### Submittal

**Prepared For:** Clark & Enerson

Date: November 1, 2024

Sold To: Comfort Systems USA Job Name: UAMS CAMID

Harrison Energy Partners is pleased to provide the enclosed submittal for your review and approval.

### Qty. Product Summary

2 ClimateCraft Air Handling Units

Josh Robinson | Sales Engineer Harrison Energy Partners 1501 Westpark Drive, Suite 9 Little Rock, AR 72204-2457 Ph. 501-539-0633 The attached information describes the equipment we propose to furnish for this project, and is submitted for your approval.

### **Heat Recovery Units**

Тад	Qty.	Description	Model Number
HRU-2	1	Indoor Air Handling Unit	ClimateCraft CAH60
HRU-5	1	Indoor Air Handling Unit	ClimateCraft CAH30

- Double wall construction with 2" R13 insulation ٠
- ASHRAE leakage class 6 •
- Access sections with view ports and lights as required ٠
- Stainless steel drain pans in humidifier and cooling coil sections •
- 8" base rail •
  - Stainless steel interior liner HRU-5 only 0
  - Intake section 0
  - Filter section HRU-2 only
     Heat recovery coil section

  - Discharge plenum

### ClimateCraft Construction Standards

This document details the standard construction of ClimateCraft custom air handlers. It is intended to be used in conjunction with the unit data sheets and component data sheets to describe the construction specifications of all equipment. The unit data sheets and the component data sheets together with component cut sheets and unit drawings, detail each specific unit. Together, they make up the submittal data for the ClimateCraft air handlers on the project.

### **Exterior Cabinet Construction**

The exterior of ClimateCraft units are made from prefabricated roll formed panels that incorporate a patented thermal break system. They are fastened on 6" centers with 5/16" - 18 stainless steel bolts. All panel fasteners are accessible from the outside of the unit. No sheet metal screws are used on the unit to secure the structural panels. The panels are sealed with specially extruded EPDM gasket along all four sides to prevent cabinet leakage.

The roll formed panels are fabricated from 16 gauge material. The type of material is detailed on each unit's product datasheet and can be one of the following exterior materials.

### 16 gauge pre-painted galvanized steel

Base material is 16 gauge galvanized steel conforming to the requirements of ASTM-653. The material is pre-coated with a polyester ceramic paint system. This system passes an ASTM B-117 salt spray resistance test of 3000 hours and an ASTM G-23 accelerated weathering test of 3,000 hours. The paint color is "ClimateCraft Sky Grey".

Indoor units have a flat roof with a 1-1/2" standing seam.

### Wall and Roof Insulation

Insulation is thermally and acoustically rated. The fire and smoke ratings meet NFPA 90A and 90B requirements. The insulation type used can be found in the "Cabinet" section of the unit data sheet. One or more panel thicknesses as detailed in the construction section of the unit data sheet can be used. The R value of the panels used are as follows:

Foam Insulation R Value = 6.6 / inch

### **Interior Liners**

The interior liners are a one-piece liner. The liners are fastened to the exterior panels through a thermally isolating material. The unit data sheet details the types of liners used in each section. The liners used can be one of the following materials:

### 20 gauge type 304 stainless steel

Type 304L stainless steel sheet conforms to ASTM A-240 with a 2-B finish.

### Floor

The unit floor can be varied from section to section and the material and method of fastening is detailed by section in the unit data sheets. The floor materials options are as follows:

### 10 gauge aluminum

Type 1100 aluminum sheet produced to UNS A91100 with 2-B smooth finish.

The floors are fastened to the base with #12 self-drilling sheet metal screws driven into the base through pre-punched holes to insure uniformity. The screws are plated steel for galvanized steel and aluminum floors and are type 410 stainless steel on stainless steel floors. 1/8" thick EPDM gasket is applied between the floor sheets the base to provide a thermal break.

### **Structural Base**

The perimeter of each base is fabricated from electrically welded structural steel tubing. The tubing is 3/16" thick (1/4" thick for seismically rated units) high strength carbon steel and is pre-painted at the mill with a weldable steel primer. The tube height is detailed in the unit data sheets. The perimeter tubing is drilled and tapped with 5/16" - 18 threads on 6" centers to accept steel bolts to fasten the unit panels to the base. The tubing is continuously welded together at the corners and the open ends are seal welded shut with a steel plate.

Formed "C" channels made of 12 gauge hot rolled pickled and oiled carbon steel are used as structural cross members and are fully welded into the perimeter frame. The cross members are placed on a maximum of 24" centers. The cross members are 4" deep.

5/8" thick by 8" wide steel plates are welded between cross members to distribute the weight of the fan assemblies to the structural base. The unit serial number is marked on the base for permanent identification. Lifting lugs are welded to the perimeter tubes. The lugs can be used to tie the unit down to the pad or roof curb for seismic restraint.

