599 Series 2-Way Ball Valves

Description

The 599 Series 2-Way Ball Valves are coupled with OpenAir™ actuators to provide equal percentage flow control. The Ball Valves are 1/4-turn rotary control valves.

Product Numbers

Use the product numbers in Table 1 through Table 11 to order a valve and actuator assembly. The product number consists of a 4-character actuator prefix code, a hyphen, and a 5-digit valve body suffix code. Stainless steel product numbers have an "S" suffix in Table 6 through Table 11.

Features

- 200 psi close-off with ANSI Class IV leakage for all line sizes and actuators.
- Available with chrome-plated brass ball and brass stem or stainless steel ball and stem.
- Blow-out proof stem withstands high pressure.
- Universal mounting plate.
- Actuator and plate can be rotated (90 degree increments).
- Standoffs provide a thermal barrier between the actuator and the mounting plate.
- Operating handle for manual operation.

* Denotes a full-port valve without flow characterizer insert.

Typical Specifications

Ball valves shall have female NPT type fittings and shall be 1/2-inch to 2-inch (15 mm to 50 mm) line and ball sizes. The valves shall have a forged brass body; chrome-plated brass ball with brass stem or stainless steel ball and stem; and EPDM O-ring seals. Valves shall contain glass-filled PTFE ball valve seals or integral seals and flow characterizers to provide an equal percentage control characteristic where required. Ball valves shall utilize a 90-degree rotation for control. They shall provide automated flow control of hot or chilled water and up to 50% water-glycol solution for HVAC control applications.

Technical Data

Pressure Rating	600 WOG/ANSI 250	Ball Seals	Glass-filled PTFE with EPDM O-rings
Media Temperature	35°F to 250°F (2°C to 120°C)	End Connections	Female NPT
Controlled Medium	Water, 50% water-glycol solution	Stem	Brass or stainless steel
Body	Brass: ASTM B283, C37700	Stem Seals	EPDM O-rings
Ball	Chrome-plated brass or Stainless steel	Angle of Rotation	0° to 90°
Flow Characterizer	Glass-filled PTFE

Duct Temperature Sensors

Rigid Probe

Rigid Probe – Bracket Mount

Flexible Probe

Description

Siemens Duct Temperature Sensors monitor and transmit changes in duct air temperature to the HVAC control system. They provide an accurate, reliable indication of duct air temperature. The sensor resistance varies proportionally to the actual temperature being measured.

Sensors are offered with a variety of probe lengths to fit almost any size duct. Longer probes are typically flexible for easier handling and installation (see *Product Ordering Information* on the following page for details).

Multiple output signals are available to ensure compatibility with most common HVAC control systems.

Features

- Variety of sensing elements.
- Suitable for multiple duct applications.
- Responsive to temperature change.
- Accurate and reliable indication of duct temperature.
- Familiar installation process does not require special tools.

Specifications

Output Signals	100K Ω Thermistor 10K Ω Type 2 Thermistor 10K Ω Type 3 Thermistor 1K Ω @ 32°F Ni RTD 1K Ω @ 70°F Ni RTD 1K Ω Pt RTD (375a) 1K Ω Pt RTD (385a) 4 to 20mA • -4°F to 122°F • 20°F to 120°F • 30°F to 250°F 10K Ω Matched Pair Thermistor • (For use with Siemens TEC only)
Probe Material	0.028 Wall SAE J526 ZTEW or Galfan steel tubing
Housing*	Standard NEC approved 2 x 4 inch (5 x 10 cm) utility box with 1/2-inch (13 mm) knockouts
Screw Head Type	Standard slotted

* Bracket-mounted units do not include housing.

Disposal

The devices are considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the devices through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

TEC Terminal Box (VAV) Controller

The TEC Terminal Box Controller provides high performance Direct Digital Control (DDC) of pressure-independent, variable-air-volume zone-level routines. The TEC Terminal Box Controller can operate stand-alone or can be networked to perform complex HVAC control, monitoring and energy management functions and is designed to reside on any Siemens Industry control system.

Features

- Advanced PID algorithm for the temperature control loops is employed to provide stability and to reduce unnecessary changes in the Flow setpoint when the room temperature is at or near the room temperature setpoint.
- Unique control algorithms for specific applications.
- Plenum rated controller.
- Setpoints and control parameters assigned and changed locally or remotely.
- Setpoints and control parameters stored in Electrically Erasable Programmable Read Only Memory (EEPROM)—no battery backup required.
- Returns from power failure without operator intervention.

- No calibration required, thereby reducing maintenance costs.
- Reports airflow in cfm (lps).
- Meets low duct static pressure requirements.
- Separate minimum and maximum air volume setting for heating and cooling modes.

Applications

- Slave Mode (Application 2091)
- VAV Cooling Only (Application 2020)
- VAV Cooling or Heating (Application 2021)
- VAV with Electric Reheat or Baseboard Radiation (Application 2022)
- VAV with Hot Water Reheat (Application 2023)
- VAV Series Fan Powered with Electric Reheat (Application 2024)
- VAV Series Fan Powered with Hot Water Reheat (Application 2025)
- VAV Parallel Fan Powered with Electric Reheat (Application 2026)
- VAV Parallel Fan Powered with Hot Water Reheat (Application 2027)

Control algorithms are pre-programmed. The controller is ready to operate after selecting the application. If desired, the operator may adjust the room temperature setpoints and other parameters. The controller is designed for operation and modification without vendor assistance.

Hardware

Controller Board

This controller provides all wiring terminations for system and local communication and power. The cable from the room sensor (purchased separately) connects to an RJ-11 jack on the controller. All other

connections are removable terminal blocks. The controller assembly is mounted on a plastic track that mounts directly on the terminal box.

An optional enclosure (P/N 540-155) protects the controller assembly.

Autozero Modules (optional devices, P/NB 540-200N) are available for mounting with the controller for those applications where uninterrupted airflow is necessary. An optional Pneumatic Transducer provides control of pneumatic damper and valve actuators.

The controller interfaces with the following external devices:

- Averaging air velocity sensors provided by VAV terminal unit manufacturers
- Floating control valve and damper actuators
- Temperature sensors (room, duct, immersion, and outside air)
- Service and commissioning tools
- Analog input devices (room temperature sensor, room setpoint dial, auxiliary temperature sensor)
- Digital input devices (dry contacts from motion sensors, alarm contacts)
- Digital output devices (fan, stages of electric heat)

Room Sensor

The room sensor connection to the controller board consists of a quick-connect RJ-11 jack. This streamlines installation and reduces controller start-up time.

Terminal Box Controller Specifications

Power Requirements	
Operating Range	24 Vac +/-20%, 50 or 60 Hz
Power Consumption	3 VA (plus 12 VA per DO)

Dimensions	4-1/8" W x 7-3/4" L x 1-1/2" H
Weight	approx. 3 lbs (1.35 kg)
Controlled Temperature Accuracy, Heating or Cooling	±1.8°F (0.9°C)

Autozero Module Specifications

Power Consumption	.75 VA @ 24 Vac max.
Dimensions	2" W x 1.51" H x 1.89" D (58 mm x 78 mm x 29 mm)
Weight	1.3 oz. (36.9 g)

Inputs	
Analog	1 room temperature sensor 1 velocity sensor 1 setpoint (optional) 1 auxiliary temperature sensor
Digital	1 aux temp dry contact 1 dry contact only input

Outputs	
Analog	N/A
Digital	6 DO 24 Vac optically isolated solid state switches @ 0.5 amp

Communications	
Remote	4800 bps FLN Trunk
Local	WCIS

Ambient Conditions	
Shipping & Storage Temperature	-13°F to 158°F (-25°C to 70°C)
Operating Temperature	32°F to 122°F (0°C to 50°C)
Humidity Range	5% to 95% rh (non-condensing)

Agency Listings	
UL Listing	UL 916, PAZX
cUL Listed	Canadian Standards C22.2 No. 205-M1983, PAZX7
FCC Compliance	FCC Part 15, Class A

Optional Accessories

Autozero Module

The optional Autozero Module (product number 540-380) should be used when continuous operation at occupied flow is required for an area. The Autozero Module is connected to the air velocity inlet ports of the controller and provides periodic recalibration of the air velocity transducer without changing air volume being delivered to a room. This recalibration ensures long-term precise airflow delivery.

Autozero Module.

Differential Pressure Sensor

The differential pressure sensor is easily connected to the box's air-velocity sensing elements to provide measurement of the differential pressure. The measured value is converted to actual airflow in cfm (lps) by the controller.

Differential Pressure Sensor Specifications

Temperature Range	32°F to 122°F (0°C to 50°C)
Measurement Range	0 to 5200 fpm (0 to 26 m/s)

Pneumatic Transducer

The PTS Pneumatic Transducer contains the transducers that provide the signal conversion from electronic to pneumatic. The module is piped to the pneumatic actuator and wired to the Terminal Box Controller. This transducer provides for accurate control of pneumatic actuators for precise temperature and air volume control.

Pneumatic Transducer Specifications

Maximum Input Pressure	30 psi (207 kPa)
Air Consumption	0 SCIM
Power Consumption	4 VA @ 24 Vac max.
Dimensions	3-1/2" L x 2-1/4" W x 1-1/2" H (87 mm x 57 mm x 38 mm)
Weight	9 oz (0.3 kg)

Description

The OpenAir, non-spring return, direct-coupled, electronic damper actuators provide modulating and floating control of building HVAC dampers.

Features

- Compact, lightweight design
- Models available with dual independently adjustable auxiliary switches
- Modulating models available with built-in feedback (Exception: GDE161.1N and GDE161.1T do not provide feedback)
- Floating control models available with feedback potentiometer
- Manual override
- Mechanical range adjustment capability
- Easily visible position indicator
- Precabled 18 AWG, 3 ft (0.9 m), or 6 ft (1.8 m) long
- Synchronous motor technology
- UL873 and cUL (C22.2 No. 24-93) listed
- **CE** certified plenum only
- Connection cables for GDExx.1N models sold separately.

Technical Data

Torque:	44 lb-in (5 Nm)
Runtime for 90°:	90 seconds at 60 Hz opening and closing 108 seconds at 50 Hz opening and closing
Frequency:	50/60 Hz
Power consumption:	3.3 VA (modulating), 2.3 VA (three-position)
Equipment rating (24 Vac):	Class 2 per UL/CSA
Noise level:	<35 dBA (running)
Angle of rotation:	90° nominal, 95° maximum
Shaft dimensions:	3/8 to 5/8 in. (8 to 16 mm) dia., 3/4 in. (20 mm) min. length
Operating temperature:	-22°F to 130°F (-30°C to 55°C)
Storage temperature:	-40°F to 158°F (-40°C to 70°C)
Ambient humidity:	95% RH (non-condensing)
Enclosure:	NEMA 2, IP54 per EN60529
GDExxx.1N and GDExxx.1T:	NEMA 1
Material:	Durable plastic
Agency listings:	UL873, cUL C22.2 No. 24-93
CE Conformity:	Plenum only
Electromagnetic compatibility (EMC)	2004/108/EC
Emissions Standards	EN61000-6-3
Immunity standards	EN61000-6-2
Gear Lubrication:	Silicone-free
Weight	1.06 lb (0.48 kg)
Country of Origin	USA

Typical Specifications

Non-spring return damper actuators shall be the direct-coupled type that requires no connecting linkages. The non-spring return actuators under 100 lb-in shall be capable of direct-mounting to a shaft up to a 5/8-inch diameter. Actuators shall provide stall protection throughout the full range of rotation. All non-spring return actuators shall be capable of both clockwise and counterclockwise operation. All non-spring return actuators shall hold position in the event of a power failure. All modulating actuators shall return to the 0 position in the event only the control signal is lost. All actuators shall provide a means of manually positioning the output coupling in the absence of power. Dual independently adjustable auxiliary switches must be integral to the actuator. All actuators must provide an easily readable high contrast yellow on black position indicator. All actuators shall be UL873 and CSA22.2 listed, CE certified, and manufactured under ISO 9002 and ISO 14000 procedures. Actuators shall be designed for a minimum of 60,000 full stroke cycles at the actuators rated torque and temperatures. Actuators shall be as manufactured by Siemens Industry, Inc.

Series 2200/3200 Communicating Room Sensors for Use with Siemens Terminal Equipment Controllers

QxAx2xx.EWSC
Sensing Only

QxAx2xx.DWSC
with Display

QxAx2xx.FWSC
Full HMI

Description

These Series 2200/3200 Room Sensors are designed for use with Siemens Terminal Equipment Controllers (TECs)*. The sensor and controller communicate using an RJ-11 cable with plug connections at both ends for easy and error-free wiring. Installation is quick and straightforward with all hardware included for mounting on a standard 2" x 4" electrical box. Screws and anchors are provided for mounting the sensor directly to a wall. Matching gaskets and trim rings are also available.

All units include an RJ-11 tool port at the bottoms of the sensor housings for connection to Siemens configuration, commissioning and start-up tools.

QAA Series Sensors measure room temperature, while QFA Series sensors measure both temperature and relative humidity. The QPA Series Sensors measure temperature and CO₂ or temperature, CO₂* and relative humidity.

QPA Series sensors are designed to help maintain occupant comfort and are not intended for use in life safety applications.

The "E" versions have a blank front to prevent unauthorized adjustments and are ideal for high traffic areas or remote spaces that are not supervised.

The "D" versions display room temperature and/or room humidity.

The "F" versions feature a full HMI that can display room conditions and temperature setpoint. The display is easily configured to limit the information that is available to the occupant. Temperature setpoint can be adjusted using soft touch plus (+) and minus (-) keys, and an override key enables the user to manually signal to the controller that the space is occupied.

