DUCT-SEAL™ 321

Indoor/Outdoor Water Based Duct Sealant

DUCT-SEAL 321 is an **all purpose industrial grade duct sealant** for all types of metal duct, glass fiber duct board, and flex duct, as well as duct fabric and flexible tubing runouts. It includes UV inhibitors for **extended outdoor exposure** and built-in **fiber reinforcement** for **added strength.** This non-toxic water based product is solvent free and is suitable for residential use.

TECHNICAL DATA

Color	Gray
Consistency	Smooth creamy texture
Base	Synthetic latex
Solvent	Water
Weight per Gallon	10.6 lbs.
Solids Content	65%
Viscosity	Thixotropic
Coverage (per gal)	Up to 320 lin. ft. at 3" width 20 mil thickness
Shore A Hardness	>20
Flexibility	Passes ¼ inch mandrel bend
Time to Test	48 hours*
Service Temperature	-20°F to 200°F (-29°C to 34°C)
Weather Resistance	Weather resistant
Mildew Resistance	Mold & Mildew resistant
VOC (less water)	57.2 g/l (less water)
Pressure Classes	SMACNA ½, 1, 2, 3, 4, 6 and 10 inches w.g.
Seal Classes	SMACNA A, B, C
Packaging	11 oz. cart.(0.32 Ltr.), 1 US gal. pail (3.78 Ltr.), 2 US gal. pail (7.56 Ltr.), 5 US gal. pail (18.9 Ltr.)
Freeze/Thaw Stability	Passed 5 Cycles
Specifications Compliance	Passes ASTM D-2202, ASTM C-731. USDA, EPA and FDA Approved. LEED compliant SCAQMD Rule 1168.

*May vary according to temperature and humidity

CLASSIFIED C UL US

CAULKING AND SEALANTS

*Applied to inorganic reinforced Cement Board *Tested as applied in one 3 in. (76.2 mm) wide strip, on center covering 16.7 percent of the exposed test sample area) at a coverage of 80 sq. ft/ gal (2 sq. M/L). Flash point of finished sealant, closed cup : No flash to boiling.

UL LISTED

17NF
UL 181B-M
Mastic closure systems for use with flexible duct systems or connectors.

City of Los Angeles Approval RR #8069

PRECAUTIONS

Surface must be clean and free of moisture, contamination and foreign matter. Do not allow this product to freeze. Apply when temperatures will not fall below freezing for at least 36-48 hours, depending on temperature and humidity. Do not apply this product where temperatures will exceed 200°F. Keep out of the reach of children. Review MSDS for complete safety information prior to use. DO NOT use where acidic or alkaline chemicals are present (ie., lab fume hood, vents, etc.)

For Industrial Professional Use Only.

DUCT-SEAL 321 PART NUMBERS

1 Case w/ (25) 11 oz. (0.32 Ltr.) Cartridges	304159
1 Case w/ (4) 1-Gallon (3.78 Ltr.) Pails	304156
1 - 2-Gallon (7.56 Ltr.) Pail	304157
1 - 5-Gallon (18.9 Ltr.)Pail	304158

APPLICATION

Temperature	35°F. to 110°F. (1.7°C to 44°C)
Method	Brush, putty knife, caulk gun, pump
Preparation	Surface must be dry, dirt, oil and grease free.
Rate	Apply at joints and fasteners to 20 mil thick wet film
Clean Up Wet	Soap and water
Clean Up Dry	UN-TACK™ or Solvent (Use safe handling practices.)
Painting	Only latex or epoxy paints

STORAGE

Temperature	35°F. to 110°F. (1.7°C to 44°C) DO NOT FREEZE
Shelf Life	One year (unopened)
Flammability	Non-flammable

Contributes to LEED® Credit Requirements

USDA, EPA & FDA APPROVED

TABLE OF CONTENTS

MODEL CODES

ICC: International Code Council
The ICC is a not-for-profit organization established by the International Conference of Building Officials, Building Officials and Code Administrators International, and the Southern Building Code Congress International to create a single set of comprehensive and coordinated international codes. This set is called the International Codes. ICBO, BOCA, and SBCCI no longer publish separate codes. Codes regarding chimneys and vents are in the 2006 International Mechanical Code (IMC).

IAPMO: International Association of Plumbing & Mechanical Officials
IAPMO publishes the Uniform Plumbing Code© (UPC), Uniform Mechanical Code© (UMC), and a number of other life safety codes. IAPMO is most recognized for their development of the Uniform Plumbing Code.

NFPA: National Fire Protection Association
NFPA develops codes and standards for fire safety. There are over 300 NFPA codes and standards.

STANDARDS/LISTINGS/CLASSIFICATIONS

NFPA 96	Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations
UL1978	Test Standard For Grease Ducts
UL HNOB	Classification for “Grease Duct Assemblies” (Metal-Fab File No. R15388)
UL 2221	Tests of Fire Resistive Duct Enclosure Assemblies
UL 103	Standard For Safety, Factory-Built Chimneys for Residential and Building Heating Appliances
ASTM E119	Standard Test Methods for Fire Tests for Building Construction and Materials
ASTM E814	Standard Test Method for Through-Penetration Fire Stops
AC121	ICC-ES Acceptance Criteria For Grease Duct Systems, Self-Enclosed
ICC-ES	Evaluation Report No. ESR-2627*

* See Evaluation Report for allowable values and/or conditions of use.

