where pruning is required. Plant Materials that meet the measurements specified, but do not possess a normal balance between height and spread shall be rejected.

F. Field Dug Stock: Prior to digging of field-grown Plant Materials, ensure that excess loose fill resulting from cultivation around trunks/stems and over roots be removed down to natural finish grade at crown of Plant Materials. During digging, verify that size of tree spade or other equipment is adequate to encompass the actively growing root zone of all Plant Materials. Plant Materials which, after digging, show mostly large fleshy roots and few fibrous roots, will be rejected.

G. Condition of Root Systems: Plant Materials must prove to be completely free of circling, kinked or girdling trunk surface and center roots and show no evidence of a root-bound condition. Upon inspection by Landscape Architect at the job site, if five-percent (5%) or more of the plants of each species are found to contain kinked, circling or girdling roots, all plants of that species shall be rejected.

H. Unacceptable Trees: Trees that have damaged, broken, pruned, or crooked leaders will be rejected. Trees having a main leader shall not have been headed back. Trees with abrasions of the bark, sunscalds, disfiguring knots, or fresh cuts of limbs over 3/4 in. which have not completely callused will be rejected.

2.2 ACCESSORIES

A. Reference – Section 32 94 00 Landscape Planting Accessories

PART 3 - EXECUTION

3.1 INSTALLATION

A. Plug Plant Material: Set Plug Plant Material plumb and in center of the excavated hole, with top of root structure set properly at the adjacent finish grade as indicated. Set Plug Plant Material in the proper spacing and/or alignment(s) as indicated on the Contract Documents, or as further directed at the Project Site by the Landscape Architect.
   1. Thoroughly soak the roots in clean water for a minimum of two (2) hours but no more than four (4) hours to fully hydrate the root mass. Do not soak above the root crown.
   2. Carefully place the Plant Material stock on the specified setting layer of compacted native soil, with the top of root mass set approximately one half-inch (1/2”) above the finished grade to allow for settlement of the Plant Material within the excavated planting hole. Provide an orientation of the Plant Material that is confirmed and acceptable by the Landscape Architect.
   3. Prepare the Amended Planting Backfill Mixture: Amend each cubic yard (cu/yd) of native soil excavated from the planting hole by incorporating and thoroughly mixing/blending the following:
      a. ¼ yard of Bulk Composted Organic Soil Amendment Material (per Section 32 91 13 – Soil Preparation).
      b. ½ pound of Granular Soil Conditioning Material & Fertilizer (per Section

329113–Soil Preparation).

c. Add Mycorrhizal Inoculum to the excavated native soil, (per Section 329113 – Soil Preparation), per the Manufacturer's latest printed instructions.

1) Pending the results of the Agronomic Soil Fertility Report, the Amended Planting Backfill Mixture may be modified accordingly to include additional soil amendments or fertilizers (gypsum, iron, potash, etc.) or the ratios as indicated in the Mixture indicated above may be modified.

a) The cost of providing modifications to the Amended Planting Soil Backfill Mixture (as recommended through the Agronomic Soil Fertility Report and as directed by the Landscape Architect) shall be borne by the Contractor.

4. Backfilling the excavated planting hole:
   a. Place the Amended Planting Backfill Mixture around the Plant Material root mass in the excavated planting hole. Place the Mixture in six-inch (6") lifts, tamping each lift accordingly to settle the Mixture and eliminate voids and air pockets.
   b. Maintain the Plant Material plumb while working the Mixture around the root mass. When the planting hole is approximately half-backfilled, water thoroughly before placing the remainder of the Mixture.
   c. Add the Fertilizer Tablets and other amendments, (per Section 329113 – Soil Preparation) as required, at the prescribed application rates (as indicated per Section 329113 – Soil Preparation) or if not indicated, per the Manufacturer's latest printed instructions.
   d. Place the final layers of the Amended Planting Backfill Mixture, tamping accordingly, to the top of the root mass.
   e. Dish and tamp top of the Mixture to form a three-inch (3") deep watering basin centered on the Plant Material's trunk to the rim width of the planting hole.
   f. Thoroughly mix together water and Plant Vitamin/Hormone Stimulant in application ratio as recommended by Stimulant Manufacture (per Section 329400 –Landscape Planting Accessories). Apply liquid matrix in sufficient quantity to thoroughly saturate the basin to settle the Mixture, and to eliminate voids and air pockets. Should any portions of the root mass be exposed, add additional Mixture as needed to thoroughly cover the root mass.
5. Mulching: Apply mulch evenly at 1" at all plug installation locations. Refer to Section 32 94 00) – Landscape Planting Accessories for type and requirements.