Product Ordering Information

Part Number ¹⁾	Temp	Humidity ²⁾	CO ₂ ³⁾	Display	Setpoint Adjustment	Tool Port	Communication Type
QAA2280.DWSC	•	—	—	•	—	•	Digital (P1)
QAA2280.EWSC	•	—	—	—	—	•	Analog - Resistive
QAA2280.FWSC	•	—	—	•	•	•	Digital (P1)
QFA3280.DWSC	•	•	—	•	—	•	
QFA3280.EWSC	•	•	—	—	—	•	
QFA3280.FWSC	•	•	—	•	•	•	
QPA2282.EWSC ²⁾	•	—	•	—	—	•	
QPA2284.EWSC ²⁾	•	•	•	—	—	•	
QPA2284.FWSC ²⁾	•	•	•	•	•	•	

¹⁾ For no-logo version, change "S" to "N" in part number position 10.

²⁾ QPA models require an AQM2200 24V Power Module.

³⁾ P1 TECs cannot read relative humidity and CO₂ data. Use BACnet TECs for applications requiring these measurements.

Accessories Ordering Information

Description	Part Number
Power Module ¹⁾ (Required only with QPA2282 and QPA2284 sensors)	AQM2200
Room Unit Back Plate (10-pack) ¹⁾	AQA2200-INTL
Room Unit Back Plate (Single) ¹⁾	AQA2200-2X4
Room Sensor Insulating Gasket (10-pack) (Recommended for hollow wall installations.)	563-102 GSKT KIT
25-foot (7.6 m) cable with connections	588-100A
50-foot (15.2 m) cable with connections	588-100B
100-foot (30.5 m) cable with connections	588-100C
Passkey Tool (Used to set room unit parameters)	544-643A
Replacement RH Sensing Element – TEC Room Unit ²⁾	AQF3060

¹⁾ For use when installing Series 2200/3200 Sensors on conduit boxes other than US style 2" x 4". Back plate measures 3-1/4" x 5" (82.55 mm x 127 mm).

²⁾ For use with all QFA models and QPA2284.xxxx only.

Disposal

The devices are considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the devices through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Information in this document is based on specifications believed correct at the time of publication. The right is reserved to make changes as design improvements are introduced. AIR TERMINAL NO. 1 SEQUENCE OF OPERATION:

AIR TERMINAL MODE OF OPERATION IS EITHER "OCCUPIED" OR "UNOCCUPIED" BASED UPON WEEKLY SCHEDULE OR OPERATOR COMMAND. MODE OF OPERATION MAY BE CHANGED BY THE USER FROM "UNOCCUPIED" TO "OCCUPIED" FOR A PERIOD OF FOUR (4) HOURS BY PRESSING A PUSHBUTTON LOCATED AT THE THERMOSTAT.

DURING THE "OCCUPIED" MODE OF OPERATION THE AIR TERMINAL CONTROLLER SHALL MODULATE THE TERMINAL DAMPER BETWEEN THE MINIMUM AND MAXIMUM "OCCUPIED" AIR FLOWS SCHEDULED IN SEQUENCE WITH THE HEATING WATER CONTROL VALVE AS REQUIRED TO MAINTAIN THE SPACE TEMPERATURE AT SETPOINT. THE SPACE TEMPERATURE SETPOINT SHALL BE ADJUSTABLE BY THE USER FROM A MINIMUM OF 68 DEG. F TO A MAXIMUM OF 76 DEG. F. ON A DECREASE IN SPACE TEMPERATURE THE TERMINAL DAMPER SHALL CLOSE TO THE MINIMUM AIR FLOW AND THE HEATING WATER CONTROL VALVE SHALL MODULATE OPEN. ON AN INCREASE IN SPACE TEMPERATURE THE HEATING WATER CONTROL VALVE SHALL CLOSE AND THE TERMINAL DAMPER SHALL MODULATE OPEN.

DURING THE "UNOCCUPIED" MODE OF OPERATION THE AIR TERMINAL CONTROLLER SHALL MODULATE THE TERMINAL DAMPER BETWEEN THE MINIMUM AND MAXIMUM "UNOCCUPIED" AIR FLOWS SCHEDULED IN SEQUENCE WITH THE HEATING WATER CONTROL VALVE AS REQUIRED TO MAINTAIN THE SPACE TEMPERATURE AT SETPOINT. THE SPACE TEMPERATURE SETPOINT SHALL BE ADJUSTABLE BY THE USER FROM A MINIMUM OF 68 DEG. F TO A MAXIMUM OF 76 DEG. F. ON A DECREASE IN SPACE TEMPERATURE THE TERMINAL DAMPER SHALL CLOSE TO THE MINIMUM AIR FLOW AND THE HEATING WATER CONTROL VALVE SHALL MODULATE OPEN. ON AN INCREASE IN SPACE TEMPERATURE THE HEATING WATER CONTROL VALVE SHALL CLOSE AND THE TERMINAL DAMPER SHALL MODULATE OPEN.

How To Use This Manual

This manual is written for the owner and user of the TEC Terminal Box Controller. It is designed to help you become familiar with the Siemens TEC and its applications.

This section covers manual organization, manual conventions, symbols used in the manual, and other information that will help you use this manual.

Manual Organization

This manual contains the following chapters:

- *Chapter 1 - Hardware*, describes the hardware components and the accessories that are used with the TEC.
- *Chapter 2 - Applications*, describes the control applications available in the model of the TEC that includes a terminal block for wireable input/output connections.
- *Chapter 3 - Point Database*, defines the point database descriptors and includes address and applications.
- *Chapter 4 - Basic Service and Maintenance*, describes basic corrective measures you can take should you encounter a problem when using the TEC. For issues not covered in this chapter, consult your local Siemens Industry representative.
- The *Glossary* describes the terms and acronyms used in this manual.
- The *Index* helps you locate information presented in this manual.

Manual Conventions

The following table lists conventions to help you use this manual in a quick and efficient manner.

Convention	Examples
Numbered Lists (1, 2, 3...) indicate a procedure with sequential steps.	1. Turn OFF power to the field panel. 2. Turn ON power to the field panel. 3. Contact the local Siemens Industry representative.
Conditions that must be completed or met before beginning a task are designated with a ▷. Intermediate results (what will happen following the execution of a step), are designated with a ⇨. Results, which inform the user that a task was completed successfully, are designated with a ⇨.	▷Composer software is properly installed. ▷A Valid license is available. 1. Select Start > Programs > Siemens > GMS > Composer . ⇨The Project Management window displays. 2. Open an existing project or create a new one. ⇨The project window displays.
Actions that should be performed are specified in boldface font.	Type F for Field panels. Click OK to save changes and close the dialog box.
Error and system messages are displayed in Courier New font.	The message <code>Report Definition successfully renamed</code> displays in the status bar.
New terms appearing for the first time are italicized.	The field panel continuously executes a user-defined set of instructions called the <i>control program</i> .
	This symbol signifies Notes. Notes provide additional information or helpful hints.

Convention	Examples
Cross references to other information are indicated with an arrow and the page number, enclosed in brackets: [→92]	For more information on creating flowcharts, see Flowcharts [→92].
Placeholders indicate text that can vary based on your selection. Placeholders are specified by italicized letters, and enclosed with brackets [].	Type A C D H [<i>username</i>] [<i>field panel #</i>].

Manual Symbols

The following table lists the safety symbols used in this manual to draw attention to important information.

Symbol	Meaning	Description
NOTICE	CAUTION	Equipment damage may occur if a procedure or instruction is not followed as specified. (For online documentation, the NOTICE displays in white with a blue background.)
	CAUTION	Minor or moderate injury may occur if a procedure or instruction is not followed as specified.
	WARNING	Personal injury or property damage may occur if a procedure or instruction is not followed as specified.
	DANGER	Electric shock, death, or severe property damage may occur if a procedure or instruction is not followed as specified.

Getting Help

For more information about the TEC Terminal Box Controller, contact your local Siemens Industry representative.

Where to Send Comments

Your feedback is important to us. If you have comments about this manual, please submit them to SBT_technical.editor.us.sbt@siemens.com

Chapter 1 – Product Overview

The TEC Terminal Box Controller is the Siemens Industry FLN controller used in pressure independent Variable Air Volume applications. It provides Direct Digital Control (DDC) for eight applications and is available in both short and long board hardware assemblies.

- The controller can operate as an independent, stand-alone, DDC room controller or it can be networked with a field panel.
- The controller provides all termination, input/output, system and local communication connections.
- The controller hardware consists of the controller with cover and mounting bracket (See Figure TEC Terminal Box Controller).

The following applications are covered:

- Slave Mode (Application 2091)
- VAV Cooling Only (Application 2020)
- VAV Cooling or Heating (Application 2021)
- VAV with Electric Reheat or Baseboard Radiation (Application 2022)
- VAV with Hot Water Reheat (Application 2023)
- VAV Series Fan Powered with Electric Reheat (Application 2024)
- VAV Series Fan Powered with Hot Water Reheat (Application 2025)
- VAV Parallel Fan Powered with Electric Reheat (Application 2026)
- VAV Parallel Fan Powered with Hot Water Reheat (Application 2027)

Ordering Notes

TEC Terminal Box Controller	540-100N
TEC Terminal Box Controller with Autozero Module	540-200N

Generic Controller I/O Layout. See *Wiring Diagram* for application specific details.

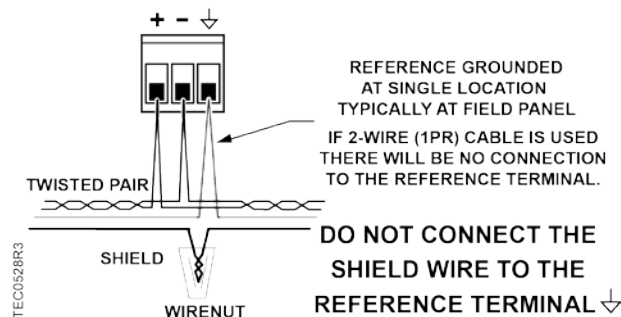

Power Wiring

Communication Wiring

The controller connects to the field panel by means of a Floor Level Network (FLN) trunk. Communication wiring connects to the three screw terminals on the controller labeled “+” (positive), “-” (negative), and “↓” (reference).

3-WIRE FLN TRUNK

Controller LED Indicators

NOTE:

The TX and RX LEDs indicate communication over the FLN.

To determine if the controller is powered up and working, verify that the Basic Sanity Test (BST) Light Emitting Diode (LED) is flashing ON/OFF once per second. The controller has nine Light Emitting Diode (LED) indicators (see Figure Siemens BACnet VAV Controller).

Controller LEDs.			
LED Type	Label (if present)*	LED Number	Indication
DO	LED 1 - LED 6	1 – 6	Indicates the ON/OFF status of the DO associated with it. A glowing LED indicates that the DO is energized.
Transmit	TX	7	Indicates, when flashing, that the controller is transmitting information to the field panel.
Receive	RX	8	Indicates, when flashing, that the controller is receiving information from the field panel.
BST "Basic Sanity Test"	BST	9	Indicates, when flashing ON and OFF once per second, that the controller is functioning properly.

* Some LED labels and numerals may be hidden by the controller cover.

Temperature Sensors

Temperature sensors used with the TEC Terminal Box Controller include an electronic room temperature sensor and an optional duct temperature sensor.

Room Temperature Sensor

The room temperature sensor connects to the controller by means of a cable terminated at both ends with a six-conductor RJ-11 plug-in connector.

See the Ordering Notes section for the location of the room temperature sensor/Human Machine Interface (HMI) port.

Duct Temperature Sensor

An optional duct temperature sensor provides duct air temperature sensing inputs to the controller.

For more information about temperature sensors, contact your local Siemens Industry representative.

Actuators

Actuators used with the TEC Terminal Box Controller include electronic damper motors, electronic valve motors, and electronic valve assemblies. These actuators are powered through the controller to position cooling and/or reheat valves or supply air dampers.

Related Equipment

- *(Optional)* Autozero Module
- *(Optional)* Relay Module
- Damper Actuator(s)
- *(Optional)* Duct Temperature Sensor
- Room Temperature Sensor
- *(Optional)* Valve Actuator

Contact your local Siemens Industry representative for product numbers and more information.

Chapter 2 – Applications

Basic Operation

The TEC Terminal Box Controller provides Direct Digital Control (DDC) for Variable Air Volume (VAV) terminal box applications. Temperature control varies with the application. If present, heating can be provided by hot water, up to three stages of electric reheat, or optional baseboard radiation.

Control Temperature Setpoints

The controller maintains a specified temperature setpoint based on Day/Night mode, the heating/cooling mode, or the setpoint dial (if used).

This application has a number of different room temperature setpoints (DAY HTG STPT, NGT CLG STPT, RM STPT DIAL, and so on.). The application actually controls using the CTL STPT. CTL STPT is set to different values depending on its override status, the time of day, whether or not a temperature deadband (zero energy band) has been configured, and the type of RTS used.

Day/Night Mode

The controller maintains the specified day setpoint temperature during daytime hours and the specified night setpoint at night.

Night Mode Override Switch

If the ROOM TEMPERATURE SENSOR has an override switch, it can be used to command the controller into day mode for an adjustable period of time. This only affects a controller in night mode.

Control Loops

Temperature Loop – Heating Loop – Cooling Loop

Maintain temperature setpoint by changing the flow setpoint or modulating the heat source (valve/electric heat).

Flow Loop

Maintains flow setpoint by modulating the damper actuator.

Calibration

Air Velocity Sensor

Calibration of the controller's internal air velocity sensor is periodically required to maintain accurate air velocity readings. Calibration may be set to take place automatically or manually.

Additional calibration is provided by driving the valve or damper fully closed or open, whenever they are commanded to 0 or 100 percent.