GENERAL INFORMATION

Pertinent information is consolidated in this publication to assist you with application information, codes and standards, dimensional information, support requirements and other data of special interest. It is our goal to enable you to select the proper product to meet the requirements of your project confidently and efficiently. For additional information you may contact us via:

Web Sites: www.metal-fabcommercial.com / www.greaseduct.com
Telephone: 316-943-2351
Toll Free Phone: 800-835-2830
Fax: 316-771-4168
E-mail: info@metal-fabinc.com

Complete information for proper and safe installations is found in the Metal-Fab Installation Instructions for each product.

Factory-Built G Series Grease Duct Systems are suitable for venting Type I and Type II kitchen ventilation hoods. G Series systems are manufactured in a controlled environment to exacting standards. No other product has been so thoroughly tested and determined to be in compliance with more codes.

NOTE: Dimensions are American Standard (feet & inches), with metric in parenthesis except where stated otherwise. Always consult appliance installation instructions for exhaust temperatures, pressures, and operating conditions. Appliance manufacturer may limit horizontal runs, elbows, offsets, vertical heights, etc.

DEFINITIONS – NFPA

Access Panel. A closure device used to cover an opening into a duct, an enclosure, equipment or an appurtenance.

Authority Having Jurisdiction (AHJ). An organization, office, or individual responsible for enforcing the requirements of a code or standard, or for approving equipment, materials, an installation, or a procedure.

Classified. Products or materials of a specific group category that are constructed, inspected, tested and subsequently reinspected in accordance with an established set of requirements. The classification process is performed by an organization acceptable to the authority having jurisdiction.

Combustible Material. A material capable of undergoing combustion.

Continuous Enclosure. A recognized architectural or mechanical component of a building having a fire resistance rating as required for the structure and whose purpose is to enclose the vapor removal duct for its full length to its termination point outside the structure without any portion of the enclosure having a fire resistance rating less than the required value.

Continuous Weld. A metal-joining method that produces a product without visible interruption or variation in quality.

Factory-Built Grease Duct Enclosures. A listed factory-built grease duct system evaluated as an enclosure system for reduced clearances to combustibles and as an alternative to a duct with its fire-rated enclosure.

Field-Applied Grease Duct Enclosure. A listed system evaluated for reduced clearances to combustibles and as an alternative to a duct with its fire-rated enclosure.

Grease. Rendered animal fat, vegetable shortening, and other such oily matter used for the purposes of and resulting from cooking and/or preparing foods.

Grease Ducts. A containment system for the transportation of air and grease vapors that is designed and installed to reduce the possibility of the accumulation of combustible condensation and the occurrence of damage if a fire occurs within the system.

Grease-Tight. Constructed and performing in such a manner as not to permit the passage of any grease under normal cooking conditions.

Hood. A device provided for a cooking appliance(s) to direct and capture grease-laden vapors and exhaust gases.

Liquid-Tight. Constructed and performing in such a manner as not to permit the passage of any liquid at any temperature.

DEFINITIONS (CONTINUED)

Listed Equipment. Materials, or services included in a list published by an organization that is acceptable to the authority having jurisdiction and concerned with evaluation of products or services, that maintains periodic inspection of production of listed equipment or materials or periodic evaluation of services, and whose listing states that either the equipment, material, or service meets appropriate designated standards or has been tested and found suitable for a specified purpose.

Noncombustible Material. A material not capable of supporting combustion.

Standard. A document, the main text of which contains only mandatory provisions using the word "shall" to indicate requirements and which is in a form generally suitable for mandatory reference by another standard or code or for adoption into law. Nonmandatory provisions shall be located in an appendix or annex, footnote, or fine-print note and are not to be considered a part of the requirements of a standard.

DESIGN CONSIDERATIONS

NFPA 96 requires provisions for inspection of, and access for, cleaning of grease ducts. Openings are to be located on the top or side of the duct at changes of direction, to access and inspect fire suppression components within the duct, within 3 ft. of the inlet and outlet of any inline fan. Horizontal portions of ducts 20 inches by 20 inches or larger shall provide at least one opening for personnel entry. Smaller horizontal ducts shall provide openings large enough for cleaning at 12 ft. intervals. Refer to NFPA 96, section 7 for complete information.

Duct Slope. Nationally recognized codes require horizontal ducts to slope at a minimum of 1/4 unit vertical in 12 units of horizontal toward the hood or grease reservoir. In addition, where horizontal ducts exceed 75 feet in length, the slope shall not be less than one unit vertical in 12 units horizontal. This general rule for duct slope is prescribed for grease ducts that are not listed and/or evaluated by an accredited third body testing agency. For factory-built grease ducts that are listed to UL1978 and have been further tested and/or analyzed to provide equivalent or better flow characteristics as compared to field-installed grease ducts, reduce duct slope is allowed per the factory-built grease duct listing.

For Metal-Fab factory built grease ducts listed to UL1978, install at a duct slope not less than 1/16 unit vertical slope in 12 units of horizontal toward the hood or toward the grease reservoir. Where Metal-Fab grease ducts listed to UL1978 exceed 75 feet in length, the slope shall not be less than 1/4 unit vertical slope in 12 units horizontal. This minimum slope is a result of tests and analysis performed by Underwriters Laboratories, where factory-built grease duct was compared to rectangular field-applied grease duct for performance of flow characteristics. Consult with AHJ for acceptance of this alternate method.

DESIGN CONSIDERATIONS (CONTINUED)

Thermal Expansion. A change in temperature within a duct system, site-built or factory-built, causes thermal expansion of the duct. For example, when a grease duct temperature increases from ambient to a normal operating temperature of 75°F plus ambient, the duct expands 0.375 inches per 50 feet of duct length. Greater expansion and contraction under normal operating temperatures can fatigue welds causing leakage. If expansion is computed to exceed 0.375 inches between changes of direction or rigid supports, an Adjustable length (AL) should be installed.