B. Balled and Burlapped Plant Material: Set the Balled and Burlapped Plant Material plumb and in center of the excavated hole, with top of the root ball raised above adjacent finish grade as indicated. Set Balled and Burlapped Plant Material in the proper spacing and/or alignment(s) as indicated on the Contract Documents, or as further directed at the Project Site by the Landscape Architect.
   1. Carefully place the Balled and Burlapped Plant Material stock on the specified setting layer of compacted native soil, with the top of root ball set two-inch (2") above the finished grade to allow for settlement of the Plant Material within the

excavated planting hole. Provide the orientation of the Plant Material that is confirmed and accepted by the Landscape Architect. During the process of determining an acceptable orientation of the Plant Material, handle the Plant Material by its root ball; avoid handling the Plant Material by its trunk.

2. Once orientation is accepted, carefully remove the burlap and wire baskets from the tops of the root ball and partially from the sides, but do not remove from under the root ball. Do not damage the root ball or any part of the plant. Plant Material shall be rejected if the root ball is cracked or broken before or during the planting operation.
3. Prepare the Amended Planting Backfill Mixture: Amend each cubic yard (cu/yd) of native soil excavated from the planting hole by incorporating and thoroughly mixing/blending the following:
    a. ¼ yard of Bulk Composted Organic Soil Amendment Material (per Section 32 91 13 – Soil Preparation).
    b. ½ pound of Granular Soil Conditioning Material & Fertilizer (per Section 32 91 13– Soil Preparation).
    c. Add Mycorrhizal Inoculum to the excavated native soil, (per Section 32 91 13 –Soil Preparation), per the Manufacturer's latest printed instructions.
4. Backfilling the excavated planting hole:
    a. Place the Amended Planting Backfill Mixture around the root ball in the excavated planting hole. Place the Mixture in six-inch (6") lifts, tamping each lift accordingly to settle the Mixture and eliminate voids and air pockets.
    b. Maintain the plant plumb while working the Mixture around the root ball. When the planting hole is approximately half-backfilled, water thoroughly before placing the remainder of the Mixture.
    c. Add the Fertilizer Tablets and other amendments, (per Section 32 91 13 – Soil Preparation) as required, at the prescribed application rates indicated herein this Article or if not indicated, per the Manufacturer's instructions.
    d. Place the final layers of the Mixture, tamping accordingly, to the top of the root ball. Do not place the Mixture on top of the root ball. Pull soil away and exposed root flare. Ensure root flare is planted above finished grade.
    e. Dish and tamp top of the Mixture to form a three-inch (3") deep watering basin centered on the Plant Material's trunk to the rim width of the planting hole. Do not cover the top of the root ball with the backfill mixture.
    f. Thoroughly mix water and Plant Vitamin/Hormone Stimulant in application ratio as recommended by Stimulant Manufacture (per Section 32 94 00– Landscape Planting Accessories). Apply liquid matrix in sufficient quantity to thoroughly saturate the basin to settle the Mixture, and to eliminate voids and air pockets. Should any portions of the root mass be exposed, add additional Mixture as needed to thoroughly cover the root mass.
5. Mulching: Apply mulch in watering basins as indicated on the Contract Drawings. Refer to Section 32 94 00 – Landscape Planting Accessories for type and requirements.
6. Wrapping:
    a. Inspect trees for injury to trunks, evidence of insect infestation, and improper pruning before wrapping.
    b. Wrap trunks of all trees as directed spirally from bottom to top with specified tree wrap and secure in place.

c. Overlap 1/2 the width of the tree wrap strip and cover the trunk from the ground to the height of the second branch.
d. Secure tree wrap in place with twine wound spirally downward in opposite direction, tied around the tree in at least 3 places in addition to the top and bottom.

7. Staking/guying:
   a. Stake/guy all trees immediately after each tree planting.
   b. Stake all trees and all multi-trunk trees.
   c. Flag or color all cables.
   d. All work shall be acceptable to the Landscape Architect.

C. Container-Grown and Ball and Burlap Plant Material: Set Plant Material plumb and in the center of the excavated planting hole, with top of the root ball raised above adjacent finish grade as indicated. Set Plant Material in the proper spacing and/or alignment(s) as indicated on the Contract Documents, or as further directed at the Project Site by the Landscape Architect.