The welded base assembly is cleaned using a multi-step cleaning process to remove all dirt and oil, primed using a phenolic primer, and finished with a 2-part epoxy paint. The underside of the base is coated with a two component, closed cell, rigid polyurethane foam. A minimum 2" of insulation is provided.

### **Subfloor Options**

When chosen a subfloor liner is fastened to the underside of the base and is constructed from one of the following materials: 20 gauge G90 galvanized steel.

### Unit Splits (Refer to the unit data sheet to see which option applies to the specific unit)

### Option 1: "No unit splits are provided"

The unit will ship as a single piece as shown on the drawings and individual sections cannot be separated.

### Doors

Doors shall be 2" thick, double wall construction with R-6.6/inch polyurethane foam insulation. Doors shall open inward or outward as shown on the unit drawings. Outward swing doors which are installed in positive pressure sections shall be provided with a safety catch. Doors shall be constructed of minimum 0.125" thick, 6063-T5 extruded aluminum framework. Each door shall be mounted with fully adjustable die-cast aluminum hinges. All doors and mounting frames shall incorporate a thermal break design and the doors shall seal to a replaceable extruded EPDM sponge rubber gasket.

The door latch assembly shall consist of a roller cam compression arm with a chrome plated steel inner handle and glass/fiber/nylon composite outer handle. Tool operated locks are provided on each fan section access door. All doors have a minimum of two latches.

The door includes dual pane viewing windows with clear and wire reinforced safety glass. The windows are replaceable without disassembling the door. The windows are sealed and gasketed to prevent condensation. The unit data sheet details the sections that contain windows. All windows are resistant to UVC transmission.

The size, location and swing of each door is detailed on the unit drawings. Door sizes listed on the drawings are a nominal door size. Actual door clearance dimensions are approximately 3" less in the width and height.

### Coils

All hot-water coils are constructed in accordance with ARI. 5/8" OD copper tubes are mechanically expanded into die formed fins. The tubes are arranged in a triangular pattern and the fins are patterned to augment heat transfer with a minimum air pressure drop. The coil data sheets detail fin and tube material and size. All water coils have seamless copper headers and threaded red brass connections. Each coil is tested under clear water at 350 psig.

The casing of all coils will be 16 gauge type 304 stainless steel as indicated on the coil data sheet. The casing consists of a C-channel tube sheet on either end with a 1 1/2" flanges. A 1 3/8" stacking flange is used on the top and bottom. On coils with finned widths greater than 42" an intermediate tube sheet is used to reinforce the coil casing. Multiple tube sheets are used to keep the maximum unsupported coil width to 42".

A coil data sheet is provided for each coil bank in all air handlers. The data sheets detail coil performance and optional construction supplied on each coil.

### **Filter Racks**

Filter holding frames are of heavy-duty construction designed for industrial applications. Holding frames applied in medium efficiency filter applications are either upstream or downstream accessible. Holding frames applied in high efficiency filter applications are upstream accessible only. Holding frames are constructed from galvanized steel or optional type 304 stainless steel as specified in the unit data sheet.

They are equipped with polyurethane foam gaskets, fasteners and filter centering dimples. The in-line depth is 2.75" in order to effect adequate bearing surface for built-up filter banks. Filter fasteners are capable of being installed without the requirement of tools, nuts or bolts. The holding frame rack is designed to accommodate standard size filters with the application of the appropriate type fastener. The filter rack is designed to use standard 24" x 24" and 12" x 24" filters only. Headered filters of any depth may be used with 1", 2", or 4" non-headered pre-filters. 16 gauge stiffening angles are used between each column of filters.

Dwyer "Magnehelic" filter gauge options when chosen are installed where shown to monitor the air pressure drop of any filter bank. The gauges are factory mounted into a 16 gauge steel housing that mounts to the unit exterior using the bolts of one of the external standing seam flanges. Special air sensing tube assemblies are attached to the skin of the unit with self drilling sheet metal screws that come with an integral rubber washer. The sensing tube is inserted through a predrilled hole and the back of the plate is gasketed to eliminate air and water leakage. The air sensing assembly includes a barbed fitting on the exterior and vinyl tubing connects the sensing tubes to the filter gauge.

The unit data sheet details the type of filters and filter rack used along with the optional equipment and construction.

### Electrical

The unit voltage is indicated on the unit data sheet. A weatherproof plastic nameplate is provided on all units giving the electrical rating information of the unit and all electrical components.

### **Power Circuit Conduit**

The following is a detailed list of possible power circuit conduit types provided on all factory-built units.