The formula for computing expansion is:

[Length (feet)/100] X [Temperature Rise (°F) /100]
Example: 50'/100 X 75°F/100 = 0.375 inches

WEIGHT/LIFT INFORMATION

The average weight of the chimney, per foot of length, can be calculated using the following formula:

Weight (lbs. per lineal foot) = (Pipe Dia. in inches) x “weight factor”

Weight Factor

PSW = 0.40	2G = 1.05
PIC = 0.80	3G = 1.45
1G = 0.95	4G = 1.45

Example: 8"1G Weight calculated: 8 x 0.95 = 7.6 lbs. per lineal foot.

STACK LIFT CHART

This chart indicates maximum height that can be suspended from overhead.

	PSW	PIC	1G	2G	3G	4G

COMPONENTS

Components are identified by Part number and CTO (Configured To Order) code. The part number identifies the flue diameter and the component. EXAMPLE: 24PIC30L = 24 diameter-30 degree Elbow. The CTO code indicates materials and insulation thickness. EXAMPLE: 4A2 = 304 Stainless Steel Flue, Aluminized Steel Casing, and 2 inches of ceramic insulation. See the table below for CTO options.

CTO CODES		
First Position	Second Position	Third Position
(Flue Material)	(Casing Material)	(Insulation)
3 = 430 S/S	A = ALUMINIZED STEEL	0 = 1" AIRSPACE
4 = 304 S/S	4 = 304 S/S	1 = 1" CERAMIC
6 = 316 S/S	6 = 316 S/S	2 = 2" CERAMIC
	3 = 430 S/S	3 = 3" CERAMIC
		4 = 4" CERAMIC

ROUND HOOD COLLAR (RHC)

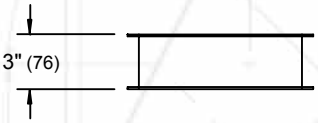
Available in 8" to 18" dia. (Other diameters are custom.)

Height: 3"

NOTE: Can be field welded to Hood or supplied to Hood manufacturer for installation.

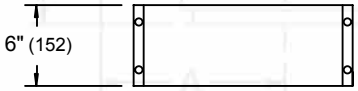
NOTE: Confirm dimensions with Hood manufacturer.

NOTE: Requires Round Hood Connection Kit to complete installation.



ROUND HOOD CONNECTION KIT (RHCK)

NOTE: Required for Round Hood Collar (RHC). Enclose Round Hood Collar and connect first pipe section to collar.



SQUARE TO ROUND (STR)

NOTE: Specify dimensional data at order entry.

ADJUSTABLE LENGTH EXPANSION JOINT (AL)

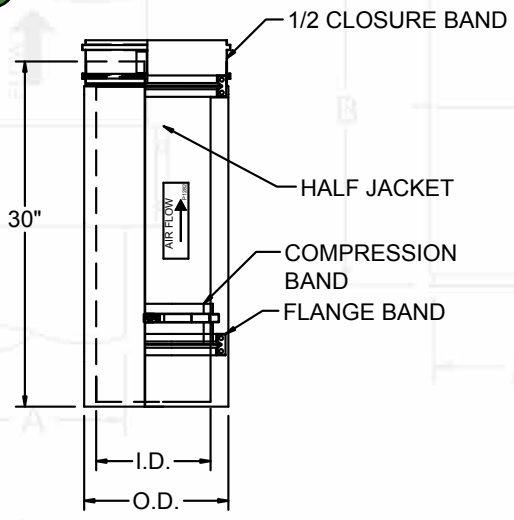
Flow Resistance K = .4($\frac{L}{D}$)

NOTE: This part can be field adjusted to fill gaps between standard length components or to compensate for thermal expansion and contraction between two fixed points.

INSTALLED LENGTH

Minimum: **5 1/2"** (140)
Maximum: **22"** (559)

NOTE: Do not install within 8' downstream of clean out location.



COMPONENTS

VARIABLE LENGTH (VL)

Flow Resistance K = $.4(\frac{L}{D})$

L = pipe length in feet

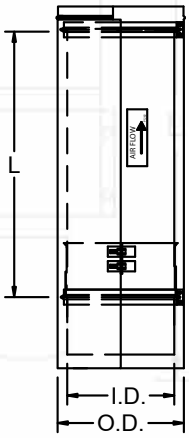
D = flue diameter

NOTE: Used to fill gaps between standard length components. Does not allow for expansion.

INSTALLED LENGTH

Minimum: **4"** (140)

Maximum: **26"** (559)

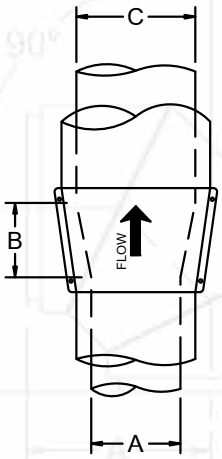


TAPERED INCREASER (TI)

Flow Resistance K = $.51\ \frac{[1-(\frac{A}{C})^2]^2}{(\frac{A}{C})^4}$

NOTE: For each 2" increase in diameter, the "B" length increases by 5". Minimum Length is 10". Tapered increasers are preferred over step increasers when space permits.

NOTE: When ordering, specify both diameters with small diameter first (ie. 18PICTI22 for 18" to 22")



ECCENTRIC TAPERED INCREASER (ETI)

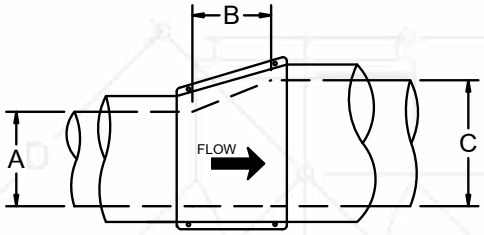
Flow Resistance K = $.51\ \frac{[1-(\frac{A}{C})^2]^2}{(\frac{A}{C})^4}$

NOTE: The number of steps is determined by the number of pipe sizes the tapered increaser enlarges.