1. For plastic container stock (4" pot, 1-gallon, 5-gallon, 15-gallon, etc.), carefully remove the plant container prior to setting the plant in the excavated hole so as not to damage root ball. Tip container to horizontal position and shake carefully to remove Plant Material. Support root ball during installation to prevent cracking or shedding of soil.
2. Set the Plant Material stock on the specified setting layer of compacted native soil, with the top of root ball set one-inch (1") above the finished grade to allow for settlement of the Plant Material within the excavated planting hole. Provide the orientation of the Plant Material that is confirmed and accepted by the Landscape Architect. During the process of determining an acceptable orientation of the plant material, carefully handle the Plant Material by its container; avoid handling the Plant Material by its trunk.
   a. Plant Material with a damaged root ball upon removal of the container, or if the root ball fails to thoroughly hold the soil as it is removed from the container, or if the plant is mishandled or damaged during planting operations, shall be rejected.
3. For Ball and Burlap stock, carefully set whole root ball of the Plant Material stock on the specified setting layer of compacted native soil, with the top of root ball set two-inch (2") above the finished grade to allow for settlement of the Plant Material within the excavated planting hole. Provide the orientation of the Plant Material that is confirmed and accepted by the Landscape Architect. During the process of determining an acceptable orientation, carefully handle the Plant Material by its basket; avoid handling the Plant Material by its trunk or branches. Once orientation is accepted, remove 1/3 of the wire basket so as not to damage the root ball or any part of the plant. Do not remove the bottom of the wire basket. Discard top 1/3, do not bend back or bury.
   a. Plant Material with a damaged root ball upon placing/planting, or if the root ball fails to thoroughly hold the soil as it is planted, or if the plant is mishandled or damaged during planting operations, shall be rejected.
4. Prepare the Amended Planting Backfill Mixture: Amend each cubic yard (cu/yd) of native soil excavated from the planting hole by incorporating and thoroughly mixing/blending the following:
   a. ¼ yard of Bulk Composted Organic Soil Amendment Material (per Section

32 91 13 – Soil Preparation).

b. ½ pound of Granular Soil Conditioning Material & Fertilizer (per Section 32 91 13– Soil Preparation).

c. Add Mycorrhizal Inoculum to the excavated native soil, (per Section 32 91 13 –Soil Preparation), per the Manufacturer's latest printed instructions.

1) Pending the results of the Agronomic Soil Fertility Report, the Amended Planting Backfill Mixture may be modified accordingly to include additional soil amendments or fertilizers (gypsum, iron, potash, etc.) or the ratios as indicated in the Mixture indicated above may be modified.

a) The cost of providing modifications to the Amended Planting Soil Backfill Mixture (as recommended through the Agronomic Soil Fertility Report and as directed by the Landscape Architect) shall be borne by the Contractor.

5. In areas where indicated on the Contract Drawings, install the Deep Watering Bubblers as part of the irrigation system.
6. Backfilling the excavated planting hole:
   a. Place the Amended Planting Backfill Mixture around the root ball in the excavated planting hole. Place the Mixture in six-inch (6") lifts, tamping each lift accordingly to settle the Mixture and eliminate voids and air pockets. Foot tamp the backfill, as required.
   b. Maintain the plant plumb while working the Mixture around the root ball. When the planting hole is approximately half-backfilled, water thoroughly before placing the remainder of the Mixture.
   c. Add the Fertilizer Tablets and other amendments (per Section 32 91 13 – Soil Preparation) as required, at the prescribed application rates indicated herein this Article or if not indicated, per the Manufacturer's instructions.
   d. Place the final layers of the Mixture, tamping accordingly, to the top of the root ball. Do not place the Mixture on top of the root ball.
   e. Dish and tamp top of the Mixture to form a three-inch (3") deep watering basin centered on the Plant Material's trunk to the rim width of the planting hole. Do not cover the top of the root ball with the backfill mixture.
7. Mulching: Apply mulch in watering basins as indicated on the Contract Drawings. Refer to Section 32 94 00 – Landscape Planting Accessories for type and requirements.
8. Wrapping:
   a. Inspect trees for injury to trunks, evidence of insect infestation, and improper pruning before wrapping.
   b. Wrap trunks of all trees as directed spirally from bottom to top with specified tree wrap and secure in place.
   c. Overlap 1/2 the width of the tree wrap strip and cover the trunk from the ground to the height of the second branch.
   d. Secure tree wrap in place with twine wound spirally downward in opposite direction, tied around the tree in at least 3 places in addition to the top and bottom.
9. Staking/guying:
   a. Stake/guy all trees immediately after each tree planting.

b. Stake all trees and all multi-trunk trees.
c. Flag or color all cables.
d. All work shall be acceptable to the Landscape Architect.