Fail-Mode Operation

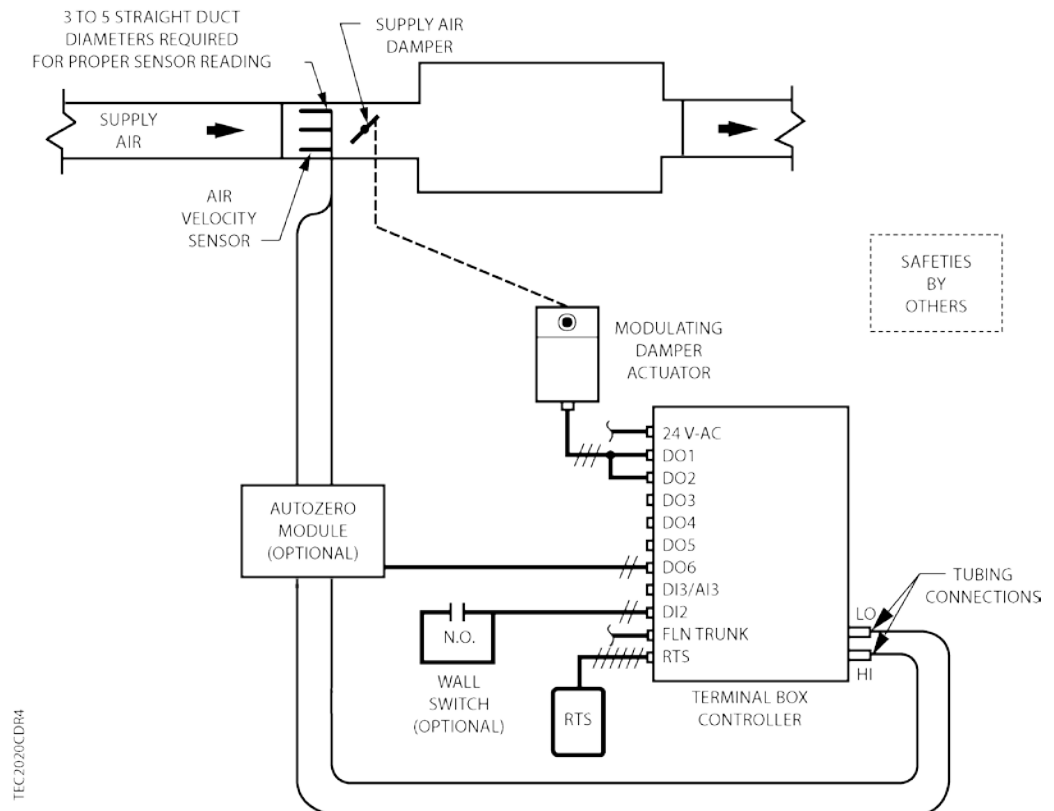

If the RTS or the setpoint dial fails, then the controller operates using the last known temperature value.

Notes

1. If the temperature swings in the room are excessive, or if there is trouble in maintaining the setpoint, contact your local Siemens Industry representative for more information.
2. The TEC Terminal Box Controller, as shipped from the factory, keeps all associated equipment OFF. The controller and its equipment are released to application control at start up.

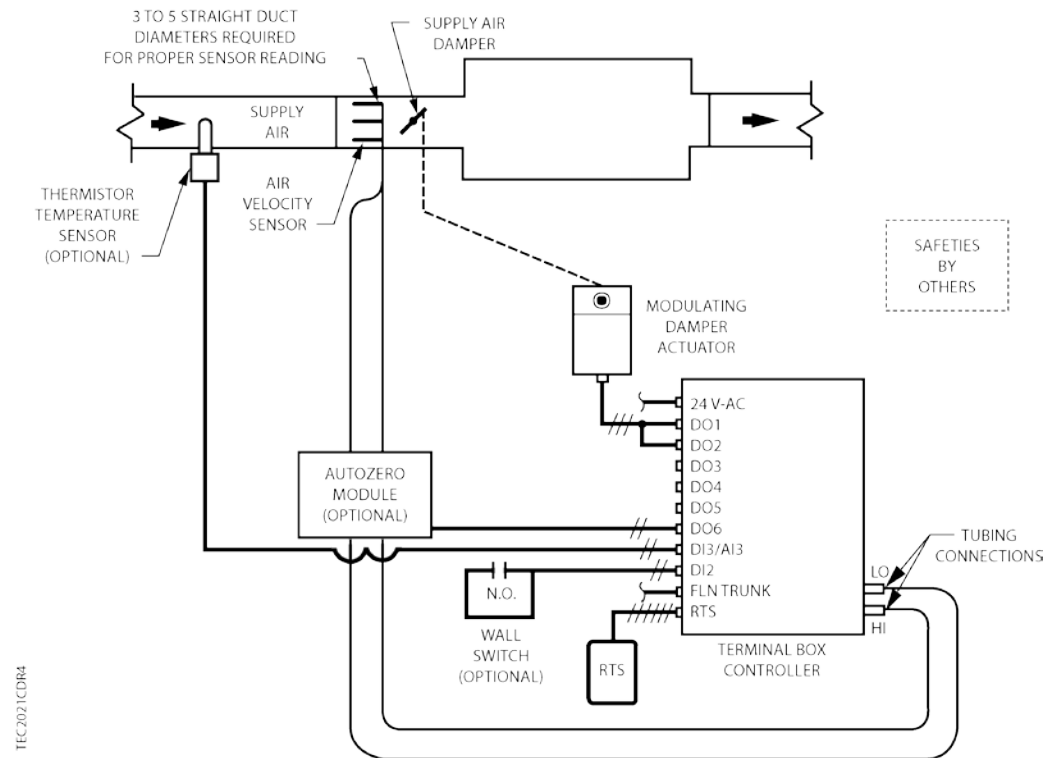

Application 2020 VAV Cooling Only

In Application 2020, the controller modulates the supply air damper of the terminal box for cooling. In order for it to work properly, the central air-handling unit must provide cool supply air.

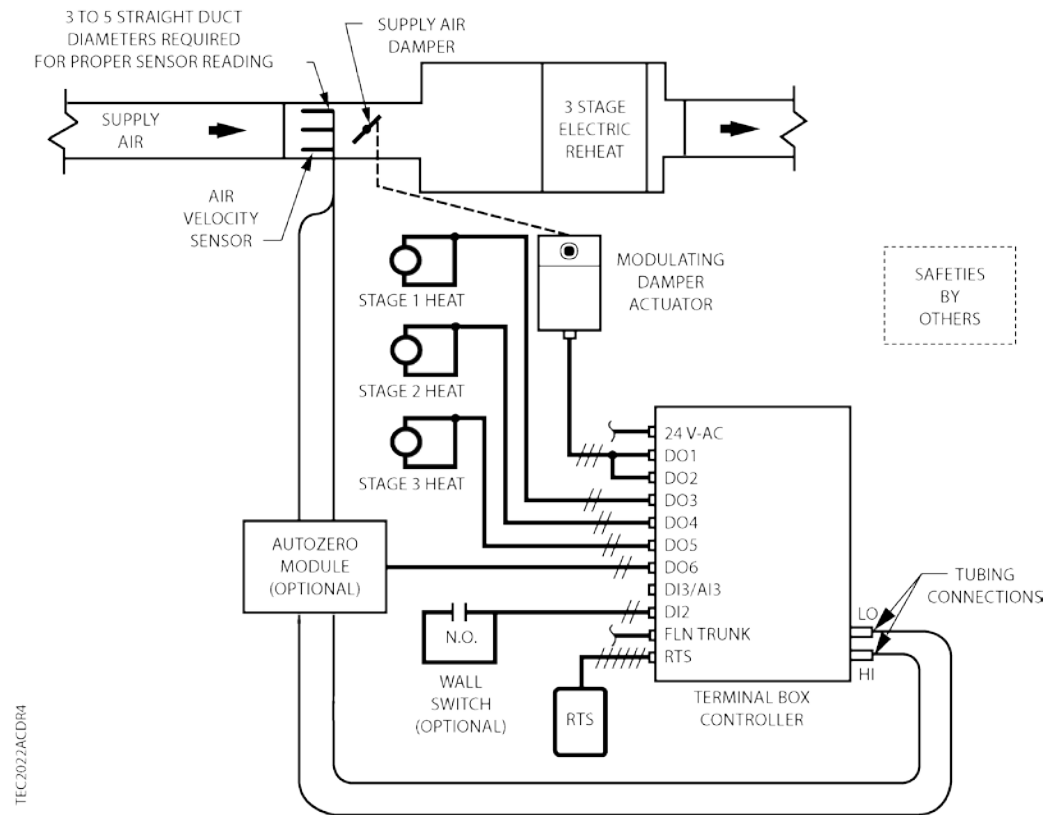

Application 2021 VAV Cooling or Heating

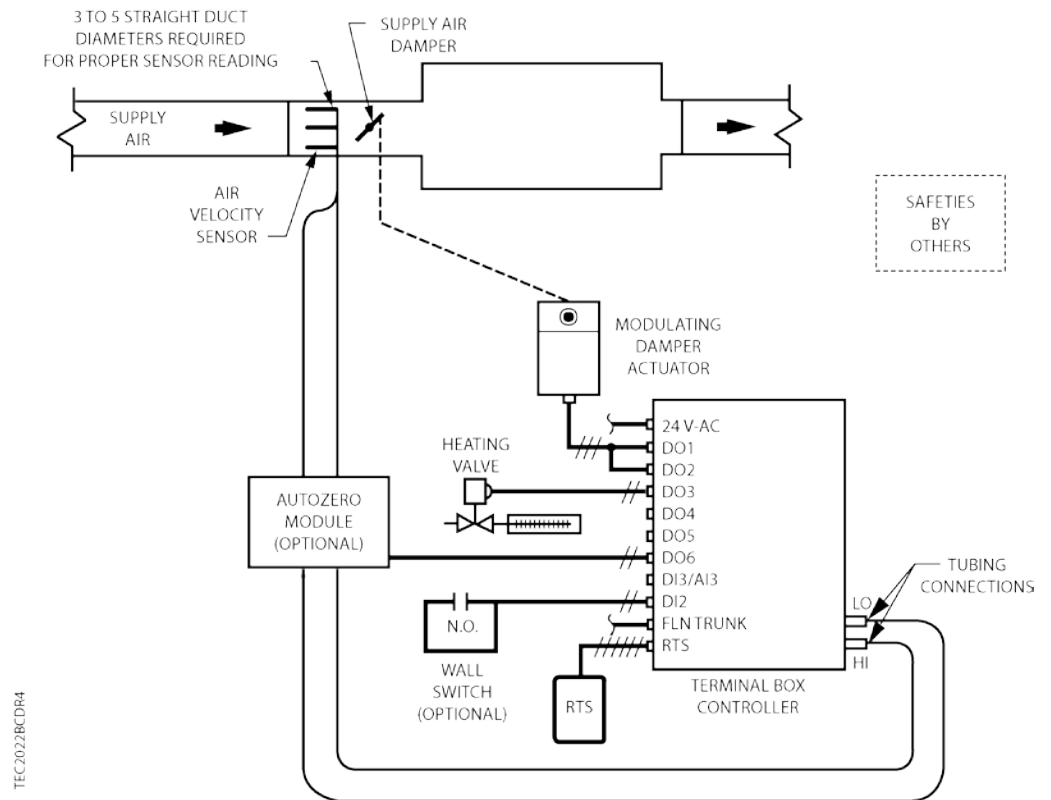

In Application 2021, the controller modulates the supply air damper of the terminal box for cooling or heating. In order for it to work properly, the central air-handling unit must provide cool supply air in cooling mode and warm air during heating mode.

Application 2022 VAV with Electric Reheat or Baseboard Radiation

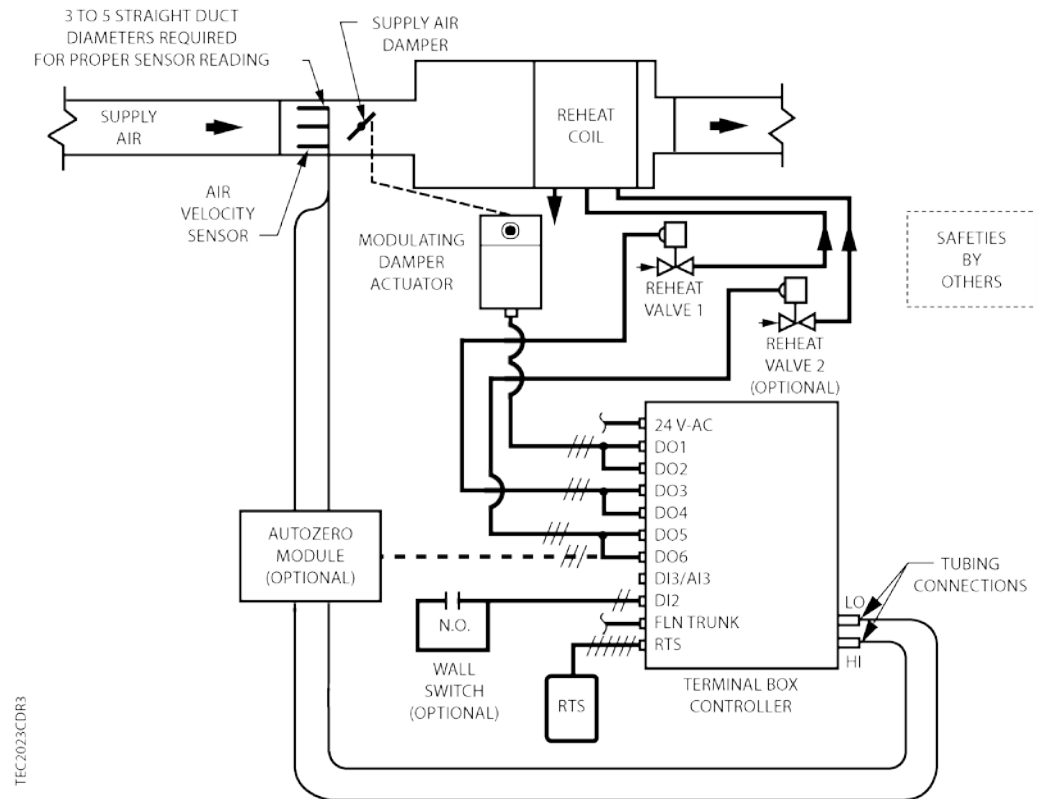

In Application 2022, the controller modulates the supply air damper of the terminal box for cooling and controls stages of electric reheat or baseboard radiation for heating. When in heating, the terminal box either maintains minimum airflow or modulates the supply air damper. In order for the terminal box to work properly, the central air-handling unit must provide supply air.