Each step increases "B" dimension 5" (127).

Tapered increasers are preferred over step increasers when space permits.

NOTE: When ordering, specify both diameters with small diameter first (ie. 18PICETI22 for 18" to 22") For each 2" increase in diameter, the "B" Length increases by 5". Minimum Length is 10".



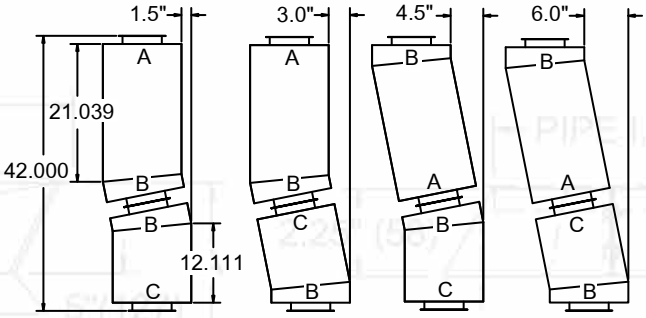
VARIABLE OFFSET KIT (VOK)

Flow Resistance K = 0.09

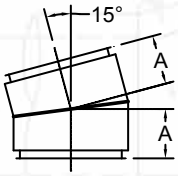
Assembled Length = 42"

ENDS JOINED	OFFSET
B-B	**1.5"**
B-C	**3.0"**
A-B	**4.5"**
A-C	**6.0"**

Provides offsets of 1.5", 3.0", 4.5", & 6" by rotating components.



15° ELBOW (15L)



Flow Resistance K = 0.06

Offset Distance:
O= 2 x “A” x 0.259

Offset distance between 2 elbows with a straight length between is:
O=(2 x “A” + pipe length) x 0.259

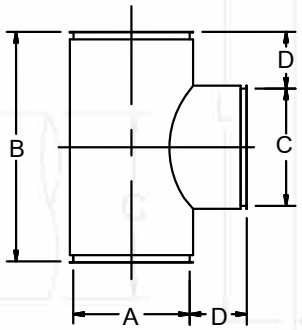
90° MANIFOLD TEE (90MT)

Flow Resistance K = 1.25

A = Pipe I.D.
B = "C" I.D. + (2 x "D")
C = Tap I.D.
D = PSW/PIC/IPIC-1 = 5"
IPIC-2 = 6"
IPIC-3 = 7"
IPIC-4 = 8"

NOTE: Specify tap diameter (C) at time of order.

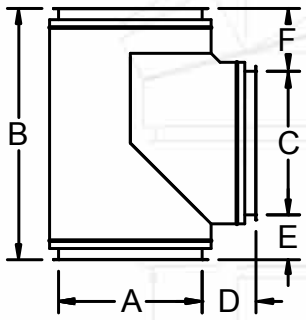


BOOT TEE (BT)

Flow Resistance K = 0.65

A = Pipe I.D.
B = "C" + 10" +(2 x insulation thickness)
C = Tap I.D.
D, E, F = PSW/PIC/IPIC-1 = 6", 5" & 7"
IPIC-2 = 7", 6" & 8"
IPIC-3 = 8", 7" & 9"
IPIC-4 = 9", 8" & 10"

NOTE: Specify tap diameter (C) at time of order.

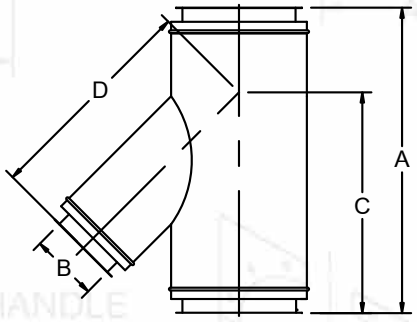


45° MANIFOLD TEE (45MT)

Available through 48" dia.
Flow Resistance K = 0.4

NOTE: Used for low resistance flow into vertical or horizontal run. Specify Tap Diameter "B" when ordering.

NOTE: For dimensional information see tables on pages 29-35.



COMPONENTS

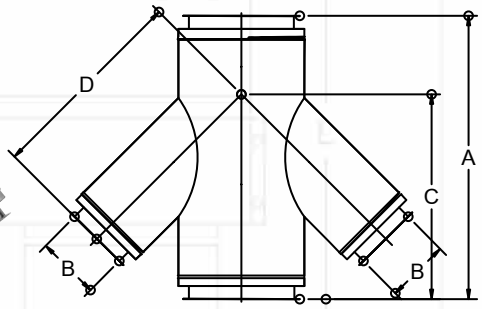
DOUBLE LATERAL (DL)

Available in 8" to 48" dia.
Flow Resistance K = 0.4

NOTE: Used to centrally connect two appliance manifolds to a common chimney. Specify tap diameter "B" at time of order.

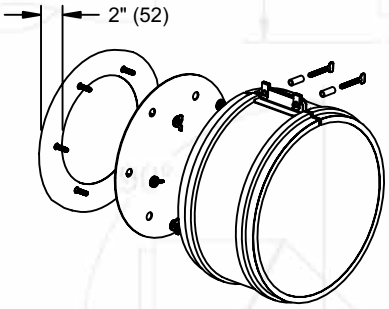
NOTE: Tap dia. must be less than Body dia.

NOTE: For dimensional information see tables on pages 29-35.



TOOLESS ACCESS PANEL (TAP)

Provides tooless access for inspection and cleaning. Opening is 3" less than flue diameter.