D. Native Wildflower and Grass Seed Material: Drill or hand apply seed per volumes specified within the Construction Documents. Apply native grass and wildflower seed after ground preparation is complete between September 15 and October 15 or February 15 and March 15. Landscape Architect shall be consulted prior to seeding to review preparation and installation.
1. Seed as follow to ensure complete coverage as noted:
a. Treat all seed areas with an aquatic approved herbicide when vegetation is present, two (2) prior to all seeding.
b. Fine grade areas that receive seed eliminate low areas that may hold water.
c. Provide 2 parts masonry sand to 1 part pure live seed (PLS). Granule Mycorrhizal shall also be included and may substitute the masonry sand.
d. Herbicide reapplication shall be required prior to broadcasting seed if visible vegetation is present.
e. Broadcast half the Native Grass and/or Wildflower Seeds evenly over the entire area prior to placement of compost at the rates indicated within the Construction Documents. Sow remaining seed in a perpendicular direction to the initial sowing prior to placement of compost.
f. Placement of one-half inch (1/2”) organic compost by Landscape Contractor
g. Wildflower seed to be broadcast similar to the above and seed shall be allows to rest on top of the compost without pressing into the substrate. Do not cover the seed more than 1/16”.
h. Cover seed with a 100% wood fiber hydroseeding mulch.
2. Jute netting or Biodegradable Erosion Control Blanket:
a. Install per plans and/or all areas that exceed 3:1 slopes using biodegradable stakes.

3.2 PLANT MAINTENANCE

A. Maintain the trees, shrubs, groundcovers, perennials, native grasses until Final Completion of the entire project. Upon Final Completion, the Owner will assume maintenance as recommended by the written maintenance instructions submitted by the Landscape Contractor for Sodded areas only.

B. Maintenance shall include pruning, cultivating, weeding, watering, and application of appropriate insecticides and fungicides necessary to maintain plants free of insects and disease.

C. Tighten and repair guy wires and stakes as required.

D. Re-set settled plants to proper grade and position. Restore planting saucer and adjacent material and remove dead material.

E. Correct defective work as soon as possible after deficiencies become apparent and weather and season permit.

F. Deep-water trees, plants, groundcover, perennial and native grass beds within the first 24

hours of initial planting, and thereafter as required for healthy growth until final acceptance.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Piping joining materials.
2. Dielectric fittings.
3. Sleeves.
4. Identification devices.
5. Grout.
6. Piping system common requirements.
7. Concrete bases.
8. Metal supports and anchorages.

1.2 ACTION SUBMITTALS

A. Product Data: For the following:
1. Dielectric fittings.
2. Identification devices.

1.3 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.4 QUALITY ASSURANCE

A. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Steel Piping Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Comply with ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

PART 2 - PRODUCTS

2.1 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
1. ASME B16.21, nonmetallic, flat, asbestos free, **1/8-inch** maximum thickness, unless otherwise indicated.
a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.

b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, **1/8 inch** thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

D. Solder Filler Metals: ASTM B32, lead-free alloys. Include water-flushable flux according to ASTM B813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Solvent Cements for Joining Plastic Piping:
1. ABS Piping: ASTM D2235.
2. CPVC Piping: ASTM F493.
3. PVC Piping: ASTM D2564. Include primer according to ASTM F656.
4. PVC to ABS Piping Transition: ASTM D3138.

H. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

PART 3 - EXECUTION

3.1 DIELECTRIC FITTING APPLICATIONS

A. Dry Piping Systems: Connect piping of dissimilar metals with the following:
1. NPS 2 (DN 50) and Smaller: Dielectric unions.
2. NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Dielectric flanges or dielectric flange kits.

B. Wet Piping Systems: Connect piping of dissimilar metals with the following:
1. NPS 2 (DN 50) and Smaller: Dielectric couplings or dielectric nipples.
2. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Dielectric nipples.