• EMT and Flexible Metal Conduit - Power circuits are wired with EMT thin wall galvanized steel conduit. The wire is type THHN sized for the connected load. At each air seal and wall penetration, the conduit is sealed after assembly to prevent air and moisture migration. The final connection to the fan motors is through a short length of flexible conduit to allow for the movement of the spring isolated fan assemblies.

### Lighting

The internal lights are in 100 watt vapor proof safety fixtures. The fixtures are die cast aluminum with a glass globe protected with a die cast safety cage. The lights are 10 watt LED non-dimmable bulbs equivalent to a 60 watt incandescent bulb. A combination 20 amp light switch and 115V outlet mounted in a die cast aluminum box controls lights and provides convenience power. The lighting power wiring diagram details the lighting control circuit.

Lighting wiring conduit types are detailed in the submittal with the following options.

• Aluminum MC Cable - The lights are wired with MC aluminum armor-clad cable. The cable consists of color coded 12 gauge, type THHN, stranded wiring. It is protected by a continuous

wrap of aluminum flexible conduit. The MC cable is air tight, and air and moisture cannot migrate through the conduit from section to section as with EMT or rigid conduit.

### Controls

Controls are to be wired and installed, the following list details the possible options provided.

• EMT or Flexible Metal Conduit - The controls are wired with EMT thin wall galvanized steel conduit or flexible metal conduit. The wiring is stranded, 18 gauge, type THHN. At each air seal and wall penetration, the conduit is sealed after assembly to prevent air and moisture migration.

### ETL

All factory-built units, unless stated otherwise in the submittal, are ETL listed. They have been examined by ETL and found to comply with UL safety standard 1995. The unit will bear the ETL listing mark.

### Testing

All factory assembled units undergo a functional run test. Power is applied to the unit and all circuits are run and checked for proper function. All fan motors are run and checked for rotation, operating speed, and balance after fan assembly.

### **Condensate Drain**

Static pressure in the drain pan section will be negative if the cooling coil is in a draw through application. Static pressure will not allow the drain pan to empty if a properly plumbed trap is not used. Cooling coils and drain pans in a blow through or positive pressure section also need to be properly trapped to prevent air from blowing through the drain.

The following trap sizes are required as a <u>minimum</u> for proper operation of the air handling unit. On startup, it may be necessary to fill the trap manually. If the air handling unit is exposed to freezing conditions during winter months, an antifreeze solution should be placed in the trap or the trap should be drained and plugged.

### NEGATIVE INTERNAL STATIC PRESSURE COIL SECTION (DRAW-THROUGH APPLICATION)

### POSITIVE INTERNAL STATIC PRESSURE COIL SECTION (BLOW-THROUGH APPLICATION)

### THE WORLD LEADER IN CLEAN AIR SOLUTIONS

PerfectPleat® SC M8 (Standard Capacity MERV 8)

### EXTENDED SURFACE PLEATED PANEL FILTERS

- Mechanical efficiency does not rely on electret charge technology
- Self-supporting DuraFlex<sup>®</sup> media made from virgin fiber – no wire support needed
- Consistent media with controlled fiber size and blend
- Available in 2" and 4" models
- Environmentally friendly no dies, no metal, fully incinerable
- Patented media, filter design, and manufacturing process. Patents covered under one or more of the following: US 6398839 B2; US 6254653 B1; US 6159318; US 6165242; US 6387140 B1

PerfectPleat SC M8 filters are designed to consistently increase efficiency throughout the service life of the filter. They have an initial MERV 8 rating respectively, but the efficiency increases significantly when dust loading begins. PerfectPleat SC M8 filters have distinctive self-supporting characteristics that allow a pleating pattern, which promotes airflow and maximizes Dust Holding Capacity (DHC). The PerfectPleat SC M8 filter is best suited for standard capacity pleated panel filter applications, where pleated filters are currently in use. They can also be used to upgrade applications using panel filters.

### **Superior Design and Construction**

The perimeter frame is constructed from the highest wet-strength 28 pt. beverage carrier board, securely bonded to the media pack. Support straps on the air entering side are used in combination with uniquely designed pleat stabilizers on the air leaving side of the 2" model to provide additional strength. The support straps and pleat stabilizers ensure integrity against turbulent airflow. The 2" filter resists crushing and abuse and provides excellent lateral stability for installation in side access systems.

The 4" model utilizes a two piece die cut frame with integral pleat spacers on the air leaving side. Pleat spacing is controlled by straps bonded to the air entering side and the multiple rows of pleat spacers on the air leaving side. The pleat spacers also ensure the pleats remain open during use, maximizing filter life.

### DuraFlex® Media—Patented Media Design

Uniform size virgin fibers are assembled in closely controlled blends to create a media that is both self-supporting and consistent in performance. When pleated, DuraFlex media will hold its shape without the wire support characteristic of conventional pleated filters. That means no potential for the formation of rust and safer handling. With the superior resiliency of DuraFlex media and no need for wire support, PerfectPleat SC M8 filters can sustain significant abuse and maintain their shape and pleat spacing. The absence of wire also makes the filter totally incinerable, which can simplify disposal.