SIDEWALL TOOLESS ACCESS PANEL (STAP)

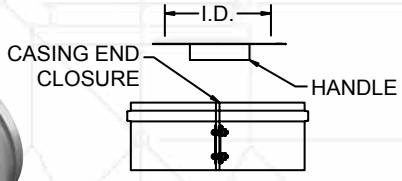
Used to facilitate inspections and cleaning. Can be installed in horizontal or vertical runs. When installed in horizontal runs the opening must be above the centerline of the duct.

Duct Diameters	Opening Dimension	Minimum Pipe Length
10" - 14"	8" X 4"	18"
16" - 20"	12" X 8"	22"
22" - 36"	16" X 12"	26"

NOTE: Can be installed in any pipe length exceeding minimum.

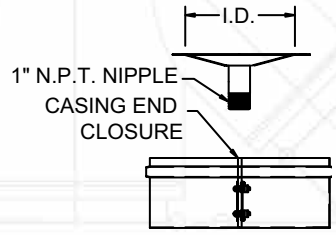
TEE CAP LESS DRAIN W/ CASING END CLOSURE (TCN)

NOTE: Used to close and seal unused port of Tees, Wyes and Laterals.



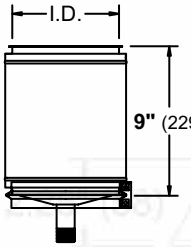
DRAIN TEE CAP W/CASING END CLOSURE (TC)

NOTE: Provides drain port for rain or condensation.



DRAIN BUCKET (DB)

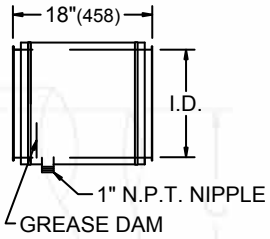
NOTE: Used at the base or a vertical riser as a drain reservoir and to provide cleanout access.



COMPONENTS

DUCT DRAIN (DR)

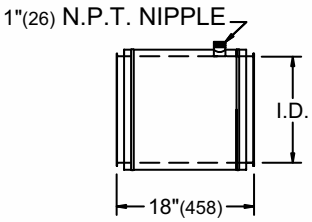
NOTE: Used as a point drain for horizontal runs.



NOZZLE SECTION (NS)

NOTE: Used to insert a fire suppression or wash down nozzle or as a drain point in a horizontal run.

NOTE: Specify dimensional data at order entry.



SPRINKLER HEAD ACCESS PORT (9SHAP)

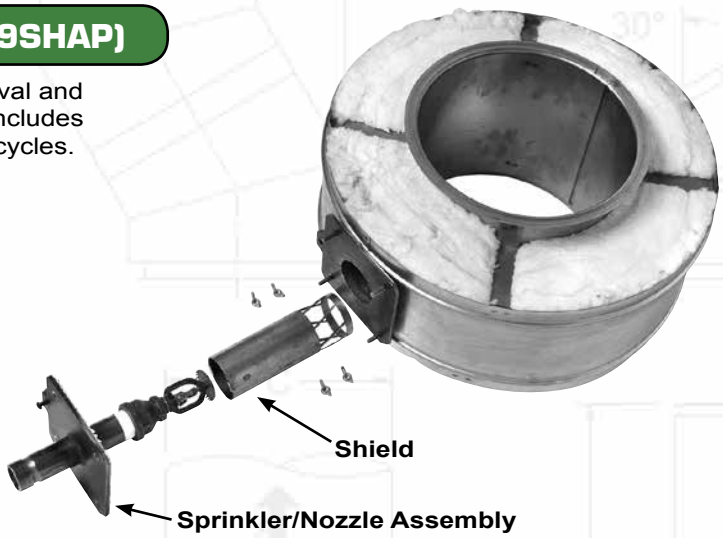
NOTE: Tooless access for the installation, removal and inspection of sprinkler or wash down nozzles. Includes shield to protect sprinkler head during cleaning cycles.

Sprinkler Head not included.

Not UL Listed.

Duct Length: 9"

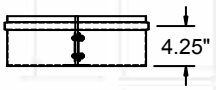
Available in 3A3, 4A3, 4A4 ONLY!



CASING END CLOSURE (CEC)

NOTE: Used as an end cover when transitioning from one insulation thickness to PSW. When ordering, specify PICCEC

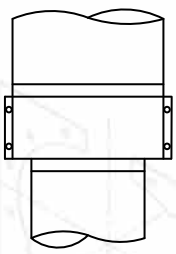
IPICCEC-1
-2
-3
-4



TRANSITION BAND (TB)

NOTE: Used as a joint closure when transitioning from one insulation thickness to another. When ordering, specify

IPICTB-1-2 -2-3
-1-3 -2-4
-1-4 -3-4



COMPONENTS

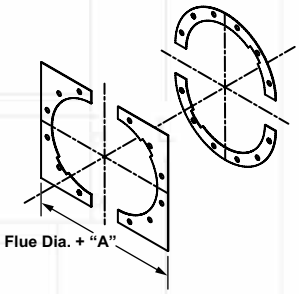
PLATE SUPPORT (PS)

Provides vertical or horizontal rigid support.

Includes split plates, clamp flanges, and 1/2 closure bands. (Zinc plated)

NOTE: Does not allow for thermal expansion.

PSW/PIC/IPIC-1	A=6"
IPIC-2	A=8"
IPIC-3	A=10"
IPIC-4	A=12"



WALL SUPPORT ASSEMBLY (WSA)

Used to provide vertical or horizontal rigid support point. (Zinc plated)

NOTE: Does not allow for thermal expansion.