3.2 INSTALLATION OF PIPING

A. Install piping according to the following requirements and utilities Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on the Coordination Drawings.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at

right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping to permit valve servicing.

E. Install piping at indicated slopes.

F. Install piping free of sags and bends.

G. Install fittings for changes in direction and branch connections.

H. Select system components with pressure rating equal to or greater than system operating pressure.

I. Sleeves are not required for core-drilled holes.

J. Permanent sleeves are not required for holes formed by removable PE sleeves.

K. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
   1. Cut sleeves to length for mounting flush with both surfaces.
      a. Exception: Extend sleeves installed in floors of equipment areas or other wet areas **2 inches** above finished floor level.
   2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
      a. Pipe Sleeves: PVC. For pipes smaller than **NPS 6**.
      b. Steel Sheet Sleeves: For pipes **NPS 6** and larger, penetrating gypsum-board partitions.

L. Verify final equipment locations for roughing-in.

M. Refer to equipment specifications in other Sections for roughing-in requirements.

3.3 INSTALLATION OF EQUIPMENT

A. Install equipment level and plumb, unless otherwise indicated.

B. Install equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference with other installations. Extend grease fittings to an accessible location.

C. Install equipment to allow right of way to piping systems installed at required slope.

3.4 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Section 055000 "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor piped utility materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.5 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and use cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.
   1. Use Light-Duty, top-loading classification cleanouts in earth or unpaved foot-traffic areas.
   2. Use Medium-Duty, top-loading classification cleanouts in paved foot-traffic areas.
   3. Use Heavy-Duty, top-loading classification cleanouts in vehicle-traffic service areas.
   4. Use Extra-Heavy-Duty, top-loading classification cleanouts in roads.

B. Set cleanout frames and covers in earth in cast-in-place-concrete block, 18 by 18 by 12 inches deep. Set with tops 1 inch above surrounding grade.

C. Set cleanout frames and covers in concrete pavement and roads with tops flush with pavement surface.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Modular precast concrete manhole and structures with tongue-and-groove joints, cover frame, covers, anchorage, and accessories. For junction box and inlet structure, and detention basin.
   2. Bedding and cover materials.

B. Related Sections:
   1. Section 31 2000 - Earthwork
   2. Section 03 1000 - Concrete Forms and Accessories.
   3. Section 03 2000 - Concrete Reinforcement.
   4. Section 03 3000 - Cast-in-Place Concrete:.

1.2 QUALITY ASSURANCE

A. Perform Work in accordance with the City of Bentonville's applicable standards requirements.

PART 2 - PRODUCTS

2.1 FRAME AND COVERS

A. Manufacturers:
   1. [**{PropertyRef(Id=d2d7ca08-4c6a-4fa1-a3d0-d5b3b6f4afc4)}**]
   2. [**Refer to Drawings for frame, grates, and covers required for each manhole and structure.**]
   3. <**Insert manufacturer's name**>

B. Product Description: Cast iron construction, machined flat bearing surface and as shown on the Drawings.

2.2 COMPONENTS

A. Manhole Steps: corrosion resistant, coated, and reinforced with steel per ASTM C-478. Steel reinforcing minimum 1/2" diameter. Formed integral with manhole and structure sections.

2.3 BEDDING AND COVER MATERIALS

A. Refer to Section 312116, Trenching.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Excavation and Backfill:
   1. Excavate for manholes and structures in accordance with Section 312000 in location and to depth shown. Provide clearance around sidewalls of structure for construction operations.
   2. When groundwater is encountered, prevent accumulation of water in excavations. Place manholes and structures in dry trench.
   3. Where possibility exists of watertight structure becoming buoyant in flooded excavation, anchor structure to avoid flotation.

B. Place base pad, trowel top surface level.

C. Place manhole and structure sections plumb and level, trim to correct elevations, anchor to base pad.

D. Backfill excavations for manholes and structures in accordance with Section 312000.

E. Form and place manhole and structures cylinder plumb and level, to correct dimensions and elevations.

F. Cut and fit for pipe sections.

G. Grout base of shaft sections to achieve slope to exit piping. Trowel smooth. Contour to form continuous drainage channel as indicated on Drawings.

H. Set cover frames and covers level without tipping, to correct elevations.

I. Coordinate with other sections of Work to provide correct size, shape, and location.

3.2 PRECAST CONCRETE MANHOLE AND STRUCTURE INSTALLATION

A. Lift precast components at lifting points designated by manufacturer.

B. When lowering manholes and structures into excavations and joining pipe to units, take precautions to ensure interior of pipeline and structure remains clean.