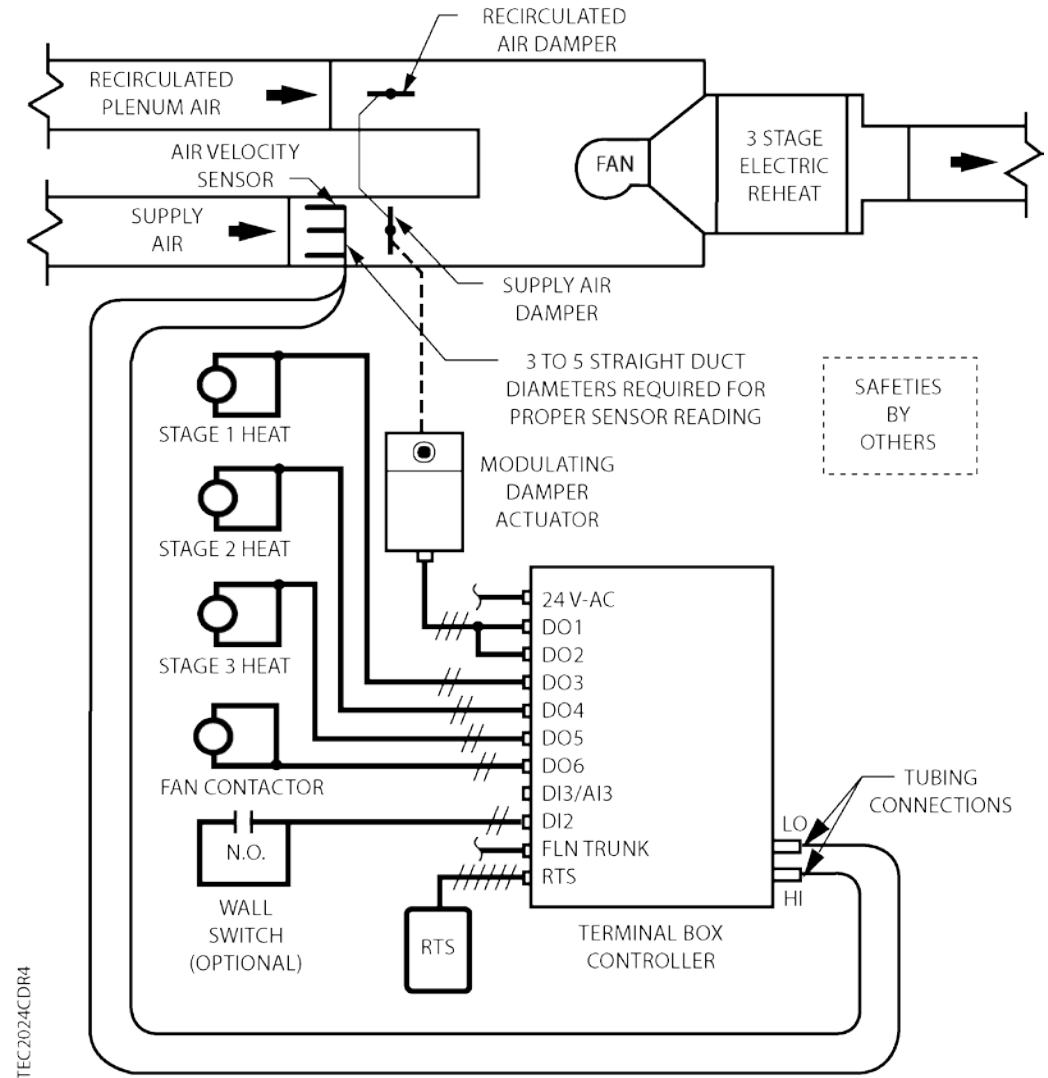

Application 2023 VAV with Hot Water Reheat

In Application 2023, the controller modulates the supply air damper of the terminal box for cooling and controls a hot water valve (or valves) for heating. When in heating, the terminal box either maintains minimum airflow or modulates the supply air damper. In order for the terminal box to work properly, the central air-handling unit must provide supply air for cooling.

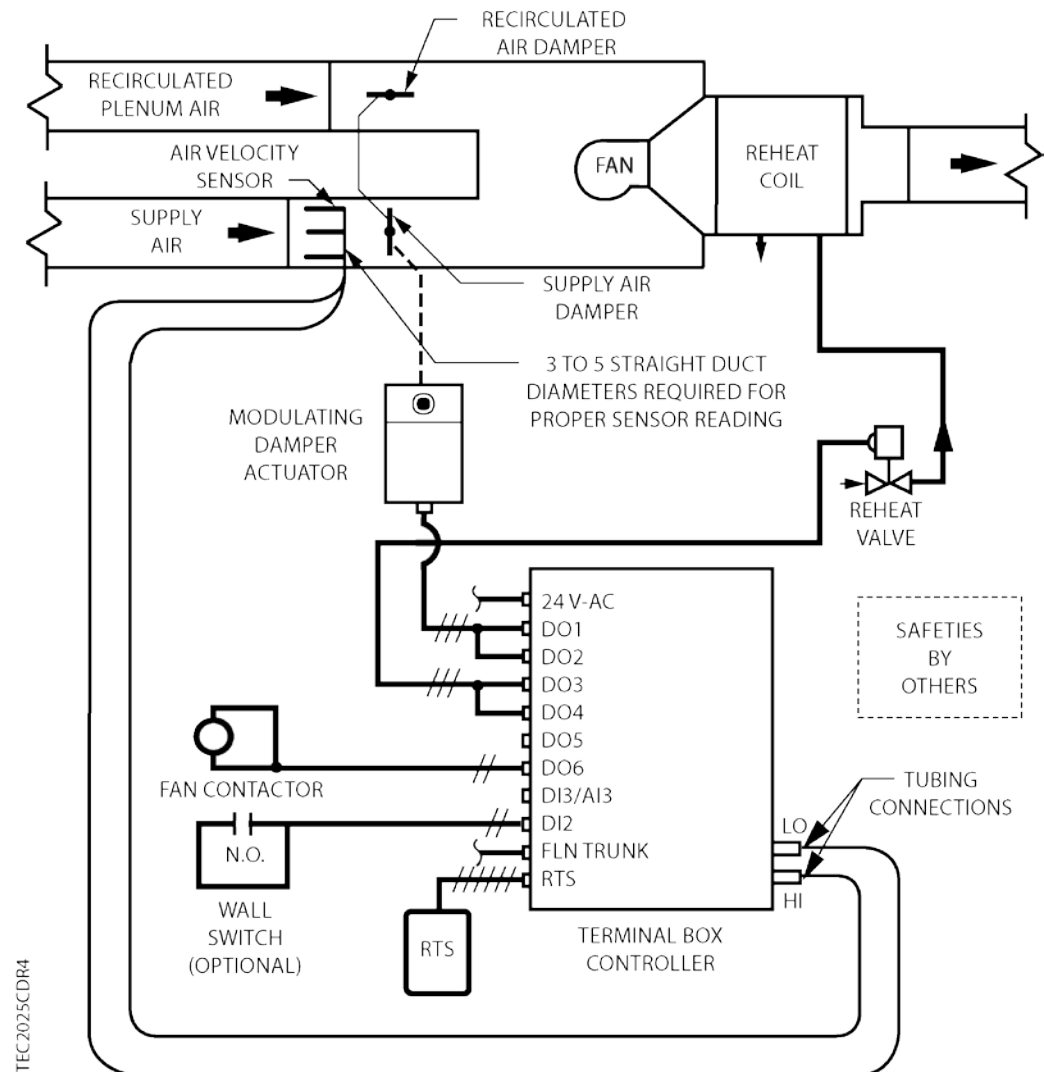

Application 2024 VAV Series Fan Powered with Electric Reheat

In Application 2024, the controller modulates the supply air damper of the terminal box for cooling and controls stages of electric reheat for heating. When in heating, the terminal box either maintains minimum airflow or modulates the supply air damper. Application 2024 has a series fan for air circulation. In order for the terminal box to work properly, the central air-handling unit must provide supply air.

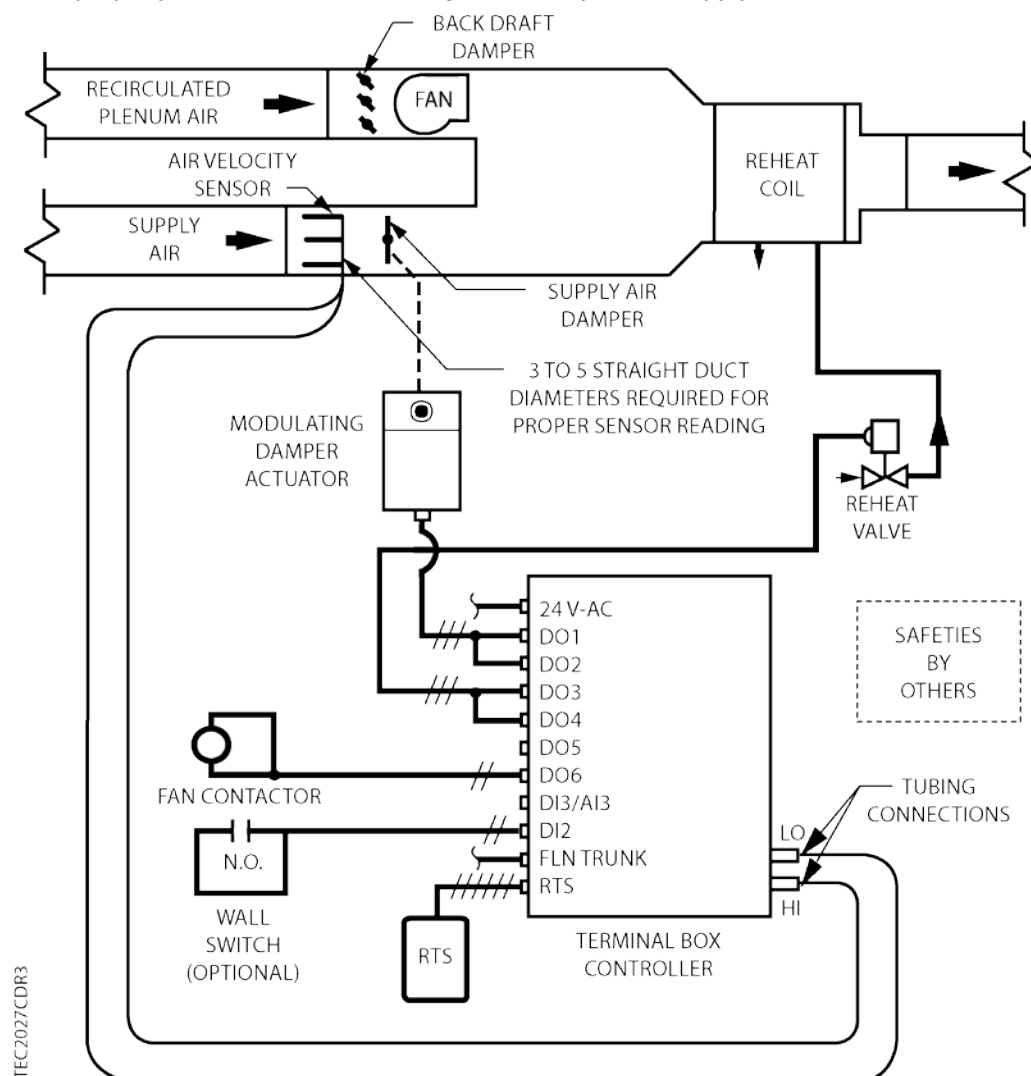

Application 2025 VAV Series Fan Powered with Hot Water Reheat

In Application 2025, the controller modulates the supply air damper of the terminal box for cooling and modulates a hot water valve for heating. When in heating, the terminal box either maintains minimum airflow or modulates the supply air damper. Application 2025 has a series fan for air circulation. In order for the terminal box to work properly, the central air-handling unit must provide supply air.

In Application 2027, the controller modulates the supply air damper of the terminal box for cooling and modulates a hot water valve for heating. When in heating, the terminal box either maintains minimum airflow or modulates the supply air damper. Application 2027 has a parallel fan that re-circulates the room air. In order for the terminal box to work properly, the central air-handling unit must provide supply air.

Application 2091 is the slave mode application for the TEC (see Ordering Notes for product numbers). Slave mode is the default application that comes up when power is first applied to the controller. Slave mode provides no control. Its purpose is to allow the operator to perform equipment checkout before a control application is put into effect and to set some basic controller parameters (CTLR ADDRESS, APPLICATION, etc.).

Chapter 3 – Point Database

Chapter 3 presents a description of the TEC Terminal Box Controller point database, including point descriptors, point addresses, and a listing of applications in which each point is found.