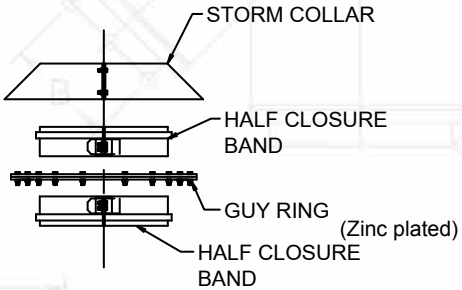
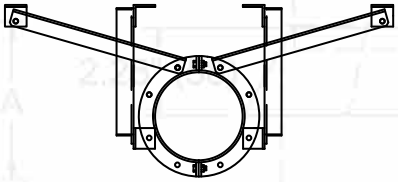
GUY RING (GR)

NOTE: Guy Ring is installed at the flange to flange joint of two sections of pipe. Storm Collar and Half Closure Bands are included. See installation instructions for correct location.



WALL GUIDE (WG)

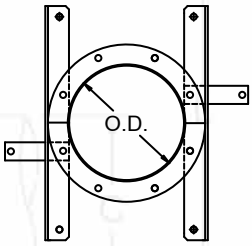
NOTE: Used to provide lateral guidance and allow for thermal expansion. (Zinc plated)



COMPONENTS

FLOOR GUIDE (FG)

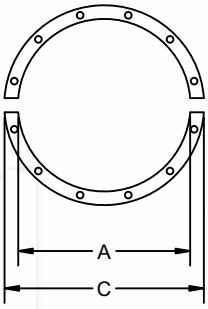
NOTE: Used at each floor to insure correct alignment through floor opening. (Zinc plated)



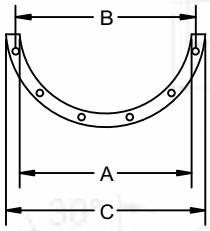
FULL ANGLE RING (FAR)

Provides lateral support for vertical runs.
Allows pipe movement for thermal expansion.
(Zinc plated)

FULL ANGLE RING



HALF ANGLE RING



HALF ANGLE RING (HAR)

Used to support horizontal runs.
(Zinc plated)

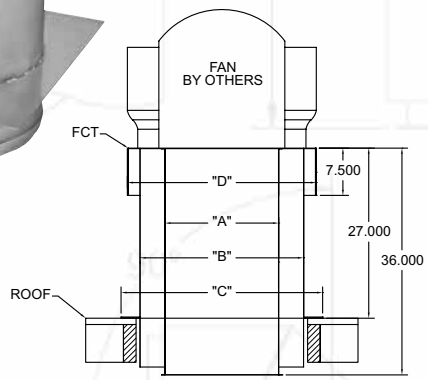
FAN CURB TERMINATION (FCT)

NOTE: Available for 3G & 4G systems only. Eliminates Curb. Zero Clearances to Combustibles. Roofing materials can be flashed directly to casings.

A = Flue Diameter
B = Outer Casing Diameter:
3G: Flue Diameter Plus 6 Inches
4G: Flue Diameter Plus 8 Inches
C = Square Mounting Support:
Casing Diameter Plus 6 Inches
D = Fan Curb: See Table

	Flue Diameters						
Curb Size - Inches	**8**	**10**	**12**	**14**	**16**	**18**	**20**
18 X 18	X	X	X	3G			
19.5 X 19.5	X	X	X	3G	3G		
22 X 22	X	X	X	X	X		
23 X 23		X	X	X	X		
26.5 X 26.5				X	X	X	X
28 X 28					X	X	X
31.5 X 31.5							X



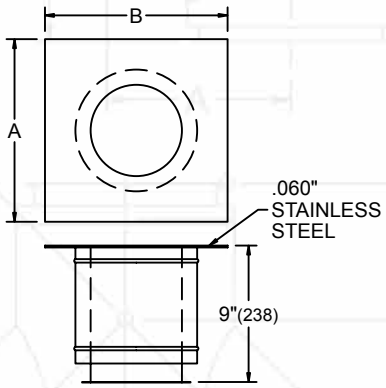
"3G" – Only available on 3G systems. Specify Curb Dimensions when ordering. Consult Factory for additional options.

FAN ADAPTER PLATE (FAP)

Plate dimensions (AxB) = outside dimensions of curb less .25" (7).

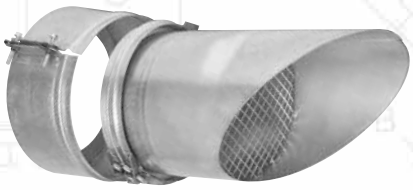
NOTE:

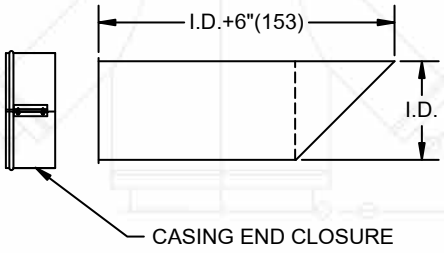
1. Used to connect to the inlet of an upblast fan.
2. Plate size may be varied to fit application. Advise outside dimensions of fan curb at the time of order. (AxB)



MITER CUT (MC)

NOTE: Used for horizontal termination with inline fan. Standard with bird screen.





COMPONENTS

STACK CAP (C)

Flow resistance K = 0.5

NOTE: Available through 36" diameter only.

NOTE: Provides partial rain protection. Use of Drain Tee Cap (TC) or Drain Section (DS) is recommended.

NOTE: Also available with bird screen order as (CB).