C. Set precast structures bearing firmly and fully on crushed stone bedding, compacted in accordance with provisions of Section 312000 and 312116 or on other support system shown on Drawings.

D. Assemble multi-section structures by lowering each section into excavation. Lower, set level, and firmly position base section before placing additional sections.

E. Remove foreign materials from joint surfaces and verify sealing materials are placed properly. Maintain alignment between sections by using guide devices affixed to lower section.

F. Joint sealing materials may be installed on site or at manufacturer’s plant.

G. Verify manholes and structures installed satisfy required alignment and grade.

H. Remove knockouts or cut structure to receive piping without creating openings larger than required to receive pipe. Fill annular space with mortar.

I. Cut pipe to finish flush with interior of structure.

J. Shape inverts through manhole and structures as shown on Drawings.

3.3 FRAME AND COVER INSTALLATION

A. Set frames using mortar and pre-cast concrete rings. Install precast reinforced concrete rings. Lay precast concrete rings in full bed of mortar and completely fill joints.

3.4 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Test cast-in-place concrete in accordance with Section 033000.

C. Vertical Adjustment of Existing Manholes and Structures:
   1. Where required, adjust top elevation of existing manholes and structures to finished grades shown on Drawings.
   2. Reset existing frames, grates and covers, carefully removed, cleaned of mortar fragments, to required elevation in accordance with requirements specified for installation of castings.
   3. Remove concrete without damaging existing vertical reinforcing bars when removal of existing concrete wall is required. Clean vertical bars of concrete and bend into new concrete top slab or splice to required vertical reinforcement, as indicated Drawings.
   4. Clean and apply sand-cement bonding compound on existing concrete surfaces to receive cast-in-place concrete in accordance with Section 033000.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Pipe and fittings for site water line including domestic water line and fire water line
2. Valves.
3. Hydrants.
4. Positive displacement meters.
5. Backflow preventers.
6. Underground pipe markers.
7. Precast concrete vault.
8. Bedding and cover materials.

B. Related Sections:
1. Section 31 2000 - Earthwork: Product and execution requirements for excavation and backfill required by this section.
2. Section 31 2116 - Trenching: Execution requirements for trenching required by this section.
3. Section 33 1100 – Water service connections: Connections for domestic water service 2 inches or smaller.
4. Section 33 1200 - Disinfection of Water Distribution: Disinfection of site service utility water piping.
5. Section 32 0523 – Concrete for Exterior Improvements: Concrete for thrust restraints.

1.2 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of piping mains, valves, connections, thrust restraints, and invert elevations.

B. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.3 QUALITY ASSURANCE

A. Perform Work in accordance with Central Arkansas Water's (CAW), City of Little Rock Fire Department's, and the Arkansas Department of Health's requirements.

B. Valves: Manufacturer's name and pressure rating marked on valve body.

PART 2 - PRODUCTS

2.1 GATE VALVES

A. Manufacturers:
1. [**American Darling**]

2. [**Approved Equal.**]
3. [**Mueller.**]
4. [**Smith Metropolitan.**]
5. <**Insert manufacturer's name**>

B. 2-1/2 inches and Smaller: Brass or Bronze body, non-rising stem, inside screw, single wedge or disc, compression IPS ends, with control rod, post indicator, extension box and valve key.

C. 3 inches and Larger: AWWA C509, Iron body, bronze trim, non-rising stem with square nut, single wedge, resilient seat, flanged mechanical joint ends, control rod, post indicator, extension box and valve key.