## PerfectPleat® SC M8 Filters

### **Performance Data**

	Pleats Per	Rated Initial Resistance (in. w.g.)		Recommended Final Resistance	ASHRAE 52.2	Continuous Operating	
Filter	Linear Foot	300 FPM	500 FPM	625 FPM	(in. w.g.)	MERV	Temperature Limits
2" PerfectPleat SC M8	10	.13	.24	.33	1.0	8	150°F (66°C)
4" PerfectPleat SC M8	9	.11	.23	.35	1.0	8	200°F (93°C)

All performance data based on ASHRAE Standard 52.2. Performance tolerance conforms to Section 6.4 of ANSI/AHRI Standard 850-2013. Underwriters Laboratories Classification – PerfectPleat filters are UL Classified. Testing was performed according to UL Standard 900.

Differential Pressure Gages

PRESSURE

CALIBRATION SERVICES AVAILABLE

undistorted viewing of pointer and scale.

Bezel provides flange for flush mounting in panel.

Clear plastic face is highly resistant to breakage. Provides

Precision litho-printed scale is accurate and easy to read.

**Calibrated range** spring is flat spring steel. Small amplitude of motion assures consistency and long life. It reacts to pressure on diaphragm. Live length adjustable for calibration.

Red tipped pointer of heat treated aluminum tubing is easy to see. It is rigidly mounted on the helix shaft.

Pointer stops of molded rubber prevent pointer over-travel without damage.

"Wishbone" assembly provides mounting for helix, helix bearings and pointer shaft.

Jeweled bearings are shock-resistant mounted; provide virtually friction-free motion for helix. Motion damped with high viscosity silicone fluid.

Helix is precision made from an alloy of high magnetic permeability. Mounted in jeweled bearings, it turns freely, following the magnetic field to move the pointer across the scale.

Zero adjustment screw is conveniently located in the plastic cover, and is accessible without removing cover. O-ring seal provides pressure tightness

O-ring seal for cover assures pressure integrity of case.

#### OVERPRESSURE PROTECTION

**Blowout plug** is comprised of a rubber plug on the rear which functions as a relief valve by unseating and venting the gage interior when over pressure reaches approximately 25 psig (1.7 bar). To provide a free path for pressure relief, there are four spacer pads which maintain 0.023" clearance when gage is surface mounted. Do not obstruct the gap created by these

pads. The blowout plug is not used on models above 180" of water pressure, medium or high pressure models, or on gages which require an elastomer other than silicone for the diaphragm. The blowout plug should not be used as a system overpressure control. High supply pressures may still cause the gage to fail due to over pressurization, resulting in property damage or serious injury. Good engineering practices should be utilized to prevent your system from exceeding the ratings of any component.

Die cast aluminum case is precision made and iridite-dipped to withstand 168 hour salt spray corrosion test. Exterior finished in baked dark gray hammerloid. One case size is used for all standard pressure options, and for both surface and flush mounting.

Silicone rubber diaphragm with integrally molded O-ring is supported by front and rear plates. It is locked and sealed in position with a sealing plate and retaining ring. Diaphragm motion is restricted to prevent damage due to overpressures.

Samarium Cobalt magnet mounted at one end of range spring rotates helix without mechanical linkages.

A single case size is used for most models of Magnehelic® gages. They can be flush or surface mounted with standard hardware supplied. Complete mounting and connection fittings plus instructions are furnished with each instrument. A 4-9/16" hole is required for flush panel mounting

Flush mounting is easily accomplished with the new A-300 Flush Mounting bracket. This bracket provides a solution to quickly and conveniently flush mount the Magnehelic® gage. The A-300 is ideal for mounting the Magnehelic® gage on control panel doors.

The A-368 is a simple bracket for quickly surface mounting the Magnehelic<sup>®</sup> gage. After securing the Magnehelic® gage to the A-368 bracket, mount the bracket on any flat surface

The A-369 allows the Magnehelic® gage to be easily carried to locations where pressure readings need to be taken. The A-369 can stand on its own or hang on a nail or hook.

**SERIES A-320 INSTRUMENT ENCLOSURES Protects Various Instruments** 

The Series A-320 Instrument Enclosures protect instruments in all applications. The enclosures, available in plastic and stainless steel, fit a variety of gages including the Series 605 transmitter, DM-2000, 3000MR/MRS and DH3. All models include silicone tubing, Banjo fittings, and threaded pressure connections pre-installed. The threaded pressure connections allow the user to easily change the connection type through the use of fittings or adapters. This modification can be implemented to allow connection to a wide variety of plastic or metal tubing.