PIPE I.D.	A	B	PIPE I.D.	A	B

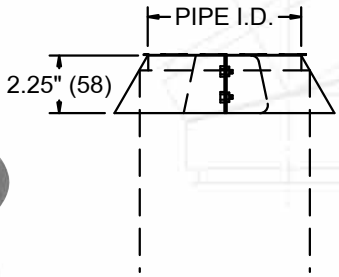
STACK CLOSURE RING (CR)

NOTE: Used to shield insulation from the weather when open stack is desired. Provide for moisture removal with a Drain Tee Cap (TC) or Drain Section (DS).

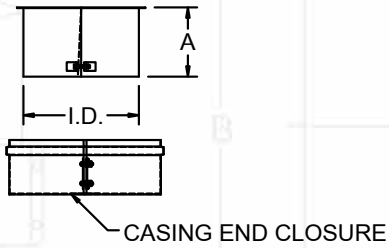


SINGLE WALL BOILER ADAPTER (SBA)

Flow Resistance K= same as pipe

NOTE: A is 6" or 4" (opt.) specify when ordering
e.g. 6PICSBA - A=6" 6PICSBA4 - A=4"

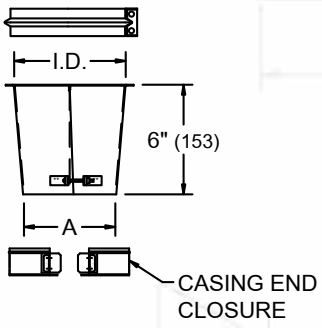
NOTE: Used to attach pipe to straight shank outlets. Closure band included with flange adapter on PIC and IPIC applications. Closure band not required on PSW applications.



REDUCER COLLAR (RC)

Flow Resistance K= same as pipe
Specify 'A' dimension when ordering.
e.g. 6PIC4RC

NOTE: Used to attach pipe to an outlet source of a smaller diameter.
2" (51) maximum reduction.



VENTILATED THIMBLE ASSEMBLIES (VTA–FPVTA)
ROOF SUPPORT ASSEMBLIES (RSA–FPRSA)

STORM COLLAR

SUPPORT COLLAR (RSA ONLY)

LATERAL SPACER RING

THIMBLE

FLASHING

FIXED PITCH FLASHING

Used when pipe passes through a combustible roof structure to reduce clearances to combustibles. The VTA allows for pipe expansion and contraction through the roof. The RSA will support up to 30 ft. of pipe from the roof structure.

Framing Dimensions:

PIC/1G: I.D. + 8"
2G: I.D. + 10"
3G: I.D. + 12"
4G: I.D. + 14"

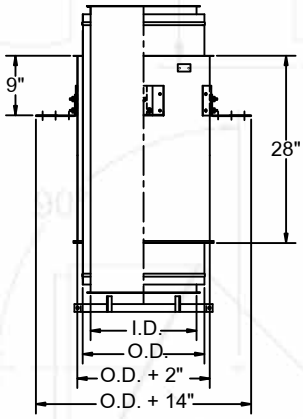
NOTES:

1. Thimbles extend 9" into flashings.
2. Use VTA / RSA on Flat to 1/12 pitch applications.
3. Use FPVTA / FPRSA on 1/12:12/12 pitch applications.

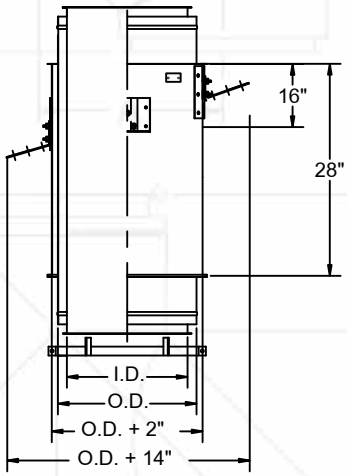
Specify Pitch when ordering.

STORM COLLAR

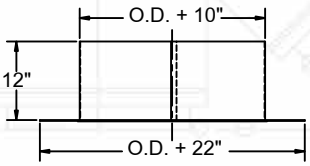
STANDARD THIMBLE

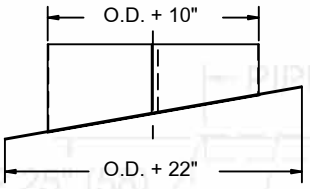


PITCHED THIMBLE



FLASHINGS





TALL CONE FLASHING (F)

Used for flat roof applications.

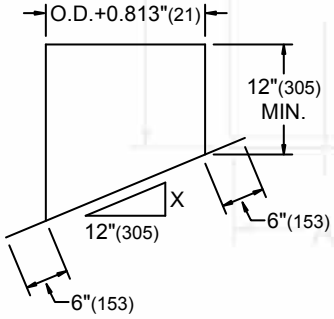
FIXED PITCH FLASHING (FPF)

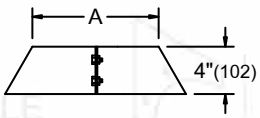
NOTES:

1. X=PITCH RATE, AVAILABLE RATES 1/12 12/12. Please specify pitch rate with order.
2. Storm collar is included with flashing.
3. Fixed pitch flashing is available in sizes from 6" through 36".



STORM COLLAR (SC)

A = Pipe Diameter (O.D.)



THROUGH PENETRATION FIRESTOP KIT (PPK)

NOTE:

1. Kit consists of closure band, plate, insulation and caulk.
2. Used to maintain fire resistance rating of floor or wall at duct penetration.
3. Diameter of penetration is casing diameter + 2 inches.
4. Closure band height is 12" (306).
5. For use on 3G/4G only.

NOTE: 2 KITS required for wall penetration!
Consult factory.