2.2 BEDDING AND COVER MATERIALS

A. Bedding: As indicated on Drawings

B. Cover: As indicated on Drawings

C. Soil Backfill from Above Pipe to Finish Grade: As indicated on the Drawings

2.3 ACCESSORIES

A. Concrete for Thrust Restraints: Concrete type specified in Section 32 0523.

PART 3 - EXECUTION

3.1 INSTALLATION - PIPE

A. Maintain separation of water main from sewer piping in accordance with Arkansas Department of Health requirements.

B. Install pipe to indicated elevation to within tolerance of 1 inch.

C. Install ductile iron piping and fittings to AWWA C600.

D. Route pipe in straight line as indicated.

E. Install pipe to allow for expansion and contraction without stressing pipe or joints.

F. Install access fittings to permit disinfection of water system performed under Section 02516.

G. Form and place concrete for thrust restraints at each elbow or change of direction of pipe main.

H. Establish elevations of buried piping with not less than 2.5ft of cover.

I. Install trace wire continuous buried 6 inches below finish grade, above pipe line; coordinate with Section 33 1100.

J. Backfill trench in accordance with Section 31 2116.

3.2 INSTALLATION – VALVES AND HYDRANTS

A. Set valves on solid bearing.

B. Center and plumb valve box over valve. Set box cover flush with finished grade.

3.3 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. Flush and disinfect system in accordance with Section 33 1200.

3.4 FIELD QUALITY CONTROL

A. Perform pressure test on domestic site water distribution system in accordance with Central Arkansas Water standards.

B. When tests indicate Work does not meet specified requirements, remove Work, replace and retest.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Pipe and fittings for domestic water service connections to buildings.
2. Corporation stop assembly.
3. Curb stop assembly.
4. Meter setting equipment.
5. Water meters.
6. Backflow preventers.
7. Underground pipe markers.
8. Precast concrete vault.
9. Bedding and cover materials.

B. Related Requirements:
1. Section 312000 – Earthwork
2. Section 31 2116 - Trenching.
3. Section 33 1000 – Site Water Distribution
4. Section 33 1200 - Disinfection of Water Distribution

1.2 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of piping mains, curb stops, connections, thrust restraints, and invert elevations.

B. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.3 QUALITY ASSURANCE

A. Perform Work in accordance with Central Arkansas Water, City of Little Rock Fire Department, and the Arkansas Department of Health's standards and requirements.

PART 2 - PRODUCTS

2.1 CORPORATION STOP ASSEMBLY

A. Furnish materials in accordance with Central Arkansas Water's standards.

B. Corporation Stops:
1. Brass or red brass alloy body conforming to ASTM B62.
2. Inlet end threaded for tapping according to AWWA C800.
3. Outlet end suitable for service pipe specified.

C. Service Saddles:
1. Double strap type, designed to hold pressures in excess pipe working pressure.

2.2 BEDDING AND COVER MATERIALS

A. Bedding: As indicated on Drawings

B. Cover: As indicated on Drawings

2.3 ACCESSORIES

A. Concrete for Thrust Restraints: Concrete type specified in Section 32 0523.

PART 3 - EXECUTION

3.1 INSTALLATION – CORPORATION STOP ASSEMBLY

A. Make connection for each different kind of water main using suitable materials, equipment and methods approved by the Architect/Engineer.

B. Provide service clamps for mains other than of cast iron or ductile iron mains.

C. Screw corporation stops directly into tapped and threaded iron main at 10 and 2 o'clock position on main's circumference; locate corporation stops at least 12 inches apart longitudinally and staggered.

D. For plastic pipe water mains, provide full support for service clamp for full circumference of pipe, with minimum 2 inches width of bearing area; exercise care against crushing or causing other damage to water mains at time of tapping or installing service clamp or corporation stop.

E. Use proper seals or other devices so no leaks are left in water mains at points of tapping; do not backfill and cover service connection until approved by the Engineer.

3.2 INSTALLATION – PIPE AND FITTINGS

A. Maintain separation of water main from sewer in accordance with Arkansas Department of Health requirements.

B. Route pipe in straight line.

C. Install pipe to allow for expansion and contraction without stressing pipe or joints.

D. Install access fittings to permit disinfection of water system performed under Section 02516.

E. Form and place concrete for thrust restraints at each elbow or change of direction of pipe main.

F. Establish elevations of buried piping with not less than 2.5 ft of cover.

G. Install trace wire continuous, buried 12 inches below finish grade, above pipe line; coordinate with Section 33 1000.

H. Backfill trench in accordance with Section 31 2116.

3.3 INSTALLATION – WATER METERS

A. Install Work in accordance with Central Arkansas Water's standards.

3.4 INSTALLATION – BACKFLOW PREVENTERS

A. Install backflow preventer where indicated on the Contract Drawings and in accordance with manufacturer's instructions.

B. Comply with Central Arkansas Water's requirements and plumbing codes in regards to testing and installation requirements.

3.5 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. Flush and disinfect system in accordance with Section 33 1200.