Descriptor	Address ¹	Application	Description
CTLR ADDRESS	01	All	Identifies the controller on the FLN trunk.
APPLICATION	02	All	Identification number of the program running in the controller.
ROOM TEMP	{04} ²	All	Actual reading from the room temperature sensor.
HEAT.COOL	{05}	All <i>except</i> 2020, 2091	Current mode of operation for applications that can be in either a heating mode or a cooling mode.
DAY CLG STPT	06	All <i>except</i> 2091	The temperature setpoint in degrees that the controller maintains during day periods in cooling mode if a room temperature sensor setpoint dial is not present or is not used. See <i>STPT DIAL</i> .
NGT CLG STPT	08	All <i>except</i> 2091	The temperature setpoint in degrees that the controller maintains during the night periods in cooling mode.
DAY HTG STPT	07	All <i>except</i> 2020, 2091	The temperature setpoint in degrees that the controller maintains during day periods in heating mode if a room temperature sensor setpoint dial is not present or is not used. See <i>STPT DIAL</i> .
NGT HTG STPT	09	All <i>except</i> 2020, 2091	The temperature setpoint in degrees that the controller maintains during the night periods in heating mode.
RM STPT MIN	11	All <i>except</i> 2091	The minimum temperature setpoint in degrees that the controller can use from the setpoint dial. This overrides any temperature setpoint from the setpoint dial that falls below this minimum.
RM STPT MAX	12	All <i>except</i> 2091	The maximum temperature setpoint in degrees that the controller can use from the setpoint dial. This overrides any temperature setpoint from the setpoint dial that falls above this maximum.
RM STPT DIAL	{13}	All	The temperature setpoint in degrees from the room temperature sensor (not available on all temperature sensor models). This setpoint will be used for control in day mode (heating or cooling) when enabled by STPT DIAL.
STPT DIAL	14	All <i>except</i> 2091	YES indicates that there is a room setpoint dial on the room temperature sensor and it should be used as the temperature setpoint for control in day/occupied mode. NO indicates that the appropriate preset setpoint will be used as the temperature setpoint for control in day/occupied heating or cooling mode. Valid input: YES or NO.
AUX TEMP	{15}	All <i>except</i> 2021	Actual reading from a 100K Ω thermistor.
SUPPLY TEMP	{15}	2021	Actual reading from a 100K Ω thermistor. The controller uses this value to determine whether it is in heating or cooling mode.
FLOW START	16	All <i>except</i> 2020, 2021, 2091	Determines how the damper modulation will be sequenced while in heating mode. When HTG LOOPOUT is above this value, then FLOW STPT starts to increase.

Descriptor	Address ¹	Application	Description
FLOW END	17	All <i>except</i> 2020, 2021, 2091	Determines how the damper modulation will be sequenced while in heating mode. When HTG LOOPOUT is below this value, then FLOW STPT starts to decrease.
WALL SWITCH	18	All	YES indicates that the controller is to monitor the status of a wall switch that is connected to UI 2. NO indicates that the controller will not monitor the status of a wall switch, even if one is connected. Valid input: YES or NO.
DI OVRD SW	{19}	All	Actual indication of the status of the override switch (not physically available on all temperature sensor models) at the room temperature sensor. ON indicates that the switch is being pressed. OFF indicates that the switch is released. Valid input: ON or OFF.
OVRD TIME	20	All <i>except</i> 2091	The amount of time in hours that the controller will operate in day/occupied mode when the override switch is pressed while the controller is in night/unoccupied mode.
NGT OVRD	{21}	All <i>except</i> 2091	Indicates the mode that the controller is operating in with respect to the override switch. NIGHT indicates that the switch has not been pressed and the override timer is not active. DAY indicates that the switch has been pressed and the override timer is active. The controller then uses a day mode temperature setpoint. This point is only in effect when DAY.NGT indicates night mode.
REHEAT START	22	All <i>except</i> 2020, 2021, 2091	Determines how the reheat modulation will be sequenced while in heating mode. When HTG LOOPOUT is above this value, then the reheat modulates upward.
REHEAT END	23	All <i>except</i> 2020, 2021, 2091	Determines how the reheat modulation will be sequenced while in heating mode. When HTG LOOPOUT is below this value, then the reheat modulates downward.
DI 2	{24}	All	Actual status of a contact connected to the controller at DI 2. ON indicates that the contact is closed; OFF indicates that the contact is open. If a wall switch is used, it is connected to DI 2. See <i>WALL SWITCH</i> .
DI 3	{25}	All <i>except</i> 2021	Actual status of a contact connected to the controller at AI 3/DI 3. ON indicates that the contact is closed; OFF indicates that the contact is open. When a contact is connected at DI 3, AI 3 is not available. See <i>AUX TEMP</i> .
SERIES ON	26	2024, 2025	When flow rises above this value, the series fan will turn ON.
SERIES ON	26	2026	This point is present, but not used in this application.
SERIES OFF	27	2024, 2025	When flow drops below this value and other conditions have been met, the series fan will turn OFF.
SERIES OFF	27	2026	This point is present, but not used in this application.
PARALLEL ON	28	2024	This point is present, but not used in this application.
PARALLEL ON	28	2026, 2027	When flow drops below this value and other conditions have been met, the parallel fan will turn ON.
DAY.NGT	{29}	All	Indicates the mode in which the controller is operating. Day temperature setpoints will be used in day mode. Night temperature setpoints will be used in night mode. This point is normally set by the field panel.
PARALLEL OFF	30	2024	This point is present, but not used in this application.
PARALLEL OFF	30	2026, 2027	When flow rises above this value, the parallel fan will turn

Descriptor	Address ¹	Application	Description
			OFF.
CLG FLOW MIN	31	All <i>except</i> 2091	The minimum amount of air in CFM (LPS) to be supplied to the space in cooling mode.
CLG FLOW MAX	32	All <i>except</i> 2091	The maximum amount of air in CFM (LPS) to be supplied to the space in cooling mode.
HTG FLOW MIN	33	All <i>except</i> 2020, 2091	The minimum amount of air in CFM (LPS) to be supplied to the space in heating mode.
HTG FLOW MAX	34	All <i>except</i> 2020, 2091	The maximum amount of air in CFM (LPS) to be supplied to the space in heating mode.
AIR VOLUME	{35}	All	Actual amount of air in CFM (LPS) currently passing through the air velocity sensor.
FLOW COEFF	36	All	Calibration factor for the airflow sensor.
MTR3 COMD	{37}	2020, 2021, 2022, 2091	The value to which the Motor 3 actuator is commanded in percent of full value.
VLV2 COMD	{37}	2023	The value to which the valve 2 actuator is commanded in percent of full travel for applications using a second water valve.
MTR3 POS	{38}	2020, 2021, 2022, 2091	The current position of the Motor 3 actuator in percent of full travel. This value is calculated based on motor run time.
VLV2 POS	{38}	2023	The current position of Valve 2 in percent of full travel. This value is calculated based on valve run time.
MTR3 TIMING	39	All <i>except</i> 2024, 2025, 2026, 2027	The time, in seconds, required for the Motor 3 actuator to travel from the full closed position to the full open position.
DO 1	{41}	All	Digital output 1 controls a 24 Vac load with an ON or OFF status. If Motor 1 is enabled, DO 1 is coupled with DO 2 to control an actuator.
DO 2	{42}	All	Digital output 2 controls a 24 Vac load with an ON or OFF status. If Motor 1 is enabled, DO 2 is coupled with DO 1 to control an actuator.
DO 3	{43}	All <i>except</i> 2022, 2024, 2026	Digital output 3 controls a 24 Vac load with an ON or OFF status. If Motor 2 is enabled, DO 3 is coupled with DO 4 to control an actuator.
HEAT STAGE 1	{43}	2022, 2024, 2026	This point is DO 3 in applications with electric reheat. This digital output controls the contact for the first stage of heating and has a status of ON or OFF.
DO 4	{44}	All <i>except</i> 2022, 2024, 2026	Digital output 4 controls a 24 Vac load with an ON or OFF status. If Motor 2 is enabled, DO 4 is coupled with DO 3 to control an actuator.
HEAT STAGE 2	{44}	2022, 2024, 2026	This point is DO 4 in applications with electric reheat. This digital output controls the contact for the second stage of heating and has a status of ON or OFF.
DO 5	{45}	2020, 2021, 2023, 2091	Digital output 5 controls a 24 Vac load with an ON or OFF status. If Motor 3 is enabled, DO 5 is coupled with DO 6 to control an actuator.
DO 5	{45}	2025, 2027	Digital output 5 controls a 24 Vac load with an ON or OFF status.
HEAT STAGE 3	{45}	2022, 2024, 2026	This point is a digital output used to control the contact for the third stage of heating and has a status of ON or OFF.

Descriptor	Address ¹	Application	Description
DO 6	{46}	All <i>except</i> 2024, 2025, 2026, 2027	Digital output 6 controls a 24 Vac load with an ON or OFF status. If Motor 3 is enabled, DO 6 is coupled with DO 5 to control an actuator. In applications with CAL MODULE set to YES, this digital output controls the Autozero Module to calibrate the controller's internal air velocity transducer.
FAN	{46}	2024, 2025, 2026, 2027	This point is a digital output used to control the fan. ON indicates that the DO is energized; OFF indicates that the DO is de-energized.
DMPR COMD	{48}	All <i>except</i> 2091	The value to which the damper motor is commanded in percent of full travel.
MTR1 COMD	{48}	2091	The value to which the Motor 1 actuator is commanded in percent of full travel.
DMPR POS	{49}	All <i>except</i> 2091	The current position of the damper motor in percent of full travel. This value is calculated based on motor run time.
MTR1 POS	{49}	2901	The current position of Motor 1 in percent of full travel. This value is calculated based on motor run time. See <i>MTR1 TIMING</i> .
MTR1 TIMING	51	All	The time, in seconds, required for the Motor 1 actuator to travel from full closed to the full open position.
MTR2 COMD	{52}	2020, 2021, 2091	The value to which the Motor 2 actuator is commanded in percent of full travel (for use as an auxiliary slave point).
VLV COMD	{52}	2025, 2027	The value to which the valve actuator is commanded in percent of full travel for applications using a water valve.
VLV1 COMD	{52}	2023	The value to which the valve 1 actuator is commanded in percent of full travel for applications using a water valve.
MTR2 POS	{53}	2020, 2021, 2091	The current position of the Motor 2 actuator in percent of full travel (for use as an auxiliary slave point). This value is calculated based on motor run time. See <i>MTR2 TIMING</i> .
VLV POS	{53}	2025	The current position of the valve in percent of full travel for applications using a water valve. This value is calculated based on motor run time.
VLV1 POS	{53}	2023	The current position of valve 1 in percent of full travel for applications using a water valve. This value is calculated based on motor run time.
MTR2 TIMING	55	All <i>except</i> 2022, 2024, 2026	The time, in seconds, required for the Motor 2 actuator to travel from full closed to the full open position.
DMPR ROT ANG	56	All <i>except</i> 2091	The number of degrees the damper is free to travel.
DPR1 ROT ANG	56	2091	The number of degrees that damper 1 is free to travel.
DPR2 ROT ANG	57	2091	The number of degrees that damper 2, the hot duct damper, is free to travel.
MTR SETUP	58	All	The configuration setup code for Motors 1 and 2. This enables the motors individually and sets each motor to be either direct or reverse acting. Note: When a motor is enabled, its associated DOs are enabled.
DO DIR.REV	59	All	The configuration setup code for DOs. Allows the DOs to be direct or reverse acting (enabled equals energized or disabled equals de-energized).

Descriptor	Address ¹	Application	Description
EHEAT FLOW	60	2022	The flow required before the electric heat will be enabled.
COOL TEMP	61	2021	The discharge air temperature where the controller will switch from heating to cooling mode. Used only in applications with SUPPLY TEMP.
HEAT TEMP	62	2021	The discharge air temperature where the controller will switch from cooling to heating mode. Used only in applications with SUPPLY TEMP.
CLG P GAIN	63	All <i>except</i> 2091	The proportional gain value for the cooling temperature control loop.
CLG I GAIN	64	All <i>except</i> 2091	The integral gain value for the cooling temperature control loop.
CLG D GAIN	65	All <i>except</i> 2091	The derivative gain value for the cooling temperature control loop.
CLG BIAS	66	All <i>except</i> 2091	The biasing of the cooling temperature control loop. See <i>CLG LOOPOUT</i> .
HTG P GAIN	67	All <i>except</i> 2020, 2091	The proportional gain value for the heating temperature control loop.
HTG I GAIN	68	All <i>except</i> 2020, 2091	The integral gain value for the heating temperature control loop.
HTG D GAIN	69	All <i>except</i> 2020, 2091	The derivative gain value for the heating temperature control loop.
HTG BIAS	70	All <i>except</i> 2020, 2091	The biasing of the heating temperature control loop. See <i>LOOPOUT</i> .
FLOW P GAIN	71	All <i>except</i> 2091	The proportional gain value for the flow control loop.
FLOW I GAIN	72	All <i>except</i> 2091	The integral gain value for the flow control loop.
FLOW D GAIN	73	All <i>except</i> 2091	The derivative gain value for the flow control loop.
FLOW BIAS	74	All <i>except</i> 2091	The biasing of the flow control loop.
FLOW	{75}	All <i>except</i> 2091	Indicates the amount of air currently passing the air velocity sensor. The value is calculated as a percentage based on where the value of AIR VOLUME is in the range between 0 and CTL FLOW MAX.
CTL FLOW MIN	{76}	All <i>except</i> 2091	The active minimum flow used as a limit for the flow control loop. This value is the same as CLG FLOW MIN if the controller is in cooling mode, or is the same as HTG FLOW MIN if the controller is in heating mode, unless it is overridden.
CTL FLOW MAX	{77}	All <i>except</i> 2091	The active maximum flow used as a limit for the flow control loop. This value is the same as CLG FLOW MAX if the controller is in cooling mode, or is the same as HTG FLOW MAX if the controller is in heating mode unless, it is overridden.
CTL TEMP	{78}	All <i>except</i> 2091	The temperature used as input for the temperature control loops. This value is the same as the value in ROOM TEMP unless it is overridden.
CLG LOOPOUT	{79}	All <i>except</i> 2091	The cooling temperature control loop output value in percent.