SEALANT REQUIREMENTS

P080 Joint Sealant, use for flue connection – Type I Hoods.
P077 Joint Sealant, use for flue connection – Type II Hoods and casing bands exposed to moisture.
NOTE: Refer to the Installation Instructions for additional information relating to proper sealant selection.

4G 45MT & DL TABLE IN METRIC

JOINT ASSEMBLY

1. Apply continuous bead of sealant 1/4" wide to one flange.
2. Join to next section.
3. Fill the Flange Vee Band with sealant and install around Flanges.
4. Gently tap Vee Band with a soft head mallet while tightening band to assure tight seal.
5. Insert insulation (IPIC-1, -2, -3, -4) between pipe sections
6. Install casing closure band. (Seal if external to structure to prevent moisture infiltration).

DESIGN CHECKLIST

In order to quickly and accurately design a Grease Duct system, Metal-Fab's Engineering Department needs basic information about the system. Supplying the following data will speed the design process:

1. Determine if it is a Type I (Grease) or Type II (Heat and non-flammable vapors).
2. Provide CFM flow rate for each hood connection.
3. Advise available height above hood for ductwork.
4. What are hood outlet dimensions?
5. Supply a line drawing to reflect desired system layout.
6. Provide termination information. (Vertical / Horizontal, Roof Curb dimensions, etc.)
7. Will the ductwork penetrate combustible materials and/or fire-rated partitions?
8. Identify any obstructions and / or restrictions that will affect system design and supports.
9. Provide basic fan information (Upblast / Inline / Utility set).

Receipt of this information will speed the design process.
Thank you.

WARRANTY

LIMITED LIFETIME WARRANTY

Metal-Fab Inc. warrants to owners of its Models PSW, PIC, 1G, 2G, 3G, and 4G grease duct systems that they are free from defects in material and workmanship in normal use for as long as the original consumer owns the grease duct system, provided the system has been designed, installed, maintained and used in accordance with Metal-Fab, Inc. specifications. Metal-Fab, Inc. further warrants any portion of such system repaired or replaced under this limited warranty for the remainder of the original warranty period.

Refer to Metal-Fab Warranty form L2157 for complete information on claim procedures, exclusions and limitations. Available on line at www.greaseduct.com and www.metal-fabcommercial.com

Material Specification Sheet
Galvanized Steel

Description

Hot-dipped galvanized commercial steel is carbon steel sheet coated with zinc on two sides by the continuous hot-dipped process. This process results in a layer of zinc on each side of the steel sheet that is tightly adhering to the steel thru the formation of an iron-zinc alloy bonding layer that is formed by a diffusion process while the heated steel strip is in contact with the molten zinc. Hot-dipped galvanized steel is one of the most economical corrosion resistant sheet materials available. It is excellent for all applications where optimum galvanic protection from corrosion is required. Additionally, galvanized steel lends itself to most fabrication processes. It can be roll-formed, brake-formed or lock-seamed. It can be joined by various methods including riveting, soldering, welding and spot welding. Galvanized steel is available in numerous metallurgical grades providing different degrees of formability and strength to the base sheet. The designation for the basic galvanized product is commercial steel (CS). This product is useful for many applications requiring the strength of steel combined with the workability needed for bending and moderate forming; it provides the strength and formability levels that most users need for general purpose applications.

Mechanical Properties

Typical mechanical properties for hot-dipped galvanized commercial steel are listed below.

- Yield Strength: 48 ksi
- Tensile Strength: 59 ksi
- Elongation: 28%
- Hardness: 62 RB

ASTM Specifications

ASTM Designation A924 outlines the general requirements for carbon steel sheet metal coated by the hot-dipped process. A924 designates tolerances for thickness, width, camber, shape, etc.

ASTM Designation A653 outlines the general requirements for the hot-dipped coated galvanized steel. Included in this specification are steel chemistry requirements and typical mechanical properties of the various metallurgical grades. ASTM A653 also includes the coating weight requirements for the different coating designations.

Coating Thickness

Coating thickness is measured as the coating weight in ounces per square foot. For example the coating designation G-90 specifies there is a minimum coating weight of .90 ounces per square foot on both sides of the sheet. For more information on zinc coatings visit http://www.galvinfo.com/ginotes/GalvInfoNote_1_6.pdf

Surface Treatment

The "chem-treat dry" surface treatment consists of an application of a thin, invisible, corrosion inhibiting, inorganic, chemical film on the zinc surface. This film is applied at the galvanizing line by dipping into an aqueous solution of corrosion inhibiting chemicals. The chemically treated surface is much more resistant to "white rust" - the corrosion of zinc that typically occurs in humid conditions during storage or transportation.

The ductwork design should be something in which the engineer, contractor, and owner can take great pride. Always using the top quality materials, the best grade of steel in the proper gauges, forming the product with the state of the art manufacturing processes, and the gasket material to meet the highest of industry standards has made the products of **AirTite, Inc.** stand out as the finest ductwork take-offs in the HVAC industry.

AirTite, Inc. has always striven to meet the industries best standards. Complying with SMACNA, ADI, and other required standards of the HVAC industry.

Applying these easy to use fittings has made them very popular with the contractors that have had the opportunity to incorporate these fittings into their duct systems. Cutting into the ductwork at an ideal or specific location the contractors find these take-off fittings more adaptable because the mastic or glue on the gasket adheres readily and firmly holds the fitting in place for the technician to securely fasten the take-off fittings to the ductwork.

The **HETDQ** is used primarily where the duct sizing and the building structure has made it necessary to assure that the branch line of the duct has a sufficient quantity of air flow to accomplish the required amount of air volume. The polyethylene cross-linked fire retardant gasket enhances the seal between the take-off and the duct to insure **NO** air loss without extensive caulking and use of mastics.