3.6 FIELD QUALITY CONTROL

A. Perform pressure test on domestic site water distribution system in accordance with Central Arkansas Water's standards.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes disinfection of potable water distribution system and testing and reporting results.

B. Related Requirements:
   1. Section 33 1000 - Site Water Distribution Product and Execution requirements for installation, testing, of site domestic water distribution piping.

1.2 CLOSEOUT SUBMITTALS

A. Disinfection Report:
   1. Type and form of disinfectant used.
   2. Date and time of disinfectant injection start and time of completion.
   3. Test locations.
   4. Name of person collecting samples.
   5. Initial and 24-hour disinfectant residuals in treated water in ppm for each outlet tested.
   6. Date and time of flushing start and completion.
   7. Disinfectant residual after flushing in ppm for each outlet tested.

B. Bacteriological Report:
   1. Date issued, project name, and testing laboratory name, address, and telephone number.
   2. Time and date of water sample collection.
   3. Name of person collecting samples.
   4. Test locations.
   5. Initial and 24-hour disinfectant residuals in ppm for each outlet tested.
   6. Coliform bacteria test results for each outlet tested.
   7. Certify water conforms, or fails to conform, to bacterial standards of the Arkansas Department of Health.

C. Water Quality Certificate: Certify water conforms to quality standards of the Arkansas Department of Health and Central Arkansas Water, suitable for human consumption.

1.3 QUALITY ASSURANCE

A. Perform Work in accordance with Central Arkansas Water's standards.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

A. Disinfection, Flushing, and Sampling:

1. Disinfect pipeline installation in accordance with Central Arkansas Water's specifications.
2. Upon completion of retention period required for disinfection, flush pipeline until chlorine concentration in water leaving pipeline is no higher than that generally prevailing in existing system or is acceptable for domestic use.
3. Legally dispose of chlorinated water. When chlorinated discharge may cause damage to environment, apply neutralizing chemical to chlorinated water to neutralize chlorine residual remaining in water.

B. Bacteriological Tests:
1. After final flushing and before pipeline is connected to existing system, or placed in service, two sets of acceptable water samples collected from the new water line and taken on consecutive days shall be submitted by the Contractor to the bacteriological laboratory at the Arkansas Department of Health in Little Rock, Arkansas.
2. Samples shall be tested for bacteriological quality in accordance with Standard Methods for the Examination of Water and Wastewater per the American Public Health Association, AWWA, and Water Environment Association (latest edition and shall show the absence of coliform organisms.
3. If samples collected are positive, the disinfecting procedures and samples shall be repeated until two consecutive day samples are tested safe.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Storm drainage piping.
   2. Accessories.
   3. Underground pipe markers.
   4. Catch basins and plant area drains.

B. Related Sections:
   1. Section 31 2000 – Earthwork: Backfill and compaction for structures and storm piping.
   2. Section 31 2116 - Trenching: Execution requirements for trenching required by this section.
   3. Section 33 0513 - Manholes and Structures.
   4. Section 03 3000 - Cast-in-Place Concrete: Concrete type for catch basin base pad construction.

1.2 CLOSEOUT SUBMITTALS

A. Project Record Documents:
   1. Accurately record actual locations of pipe runs, connections, catch basins, structures, and invert elevations.
   2. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.3 QUALITY ASSURANCE

A. Perform Work in accordance with the City of Bentonville's applicable standards requirements.

PART 2 - PRODUCTS

2.1 ACCESSORIES

A. Filter Fabric: Non-biodegradable, non-woven, 6 oz minimum weight.

B. Grout: Specified in Section 033000.

C. Bedding: As indicated on the Drawings.

D. Cover: As indicated on the Drawings.

PART 3 - EXECUTION

3.1 INSTALLATION - PIPE

A. Install pipe, fittings, and accessories in accordance with ASTM D2321. Seal joints watertight.

B. Place pipe on bedding material as indicated on the Drawings.

C. Lay pipe to slope gradients noted on drawings with maximum variation from indicated slope of 1/8 inch in 10 feet.

D. Place bedding backfill around pipe as indicated on the Drawings.

E. Install trace wire continuous over top of pipe buried 12 inches below finish grade, above pipe line.

3.2 INSTALLATION - CATCH BASINS AND STRUCTURES

A. Perform work in accordance with Drawings.

B. Refer to Section 330513, Manholes and Structures.

3.3 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Request inspection prior to and immediately after placing aggregate cover over pipe.

END OF SECTION