Descriptor	Address ¹	Application	Description
HTG LOOPOUT	{80}	All <i>except</i> 2020, 2091	The heating temperature control loop output value in percent.
AVG HEAT OUT	{81}	2022, 2024, 2026	This point is used to determine what stages of electric heat are used for a given loop output value. The ranges for the value are determined by the number of stages used: 0 to 100 for 1 stage of electric heat, 0 to 200 for 2 stages of electric heat, and 0 to 300 for 3 stages of electric heat. With electric heat, this value is equal to: HTG LOOPOUT × STAGE COUNT.
STAGE MAX	82	2022, 2024, 2026	The value, in percent, which the heating loop must exceed for the electric heat to be ON for the full duty cycle (STAGE TIME).
STAGE FAN	83	2025, 2027	The valve must be opened greater than this value before the fan will turn ON.
STAGE MIN	83	2022, 2024, 2026	The value, in percent, which the heating loop must go below for the electric heat to be OFF for the full duty cycle (STAGE TIME).
DMPR STATUS	{84}	2020, 2021, 2022, 2023	This point is used only when CAL MODULE set to YES. It readjusts the damper position if the command value is not equal to the actual position of the damper. CAL indicates that the damper is operating normally. RECAL indicates that the damper position was adjusted (recalibrated) by 25% because the desired airflow was not obtainable under its current status.
SWITCH LIMIT	85	All <i>except</i> 2020, 2021, 2091	The active temperature control loop output must be less than this value to switch between cooling mode and heating mode. Actual switchover depends on SWITCH DBAND being exceeded and is subject to SWITCH TIME being expired.
SWITCH TIME	86	All <i>except</i> 2020, 2021, 2091	The time, in minutes, before the heat/cool mode can change over when the other parameters are appropriate.
CAL MODULE	87	All <i>except</i> 2024, 2025, 2026, 2027	YES indicates that the Autozero Modules are enabled to calibrate the air velocity transducers. The dampers will not be used for calibration. NO indicates that Autozero Modules are disabled and that the air velocity transducers will be calibrated by closing the dampers. Valid input: YES or NO.
STAGE COUNT	88	2022, 2024, 2026	The number of electric heating stages used by the application. DOs associated with unused stages may be used as spare DOs.
VALVE COUNT	88	2023	The number of heating valves available.
STAGE TIME	89	2022, 2024, 2026	The cycle time in minutes for the electric reheat stages. For example, if there are three stages of electric heat and STAGE TIME = 10 minutes, STAGE COUNT = 3, and AVG HEAT OUT = 150% then, Stage 1 is ON for 10 minutes (100% of the time), Stage 2 is ON for 5 minutes (50% of 10 minutes) and OFF for 5 minutes, and Stage 3 is OFF.
SWITCH DBAND	90	All <i>except</i> 2020, 2021, 2091	The temperature range in degrees which is compared to the difference between CTL TEMP and CTL STPT. The difference must exceed this value for temperature control mode to change over. Changeover is also subject to the active temperature control loop output being below SWITCH LIMIT (Point 85) and SWITCH TIME being expired.
TOTAL VOLUME	{91}	All <i>except</i> 2091	The total amount of air delivered to a space in CF (L) since the last time the point was reset or rolled over.

Descriptor	Address ¹	Application	Description
CTL STPT	{92}	All <i>except</i> 2091	The actual setpoint value being used as input for the active temperature control loop.
FLOW STPT	{93}	All <i>except</i> 2091	The setpoint of the flow control loop.
CAL AIR	{94}	All	YES commands the controller to go through calibration sequence for the air velocity transducers. YES is also displayed when the calibration sequence is started automatically. CAL AIR automatically returns to NO after the calibration sequence is completed. Valid input: YES or NO.
CAL SETUP	95	All	The configuration setup code for the calibration sequence options.
CAL TIMER	96	All	Time interval, in hours, between the calibration sequence initiations if a timed calibration option is selected in CAL SETUP.
DUCT AREA	97	All	Area, in square feet (square meters), of the duct where the air velocity sensor is located. This is a calculated value (calculated by the field panel or computer being used) that depends on duct shape and size. It is used in calculating all points in units of CFM, CF, LPS and L. Valid input: .025 ft ² (.002 m ²) through 6.375 ft ² (.5923 m ²).
LOOP TIME	98	All <i>except</i> 2091	The time, in seconds, between control loop calculations.
ERROR STATUS	{99}	All	The status code indicating any errors detected during controller power up. A status of 0 indicates there are no problems.

¹⁾ Points not listed are not used in this application.

²⁾ Point numbers that appear in brackets { } may be unbundled at the field panel.

Chapter 4 – Basic Service and Maintenance

This chapter describes basic service and maintenance measures you can take when using a TEC.

You may want to contact your local Siemens Industry representative if a problem occurs or you have any questions about the controller.

NOTE:

When troubleshooting, record the problem and what actions were performed immediately before the problem occurred. Being able to describe the problem in detail is important should you need assistance from your local Siemens Industry representative.

Basic Service Information

Always remove power to the TEC when installing or replacing it. Since the controller does not have a power switch, the recommended method of removing power to a locally powered controller is to turn OFF the power to the 24 Vac transformer. The recommended method of removing power to a controller on a power cable (even to service a single controller) is to turn OFF the power at the transformer.

NOTE:

When removing power to a controller to perform maintenance or service, make sure that the person in charge of the facility is aware of this and that appropriate steps are taken to keep the building in control.

Never remove the cover from the TEC. There are no serviceable parts inside. If a problem is found with this device, contact your local Siemens Industry representative for replacement. An anti-static wrist strap is recommended when installing or replacing controllers.

Preventive Maintenance

Most controller components are designed so that, under normal circumstances, they do not require preventive maintenance. Periodic inspections, voltage checks, and point checks are normally not required. The rugged design makes most preventive maintenance unnecessary. However, devices that are exposed to dusty or dirty environments may require periodic cleaning to function properly.

Safety Features

The controller board stores the controller's address, applications, and point values. In the event of a power failure or a reset, these values are retrieved from the controller's permanent memory and are used by the controller unless overridden by a field panel. If one of the following conditions occurs, the controller will activate safety features present in its fail-safe mode.

- Sensor failure.
- Loss of power. Upon controller power loss, communication with the controller is also lost. The controller will appear as failed (*F*) at the field panel.

Glossary

This glossary contains the collected terms and acronyms that are used in Siemens BACnet PTEC and TEC Controllers. For definitions of point database descriptors, see Chapter 3 - Point Database, in this manual.

airflow

Rate at which a volume of air moves through a duct. Usually expressed in cubic feet per minute (cfm) or liters per second (lps).

algorithm

Mathematical formula and control logic that uses varying inputs to calculate an output value.

AVS

Air Velocity Sensor. An electronic device that converts differential pressure from a pilot tube or multi-point pickup to an analog rate of fluid flow (air velocity in fpm, m/s) to provide calculations of air volume rate (cfm, lps) in a duct. The air velocity sensor may be an external device or an internal component of a controller.

centralized control

Type of control offered by a controller that is connected by means of Field Level Network (FLN).

cfm

Cubic Feet per Minute.

Chilled Beam

A cooling device that provides a cooling system by taking care of both the sensible and latent heat gains of a room in a single package by a series of chilled water coils mounted near or in the ceiling. Coupled with a CV or VAV terminal ventilation system, a chilled beam induces air movement over the coil in the way that it discharges fresh air into the room. This allows for both fresh air and cooling to be taken care of at the same time.

control loop

An algorithm, such as PI or PID, that is used to control an output based on a setpoint and an input reading from a sensor.

CO₂

Carbon dioxide, a naturally occurring chemical compound composed of two oxygen atoms and a single carbon atom. Among other production sources, carbon dioxide is produced as the result of breathing of humans and animals and can therefore be an indirect indication of the concentration of humans in a zone.

CV

Constant air volume. Ventilation system that provides a fixed air volume supplied to and exhausted from the rooms served. The fixed volume may be different during occupied and unoccupied times

Demand Control Ventilation

A control algorithm that provides for the control or reduction of outdoor air intake below design rates when the actual occupancy of spaces served by the system is at less than design occupancy.

DCV

Demand Control Ventilation.

DDC

Direct Digital Control.

Direct digital control

The automated control of a condition or process by a digital device (computer).

DO

Digital Output. Physical output point that sends a two-state signal (ON/OFF, OPEN/CLOSED, YES/NO).

English units

The foot-pound-second system of units for weights and measurements.

equipment controller

FLN device, such as a BACnet PTEC or ATEC, that provides individual room or mechanical equipment control or additional point capacity to a field panel.

field panel

A DDC control device containing a microprocessor for centralized control and monitoring of system components and equipment controllers.

Floating Control

The combination of a modulating controlled device with the use of a pair of two position outputs. The control signal will either activate one or the other outputs to drive the controlled device towards its open or closed position. When both outputs are off, the controlled device maintains its last position. Also referred to as tri-state control.

FLN

Field Level Network. Network consisting of equipment controllers, FLN end devices, fume hoods, etc.

lps

Liters per Second.

loopout

Output of the control loop expressed as a percentage.

Heat pump

An HVAC device used for both space heating and space cooling. When a heat pump is used for heating, it employs the same basic refrigeration-type cycle used by an air conditioner but in the opposite direction, releasing heat into the conditioned-space rather than the surrounding environment. In this use, heat pumps generally draw heat from the cooler external air or from the ground.

HMI

Human Machine Interface. Terminal and its interface program that allows you to communicate with a field panel or equipment controller.

Occupancy sensor

A control device that detects presence of people in a space by using infrared or ultrasonic technology. Occupancy sensors are used to save energy by controlling lighting and temperature and, along with CO2 sensors, to provide control input of demand control ventilation (DCV) algorithms.

override switch

Button on a room temperature sensor that an occupant can press to change the status of a room from unoccupied to occupied (or from night to day) for a predetermined time.

pressure dependent

Variable Air Volume (VAV) room temperature control system in which the temperature drives a damper such that the air volume delivered to the space at any damper position is dependent on the duct static pressure.

pressure independent

Variable Air Volume (VAV) room temperature control system in which the temperature drives an airflow setpoint such that the air volume delivered to the space is independent of variations in the duct static pressure.

PID

Proportional, Integral, Derivative.

RTS

Room Temperature Sensor.

setpoint

Data point that stores a value such as a temperature setting. In contrast, points that monitor inputs, such as temperature, report actual values.

SI units

Système International d'Unités. The international metric system.

slave mode

Default application that displays when power is first applied to an equipment controller. No control action is initiated in the slave mode. Input and output points in the slave application can be monitored or controlled by a field panel (or by PPCL in a BACnet PTEC controller).

stand-alone control

Type of control offered by a controller that is providing independent DDC control to a space.

Terminal Equipment Controller

Siemens Industry, Inc. product family of equipment controllers that house the applications software used to control terminal units, such as heat pumps, VAV terminal boxes, fan coil units, unit ventilators, etc.

UI

Universal Input. Can be used as an AI or DI. An AI input is a point receiving a signal that represents a condition that has more than two states. A DI input is a physical input point that receives a two-state signal.

unbundle

Term used to describe the entering of a point that resides in a controller's database into the field panel's database so that it can be monitored and controlled from the field panel.

VAV

Variable air volume. Ventilation system that changes the amount of air supplied to and exhausted from the rooms served.

Room Unit for TEC, and ATEC

Overview

This document explains the set up and operation of the Series 2200, 3200, 2300, and 3300 room units. It explains the various operating modes available and describes the procedure for programming the display, according to user preferences.

These devices are used with BACnet Terminal Equipment Controllers (TEC), BACnet Actuator TEC (ATEC) Controllers, and BACnet Programmable Controllers (PTEC).

Accessories

Description	Product Number
Passkey	544-643A
25-foot (7.6 m) cable with connections	588-100A
50-foot (15.2 m) cable with connections	588-100B
100-foot (30.5 m) cable with connections	588-100C
Replacement rh 2%+ Thermostat Element – TEC Room Unit	AQF3060
Replacement Housing Base (QAA, QFA types)	563-102-01
Replacement Housing Base (QPA types)	563-120
Room Unit Backplate, 10-pack	AQM2200-INTL
Power Supply (QPA types)	AQM2200

Operation

Operation modes

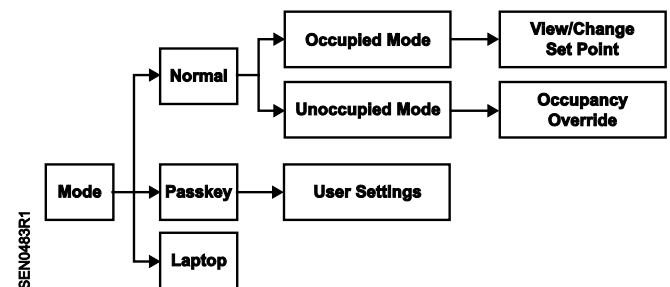

Figure 1. Operation Modes.

Normal Mode

In Normal Mode, the display is updated with temperature, humidity, carbon dioxide, and/or occupied status (all where applicable) on a set time cycle.

The display shows temperature in the desired units (as set by the clipable jumper on the PCA). Depending on the model, the humidity and/or carbon dioxide value(s) will be displayed as well. When multiple variables need to be displayed (temperature, relative humidity, and/or carbon dioxide) the display will cycle through the required values at a rate of one change every three to five seconds.

Operation modes, Continued

Occupied Mode

If the TEC is currently in Unoccupied Mode (display shows man outside of the house), pressing the override button (button designated by an image of a man inside a house) results in the display showing the word OCCUPIED and the request is sent to the TEC to override the unoccupied mode. If the TEC does not get overridden, and stays in unoccupied mode, the display on the sensor reverts back to the unoccupied symbol as soon as possible.

If the TEC is currently in occupied mode, pressing the override button flashes the word OCCUPIED, and does nothing else. This functionality is intended solely to let the user know that the button press was recognized.

**Occupied Mode
Display**

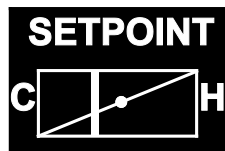

**Unoccupied Mode
Display**

Setpoint Adjustment Mode

The temperature setpoint is adjusted by using the plus and minus buttons. The resulting changes in setpoint are displayed on the display in 1.0°F or 0.5°C increments.

The setpoint adjustment will display for three seconds. If, during those three seconds, a setpoint button is pressed again, the setpoint will be adjusted accordingly and be displayed, and the three-second countdown will restart. If there is no user input for more than three seconds, the room unit will return to Normal Mode.

Passkey Mode

Insert the passkey in the sensor HMI (Human-Machine Interface) port to setup all of the user functionality listed below. For each parameter, use the following sequence:

- Press the occupancy override button to edit the parameter.

- Press the plus/minus buttons to scroll through the various options available for each parameter to display the desired option.
- Press the occupancy override button again to move to the next user adjustable parameter.
- When finished, remove the passkey from the HMI port. User setting changes will be saved when the passkey is removed.

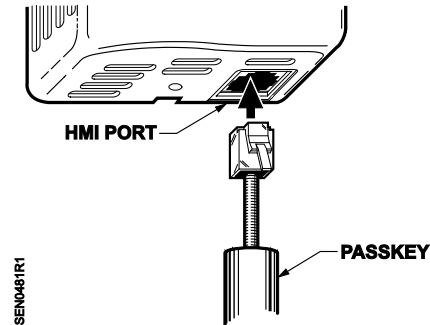

Figure 2. Inserting the Passkey.

NOTE: When the passkey is plugged in, communication between the room unit and the TEC is disabled. See note in *Laptop Pass-thru Mode* section for more information.

Settings

- **Set Pt Disp** - determines how the user views the temperature setpoint adjustment. The default setting is NUMERIC, and displays in degrees. The user can select between a NUMERIC and a GRAPHIC setpoint display.
- **Set Pt Min** - determines the minimum temperature setpoint value. The default setting is 55°F (12.5°C). The user selects the minimum setpoint the room unit should request. The setpoint limit is ultimately defined in the controller. If the setpoint is displayed graphically as a sliding bar, this sets the left end of the slider bar. The limits are 55°F to the Set Pt Max value. The adjustment step size is 1°F (0.5°C).
- **Set Pt Max** - determines the maximum temperature setpoint value. The default setting is 95°F (35°C). The user selects the maximum setpoint the sensor should request. The setpoint limit is ultimately defined in the controller. If the setpoint is displayed graphically as a sliding bar, this sets the right end of the slider bar. The limits are Set Pt Min to 95°F (35°C). The adjustment step size is 1°F (0.5°C).

- **Disp Temp?** – determines whether the temperature value should be displayed. The default value is YES.
- **Disp RH?** – determines whether the humidity value should be displayed. The default value is YES, if the device is a combination temperature/humidity or temperature/humidity, CO₂ room unit. (This option is conditional based on the presence of humidity measurement capability, and only offered with QFA3x80.F or QPA2x84.F types.)
- **Disp CO2?** – determines whether the carbon dioxide value should be displayed. The default value is YES, if the device is a CO₂ Room Unit. (This option is conditional based on the presence of CO₂ measurement capability, and only offered with QPA2x84.F types.)
- **Disp Occ?** – determines whether the occupancy status should be displayed. The default value is YES if the device offers occupancy override capability.
NOTE: This does not enable/disable the Occupancy override button functionality, just the display of the occupancy status.
- **T Cal** – allows the user to field calibrate the temperature display and output through a bias adjustment. The default value is + 0°F. Adjustments can be made between -5°F and + 5°F, in 0.5°F increments.
- **RH Cal** – allows the user to field calibrate the humidity display and output through a bias adjustment. The default value is + 0%. Adjustments can be made between -5% and + 5%, in 0.5% increments. (This option is conditional based on the presence of humidity measurement capability, and only offered with QFA3x80.F or QPA2x84.F types.)
- **CO2 Cal** – allows the user to field calibrate the carbon dioxide display and output through a bias adjustment. The default value is +0 parts per million (PPM). Adjustments can be made between -175 and + 50 PPM, in 5 PPM increments. (This option is conditional based on the presence of CO₂ measurement capability, and only offered with QPA2x84.F types.)
- **Brightness** – allows the user to adjust the display brightness. Valid values are 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10, with 1 being dimmest and 10 being brightest. The default setting is 5.

- **Scr Saver** – allows the user to activate or deactivate the display screen saver. Available options are: NONE, OFF, and FADING. The default value is NONE.
 - **NONE** – The display operates at the programmed brightness level without any interruption.
 - **Off** – The display will turn off after 30 seconds. Any button press will wake it up (without doing anything else), and then the device will operate in Normal Mode for 30 seconds until the display turns off again.
 - **Fading** – Within 30 seconds of no operator interaction, the entire display will fade to a display brightness of 1. The display will operate at this brightness until the user presses a button. At that time, the programmed display brightness will be restored.
- **Factory Defaults** - allows the user to reset all parameters to factory defaults. The default is NO. Available options for this parameter are YES and NO.

Parameter	Default Value
Set Pt Disp	NUMERIC
Set Pt Min	55°F (13°C)
Set Pt Max	95°F (35°C)
DISP Temp?	YES
Disp RH?	YES
Disp CO2?	YES
Disp Occ?	YES
T Cal	+ 0°F (0°C)
RH Cal	+ 0%
CO2 Cal	+0 PPM
Brightness	5
Scr Saver	NONE
Factory Defaults	NO

Laptop Pass-thru Mode

To communicate with the TEC using Datamate Base, Datamate Advanced, or Microsoft Windows™ Controller Interface Software (WCIS), connect a PC-compatible cable (see *Accessories*) from a laptop to the sensor HMI port at the bottom of the room unit. This puts the room unit in laptop mode, which deactivates all buttons and displays LAPTOP on the display. In this mode, the controller communicates only with the laptop and still allows the temperature, humidity, or CO₂ values (where applicable) to be updated in the controller. The room unit controls communication, and updates values every 10 seconds. The room unit returns to Normal Mode once the cable is disconnected.

NOTE: The Room Unit (Firmware Revision 016 or lower) will stop updating ROOM TEMP, RM STPT, and OVRD if a passkey or laptop cable is connected to the Room Unit. This issue will affect the normal commissioning process, because the Specialist cannot leave the HMI cable connected to the Room Unit to monitor the TEC's control. This affects all Series 2200, 3200, 2300, and 3300 models, with the exception of QAA2280.EWSC, QAA2380.EWTC, QAA2280.EWNC, and QAA2380.EWNC.

Furthermore, if the TEC is initialized, power is cycled (which has the same effect as initializing the TEC) or the Application (subpoint 2) is commanded to another value, the following will occur:

- The RM TEMP will read and control to 57°F (12°C).
- The RM STPT will read and control to 98°F (37°C).

Once the passkey or HMI cable or passkey is disconnected, the ROOM TEMP will update within 10 seconds. The RM STPT will not update until the setpoint setting is changed on the Room Unit or until the Room Unit cycles power.

The Room Unit (Firmware Revision 029 or higher) in combination with new release TEC products ROOM TEMP, RM STPT, and OVRD will be updated if a passkey or laptop cable is connected to the Room Unit, but the buttons will not work. New release TEC Products Use a SENSOR SEL point that allows the TEC to see all inputs from the Digital Room Sensor, the default setting does not allow the TEC to see the points.

Set-up of Displayed Temperature Units

The factory default for displayed temperature units is °F. To change the display to °C mode, snip the wire jumper on the back of the PCB (the visible side when the unit is taken off the wall).

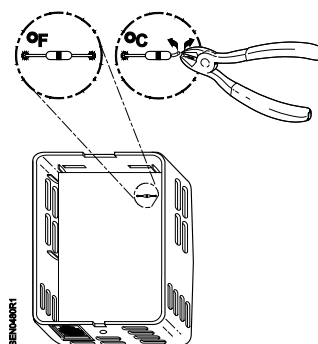

Figure 3. Jumper Location.

Error Messages

Message	Meaning
NO TEC	No communication with TEC. This error will display on the lower right (icon) section of the display, and the upper portion of the display should continue to display temperature values (and/or humidity and CO ₂ values where applicable). Or a bad crimp on the RJ11 cable connection. NOTE: This error will display whenever TEC subpoints are not available or when the TEC (or its subpoints) are not responding to commands. The default HMI baud rate on the TEC is 1200, but the room unit baud rate is self-adjusting.
NO SENSOR	No temperature (or humidity or CO ₂ where applicable) sensor detected on the PCA. This error will display until the error is corrected. This message might also display if the wrong controller-to-room unit-cable is used or if the replacement sensor element is incorrectly installed on the PCA.
0xx	Room unit firmware revision, where X is a number between 0 and 9. For Room Units (Revision 016 and lower) this is visible upon power-up for a few seconds until communication is established with the TEC or ATEC. For Revision 029 and higher, this is visible for a few seconds upon power-up and when the laptop cable is disconnected.

599 Series 2-Way Ball Valves

Description

The 599 Series 2-Way Ball Valves are coupled with OpenAir™ actuators to provide equal percentage flow control. The Ball Valves are 1/4-turn rotary control valves.

Product Numbers

Use the product numbers in Table 1 through Table 11 to order a valve and actuator assembly. The product number consists of a 4-character actuator prefix code, a hyphen, and a 5-digit valve body suffix code. Stainless steel product numbers have an "S" suffix in Table 6 through Table 11.

Features

- 200 psi close-off with ANSI Class IV leakage for all line sizes and actuators.
- Available with chrome-plated brass ball and brass stem or stainless steel ball and stem.
- Blow-out proof stem withstands high pressure.
- Universal mounting plate.
- Actuator and plate can be rotated (90 degree increments).
- Standoffs provide a thermal barrier between the actuator and the mounting plate.
- Operating handle for manual operation.

Typical Specifications

Ball valves shall have female NPT type fittings and shall be 1/2-inch to 2-inch (15 mm to 50 mm) line and ball sizes. The valves shall have a forged brass body; chrome-plated brass ball with brass stem or stainless steel ball and stem; and EPDM O-ring seals. Valves shall contain glass-filled PTFE ball valve seals or integral seals and flow characterizers to provide an equal percentage control characteristic where required. Ball valves shall utilize a 90-degree rotation for control. They shall provide automated flow control of hot or chilled water and up to 50% water-glycol solution for HVAC control applications.

Technical Data

Pressure Rating	600 WOG/ANSI 250	Ball Seals	Glass-filled PTFE with EPDM O-rings
Media Temperature	35°F to 250°F (2°C to 120°C)	End Connections	Female NPT
Controlled Medium	Water, 50% water-glycol solution	Stem	Brass or stainless steel
Body	Brass: ASTM B283, C37700	Stem Seals	EPDM O-rings
Ball	Chrome-plated brass or Stainless steel	Angle of Rotation	0° to 90°
Flow Characterizer	Glass-filled PTFE

Duct Temperature Sensors

Rigid Probe

Rigid Probe – Bracket Mount

Flexible Probe

Description

Siemens Duct Temperature Sensors monitor and transmit changes in duct air temperature to the HVAC control system. They provide an accurate, reliable indication of duct air temperature. The sensor resistance varies proportionally to the actual temperature being measured.

Sensors are offered with a variety of probe lengths to fit almost any size duct. Longer probes are typically flexible for easier handling and installation (see *Product Ordering Information* on the following page for details).

Multiple output signals are available to ensure compatibility with most common HVAC control systems.

Features

- Variety of sensing elements.
- Suitable for multiple duct applications.
- Responsive to temperature change.
- Accurate and reliable indication of duct temperature.
- Familiar installation process does not require special tools.

Specifications

Output Signals	100K Ω Thermistor 10K Ω Type 2 Thermistor 10K Ω Type 3 Thermistor 1K Ω @ 32°F Ni RTD 1K Ω @ 70°F Ni RTD 1K Ω Pt RTD (375a) 1K Ω Pt RTD (385a) 4 to 20mA • -4°F to 122°F • 20°F to 120°F • 30°F to 250°F 10K Ω Matched Pair Thermistor • (For use with Siemens TEC only)
Probe Material	0.028 Wall SAE J526 ZTEW or Galfan steel tubing
Housing*	Standard NEC approved 2 x 4 inch (5 x 10 cm) utility box with 1/2-inch (13 mm) knockouts
Screw Head Type	Standard slotted

* Bracket-mounted units do not include housing.

Disposal

The devices are considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the devices through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

TEC Terminal Box (VAV) Controller

The TEC Terminal Box Controller provides high performance Direct Digital Control (DDC) of pressure-independent, variable-air-volume zone-level routines. The TEC Terminal Box Controller can operate stand-alone or can be networked to perform complex HVAC control, monitoring and energy management functions and is designed to reside on any Siemens Industry control system.

Features

- Advanced PID algorithm for the temperature control loops is employed to provide stability and to reduce unnecessary changes in the Flow setpoint when the room temperature is at or near the room temperature setpoint.
- Unique control algorithms for specific applications.
- Plenum rated controller.
- Setpoints and control parameters assigned and changed locally or remotely.
- Setpoints and control parameters stored in Electrically Erasable Programmable Read Only Memory (EEPROM)—no battery backup required.
- Returns from power failure without operator intervention.

- No calibration required, thereby reducing maintenance costs.
- Reports airflow in cfm (lps).
- Meets low duct static pressure requirements.
- Separate minimum and maximum air volume setting for heating and cooling modes.

Applications

- Slave Mode (Application 2091)
- VAV Cooling Only (Application 2020)
- VAV Cooling or Heating (Application 2021)
- VAV with Electric Reheat or Baseboard Radiation (Application 2022)
- VAV with Hot Water Reheat (Application 2023)
- VAV Series Fan Powered with Electric Reheat (Application 2024)
- VAV Series Fan Powered with Hot Water Reheat (Application 2025)
- VAV Parallel Fan Powered with Electric Reheat (Application 2026)
- VAV Parallel Fan Powered with Hot Water Reheat (Application 2027)

Control algorithms are pre-programmed. The controller is ready to operate after selecting the application. If desired, the operator may adjust the room temperature setpoints and other parameters. The controller is designed for operation and modification without vendor assistance.

Hardware

Controller Board

This controller provides all wiring terminations for system and local communication and power. The cable from the room sensor (purchased separately) connects to an RJ-11 jack on the controller. All other

connections are removable terminal blocks. The controller assembly is mounted on a plastic track that mounts directly on the terminal box.

An optional enclosure (P/N 540-155) protects the controller assembly.

Autozero Modules (optional devices, P/NB 540-200N) are available for mounting with the controller for those applications where uninterrupted airflow is necessary. An optional Pneumatic Transducer provides control of pneumatic damper and valve actuators.

The controller interfaces with the following external devices:

- Averaging air velocity sensors provided by VAV terminal unit manufacturers
- Floating control valve and damper actuators
- Temperature sensors (room, duct, immersion, and outside air)
- Service and commissioning tools
- Analog input devices (room temperature sensor, room setpoint dial, auxiliary temperature sensor)
- Digital input devices (dry contacts from motion sensors, alarm contacts)
- Digital output devices (fan, stages of electric heat)

Room Sensor

The room sensor connection to the controller board consists of a quick-connect RJ-11 jack. This streamlines installation and reduces controller start-up time.

Terminal Box Controller Specifications

Power Requirements	
Operating Range	24 Vac +/-20%, 50 or 60 Hz
Power Consumption	3 VA (plus 12 VA per DO)

Dimensions	4-1/8" W x 7-3/4" L x 1-1/2" H
Weight	approx. 3 lbs (1.35 kg)
Controlled Temperature Accuracy, Heating or Cooling	±1.8°F (0.9°C)

Autozero Module Specifications

Power Consumption	.75 VA @ 24 Vac max.
Dimensions	2" W x 1.51" H x 1.89" D (58 mm x 78 mm x 29 mm)
Weight	1.3 oz. (36.9 g)

Inputs	
Analog	1 room temperature sensor 1 velocity sensor 1 setpoint (optional) 1 auxiliary temperature sensor
Digital	1 aux temp dry contact 1 dry contact only input

Outputs	
Analog	N/A
Digital	6 DO 24 Vac optically isolated solid state switches @ 0.5 amp

Communications	
Remote	4800 bps FLN Trunk
Local	WCIS

Ambient Conditions	
Shipping & Storage Temperature	-13°F to 158°F (-25°C to 70°C)
Operating Temperature	32°F to 122°F (0°C to 50°C)
Humidity Range	5% to 95% rh (non-condensing)

Agency Listings	
UL Listing	UL 916, PAZX
cUL Listed	Canadian Standards C22.2 No. 205-M1983, PAZX7
FCC Compliance	FCC Part 15, Class A

Optional Accessories

Autozero Module

The optional Autozero Module (product number 540-380) should be used when continuous operation at occupied flow is required for an area. The Autozero Module is connected to the air velocity inlet ports of the controller and provides periodic recalibration of the air velocity transducer without changing air volume being delivered to a room. This recalibration ensures long-term precise airflow delivery.

Autozero Module.

Differential Pressure Sensor

The differential pressure sensor is easily connected to the box's air-velocity sensing elements to provide measurement of the differential pressure. The measured value is converted to actual airflow in cfm (lps) by the controller.

Differential Pressure Sensor Specifications

Temperature Range	32°F to 122°F (0°C to 50°C)
Measurement Range	0 to 5200 fpm (0 to 26 m/s)

Pneumatic Transducer

The PTS Pneumatic Transducer contains the transducers that provide the signal conversion from electronic to pneumatic. The module is piped to the pneumatic actuator and wired to the Terminal Box Controller. This transducer provides for accurate control of pneumatic actuators for precise temperature and air volume control.

Pneumatic Transducer Specifications

Maximum Input Pressure	30 psi (207 kPa)
Air Consumption	0 SCIM
Power Consumption	4 VA @ 24 Vac max.
Dimensions	3-1/2" L x 2-1/4" W x 1-1/2" H (87 mm x 57 mm x 38 mm)
Weight	9 oz (0.3 kg)

Description

The OpenAir, non-spring return, direct-coupled, electronic damper actuators provide modulating and floating control of building HVAC dampers.

Features

- Compact, lightweight design
- Models available with dual independently adjustable auxiliary switches
- Modulating models available with built-in feedback (Exception: GDE161.1N and GDE161.1T do not provide feedback)
- Floating control models available with feedback potentiometer
- Manual override
- Mechanical range adjustment capability
- Easily visible position indicator
- Precabled 18 AWG, 3 ft (0.9 m), or 6 ft (1.8 m) long
- Synchronous motor technology
- UL873 and cUL (C22.2 No. 24-93) listed
- **CE** certified plenum only
- Connection cables for GDExx.1N models sold separately.

Technical Data

Torque:	44 lb-in (5 Nm)
Runtime for 90°:	90 seconds at 60 Hz opening and closing 108 seconds at 50 Hz opening and closing
Frequency:	50/60 Hz
Power consumption:	3.3 VA (modulating), 2.3 VA (three-position)
Equipment rating (24 Vac):	Class 2 per UL/CSA
Noise level:	<35 dBA (running)
Angle of rotation:	90° nominal, 95° maximum
Shaft dimensions:	3/8 to 5/8 in. (8 to 16 mm) dia., 3/4 in. (20 mm) min. length
Operating temperature:	-22°F to 130°F (-30°C to 55°C)
Storage temperature:	-40°F to 158°F (-40°C to 70°C)
Ambient humidity:	95% RH (non-condensing)
Enclosure:	NEMA 2, IP54 per EN60529
GDExxx.1N and GDExxx.1T:	NEMA 1
Material:	Durable plastic
Agency listings:	UL873, cUL C22.2 No. 24-93
CE Conformity:	Plenum only
Electromagnetic compatibility (EMC)	2004/108/EC
Emissions Standards	EN61000-6-3
Immunity standards	EN61000-6-2
Gear Lubrication:	Silicone-free
Weight	1.06 lb (0.48 kg)
Country of Origin	USA

Typical Specifications

Non-spring return damper actuators shall be the direct-coupled type that requires no connecting linkages. The non-spring return actuators under 100 lb-in shall be capable of direct-mounting to a shaft up to a 5/8-inch diameter. Actuators shall provide stall protection throughout the full range of rotation. All non-spring return actuators shall be capable of both clockwise and counterclockwise operation. All non-spring return actuators shall hold position in the event of a power failure. All modulating actuators shall return to the 0 position in the event only the control signal is lost. All actuators shall provide a means of manually positioning the output coupling in the absence of power. Dual independently adjustable auxiliary switches must be integral to the actuator. All actuators must provide an easily readable high contrast yellow on black position indicator. All actuators shall be UL873 and CSA22.2 listed, CE certified, and manufactured under ISO 9002 and ISO 14000 procedures. Actuators shall be designed for a minimum of 60,000 full stroke cycles at the actuators rated torque and temperatures. Actuators shall be as manufactured by Siemens Industry, Inc.

Series 2200/3200 Communicating Room Sensors for Use with Siemens Terminal Equipment Controllers

QxAx2xx.EWSC
Sensing Only

QxAx2xx.DWSC
with Display

QxAx2xx.FWSC
Full HMI

Description

These Series 2200/3200 Room Sensors are designed for use with Siemens Terminal Equipment Controllers (TECs)*. The sensor and controller communicate using an RJ-11 cable with plug connections at both ends for easy and error-free wiring. Installation is quick and straightforward with all hardware included for mounting on a standard 2" x 4" electrical box. Screws and anchors are provided for mounting the sensor directly to a wall. Matching gaskets and trim rings are also available.

All units include an RJ-11 tool port at the bottoms of the sensor housings for connection to Siemens configuration, commissioning and start-up tools.

QAA Series Sensors measure room temperature, while QFA Series sensors measure both temperature and relative humidity. The QPA Series Sensors measure temperature and CO₂ or temperature, CO₂* and relative humidity.

QPA Series sensors are designed to help maintain occupant comfort and are not intended for use in life safety applications.

The "E" versions have a blank front to prevent unauthorized adjustments and are ideal for high traffic areas or remote spaces that are not supervised.

The "D" versions display room temperature and/or room humidity.

The "F" versions feature a full HMI that can display room conditions and temperature setpoint. The display is easily configured to limit the information that is available to the occupant. Temperature setpoint can be adjusted using soft touch plus (+) and minus (-) keys, and an override key enables the user to manually signal to the controller that the space is occupied.

NOTES: All control valves and wells shall be installed by the heating contractor.																		

INSTALLATION NOTES:

- 1 VAV BOX INSTALLED BY MECHANICAL CONTRACTOR WITH 3 TO 5 STRAIGHT DUCT DIAMETERS UPSTREAM OF BOX TO PROVIDE PROPER FLOW SENSING
- 2 TEC-1 TO BE MOUNTED IN MANUFACTURER SUPPLIED CONTROLLER ENCLOSURE
- 3 24 VAC POWER FROM EXISTING TRANSFORMER IN ELECTRIC ROOM 7E-108.
- 4 MOUNT ACTUATOR WITH DAMPER IN FULL OPEN POSITION. VERIFY TEC-1 AND ACTUATOR REQUIREMENT WITH THE BOX MANUFACTURER
- 5 LOCATE AS SHOWN ON FLOOR PLANS/CONTRACT DOCUMENTS

GENERAL NOTE:

EXTEND EXISTING FLN COMMUNICATION CABLELING FROM EXISTING VAV TERMINAL SERVING STORAGE 7E-117 TO NEW SUPPLY AIR CONTROLLERS.

1 VAV WITH REHEAT COIL (#2023)
001 TYPICAL OF 4

AIR TERMINAL NO. 1 SEQUENCE OF OPERATION:

AIR TERMINAL MODE OF OPERATION IS EITHER "OCCUPIED" OR "UNOCCUPIED" BASED UPON WEEKLY SCHEDULE OR OPERATOR COMMAND. MODE OF OPERATION MAY BE CHANGED BY THE USER FROM "UNOCCUPIED" TO "OCCUPIED" FOR A PERIOD OF FOUR (4) HOURS BY PRESSING A PUSHBUTTON LOCATED AT THE THERMOSTAT.

DURING THE "OCCUPIED" MODE OF OPERATION THE AIR TERMINAL CONTROLLER SHALL MODULATE THE TERMINAL DAMPER BETWEEN THE MINIMUM AND MAXIMUM "OCCUPIED" AIR FLOWS SCHEDULED IN SEQUENCE WITH THE HEATING WATER CONTROL VALVE AS REQUIRED TO MAINTAIN THE SPACE TEMPERATURE AT SETPOINT. THE SPACE TEMPERATURE SETPOINT SHALL BE ADJUSTABLE BY THE USER FROM A MINIMUM OF 68 DEG. F TO A MAXIMUM OF 76 DEG. F. ON A DECREASE IN SPACE TEMPERATURE THE TERMINAL DAMPER SHALL CLOSE TO THE MINIMUM AIR FLOW AND THE HEATING WATER CONTROL VALVE SHALL MODULATE OPEN. ON AN INCREASE IN SPACE TEMPERATURE THE HEATING WATER CONTROL VALVE SHALL CLOSE AND THE TERMINAL DAMPER SHALL MODULATE OPEN.

DURING THE "UNOCCUPIED" MODE OF OPERATION THE AIR TERMINAL CONTROLLER SHALL MODULATE THE TERMINAL DAMPER BETWEEN THE MINIMUM AND MAXIMUM "UNOCCUPIED" AIR FLOWS SCHEDULED IN SEQUENCE WITH THE HEATING WATER CONTROL VALVE AS REQUIRED TO MAINTAIN THE SPACE TEMPERATURE AT SETPOINT. THE SPACE TEMPERATURE SETPOINT SHALL BE ADJUSTABLE BY THE USER FROM A MINIMUM OF 68 DEG. F TO A MAXIMUM OF 76 DEG. F. ON A DECREASE IN SPACE TEMPERATURE THE TERMINAL DAMPER SHALL CLOSE TO THE MINIMUM AIR FLOW AND THE HEATING WATER CONTROL VALVE SHALL MODULATE OPEN. ON AN INCREASE IN SPACE TEMPERATURE THE HEATING WATER CONTROL VALVE SHALL CLOSE AND THE TERMINAL DAMPER SHALL MODULATE OPEN.
